²⁹ H. Auerbach, Institut für Zeitgeschichte, letter to Bundesprüfstelle, Munich, Oct. 10, 1989; Auerbach, November 1989 (no day given), both published in U. Walendy, *Historische Tatsache* no. 42, Verlag für Volkstum und Zeitgeschichtsforschung, Vlotho 1990, pp. 32 and 34; somewhat shortened in: Wolfgang Benz (ed.), *Legenden, Lügen, Vorurteile*, 7th ed., dtv, Munich 1995, pp. 147-149.

³⁰ In this regard, see my technical appraisal, first reprinted in Henri Roques, Günter Anthon, *Der Fall Günter Deckert*, DAGD/Germania Verlag, Weinheim 1995, pp. 431-435 (www.vho.org/D/Deckert/C2.html); updated as "Institut für Zeitlegenden" in G. Rudolf, *Auschwitz-Lügen*, 2nd ed., Castle Hill Publishers, Uckfield 2012, pp. 15-28 (www.holocausthandbuecher.com/dl/18d-al.pdf).

In 1991, a contribution on the *Leuchter Report* appeared in an anthology on the Third Reich, authored by a 90-year-old German geriatric, retired social worker Werner Wegner, who had neither qualifications in chemistry nor civil engineering nor did he back up his technical claims.³¹ Instead of seeking the advice of qualified people on these matters, he drew his own conclusions – to his own massive embarrassment.³² On my question why German historian Dr. Rainer Zitelmann, the responsible editor of this anthology, included this ridiculous piece in his otherwise well-researched compilation, he indicated that he had to include the paper to avoid opposition to his book due to the fact that the other papers were ‘revisionist’ in tone.³³

At the end of 1991, Austrian chemist Dr. Josef Bailer critiqued the *Leuchter Report* in a little booklet published in Austria.³⁴ This work is notable for largely ignoring the witness testimony on the procedures supposedly used during the gassings at Auschwitz and for the author’s lack of understanding of the chemical process involved. Despite criticism directed at his study,³⁵ Bailer repeated his unsustainable objections in a later publication,³⁶ without responding to his critics.³⁷

Finally, the Auschwitz State Museum itself ordered an expert report to be compiled. The Institute for Forensic Research, Toxicology Division, of Krakow, Poland, named after Prof. Dr. Jan Sehn, prepared this report, which was confined to the analysis of masonry samples, on September 24, 1990, under the late Dr. Jan Markiewicz, professor for technical testing.³⁸ The report concluded that the reason why Leuchter’s samples from the homicidal gas chambers were mostly negative with respect to traces of cyanide was because the

cyanide compounds had been exposed for more than 40 years to weathering, which these compounds allegedly could not have withstood. Three of these authors from the Jan Sehn Institute later published additional findings.³⁹ Both studies, however, were based on a verifiably incorrect analytical method, so that their results were flawed.⁴⁰ Correspondence with the authors failed to elucidate the reasons for the deliberate use of an incorrect method.⁴¹

The first critique of the *Leuchter Report* that deserved at least partially to be called scientific was published on the Internet in 1998 by an American Ph.D. chemist, Dr. Richard J. Green. Green also criticized the *Rudolf Report*, unfortunately engaging in massive political name-calling as well.⁴² In related correspondence⁴³ the author of the paper avoided any discussion of the central issues.⁴⁴

In 1999, the Dutch cultural historian Dr. Robert Jan van Pelt, professor of the history of architecture in Canada, produced an expert report on Auschwitz for the defense in the libel case of British Historian David Irving against U.S. author Deborah Lipstadt.⁴⁵ This report represents a retreat from the argumentative situation *before* Jean-Claude Pressac's first book, published in 1989,⁴⁶

⁴³ A detailed description of the deficiencies of the paper appeared in "Das Rudolf Gutachten in der Kritik, Teil 2," *Vierteljahreshefte für freie Geschichtsforschung* 3(1) (1999), pp. 77-82 (www.vho.org/VffG/1999/1/RudDas3.html); Engl.: "Some considerations about the 'Gas Chambers' of Auschwitz and Birkenau," www.vho.org/GB/c/GR/Green.html.

⁴⁴ Richard J. Green, Jamie McCarthy, "Chemistry is Not the Science," May 2, 1999, holocaust-history.org/auschwitz/chemistry/not-the-science/. About 50% of the article consists of political accusations and vilification. For a response, see G. Rudolf, "Character Assassins," www.vho.org/GB/c/GR/CharacterAssassins.html; R. Green's response to this, "Postscript to Chemistry Is Not the Science: Rudolf's Character Suicide" (www.holocaust-history.org/auschwitz/chemistry/not-the-science/postscript.shtml), was again filled with political polemics and evasions of the core issues; see G. Rudolf, "Dr. Richard Green's Evasions," www.vho.org/GB/c/GR/Evasions.html. See also G. Rudolf, "Green sees Red," in: G. Rudolf, Carlo Mattogno, op. cit. (note 28), pp. 69-85.

⁴⁵ *Pelt Report*, introduced in evidence during the libel case before the Queen's Bench Division, Royal Courts of Justice, Strand, London, David John Cawdell Irving vs. (1) Penguin Books Limited, (2) Deborah E. Lipstadt, ref. 1996 I. No. 113 (www.hdot.org/en/trial/defense/van.html).

⁴⁶ Jean-Claude Pressac, *Auschwitz: Technique and operation of the gas chambers*, Beate-Klarsfeld-Foundation, New York 1989 (www.holocaust-history.org/auschwitz/pressac/technique-and-operation/pressac0011.shtml).

ignoring almost all arguments brought forth by revisionists since that year.⁴⁷ In 2002, Prof. van Pelt published a summary of the evidence presented at said trial and his interpretation of it.⁴⁸ This book is the first in English to intensively discuss various revisionist arguments, for which van Pelt mainly relies on the works of J.-C. Pressac.⁴⁹ It is a pity, though, that the cultural historian van Pelt tries to address many chemical, toxicological, engineering, and architectural questions for which he simply lacks both expertise and experience.⁵⁰

Considering all the deficiencies of the critiques of the (first) *Leuchter Report*, the present edition may be the first thorough criticism of the *Leuchter Report*. At the same time, it tries to be fair. When reading my critical remarks in the footnotes as well as in the explanatory chapters added after Leuchter's report, the reader should keep in mind that Leuchter had only two weeks to compile his work, based on the limited knowledge of 1988, whereas the current author has had more than a decade of time to investigate the issues involved, and he also had the help of many other scholars working in this field for years or even decades.

3. An Engineering Report on the Alleged Execution Gas Chambers at Auschwitz, Birkenau, and Majdanek, Poland

3.0. Introduction

In February of this year (1988), I was contacted by Dr. Robert Faurisson for Mr. Ernst Zündel and asked to consider an assignment to investigate and forensically evaluate the extant crematoria and alleged execution gas chambers operated by the Nazis in Poland and to render an engineering opinion as to their feasibility and efficacy.

After a meeting with Mr. Zündel, defense lawyer Douglas H. Christie and staff members, in which the project was discussed, I was told that my findings were to be used in conjunction with the case of the Queen v Zündel, then before the District Court in Toronto.

Understanding this, it was determined that the investigation would include Auschwitz, Birkenau and Majdanek (Lublin), and all associated crematoria and alleged execution gas chambers. I accepted the assignment and on February 25, 1988, I led a party of investigators to Poland. This party consisted of myself; my wife Carolyn Leuchter; Mr. Howard Miller, draftsman; Mr. Jurgen Neumann, cinematographer; and Mr. Tijadar Rudolph, Polish language interpreter. We returned on March 3, 1988 after inspecting all the required facilities at Auschwitz, Birkenau and Majdanek. This report and my findings are resultant to those investigations conducted in Poland.

3.1. Purpose

The purpose of this report and the investigation upon which it is based is to determine whether the alleged execution gas chambers and crematory facilities at three (3) sites in Poland, namely Auschwitz, Birkenau and Majdanek, could have operated in the manner ascribed to them in Holocaust literature.

This purpose includes the investigation and inspection of the physical facilities, design of these facilities, and a description of procedures utilized at these facilities with an eye to determining the quantities of gas utilized, the times involved in these usages (i.e. execution and ventilation times), the physical sizes of chambers relative to the inclusion of occupants and the procedures and times involved in handling and cremating corpses with the intent of determining the veracity and credibility of unsupported operational reports.

This purpose does not include a determination of any numbers of persons who died or were killed by means other than gassing or as to whether an actual Holocaust occurred. It, further, is not the intent of this author to redefine the Holocaust in historical terms, but simply to supply scientific evidence and information obtained at the actual sites and to render an opinion based on all available scientific, engineering and quantitative data as to the purpose and usages of the alleged execution gas chambers and crematory facilities at the investigated locations.

3.2. Background

The principal investigator and author of this report on design and fabrication of execution hardware has specifically worked on and designed hardware in the United States used in the execution of condemned persons by means of hydrogen cyanide gas.⁵¹

The investigator has inspected the facilities at Auschwitz, Birkenau and Majdanek, made measurements, taken forensic samples, reviewed design and procedural literature on DEGESCH delousing chambers and procedures, Zyklon B gas, and materials on execution procedures. Much of the reviewed material was literature purchased and viewed at the sites in Poland, including copies of original drawings of Kremas I, II, III, IV and V.

3.3. Scope

The scope of this report includes a physical inspection and quantitative data obtained at Auschwitz, Birkenau and Majdanek, literature supplied by the officials at the three (3) museum sites, blueprint copies of Kremas I, II, III, IV and V obtained at the museums, material relative to DEGESCH delousing chambers and facilities (including equipment and procedures utilized with Zyklon B gas), a description of operational procedures at the facilities in question, and forensic samples taken at the Kremas investigated.

Additionally, data on the design of U.S. gas chambers and operational procedures coming from the investigator's own personal knowledge and work in the field, as well as an investigation of U.S. crematories and procedures, were utilized in the production of this report. Utilizing all of the above data, the investigator has limited the focus of this study to a determination of:

(a) the capability of the alleged execution gas chambers to have accomplished the mass murder of human beings by the use of Zyklon B gas in Auschwitz I and Birkenau and carbon monoxide and/or Zyklon B gas in Majdanek;

⁵¹ See the "Third Leuchter Report" in this volume.

Fig. 4: DEGESCH delousing chamber with circulation feature.⁵² This design was developed in the late 1930s / early 1940s and became a standard in Germany during the war. It was, however, not installed in all concentration camps, which were frequently equipped with makeshift delousing chambers.
Editor's note.

(b) the capability of the investigated kremas to have accomplished the alleged number of human cremations in the alleged period of time.

3.4. Synopsis and Findings

After a study of the available literature, examination and evaluation of the existing facilities at Auschwitz, Birkenau and Majdanek, with expert knowledge of the design criteria for gas chamber operation, an investigation of crematory technology and an inspection of modern crematories, the author finds no evidence that any of the facilities normally alleged to be execution gas chambers were ever used as such, and finds, further, that because of the design and fabrication of these facilities, they could not have been utilized for execution gas chambers.

Additionally, an evaluation of the crematory facilities produces conclusive evidence that contradicts the alleged volume of corpses cremated in the generally alleged time frame. It is, therefore, the best engineering opinion of the author that none of the facilities examined were ever utilized for the execution of human beings and that the crematories could never have supported the alleged work load attributed to them.

⁵² Ludwig Gaßner, "Verkehrshygiene und Schädlingsbekämpfung," *Gesundheits-Ingenieur*, 66(15) (1943), pp. 174ff.; cf. F.P. Berg, "Typhus and the Jews," *Journal of Historical Review*, 8(4) (1988), pp. 433-481.

3.5. Method

The procedures involved in the study and forensic analysis which resulted in the report were as follows:

1. A general background study of the available material.
2. An on-site inspection and forensic examination of the facilities in question which included the taking of physical data (measurements and construction information) and a considered removal of physical sample material (brick and mortar) which was returned to the United States for chemical analysis.
3. A consideration of recorded and visual (on-site) logistic data.
4. A compilation of the acquired data.
5. An analysis of the acquired information and comparison of this information with known and proven design, procedural and logistic information and requirements for the design, fabrication and operation of actual gas chambers and crematories.
6. A consideration of the chemical analysis of the materials acquired on site.
7. Conclusions based on the acquired evidence.

3.6. Use of HCN and Zyklon B as a Fumigant

Hydrogen cyanide gas (HCN or hydrocyanic acid) has been utilized as a fumigant since before WWI. It has been used side by side with steam and hot air and during WWII with D.D.T. by the United States and its Allies.

HCN is generally manufactured by a chemical reaction of sodium cyanide with dilute sulfuric acid. The chemical reaction results in HCN being given off into the air with a remainder of prussic acid (hydrocyanic acid). This reaction is normally contained in a ceramic crock pot.

This procedure has been utilized for pest and vermin control on ships, in buildings and in specially designed chambers and structures. Special design and handling considerations must be followed to ensure the safety of the users (technicians). Hydrogen cyanide is one of the most powerful and dangerous of all fumigation chemicals. Buildings especially constructed or modified for this purpose were used by all militaries and health organizations throughout the world. HCN has been used everywhere for disease control; specifically for plague and typhus i.e. rat, flea and lice control.

Special chambers were used since WWI in Europe and the United States. Some of these chambers were used by the German Army in Europe before and during WWII and much earlier by the United States Immigration Service at Ellis Island, New York Harbor. Many of these fumigation chambers were made by DEGESCH, a German firm located in Frankfurt am Main, Germany.

Table 1: Specification of HCN⁵⁴

Name:	HCN, hydrocyanic acid, prussic acid
Boiling point:	25.7°C/78.3°F at 760 mm Hg
Specific gravity:	0.69 at 18°C/64°F
Vapor density:	0.947 (air=1)
Melting point:	-31.2°C/8.2°F
Vapor pressure:	750 mm Hg at 25°C/77°F 1200 mm Hg at 38°C/100°F
Solubility in water:	100%
Appearance:	clear
Color:	slightly bluish
Odor:	bitter almond, very mild, non-irritating (odor is not considered a safe method of determining presence of the poison)

Hazards:

1. Unstable with heat, alkaline materials and water
2. Will explode if mixed with 20% sulfuric acid
3. Polymerization (decomposition) will occur violently with heat, alkaline material or water. Once started, reaction is autocatalytic and uncontrollable. Will explode.
4. Flash point: -18°C/0°F
5. Autoignition temperature: 538°C/1000°F
6. Flammable limits in air: lower 6 vol.-%, upper 41 vol.-%

During the war, DEGESCH supervised the distribution of Zyklon B. DEGESCH presently manufactures HCN.⁵³

Zyklon B was a special commercial preparation containing hydrocyanic acid. The name “Zyklon B” was itself a trade name. HCN was prepared at the factory and delivered in a form where the HCN was absorbed in a porous carrier, either wood pulp or diatomaceous earth (chalk).⁵⁵ It was supplied either in discoids or snippets or pellets. This preparation was sealed in an airtight can which required a special can opener. In this form the HCN – Zyklon B was much safer and easier to handle. The resultant Zyklon B gas was HCN.

The discoids, snippets or pellets had to be spread on the floor of the area to be fumigated or utilized in a chamber which circulated and heated the air within the chamber in excess of 78.3 degrees Fahrenheit (25.7 degrees Centigrade).⁵⁶ If used in buildings, ships, or tents to fumigate trees and produce, the

⁵³ DEGESCH is no longer in business. Its operations were taken over by Detia Freyberg, Ltd., Germany. Zyklon B® was renamed to Cyanosil® after the TV series “Holocaust” in 1978/79.

⁵⁴ See W. Braker, A.L. Mossman, *Matheson Gas Data Book*, Matheson Gas Products, East Rutherford 1971, p. 301; R.C. Weast (ed.), *Handbook of Chemistry and Physics*, 66th Ed., CRC Press, Boca Raton, Florida 1986, E 40.

⁵⁵ A third type of porous carrier material introduced in the late 1930s, gypsum mixed with small amounts of starch (called “Erco”), more and more replaced the type using diatomaceous earth. See R. Irmscher, “Nochmals: ‘Die Einsatzfähigkeit der Blausäure bei tiefen Temperaturen’,” *Zeitschrift für hygienische Zoologie und Schädlingsbekämpfung*, 34 (1942), pp. 35f.; Wolfgang Lambrecht, “Zyklon B – eine Ergänzung,” *Vierteljahreshefte für freie Geschichtsforschung* 1(1) (1997), pp. 2-5; see also Jürgen Kalthoff, Martin Werber, *Die Händler des Zyklon B*, VSA-Verlag, Hamburg 1998; Horst Leipprand, *Das Handelsprodukt Zyklon B: Eigenschaften, Produktion, Verkauf, Handhabung*, publ. by author, Mannheim 2008; www.grin.com/de/e-book/150878/dashandelsprodukt-zyklon-b. It was also the type used at Auschwitz, see Harry W. Mazal, “Zyklon-B: A Brief Report on the Physical Structure and Composition,” www.holocausthistory.org/auschwitz/zyklonb/

⁵⁶ Zyklon B can also be applied at lower temperatures, because HCN evaporates steadily even at temperatures as low as -5°C/20°F; see R. Irmscher, *ibid.*

area must be heated to an excess of 78.3 degrees Fahrenheit temperature, the boiling point of HCN. Failure to do this will result in a much longer time to complete the fumigation. Fumigation takes a minimum of 24 to 48 hours.⁵⁷

After the fumigation, the ventilation of the area must take a minimum of ten hours, depending on the location (and volume), and longer if the building has no windows or exhaust fans.⁵⁸ The fumigated area must then be chemically tested for the presence of gas before entering.⁵⁹ Gas masks are sometimes used, but are not safe and should not be used for more than ten (10) minutes.⁶⁰ A complete chemical suit must be worn to prevent skin poisoning.⁶¹ The warmer the temperature and the drier the location, the faster and safer the handling will be.

The specifications for the gas are found in Table 1.

3.7. Design Criteria for a Fumigation Facility

A fumigation facility, whether a building or a chamber, must adhere to the same basic requirements. It must be sealable, heatable, have both circulation and exhaust capability for the air, must have a sufficiently high stack for the exhaust and a means for distribution of the gas evenly (likewise the Zyklon B material).⁶²

First, if a chamber is used today, it must be a welded and pressure tested vessel coated with an inert (epoxy) paint or stainless steel or plastic (PVC). The doors must be gasketed with an HCN resistant material (pickled asbestos,

⁵⁷ This value is recommended by DEGESCH for fumigations in rooms without special heating and ventilation devices. Minimum ventilation time is set to be 10 hrs. or even 20 hrs., see DEGESCH, *Zyklon for Pest Control*, undated, 28pp, see appendix to this report (starting at p. 76); see also the information sheet issued by the Public Health Agency of Bohemia-Moravia during the war (Gesundheitsanstalt des Protektorats Böhmen und Mähren), "Richtlinien für die Anwendung von Blausäure (Zyklon) zur Ungeziefervertilgung (Entwesung)," as presented during the International Military Tribunal in Nuremberg, document NI-9912 (see R. Faurisson, in G. Rudolf (ed.), *Auschwitz: Plain Facts*, Theses & Dissertations Press, Chicago, IL 2005, pp. 103-111).

⁵⁸ The procedure can be vastly accelerated when using special fumigation chambers designed like the DEGESCH "Kreislaufanlage" (circulation facility), see Gerhard Peters, E. Wüstinger, "Entlausung mit Zyklon-Blausäure in Kreislauf-Begasungskammern. Sach-Entlausung in Blausäure-Kammern," *Zeitschrift für hygienische Zoologie und Schädlingsbekämpfung*, 32 (10/11) (1940), pp. 191-196; cf. also F.P. Berg, "The German Delousing Chambers," *Journal of Historical Review*, 7(1) (1986), pp. 73-94.

⁵⁹ See Carlo Mattogno, "The 'Gas Testers' of Auschwitz," *The Revisionist*, 2(2) (2004), pp. 140-154 (www.vho.org/tr/2004/2/Mattogno140-154.html).

⁶⁰ This value depends on various factors, like: type of filter used, concentration of HCN in air, breathing volume. There were special HCN filters available which last as long as 30 min at 1 Vol.-% HCN in air. Cf. R. Queisner, "Erfahrungen mit Filtereinsätzen und Gasmasken für hochgiftige Gase zur Schädlingsbekämpfung," *Zeitschrift für hygienische Zoologie und Schädlingsbekämpfung*, 1943, pp. 190-194.

⁶¹ Poisoning through the skin occurs at concentrations of 0.6 Vol.-% and beyond. A concentration of 1 Vol.-% can be fatal within a few minutes. Heavy physical activity, resulting in wet skin (sweat), is considered highly dangerous, see F. Flury, F. Zernik, *Schädliche Gase, Dämpfe, Nebel, Rauch- und Staubarten*, Berlin 1931, p. 405; see also M. Daunderer, *Klinische Toxikologie*, 30th suppl. delivery 10/87, ecomed, Landsberg 1987, pp. 4ff.

⁶² Although this is intelligent design and required by law today, this and the following requirements were not always met by fumigation facilities built by the Germans during the war; see my comments in Chapter 4.2.

neoprene or Teflon[®]). If a building, it must be made of brick or stone and coated both inside and out with an inert (epoxy) paint or pitch, tar or asphalt. The doors and windows must be gasketed or sealed with a rubberized or pitched canvas and sealed with neoprene sealant or tar. In either case, the area must be extremely dry. The term 'sealing' has two meanings: first, to mechanically prevent leakage from the facility; and second, to render the exposed, porous surfaces of the facility impervious to impregnation by Zyklon B gas.

Second, the chamber or structure must have a gas generator or distribution system for Zyklon B which would force hot air over the Zyklon B or the generator (generator may be heated with water if sealed) and circulate the warm air and gas. The mixture required for fumigation is 3200 parts per million (ppm) or 0.32% total volume HCN. The chamber must be free of obstructions and have a capability for a strong, constant and copious air flow.

Third, the chamber or structure must have a means for evacuating the poisonous air/gas mixture and replacing it with fresh air. Generally, this is done with an exhaust or intake fan with either exhaust or intake valves or louvered ports of sufficient size to allow reasonable air change per hour. Usually, a sufficient cubic feet per minute (cfm) fan and intake and exhaust aperture should permit a complete air change in ½ hour and should be run for at least twice the required time of one hour, or two hours. The larger the facility, the less practical this becomes (due to the size of available fans) and exhaust times may take several hours or longer.

The exhaust must be vented at a safe distance above the facility where the air currents can disperse the gas. This is normally 40 feet above the structure, but it should be more if the structure is sheltered from the wind. If an incinerator is used, the stack may be only several feet in height. It is generally too costly to incinerate the HCN because of the air volume it must handle in a short time period.

The temperature of the walls and the air within the facility, and the intake air, must be kept at least 10 degrees above the boiling point of the hydrocyanic acid (78.3 degrees F) to prevent condensation of HCN on the walls, floor and ceiling of the facility, as well as in the exhaust system. If the temperature is below 79 degrees F and condensation occurs,⁶³ the facility must be decontaminated with chlorine bleach or ammonia, the former being the more effective. This is accomplished by spraying the walls either automatically or manually. If done manually, protective suits (generally neoprene) must be worn and the

⁶³ Condensation of a gas occurs if the temperature drops below its dew point. At 1 Vol.-%, the dew point of HCN is at -93°C (-135°F)! Even at 10 Vol.% it is still as low as -33°C (-27.4°F). An exception would be capillary condensation in highly porous material like cement mortar, but even this is negligible in the absence of capillary water. The proper term to use here is: adsorption of HCN at the wall or absorption (dissolution) in moisture (capillary water). Since the moisture content of walls rises sharply at lower temperatures, the danger arises from HCN absorbed in moisture. See K. Wesche, *Baustoffe für tragende Bauteile*, volume 1, Bauverlag, Wiesbaden 1977, p. 37.

technicians must utilize air breathing cylinders, as gas masks are unsafe and dangerous.⁶⁴ The interior of the building must be evacuated longer to allow the chlorine bleach vapors to neutralize the liquid HCN in the exhaust system. The interior of the building must be washed with water and thoroughly mopped and dried before the next use.⁶⁵

Additionally, a check of the air inside the building must be done to determine whether all of the HCN has been removed. The test may be either by gas detector or by the copper acetate/benzidine test. In the former, an electronic readout is provided with detection to 10 ppm. In the other, a benzidine solution is mixed with a copper acetate solution and is used to moisten a piece of test paper which turns blue in varying degrees if HCN is present.⁶⁶

3.8. Design Criteria for an Execution Gas Chamber

Many of the same requirements for the fumigation facility apply to an execution facility. Generally, however, the execution facility will be smaller and more efficient. Zyklon B is not recommended for use in an execution gas chamber generally because of the time it takes to drive the gas from the inert carrier.⁶⁷ Up until now, the only efficient method has been to generate the gas on-site by chemical reaction of sodium cyanide and 18% sulfuric acid. Recently, a design for a gas generator has been completed which will be utilized in the two (2) man gas chamber at the Missouri State Penitentiary, Jefferson City, Missouri. The author is the design consultant for this execution gas chamber.

This generator employs an electrically heated water jacket to pre-boil HCN in a cylindrical vessel. At the time of use, the HCN is already vaporized and is released through valves into the chamber. A nitrogen burst system clears the plumbing after use. The total time of the execution is less than four minutes. The chamber is evacuated at a rate of once every two minutes for a 15 minute time period, providing some seven (7) complete air changes.

The chamber may be of welded steel construction or of plastic PVC. The doors and windows should be of standard marine watertight construction. The door is gasketed with a single handle pressure seal. All lighting and electrical hardware is explosion-proof. The chamber contains the gas distribution plumbing, the gas generator with the bottle of liquid HCN, electronic heart monitoring equipment, two (2) seats for the condemned and a gas detector reading externally, electronically to 10 ppm.

⁶⁴ More so because of the chemicals used to clean the wall (chlorine, ammonia), which are highly irritating and corrosive gases, than because of the residual HCN.

⁶⁵ Since water absorbs (dissolves) HCN readily and eagerly, it is indeed highly advisable to keep locations exposed to gaseous HCN as dry as possible.

⁶⁶ During the war only the latter chemical type was available; see note 59.

⁶⁷ For the time required see R. Irmscher, *op. cit.* (note 55), as well as my remarks in Chapter 4.1.

Because the chamber contains so lethal a gas, it is operated at a negative pressure to guarantee that any leak would be inward. The chamber pressure is controlled by a vacurizer system, which should hold the chamber at a partial vacuum of 10 pounds per square inch (psi)⁶⁸ (operational: 8 psi plus 2 psi of HCN⁶⁹). The negative pressure is maintained utilizing the outward ambient as a standard. This system is controlled electrically and supported by a 17.7 cfm displacement vacuum pump. Additionally, a pressure switch is set to trigger emergency systems if the chamber pressure reaches 12 psi, 3 psi above the operational limit.

The inlet and exhaust system is designed for an air change every two (2) minutes. The air is supplied by a 2000+ cfm fan on the inlet side of the chamber and exhausted through the top of the chamber. The inlet and exhaust valves are both of the inwardly closing type to prevent vacuum loss and are timed to electrically open in sequence, the exhaust valve first. This is evacuated through a 40-foot high 13-inch diameter PVC pipe where the wind disperses the gas harmlessly. The intake air should have preheating capability to guarantee that no HCN will condense and thereby escape evacuation.

Gas detectors are utilized for safety. First, in the chamber where it will electrically prohibit the door from opening until the chamber is safe, second, outside the chamber in the witness and personnel areas where they sound alarms and initiate an air exhaust and intake system to protect the witnesses as well as abort the execution and evacuate the chamber. The safety systems contain warning bells, horns, and lights as well.

Further, emergency breathing apparatus (air tanks) is available in the chamber area, as well as special HCN first aid kits, emergency medical equipment for HCN and a resuscitator in an adjacent area for medical personnel.

Execution gas chamber design requires the consideration of many complicated problems. A mistake in any area may, and probably will, cause death or injury to witnesses or technicians.

3.9. United States Execution Gas Chambers Since 1920

The first gas chamber for execution purposes was built in Arizona in 1920. It consisted of an airtight chamber with gasketed doors and windows, a gas generator, an explosion proof electrical system, an air intake and exhaust system, provision for adding ammonia to the intake air and mechanical means for activating the gas generator and air exhaust. The air intake consisted of several mechanically operated valves. Only the hardware has changed to the present.

The gas generator consisted of a crockery pot filled with a dilute solution (18%) of sulfuric acid with a mechanical release lever. The chamber had to be

⁶⁸ Roughly 70% of the average atmospheric pressure at sea level.

⁶⁹ This is 20 Vol.-% of HCN (138 mbar).

scrubbed with ammonia after the execution, as did the executee. Some 25 13-gram sodium cyanide⁷⁰ pellets were used and generated a concentration of 3200 ppm in a 600 cubic foot chamber.⁷¹

In the years that followed, other states adopted the HCN gas chamber as a mode of execution and design techniques changed. Eaton Metal Products designed, built and improved most of the chambers. Most had two chairs and were fitted with a vacuum system to guarantee a negative pressure and only inward leakage. All systems employed the gas generator technique because it was the most effective and simplest procedure available up until the late 1960s. No system ever was designed to use, or ever used, Zyklon B.

The reason for this is quite simple. Zyklon B takes too long to evaporate (or boil off) the HCN from the inert carrier and requires heated air and a temperature controlled system. Not only is the gas not instant, but a danger of explosion always exists.

The overall gas mixture is generally below the lower explosion limit (LEL) of the gas air mixture of 0.32%⁷² (since the mixture should not normally exceed 3200 ppm), but the concentration of the gas at the generator (or as in the case of Zyklon B, at the inert carrier) is much greater and may well be 90% to 99% by volume. This is almost pure HCN, and this condition may exist at points of time in pockets in the chamber.⁷³ The ambient air temperature or the heated air temperature must be considerably higher and artificially controlled for Zyklon B (since evaporation is strictly a physical process), where, with the gas generator, the temperature can be lower and uncontrolled since the chemical reaction in the generator is self-catalytic after starting. Electrical contacts and switches must be kept at a minimum, explosion-proof and outside the chamber. Technology available only since the late 1960s has enabled the Missouri system, which will be the most advanced system ever built, to utilize a gas vaporizer and delivery system for liquid HCN, eliminating the dangers of handling and disposal of the prussic acid residual after the execution.

Zyklon B, which would seem on the surface to have been a more efficient means of supplying gas and eliminating the prussic acid residue problem, was not the solution to the problem. In fact, the use of Zyklon B would have increased the execution time and therefore lengthened the time for handling the dangerous gas and, also, because of the heater requirements, caused a risk of

⁷⁰ Equivalent to 179 g HCN (6.6 mol).

⁷¹ Equivalent to 17 m³, resulting in 10.5 g HCN/m³ = 0.87 Vol.-% = 8,700 ppm. Experiments show that almost 50% of the HCN developed stays dissolved in the aqueous sulfuric acid (see Chapter 8.3.3.4. of my expert report, G. Rudolf, *The Rudolf Report*, Theses & Dissertations Press, Chicago 2003, p. 265). Hence Leuchter's assumed concentration of 3,200 ppm is reasonable, although perhaps a little on the low side (depending on the volume of sulfuric acid used).

⁷² Transcription error, as this should read: 6 Vol.-%. See Table 1.

⁷³ Because Zyklon B releases its gas over at least one hour at temperatures of 20°C/70°F, and even more slowly at lower temperatures, concentrations around the carrier material will be within the explosion limits for most of that time, if no strong air circulation is applied to dissipate the gas.

explosion. An alternate solution would have been to heat the gas externally and circulate the gas/air mixture through plumbing outside the chamber and back into the chamber as the DEGESCH delousing equipment did,⁵⁸ but this would only have caused a greater risk of leakage and hazard to the users. It is poor design and extremely dangerous to allow the gas outside the pressurized chamber. The DEGESCH equipment was intended to be utilized in the open, or in a well-ventilated area, and only in the presence of trained personnel and not with untrained people present.

In the United States, Arizona, California, Colorado, Maryland, Mississippi, Missouri, Nevada, New Mexico, and North Carolina have utilized gas as a mode of execution. But because of the inherent dangers in handling the gas and the expensive maintenance costs for the equipment used, some states (Nevada, North Carolina and New Mexico) have legislated for lethal injection, either as the only procedure, or as the procedure of choice. Other states will probably follow. The author has been a consultant to the states of Missouri, California and North Carolina.

In any event, because of the cost of manufacture of HCN gas, and because of the excessive hardware and maintenance costs of the equipment, gas has been in the past, and still is, the most expensive mode of execution.

3.10. Toxic Effects of HCN Gas

Medical tests show that a concentration of hydrogen cyanide gas in an amount of 300 ppm in air is rapidly fatal. Generally, for execution purposes a concentration of 3200 ppm is used to ensure rapid death. This is a weight / volume of some 120 to 150 grams / 2 cubic feet of gas,⁷⁴ depending on temperature and pressure. Some 100 ppm of HCN is fatal within half an hour.⁷⁵ Toxic effects are skin irritation and rashes, eye irritation, blurring of vision and permanent eye damage; non-specific nausea; headache; dizziness; vomiting and weakness; rapid respiration, lowered blood pressure, unconsciousness, convulsions and death; symptoms of asphyxia, dyspnea, ataxia, tremors, coma and death through a disruption of the oxidative metabolism.⁷⁶

Hydrocyanic acid does not have to be breathed to be fatal. In concentrations of over 50 ppm, the user must wear a chemical suit to completely protect his

⁷⁴ Calculation error: 1,000 ppm HCN is equivalent to 1.205 mg HCN per liter of air under normal conditions. Hence 3,200 ppm equate to about. 3.86 mg per liter, or with 28.37 liter per cft, some 219 mg of HCN.

⁷⁵ DuPont, *Hydrogen Cyanide*, Wilmington, Delaware 7/83, pp. 5f.; see also note 61.

⁷⁶ Any decent book of toxicology will contain detailed information about this. As the commenting author is German, the literature consulted by him is German, too: W. Wirth, C. Gloxhuber, *Toxikologie*, Georg Thieme Verlag, Stuttgart 1985, pp. 159f.; W. Forth, D. Henschler, W. Rummel, *Allgemeine und spezielle Pharmakologie und Toxikologie*, Wissenschaftsverlag, Mannheim 1987, pp. 751f.; H.-H. Wellhöner, *Allgemeine und systematische Pharmakologie und Toxikologie*, Springer Verlag, Berlin 1988, pp. 445f.

body and breathe bottled air.⁷⁷ Gas masks are generally ineffective and should never be utilized. Specialized first aid kits and medical supplies are available and should be present in all areas where a person may contact the gas.

3.11. A Brief History of the Alleged German Execution Gas Chambers

Based on material available to the author, it has been determined that the Germans allegedly constructed a series of large (three or more executees)⁷⁸ gas chambers for execution purposes beginning sometime in late 1941 and utilized them until late 1944.

Beginning with the first alleged gassing in a basement at Auschwitz I, two converted farmhouses at Birkenau (Auschwitz II) known as the Red and White houses or Bunkers 1 and 2, Krema I at Auschwitz, Kremas II, III, IV and V at Birkenau and an experimental facility at Majdanek, these facilities allegedly utilized hydrocyanic acid in the form of Zyklon B as the gas. Majdanek allegedly also used carbon monoxide (CO).

According to official literature obtained at the Auschwitz and Majdanek State Museums, these execution facilities were located in concentration camps constructed in highly industrial areas, and their inmates supplied forced labor to the factories producing materials for the war effort. These facilities also included crematories for the disposal of the remains of those allegedly executed.

Additionally, other alleged facilities, which only utilized CO as the execution gas, were located at Belzec, Sobibor, Treblinka and Chelmno (gas vans). These additional facilities were allegedly destroyed either during or after WWII, have not been inspected and are not directly the subject of this report.

Carbon monoxide (CO) gas, however, will be considered briefly at this point. CO gas is a relatively poor execution gas in that it takes much too long to effect death, perhaps as long as 30 minutes, and if poorly circulated, longer. In order to utilize CO, a quantity of 4,000 ppm would be required, making it necessary to pressurize the chamber at approximately 2.5 atmospheres with CO.⁷⁹ Additionally, CO₂ (carbon dioxide) has also been suggested. CO₂ is

⁷⁷ If not sweating, skin absorption of HCN with concentrations below 0.6 Vol.-% are not necessarily fatal (see note 61). However, any hard labor lowers that level drastically.

⁷⁸ Actually, several hundred to several thousand executees per chamber are claimed by witnesses. For instance for the Auschwitz crematoria II & III: 2,000 according to Rudolf Höß (Henry Friedländer, *The Holocaust*, Vol. 12, p. 112), as well as Charles Sigismund Bendel; 3,000 according to Miklos Nyiszli (see Jean-Claude Pressac, op. cit. (note 46), pp. 125, 253, 469ff); 4,000 according to Pery Broad, "Erinnerungen," in Jadwiga Bezwinska, *KL Auschwitz in den Augen der SS*, Krajowa Agencja Wydawnicza, Katowice 1981, p. 180; see also: Josef Buszko (ed.), *Auschwitz, Nazi Extermination Camp*, 2nd ed., Interpress Publishers, Warsaw 1985; Carlo Mattogno, *The Bunkers of Auschwitz*, Theses & Dissertations Press, Chicago 2004.

⁷⁹ This is incomprehensible. 4,000 ppm would increase the pressure only by 0.4%.

even less effective than CO. These gasses, it has been alleged, were produced by diesel engines. Diesel engines produce exhausts which contain very little carbon monoxide⁸⁰ and would require that the execution chamber be pressurized with the air/gas mixture in order to have sufficient gas to cause death.⁸¹ Carbon monoxide in quantities of 3000 ppm or 0.30% will cause nausea and headache after exposure for one hour and perhaps some long-term damage.

Concentrations of some 4000 ppm and above will prove fatal for exposure times of over 1 hour. The author would submit that the occupants in a chamber filled to capacity with persons occupying approximately 9 square feet or less (the minimum area required to ensure gas circulation around the occupants), would die of suffocation due to their own exhaustion of the available air, well before the additional gas would take effect. Thus, simply closing the executees in this confined space would obviate the need for either CO or CO₂ from an external source.⁸²

The alleged execution facilities in Auschwitz I (Krema I) and Majdanek still exist allegedly in original form. In Birkenau, Kremas II, III, IV and V are collapsed or razed to the foundations; Bunker I (the Red House) is gone and Bunker II (the White House) is now restored and utilized as a private residence.⁸³ At Majdanek, the first oil-fired crematory has been removed and the crematory with the alleged gas chamber has been rebuilt with only the ovens being original.⁸⁴

Krema I at Auschwitz, Kremas II, III, IV and V at Birkenau, and the existing crematory at Majdanek were allegedly crematories and gas chambers combined. The Red and White houses at Birkenau were allegedly only gas

⁸⁰ Diesel exhaust gas is indeed unsuited for mass murder: Since the invention of Diesel engines, there has only been one (1) reported fatality due to Diesel exhaust gas: A 83-year-old victim with heart disease had cardiac arrest due to suffocation by Diesel smoke, see S. Sivaloganathan, "Death from diesel fumes," *Journal of Clinical Forensic Medicine*, 1998, 5, pp. 138f.

(www.vho.org/GB/c/FPB/DieselDeath.html); for a general overview of arguments against Diesel engines for mass murder see F.P. Berg, "The Diesel Gas Chambers: Ideal for Torture – Absurd for Murder," in: G. Rudolf (ed.), *Dissecting the Holocaust*, 2nd ed., Theses & Dissertations Press, Chicago 2003, pp. 435-469 (www.vho.org/GB/Books/dth/fndieselgc.html).

⁸¹ Pressurizing the gas does not increase its percentage. It is the percentage in air that makes poison gases lethal, not their absolute amount per volume.

⁸² These considerations about the suffocation of victims even without poison gas are correct and have been verified with detailed calculations by me (G. Rudolf, op. cit. (note 71), pp. 211-216), and by Carlo Mattogno (C. Mattogno, Jürgen Graf, *Treblinka*, Theses & Dissertations Press, Chicago 2003, pp. 133f.)

⁸³ This claim is false, see Carlo Mattogno, "The 'Discovery' of 'Bunker 1' at Birkenau: Swindles, Old and New," *The Revisionist* 1(2) (2003), pp. 176-183. Foundations of a building do still exist in the area claimed to have been the location of Bunker II, but there is no documentary evidence about what purpose this building served; see C. Mattogno, op. cit. (note 78).

⁸⁴ Although the old crematory was indeed removed during the war, the new crematory, allegedly equipped with one gas chamber, is basically unchanged to this day. The "bath and disinfection," allegedly housing four gas chambers, was an entirely different building, which has been structurally changed after the war, but basically only externally. See J. Graf, C. Mattogno, *Concentration Camp Majdanek*, 3rd ed., The Barnes Review, Washington, DC, 2012 (www.holocausthandbooks.com/dl/05-ccm.pdf).

chambers. At Majdanek, the experimental gas chambers were not adjacent to a crematory, and there was a separate crematory which is not now extant.

3.12. Design and Procedures at the Alleged Execution Gas Chambers

It appears, through investigation of the available historical documents and the facilities themselves, that most of the alleged execution gas chambers were converted from an earlier design, purpose and structure.⁸⁵ This is true except for the so-called experimental chambers at Majdanek, which were allegedly specifically built as gassing facilities.⁸⁶

Bunkers I and II are described in Auschwitz State Museum literature as converted farm houses with several chambers and windows sealed. These do not exist in their original condition and were not inspected. Kremas I, II, III, IV and V are described historically and on inspection were verified to have been converted mortuaries or morgues connected and housed in the same facility as crematories.⁸⁷ The on-site inspection of these structures⁸⁸ indicated extremely poor and dangerous design for these facilities if they were to have

⁸⁵ Even mainstream historians admit that the morgues of the crematories I in Auschwitz and II and III in Birkenau, allegedly used as homicidal gas chambers, were designed (and in case of crematory I initially even used) as normal morgues, e.g., Robert van Pelt, *The Case for Auschwitz*, Indiana Univ. Press, Bloomington/Indianapolis, IN, 2002 pp. 72, 80. Opinions are less unanimous for crematories IV and V. J.-C. Pressac has changed his mind about this (no initial criminal planning: J.-C. Pressac, *Le Monde Juif*, no. 107, July-September 1982, pp. 91-131; initial criminal planning: Pressac, op. cit. (note 46), p. 447; Pressac, *Les crématoires d'Auschwitz*, SNRS, Paris 1993, p. 52), whereas van Pelt insist in a criminal planning right from the start (*ibid.*, p. 80). There are, however, no historical documents – other than witness statements – or physical traces in the facilities themselves – or their ruins – supporting the claim of such a conversion. For details see further below.

⁸⁶ There are no historical documents proving that the “experimental gas chamber(s)” at Majdanek – those in the “Bath and Disinfection” building – had been designed for homicidal use.

⁸⁷ The crematories were crematories, not morgues. They most certainly must have had mortuaries, yet not all rooms in a crematory were mortuaries, and not all rooms claimed to have been execution gas chambers can be identified as mortuaries, in particular not for Crematory IV and V, whose mortuaries were located right next to the furnace room in the east of the building, whereas the alleged gas chambers are supposed to have been at the other, western end of the buildings.

⁸⁸ Except for the concrete foundation, no original traces have remained of the Crematories IV and V. The walls to be found there today were erected after the war by the Auschwitz Museum using material of unknown origin (Pressac, op. cit. (note 46), p. 390; J. Markiewicz et al., op. cit. (note 38), and not in consistence with the original layout (see Fig. 8). Hence, no such conclusions can be drawn from the structures as they exist today. The alleged gas chamber of Crematory III has been obliterated, with only the bare brick walls remaining. The same room of Crematory II is in better shape, but the roof has collapsed into it. There is only very limited indication in those ruins about the original equipment of these rooms. Finally, the area of the former morgue of Crematory I, allegedly used as an execution gas chamber, underwent massive structural changes after an attempt at “reconstruction” by the Auschwitz-Museum after the war, leading to extensive misrepresentations (see Pressac, op. cit. (note 46), p. 158; Eric Conan, “Auschwitz: la mémoire du mal,” *L'Express*, January 19-25, 1995; Robert van Pelt, Deborah Dwork, *Auschwitz: 1270 to the Present*, Yale University Press, New Haven and London 1996, pp. 363f.). Hence: none of the five crematories or their remainders allows a comprehensive conclusion as to their original equipment and design. Only some features can be determined. For a proper assessment of the situation during the war, historical documents need to be consulted. I will return to this in Chapter 4.3. “Homicidal Gassings.”

served as execution gas chambers. There is no provision for gasketed doors, windows or vents; the structures are not coated with tar or other sealant to prevent leakage or absorption of the gas. The adjacent crematories are a potential danger of explosion.⁸⁹

The exposed porous brick and mortar would accumulate the HCN and make these facilities dangerous to humans for several years.⁹⁰ Krema I is adjacent to the hospital⁹¹ at Auschwitz and has floor drains connected to the main sewer of the camp – which would allow gas into every building at the facility.⁹² There were no exhaust systems to vent the gas after usage⁹³ and no heaters or dispersal mechanisms for the Zyklon B to be introduced or evaporated.⁹⁴ The Zyklon B was supposedly dropped through roof vents⁹⁵ and put in through windows⁹⁶ – not allowing for even distribution of gas or pellets. The facilities are always damp and not heated.⁹⁷ As stated earlier, dampness and Zyklon B are not compatible.

⁸⁹ Since a minimum of 60,000 ppm (6%) of HCN in air is required to form an explosive mixture, but the applied concentration could in average hardly reach such values, and also because the furnaces were at a considerable distance from the gas chambers (which is true in particular for Crematories II-V), there was no real danger of explosion. Such a danger would have existed only in proximity to the Zyklon B carriers, requiring an ignition spark from within the chamber, for example from a finger ring of a falling victims scratching along a wall or from an electric switch or light not secured against arcing.

⁹⁰ Though porous building material does indeed accumulate HCN, once the use of HCN has ceased, it does not remain as such in the walls for very long. After several weeks most of it would either have evaporated or chemically transformed into more-stable compounds which are no longer dangerous (iron cyanides). For experimental data see L. Schwarz, W. Deckert, *Zeitschrift für Hygiene und Infektionskrankheiten*, 107 (1927), pp. 798-813; *ibid.*, 109 (1929), pp. 201-212.

⁹¹ Close to it were also located the headquarters of the Auschwitz Political Department, i.e., the camp Gestapo, and the headquarters of the Auschwitz garrison motor park (*Fahrbereitschaft*). Personnel working there would have been similarly endangered.

⁹² Since all common sanitary installations have U-shaped siphon traps to seal them against smelling gases, and because HCN gets readily absorbed by water, it is not very likely that HCN gas could have penetrated through the sewer system into other buildings. But the wastewater would certainly have been poisoned, which could have led to dying fish in creeks and rivers downstream.

⁹³ The morgues of Crematories I through III, falsely portrayed as gas chambers, did have ventilation systems designed for morgues. Crematory I only had a poorly functioning makeshift ventilation, whereas in the case of the Crematories II & III they had a capacity which was standard for morgues. Oddly enough, though, their capacity was lower than those installed for other rooms in the crematories, clearly indicating that their intended purpose was indeed merely the ventilation of a normal morgue. For Crematory I see C. Mattogno, *Auschwitz: Crematory I*, Theses & Dissertations Press, Chicago, IL, 2005, pp. 17-22; for Crematories II and III cf. C. Mattogno, "Auschwitz: The End of a Legend," in G. Rudolf (ed.), *op. cit.* (note 57), pp. 153-155. There is no evidence that any ventilation systems were ever installed in the relevant rooms of Crematories IV & V and the so-called Bunkers; for Crematoria IV & V see C. Mattogno, "Auschwitz: The End of a Legend," *ibid.*, pp. 161-164; for the Bunkers see C. Mattogno, *The Bunkers of Auschwitz*, *op. cit.* (note 78).

⁹⁴ Considering that such systems were available, it is incomprehensible indeed that they were not used, as they would have been a necessary prerequisite for effective conveyor-belt-style mass murder.

⁹⁵ Kremas I through III.

⁹⁶ Kremas IV & V and the Bunkers.

⁹⁷ This is true only for the rooms under consideration in Kremas II & III as well as in the Bunkers. The morgue of Krema I was adjacent to the furnace room, which, if in operation, would have heated the entire building. The relevant rooms of Krema IV & V had coke-fired furnaces.

The chambers are too small to physically contain the occupants claimed⁹⁸ and the doors all open inward,⁹⁹ a situation which would inhibit removal of the bodies. With the chambers fully packed with occupants, there would be no circulation of the HCN within the room. Additionally, if the gas eventually did fill the chamber over a lengthy time period, those throwing Zyklon B in the roof vents and verifying the death of the occupants would die themselves from exposure to HCN.¹⁰⁰ None of the alleged gas chambers was constructed in accordance with the design for delousing chambers which were effectively operating for years in a safe manner.¹⁰¹ None of these chambers was constructed in accordance with the known and proven designs of facilities operational in the United States at that time. It seems unusual that the presumed designers of these alleged gas chambers never consulted or considered the United States technology; the only country then executing prisoners with gas.¹⁰²

The facilities at Majdanek are likewise incapable of fulfilling the alleged purpose. First, there is a rebuilt crematory with an alleged gas chamber. The only portions of the building which existed prior to the rebuilding were the cremation ovens.¹⁰³ Allegedly, the building was reconstructed from plans

⁹⁸ Purely physically seen, this is true only for some claims, for instance those claiming about 2000 or more victims in the morgues of Kremas II & III (see note 78). Because military discipline and cooperation of the victims could not be expected, though, it is unrealistic to assume a higher density than five persons per square meter (10 sq. ft). With a floor area of 210 square meters of the relevant morgues of Kremas II & III, the physical limit would therefore have been some 1,000 people. Whether or not such a tightly packed room could have been continuously operated as claimed – as badly equipped as it was – is of course an entirely different question.

⁹⁹ This is not correct. Krema I: The door to the washing room opened outward. The door to the furnace room was a swinging door, which could neither have been made air-tight nor secured against a panicking crowd. (see “SS-Neubauleitung, K.L. Auschwitz – Krematorium,” Nov. 30, 1940; RGVA, 502-1-312, p. 135; “Bestandsplan des Gebäudes Nr. 47a B.W. 11, Krematorium,” April 10, 1942; RGVA, 502-2-146, p. 21; taken from C. Mattogno, *Auschwitz: Crematory I*, op. cit. (note 93), docs. 1, 4; cf. C. Mattogno, “The Openings for the Introduction of Zyklon B – Part 1: The Roof of the Morgue of Crematorium I at Auschwitz,” *The Revisionist* 2(4) (2004) p. 52). The doors of Kremas II & III were double doors opening outward (see J.-C. Pressac, op. cit. (note 46), plans on p. 322 (Sept. 21, 1942; Pressac erroneously gives 1943 as the year) pp. 285, 302 (Dec. 19, 1942), p. 308 (March 19, 1943), p. 311 (March 20, 1943)). Double doors could not be sealed air-tight nor made panic-proof either. Kremas IV & V: All doors of the two main rooms under consideration opened outward; two of these doors opened into a hallway, which sometimes is claimed to have been used as a gas chamber as well. It had a third door opening outward into another hallway (see J.-C. Pressac, op. cit. (note 46), plan on p. 401; see Fig. 8, on p. 52 of the present book).

¹⁰⁰ HCN does not kill that swiftly. Peeking into a chamber filled with HCN would hardly suffice anyway.

¹⁰¹ This is particularly true if considering the high standard of the DEGESCH circulation delousing chambers. For well-planned, industrialized conveyor-belt-style mass murder one must expect such standards, indeed.

¹⁰² Even though German technicians could hardly get access to U.S. hardware after war broke out between Germany and the U.S. in late 1941, major German libraries always had a huge selection of English-language technical literature. To my knowledge, none of it contains data about U.S. execution technology, which, after all, is not a major sector of U.S. engineering. Leuchter’s statement is therefore a little far-fetched.

¹⁰³ This building was not reconstructed; see note 84. However, Leuchter’s assessment of the technical deficiencies of the room in this building allegedly used as a gas chamber is correct, as that room could and can be accessed only from other rooms, has openings in the wall which could not be closed, and it

which do not exist. The facility is built in such a manner that gas could not have been contained within the alleged chamber; the chamber itself is too small to have accommodated the volume of victims attributed to it. The building is too damp and cold to utilize Zyklon B gas effectively. The gas would have reached the ovens, and after killing all the technicians,¹⁰⁴ would have caused an explosion and destroyed the building.¹⁰⁵ Further, the construction, poured concrete, is radically different from the other buildings at the facility. In short, the building could not be used for its alleged purpose and fails to follow even minimal gas chamber design.

The second facility at Majdanek is shown on maps to be a U-shaped building and is now, in reality, two separate buildings. This complex is designated Bath and Disinfection Building 1 and 2. One of the buildings is strictly a delousing facility and is designed as were the other accepted delousing facilities at Birkenau. The second building of the complex is somewhat different. The front portion of the building contains a shower room and an alleged gas chamber. The existence of blue stains in this room is consistent with the blue stains found in the Birkenau delousing facility. This room has two roof vents which were for venting the room after a delousing procedure.¹⁰⁶ The Zyklon B would have been placed by hand on the floor. This chamber is clearly not an execution chamber. It has provision for air circulation but no stack for venting.¹⁰⁷ It, like the other facilities, is not designed as, or capable of being used as, an execution gas chamber.

In the back of this building are the experimental gas chambers. This area includes a breezeway, control booth and two chambers allegedly used as gas chambers. A third room was sealed and not available for inspection. These chambers are unique in that both have piping for allegedly using carbon monoxide gas controlled from the booth. One of the chambers has a potential vent in the ceiling that was apparently never cut through the roof.¹⁰⁷ The other chamber has a heating circulatory system for moving heated air into the chamber. This circulatory system is ineffectively designed and constructed with the intake and outlet too close together to function properly and has no

had no means to ventilate it. For these and the following details about the alleged Majdanek gas chambers see J. Graf, C. Mattogno, *op. cit.* (note 84), pp. 119-159.

¹⁰⁴ Since this room could not be closed, everyone present in this building would have been killed.

¹⁰⁵ This is not likely; see note 89.

¹⁰⁶ There is documentary evidence to support this claim; see J. Graf, C. Mattogno, *op. cit.* (note 84), pp. 150f. If, as sometimes claimed, these openings were used to pour in Zyklon B, they could not have been used for ventilation, because they would have had to be disconnected from the ventilation duct when introducing the poison. Ventilation using the doors was impossible, because one of them opened into the shower room, the other opened inward – and besides: it could even be opened from the inside, allowing inmates to escape at any time. Also, this room has a normal glass window, which would have been broken by trapped inmates.

¹⁰⁷ The duct connecting the openings in the ceiling to the chimney was removed after the war, as the roof design was changed.

provision for a vent.¹⁰⁸ Remarkable about both chambers is what appears to be a rabbet or groove cut into the four (4) steel doors, which is consistent with the placement of a gasket. Purportedly, both chambers were used for Zyklon B or carbon monoxide. This cannot be true.

Of the two chambers, one was not completed and never could have been used for carbon monoxide. It is also not designed for HCN, even though it allegedly was utilized for this purpose.¹⁰⁹ The larger chamber was not designed for HCN.¹¹⁰ Notwithstanding the sign at the door saying “experimental,” this chamber would have been incapable of providing execution by CO because of the need to produce 4,000 ppm (the lethal concentration) at the required 2.5 atmospheres of pressure.¹¹¹ Both chambers failed to meet the design requirements for venting, heating and circulating, and leakage. Nowhere were the bricks, stucco and mortar ever coated with a sealant, inside or out.

A most remarkable characteristic of this complex is that these chambers were surrounded on three sides by a depressed concrete walkway. This is totally inconsistent with intelligent gas handling design in that gas seepage would accumulate in this trench and,¹¹² being sheltered from the wind, would not dissipate. This would make the entire area a death trap, especially with HCN.

The author must therefore conclude that this facility was never intended for even the limited use of HCN gas.

3.13. Crematories

A consideration of crematories, both old and new, must be made to determine the functionality of the German Kremas at accomplishing their attributed tasks.¹¹³

¹⁰⁸ The chamber was initially designed and used as a hot-air disinfestation chamber, and as such it did not need a ventilation system. See J. Graf, C. Mattogno, *ibid.*, pp. 145, 147.

¹⁰⁹ This chamber had an opening in the wall and could therefore not be used for any process during which poisonous gas is released, *ibid.*, pp. 147f., 308.

¹¹⁰ Since its walls have blue staining from Iron Blue, this proves the use of HCN in this room at some point, although only for the purpose of killing lice, because this room had no opening to insert Zyklon B from the outside; *ibid.*, pp. 144, 313.

¹¹¹ There is no need to put rooms under pressure in order to reach a certain percentage of CO. It is claimed that the rooms were filled with CO from steel bottles via steel pipes. The latter are still visible in these two rooms (*ibid.*, pp. 293, 307). However, the fact that one of these rooms had an opening in the wall that could not be closed proves that the steel pipes did not serve to fill the room with anything poisonous. Also, the steel bottle presented today in this location, which the Majdanek Museum claims to be an original bottle, clearly states “CO₂” as its original content. CO₂ is not poisonous! *Ibid.*, p. 145.

¹¹² It is not certain whether this depressed walkway is an original feature or if it was added after the war. However, because HCN – in contrast to most other poisonous gases – is slightly lighter than air, it is not likely that it would accumulate in such a place.

¹¹³ For a historical overview of the development of cremation in Germany see C. Mattogno, “The Crematoria Ovens of Auschwitz and Birkenau,” in: Germar Rudolf, op. cit. (note 80), pp. 373-412, here pp. 375-

Cremation of the dead is not a new concept. It has been practiced by many cultures for many centuries. Although practiced several thousand years ago, it was frowned upon by the Catholic Church and not practiced recently until the Church relaxed its opposition in the latter part of the 18th century.

Cremation was forbidden by Orthodox Judaism. By the early 1800s Europe was again practicing cremation on a limited basis. It becomes advantageous to control disease, free up much needed land in crowded areas and eliminate the need for storing corpses in winter when the ground is frozen. Europe's early crematories were coal or coke fired furnaces.

The oven or furnace which is used to cremate corpses is properly termed a retort. Early retorts were merely ovens which cooked all the moisture out of the corpse and reduced it to ash. Bones cannot be burned and must be pulverized, even today. The early mortar and pestle has been replaced by a crushing machine, however.¹¹⁴ Modern retorts are mostly gas fired, although some are still supplied for oil. None are still fired by coke or coal in the United States or Canada.

Earlier retorts were simply a drying or baking kiln and simply dried the human remains. Modern retorts of brick-lined steel actually blow fire from a nozzle onto the remains setting them afire, causing combustion and rapid burning. Modern retorts also have a second or afterburner for reburning all the pollutants in the combusted gaseous material. This second burner is a requirement set by the various state agencies responsible for air pollution. It should be noted that the human remains are not responsible for the pollution. It is caused entirely by the fossil fuels used. An electric retort, although cost prohibitive to run, would have no pollutants.

These modern retorts or crematories burn at a temperature of 2000+ degrees Fahrenheit, with an afterburner temperature of 1600 degrees Fahrenheit. This high temperature causes the body to combust and consume itself, allowing for the burner to be shut down. Wooden caskets and paper boxes are burned with the body today, although not in the past, with no added time of burning due to the high temperature. Some European units are operated at a traditional lower temperature of 800 degrees Centigrade (1472 degrees Fahrenheit) and for a longer time period.

378; in more detail: Carlo Mattogno and Franco Deana, *The Cremation Furnaces of Auschwitz. A Historical and Technical Study*, Castle Hill Publishers, Uckfield, UK, 2015.

¹¹⁴ The organic parts of bones do burn, if the oven temperature is sufficiently high, leaving a very brittle inorganic skeleton behind which crumbles to mere ashes at the slightest touch, often spontaneously.

At 2000 degrees Fahrenheit or more with a 2500 cfm blowered air supply from the outside,¹¹⁶ modern retorts will cremate one corpse in 1.25 hours. Theoretically, this is 19.2 in a 24 hour time period. Factory recommendation for normal operation and sustained use allows for three (3) or less cremations per day. Older, oil, coal and coke furnaces with forced air (but no direct flame application) normally took 3.5 to 4 hours for each corpse.¹¹⁷

Theoretically, this could allow for 6.8 corpses in a 24 hour period at a maximum. Normal operation permits a maximum of three (3) cremations in a 24 hour time period. These computations are based on 1 corpse per retort per cremation. These modern retorts are of all steel construction and lined with high quality refractory brick. The fuel is pumped directly to the retort and all controls are electric and automatic. The coal and coke fired furnaces did not burn at an even temperature (approximately 1600 degrees Fahrenheit max.) and had to be constantly fed fuel by hand and dampered up and down. Since there was no direct application of flame to the corpse, the blower

Table 2: Theoretical and Real-time Estimated Maximum 24 Hour Crematory Outputs	
Krema I:	3 furnaces, 2 retorts each 6 retorts × 6.8 corpses 40.8 6 retorts × 3 corpses18
Krema II:	5 furnaces, 3 retorts each 15 retorts × 6.8 corpses 102.0 15 retorts × 3 corpses45
Krema III:	5 furnaces, 3 retorts each 15 retorts × 6.8 corpses 102.0 15 retorts × 3 corpses45
Krema IV:	2 furnaces, 4 retorts each 8 retorts × 6.8 corpses 54.4 8 retorts × 3 corpses24
Krema V:	2 furnaces, 4 retorts each 8 retorts × 6.8 corpses 54.4 8 retorts × 3 corpses24

Total Bodies Cremated in 24 hours (theoretical)469	
Total Bodies Cremated in 24 hours (real-time)207	

¹¹⁵ Leuchter’s figures are wrong here: the new Majdanek crematory had only 5 muffles (=retorts) in total; cf. J. Graf, C. Mattogno, op. cit. (note 84), pp. 274ff.

¹¹⁶ Such a large amount of fresh air would swiftly cool down a single cremation muffle. That value seems excessive and may be valid for several cremation ovens or muffles.

¹¹⁷ This is not correct. In civilian crematories the next corpse – usually placed in a coffin, which initially slows down the cremation by shielding the corpse from the heat but later accelerates it due to the added heat – is inserted into a muffle only after the previous one has been incinerated completely and its ashes removed. That procedure was most certainly not followed in Auschwitz during times of emergency caused by raging typhus epidemics. First, the Auschwitz muffles were too small to allow the insertion of coffins. Furthermore, the next corpse could be inserted after most body parts of the previous corpse had fallen through the grill into the post-combustion chamber (ash chamber) underneath the muffle. This process could take considerably less than one hour, depending on the furnace design. The facilities in Auschwitz could not quite reach such short cremation times, but with roughly one hour they were still much faster than what Leuchter estimates. For details see the study by C. Mattogno, op. cit. (note 113). This renders all of Fred Leuchter’s following calculations *inapplicable to* Auschwitz and Majdanek.

only fanned the flames and increased the temperature of the kiln. This crude mode of operation probably produced an average temperature of about 1400 degrees Fahrenheit.¹¹⁸

The crematories utilized at the inspected German facilities were of the older type. They were constructed of red brick and mortar and lined with a refractory brick. All of the ovens had multiple retorts, some were blowered (although none had direct combustion), none had afterburners and all were coke fired except one facility no longer in existence at Majdanek. None of the retorts inspected and examined at all of the locations was designed for multiple corpse incineration.¹¹⁹ It should be noted that unless specifically designed for a greater bone to flesh to heat ratio, the retort will not consume the materials placed within it.¹²⁰ Theoretical and real-time¹²¹ estimated maximum 24 hour outputs, based on one (1) corpse per retort per cremation are found in Table 2.

3.14. Forensic Considerations of HCN, Cyano-Compounds and Crematories

As stated earlier, forensic samples of brick, mortar, concrete and sediment were selectively taken from sites in Poland.¹²² Cyanide and cyanide compounds may remain in a given location for long periods of time¹²³ and, if they

¹¹⁸ Temperatures could actually reach 1600°F (870°C)

¹¹⁹ This is true, as the muffle doors were too small to introduce multiple corpses (60 cm × 60 cm, with a circular arch at the top and rollers for the corpse stretcher at the bottom, reducing the usable height even further). Not even an average coffin would have fitted through these doors.

¹²⁰ The burners of the Auschwitz furnaces were designed to produce only the heat required to incinerate one corpse per muffle. That would still allow placing more than one corpse into each muffle (although more than two wouldn't fit through the door), but the initial heat required to evaporate the body water could not be delivered by these generators, hence the muffles would cool down, which in turn slows down the cremation process. Also, once the body water has evaporated, the excess heat created by several corpses burning in one muffle would superheat those muffles and subsequently the flues and chimneys, potentially damaging them.

¹²¹ Based on the assumption that coke furnaces not only have to be shut down, cleaned, and refired every day, but also that maintenance and repairs reduce the real operation time further. Leuchter's assumption of only 44% operation time is somewhat theoretical, but as shown by Mattogno's study (note 113), it is not unreasonable.

¹²² Leuchter's sampling procedure has been criticized. For some details of his methods see Errol Morris's documentary *Mr. Death: The Rise and Fall of Fred A. Leuchter, Jr.*, Fourth Floor Productions, May 12, 1999; premiered January 1, 1999 during the Sundance Film Festival in Park City (Utah); vgl. William Halvorsen, "Morris Shines a Light on Fred Leuchter," *The Revisionist*, Nr. 3, 2000 (www.codoh.com/library/document/411). For example, in one case Leuchter picked up a brick fragment out of a water puddle in the collapsed Morgue 1 of Krema II. Such bricks are neither likely to form long-term stable iron cyanide compounds, nor can anyone safely determine the exact origin and history of the brick fragments that Leuchter fished out of the puddle.

¹²³ This is particularly true for iron-cyanide compounds of the type called Iron Blue, also often referred to as Prussian Blue, Berlin Blue, Turnbull's Blue, among others. They are basically indestructible. See the long-term-stability test conducted by J.M. Kape, E.C. Mills, *Transactions of the Institute for Metal Finishing*, 35 (1958), pp. 353-384; *ibid.*, 59 (1981), pp. 35-39; for more details on the stability of these compounds see my expert report, op. cit. (note 71), pp. 170-180.

do not react with other chemicals, may migrate around in brick and mortar.¹²⁴

Thirty-one samples were selectively removed from the alleged gas chambers at Kremas I, II, III, IV and V. A control sample was taken from delousing facility #1 at Birkenau.¹²⁵ The control sample was removed from a delousing chamber in a location where cyanide was known to have been used and was apparently present as blue staining. Chemical testing of the control sample #32 showed a cyanide content of 1050 mg/kg, a very heavy concentration. The conditions at areas from which these samples were taken are identical with those of the control sample, cold, dark and wet. Only Kremas IV and V differed,¹²⁶ in that these locations had sunlight (the buildings have been torn down) and sunlight may hasten the destruction of uncomplexed cyanide.¹²⁷ The cyanide combines with the iron in the mortar and brick and becomes ferric-ferro-cyanide or Prussian blue pigment,¹²⁸ a very stable iron-cyanide complex.¹²³

The locations from which the analyzed samples were removed are set out in Table 3.

It is notable that almost all the samples were negative and that the few that were positive were very close to the detection level (1 mg/kg);¹²⁹ 6.7 mg/kg at Crema III; 7.9 mg/kg at Crema I.¹³⁰ The absence of any consequential read-

Table 3: Locations of Analyzed Samples	
Auschwitz I:	
Krema I:	samples #25 through #31
Birkenau (Auschwitz II):	
Krema II:	samples #1 through #7
Krema III:	samples #8 through #11
Krema IV:	samples #13 through #20
Krema V:	samples #21 through #24
Sample #12 is a gasket sample from the Sauna at Birkenau	
Sample #32 is the Control Sample obtained from Delousing Facility #1, Birkenau	

¹²⁴ It is true for the precursors of Iron Blue: alkaline and alkaline earth-metal salts of ferro- and ferricyanides. The effects of this migration can be seen in Zyklon B delousing chambers, where these compounds accumulated at certain spots of the wall's surface due to migrating wall moisture and eventually turned into the blue Iron Blue; see the illustrations in my expert report, *ibid.*, color inserts, as well as the discussion on pp. 258-268.

¹²⁵ Leuchter means the Zyklon B delousing wing of Building BW5a in Construction Sector BA1a of Birkenau. There is another similar building BW5b in Construction Sector BA1b.

¹²⁶ Since the origin of the building material of the re-erected wall fragments of Kremas IV and V is unknown, these samples cannot be interpreted (see note 88).

¹²⁷ Sunlight has only a very marginal effect on the destruction of Iron Blue, but environmental influence does hasten the reaction from precursor compounds to the extremely stable Iron Blue; see my expert report, op. cit. (note 71), pp. 176f., 258-265.

¹²⁸ On the exact mechanism for this, including excess cyanide as a necessary agent to reduce Fe^{III}-cyanide (ferrocyanide) to Fe^{II}-cyanide (ferricyanide), see my expert report, *ibid.*, pp. 159-170, 180-189.

¹²⁹ The detection level of 1 mg/kg for this method was determined for liquid samples. Because building-material samples are solid and usually contain large amounts of carbonates (mortar, cement, concrete), which can disturb the method, the detection level is probably considerably higher than 1 mg/kg. Repeated analyses of mortar and concrete samples showing results of lower than 10 mg/kg have shown this to be true, since the results could not be reproduced reliably. It is therefore most appropriate to state that test results below 10 mg/kg of solid samples rich in carbonates cannot be interpreted properly and ought to be considered zero. See my expert report, *ibid.*, pp. 253, 258.

¹³⁰ It should be noted that Leuchter's sample No. 28 (1.3 mg cyanide per kg) was accidentally taken at a location that was not part of the morgue during the war, which is claimed to have been a homicidal gas

ings at any of the tested locations, as compared with the control sample reading 1050 mg/kg, supports the evidence that these facilities were not execution gas chambers. The small quantities detected would indicate that at some point these buildings were deloused with Zyklon B – as were all the buildings at all these facilities.¹³¹

Additionally, the areas of blue staining show a high iron content,¹³² indicating ferric-ferro-cyanide, no longer hydrogen cyanide.¹³³

One would have expected higher cyanide detection in the samples taken from the alleged gas chambers (because of the greater amount of gas allegedly utilized there¹³⁴) than that found in the control sample.¹³⁵ Since the contrary is true, one must conclude that these facilities were not execution gas chambers, when coupled with all the other evidence gained on inspection.

Evidence as to Krema function is non-existent since Krema I's oven has been completely rebuilt, Kremas II and III are partially destroyed, with components missing and Kremas IV and V are gone.¹³⁶ At Majdanek, one Krema is completely gone and the second Krema has been rebuilt, except for the ovens. Visual inspection of the memorial ash heap at Majdanek shows ash of a strange beige color. Actual human-remains ash (as per the author's own investigations) is oyster gray. There may be some sand in the mixture at the memorial at Majdanek.

Additionally, the author will discuss the alleged burning (cremation) pits in this section.

chamber. Rather, this wall was part of the washing room, where no application of Zyklon B is claimed to have occurred. This emphasizes the importance and correctness of my previous note.

¹³¹ Considering the impossibility of interpreting these small values, the proper evaluation would be that they do not conclusively prove the use of Zyklon B in these rooms at all.

¹³² The iron content analyzed in this sample is not noticeably higher than in other samples with lacking blue staining (see my expert report, op. cit. (note 71), pp. 254f.). Building materials like bricks, concrete and mortar have a natural iron content of this order of magnitude (1 to 3 percent). It stems from the ingredients clay (for brick), cement and sand (for concrete and mortar), which have an iron-oxide content of up to 5%. See my expert report, op. cit. (note 71), pp. 180f., 183, 185.

¹³³ Hydrogen cyanide, being a highly volatile and chemically rather unstable liquid, could not be expected to be found some 50 years after its application. It should read: "no longer less-stable cyanide salts."

¹³⁴ The few witnesses who made statements about the amount of Zyklon B used claimed similar amounts as used during disinfestations; see my expert report, op. cit. (note 71), p. 211. However, the rapid execution times claimed by many more witnesses, in connection with the technical features of the alleged gas chambers, suggest that the applied poison gas concentration would have to have been considerably higher than what was used during disinfestations; see my expert report, op. cit. (note 71), p. 208-216; see also Chapter 4.3. of this section.

¹³⁵ Leuchter jumps to conclusions here. In order to expect higher concentration in homicidal gas chambers than in disinfestations, not only the applied amount of poison gas must be considered, but also the time during which the walls were exposed to the gas as well as the particular physical and chemical conditions of the wall material, which can have drastic effects on the amount of long-term-stable cyanide residues formed. See Chapter 4.3. for more details.

¹³⁶ With the help of the detailed documentation available about the Auschwitz cremation facilities and other similar facilities of Third Reich Germany, the function of the Auschwitz crematoria can very well be established, see chapter 4.4. for more details.

The author personally inspected and photographed the burning pits at Birkenau. Most remarkable about those pits is a high water table – perhaps as high as 1.5 feet from the surface. The historical description of these pits is that they were 6 meters (19.55 feet) deep.¹³⁷ It is not possible to burn corpses under water, even with the use of an artificial accelerant (gasoline). All pit locations officially designated on museum maps were inspected and as anticipated, since Birkenau was constructed on a swamp, all locations had water within 2 feet of the surface. It is the opinion of this author that no burning pits existed at Birkenau.¹³⁸

3.15. Auschwitz, Krema I

A detailed study of the officially alleged execution gas chamber at Krema I and a detailed analysis of the existing blueprints acquired from the museum officials indicate that the alleged gas chamber was, at the time of the alleged gassings, a morgue and later an air raid shelter. The drawing supplied by the author of this report of Krema I has been reconstructed for the time period from September 25, 1941 through September 21, 1944. It shows a morgue of some 7680 cu. ft. with two doorways, neither door opening externally. One doorway opened into the crematory and the other into the washroom. Apparently neither opening had a door, but this was not verifiable since one wall had been removed and one opening had been moved.¹³⁹ It should be noted that the official Auschwitz State Museum guidebook says that the building physically remains in the same condition as it was on liberation day on January 27, 1945.¹⁴⁰

There are 4 roof vents and 1 heater flue¹⁴¹ in the morgue area. The flue is open, showing no evidence of ever having been closed. The roof vents were not gasketed and new wood indicated they had recently been rebuilt.¹⁴² The walls and ceiling are stucco and the floor is poured concrete. The floor area is 844 sq. ft. The ceiling is beamed, and on the floor one can see where the air

¹³⁷ Witness statements for Auschwitz vary between 1.50 m and 3 m. S. Dragon: 3 m (J.-C. Pressac, *op. cit.* (note 46), p. 171.); M. Nyszli: 3 yards (*ibid.*, p. 177.); M. Benroubi: 2.50 m (*ibid.*, p. 162); F. Müller: 2 m (Filip Müller, *Sonderbehandlung*, Steinhausen, Munich 1979, p. 207.); M. Garbarz: 1.50 m (J.-C. Pressac, *ibid.*, p. 164).

¹³⁸ This was confirmed by two scientific studies on the question of whether or not the groundwater table was that high during the war as well; see Michael Gärtner, Werner Rademacher, “Ground Water in the Area of the POW Camp Birkenau,” *The Revisionist*, 1(1) (2003), pp. 3-12 (www.vho.org/tr/2003/1/GaertnerRademacher3-12.html); Carlo Mattogno, “‘Incineration Pits’ and Ground Water Level in Birkenau,” *ibid.*, pp. 13-16 (www.vho.org/tr/2003/1/Mattogno13-16.html).

¹³⁹ Original plans of that location show doors, see note 99.

¹⁴⁰ This obvious lie, now abandoned, was confirmed during a taped interview by the museum’s director Franciszek Piper, see David Cole, “David Cole in Auschwitz,” 1993; www.youtube.com/watch?v=iXKHw0EZrQM; partially printed as “David Cole Interviews Dr. Franciszek Piper, Director, Auschwitz State Museum,” *Journal of Historical Review*, 13(2) (1993), pp. 11-13.

¹⁴¹ This is actually a ventilation stack of the air-raid shelter of late 1944.

¹⁴² A detailed study of these openings and the documentary material of this room shows that these four vents were inserted into the roof only after war’s end; see C. Mattogno, “The Openings for the Introduction of Zyklon B – Part 1,” *op. cit.* (note 99).

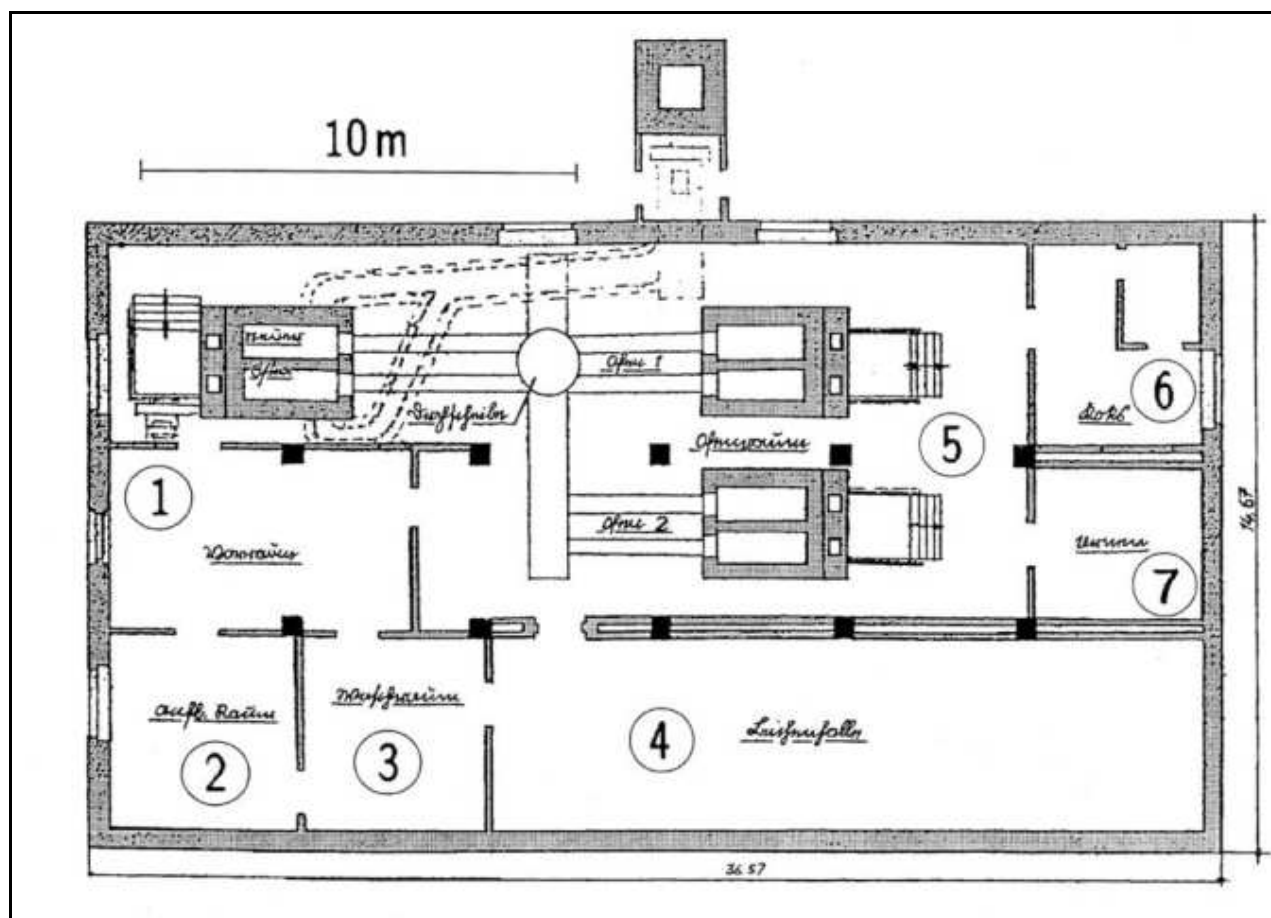

Fig. 5: Ground plan of Crematorium I in Auschwitz I/Main Camp in its original condition. The morgue was later allegedly used as a homicidal gas chamber.¹⁴⁴

1: vestibule; 2: laying-out room; 3: wash room; 4: morgue;
5: furnace room; 6: coke; 7: urns

raid shelter walls were removed.¹⁴³ The lighting was not, and is not now, explosion-proof. There are floor drains in the floor of the chamber which connect into the main camp drain and sewer system. Assuming a 9 sq. ft. area per person to allow for gas circulation, which is nevertheless very tight, a maximum of 94 people could fit into this room at one time. It has been reported that this room could hold up to 600 persons.

The alleged execution gas chamber is, as stated earlier, not designed to be used in such a manner. There is no evidence of an exhaust system or fan of any type in this structure.¹⁴⁵ The venting system for the alleged gas chamber

¹⁴³ While doing this, the Auschwitz museum removed one wall too many, including the former washing room into the “gas chamber” exhibit, although it never was a part of the original morgue. The original morgue was therefore some 20% smaller than what is shown to tourists today.

¹⁴⁴ J.-C. Pressac, op. cit. (note 46), pp. 151, 153.

¹⁴⁵ The original morgue had a ventilation system, which according to the documentation served to ventilate a morgue, not a homicidal gas chamber. Its exhaust duct led into the crematory flue, which fed both the exhaust gases of the ovens and the stale air of the morgue into the chimney; see note 93. If large amounts of Zyklon B would have been used in the morgue, the ventilation system would have pushed those out together with the hot oven gases – provided the ovens were operating. Since hot gases rise quickly, this exhaust gas mixed with HCN would not have posed a serious threat to the immediate environment of this crematorium. However, some wind gusts or not-operating or improperly operating ovens could have turned this design into a disaster for the environs of this crematory. Also, should there ever have been a concentration of HCN in the exhaust gas at or above the explosion limit – for instance be-

consisted simply of four (4) square roof vents exhausting less than two (2) feet from the surface of the roof.¹⁴²

Table 4: Hypothetical Execution and Crematory Usage Rates of Krema I	
Execution rate	94 people/week (hypothetical)
Cremation rate	286 people/week (theoretical)
	126 people/week (real time)

Ventilating HCN gas in this manner would undoubtedly result in the poison gas reaching the confines of the SS hospital a short distance across the road, with patients and support personnel being killed. Because of the fact that the building has no sealant to prevent leakage, no gasketed doors to prevent gas reaching the crematory,¹⁴⁶ drains that would permit gas to reach every building in the camp, no heating system, no circulatory system, no exhaust system or venting stack,¹⁴⁵ no gas distribution system, constant dampness, no circulation due to the number of people in the chamber, and no way of satisfactorily introducing the Zyklon B material, it would be sheer suicide to attempt to utilize this morgue as an execution gas chamber. The results would be an explosion⁸⁹ or leaks gassing the entire camp.

Further, if the chamber were used thus (based on DEGESCH figures of 4 oz. or 0.25 lbs. per 100 cu. ft.), 30.4 oz. or 1.9 lbs. of Zyklon B gas (gross weight of Zyklon B is three times that of Zyklon B gas; all figures are for Zyklon b gas only)¹⁴⁷ would be used each time for 16 hours at 41 degrees Fahrenheit (based on German government fumigation figures). Ventilation must take at least 20 hours and tests must be made to determine if the chamber is safe. It is doubtful whether the gas would clear in a week without an exhaust system.¹⁴⁸ This clearly is contradictory of the chamber’s alleged usage of several gasings per day.

Computed theoretical and real-time usage rates of Krema I and alleged execution gas chamber at maximum capacity are set out in Table 4.

cause some Zyklon B granules fell close to the exhaust pipe – this could have caused an explosion upon entering the furnace flue. As unlikely as it is, it is not impossible. Hence, such a design would have been very poor, indeed.

¹⁴⁶ Documentation shows that gas-tight doors were installed in this building only upon conversion into an air-raid shelter in late 1944; “Herstellung der für die Beheizungsöfen, sowie für die Ent- und Belüftung erforderlichen Mauerdurchbrüche und Schläuche,” letter from the Auschwitz Air Raid Warden, Aug. 26, 1944, RGVA 502-1-401, p. 37; see C. Mattogno, “No Holes, No Gas Chamber(s),” *The Revisionist* 2(4) (2004), pp. 387-410, here p. 407. The original doors of the morgue were neither gastight nor panic-proof (see note 99).

¹⁴⁷ In order to achieve the rapid execution times claimed by witnesses, much more Zyklon B than what Leuchter suggests here would have to have been used; see note 134.

¹⁴⁸ Because the room did have a ventilation system (see note 145), Leuchter’s calculation are not applicable here. Although the exact capacity of this ventilation system is not known, it can be assumed to have been no better than those installed in Crematoria II & III, as the one in Crematorium I was a makeshift solution only. The capacity of the ventilation systems of Crematoria II & III is known, so that calculations of hypothetical ventilation times can be made. According to this, it would have taken at least 3 to 4 hours before the alleged gas chamber could have been entered without gas masks (and at least 1½ to 2 hours before it could have been entered with gas masks, but without protective suites). See my expert report, op. cit. (note 71), pp. 220-227.

3.16. Birkenau – Kremas II, III, IV and V

A detailed study of these Kremas resulted in the following information.

Kremas II and III were mirror image installations consisting of several morgues and a crematory of 15 retorts each. The morgues were in the basement and the crematories on the ground floor. An elevator was utilized for corpse transport from the morgues to the crematory. The included drawings

¹⁴⁹ J.-C. Pressac, op. cit. (note 46), pp. 319-329.

were generated from original blueprints obtained at the Auschwitz State Museum and observations made and measurements taken on location. Construction was of brick, mortar and concrete.

The investigated areas were the alleged gas chambers

designated as morgue #1 on both drawings. As noted for Krema I, there was no ventilation,¹⁵⁰ no heating system, no circulation system, no sealant inside or out and further, no doors on the morgues in Krema II.¹⁵¹ The area has been examined by the author and no evidence of doors or door frames has been found. This investigator could not make this determination for Krema III since portions of the structure are missing. Both structures had roofs of reinforced concrete without any apparent openings. Further, reports of hollow gas-carrying columns are not true. All the columns are solid, reinforced concrete exactly as indicated in the captured German plans.¹⁵² The roof vents are not gasketed.¹⁵³ These facilities would be very dangerous if used as gas chambers and this use would probably result in the death of the users and an explosion when the gas reached the crematory.¹⁵⁴ Each facility had a corpse elevator of 2.1 meters x 1.35 meters. Clearly, this elevator was large enough for only one (1) body and an attendant.¹⁵⁵

The alleged gas chamber in each of Kremas II and III had an area of 2500 sq. ft.¹⁵⁶ This would accommodate 278 people based on the 9 square foot theory. If the chamber were filled with the required HCN gas (0.25 lbs./1000 cu. ft.), and assuming a ceiling height of 8 feet and 20,000 cubic feet of space, then 5 lbs. of Zyklon B gas would be required.¹⁵⁷ Again, assume at least one

Table 5: Hypothetical Execution and Crematory Usage Rates of Kremas II and III	
Krema II	
Execution rate	278 people/week (hypothetical)
Cremation rate	714 people/week (theoretical)
	315 people/week (real time)
Krema III	
Execution rate	278 people/week (hypothetical)
Cremation rate	714 people/week (theoretical)
	315 people/week (real time)

¹⁵⁰ This is incorrect, see note 93.

¹⁵¹ This is incorrect, see note 99.

¹⁵² This finding was confirmed by two thorough scientific and forensic studies, see C. Mattogno, op. cit. (note 146), and M. Mattogno, “The Openings for the Introduction of Zyklon B – Part 2: The Roof of Morgue 1 of Crematorium II at Birkenau,” *The Revisionist* 2(4) (2004), pp. 420-436.

¹⁵³ Three sentences earlier, Leuchter wrote: “Both structures had roofs of reinforced concrete without any apparent openings.” If so, how can a roof without openings have roof vents? Leuchter explained this contradiction in a letter where he emphasized that there are no such vents in the roof; see Fig. 16 in the appendix, p. 63, as well as the papers quoted in the previous note.

¹⁵⁴ Extremely unlikely; see note 89.

¹⁵⁵ That is all but clear. No attendant would be necessary, and the amount of corpses that can be piled on a board 1.35 m wide certainly exceeds one. The limit would more likely be defined by the weight capacity of the elevator. For Krema II this was 300 kg, or some four to five corpses; cf. C. Mattogno, *The Real Case...*, op. cit. (note 5), Chapter 1.9., pp. 49-54.

¹⁵⁶ Correct: 210 sqm = some 2257 sq.ft.

¹⁵⁷ To accomplish the murder as swiftly as claimed, at least 15 to 20 kg (33 to 44 lbs) of HCN in the form of Zyklon B would have been necessary, because only some 10% evaporates from the carrier during the

Fig. 8: North elevation (above) and ground plan (below) of crematorium IV and/or V (mirror image) in Auschwitz II/Birkenau camp.¹⁵⁹

1: Alleged 'gas chambers'; 2: Alleged Zyklon B introduction hatches; 3: Heating furnaces; 4: Coke room; 5: Doctor's office; 6: Morgue; 7: Ventilation chimneys; 8: Gutters; 9: Furnace room; 10: Crematorium furnaces

week to vent (as at Krema I). This ventilation time is again doubtful, but will serve to compute our numbers.¹⁵⁸

Computed usage rates for Kremas II and III (theoretical and real-time) and alleged execution gas chamber at maximum capacity are set out in Table 5.

Kremas IV and V were mirror image installations consisting of crematories of two furnaces with 4 retorts each and numerous rooms utilized as mortuaries, offices and storage. The interior rooms did not conform to the mirror image.¹⁶⁰ Some of these rooms were allegedly used as gas chambers. It is impossible to ascertain much from the physical sites since the buildings were razed long ago. No sealant was found anywhere on the foundation or floor. According to reports, Zyklon B gas pellets were allegedly thrown through wall ports which are now non-existent. If the plans of the building are correct, these facilities likewise were not gas chambers,¹⁶¹ for the same reasons iterated earlier

first five to ten minutes; see note 134. Five lbs of gas released during this time would equal 50 lbs of Zyklon B applied.

¹⁵⁸ Because these morgues did have ventilation systems (see note 93), Leuchter's calculations are wrong. See note 148 for calculations based on documented ventilation capacities.

¹⁵⁹ J.-C. Pressac, op. cit. (note 46), p. 401.

¹⁶⁰ Leuchter based this assessment on the situation as it is today. However, since the brick structure visible today was erected after the war with no relation to the original situation (see note 88), this statement is not correct.

¹⁶¹ The plans discovered so far do not indicate the use or purpose of the rooms claimed to have been homicidal gas chambers, although some documents indicate that at least one of them had been equipped to serve as a shower room for inmates, whereas the other might have served (or had been planned to serve) for disinfestations; cf. C. Mattogno, *The Real Case...*, op. cit. (note 5), Chapter 5.11., pp. 177-180.

for Kremas I, II, and III.¹⁶² Construction was apparently red brick and mortar with a concrete floor and no basement. It should be noted that the existence of cremation and execution facilities at Kremas IV and V is unsubstantiated.¹⁶³

Based upon statistics obtained from the Auschwitz State Museum and measurements made at the site for Kremas IV and V relative to the alleged gas areas, and assuming a ceiling height of 8 feet, the computed statistics are as follows:

Table 6: Hypothetical Execution and Crematory Usage Rates of Kremas VI and V	
Krema VI	
Execution rate	209 people/week (hypothetical)
Cremation rate	385 people/week (theoretical)
	168 people/week (real time)
Krema V	
Execution rate	570 people/week (hypothetical)
Cremation rate	385 people/week (theoretical)
	168 people/week (real time)

Krema IV

1875 sq. ft.; will hold 209 people. 15,000 cu. ft. will use 3.75 lbs. of Zyklon B gas at 0.25 lbs./1000 cu. ft.

Krema V

5125 sq. ft.; will hold 570 people. 41,000 cu. ft. will use 10.25 lbs. of Zyklon B gas at 0.25 lbs./1000 cu. ft.

Computed alleged usage rates for Kremas IV and V (theoretical and real-time) and gas chamber at maximum capacity and 1 week ventilation time are set out in Table 6

The Red and White houses, otherwise designated as Bunker I and II, were alleged to be gas chambers only, and there are no estimates available or statistics on the buildings.

3.17. Majdanek

At Majdanek, there are several facilities of interest: the original [old] crematory, now removed; the [new] crematory with the alleged execution gas chamber, now rebuilt; the Bath and Disinfection Building #2, which was apparently a delousing facility; and Bath and Disinfection Building #1, which contained a shower, delousing and storage room and the alleged experimental CO and HCN gas chambers.

The first freestanding crematory, which has been removed, has been discussed earlier. For Bath and Disinfection #2, although closed, an inspection through the windows confirms its function was only a delousing facility, simi-

¹⁶² It should be noted that two of these rooms discussed here did have a heating stove. A ventilation system initially planned was apparently never installed. See my expert report, op. cit. (note 71), pp. 135-139.
¹⁶³ There is ample documentation regarding the cremation furnaces erected in these buildings; in addition, there are documents about gas-tight windows and a gas chamber in connection with these buildings, but this may simply refer to delousing gas chambers. See my expert report, *ibid.*

lar to those at Birkenau. The rebuilt crematory and alleged gas chamber, although discussed earlier, will be considered briefly again. The furnaces are the only portion of the original facility which has not been rebuilt. The basic structure appears to be of wood, as are the other facilities at Majdanek (except for the experimental chambers). However, closer inspection reveals that much of the building is of reinforced concrete, totally inconsistent with the remaining portions of the camp. The alleged execution gas chamber is adjacent to the crematory with apparently no means of containing the HCN gas.

The building is not sealed and would be inoperable for its alleged purpose. Allegedly rebuilt from an original plan, which does not exist, it physically appears to be nothing more than a crematory with several morgues. It is by far the smallest and most insignificant alleged gas chamber of all.

The delousing/storage area at Bath and Disinfection #1 is an L-shaped room with an internal wooden partition and door. It comprises some 7657 cu. ft. of volume and has an area of 806 sq. ft. It has stuccoed walls, beam construction and two ungasketed roof vents. It contains an air circulatory system which is improperly designed, whereby the inlet and outlet are in close proximity to each other. Blue staining, apparently caused by ferric-ferro-cyanide pigment, visibly coats the surface of the walls. It would appear from its design that this was a delousing room or storage room for deloused materials. The roof vents are only capable of providing long-term airing of stored materials. The doors are not gasketed and are not designed to be tight. The room is not sealed inside or out with sealant. There were several areas in this building that were permanently sealed and not available for the author's inspection. This room clearly was not an execution chamber and meets none of the described criteria. See drawing.

If this were utilized as a presumed execution chamber, it would hold 90 people, at most, and require 2.0 lbs. of Zyklon B gas. Venting time should be at least one week. Maximum usage execution rate – 90 people/week.

The alleged experimental gas chambers, located at Bath and Disinfection Building #1, are a brick building connected to the main facility by a loose wood structure. This building is surrounded on three sides by a depressed concrete walkway.¹¹² There are two chambers, an unknown area and a control booth, which has two steel cylinders, allegedly having contained carbon monoxide,¹⁶⁴ which was piped into the two chambers. There are four steel doors with a rabbet, presumably for a gasket. The doors open out and are fastened shut with two mechanical latches and a locking bar (hasp).

¹⁶⁴ The two allegedly original gas cylinders in that room actually contained the non-toxic gas carbon dioxide; cf. J. Graf, C. Mattogno, *op. cit.* (note 84), pp. 143f.

All four doors have glass peepholes and the two inner doors have chemical test cylinders to test the air in the chamber.¹⁶⁵ The control booth has an open window of some 6 inches by 10 inches, never having provision for glass or gasketing, barred horizontally and vertically with reinforcing rods and opening into chamber #2. See drawing. Two of the doors open into chamber #1, one front and one rear, to the outside. One door opens into chamber #2 in the front. The remaining door opens into an unknown area behind chamber #2.¹⁶⁶ Both chambers have piping, allegedly for carbon monoxide gas, but in chamber #2 it is incomplete, having apparently never been completed. Chamber #1 has finished piping, terminated in gas ports at two corners of the room. Chamber #2 has provision for a roof vent, but it appears never to have been cut through the roof.¹⁶⁷ Chamber #1 has a heater/circulatory system for the air, which is not properly designed (the inlet and outlet are too close) and has no provision for venting.

The walls are of stucco, the roof and floor are of poured concrete, none of which has been sealed, inside or out. There are two heater circulators built as sheds on the side of the building, one for chamber #1 and the other for something in the Bath and Disinfection facility, forward, (see drawing) neither of which are properly designed and have no provision for vent/exhaust. The walls in chamber #1 have the characteristic blue ferric-ferro-cyanide staining. The building is unheated and damp.¹⁶⁸

Although at first glance these facilities appear properly designed, they fail to meet all the required criteria for an execution gas chamber or a delousing facility. First, there is no sealant on any of the inside or outside surfaces. Second, the depressed walkway is a potential gas trap for HCN, making the building extremely dangerous.¹¹² Chamber #2 is incomplete and probably was never used. The piping is incomplete and the vent has never been opened in the roof. Although chamber #1 is operational for carbon monoxide, it is poorly vented and not operational for HCN.¹⁶⁹ The heater/circulator is improperly installed. There is no vent or stack.

Therefore, it is the author's best engineering opinion that chambers #1 and #2 were never used, and could not ever be used, as execution gas chambers. None of the facilities at Majdanek is suitable, or was used, for execution purposes.

¹⁶⁵ Probably for a thermometer, since at least one of the rooms had been equipped with a heater for hot-air disinfestations, see below.

¹⁶⁶ This room has no means to introduce Zyklon B from the outside or to ventilate it, therefore cannot be seriously considered for executions.

¹⁶⁷ It is claimed to have been a hole through which Zyklon B was thrown. There is no provision to close this hole. The roof of this building is not original.

¹⁶⁸ Except for the room with heater/circulator.

¹⁶⁹ Although the blue staining proves that it *was* used for HCN delousing purposes at least, as this facility was just that: a delousing facility. For more about this see chapter 4.3.

Chamber #1 has an area of 480 sq. ft., a volume of 4240 cubic feet, will hold 54 persons, and use one pound of Zyklon B

Table 7: Hypothetical Execution Rates for Majdanek	
Chamber #1	54 people/week
Chamber #2	24 people/week

gas. Chamber #2 has an area of 209 sq. ft., a volume of 1850 cubic feet, will hold 24 persons, and use 0.5 pounds of Zyklon B gas. Assuming gas chamber usage, the maximum weekly execution rate would have been the figures set out in Table 7.

3.18. Statistics

The statistics set out in Table 8 (next page) were generated for this report. Assuming the gas chambers existed (and they did not), these figures represent the maximum 24-hour, 7-day a week outputs of each facility and the amount of Zyklon B gas required.

Relative to the additional alleged execution facilities of Chelmno (gas vans),¹⁷⁰ Belzec,¹⁷¹ Sobibor,¹⁷² Treblinka¹⁷³ and any others, it should be noted that carbon monoxide gas was allegedly used.

As discussed above, carbon monoxide gas is not an execution gas,¹⁷⁴ and the author believes that before the gas could take effect, all would have suffocated. Therefore, it is the author’s best engineering opinion that no one died of CO execution.

3.19. Conclusion

After reviewing all of the material and inspecting all of the sites at Auschwitz, Birkenau and Majdanek, your author finds the evidence to be overwhelming. There were no execution gas chambers at any of these locations. It is the best engineering opinion of this author that the alleged gas chambers at the inspected sites could not have then been, or now be, utilized or seriously considered to function as execution gas chambers.

Prepared this 5th day of April, 1988 at Malden, Massachusetts.

May 14, 1988

Dear Mr. Zundel:

I am writing to advise you of a clarification on the drawings of Krema II and Krema III as submitted with my report of April 5, 1988.

Both these drawings indicate roof vents that are for reference only, as they appear on material supplied by Museum officials. These vents are not now, or were they ever part of the actual structures at Birkenau. These are spurious bits of information that are shown on some schematics of these two structures and appear on my drawings only for reference as indicated in the text. My intent was to call attention to this erroneous material and information. It must be clearly understood that a visual inspection of both KremaII and Krema III clearly shows that no roof vent ever existed at either of these Facilities.

Very truly yours,
Fred A. Leuchter Associates

Fred A. Leuchter, Jr.
Chief Engineer.

Gentlemen:

Enclosed, please find 32 samples of materials for analysis. All are for determination of cyanate residue except # 12 which is for definition of material.

Sample # 32 is control sample. Note blue color. Other samples should equal or exceed cyanate content.

Sample # 12 is Gasket material. Determine composition.

Sample # 7 is sediment material. Determine cyanate content.

Samples #1 through # 11; Samples # 13 Through 32. Brick, mortar and sediment. Cyanate content.

Test results for court litigation. Please certify.

All samples stored in cool, damp and sunlight free locations.

Please complete analysis as soon as possible.

ALPHA ANALYTICAL LABORATORIES
CERTIFICATE OF ANALYSIS

Client: Fred A. Leuchter, Associates
Analysis Requested: Total Iron
Sample Number: 880451.1
Date Received: 03/18/88
Date Reported: 03/22/88
Client Ident: 9
Sample Location:
Sample Description: Brick
Sample Container: Bag
Field Prep: None
of Containers: 1

PARAMETER	RESULT	UNITS	MDL*	INST	REF**	METHOD	EXTRACT ANALYSIS
Total Iron	7,580	mg/kg	1.0	ICP	1	6010	----- 03/21/88

* MDL—Method Detection Limits (same units as the Results)
** REF—Reference as cited on the cover (first) page of this report.

CERTIFICATE OF ANALYSIS

Client: Fred A. Leuchter, Associates

Analysis Requested: Total Iron

Client Ident: 29

Sample Location: Brick

Sample Description: Bag

Sample Container: None

Field Prep: None

Sample Number: 880451.2

Date Received: 03/18/88

Date Reported: 03/22/88

of Containers: 1

PARAMETER	RESULT	UNITS	MDL*	INST	REF**	METHOD	EXTRACT ANALYSIS
Total Iron	6,280	mg/Kg	1.0	ICP	1	6010	----- 03/21/88

ALPHA ANALYTICAL LABORATORIES

CERTIFICATE OF ANALYSIS

Client: Fred A. Leuchter, Associates

Analysis Requested: Total Iron

Client Ident: 32

Sample Location: Brick

Sample Description: Bag

Sample Container: None

Field Prep: None

Sample Number: 880451.3

Date Received: 03/18/88

Date Reported: 03/22/88

of Containers: 1

PARAMETER	RESULT	UNITS	MDL*	INST	REF**	METHOD	EXTRACT ANALYSIS
Total Iron	6,170	mg/Kg	1.0	ICP	1	6010	----- 03/21/88

ALPHA ANALYTICAL LABORATORIES

200 Homer Avenue

Ashland Technology Center

Ashland, Massachusetts 01721

(617) 881-3503

CERTIFICATE OF ANALYSIS

Client: Fred A. Leuchter, Associates

Job Number: 880386

Address: 231 Kennedy Drive; Unit #110

Invoice Number: 3943

Boston, MA 02148

Date In: 03/09/88

Attn: Fred A. Leuchter, Jr.

Date Reported: 03/18/88

Sample Description: Thirty-two brick samples

All signs indicate that this will remain so for an indefinite period. Realizing the necessity for keeping food and raw materials free from pests, a quick and efficient method had to be devised which required only one application. One of the very few important fumigants suitable for pest control in confined spaces is hydrocyanic acid. Most commodities can be treated with this without causing harm (even living plants, under certain conditions). It is simple to detect the presence of hydrocyanic acid, even at extremely low concentrations. As long as 80 years ago it was recognized that hydrocyanic acid could be useful in pest control but it took half this time to popularize the method. Deficiencies and disadvantages had first of all to be eliminated from the method of application. First this had been done in such a way that hydrocyanic acid was no more developed on the spot by mixing cyanides and acid, but this process already took place in the factory: The so-called “pot method” was replaced by liquid hydrocyanic acid. The few deficiencies of this procedure were removed in the early twenties by the ZYKLON method: One added liquid HCN to a “carrier substance”, thus simplifying handling whilst all favourable properties of liquid HCN were maintained. At the same time, danger to the operator was reduced to a minimum. Hydrocyanic acid in the form of ZYKLON can be safely stored for considerable periods and under all climatic conditions, any quantity of gas can be easily measured, quickly and cleanly released. Any residues are completely harmless.</div> <div>3</div>
---	---

<div><div>HYDROCYANIC ACID</div><div><p>In conjunction with its favourable chemical and physical properties, hydrocyanic acid is very popular as a fumigant. This is due to its radical effect on nearly all insects, including eggs, larvae and pupae – e.g. in stored products, dwellings, etc. – and on all rodents such as rats and mice in ships, warehouses, etc.</p><div><div>Chemical and Physical Properties</div><div>The chemical and physical properties of hydrocyanic acid are: –</div><div><div><div><div>HCN</div><div>27</div><div>24.6 cal/10°C (32°F)</div><div>25.6°C (78°F)</div><div>–14.8°C (5°F)</div><div>0.687 (20°C) (68°F)</div><div>0.969 (30°C) (86°F)</div><div>1.20 grammes</div><div>177 mg Hg (= 3.4 lb/sq. in.) at 30°C (= 86°F)</div></div><div><div>Chemical formula:</div><div>Molecular weight:</div><div>Evaporations:</div><div>Boiling point:</div><div>Freezing point:</div><div>Density of liquid HCN:</div><div>Density of gaseous HCN:</div><div>Weight per litre of gaseous HCN:</div><div>Vapour pressure:</div></div></div></div></div><div><div>HCN is colourless and has a slight but distinct odour.</div><div>The following conversion table should be observed when applying gaseous hydrocyanic acid for fumigation purposes: –</div><div><div><div>1 g/m³</div><div>1 lb/1000 cu. ft.</div><div>1 vol-%</div><div>1 ppm</div></div><div><div>= 1 oz/1000 cu. ft.</div><div>= 0.083 vol-%</div><div>= 833 ppm (parts per million)</div><div>= 16 g/m³</div><div>= 12 g/m³</div><div>= 0.0012 g/m³</div></div></div></div></div></div>	<div><div>Stability</div><div>Liquid pure HCN is very unstable for which reason only stabilized hydrocyanic acid is marketed. Weak acids or substances splitting off acids are used as stabilizers. Absorption in porous materials also has a stabilizing effect.</div><div><div>Inflammability</div><div>Liquid HCN burns like alcohol. Gaseous HCN forms an explosive mixture with air under certain conditions. The lower explosion limit, however, lies far above the concentration used in practical fumigation work.</div><div><div>Chemical Compatibility</div><div>Hydrocyanic acid dissolves very readily in water. Compared with liquid hydrocyanic acid, the gas is chemically very indifferent, and even in highly concentrated form under prolonged exposure it does not show a tendency to react with other substances. In consequence, it is harmless to wood, polished articles lacquers, as well as to dry foodstuffs. Weak concentrations of HCN are harmless to metals. In case of high relative humidity of air, it may happen that blank-polished surfaces of metal get tarnished, particularly in case of somewhat higher concentrations of gas. Experience over many years has also shown that neither the processing of raw materials (e.g. flour, brewing barley, tobacco, cocoa) nor the flavour of processed articles (e.g. pastries dried fruit, cigarettes) are affected; only roasted coffee and tea should never be treated with HCN. (Raw coffee, however, can be treated.)</div><div><div>Penetration and Sorption</div><div>A major contributory factor to successful treatment is the great penetrative power of hydrocyanic acid; this is valid for the treatment of packed commodities as well as for space fumigation. HCN is very volatile and therefore commodities and also whole buildings can easily be aerated. Even if dampness retains some residues, the volatility of the gas will ensure its rapid dispersal. The chemical indifference prevents, for instance, the formation of other poisonous substances from any possible absorbed residues.</div></div></div></div></div>
--	---

<p>Toxicity</p> <p>No thoroughly effective pesticide is known to exist which could be considered to be harmless to human beings or mammals.</p> <p>Fatal concentrations of HCN impede or completely cut off the oxygen supply to the cells. The poison can enter the body in three ways: through the mouth, the respiratory organs, or the pores of the skin. The latter will occur in particular if the body is exposed to a high concentration for any length of time and in unfavourable conditions (great heat).</p> <p>Protection against Hydrocyanic Acid</p> <p>The use of gas-masks, which in no case should have exhaust valves, during fumigation operations is absolutely essential. A gas-mask must be worn whenever there is a risk of gas being inhaled, particularly during the process of gassing or ventilation, or in the event of leakages.</p> <p>Each operator must carry two well-fitting gas masks (one as a spare if the other should fail to function), also two special canisters giving protection against hydrocyanic acid with irritants. It is highly dangerous to use any other type of canister than those specially marked.</p> <p>The capacity of a canister is limited, as its chemical filling can absorb only a small quantity of gas. Therefore, several canisters must always be on hand. A slight smell of gas or irritation of the eyes or the nose indicates that the canister is exhausted and needs replacing. This must, of course, be done in the open air. A fresh canister must be used in gas-free air for at least 2 minutes before it is used in gas-filled rooms, since it will not absorb gas before the chemical filling has become moist.</p> <p>When working with fumigation chambers, it is not necessary to wear a gas-mask, as these chambers are equipped with special devices obviating a contact of the operator with the gas.</p>	<p>Method of Detecting Hydrocyanic Acid</p> <p>On account of the extreme toxicity of hydrocyanic acid, combined with its solubility in water, even traces of the gas can prove fatal. It is, therefore, of the utmost importance that premises and their contents be thoroughly aired before they are reoccupied. Many tests are recommended or officially prescribed to confirm that no dangerous traces of gas stay behind. The most reliable test is a chemical one. It is quite objective, simple to prepare and to use, and is sensitive to concentrations of HCN lower than the minimum that can be tolerated by man.</p> <p>The so-called "copper acetate/benzidine acetate test" will determine a concentration of the gas of 15 mg/m^3 ($= 0.015 \text{ oz/1000 cu. ft.}$), while the concentration tolerated by human beings is 50 mg/m^3 ($0.05 \text{ oz/1000 cu. ft.}$). In ordinary fumigation work the concentrations are 1 to 30 g/m^3 ($= 1$ to $30 \text{ oz/1000 cu. ft.}$).</p> <p>Two solutions are needed for this test: —</p> <p>Solution I: Dissolve 2.86 g ($= 0.1 \text{ oz}$) of cupric acetate — $\text{Cu}(\text{C}_2\text{H}_3\text{O}_2)_2 \cdot 2 \text{ H}_2\text{O}$ — in distilled water and dilute to 1 litre ($1\frac{3}{4} \text{ pints}$).</p> <p>Solution II: Dilute 475 ml of a saturated benzidine acetate solution with 525 ml of distilled water. If benzidine acetate is not available, dissolve 0.43 g ($= 0.015 \text{ oz}$) benzidine in 100 ml distilled water and add 0.6 ml acetic acid.</p> <p>Solution II is somewhat unstable and must therefore be protected from light and kept in a brown bottle. If precipitation or turbidity is observed, it means that the solution has deteriorated and must be replaced.</p> <p>Equal parts of both solutions are mixed shortly before use. It is advisable not to mix larger quantities than needed as the mixture is very unstable.</p> <p>The lower part of a strip of filter paper is dipped into the mixed reagent and excess moisture shaken off. In contact with hydrocyanic acid the test paper will show a colour varying from a very faint to an intense blue, indicating a lower or higher concentration, respectively.</p>
--	--

The gas-test outfit contains a scale of colours: -

- | | | |
|------------------|-------|---|
| 1) intense blue | means | dangerous |
| 2) ordinary blue | means | less dangerous, but not allowed for release |
| 3) pale blue | means | not dangerous. |

To prove the efficiency of the reagent a freshly prepared test paper is inserted into the test tube provided with the gas-test outfit for 10 seconds. This tube contains a salt which develops traces of hydrocyanic acid; the colour of the test paper will thus indicate whether a solution is fit for use or not.

For the test proper, another strip of test paper is briefly immersed in the reagent and then taken into the room (or commodities) to be examined for gas, inside a stoppered tube or vial. It is then taken out, exposed in some place where traces of gas are most likely to be found, e. g. in bedding and the like. The colour assumed by the test paper at the end of 10 seconds is then compared with the colour scale, and if this reveals a still dangerous concentration, the room or commodity must be aired for at least another two hours. Then the test must be repeated with a freshly prepared strip of test paper and in the manner mentioned above. If the paper still shows a blue tint, the airing must be continued for another two hours.

Where air contains other oxidizing elements, such as chlorine or nitrogen oxide, the method described above is of no avail.

Poisoning and Antidotes

The first stage of poisoning manifests itself in increasing local irritation of the mucous membrane of eyes, throat or upper respiratory tract, burning sensation on the tongue, peculiar metallic and irritant taste in the mouth. The exhaled breath smells of hydrocyanic acid; there is a sensation of pressure in the forehead, general oppression, giddiness, disturbed equilibrium, stabbing pains in the head, nausea, vomiting, tenesmus. Respiration quickens at first and deepens later on; it is accompanied by a rush of blood to the head and by palpitation of the heart.

There follows an asthmatic stage, convulsive in character, and, finally, an asphyctic stage. Death takes place if the patient cannot be treated in time.

If the quantity of gas is very small, the body itself can convert it into harmless compounds. So far no clear case of chronic poisoning is on record.

As soon as the first stage of poisoning is observed, the most important thing is to remove the patient from the gas infected area into fresh air, away from all traces of gas. Moreover, the respiration and heart action must be stimulated to the greatest possible extent in order to accelerate conversion of the gas. The patient must be treated immediately. He should be kept warm and a doctor called.

An ampoule containing amyl nitrite and wrapped in a cloth should be broken and held in front of the patient's nose for 15 seconds. This is to be repeated five times at intervals of 15 seconds.

Injections of stimulants, such as lobeline or caffeine, will be very useful. On no account should camphor be injected. Information on other anti-toxi measures can be obtained from health authorities, but their application must be left to a doctor. Should the patient lose consciousness, artificial respiration must be applied in the usual way and not be interrupted under any circumstances, a point to be borne in mind where the poisoned person must be taken to a hospital. Non-observation of this important rule may lead to death.

Gas-test and first-aid outfit.

ZYKLON

Composition

In ZYKLON pure (98%-99%) liquid hydrocyanic acid is chemically stabilized and absorbed in a porous, inert material. It is supplied in snippets or discs prepared from wood pulp. Snippets generally are preferred as in view of their larger surface they give off the gas more rapidly. Upon request also discs can be supplied. The absorbent material can easily be collected at the end of the fumigation.

Packing

ZYKLON is packed in handy, gas-tight tins of various sizes which are packed in strong wooden cases. One case, measuring 72 x 50 x 36 cm (= 0.130 m³ or 4.59 cu. ft.), contains: -

Imperial units	16 tins, each containing 40 ozs. HCN - total 40	lbs HCN or
	30 tins, each containing 16 ozs. HCN - total 30	lbs HCN
Metric units	12 tins, each containing 1500 g HCN - total 18 kg HCN or	
	16 tins, each containing 1000 g HCN - total 16 kg HCN or	
	30 tins, each containing 500 g HCN - total 15 kg HCN	

Upon special request smaller sizes of tins will be manufactured.

Storage and Storage Stability

The tins are so resistant to pressure and corrosion that they will be safe for transport and storage also in tropical countries. Nevertheless, the store should be dry and cool as far as possible, and, above all, well ventilated and locked. Although ZYKLON tins can safely be stored for many years, because of the existing international transport regulations a storage time of only one year may be guaranteed.

◀ Fumigation of an elevator mill.

Fields of Application

ZYKLON can be used in all spheres where the other hydrocyanic acid methods are suitable, except for the fumigation of trees under tents. It is, however, imperative that a closed space is available. For instance, two operators are required for an area of 350,000 cu. ft. With adequate organisation, buildings of all sizes can be fumigated.

The individual fields of application are as follows: —

Protection of Stores: Destruction of pests in mills, food factories, cold storage, textile factories, tobacco processing factories, warehouses for any type of commodity, goods waggons, cargo boats for transoceanic traffic and inland navigation.

Protection of Health: Destruction of pests in dwellings, railway carriages, passenger and cargo boats — in the latter, in particular, for the regular destruction of rats —, further, irradiation of foxes and badgers in their burrows for fighting rabies (hydrophobia).

Protection of Materials: Treatment of museums, collections, libraries, churches, etc.

Plant Quarantine: Fumigation of nursery products, seeds and plants, flowers, fruits and young vines, in particular, in gas chambers which are equipped with a circulatory system.

Preparation for Fumigation with ZYKLON

For practical purposes, a close inspection of the premises to be fumigated and their immediate surroundings should precede the actual preparatory work. In particular, it should be ascertained, which types of pests have to be dealt with, when fumigation is to take place, what preparation has to be made by the client.

Full co-operation with the client facilitates the whole fumigation procedure from the preparation to the successful conclusion.

It is essential to ascertain the cubic capacity of the premises to be fumigated so that the required quantity of ZYKLON can be made available. Only the outside measurements are decisive even if the premises are empty.

ZYKLON tins with the gas-impregnated materials: Snippets and discs.

The building to be fumigated must be sealed so as to retain an adequate gas concentration for the required time. It is made gas-tight by closing and/or sealing all doors, windows and other openings leading to the open air (chimneys, fans, exhausts, air-flaps, conveyor devices, loading platforms, etc.).

In order to accelerate diffusion of the released gas, closed machines, elevators, conveyor belts and worms are to be opened, tightly packed commodities or stacked sacks unstacked, clothes and bed clothes spread out in dwellings, wardrobes and drawers opened, etc.

The following have to be removed from rooms: –

Pets and domestic animals, living plants, moist and fatty foodstuffs which are not stored in closed containers, tea and roasted coffee, undeveloped films, fresh fruit and vegetables, finally also aqueous liquids in open containers.

Safety Measures

As in the case of all substances containing or generating hydrocyanic acid, ZYKLON should be handled only by persons with extensive training, thorough knowledge of its properties and experience in its application. Many countries have issued official regulations for the method of application to be adopted and these are to be followed in principle. Generally speaking, attention should be paid to the following: –

As long as there is any possibility of hydrocyanic acid being present or developing, one person should never work on his own – except when doing chamber fumigation (see page 25). From the moment the tins are opened until the fumigated rooms are available again for reoccupation, a well-fitting mask equipped with the special HCN filter should be on hand and put on when necessary.

In some countries, as e. g. in Germany or England, it is necessary to evacuate rooms adjacent to those to be fumigated. However, e. g. in Italy, Sweden, etc., regulations are not so strict. In any case, windows in these adjacent rooms must be left open.

Signs warning unauthorised persons of the danger should be posted at all approaches.

Gasping of a fox burrow

Gasping of bagged raw coffee

Development of Hydrocyanic Acid from ZYKLON

The tins containing ZYKLON are opened by means of the „DEGESCH tin opener“. It works quickly, and the cut is clean. Once a tin is opened, its contents should be used up in one operation. If it has to be distributed over several small rooms, the tin can be closed again for short periods with a rubber cap. The contents of the tin — snippets or discs — is shaken out preferably on sheets of paper or old sacks, so as to protect the floor, if necessary (see front-cover). Each disc approximately contains the same quantity of hydrocyanic acid. Therefore, it is possible to give exact dosages also in small rooms, such as e. g. ships' cabins.

Hydrocyanic acid absorbed in the carrying material develops without any auxiliaries, such as warmth, pressure, etc.; of course warmth accelerates the action, but as a rule rooms need not be pre-heated. If time is limited, a short pre-heating renders the insects more susceptible to the gas, speeds up generation, and leads to quicker results.

DEGESCH tin opener

Concentration and Time of Exposure

Various types of pests react differently to hydrocyanic acid. Rodents can be killed with only 1.2 g/m³, larder (bocon) beetles require twenty times as much. Times of exposure also vary greatly, i. e. from 2 to 72 hours. The various types of pests, small leakages in rooms, unfavourable weather conditions, difficulties of penetration and other circumstances have to be taken into consideration when determining the concentration and time of exposure. Apart from this, quantities of gas and time of exposure to be applied are officially regulated in many countries — in particular, for rat control and plant quarantine.

Diffusion of Gas

Tins should be distributed suitably in the rooms to be fumigated; the numerous gas sources will accelerate spreading of the fumigant. As a rule, the distribution should be uniform, but in the case of places difficult to penetrate proportionally more tins should be placed. Then the gas spreads evenly in the shortest time, and no fans or other mechanical devices are required.

Ventilation

As a rule, it is not necessary to use fans or forced ventilation in airing fumigated rooms. Natural drafts remove the gas very rapidly, i. e. as soon as windows and doors of the rooms are opened and all other openings unsealed. Damp, cool and calm weather conditions, too tightly stored commodities, many fittings with large surface areas require prolonged airing, whereas warm and dry weather conditions, relatively empty rooms need shorter airing. Wherever possible, especially in dwellings and work-rooms, ventilation can be speeded up by heating rooms, beating clothes, bed clothes, etc., and spreading out commodities, but naturally only after rooms can be re-entered. This work should only be carried out by the fumigation personnel or under their close supervision.

Clearance of Property and/or Goods Fumigated

A simple, reliable chemical test (see page 7) is used to ensure that no dangerous concentrations remain in the spaces or commodities which have undergone fumigation. It is required that these tests be carried out after the premises have been closed for at least one hour following ventilation so that conditions, especially the temperature, are as near normal as they will be when re-occupied.

Fumigation of a pneumatic mill.

Fumigation of Flour Mills, Food Factories, etc.

Mills, farinaceous food, chocolate and other food factories, provision stores and similar buildings provide very favourable living conditions and breeding grounds for all kinds of food pests. Flour moths, dried fruit moths, flour beetles, bread beetles, etc. and their larvae thrive on the food in the suitable temperature and humidity prevailing. Their presence will soon become a nuisance, and drastic action must be taken at an early stage.

ZYKLON acts rapidly and drastically. The hydrocyanic acid developed from ZYKLON penetrates all nests and breeding grounds, kills all insects in their various stages of development if the necessary dosage and time of exposure is observed, and also destroys rats and mice. After fumigation, the gas can easily be cleared away without leaving any residue or affecting the fumigated commodities in any way.

A typical fumigation in its various phases is described in the following paragraphs, naturally local conditions, such as type of building, purpose, etc., need individual adjustment. The buildings in question are usually fairly large and full of recesses. Complicated systems of pipes, machines, containers, etc. are involved.

In co-operation with the manager and workers of the factory, the fumigators make the necessary preparations which have a twofold purpose: —

- (a) to prevent or retard the escape of the gas by sealing all windows, apertures, etc., of the building;
- (b) to facilitate the access of the gas to the insects' hiding places by a preliminary exposure and cleaning of all parts of machines and pipes. For this purpose also dense stacks of commodities should be broken down.

It is imperative to clear the rooms to be treated, and all adjacent rooms, of human beings, domestic animals, pets, etc. from the very beginning of the

fumigation until the end of the airing operation. This evacuation must be controlled by a roll-call and inspection of the premises.

The chief operator must so arrange everyone's part in the operation that it will not take more than 30 minutes in all. This applies especially to very warm climates. HCN develops more quickly at a high temperature. This important fact should always be kept in mind. Gassing should not be interrupted.

At least two – for larger buildings more – of the fumigating staff must work together and watch each other continuously. It is advisable to divide the work: one expert to open the tins, another to empty them.

Prior to fumigation, the tins must be distributed about the building. The tins are opened, and the ZYKLON is scattered so as to reach even the remotest parts of the building. If this is done correctly the gas will develop evenly and instantaneously throughout the premises. Spaces difficult to reach may be charged separately. In multi-storied buildings one begins with the top floor, and then works towards the exit, taking care that nobody re-enters rooms already charged. Even under mask protection it is not advisable to expose oneself to the gas more than is absolutely necessary.

The exit door is sealed after everybody has left the building; warning notices must be put up before gassing commences and a guard placed near the building to prevent unauthorised persons from entering.

Time of exposure depends on the type of pests to be attacked; for the destruction of the various types of moths and their pre-adult stages 24 hours will suffice, against other kinds of insect pests one should fumigate for 48 hours. If there are any dense stowages or bulks of commodities to penetrate, the time of exposure may need to be extended to 72 hours.

Ventilation

During this operation gas-masks must be worn. The ventilation takes place in the reverse direction to the gassing. All windows near the entrance are opened first, then gradually those in the rest of the building. It is advisable to work only for 10 to 15 minutes at a time and then to make interruptions of half an hour, as a precaution against skin poisoning.

Depending on concentration, outdoor temperature and weather conditions, ventilation will take at least 10 hours. Its duration also depends on the type of building, number, size, and situation of windows and other apertures.

Clearing of tins and residues may be commenced before the end of airing. Windows and doors must remain open, and gas-masks kept available. ZYKLON tins and absorbent material must always be collected and cleared away before the resumption of work. It is imperative that not a single tin be left about!

Chemical gas tests must be made in various parts of the building, according to the relative instructions.

A conscientious operator should never fail to inspect the result of his work, accompanied by the client.

Fumigation of Ships

Passenger or cargo boats can be successfully fumigated with ZYKLON for the control of every kind of infestation. For the extermination of rats, the ZYKLON method is expressly recognised and admitted under the regulations of the "International Sanitary Convention". Lowest concentrations and exposure time can be applied for this work as rodents are far more susceptible than insects. Fumigation takes only 6-8 hours when ships' holds are empty.

Gassing of ship. Feeding ZYKLON discs into compartment of hold. (N.B. - In German ports regulations prescribe the personal supervisions by an official of the Public Health Authorities.)

If cockroaches, ants, bugs or food pests in ships' cabins, kitchen, provision stores, etc., are to be controlled simultaneously, higher concentrations and longer exposure times should be used.

Loaded cargo vessels should be fumigated only in exceptional cases since loaded holds naturally impede the diffusion of gas, thus impairing the efficacy of the operation. In any case, fumigation would here necessitate very protracted ventilation. Cargoes of tea must under no circumstances be exposed to hydrocyanic acid.

A ship can be fumigated successfully and safely only in close co-operation with officers and crew. They may assist in the preparation, but at no time in the fumigation work.

As to preparatory measures, including liberation of the gas and ventilation, the same rules as apply to the fumigation of buildings must be observed, with a few exceptions conditioned by the particular structure of the vessel.

Where fumigation is limited to holds and food stores, no one is allowed to remain on board or to board the vessel for about two hours after re-opening the last fumigated space. Access to the deck and all places not subjected to fumigation may only be given after the chemical gas test has proved that no gas has penetrated into the non-fumigated parts of the vessel.

Port holes, for instance, need only be firmly closed, without paper insertions; canvas covers suffice for deck ventilators and funnels; hawses must be choked up, but the steerage holds must remain open. Top-hatches are to be sealed with battens and tarpaulins; a small section of the hatches should, however, be kept open for the introduction of the ZYKLON.

Where fumigation is to be confined to certain spaces only, all air passages to the outside (ventilators, etc.) should be properly sealed.

Liberation of the gas normally commences in the lower decks, in special cases the order can be reversed. The holds need not be entered, since the fumes are emptied by scattering their contents into the holds from above.

Fumigation Chambers

In the main, fumigation chambers serve the purpose of disinfecting nursery products, seeds and plants, flowers and fruit, in accordance with the regulations laid down by the "International Plant Protection Convention".

Whether the fumigation chamber is a permanent installation or mobile, a DEGESCH circulatory device makes it possible to operate safely and quickly, and ensures success.

Mobile fumigation chambers are of great advantage: As they can be attached to any tractor or lorry, their possibilities for use are almost unlimited. They are economical in price and running. The standard sizes are 2 m³ and 20 m³, other sizes can be constructed according to special requirements.

Stationary chambers are made from steel, bricks or concrete. If constructed from bricks or concrete they must be sealed by applying a suitable coating.

Neither service personnel nor unauthorised persons come into contact with the gas; one person alone can operate the fumigation chamber; a gas-mask need not be worn. The gas-air-mixture is circulated, thus accelerating penetration and reducing exposure time. After treatment, the gas can be cleared quickly and safely.

Detailed descriptions and instructions for usage are available.

For ventilation, all awnings and tarpaulins are removed first; then all doors, port holes and windows should be opened. Fans should be switched on and, as soon as possible, all bedding, mattresses, etc. taken on deck and thoroughly beaten. Heating of cabins will help to expel all traces of gas in the shortest possible time.

Tests for gas should not be made until all upholstered objects, bedding, curtains, hangings, etc. have been put back into place, and doors and windows have remained closed for at least one hour. The test for residual gas requires a temperature of at least 60° F (15° C). Therefore, during cold weather the heating should be used.

Special attention should be paid to rooms which, on the same day or during the following night, are intended to serve for prolonged occupation or for sleeping.

Mobile fumigation chamber, capacity 20 cubic metres.
The standard equipment for the protection of plants and stored products.

CLOSING REMARKS

Our instructions for operational procedure are based on wide experience gained during the many years ZYKLON has been on the market; these instructions, however, cannot cover every possible condition arising in special cases. For this reason, we shall be pleased to give further information on request, but we cannot accept responsibility for any direct or indirect damage caused by or to the user of ZYKLON; the responsibility always rests with him.

4. Critical Remarks

By Gernar Rudolf

4.1. Physical, Chemical, and Toxicological Features of HCN and Zyklon B

4.1.1. Physical Features

Hydrogen cyanide, HCN, a colorless liquid at room temperature, is similar to water in many of its physical properties. This results in HCN being readily dissolved in water and adsorbed on wet surfaces. Accordingly, much more HCN is accumulated in moist walls than in dry walls. The water content of concrete, cement, and lime mortars as well as other porous building materials depends on the temperature and relative humidity of the air and fluctuates between 1% and less (at 20°C (69°F) and 60% relative humidity) and up to 10% in air saturated with humidity.¹⁷⁵ Tests have shown that the amount of HCN absorbed in such materials is proportional to that:¹⁷⁶

	mg HCN absorbed per exposed m ²
Lime sandstone, naturally humid	22,740.0
Lime sandstone, dry, at 20°C	2,941.0

This is important for our considerations, because the alleged gas chambers in the basement of crematoria II and III in Birkenau had no heating systems and were thus cool and humid. In contrast to that, the delousing rooms of the hygienic Buildings BW 5a and 5b in Birkenau were above ground and well heated, so that their walls were both warm and dry. We would therefore expect the adsorption of HCN to be roughly ten times higher in the alleged homicidal gas chambers of Crematoria II and III than it was in the delousing gas chambers of the hygienic Building BW 5a and 5b, if judged only by the water content of the walls.

Although HCN is approximately 5% lighter than air, it does not separate from air and rise, mainly because of the thermal movement of every gas particle. To clarify this, reference must be made to the principal components of air. The main component of air, nitrogen (78% by volume), is 8% heavier than hydrogen cyanide gas. If a separation took place between hydrogen cyanide gas and nitrogen, it would occur all the more between the two main components of air, since oxygen (21% by volume) is 15% heavier than nitrogen. This does, of course, not happen. Thus, a spontaneous separation of hydrogen cya-

¹⁷⁵ K. Wesche, op. cit. (note 63).

¹⁷⁶ Samples exposed on one surface to 2% HCN by volume over 24 hours; L. Schwarz, W. Deckert, op. cit. (note 90).

nide gas would never take place in air. However, the 5% lower density of pure hydrogen cyanide gas compared to air – this corresponds to the density difference of air with a temperature difference of 15°C or 27 °F – can very well lead to a density convection, when pure gaseous hydrogen cyanide is released in a location with

Graph 1: Vapor pressure of hydrogen cyanide in percentage of air pressure as a function of temperature.

the same temperature as the ambient air. The gas would then rise slowly, but gradually mix with the ambient air. But to conclude from this that hydrogen cyanide vapors always rise would be an incorrect conclusion. At 15°C, for example, on physicochemical grounds, no concentrations higher than 65% of hydrogen cyanide can occur in air (see Graph 1); the density of such a mixture lies only approximately 3% below that of air. Furthermore, a great deal of energy is withdrawn from the ambient air by the evaporating hydrogen cyanide. Consequently, the ambient temperature sinks until exactly as much energy is transported to the liquid HCN as needed for the decelerated evaporation at the corresponding lower temperature. It is therefore theoretically possible that hydrogen cyanide vapors containing little HCN, which are cold, are denser and thus heavier than the surrounding air.

Graph 1 shows the equilibrium percentage of hydrogen cyanide in air as a function of air temperature. Even at 0°C (32°F), the percentage still lies at approximately 36% by volume. Condensation of HCN on surrounding objects would occur only if the percentage rose over the equilibrium percentage (the so-called dew point). Since in all cases here under consideration, a maximum concentration of 10% HCN in air would only be reached for a short period of time close to the source of HCN (the Zyklon B carrier), no condensation of HCN on walls can be expected. An exception is, however, the so-called capillary condensation, which can occur in finely porous materials such as cement mortar.¹⁷⁷ But compared to the absorption of HCN in capillary water of building materials, which occurs on a much larger scale, capillary condensation can be neglected.

¹⁷⁷ The lowered vapor pressure caused by adsorption effects in a narrow hollow space leads to early condensation.

Hydrogen cyanide forms explosive mixtures with air in the range of 6 to 41% by volume. With strong initial ignition, its explosive effects can be compared with nitro-glycerin, the usual explosive in dynamite.¹⁷⁸

In the applications under discussion here, a proportion of 6% by volume and more can only be reached in the immediate vicinity of the source, which merely suffices for local low-speed detonations at worst. Hence, only inappropriately high concentrations can lead to explosive mixtures, as shown by a corresponding accident in 1947.¹⁷⁹ With correct application quantities and concentrations, the technical literature indicates that there is practically no danger of explosion.¹⁸⁰

Zyklon B was HCN adsorbed on porous carrier material. The product used in German concentration camps during World War II consisted of gypsum granules with a certain amount of starch added (product name "Erco").¹⁸¹ If a certain mass of Zyklon B is given in the literature or in documents, this always referred to the net HCN content. The carrier itself added approximately twice the mass of the HCN to the entire product. So a can of 1 kg Zyklon B consisted of 1 kg HCN plus ca. 2 kg of carrier material.

By intentional design, Zyklon B does not release its poison gas instantaneously, but rather over an extended period of time. The evaporation characteristics of this product at various temperatures are reproduced in Graph 2 as given by R. Irmscher of the DEGESCH Company in a paper published in 1942.¹⁸² The evaporation is "seriously delayed" at high atmospheric humidity,

Graph 2: Evaporation rate of hydrogen cyanide from the Erco carrier material (gypsum with some starch) at various temperatures and fine distribution, according to R. Irmscher/DEGESCH 1942.¹⁸²

¹⁸² R. Irmscher, *op. cit.* (note 55); on the history and development of Zyklon B see H. Leipprand, *op. cit.* (note 55).

because the evaporating hydrogen cyanide withdraws considerable quantities of energy from the liquid HCN, the carrier material, and the ambient air. As a consequence, the temperature of the product and the ambient air drops. If the temperature of the air reaches the dew point, atmospheric humidity condenses out of the air onto the carrier material, which binds the hydrogen cyanide and drastically slows down the evaporation process.

For later references, we want to keep in mind that at 15°C and in the presence of low atmospheric humidity, approximately 10% of the hydrogen cyanide used at Auschwitz has left the carrier material during the first five minutes, and approximately 50% after half an hour. In cool cellar areas with a relative humidity of approximately 100%, the evaporation times would have been “seriously delayed.”

Hence, the relative atmospheric humidity in the cellars of Crematoria II and III, which must certainly have approached 100%, would have “seriously delayed” evaporation.¹⁸³

4.1.2. Chemical Features

HCN is a weak acid that forms unstable salts (cyanides) with alkali metal ions like sodium and potassium in alkaline environment. If the environment is not at least slightly alkaline, these salts decompose under the influence of water and slowly release HCN. If iron ions are present, for example in the form of rust (a component of basically all cements and sands used for construction),¹³² HCN forms iron-cyanide compounds, which are much more stable and can resist even slightly acidic environments. In the presence of sufficient amounts of HCN and a slightly alkaline environment, as can be found in fresh lime mortars for several days or weeks and in cement mortars and concretes for months or years, these iron cyanides slowly convert into complex iron cyanides of mixed iron valences, so-called Prussian Blue or Iron Blue. This blue compound is one of the most resistant inorganic pigments known.¹²³ Once formed as an integral part of a wall in the chemical process outlined above, it remains in the wall as long as the wall itself exists.

The hygienic Buildings BW 5a and 5b in Birkenau were built using cheap materials. The plaster of the walls of their delousing gas chambers consists of lime mortar. In contrast to that stand the basements of the Crematoria II and III, which extended below the level of the groundwater and had therefore to be built using concrete and cement mortar. Since concrete and cement mortar stay alkaline for months and years, but lime mortar only for days and weeks,

¹⁸³ Unheated basement rooms by their very nature have very high relative atmospheric humidity. As a result of the large numbers of human beings crammed into the basements, the atmospheric humidity would certainly have approached 100%, resulting in the condensation of water on cold objects.

the walls of the crematoria could absorb and permanently bind HCN for a much longer period of time than the walls of the delousing chambers.¹⁸⁴

A potentially detrimental factor to the absorption of HCN in the walls and the subsequent formation of Iron Blue is the carbon dioxide (CO₂) exhaled by the victims crammed into the chambers. If the chambers under discussion were sealed off and if the victims remained alive in that room for an extended period of time, the CO₂ content could have reached several percent at the end of this process. Just like HCN, CO₂ also dissolves in the capillary water of the walls, although at only 0.4% of the rate of HCN. On the other hand, CO₂ forms carbonic acid in water (H₂CO₃), which is roughly 870 times stronger than HCN. Both factors result in CO₂ being effectively ($870 \cdot 0.004 =$) 3.5 times “stronger” than HCN, hence any reaction of HCN will be slowed down accordingly in the presence of CO₂, provided no other factors are involved.

However, since the capillary water of walls made of plaster, mortar and concrete is saturated with carbonates (the salts of carbonic acid), the dissolution and diffusion of CO₂ into the capillary system is greatly hampered right at the gas/water interface, where a layer of solid calcium carbonate precipitates, slowing down any further diffusion and accumulation of CO₂.¹⁸⁵ This is particularly true for cement mortars and concrete, whose capillary water is alkaline and stays so over long periods of time even in the presence of larger amounts of CO₂. This is the basis for the durability of reinforced concrete, as the alkaline concrete protects the iron bars from rusting. Since HCN is not affected by this directly, it can penetrate deeply into the capillary system, once it has overcome the diffusion barrier built up by CO₂ at the gas/water interface. Hence, although CO₂ does reduce the speed with which HCN can fill the capillary system of a moist wall, once the HCN has entered it, it will be trapped there by the pore-closing effect of CO₂. Which factor prevails at the end is unclear and would require extended experiments.¹⁸⁶

4.1.3. Toxicological Features

Before the invention of nerve gases, HCN was considered one of the most poisonous materials known. Although it is a dangerous substance, it does not come anywhere close to the instant deadliness of nerve gases. Executions in the U.S. using HCN have shown that, even if the executee is immediately

¹⁸⁴ For a more detailed discussion of the chemical features of HCN, the reactions leading to Iron Blue, the factors involved, and the stability of this compound, see my expert report, op. cit. (note 30), pp. 151-189.

¹⁸⁵ Cf. N.V. Waubke, *Transportphänomene in Betonporen*, Dissertation, Brunswick 1966.

¹⁸⁶ Although Markiewicz et al., op. cit. (note 39), have tested the influence of CO₂, their results are contradictory and hard to interpret due to an invalid analytical method; cf. G. Rudolf, op. cit. (note 40).

exposed to high overdoses of gaseous HCN, it still takes between ten and fifteen minutes before death can be confirmed.¹⁸⁷

The poisonous effect of HCN is based on the fact that it defeats the respiration of every individual cell in the body. Oxygen can no longer be transported from the blood through the cell walls into the cells. As the vital cell functions are thereby starved of oxygen, the animal or human being suffocates on a cellular level.

Insects and in particular insect eggs are considerably less sensitive to HCN than warm-blooded animals. On the one hand, this is due to their greater resistance, as insects have a slower metabolism, in particular the nits (louse larvae) and above all the eggs, which must also be killed. Furthermore, lethal concentrations of the gas must penetrate every crack and fissure, hem and seam of all the garments in the material to be fumigated no matter how tiny, in order to reach even the last hidden nit and egg. Warm-blooded animals, by contrast, are rapidly exposed to high concentrations of the gas, not only because of their size, but above all due to their breathing through lungs which readily absorb all the HCN in the inhaled air.

Lethal doses of cyanide can be ingested orally, inhaled, or absorbed through the skin. Oral poisoning (for example with potassium cyanide, KCN) is very painful due to muscular convulsions of the stomach caused by cell suffocation. Even though victims of poisoning by inhalation of high concentrations of hydrogen cyanide become more rapidly unconscious than with oral ingestion, painful convulsions caused by muscular suffocation appear in these cases as well. A dose of 1 mg cyanide per kg body weight is generally considered lethal for humans. Non-lethal doses of cyanide are quickly decomposed and excreted by the body.

Absorption through the skin is especially likely when the skin has become moist, for example as a result of sweating at work. It is generally advised to avoid sweating during the handling of hydrogen cyanide. In this regard, concentrations from 6,000 ppm¹⁸⁸ (0.6 % by volume) constitute a health hazard, while 10,000 ppm (1% by volume) can be lethal in just a few minutes.¹⁸⁹

Table 9 shows the effects of various concentrations of hydrogen cyanide, found in the literature.¹⁹⁰

F. Flury and F. Zernik indicate that 200 ppm can be fatal within five to ten minutes, while 270 ppm are immediately fatal.¹⁸⁹ These are not, of course, the results of experiments on human beings, but rather extrapolations, in which

¹⁸⁷ Cf. Scott Christianson, *The Last Gasp: The Rise and Fall of the American Gas Chamber*, Univ. of California Press, Berkeley 2011, esp. pp. 209, 220.

¹⁸⁸ ppm stands for 'parts per million'; here, 1 ppm HCN corresponds to 1 ml HCN per m³ (1,000,000 ml) of air.

¹⁸⁹ F. Flury, F. Zernik, *Schädliche Gase, Dämpfe, Nebel, Rauch- und Staubarten*, Berlin 1931, p. 405; see also M. Daunderer, *Klinische Toxikologie*, 30th suppl. delivery 10/87, ecomed, Landsberg 1987, pp. 4ff.

¹⁹⁰ DuPont, *Hydrogen Cyanide*, Wilmington, Delaware 7/83, pp. 5f.

Table 9: Effect of various concentrations of hydrogen cyanide in air upon human beings	
2 to 5 ppm:	Perceptible odor
20 to 40 ppm:	Slight symptoms after a few hours
45 to 54 ppm:	Tolerable for ½ to 1 hour without significant or delayed effect
100 to 200 ppm:	Lethal within ½ to 1 hour
300 ppm:	Rapidly fatal

lower risk thresholds have been determined on the grounds of safety. This will be demonstrated in the following. To kill an average person with a body weight of 100 kg, the victim must ingest or inhale approximately 100 mg HCN (1 mg per kilo body weight). The respiration of a human being at rest amounts to approximately 15 liters of air per minute.¹⁹¹ With an HCN content of 0.02% (approximately 0.24 mg per liter), the victim must inhale approximately 416 liters of air before having ingested the fatal quantity of hydrogen cyanide. At 15 liters per minute, this will take about half an hour. A very strong person can survive even this period of time. By contrast, a sensitive person weighing 50 kg breathing at an accelerated rate as a result of physical effort or excitement will inhale 40 liters per minute, ingesting a fatal amount of 208 liters of air in five minutes. It is obvious from these calculations that the data in safety instructions are always intended to protect smaller, weaker people from accidents under the most unfavorable circumstances. The data given in the literature as “immediately” or “rapidly fatal” doses are furthermore so indefinite as to be unable to serve our purposes. In addition, they only refer to the time when a victim has ingested a fatal dose, but not when death occurs, which can sometimes take much longer.¹⁹²

The threshold values will be different if we require even the strongest individual, out of all conceivable individual victims, to die in just a few minutes.¹⁹³ The concentrations necessary for this purpose will be several times higher than the values indicated above. They could only be determined with certainty by a series of experiments, which is naturally impossible with human beings. The only data available to us are those gathered during executions with HCN carried out in the United States as indicated above. Leuchter speaks of concentrations of hydrogen cyanide used in executions in the USA in the order of magnitude of 3,200 ppm.⁷¹ As mentioned before, these concentrations result in executions lasting from 10 to 15 minutes. Since the gas is developed beneath the execution chair, it rises from immediately beneath the victim. Hence, immediately after the beginning of the execution process the victim is exposed to a concentration which probably exceeds 10% by volume for a

¹⁹¹ Robert F. Schmidt, *Biomasschine Mensch*, Piper, Munich 1979, p. 124.

¹⁹² M. Daunderer, op. cit. (note 189), p. 15.

¹⁹³ Among toxicologists known as the lethal dose for 100% of all victims, LD₁₀₀.

short period, but then falls steadily as a result of diffusion of the hydrogen cyanide throughout the chamber.

At a normal respiration volume of approximately 15 to 20 liters per minute and assuming an *average* concentration during the execution of 0.75% by volume, approximately 1.35 to 1.8 grams of HCN will be ingested in 10 minutes (150-200 liters of inhaled air), which corresponds to ten to twenty times the fatal dose. It is therefore not unreasonable to assume that a ten-fold overdose is required in order to kill all the people in a gas chamber with certainty within ten minutes.

Insects and their nits and eggs, however, are dead with certainty only after having been exposed to such concentrations for at least an hour or two. Since the delousing chambers of the hygienic Buildings BW5a and 5b in Birkenau were designed in a rather poor way, only a much-longer gassing time would have ensured that all lice, nits and eggs would indeed be dead. Hence, gassing times of half a day or even an entire day may have occurred.

¹⁹⁴ J.-C. Pressac, op. cit. (note 46), pp. 55-58, Plans of Buildings 5a/b, pp. 59f. exterior photos.

Fig. 25: One of the two ventilation outlets from the disinfestation wing of Building BW 5b, without equipment today. The other is located on the same wall slightly to the left. The end of a water pipe installed after the war is protruding out of the hole.

4.2. Disinfestation Chambers

Disinfestation procedures using HCN, including the appropriate techniques as well as safety instructions and regulations, were in the process of being developed in Germany of the 1930s and 1940s.¹⁹⁵ It is therefore not appropriate to apply the technical and safety standards of today to those years, in particular when dealing with events taking place during a war, when frequent emergency situations and material shortages required makeshift solutions.

The two hygienic Buildings BW5a and BW5b in Birkenau prove my point; see Figures 24 and 25. The area used for Zyklon B disinfestations was a huge room called “gas chamber” (*Gaskammer*) in the plans. This was the usual term for delousing chambers in Germany during the war. This chamber had only a flimsy, leaking roof, two small ventilation fans in one of the walls, and a heating stove at the opposite wall. The walls had a simple whitewashed plaster with no sealing coating. There was no provision for evaporating and distributing the gas. The losses of HCN due to the unusable space up to the roof, absorption in the wall, draft of the stove, and the leaks in the roof must have been tremendous, not to mention the danger for the immediate environment around this building when switching on the fans. (It is not known if the stove was operating while the room was filled with HCN, which would have caused

¹⁹⁵ Gerhard Peters published his revolutionary new circulation system only in 1940, see note 58.

additional loss of HCN and could have caused a danger of explosion if Zyklon B granules were placed too close to the fire.)

The doors used in Auschwitz for delousing chambers were of an equally makeshift nature, as Figure 26 shows. Such wooden doors, “sealed” with felt strips, were anything but gastight and safe, but in the face of severe material shortages during the war, these solutions had to do.

4.3. Homicidal Gassings

If large-scale delousing operations with makeshift delousing chambers were possible, could similar makeshift solutions also have been used for homicidal mass gassings?

The answer to this is both yes and no. Although safety equipment as it is used in U.S. execution gas chambers was not an absolute requirement, there are several factors which make the alleged homicidal gassings drastically different from delousing operations:

Fig. 26: *Wooden disinfestation chamber door at Auschwitz rendered provisionally gas-tight with peephole and metal protection grid. This is what the gas-tight doors for the homicidal ‘gas chambers’ are supposed to have looked like. Note the extremely flimsy latch to lock the door.¹⁹⁶*

4.3.1. Locking in the Victims

Whereas lice and other vermin do not need to be confined in the gas chamber by force, humans do. Even though the dramatic-looking gas-chamber doors of U.S. gas chambers (Figure 28) would not be absolutely necessary to keep the gas in, similarly sturdy doors would have been necessary to keep the panicking victims inside. However, all that was ever installed, and later found, in Auschwitz were doors such as shown in Figure 26. The simple latch to close this door and the two simple hinges which held it in place would have had no chance to withstand the pressure of a crowd of hundreds of panicking people.¹⁹⁷ Not even sturdy delousing-chamber doors such as those installed in the

¹⁹⁶ J.-C. Pressac, op. cit. (note 46), p. 49.

¹⁹⁷ Compare in this regard Hans Jürgen Nowak, Werner Rademacher, “Some Details of the Central Construction Office of Auschwitz,” in: G. Rudolf (ed.), op. cit. (note 80), pp. 311-372.

Fig. 28: Door of the execution gas chamber for a single person in Baltimore, USA, 1954, Technology from the 1930s.

Fig. 27: Doors of professional delousing chambers (DEGESCH circulation chamber) at the Dachau camp.

Dachau camp (Figure 27) were used for the rooms that allegedly served as homicidal gas chambers in Auschwitz.

When studying the original blueprints of the alleged homicidal gas chambers in Auschwitz, one is surprised to find that those doors in Crematoria I-III actually consisted of double doors, and in the case of Crematorium I a door that swung through (see Fig. 29 and 30). This is a proper design for morgues, since wide double doors and those that swing through are preferred when transporting corpses in and out, but double doors, and particularly swinging doors, are almost impossible to make sturdy enough to withstand panicking crowds, in particular since they have to open outward.

Fig. 29: Swinging door between the morgue (below) and the furnace room (above) in Crematorium I in Auschwitz, section of as-built plan of April 10, 1942, that is, at a time when the morgue was allegedly used as a homicidal gas chamber.⁹⁹

Fig. 30: Double access door to Morgue #1 of Crematoria II and III, the alleged homicidal gas chamber.¹⁹⁸

¹⁹⁸ J.-C. Pressac, op. cit. (note 46), pp. 285, 302 (Dec. 19, 1942).

No room containing windows with normal glass, as is the case for one of the rooms in the Majdanek camp claimed for decades to have served as a homicidal gas chamber (see Fig. 31), could have served such a purpose.¹⁹⁹ The victims would have shattered this window in seconds. Similarly ridiculous is the fact that one of the two doors of this same room opens to the inside (which would have been blocked by the dying victims), whereas the other one, although opening to the outside, can be opened from the inside to this day. How could the victims be persuaded not to open this door and get the hell out of there?

Fig. 31: Window in Chamber IV of Building no. 41, Majdanek camp; until 2005 claimed to have been a homicidal gas chamber, but now admitted to have been a mere delousing chamber. © C. Mattogno

4.3.2. Getting and Keeping the Poison in

It is easy to get the poison into even the most primitive makeshift delousing chamber. A person equipped with a gas mask simply enters the room and spreads out the granules.

Sophisticated devices for semi-automatically releasing the Zyklon B inside a delousing chamber were available since 1940: the DEGESCH circulation gas chambers. By turning a wheel on the outside of the chamber, an operator drove a mechanism which opened a can of Zyklon B at the inside, dropped the contents into a basket and blew warm air into it so the HCN would quickly evaporate and dissipate throughout the chamber. Although such a device was certainly extremely helpful, as it accelerated the procedure considerably and used HCN more efficiently, it was not indispensable. After all, the poison is supposed to stay in a delousing chamber for at least two hours, so the fact that Zyklon B releases its gas only reluctantly could be a useful feature.

The situation is entirely different with the claimed homicidal gassings. Following the witness statements, these killings are supposed to have taken only seconds, moments, or up to 10 minutes at most.²⁰⁰ According to the same wit-

¹⁹⁹ All following references to Majdanek are based on the research results of J. Graf, C. Mattogno, op. cit. (note 84).

²⁰⁰ With relation to the killing times, see in, for example: Jury Court Hagen, verdict from July 24, 1970, ref. 11 Ks 1/70, p. 97 (5 min.); Final Trial Brief of the Prosecution, quoted acc. to U. Walendy, *Auschwitz im IG-Farben-Prozeß*, Verlag für Volkstum und Zeitgeschichtsforschung, Vlotho 1981, pp. 47-50 (3 to 15 minutes in extreme cases); E. Kogon, H. Langbein, A. Rückerl et al. (eds.), *Nationalsozialistische Massentötungen durch Giftgas*, S. Fischer Verlag, Frankfurt 1983, ubiquitous (immediately up to 10 min., more rarely, up to 20 min.); J. Buszko (ed.), *Auschwitz, Nazi Extermination Camp*, 2nd ed., Interpress

nesses, the Zyklon B was simply dumped into the homicidal gas chambers through openings in the roof (Crematoria I-III in Auschwitz and Birkenau, the various claimed chambers in Majdanek) or in the wall (Crematoria IV and V and the Bunkers in Birkenau). Hence there was no mechanism to spread the Zyklon B and to accelerate the evaporation and dissipation of HCN.²⁰¹

Experience in U.S. gas chambers shows that not even the immediate release of high overdoses of HCN close to the victim would successfully and reliably kill in less than ten minutes. How, then, could this be achieved with Zyklon B simply dumped into the chambers?

Rudolf, "Auschwitz-Kronzeuge Dr. Hans Münch im Gespräch," *Vierteljahreshefte für freie Geschichtsforschung*, 1(3) (1997), pp. 139-190 (2 to 5 min. in winter; www.vho.org/VffG/1997/3/RudMue3.html); Salmen Lewenthal, *Hefte von Auschwitz*, Sonderheft 1, *Handschriften von Mitgliedern des Sonderkommandos*, Verlag Staatliches Museum Auschwitz, 1972, p. 155 (sudden silence); Dov Paisikovic, in: Léon Poliakov, *Auschwitz*, René Julliard, 1964, pp. 159ff. (3-4 minute), Franke-Gricksch Report, in: J.-C. Pressac, op. cit. (note 46), p. 238 (one minute to kill the victims, another until the doors were opened); Rudolf Vrba alias Walter Rosenberg, Alfred Wetzler, ref. M 20/153, Yad Vashem (acc. to War Refugee Board, "German Extermination Camps – Auschwitz and Birkenau," in David S. Wyman (ed.), *America and the Holocaust*, volume 12, Garland, New York/London 1990, p. 20 (everyone in the room was dead after three minutes); Jerzy Tabeau, in: *The Extermination Camps of Auschwitz (Oswiecim) and Birkenau in Upper Silesia* (10 minutes, quoted according to Enrique Aynat, *Los protocolos de Auschwitz. i Una fuente historica?* Verlag Garcia Hispan, Alicante 1990); André Lettich, *Trente-quatre mois dans les Camps de Concentration*, Imprimerie Union Coopérative, Tours, 1946 (a few moments). Janda Weiss, in David E. Hackett, (ed.), *The Buchenwald Report*, Beck, Munich 1997, p. 394 (3 min.). If longer killing times appear in the eyewitness testimonies, they refer, not to Crematoria II and III, but, rather, to Crematoria IV/V, Bunkers 1-2, or Crematorium I in the Main Camp. The killings in Crematoria II and III are therefore alleged to have been committed very quickly.

²⁰¹ There are claims of some kind of hollow pillars in the morgues of Crematoria II and III, into which the Zyklon B was allegedly poured. Although there is no documentary or physical evidence for this claim (see C. Mattogno, op. cit. note 146; idem, *The Real Case...*, op. cit. (note 5), Chapter 2.5, pp. 83-93), such a device would have slowed down the evaporation and dissipation of HCN even more, because it would have kept the Zyklon B granules closely together, out of reach of the victims' movements, and it would have reduced the air circulation around the granules.

The answer is that execution times of only a few minutes would simply have been impossible with the claimed equipment and procedure. Execution times of around ten minutes would have required enormous overdoses of Zyklon B.

Looking more closely into the claims and comparing them with the actual physical details of the rooms claimed to have served as homicidal gas chambers, the following discrepancies are noted:

1. The openings in the roof of Crematoria I (Auschwitz) and II (Birkenau), through which Zyklon B is claimed to have been dumped, did not exist. Nor did any introduction devices exist as claimed for Crematoria II and III (Birkenau).^{142,146,152}
2. In the cases of Crematoria II and III in Birkenau, it is claimed that the SS chiseled in the introduction holes through the roofs of Morgues #1 – the alleged gas chamber – after these roofs had been completed. Considering that the mass murder of the Jews is claimed to have been in full swing at the time these roofs were made (late 1942 and early 1943), this claim is fantastically nonsensical. It is furthermore absolutely inconceivable, why the SS should have destroyed the structural integrity of the roof of these rooms, just in order to get mere crude openings, if they could have channeled the poison gas into the chamber by using the air intake ducts of the ventilation system of these morgues. Just placing a basket in these ducts and channeling air (possibly even warm air from the cremation furnaces' exhaust gasses) through this basket filled with Zyklon B into the homicidal gas chamber would have provided an easy and effective way to quickly evaporate and dissipate the gas.²⁰² But no, the SS presumably had no brains at all. Conclusion: these openings do not and never did exist.
3. The openings in the walls of Crematoria IV and V (Birkenau), through which Zyklon B is supposed to have been dumped, could be reached by the victims. It is documented that these openings, which were barely big enough to stick a Zyklon B can into them, had iron bars set into their frames, which would actually have prevented anyone from passing any can through those openings. Hence it was physically impossible to empty Zyklon B cans through these openings.²⁰³

Moreover, in order to prevent the victims from attacking the SS man trying to pour in Zyklon B or from throwing the Zyklon B pellets back out, these openings had to be shielded by a steel grate keeping the inmates at arm's length from the openings. Such grates would have to have been securely anchored in the concrete floor. Since the concrete floors of these building are still intact today, but no such anchor points can be seen, it can be safely

²⁰² This would, of course, have released some gas into the immediate environment of the crematorium via the air outlet, but that was to happen anyway briefly thereafter when ventilating the chamber.

²⁰³ C. Mattogno, *The Real Case...*, op. cit. (note 5), chapter 5.7., pp. 168-170.

concluded that no such grate was ever installed. The same reasoning applies to the Bunkers of Birkenau.

4. The openings in the ceiling of Chamber IV of Building No. 41 in the Majdanek camp (a hygienic building “Bath and Disinfection #1,” see Fig. 32), a delousing room which until 2005 has been claimed to have served as a homicidal gas chamber instead, were used as ventilation ducts according to documents.

But until 2005, after the ventilation ducts were removed during restructuring of the roof shortly after the war, it was claimed that they were used to dump in Zyklon B. However, if these openings did not serve as ventilation, then how was this room ventilated? One door opens to the inside of the room, which means that it would have been blocked by dead victims lying in front of it, so not even an ineffective airing by “natural draft” was possible. The other

door, well, it could be opened from the inside, so perhaps the last victim to die initiated the ventilation process by opening the door prior to passing away...

Due to all these absurdities, Tomasz Kranz, head of the research department at the Majdanek Memorial, admitted in a 2005 paper that this room was never used for homicidal purposes but was merely a delousing chamber.²⁰⁵

5. Other rooms at Majdanek had crudely chiseled-in holes in the ceiling – with the reinforcement iron bars not removed. They are claimed to have

Fig. 32: Section of a plan of the “Bath and Disinfection Building #1,” at Majdanek camp, drawn by a Polish-Soviet investigation commission. I-VI: alleged gas chambers.²⁰⁴

²⁰⁴ GARF, 7021-107-9, p. 251.

²⁰⁵ Tomasz Kranz, “Ewidencja zgonów i śmiertelność więźniów KL Lublin,” *Zeszyty Majdanka*, No. XXIII (2005), pp. 7-53.

been used for pouring in Zyklon B (see Fig 33, similar in Rooms I and II of Fig. 32). There was, however, no provision for closing these openings. They were obviously chiseled in after the war for “museum” purposes.

6. The only room in Majdanek that has forensic evidence of the use of Zyklon B *and* which has a hot-air-circulation device that could also be used for evaporating HCN and ventilating the room, and which also had sturdy steel doors that could lock in victims (Room III in Fig. 32), has *no* provision to dump in Zyklon B! In other words, it would have had to be spread out manually by an SS man entering the chamber together with the victims. Such a scene is quite comical. But it proves that this room could merely be used – and was exclusively utilized – as a delousing chamber. Today the Majdanek Museum no longer claims that anyone was murdered there using Zyklon B.²⁰⁵

Fig. 33: New crematorium of the Majdanek camp, morgue room, opening in the ceiling. Until 2005 this room was claimed to have been a homicidal gas chamber, but then the Majdanek Museum admitted defeat to revisionist reasoning.²⁰⁵

Fig. 34: Opening with grate in the wall of Room I in the disinfestation wing of Building 41, Majdanek (see Fig. 32)

© C. Mattogno

7. Other rooms at Majdanek claimed to have been homicidal gas chambers have openings in their walls which could not and cannot be closed (see Fig. 34, similar, but larger and without any grate, in the alleged gas chamber of the new crematorium of Majdanek). So Zyklon B thrown into these rooms would have been thrown out by the victims through that hole, and this or any other gas released inside the room would have freely spread throughout the entire building. Anyone taking such claims seriously must be out of their mind.

4.3.3. Removing the Victims

To achieve the short execution times claimed by witnesses (ten minutes and less), enormous amounts of Zyklon B would have had to be used,¹³⁴ since only

10% of the HCN absorbed in Zyklon B would have been released in that time (see Subsection 4.1.1.). The remaining 90% of the HCN in Zyklon B would keep evaporating after the execution was over. Whereas it is possible to remove the Zyklon B laid out in a delousing chamber after a gassing is completed, this would have been impossible in a homicidal gas chamber, the Zyklon B would be buried beneath the bodies of the victims. And since Zyklon B releases HCN for at least an hour more, any attempt to ventilate such a location before at least an hour had passed would have been futile.

Whereas clothes and other utensils gassed in heated delousing chambers have only a limited tendency to absorb HCN, wet human bodies accumulate quite a large amount of HCN, so that handling them is more dangerous than handling gassed clothes. It is also much easier to drag clothes hanging on racks out of a delousing chamber than to drag hundreds of dead corpses out of a homicidal gas chamber, which is hard labor.

The *Sonderkommandos* (special teams) are claimed to have carried away the corpses out of the gas chambers immediately or shortly after the execution was completed. Considering that some of the alleged homicidal gas chambers had no ventilation systems at all²⁰⁶ or only systems with low capacities designed for morgues (Crematoria I-III at Auschwitz and Birkenau), a successful ventilation of these rooms within a few minutes or half an hour at most, as claimed by witnesses, is impossible.⁹³

If a concentration of 1 vol.% was used during the alleged homicidal gasings, which is a minimum when considering the execution times claimed, the inmates of the *Sonderkommando* had to wear gas masks. Since carrying corpses is a heavy physical activity, poisoning through the sweat-wet skin would have been avoidable under these circumstances only if the workers wore protective garments in the gas chamber, which was not reported by any witness, nor is there any document showing that such items were ever ordered, delivered, or present at Auschwitz. The ventilation systems in the morgues (alleged gas chambers) of Crematoria I-III at Auschwitz and Birkenau would not have helped much in this regard, since the clearing of the chambers is supposed to have started almost instantly after the gassing was over, so there would not have been enough time to rid the chamber of the poison to the degree necessary to make it a safe place for hard labor.

It can, of course, be argued that the SS did not care if any of the members of the *Sonderkommando* collapsed or even dropped dead now and then as a result of HCN poisoning. But considering that the swift work of these men was needed to keep the claimed machinery of death running smoothly, and also

²⁰⁶ Crematoria IV and V and the so-called Bunkers in Birkenau, as well as Rooms I, II, and the alleged homicidal gas chamber in the new crematorium in Majdanek (see Fig. 32). Rooms I and II had only one door each, and the room in the new crematorium had no opening to the outside at all, which means that it could be ventilated only by gassing the rest of the building!

considering that no witness ever mentioned any symptoms of HCN poisoning in *Sonderkommando* members, such an explanation would be futile. It must also be considered that there had to be several SS men supervising the work of the *Sonderkommando*. Considering the applied concentrations attested to, their lives would have been in jeopardy as well, which is an utterly inconceivable scenario.

It should also be kept in mind that hydrogen cyanide is a contact poison. Transporting corpses for hours on end, on whose skin huge, possible lethal amounts of hydrogen cyanide are absorbed, would also have required that the members of the *Sonderkommando* wore protective clothes.

The accounts of some witnesses regarding the applied concentrations *and* the quick clearing of the chamber immediately or shortly after the execution *always* without protective garments and in many cases even without masks can therefore certainly not be true.

4.4. Cremations

4.4.1. Crematoria

When discussing the capacity of the Auschwitz crematoria, I will not re-invent the wheel. Since the beginning of the 1990s, Italian engineer Franco Deana and Italian historian Carlo Mattogno have analyzed thousands of SS documents seized at Auschwitz. These are documents produced by the firm which built the crematory furnaces. Mattogno and Deana also analyzed all kinds of professional literature and trade publications of that time which pertain to the technology and performance of crematory furnaces in general. Based on these documents, Deana and Mattogno carried out some very detailed calculations.¹¹³

Let me summarize the results of their extensive research in table form:

Table 10: Some characteristics of the crematoria at Auschwitz-Birkenau		
	Crematoria II & III	Crematoria IV & V
Ideal coke consumption per muffle:	15.5 kg/hr.	11.7 kg/hr.
Actual coke consumption per muffle:	22 kg/hr.	16 kg/hr.
Time required per corpse	1 h	1 h
No. of muffles	30	16
Maximum hours of operation per day	20	20
Maximum no. of corpses per day	600	320
Total no. days in operation	888	276
Total maximum throughput	532,800	88,320

This total maximum throughput of 600,000 corpses still looks huge. But these numbers are misleading because they are theoretical maximum numbers.

There are two parameters that allow us to estimate the numbers of bodies that were *actually* cremated.

One of these is the amount of coke delivered to the crematoria, which is completely documented for the period of February 1942 to October 1943 (see Table 11.)²⁰⁷ First I would like to direct your attention to some truly amazing facts. During the operating period of the six-muffle crematory in the main camp from February 1942 until February 1943 (the only operating crematory at Auschwitz during that time), the average monthly consumption of coke came to around 30 tons, or 5 tons per muffle.

The extremely large coke delivery made in March 1943 served for drying and preheating Crematories II and IV, which went into operation at that time. In addition to this, there was probably a backlog of corpses on account of the typhus epidemic raging in Birkenau at that time, so the crematories were probably operating with unusual intensity at the early part of this period.

It is therefore amazing that coke consumption rose only by a factor of 2.5 when the new crematories came into operation, since they contained almost eight times as many muffles as the old crematory.

Even if we consider that the new furnaces were somewhat more efficient than the old ones had been, it is still clear that the new crematories were not nearly as intensively operated as the old ones had been when it had to carry the entire workload alone.

In other words, the SS created a huge overcapacity which they never used.

At an average coke consumption of 20 kilos per corpse,²⁰⁸ we see that a total of 51,625 corpses could have been cremated with 1,032.5 tons of coke over a period of 21 months. This order of magnitude corresponds to the number of victims registered in the Auschwitz death books, which do *not* indicate any gassing victims.²⁰⁹

Another parameter for determining utilization of the new crematories in Birkenau is the durability of the fireproof brickwork in the ovens. The Topf firm, which constructed the ovens at Birkenau, listed the life expectancy of

Table 11: Monthly coke deliveries to the Auschwitz Crematories			
Month in '42	Tons	Month in '43	Tons
February	22	January	23
March	39	February	40
April	39	March	144
May	32	April	60
June	25	May	95
July	16.5	June	61
August	31.5	July	67
September	52	August	71
October	15	September	61
November	17	October	82
December	39	Total	1032.5
Ø until 2/1942:	30	Ø 3/43-10/43:	80

²⁰⁷ APMO, D-AuI-4, segregator 22, 22a; cf. J.-C. Pressac, op. cit. (note 46), p. 224.
²⁰⁸ As a matter of fact, the coke consumption of the old double-muffle ovens in the main camp was somewhat higher than that of the new ovens in Birkenau.
²⁰⁹ Staatliches Museum Auschwitz-Birkenau (ed.), *Die Sterbebücher von Auschwitz*, Saur, Munich 1995.

this brickwork as 3,000 cremations, which at that time was 50% above the norm.²¹⁰

When we consider that the Birkenau crematories were operated and maintained by unskilled and hostile personnel, namely prisoners, we can see that the Topf estimate was a very optimistic maximum. After 3,000 cremations, the brickwork had to be replaced, which would have necessitated an expensive and time consuming overhaul of the entire crematory.

It is a fact that in the extremely detailed documentation of the Auschwitz Central Construction Office, in which practically every single nail or screw is itemized, there is nothing to suggest that the fireproof brickwork of even a single oven in the crematories at Birkenau was ever replaced!

From this we can conclude that the maximum number of cremations (46 muffles \times 3,000 = 138,000) was not exceeded.

Again, this is very nearly the number given as “natural” deaths by the authorities: the total *excluding* deaths by gassings or other acts of mass murder.²¹¹

C. Mattogno has also assessed the maximum capacity of the new crematorium of Majdanek: roughly 100 corpses per day.²¹² This is only accidentally in agreement with Leuchter’s figures for this crematorium, as he erroneously assigned fifteen muffles to this crematorium instead of five. This crematorium was in operation for merely one year between summer 1943 and summer 1944, which matches Leuchter’s data.

4.4.2. Incinerations in Open Trenches

Considering what we concluded in the above chapter, the question arises as to why the SS did not use the idle capacity of the crematories before resorting to the alternative method of open-air incinerations. After all, open-air incineration is much less effective than oven incineration for the simple reason that huge amounts of energy are lost through radiation and convection.²¹³ Air photos taken by Allied reconnaissance planes in spring and summer 1944 prove, in fact, that the claimed open-air incineration did not occur during that period of time.²¹⁴ However, there are no photos for the preceding years. Even though the air photos do not show large areas scarred by older incineration trenches,

²¹⁰ R. Jakobskötter, “Die Entwicklung der elektrischen Einäscherung bis zu dem neuen elektrisch beheizten Heißlufteinäscherungssofen in Erfurt,” *Gesundheits-Ingenieur*, 64(43) (1941), pp. 579-587, here p. 583.

²¹¹ Add to this the six muffles of the old crematorium in the main camp = max. 24,000 corpses.

Fig. 35: Possible sites of old mass graves of typhus victims close to the Auschwitz-Birkenau camp, as visible on allied air photos.

there is one area visible which could have been either mass graves or older, inactive incineration pits (see Fig 35.).

However, as Leuchter correctly states, the area in which the Birkenau camp was built was a swamp, where it would not have been possible to dig trenches several meters deep without hitting groundwater. Two expert studies made independently of each other did demonstrate that the groundwater level in and around Birkenau was just a few decimeters below ground level between 1941 and 1944. Any deep trenches would have quickly filled with water.¹³⁸ Even though the SS did lower the water level in the camp by means of a drainage system, this system was not completed in the area of the alleged incineration trenches of 1942/43. Both above-mentioned expert studies showed that even the drainage system which existed in 1944 was unable to lower the groundwater level in camp more than one meter below ground level.

Realistically speaking, it is quite possible that there were open-air incinerations in Birkenau in the fall of 1942. In the summer of that year, when the terrible typhus epidemic was raging, the old crematory was out of commission for several months because of massive damage to its chimney. Tens of thousands of typhus victims were probably buried in graves, which were very shallow because of the high groundwater level. The rectangular shapes on the air photos mentioned above might have been such graves. It is plausible that those typhus victims were exhumed after several weeks or months in order to avoid polluting the groundwater. Since there was no crematory in Birkenau yet and because the old crematory in the main camp was still out of commission, the authorities might have been obliged to burn them in the open.

There is a document in which the architect Walter Dejaco, who was involved in drawing up plans for the new crematories in Birkenau in 1942,²¹⁵ mentions a “visit to a special facility and discussion with SS *Standartenführer*

²¹⁵ Cf. Michael Gärtner, “Vor 25 Jahren: Ein anderer Auschwitzprozeß,” *Vierteljahreshefte für freie Geschichtsforschung* 1(1)(1997), pp. 24f.

Blobel on the design of such a facility.” This “special facility” probably concerned burning corpses in the open air. Dejaco also mentions a “ball mill for substances,” which might well have referred to a device for pulverizing incompletely incinerated remains.²¹⁶

According to the *Kalendarium*, the standard chronology of Auschwitz events, which relies on eyewitness accounts, these incinerations occurred between September 21 and the end of November 1942.²¹⁷ Paul Blobel is repeatedly mentioned as the expert on open-air incinerations in the established Holocaust literature.²¹⁸ It is therefore very likely that such eyewitness descriptions have a kernel of truth to them, although these testimonies relate mostly to the burning of gas-chamber victims, which is of course a different matter. It is alleged that the gas chambers and incineration pits at the so-called Bunkers of Birkenau had already been in operation since the spring of 1942. If so, then a trip by Dejaco to inspect such “special facilities” in mid-September 1942 would have been too late. Dejaco’s visit had therefore nothing to do with alleged gassings; rather, it was triggered by the typhus epidemic.

4.5. Chemical Analysis

4.5.1. What to Expect

Great excitement was caused by a strange occurrence in a Protestant church at Wiesenfeld, Lower Bavaria, Germany, in the spring and summer of 1977. The congregation had renovated the deteriorating church at great expense during the previous year, but now they faced a disaster. Huge blue stains were found to have formed in all parts of the plastered interior of the church. The experts who had renovated the church were now called in for consultation and found themselves confronted by a riddle, which was only solved by a chemical analysis of the stained portions of the walls. The entire interior surface of the church was impregnated by Iron Blue. No explanation could be found for this in the literature. It nevertheless was possible to reconstruct the sequence of events.

A few weeks after the re-plastering of the church with a water-resistant cement mortar, the entire church had been fumigated with Zyklon B (hydrogen cyanide) to exterminate woodworms in the choir stalls. The hydrogen cyanide

Autobiographische Aufzeichnungen des Rudolf Höß*, DTV, Munich 1981, p. 162; cf. Document NO-4498b.

released by the Zyklon B did not just kill woodworm. It also reacted chemically with the plaster. The hydrogen cyanide reacted with the iron oxides contained in quantities of 1-2% in all plasters, thus forming Iron Blue, a highly stable compound well-known for centuries.²¹⁹

An almost identical case had occurred four years earlier in 1972 in the Catholic church of St. Michael in Untergriesbach, also in Bavaria, where fresh plaster also turned blue after the church had been gassed with Zyklon B to combat woodworms.²²⁰

Reports of blue pigmentation of walls resulting from fumigation with hydrogen cyanide for the destruction of vermin in areas with moist, ferrous plaster are known in technical literature, as shown by a survey published in 1995 in Germany.²²¹ The necessary prerequisite for this reaction appears to be that the fumigated plaster must be new and must exhibit high humidity. In other cases there was also damage to the structure and interior installations, but no blue stains,²²² perhaps because the plaster was old and had already set.²²³

Fig. 36: In August 1976, the Protestant church at D-96484 Meeder-Wiesenfeld was fumigated with Zyklon B. Subsequently, blue-colored stains appeared all over the plaster (see Fig. 37).

²¹⁹ G. Zimmermann (ed.), *Bauschäden Sammlung*, volume 4, Forum-Verlag, Stuttgart 1981, pp. 120f., relating to the case of building damage occurring in August 1976 in the Protestant church at D-96484 Meeder-Wiesenfeld. We wish to thank Mr. W. Lüftl, Vienna, for discovering this information, as well as Mr. K. Fischer, Hochstadt am Main, who was held liable for damages as responsible architect, and who supplied me with further details. Reproduced in: Germar Rudolf, "Wood Preservation through Fumigation with Hydrogen Cyanide: Blue Discoloration of Lime- and Cement-Based Interior Plaster," in: G. Rudolf (ed.), op. cit. (note 80), pp. 557-561 (www.vho.org/GB/Books/dth/fndwood.html).

²²² In one case, the fumigation of a church freshly painted with iron-free lime paint led to dark stains caused by the polymerization of hydrogen cyanide: D. Grosser, E. Roßmann, "Blausäuregas als bekämpfendes Holzschutzmittel für Kunstobjekte," *Holz als Roh- und Werkstoff*, 32 (1974), pp. 108-114.

²²³ Although even old plaster might turn blue on occasion: Carl Hermann Christmann, has reported the case of a farm building belonging to an 18th-century monastery; the farm building was sold to a farmer following deconsecration, and the farmer then used it as a barn. Around 1980 an investor converted the beautiful Baroque building into a luxury holiday restaurant. The existing interior plaster was repaired and painted white. After some time blue stains appeared in the white paint; the stains were identified by a consulting expert as Iron Blue. The expert assumed that the former owner must have fumigated the

However, in the many hundreds of thousands of fumigations carried out since 1920 there cannot, as a rule, have been many complications. Otherwise the procedure would have been abandoned very rapidly. The above described cases therefore were exceptions. But what exactly was it that made these cases exceptions?

During the years 1939-1945, in the camps of the Third Reich, hundreds of thousands of people – Jews, political prisoners, criminals, ‘anti-socials,’ and prisoners of war – were crammed together. To stem the raging epidemics, attempts were made, not always with great success, to kill the carriers of disease, particularly body lice. This was done in particular with hydrogen cyanide, Zyklon B, sometimes in chambers professionally designed for such purposes. Sometimes ordinary rooms were equipped for such purposes in an auxiliary manner and provisionally used for disinfestation. Many of the camps in the Third Reich were leveled at the end of the war or afterwards. In other camps the existing buildings were torn down and the building materials used for the reconstruction of the ruined cities. A few buildings, however, remain intact today. The interiors of these buildings look as in Fig. 38-45 (see also the original color pictures in the literature mentioned in the respective footnotes).

From the remarks of a Polish research team, which conducted investigations on behalf of the Auschwitz Museum, we also know that the disinfestation chamber in the Auschwitz main camp is colored a spotty blue.^{38,39} To my knowledge, only the Zyklon B disinfestation chambers of Dachau camp (DEGESCH circulation chambers) exhibit no blue pigmentation, because their walls were professionally coated with a paint impermeable to gas and water.²²⁴

It seems therefore that a blue pigmentation of masonry is not exceptional, but rather the rule, where unprotected masonry is repeatedly exposed to hydrogen cyanide over long periods. The large-scale, long-term use of hydrogen cyanide for vermin control in disinfestation chambers only began with the onset of the Second World War. And with the dissolution of the National Socialist prisoner camps, the confiscation of the corporation having manufactured and marketed Zyklon B (the DEGESCH was a subdivision of the *I.G. Farbenindustrie AG*), and the invention of DDT and other pesticides at the

Fig. 37: Inky blue stains on the plaster of a church fumigated with hydrogen cyanide.

building with hydrogen cyanide between 1920 and 1940, which then caused the stains 40-50 years later. Personal communication from C.H. Christmann according to his recollection on July 13, 1999.

²²⁴ Since Dachau's new hygiene building was finished shortly before war's end, it is unknown whether and to what degree these devices have been used in the first place.

end of World War II, this large-scale use of hydrogen cyanide ended just as abruptly. No one cared about any ‘instances of building damage’ having occurred in the former National Socialist disinfestation chambers in this period. The question never arose in the literature... until Fred Leuchter came along.

Relying on the results of my expert report, I will briefly summarize what the conditions are that support the formation of long-term-stable iron cyanides of the Iron Blue type:

- fresh mortar or concrete
- high humidity
- low temperature (above freezing point)
- high amount of cement rather than lime in plaster
- high concentration of HCN used
- long and repeated exposure of the walls to HCN

Let us now compare the conditions that (allegedly) prevailed during the claimed homicidal gassings in the buildings at Auschwitz and Birkenau.

Crematories IV and V as well as the so-called Bunkers in Birkenau had neither heating facilities nor a ventilation system. Their walls were made of

²²⁵ G. Rudolf, *The Rudolf Report*, op. cit. (note 71), color section.

bricks and mortar, their floors of concrete or cement. Whereas the crematories were newly erected, the Bunkers were old farm houses. To achieve the claimed rapid executions, large amounts of Zyklon B had to be applied similar to disinfestation gassings. Since the Zyklon B could not be removed after the gassing, it would have kept releasing the gas for at least an hour. Ventilation through the doors would have taken many hours, if not days, depending on wind and ambient temperature. Hence, these conditions resemble those of makeshift delousing chambers with poor ventilation systems, which all developed intense blue staining. We therefore would expect similar staining in the newly built crematories, but much less, if any, in the old farm houses.

Crematory I in Auschwitz was an old building. Its walls were made of bricks and mortar, floor and ceiling of concrete. The ventilation system was a makeshift solution designed for a morgue. Here, too, the Zyklon B once applied could not be removed. Successful ventilation would have taken several

Table 12: Comparison between Bavarian church,²¹⁹ crematory morgues and disinfestation chambers

LOCATION PROPERTY	PLASTERING OF CHURCH	CREMATORIUM II/III MORGUE 1	DISINFESTATION BW 5A/B
Iron Content	> 1 Weight-%	1-2 Weight -%	0.5-5 Weight-%
Type of plaster	Lime + Cement	Cement (+lime?)	Lime
Alkalinity	Medium-term high	Medium-to-long-term high	Short-term high
Moisture	Moderately high (hy- drophobic plaster, cool, moist church)	High (unheated cellar below groundwater table, condensing sweat*)	Moderate (exterior wall) to low (interior room) (heated room)
Time elapsed between plastering and fumigation	A few weeks	Between a few weeks and three months*	(a few weeks?)
Number of fumi- gations	1, lasting for more than a day	Allegedly ≥ 400*, each time at least one hour	Probably < 400, in each case many hours
Proof of cyanide	Positive	Negative	Positive (0.1-1 weight-%)

* = assuming the correctness of the alleged mass gassing scenarios

hours. Due to the closeness of the morgue to the furnace room, it must be assumed that its air temperature was rather high. Since the exterior walls were covered with soil from the outside, the temperature of the walls would have been considerably lower than the temperature of the room’s air, resulting in condensation of water on that wall. It therefore was probably quite moist and liable to accumulate HCN. Since the plaster was old, though, it was probably not prone to develop large amounts of iron cyanides, if any.

The rooms in question within Crematories II and III in Birkenau were unheated underground morgues, freshly erected with walls made of brick and cement mortar, and the floor, pillars, and ceiling made of concrete. The chemical and physical conditions here were almost perfect for the accumulation of HCN and its conversion to long-term-stable iron cyanides: freshly made, cool, moist, long-term-alkaline material. The tendency to accumulate and convert HCN was actually many times higher here than in the disinfestation buildings depicted above, where such chemical reactions did take place. The only factor that counteracted this higher tendency was the ventilation system, which reduced the amount of time the walls were exposed to HCN considerably. Yet it would have at best been able to balance the higher chemical and physical probability of forming Iron Blue, so that we would have to expect similar residues in the alleged homicidal gas chambers of Crematoria II and III as we find in delousing chambers; see Table 12.

4.5.2. Results of Analyses

Let us now have a second look at the results of various chemical analyses. The first, white block in Table 14 (p. 119) reports samples from buildings, or ruins of buildings, where it is claimed that homicidal gassings took place.

Table 13: Orders of magnitude of analytical results of various samples, in mg CN-/kg				
Author:	Markiewicz <i>et al.</i>	Leuchter	Rudolf	Ball
Results from:	Cyanide without iron cyanide	———— Total cyanide ————		
delousing chambers	0-0.8	1,025	1,000-13,000	2,780-3,170
'gas chambers'	0-0.6	0-8	0-7	0-1.2

The second block, which is beneath it and shaded in gray, reports samples from walls of Zyklon B delousing chambers. The third block, which is white, reports samples from other walls or buildings, which had nothing to do with either homicidal chambers or delousing chambers.

As we can see, the concentrations in the delousing chambers are a thousand times those in the alleged homicidal gas chambers.

A series of analyses was also conducted by a Polish research team of the Jan Sehn Institute for Forensic Research in Krakow in the early 1990s.²²⁹ Many people, both experts and laymen, rely upon their findings. These scientists, however, intentionally tested their samples with analytical methods that were *unable* to detect stable iron cyanide compounds, that is, the only compounds that can be expected to be found after 50 years. It can therefore be no surprise that the Jan Sehn team did not detect any significant cyanide residues in any of their samples (see Table 13).

In a separate study I have shown in detail that these results are worthless because of this, and I also demonstrated that the Jan Sehn team committed this fraud for political purposes.²³⁰ They were appointed for the purpose of establishing that similar amounts of cyanide compounds are to be found in both delousing chambers and gas chambers. Since the proper analytical method does not yield such a result, they simply chose a method that would detect next to nothing in any sample. Having doctored their method to obtain equal results for all their samples, the Poles happily announced that similar results prove similar history: if both homicidal gas chambers and delousing chambers showed extremely low levels of unstable cyanides, this proves that they both were exposed to the poison Zyklon B in a similar manner. This conclusion is itself logically unsupported.

4.5.3. Interpretation of Analytical Results

The fact is that the results of samples taken from alleged homicidal chambers are not zero. However, the traces of cyanide found there can also be found in samples taken from locations that were either only occasionally exposed to Zyklon B, such as prisoner barracks, or never at all, such as the Bavarian farmhouse or the washroom in Crematory I.

²²⁹ J. Markiewicz *et al.*, *op. cit.* (note 38, 39).
²³⁰ Cf. works cited in note 40.

If such minute traces are proof of homicidal gassing, does that mean there were other “Auschwitzes” we don’t know about, like in a collapsed Bavarian farmhouse, from which I took a sample just to have a comparison? This is of course not likely.

Also, my attempts to reproduce some of these low test results did not succeed (see Rudolf Samples 3 and 8).

The background of this uncertainty is that we are dealing with solid samples. The analytical method used to test the samples had been developed for liquid samples like those taken from industrial waste waters. Solid samples behave differently, in that they bring in many insoluble compounds, which can disturb the analysis. Also, high amounts of carbonates – a major ingredient of all mortar, cement, and concrete – disturb the analysis as well, because the analytical method chosen converts carbonates into carbon dioxide and transports it along with HCN into the test tube, where it changes the optical characteristics of the liquid then tested for cyanide with an optical method.

In other words: test results of solid samples – in particular wall samples – are much less precise than those of liquid samples. For this reason, detection levels for solid samples are usually set much higher than for liquid samples.

This in turn means that results under 10 mg of cyanide in 1 kg of sample material are considered unreliable in these cases. Test results under 10 mg/kg should therefore be considered “insignificant,” if not “zero.”

To make a long story short: Chemical tests show that there are *no significant cyanide residues* in the alleged homicidal gas chambers, although we would have to expect huge amounts if the eyewitness claims were true.

And that is the end of the line.

Table 14: Cyanide concentrations in the walls of alleged homicidal gas chambers and delousing chambers at Auschwitz/Birkenau

No.	Location	Sampler	c[CN ⁻] mg/kg
1-7	Crematory II, Mortuary 1 ('gas chamber')	Leuchter	0.0
8	Crematory III, Mortuary 1 ('gas chamber')	Leuchter	1.9

28	Crematory I, Washroom	Leuchter	1.3
5	Inmate barracks	Rudolf	0.6
6	Inmate barracks	Rudolf	<0.1
7	Inmate barracks	Rudolf	0.3
8	Inmate barracks	Rudolf	2.7/0.0
23	Inmate barracks	Rudolf	0.3
24	Inmate barracks	Rudolf	0.1
25	Untreated brick from collapsed Bavarian Farmhouse	Rudolf	9.6/9.6

Concentrations are in mg of cyanide (CN⁻) per kg of building material (brick, mortar, concrete, plaster). Cyanide values of less than 10 mg/kg are uncertain, samples returning values of less than 1-2 mg are considered cyanide-free. If two values are given, the second value gives the result of a control analysis performed by a different company and a slightly different method.

The Second Leuchter Report

FRED LEUCHTER & ROBERT FAURISSON

1. Foreword

Fred A. Leuchter is a 46-year-old engineer who lives in Boston. He is a specialist in planning and building execution facilities for American penitentiaries. One of his achievements was the modernization of the execution gas chamber in the penitentiary at Jefferson City, Missouri.

Ernst Zündel is a 50-year-old German who lives in Toronto, where he had a brilliant career as a graphic artist and advertising man, until he was boycotted because of his Revisionist opinions. Since then, he has spent almost all his time struggling against lies about the “Holocaust.” I have helped him in this struggle, especially during the two trials which a Canadian Jewish organization initiated against him in 1985 and 1988.

Zündel’s first trial lasted seven weeks and ended with his being sentenced to 15 months in prison for “publication of false news.”²³¹ The verdict was thrown out on appeal because of serious errors made by District Court Judge Hugh Locke.

The second trial lasted four months. This time Ernst Zündel was sentenced to nine months in prison by District Court Judge Ron Thomas.²³² This second verdict, too, may eventually be successfully appealed on the same grounds.

In 1988, Ernst Zündel asked Fred Leuchter to visit Poland to examine “the alleged execution gas chambers” in the three concentration camps at Auschwitz, Birkenau and Majdanek. The conclusion of the first Leuchter Report was quite clear: no such gas chambers ever existed in those three places.

In 1989, he asked Leuchter to visit West Germany and Austria to examine “the alleged execution gas chambers” at Dachau, Mauthausen and Hartheim Castle. The conclusion of the second report, as you will read below, is just as clear: no such gas chambers ever existed in those three places.

²³¹ Editor’s remark: cf. Michael Hoffmann II., *The Great Holocaust Trial*, 3rd ed., Wiswell Ruffin House, Dresden, NY, 1995.

²³² Editor’s remark: cf. Barbara Kulaszka, *Did Six Million Really Die? Report of the Evidence in the Canadian ‘False News’ Trial of Ernst Zündel – 1988*, Samisdat Publishers, Toronto 1992 (www.zundelsite.org/archive/english/dsmrd/dsmrdtoc.html; www.vho.org/aaargh/fran/livres3/KULA.pdf); Robert Lenski, *The Holocaust on Trial: The Case of Ernst Zündel*, Reporter Press, Decatur 1990.

People have called revisionism “the great intellectual adventure of the late twentieth century.” That adventure really began shortly after the Second World War with the publication of the works of Maurice Bardèche²³³ and Paul Rassinier.²³⁴ It continued in 1976 with a masterful work *The Hoax of the Twentieth Century*, by Dr. Arthur Butz of the United States,²³⁵ and in 1979 with the publication in Germany of Dr. Wilhelm Stäglich’s book, *Der Auschwitz Mythos*,²³⁶ and the creation of the Institute for Historical Review in Los Angeles.²³⁷

During the 1980s, thanks in particular to the activities of Ernst Zündel, revisionism worldwide has developed to such an extent that future historians will probably speak of revisionism before and after Zündel. In a way, these politically motivated trials – which are a disgrace to Canada – will change everything. Zündel promised in 1985 that his trial, even if he were to lose, would put the Nuremberg Trial on trial, and that the slanderers of Germany would meet their “Stalingrad” there. He was right.

1.1. Before Ernst Zündel

Before Ernst Zündel, Germany’s accusers never gave a thought to proving the existence of the “gas chambers.” They treated their existence as “proven.”

According to Exterminationist Serge Klarsfeld:

“It is clear that during the years after 1945 the technical aspects of the gas chambers were a subject that was neglected since no one imagined that someday we would have to prove their existence.” (*Le Monde Juif*, January-March, 1987, p. 1)

At the Nuremberg trials, the Eichmann trial in Jerusalem, and the Frankfurt trial as well as at many other famous trials, including the Klaus Barbie trial in 1987, there was no attempt to prove this horrible accusation, which has so long weighed on the vanquished German nation. These judicial travesties were similar to the witchcraft trials, in which the accused and their defense lawyers did not question the existence of the Devil and his supernatural doings. In these modern witchcraft trials, it has been taboo to question the existence of “the gas chambers” and their supernatural accomplishments, which defy all laws of physics and chemistry.

²³⁶ Editor’s remark: Engl. edition: *The Auschwitz Myth: A Judge Looks at the Evidence*, Institute for Historical Review, Newport Beach, CA 1986; 3rd ed: Castle Hill Publishers, Uckfield 2015..

²³⁷ Editor’s remark: see www.ihr.org.

Even Klaus Barbie's French defense attorney, Jacques Vergés, in spite of his courage, refrained from asking for even the slightest proof of the existence of the "gas chambers," to which Klaus Barbie allegedly sent the Jewish children from their refuge in the town of Izieu, near Lyons.

In all these trials of so-called "war crimes" or "crimes against humanity," the supposedly civilized nations have ignored the elementary rules of criminal law for nearly a half century.

To understand what I mean, let us take, for example, a crime committed in France. Let's suppose that in this case there is a weapon, a body, and a killer (or presumed killer). Normally the French court would demand four routine reports:

1. A report of on-site forensic examination of the body and any suspect item;
2. A technical study of the weapon used to commit the crime;
3. An autopsy report on the victim, showing how and by what means its death occurred;
4. A report on the reenactment or simulation of the crime, in the presence of the accused, at the scene of the crime.

Even if the defendant has confessed, the judges never decide that further investigations need not be carried out; a confession, to have much judicial value, must be *verified* and *confirmed*.

In nearly half a century, however, no one has ever met these elementary standards, in a case which involves not just an ordinary crime perpetrated by a single person with an ordinary weapon (whether blade or bullet), but a supposedly unprecedented crime committed against millions of people with an extraordinary weapon that no judge had ever seen before: a "super gas chamber" for thousands of victims, a virtual mass-production chemical slaughterhouse!

The first trials of Germans accused of having used "gas chambers" or "gas vans" to kill people began in 1943 in the Soviet Union (trials of Kharkov and Krasnodar). They continue to this day, especially in Israel with the Demjanjuk trial.²³⁸ Today, after 47 years of such trials we still do not have:

1. A single on-site forensic examination of "gassed" bodies or "gas chambers" or "gas vans";
2. A single expert report concluding that a given room or a given van was used for homicidal gassing;
3. A single autopsy report concluding that the victim had been killed by any type of poison gas;

²³⁸ Editor's remark: cf. Yoram Sheftel, *The Demjanjuk Affair. The Rise and Fall of the Show Trial*, Victor Gollancz, London 1994.

4. A single report on the re-enactment or simulation of a gassing operation, using the thousands of victims claimed and the steps taken, and taking into account the dangerous chemicals involved.

In the course of the trial concerning the Struthof-Natzweiler camp, in Alsace, an expert study was in fact made of the “gas chamber” and of the “gassed” bodies (kept at the civilian hospital in Strasbourg), but in each case, Professor René Fabre, a toxicologist, found no traces of gas. As regards Dachau, there was in fact a kind of expert report carried out by Captain Fribourg, of the French army, but although the report concluded that it would be necessary to examine the room provisionally called the “gas chamber,” no such examination was carried out.

During his preliminary investigation in the trial of Rudolf Höss and other Auschwitz officials, examining magistrate Jan Sehn ordered the Institute for Forensic Examination, Copernic Street, Krakow, to test six zinc closures allegedly obtained from ventilation openings said to have been part of the “gas chamber” of Krematorium II in Birkenau, and also 25.5 Kilos of hair with metallic items in them. Traces of hydrocyanic acid and its compounds were found (expert reports by Dr. Jan Z. Robel, dated December 15, 1945).

There is nothing out of the ordinary in this. The Germans made frequent use of hydrocyanic acid, in the form of Zyklon B for the disinfection of premises, clothing, and personal effects. In Poland, as well as throughout wartime Europe, hair was collected, even in commercial barber shops, for use in clothing (after it was disinfected). What is paradoxical is that, despite having a forensic institute at its disposal, it appears that the Polish justice system never undertook basic, thorough research into the rooms alleged to be “execution gas chambers.” (See R. Faurisson, “Response to a Paper Historian,” *The Journal of Historical Review*, Spring 1986, p. 37)²³⁹

On-site visits by the courts took place during certain trials, notably the Frankfurt trial (1963-65). The scandal is that parts of the Auschwitz camp were viewed by the visiting official party, but not the supposed “gas chambers,” in spite of the fact that they were there, either in their original condition (as claimed to this day by Polish Communist officials and publications) or in ruins, from which much could be determined (see Dr. Wilhelm Stäglich, *The Auschwitz Myth*, Institute for Historical Review, 1986).

A reenactment, which is by definition a simulation, would have been easy to carry out at Birkenau. It would have immediately shown the foolishness of the gassing accusations. Filmmakers sometimes shoot Hollywood-style “docudramas” at Birkenau, claiming to re-create the arrival of the Jewish convoys on the ramp at Birkenau, near the two crematory buildings that were each

²³⁹ Editor’s remark: see www.ihr.org/jhr/volumeindex or www.codoh.com/library/categories/1206 for a collection of papers published in the *Journal of Historical Review*.

supposed to contain (1) a changing room where the victims would take off their clothes; (2) a homicidal gas chamber; (3) a room containing five crematory ovens with three retorts each. We are told that each group of victims numbered some 2,000 people and there were several such groups burned each day in each crematory. We can see from the size of the buildings and the arrangement of the surrounding areas that any re-enactment would immediately result in fantastic bottlenecks. The overcrowding at the crematories would be spectacular. Decomposing, rotting bodies would pile up all over the areas. Assuming that it took one and a half hours (the average funeral-industry time) to incinerate one body, it follows that after one and a half hours had passed we would find ourselves with the original 2,000 bodies minus the 15 that had been burned, still leaving 1,985 bodies with no place for storage before burning! The “machinery of death” would break down with the first gassing. It would take eight days and eight nights to incinerate 2,000 bodies, assuming continuous operation of the crematoriums. According to cremation experts and crematory operating manuals, however, no crematory can operate continuously, day and night.

Let’s talk about the witnesses who testified at these trials. In all of them, persons have come forward to offer themselves as living witnesses to the “Holocaust” and to the “gas chambers.” How did they, according to their own stories, escape the gas chambers? The answer was very simple: every one of them had benefited from a miracle. As each survivor passed through one so-called “death camp” after another, he considered his life a sum of miracles. The members of the “Sonderkommandos” broke all records. According to their stories, the Germans usually gassed the personnel of these units every three months, which means that two years spent at Auschwitz and Birkenau would mean a total of seven or eight consecutive miracles for those champions at surviving. Only rarely have the lawyers or judges at such trials dared to betray their surprise at so many miracles.

The Olympic champion of gas-chamber survivors, Filip Müller, the immortal author of *Eyewitness Auschwitz: Three Years in the Gas Chambers*, had some problems with this question at the Frankfurt trial, but he found the perfect answer: he disdainfully explained that the story about the regular liquidation of the “Sonderkommando” was merely a legend. The extent to which the general public, historians, and judges let themselves be bamboozled by these supposed witnesses to the “Holocaust” is disturbing.

Simone Veil, former French Minister and head of the European Parliament, often offers herself as a living witness to, and as living proof of, the extermination of the Jews at Auschwitz. If she is living proof of anything, it is that the Germans did not exterminate the Jews at Auschwitz. Simone Veil, her mother and one of her sisters were always together: at Drancy (a French transit camp),

at Auschwitz, at Bobrek (a sub-camp of Auschwitz), and at Bergen-Belsen. In the last camp they contracted typhus, usually considered a deadly disease at that time. Veil's mother died there. Like her two daughters, she too had survived Auschwitz. Another daughter survived Ravensbrück.

Personally, I do not consider anyone an "eyewitness" unless he or she successfully passes the test of being cross-examined about *the physical aspects of the facts which he or she reports*.

Please read what I say here carefully: in no trial has a supposed witness to the "gassings" been cross-examined about the physical aspects of the gassing he said he had seen or participated in. Even in the trial of Tesch and Weinbacher, sentenced to death and executed for having made or sold Zyklon B, prosecution witness Charles Sigismund Bendel, on whose testimony the two were largely condemned, did not undergo such a cross-examination (see William Lindsey, "Zyklon B. Auschwitz and the Trial of Dr. Bruno Tesch," *The Journal of Historical Review*, Fall 1983, pp. 10-23). As a matter of principle and as a defense tactic, lawyers for the accused have avoided the taboo of the "gas chambers" by limiting themselves to saying that, while gas chambers existed, their clients did not gas anyone.

1.2. After Ernst Zündel

With the arrival of Ernst Zündel the veil of trickery was torn asunder. Zündel had the daring not to let himself be intimidated. He showed that indeed, the emperor had no clothes. He confounded the rascals with his direct, no-nonsense approach. Consequently, the prosecution's experts and witnesses suffered a severe defeat at his trial. And Ernst Zündel, moving to the counter-offensive, taught historians and judges a superb lesson. He showed them what they ought to have done all along. They should have, in a sense, begun with the beginning, which, as we all know, is sometimes very difficult to do. Trying first and foremost to establish what had taken place physically, Ernst Zündel, at his own expense, sent a U.S. expert on execution gas chambers, along with his team, to Poland. This expert, Fred Leuchter, took samples from the ground, the walls, and the floors of the alleged gas chambers and then had them analyzed by an American laboratory.

I have described elsewhere how the experts and witnesses for the prosecution were routed during the 1985 and 1988 Toronto trials (see Robert Faurisson, "The Zündel Trials (1985 and 1988)," *The Journal of Historical Review*, Winter 1988-89, pp. 417-431). I am not going to return to that subject. I would only like to make it clear that this is not simply my subjective judgment. The proof that I am telling the truth is that, at the 1988 trial, Exterminationism's number one expert, Raul Hilberg, the "pope" of the Holocaust Legend, re-

fused to testify again, since he still had painful memories of his defeat in 1985 at the hands of Zündel's defense attorney, Douglas Christie. He said as much in a letter to Prosecutor John Pearson, a letter which was supposed to have remained confidential but which the defense learned of and caused to be made public. Nor did Dr. Rudolf Vrba, and other star witnesses of the 1985 trial return for the 1988 trial either. Prosecutor Pearson, asked by Judge Ron Thomas whether any "survivors" would testify, had to respond pitifully (I was present) that at this time they would not.

Out of my pity for them, I will not refer here (as I have already done in the above-mentioned article) to the statements made in 1988 by Red Cross representative Charles Biedermann, an apparently honest and intelligent man who nevertheless frequently gave evasive and misleading answers, and by Professor Christopher Browning, who gave a distressing display of what an American university professor can be like: an ignoramus of boundless naiveté, a lover of money and a man without scruples. In him, we had a university professor who accepted \$150 an hour from the Canadian taxpayer to come to Toronto to crush a man – Ernst Zündel – because of an opinion and to help throw him in prison: the crime of this man was that he had published in Canada a 14-year-old essay which had been freely distributed in Great Britain and in Browning's own country.

To me, one of the principal results of the first Leuchter Report was just that it made one simple fact strikingly clear: that no forensic expert study of the "weapon" used to carry out the "Holocaust" crime had previously been done. Since his report was made public, in April of 1988, Leuchter has not found a single person, including those who have shown their anger about his findings, who could refute his report with any other report that had previously been drawn up. As regards those who would criticize some parts of the Leuchter Report, I invite them to make their own investigation and get their own laboratory reports.

There still remains one solution outlined by Fred Leuchter himself in his paper given in Los Angeles in February 1989 during the Ninth International Conference of the Institute for Historical Review: the establishment of an international committee of experts on the problem of the gas chambers. As early as 1982, French historian Henri Amouroux, with whom I had discussed my research, confided to me that he hoped for such a solution. He told me in so many words that what he wanted was an "international" commission, "definitely not a national" commission, since the French seem incapable of any open-mindedness on the question of the gas chambers.

The Polish authorities, unless they develop a sudden appetite for *glasnost*, will oppose with all their strength any inquiry of that kind, just as they oppose all normal access to the archives of the State Museum of Auschwitz, especial-

ly to the death registers (*Sterbebücher*), left behind by the Germans, which would give us an idea of the real number of those who died at Auschwitz and the cause of their deaths. In 1987, Tadeusz Iwaszko, the director of the Archives in the Auschwitz Museum, told French journalist Michel Folco (in the presence of pharmacist Jean-Claude Pressac, one of Serge Klarsfeld's friends) that, "If we were to carry out excavations that did not uncover any proof of the existence of the gas chambers, the Jews would accuse us other Poles of having suppressed the evidence." (Note: *On August 8, 1989, Ernst Zündel wrote to Soviet leader Mikhail Gorbachev, informing him that he had received confirmation of the capture of the Auschwitz death registers by the Soviet Union from the cross-examination of Red Cross delegate Charles Biedermann. He requested access to the registers and suggested that it would be a gesture of good will if the registers were released. In what was perhaps a happy coincidence, the Soviet Union released the register one and a half months later.*)

1.3. The Second Leuchter Report

It is likely that the first Leuchter Report will for a long time remain the last word about the gas chambers at Auschwitz, Birkenau and Majdanek. As a pioneering effort, it opened a particularly fertile field of research for others to follow and expand upon.

The second Leuchter Report, 1989, is also a pioneering work, this time on the question of the alleged gas chambers at Dachau, Mauthausen and Hartheim.

I did not accompany Leuchter and his team to Auschwitz, Birkenau, and Majdanek, but I had thought since 1977 that the American gas chambers which use cyanide gas had to be studied to know the absurdity of the alleged German gas chambers which allegedly used Zyklon B, an insecticide whose base is hydrocyanic acid. I hoped, without really believing it, that some day an expert on the American gas chambers would visit Auschwitz and carry out the kind of physical and chemical study that ought to have been carried out by any honest judicial or historical inquiry.

In 1979, at the time of the first international conference of the Institute for Historical Review, I myself mentioned that idea to several people, especially to Ernst Zündel. In the years that followed, I abandoned all hope. I must say that even among some revisionists I did not find very much interest in my idea. Perhaps it appeared too bold or too unrealistic. But Ernst Zündel abandoned neither the idea, nor the hope of succeeding. In the preface to the first Leuchter Report, I told how, thanks to Ernst Zündel and to Canadian attorney Barbara Kulaszka, I was able to meet Fred Leuchter in Boston, and how the expedition to Poland was organized.

For the expedition into West Germany and Austria, I was part of the Leuchter team. In the report that you are about to read, Fred Leuchter gives us all the important information about the members of that team and about the nature and result of his mission.

1.3.1. Dachau

From 1945 to 1960, Allied propaganda and the Allied courts told us that homicidal gas chambers had been used at Dachau, Mauthausen and Hartheim. Apparently, there was no lack of evidence, of witnesses and of confessions to that fact.

They especially emphasized the Dachau “gas chamber” and its victims. American propaganda was so fulminant that, if there is any country in the world today where the “gassings” at Dachau are considered to be as well proven as the existence of the pyramids in Egypt, it is the U.S.A.

One of the decisive days at the Nuremberg show trial was that on which the prosecution exhibited a film about the German concentration camps. The ultimate horror came with a view of the “gas chamber” at Dachau. The narrator explained the functioning of the machinery which supposedly gassed “probably a hundred men at one time.” We cannot overemphasize how much that film on “Nazi Concentration Camps” – 6,000 feet selected from the 80,000 feet that had been shot – captured and influenced the popular imagination, including most of the German defendants.

It is likely that the two events which most helped to stir up public opinion against the vanquished Germans were first the showing of that film and second the sort of public confession of Rudolf Höss, “the Commandant of Auschwitz,” made before the tribunal. Today we know that his confession was “dictated.” The substance of it flowed from the sick imagination of a British Jew who was one of the men who tortured Höss after his capture (see R. Faurisson, “How the British Obtained the Confessions of Rudolf Höss,” *The Journal of Historical Review*, Winter, 1986-1987, pp. 389-403).

But the story of the Dachau “gassings” was also made up out of thin air. We had to wait until 1960 for the liars to admit it.

On August 19, 1960, in *Die Zeit*, the notorious Martin Broszat admitted that there had never been any homicidal gassings at Dachau. Two years earlier this same historian, to his everlasting shame, had published the “confession” of Rudolf Höss, supposedly written in prison after Höss was turned over to the Polish Communists by the British. In so doing, he had presented it as genuine and trustworthy, yet these “confessions” were essentially the same confessions obtained by the British, and were nothing more than a re-organized and expanded version of the British inventions, with a bit of a Polish flavor added!

(In 1972, Martin Broszat became the director of the Institute for Contemporary History in Munich.)

Today, every visitor to the “gas chamber” at Dachau can read on a mobile panel the following statement in five languages:²⁴⁰

“*GAS CHAMBER – disguised as a ‘shower room’ – never used as a gas chamber.*”

Since the panel is mobile, the film makers who sensationalize evil, as well as other professional liars, can roll it out of view and film or photograph the room from all angles while persisting in saying that it was a gas chamber that was actually used to gas prisoners.

I am amazed at the cynicism of the officials of the Dachau Museum and the naiveté of the museum’s visitors. The words on the panel are not based on reality. In 1980, in my *Mémoire en défense contre ceux qui m’accusent de falsifier l’histoire* (1980, pp. 197-222), I think I illustrated this point. I recounted how I completely embarrassed Barbara Distel, the director of the Museum, and the late Dr. Guerisse, then president of the International Dachau Committee, headquartered in Brussels, by asking them why they called this room a “gas chamber.” When people asked these two how it came to pass that the Germans did not find the time to finish this little “gas chamber” that they began in 1942, they said that the prisoners employed to construct it either sabotaged it or refused to work on it.

But how could the prisoners, unable to have seen something that had never existed anywhere in the world (a gas chamber for 100 people at a time), know from the outset of their work that once the work was completed, they would have constructed a homicidal gas chamber? Do we have here yet another miracle, one of divination and mental telepathy? Did successive prisoner work details pass on the word about this for three years? Would the Germans have given the prisoners an ultra-secret mission, to construct a lethal gas chamber for Dachau inmates, without being concerned about their carrying it out?

Furthermore, how did Barbara Distel and Dr. Guerisse know that the room was an uncompleted gas chamber? Can they explain to us what needs to be added to the “uncompleted” little gas chamber in order to complete it? Where did they get their technical information? Do they have building plans for “gas chambers” in their archives? Have they already seen some “completed” gas chambers? Where and when?

At the time of our visit to Dachau on April 9, 1989, Fred Leuchter, a staff member of the Institute for Historical Review and I were videotaped by cameraman Eugen Ernst, first in the “gas chamber,” and then, after leaving it, on a sort of parade ground outside. It was on this parade ground that we decided to record our comments about the visit. The tourists who had just visited the

²⁴⁰ Editor’s remark: This panel was removed in the early 2000s.

room saw us and some stopped and listened. Fred Leuchter was able to make his report in peace, except for one not-too-serious incident provoked by one tourist who aggressively asked me if we doubted the reality of the “gas chamber.”

When it was time for us to comment on camera about our visit and observations, the tourists began to gather. Some of them betrayed a little nervousness. We could have interrupted our report and continued it somewhere else in the camp, but I decided to remain where we were and try to exploit the situation. After all, we had there in front of us the best possible audience: all of them had just “seen a gas chamber” and they later would probably tell their friends: “No one can deny the existence of the gas chambers; I saw one myself at Dachau.” I therefore engaged in an improvised debate with the visitors. I made it a point to say that they had not visited a gas chamber at all but merely a room to which Mrs. Distel, director of the Museum, had given that designation. In so doing, she had made a serious allegation for which she offered no proof (the few photos and documents hung in a room next to the alleged gas chamber proved nothing at all). But who dared to ask her for any proofs? Apparently nobody. I warned the tourists not to be tempted to go and tell their family circle that they had seen a gas chamber at Dachau. In reality, they had seen nothing of the kind. In the midst of my presentation I let them know that, as far as we revisionists are concerned, there had been no homicidal gas chambers anywhere, including Auschwitz, nor had there been any German policy to exterminate the Jews.

The whole thing began to look like a sort of 1960’s-style “happening.” Some visitors reacted angrily, others agreed with us. All of them appeared either indignant or interested. One young German thought that I deserved to be thrown into prison for such statements. The most hostile ones resorted to the usual evasion: “Gas chambers or not, it doesn’t make any difference.” This is an argument which I, as a Frenchman, particularly enjoyed, since in France, in response to complaints by Jewish groups, Jean-Marie Le Pen had been severely condemned by the courts for having said exactly the same thing.

The magical “gas chamber” is the central pillar of the new Holocaust religion. It is not the revisionists, but rather the adherents of the new religion who make such a fuss about the “gas chambers.” Consequently, we must ask them for some explanation of their attachment to these myths. Of course, they must cling to the gas chamber, for without a specific and systematic means of destruction, it becomes impossible to prove the existence of a specific and systematic program for the destruction of the Jews. Without the “gas chamber,” there is no “genocide.”

Cameraman Eugen Ernst was able to tape a good part of this “happening,” which allowed me to give my first public presentation in Germany about the

taboo of the “gas chambers” and the “genocide” claim, right across from the fake gas chamber of Dachau, one of the most important shrines of the Holocaust cult.

1.3.2. Mauthausen

The minuscule gas chamber at Mauthausen has never been defended by very many of the Holocaust faithful. It is indefensible. In nearly a half century, only two people have really tried to make us believe in it: Hans Marsalek of Austria and Pierre-Serge Choumoff of France. In their various publications they wisely refrain from showing a real photo of the interior of the room. The reason is simple: the room looks like nothing more than a simple shower room, and one can see nothing that would lead one to think that it was a homicidal gas chamber with all the equipment, which would have been indispensable in such a case. Marsalek and Choumoff usually don't show any photo; very rarely they will show an exterior photo of one of its two doors (two doors to a gas chamber, a fact that would definitely double the problems of keeping the chamber air-tight); or, sometimes, they allow the reader to vaguely see a small part of the interior.

At the time of my first visit to Mauthausen in 1978, I asked two officials of the museum, particularly the director, a former Spanish inmate, why, amongst all the postcards of the camp that were on sale to tourists, there was not a single one showing the so-called gas chamber. The answer was: “That would be too cruel.” That is a rather surprising answer when you remember that all the concentration camp museums, including the one at Mauthausen, are reminiscent of the “chambers of horrors” that can be seen at country fairs and exhibitions, and when you realize that a sort of “sex-shop anti-Nazism” is one of the most flourishing commodities in “Shoah Business.”

During that same visit, I also wanted to know why they did not display, either in the “gas chamber” itself or in the museum, any document or any expert report proving that what looked like a shower room was actually a homicidal gas chamber. The camp's director dared to reply that the text of such an expert report was in fact on display in the “gas chamber” itself. That was not true. Forced to acknowledge that, he then told me about an expert report that could be found in Linz, but he gave no further details about it. It is clear that, if there were any such expert report, it would be reprinted in all the works devoted to Mauthausen and mentioned in all the “Holocaust” bibliographies.

During our inspection of Mauthausen on April 10, 1989, an incident took place involving the camp authorities. We visited the place at an early hour in the morning to allow Fred Leuchter to take his samples without too much risk. No sooner had he finished his task (which caused a great deal of noise) than some groups of visitors began to go through the “gas chamber.” They were

mostly children from schools, which indoctrinate them systematically to feel shame and hatred for what previous generations of Germans and Austrians supposedly did during the war (Austria is the chosen home of the malevolent Simon Wiesenthal). The guides, either museum officials or teachers, talked at length about the “gas chamber” and how it worked, giving the usual, typical explanations found in popular “Holocaust literature” that contradict each other on many points.

Without any previous agreement between us, we, under the watchful eye of Eugen Ernst’s rolling camera, began to ask questions of the museum tour guide, who seemed to be the highest-ranking on the scene. After being at first very sure of himself, the poor man, bombarded with questions, finally had to admit that no one knew very much about how that “gas chamber” had worked. It appeared that over the years the story had taken extremely varied forms. They had given visitors three successive contradictory versions of the gassing procedure:

Version No. 1: The gas came from the ceiling through shower heads (still in existence): that version, the official told us, was abandoned when people noticed that, considering the low ceiling, the victims could have simply put their hands over the shower heads to block them up and prevent the spread of the gas;

Version No. 2: The gas came in from the ceiling and was vented at the time of the airing-out process through a sort of chimney opening, still in existence, located on the west side: the official was not able to tell us why that version of the story also had to be abandoned;

Version No. 3: The gas came through a thin, perforated pipe located on the east wall, about 80 centimeters above the ground. That is, it came from the part of the room diametrically opposite to where it had been in Version No. 2. There is no longer any trace of that pipe or even of the opening, through which it supposedly came from the adjacent room where the gas was generated. The adjacent room is completely empty and contains nothing that gives any hint of what it had been used for.

All of that was already troubling, but perhaps the most troubling thing was that the whole explanation given on a metal plaque inside the gas chamber was that of Version No. 2. I mentioned that to the official, who explained that the text of the plaque was a mistake and that the procedure described there was no longer the right one.

I observed that Version No. 3, the one currently considered to be authentic, had the problem of being, physically, extremely unlikely. Since it was located 80 centimeters above the ground, the perforated pipe, even if it had been partially embedded in the wall to resist the pressure of the bodies inside, would have been blocked up by the bodies of the victims jammed into the “gas

chamber.” How would the gas have spread itself normally in the “gas chamber” so as to kill all the victims throughout the room’s entirety? The official finally said that he was not a scientist and that his explanation was that given in the book written by ... Hans Marsalek.

A few minutes after the museum tour guide left, two police officers appeared and ordered us to stop all filming. They informed us that we could photograph all of Mauthausen except ... the “gas chamber” and the crematory oven! However, there was no announcement advising tourists of that. In any event, thousands of visitors have photographed the two places without any warnings from the camp authorities.

At Mauthausen, I had the feeling that the camp authorities lived in something of a siege mentality. They appeared to be haunted by the progress of revisionism in Austria and by the revisionist work of people like Emil Lachout, Gerd Honsik and Walter Ochensberger. (In passing, I would like to pay homage to the memory of another Austrian, Franz Scheidl. In the 1960s, at his own expense, he published a whole series of studies bearing the general title *Geschichte der Verfemung Deutschlands* (History of the Defaming of Germany).²⁴¹ It has remained largely unknown, even to many revisionists).

1.3.3. Hartheim Castle

Hartheim Castle can be seen from a great distance, sitting as it does in the middle of a plain. For an area that allegedly served as a place to carry out the most secret of crimes, it is quite impossible to hide. The castle was, before and after the war, a sort of asylum. It still is today. Hartheim Castle contains a small, inoffensive-looking room that makes one wonder why the practitioners of the Big Lie decided to call it a homicidal “gas chamber.” It is one of the most insulting and most baffling inventions of the “Holocaust” religion. Today I can see only one use for it: to those who mock the religious superstitions of the past as if our era were more enlightened and more intelligent than in past centuries, I would gladly say:

Go visit the “gas chamber” at Hartheim Castle and then come tell me whether you feel humiliated to be treated like imbeciles by people who dare to say that it was once a gas chamber.

I do not know of any publication that reproduces a photo of this minuscule “gas chamber.” It was identified as such by Hans Marsalek, in the English version of the confession that he supposedly took from Franz Ziereis, Commandant at Mauthausen, regarding the

“large gassing establishment where, in Ziereis’s estimate, between 1 and 1.5 million people were killed.”

²⁴¹ Editor’s remark: www.who.org/D/gdvd; 2nd ed.: Castle Hill Publishers, Uckfield 2014.

1.4. The Revisionist Intifada

The current disarray of the defenders of the “Holocaust” has its curious effects. Up to the end of the 1970s, they believed that in Auschwitz, Birkenau and other camps located in Poland they had “solid proof” of the existence of the “gas chambers” and therefore of the “genocide” of the Jews. Up until that time they went so far as to say that there were some exaggerations and that the camps located outside present-day Poland probably or certainly did not have any gas chambers. Beginning with the start of the 1980s, under the pressure of revisionist writings, the “gas chambers” in Poland and in particular those at Auschwitz and Birkenau seemed more and more doubtful. This then produced a reaction motivated by fear. In a movement comparable to that of religious or political fundamentalism, the exterminationists called for a return to the original faith and doctrine. They “re-established” the gas chambers that had been abandoned. They set out to reaffirm that there had indeed been “gas chambers” at Mauthausen, Sachsenhausen, Ravensbrück, Neuengamme, Struthof-Natzweiler, and perhaps even at Dachau. I refer here to the book by Adalbert Rückerl, Hermann Langbein, Eugen Kogon and 21 other writers: *NS-Massentötungen durch Giftgas* (Fischer Verlag, 1983).

As regards Mauthausen, some people, including Claude Lanzmann and Yehuda Bauer, went so far as to retract the story. In 1982, Bauer clearly wrote that “no gassings took place at Mauthausen.” Lanzmann was just as clear. In 1986, during a bitter debate about the Roques affair on Europe 1 (French radio network), he corrected cabinet member Michel Noir, who had mentioned the Mauthausen “gas chamber.” Lanzmann firmly contradicted the Minister on this score: never had there been a gas chamber in that camp. But all of that did not prevent our two fellows from stating later on that there had indeed been a “gas chamber” at Mauthausen! (For Bauer’s retraction, see pages 33-34 of the absurd book published in Vienna in 1989, by the Dokumentations-Archiv des österreichischen Widerstandes under the title *Das Lachout-“Dokument,” Anatomie einer Fälschung*. As regards Lanzmann’s retraction, read his letter published in *Le Monde Juif*, July-September 1986, p. 97). All those retractions, sudden changes of direction and constantly shifting explanations add up to one further proof that the “gas chamber” and the “genocide” are nothing more than a myth. A myth constantly mutates under the influence of the dominant opinions and necessities of the moment.

The exterminationists of today have only two refuges left them – two points where they hope to be able to anchor their faith: the “gas van” and “Treblinka.”

As regards the first point, I can tell them that the Frenchman Pierre Marais will soon publish a book entitled *Le problème des camions à gaz* (The Prob-

lem of the Gas Vans).²⁴² On the second point, I can tell them that they are going to lose “Treblinka” as they have already lost “Auschwitz.”

The promoters of the Holocaust, for the foreseeable future, will keep their money, their power, their capacity to produce films, to stage ceremonies, and to build museums, but those films and ceremonies and museums will be more and more devoid of meaning. They will still be able to find more and more ways of repressing the revisionists through physical attacks, press campaigns, the passing of special laws and even murder. Fifty years after the war they will continue to prosecute all those they call “war criminals” in show trials. The revisionists will reply to them with historical and forensic studies, scholarly and technical books. Those books and those studies will be our stones, in this, our intellectual Intifada.

The Jews will have a choice: they can either follow the example of the rare few among them who have been courageous and honorable enough to denounce the Big Lie, or they can support the melodramatic activities of people like Elie Wiesel and Samuel Pisar and the shameful witch hunts carried out by people like Simon Wiesenthal, Serge and Beate Klarsfeld and the O.S.I. in the United States.

David Irving, who rallied to the support of the revisionist position in 1988, recently said:

“The Jewish community have to examine their consciences. They have been propagating something that isn’t true.” (*The Jewish Chronicle*, London, June 23, 1989).

I couldn’t have said it better.

Dr. Robert Faurisson
July 1990

2. Introduction

In March of this year (1989), I was asked by Mr. Ernst Zündel of Toronto, Canada, to investigate three (3) alleged execution gas chambers and crematoria in Germany and Austria. These locations, allegedly operated by the Germans in World War II, were Dachau, in Germany, and Mauthausen and Hartheim Castle, both near Linz, Austria.

The findings of these investigations and forensic analyses at Dachau, Mauthausen and Hartheim were to result in an engineering report and forensic study on the efficacy of these aforementioned facilities to function as execution gas chambers. Although many established historians seem now to accept that these facilities never functioned as execution gas chambers, Mr. Zündel

²⁴² Editor’s remark: P. Marais, *Les camions à gaz en question*, Polemiques, Paris 1994 ; cf. S. Alvarez, P. Marais, *The Gas Vans*, The Barnes Review, Washington, DC, 2011.

wanted to dispel any future doubts and scientifically prove beyond any question whether these facilities were or were not used, and if they could ever have been utilized, as gas execution facilities. Resultant to Mr. Zündel's direction, I undertook this scientific investigation and evaluation. On Sunday, April 9th of this year, I arrived at Dachau with the following team: Carolyn Leuchter as secretary/technician; Dr. Robert Faurisson, advisor and consultant; Mark Weber, historian and author of contemporary European history; Tjuda Rudolf, interpreter; Steven Devine, technician; Eugen Ernst, cinematographer, and Kenneth Ernst, assistant cinematographer. The following day, Monday, April 10th, we inspected Mauthausen and Hartheim Castle, near Linz, Austria. This report and my findings are resultant to these investigations conducted at Dachau, Mauthausen and Hartheim.

3. Purpose

The purpose of this report and the investigations antecedent to it is to determine whether the alleged gas chambers at three (3) specific locations, one (1) in Germany and two (2) in Austria, specifically, Dachau, Mauthausen and Hartheim Castle, respectively, could have operated in any manner resulting in single or multiple gas executions. Although cognizant of the fact that many established historians presently seem to concur that none of these installations ever functioned as a gas execution facility, the author is also aware that immediately after American capture of these locations during World War II a mass gas execution function was ascribed to these facilities, an assertion which was widely published in the international mass media at the time. It is to eliminate any further doubt or question that this investigation was undertaken and this report written.

The purpose includes the investigation and on-site inspection of physical facilities, design of these facilities and a description of the alleged gassing procedures utilized at the alleged executions. The purpose also includes estimates of the maximum number of inclusions (persons) who could possibly have fit into these alleged gas chambers and estimated venting times. This purpose does not include a determination of any numbers of persons who died or were killed by means other than gassing, or whether an actual "Holocaust" occurred. It, further, is not the intent of this author to redefine "Holocaust" in historical terms, but simply to supply scientific evidence and information obtained at the actual sites and to render an opinion based on all available scientific, engineering, and quantitative data as to the purpose and usages of the alleged execution gas chambers and crematory facilities at the investigated locations.

4. Background

The principal investigator and author of this report is an engineer and a specialist in design and fabrication of execution hardware and specifically has worked on and designed hardware in the United States used in the execution of condemned persons by means of hydrogen cyanide gas (“Zyklon B” gas).

The investigator has inspected the alleged execution gas chambers in Poland and is the author of the report on these facilities: *An Engineering Report on the Alleged Execution Gas Chambers at Auschwitz, Birkenau and Majdanek, Poland* (1988), Samisdat Publishers Ltd. The author has been recognized by a Canadian court as an expert on gas chamber technology and has testified as to the non-existence of execution gas chamber facilities at these sites.

The investigator has inspected the facilities at Dachau, in Germany, and Mauthausen and Hartheim Castle, in Austria, made measurements and taken forensic samples. Further, he purchased official printed brochures published and offered publicly for sale at the three (3) museum sites and reviewed this literature. He also reviewed the procedural literature on delousing with hydrogen cyanide (“Zyklon B”) gas.

5. Scope

The scope of this report includes a physical inspection and quantitative data obtained at Dachau, Mauthausen and Hartheim, literature obtained at the three (3) museum sites, and a consideration of forensic samples taken at Mauthausen. For reasons explained below, no samples were removed from Dachau or Hartheim. Further, data on the design of U.S. gas chambers and the operational protocol utilized in gas executions in the United States coming from the investigator’s own personal knowledge and experience in the field, as well as knowledge gained in the investigation of the alleged Polish gas chambers, were utilized in the production of this report. Additionally, operational procedure and equipment utilized at delousing facilities were considered. Utilizing all of the above data, the investigator has limited the focus of this study to a determination of the capability of the alleged gas chambers in question at Dachau, Mauthausen and Hartheim Castle to accomplish the mass murder (extermination) of human beings by the use of “Zyklon B” (hydrogen cyanide) gas.

6. Synopsis and Findings

After a study of available literature, examination and evaluation of the existing facilities at Dachau, Mauthausen and Hartheim Castle, with expert

knowledge of the essential design criteria for gas chamber operation and the expert knowledge gained in the production of the previous study on the alleged gas chambers in Poland, the author finds no evidence that any of these installations, i.e., Dachau, Mauthausen or Hartheim Castle, frequently alleged to have been gas execution facilities, was ever utilized as such, and further finds that, because of the design and fabrication of these installations, they could not ever have been utilized as execution gas chambers.

7. Method

The procedures involved in the study and forensic analysis which resulted in this report were as follows:

1. A general background study of available material.
2. An on-site inspection and forensic examination of the facilities in question, which included the taking of physical data (measurements and construction information), and a considered removal of physical samples (tile and mortar) which were returned to the United States for chemical analysis.
3. A consideration of recorded and visual (on-site) logistic data.
4. Data acquired on the previous study of the alleged gas chambers in Auschwitz I, Birkenau and Majdanek, Poland.
5. A compilation of the acquired data.
6. An analysis of the acquired information and comparison of this information with recognized and proven design, procedural, and logistic information and the requirements for the design, fabrication, and operation of actual gas chambers currently in use in the United States.
7. A consideration of the chemical analysis of the materials acquired on-site.
8. Conclusions based on the acquired evidence.

8. The Leuchter Report

The *Leuchter Report*, which formed the basis of the author's expert testimony at the trial of Ernst Zündel, Toronto, Ontario, given on April 20, 1988, is a study of the existing alleged gassing facilities in Auschwitz, Birkenau and Majdanek, Poland. This report contains the definitive data for gas chamber application purposes for hydrogen cyanide, "Zyklon B." fumigation design and procedures, execution gas chamber design and protocol, U.S. gas chambers, medical and toxic effects of hydrogen cyanide, a brief history of the alleged German gas chambers with an emphasis on design characteristics, and a

consideration of crematory technology, including a discussion of maximum cremation rates. Additionally, there is a discussion of forensic considerations of cyano-compounds and crematories.

The materials contained in the above paragraphs of the *Leuchter Report* (1988) are a necessary complement to this report.

The Sites: Dachau, Mauthausen and Hartheim Castle

These sites are considered separately and together, in that Dachau and Mauthausen have been at times described as camps which supplied prisoners to the Hartheim Castle site where they were allegedly executed.

8.1. Dachau

The alleged execution facility at Dachau is located in a building called "Baracke X." This installation was erected in 1942 and contained a crematory consisting of four (4) retorts. It was constructed primarily as a replacement for the older and smaller two (2) retort crematory located nearby. The facility also housed a morgue, fumigation cubicles (delousing chambers), related work areas and a room identified by a sign over the door as a "Brausebad" (shower room). It is this shower room which has been alleged to be the gas chamber and which tourists today are informed was the "gas chamber."

The alleged gas chamber has an area of some 427 square feet and a volume of some 3,246.7 cubic feet. It was originally a shower room but appears to have been modified sometime after Dachau's capture by the Americans. The present ceiling is some 7.6 feet in height and contains some seventeen (17) pseudo-shower heads, fabricated out of what appears to be soldered sheet zinc. Additionally, it contains some eight (8) recessed lighting fixtures which were/are not explosion proof. It also contains two (2) alleged gas inlet ports (dumps) with internal grates measuring 15.75 inches x 27.25 inches which are welded open to the outside. This alleged gas chamber also contains a ventilation port clearly added after construction. The walls are of tile and the ceiling of concrete painted white. There are two (2) 20.5 inch x 26 inch floor drains connected to the other floor drains throughout the building and the camp. It has two (2) doors with provision for gasketing, as do many European doors.

It appears from construction that the alleged gas chamber was originally a shower room, as found in all the other investigated camps. The pseudo-shower heads are fabricated from sheet metal of a cylinder and a cone with a sprinkler type head as found on a garden-type watering can. The end is sealed and not threaded. They are not connected, nor are they capable of being connected to any piping system. They are designed to appear as functional shower heads when observed from below. The ceiling with the phony shower heads seems to have been added at a time later than original construction. The ceiling is

fabricated of poured concrete, cast around the pseudo shower heads. It is typical suspended-slab concrete construction. Document No. 47 of the 79th Congress, 1st Session, of the United States, includes an investigation of Dachau. In this document, the gas chamber is described as having a 10-foot ceiling containing brass fixtures for introducing gas into the chamber. The present ceiling, as noted, is only 7.6 feet high and has none of the gas inlet fixtures described in Document No. 47.

Directly over the shower room are the steam and heating pipes, which is consistent with good and standard design for supplying hot water to the shower area. These pipes cannot be seen in the shower room today. Their existence, however, can be confirmed by observing the pipes entering into the shower room area from an off-limits corridor behind the shower room and visible only from a rear window of the building. It is an inept and extremely dangerous design to put hot, high pressure steam pipes over a chamber containing potentially explosive gas. At one end of the chamber the ventilation port was clearly added. The ports alleged to have been “Zyklon B” introduction ports, no different from apartment incinerator garbage chutes, were obviously added after the original tiling. Both these modifications are clearly discernable from the uneven replacement of the interior tiles and the exterior brick. At one end of the room there are two (2) recessed electrical boxes with grates, something which should not be in a room containing potentially explosive gas. There is no means for sealing the room to prevent gas leakage, and there is no system for exhausting the gas after use or any suitable (40-foot minimum is standard) vent stack. The doors are not gas-proof or even water-proof. They are only water resistant. There is no system for evaporating (heating) or distributing a gas into or within the chamber. The use of the improperly designed “Zyklon B” introduction port would prevent proper evaporation of the gas from the “Zyklon B” pellets because of insufficient surface area exposure. Most, if not all, of the “Zyklon B” pellets would remain in the dumping mechanism due to insufficient angular motion of the gas pellet dump.

On a sign posted within the alleged gas chamber, Dachau Museum officials state:

“GAS CHAMBER – disguised as a ‘shower room’ – never used as a gas chamber.”

An examination of the alleged gas chamber clearly shows, however, that this facility was constructed as a shower room, used only for this purpose. The modifications to the room, which include the addition of the ceiling, pseudo-shower heads, air intake and gas inlet ports, were made at a time much later than the original construction of “Baracke X” and the shower room, and for reasons and by persons unknown to this author. No samples were taken at this

location due to excessively heavy tourist traffic inside the alleged gas chamber.

For the record, this alleged gas chamber would have held only forty-seven (47) persons utilizing the nine (9) square foot inclusion rule as accepted by standard engineering practice for air-handling systems. Without an exhaust system or windows, it would require at least one week venting by convection. This estimate is based on American gas chambers requiring twenty (20) minutes to vent with two complete air changes per minute, and a minimum of forty-eight (48) hours to vent a fumigated building with an abundance of windows.

An inspection of the four (4) new crematory retorts at "Baracke X" revealed that, although fired, none of these ever experienced much use, if any. These retorts were coal-fired.

After an in-depth investigation of the alleged gas chamber at "Baracke X," Dachau, this investigator, in his best engineering opinion, categorically states that this installation could not have ever been utilized as an execution gas chamber. It was in fact a shower room (*Brausebad*) as originally labeled by the Germans.

8.2. Mauthausen

The alleged gas chamber at Mauthausen Concentration Camp was located between the hospital, the crematory and the jail. Like Dachau, it is generally considered by some established historians and the revisionists to have never been utilized for executions.

The alleged gas chamber has an area of some 150 square feet and a volume of 1,164 cubic feet. It has a ceiling height of some 7.8 feet containing piping and working shower heads. It has a floor drain of some eight (8) inches by eight (8) inches and steam pipes on the north-west wall for heating. The walls are finished in ceramic tile. It has two doors and provision for gasketing, as do many European doors. It has an alleged gas vent in the ceiling of the west end of the northwest wall but the purpose of this alleged gas vent cannot be verified since the ground above has been repaved. Additionally, an adjacent room is alleged to have been a control room for inletting gas (apparently not solid "Zyklon B" but actual hydrogen cyanide gas). There is no hardware in place for this function nor is there any evidence of its removal. The museum officials are very confused and incoherent about the operating function, and offered a succession of varying explanations on how the gas was introduced into the chamber. It has been successively stated by museum officials that the gas was introduced: (1) through overhead shower heads; (2) through a shaft in a remote corner of the room; and (3) through a perforated pipe, which does not

exist today. The lighting is not explosion proof but merely water resistant. There is nothing to indicate the alleged control room ever existed. The facility is entirely underground, as is the morgue, the hospital and the jail. The facility also housed the area for the condemned prisoners where they were executed by shooting.

It appears from the construction that this facility was constructed as, and further was utilized only as, a shower room. The installation has no provision to prevent gas leakage, the lighting is not explosion proof, the floor drain would allow leakage into the sewer system, and there is no provision for inletting gas or for exhausting the air-gas mixture after an execution. Further, there are steam heating pipes (radiator) on the *northwest* wall of the chamber, which would most likely result in an explosion if hydrogen cyanide gas were deposited in the room. Additionally, all shower heads are working and the overall design is unquestionably that of a shower room.

Table 15: Results of analyses of samples taken from the alleged Mauthausen gas chamber (all data in mg/kg) By Alpha Analytical Laboratories, Westborough, MA., May 2 and 4, 1989			
#	DESCRIPTION	CYANIDE	IRON
1	Mortar	27.0	4,580
2	Tile	1.7	500
2	Mortar	3.2	1,830
3	Mortar	19.0	11,300
4	Mortar	32.0	8,490
Method		Spectrometric ²⁴³	ICP ²⁴⁴
Detection Limit		0.5	1.0
For sample location see Document 49 on page 148			

Forensic Considerations at Mauthausen

Four (4) forensic samples were selectively removed from the alleged gas chamber at Mauthausen and returned to the United States for chemical testing. Detailed analysis was completed on each sample for both iron and cyanide in accordance with the standard procedures utilized in the prior testing of samples from Auschwitz I and Birkenau. Resultant to this testing and comparison with known test results for insoluble iron cyanide compounds, it is demonstrated that this alleged gas chamber facility has never been exposed to repetitive concentrations of cyanide necessary for execution: referencing the delousing chamber control sample No. 32 (from Birkenau) as having 1050 mg/kg, the greatest concentration found at Mauthausen was 32 mg/kg, indicating fumigation of the building at some point in its history. This clearly indicates that this facility was not a gas chamber.

Resultant to an in-depth investigation of this installation, this investigator has determined that this facility was not capable of conducting executions by gas. In the best engineering opinion of this investigator, this facility could

²⁴³ 412B/D; Standard Methods for Examination of Water and Waste Water; APHA-AWWA-WPCF, 16th ed., 1985.

²⁴⁴ 6010; Test Methods for Evaluating Solid Waste. Physical/Chemical Methods. EPA SW-846, 1986.

never have supported gas executions and was never utilized as a gas execution chamber.

Adjacent to this facility is the morgue area, which contains a refrigeration unit for cooling the cadavers. This morgue also contains a dissection room and a crematory, all adjacent and connected to the hospital. The existing crematory contains a furnace with one (1) retort. In an adjacent room, there are indications of another crematory furnace of one (1) retort which has been removed. This existing retort shows signs of considerable use, which is expected in a camp of this size with only two (2) retorts. Both units were coal-fired.

For the record, the alleged gas chamber would have held only seventeen (17) persons, utilizing the nine (9) square foot rule. Without an exhaust system, this investigator estimated that it would require at least a week to vent for the same reasons as explained for Dachau.

8.3. Hartheim Castle

This facility consists of a masonry room adjacent to a tower of a centuries old castle. This castle was donated by the monarchy to the mental health service of Austria and was also placed under the control of the German Government when it acquired control of the Austrian Government and the mental health service. The facility had been utilized as a mental hospital and under German control it continued as such. Allegedly, mass gas executions were conducted at this location on prisoners transferred from Dachau and Mauthausen for this purpose.

The alleged gas chamber was a lower level room adjacent to one of the castle towers. This room has an area of 192 square feet and a volume of 1,728 cubic feet. It has a vaulted ceiling of some 8.9 feet at the highest point. The installation had one (1) door and one (1) window, although a rectangular aperture has now been made into an adjacent room. There are no facilities to inlet "Zyklon B" or evacuate the gas after use. The room now has been completely remodeled. It has recently plastered walls and ceiling. There are three (3) new floor surfaces, one on top of the other. Even the door has been changed to a modern conventional mental institution cell door with a shuttered view port. The window is alleged to have been original, but would leak gas if used for this purpose. Neither the door nor the window has any provision for gasketing. Allegedly, all gassing apparatus was removed by January 1945. In truth, there was no gassing equipment in that the walls are very thick, as is characteristic of castle architecture and construction, and not easily cut to accommodate the installation of gas vents or gas inlet ports. It and the adjacent room contain memorial plaques to those who allegedly died in gassings here. The castle is presently used as an apartment building.

It appears by construction that this facility would not lend itself for use as a gas execution installation, the walls being too thick for the installation of gassing equipment. Certainly, because of the construction, any changes would be visible, and not easy to conceal. There is no provision for a gas stack for evacuation of the gas-air mixture and no way to install one. The window would certainly leak, allowing large volumes of deadly gas to escape. No samples were taken at this location because of the extensive remodeling to the facility which decidedly would obscure any test results.

For the record, the alleged gas chamber would have held only some 24 persons, utilizing the nine (9) square foot rule. Without an exhaust system this room would require at least one week to vent (refer to Dachau).

Resultant to an in-depth investigation of this installation, this investigator categorically states that, in his best engineering opinion, this facility was not ever utilized for, and could never have supported, gas executions. The actual use of this room is unknown to the investigator. Based on a comparison with its mirror image on the other side of the facility, it could have been a store room.

There are no crematoria extant at this location.

It is perplexing to note that the official museum literature states that Dachau and Mauthausen, both having facilities equal to or better than those at Hartheim Castle, sent inmates to Hartheim for gassing. It is unclear why this should occur, since Hartheim's alleged facility would have been so difficult to construct and was so small and so distant from Dachau (200 km). Based on all the available evidence it becomes abundantly clear that no gassing facilities ever existed at any of these locations.

8.4. Specialized Hardware: Non-Existence

In all the author's investigations in Poland, Germany and Austria, hardware or construction specific to gas chambers has never been found. There are no stacks of the necessary height, no ventilators, no gas generators, no intake air preheaters, no special paint or sealants on walls, floors or ceilings, no safety devices for the operators, and no coherent design consistently utilized throughout the alleged gas chambers. It is inconceivable that the Germans, having the highly developed technology utilized on the delousing chambers, would never have applied this technology to the alleged execution gas chambers.

8.5. Conclusion

After reviewing all the material and inspecting all of the sites at Dachau, Mauthausen and Hartheim Castle, this investigator has determined that there were

no gas execution chambers at any of these locations. It is the best engineering opinion of this investigator that the alleged gas chambers at the above inspected sites could not have then been, or now be, utilized or seriously considered to function as execution gas chambers.

Prepared this 15th day of June, 1989, at Malden, Massachusetts.

Compiled by Robert Faurisson

9.1. The First Leuchter Report

- Fred A. Leuchter, *An Engineering Report on the Alleged Execution Gas Chambers at Auschwitz, Birkenau and Majdanek, Poland*, 1988, 193 pages. This report was prepared for Ernst Zündel; it was entered as a lettered exhibit at the “false news” trial of Ernst Zündel in Toronto, Canada, in 1988; it contains copies of the original Certificates of Analysis of fragments of brick and mortar samples gathered at Auschwitz and Birkenau.
- Fred A. Leuchter, *The Leuchter Report: The End of a Myth*, Foreword by Robert Faurisson, Samisdat Publishers Ltd., 1988, 132 pages, printed under license in the United States, P.O. Box 726, Decatur, Alabama 35602, U.S.A. Illustrated edition of the original report; the results of the analysis of the bricks and mortar are presented with charts in condensed format.
- Fred A. Leuchter, “Rapport technique sur les présumés chambres à gaz d’homicides d’Auschwitz, de Birkenau et de Majdanek,” Foreword by Robert Faurisson, *Annales d’histoire révisionniste*, no. 5, Summer/Fall 1988, pp. 51-102. This article reproduces only the essential part of the report as well as one chart and eight tables.

9.2. Dachau

- Document L-159: Document No. 47 of the 79th Congress, 1st Session, Senate: Report (15 May 1945) of the *Committee Requested by Gen. Dwight D. Eisenhower [...] to the Congress of the United States Relative to Atrocities and Other Conditions in Concentration Camps in Germany*, carried out by a Special Committee of Congress after visiting the Concentration Camps at Buchenwald, Nordhausen, and Dachau (Exhibit No. USA-222), IMT,²⁴⁵ XXXVII, p. 621:

“A distinguishing feature of the Dachau Camp was the gas chamber for the execution of prisoners and the somewhat elaborate facilities for execution by shooting. The gas chamber was located in the center of a large room in the crematory building. It was built of concrete. Its dimensions were about 20 by 20 feet, and the ceiling was some 10 feet in height! In two opposite walls of the chamber were airtight doors through which condemned prisoners could be taken into the chamber for the execution and

²⁴⁵ The term IMT (International Military Tribunal) refers to the American edition of the transcripts and documents of the *Trial of Major War Criminals before the International Military Tribunal* (Nuremberg, 1945-1946; published 1947-1949), which is not to be confused with the British edition.

removed after execution. The supply of gas into the chamber was controlled by means of two valves on one of the outer walls, and beneath the valves was a small glass-covered peephole through which the operator could watch the victims die. The gas was let into the chamber through pipes terminating in perforated brass fixtures set into the ceiling. The chamber was of size sufficient to execute probably a hundred men at one time."

- OSS Section, United States 7th Army, *Dachau Concentration Camp*, Foreword by Col. William W. Quinn, 1945, p. 33:

"GAS CHAMBERS [plural]: the internees who were brought to Camp Dachau for the sole purpose of being executed were in most cases Jews and Russians. They were brought into the compound, lined up near the gas chambers, and were screened in a similar manner as internees who came to Dachau for imprisonment. Then they were marched to a room and told to undress. Everyone was given a towel and a piece of soap, as though they were about to take a shower. During this whole screening process, no hint was ever given that they were to be executed, for the routine was similar upon the arrival of all internees at the camp. Then they entered the gas chamber. Over the entrance, in large black letters, was written 'Brause Bad' (showers). There were about 15 shower faucets suspended from the ceiling from which gas was then released. There was one large chamber, capacity of which was 200, and five smaller gas chambers, capacity of each being 50. It took approximately 10 minutes for the execution. From the gas chamber, the door led to the Krematory to which the bodies were removed by internees who were selected for the job. The dead bodies were then placed in 5 furnaces, two or three bodies at a time."

- French Military Mission with the Sixth Army Group, Chemical Warfare, nr. 23/Z, *Chambre à gaz de Dachau, Rapports du capitaine Fribourg*, 5 and 17 May 1945, five pages, 6 plates, one photo (25 May 1945) (original language: French). Captain Fribourg, after a one-day examination of Dachau, did not reach any definitive conclusion in his report. He felt that a second visit would be necessary to discover the system for circulation of the poison gas and the possible connections with the disinfection gas chambers located nearby. He also recommended an investigation of all the walls.
- Captain P.M. Martinot, 23 May 1945. *Report on the Conditions in the Prison Camps*, dictated by Capt. P.M. Martinot on 23 May 1945, p. 226. U.S. National Archives at Suitland, Maryland, Record Group (RG) 153, 19-22 BK37, U.S. War Department, War Crimes Office, Judge Advocate General's Office (original text English):

"I was told by an eye-witness of the mass extermination of Jews who were sent in a gas chamber 500 at a time and from there into the cremato-

rium and the operation repeated until the whole convoy of several thousand people was disposed of. In the camp of Auschwitz the same thing took place but on a much larger scale with six crematories working night and day for several days. Witness: Wladislaus Malyszko."

- Headquarters Third United States Army, Enemy Equipment Intelligence Service Team Number 1, Chemical Warfare Service, 22 August 1945, Report by Sgt. Joseph H. Gilbert to Major James F. Munn: Subject. Dachau Gas Chamber (3 pages; enclosures), page 3:

"Based on the interviews noted above, and further, based on actual inspection of the Dachau gas chamber (it has apparently been unused), it is the opinion of the undersigned that the gas chamber was a failure for execution purposes and that no experimental work ever took place in it. In view of the fact that much reliable information has been furnished the Allies by former inmates regarding the malaria, air pressure and cold water experiments, it is reasonable to assume that if such gas experiments took place, similar information would be available."

- Document PS-2430: *Nazi Concentration and Prisoner-of-War Camps: A Documentary Motion Picture*, film shown at the Nuremberg Trial, 29 November 1945, *IMT*, XXX, p. 470:

"Dachau – factory of horrors. [...] Hanging in orderly rows were the clothes of prisoners who had been suffocated in the lethal gas chamber. They had been persuaded to remove their clothing under the pretext of taking a shower for which towels and soap were provided. This is the Brausebad – the showerbath. Inside the showerbath – the gas vents. On the ceiling – the dummy shower heads. In the engineer's room – the intake and outlet pipes. Push buttons to control inflow and outtake of gas. A hand-valve to regulate pressure. Cyanide powder was used to generate the lethal smoke. From the gas chamber, the bodies were removed to the crematory."

- Philipp Rauscher, *Never Again/Jamais Plus*, Munich, 1945 (?) (original languages: English and French); contains a plan of the crematory area; p. 24:

"The gas chamber was built for mass executions. There they used the asphyxiating gas Zyklon B."

- Document NO3859/64 and 3884/89 (original language: German): 28 pages of documents and plans (1942) for "Baracke X" (Staatsarchiv Nurnberg). None of those documents leads one to believe there was a gas chamber there.
- Document PS-3249 (original language: German): testimony under oath of the Czech prisoner, Dr. Franz Blaha, MD, 9 January 1946, *IMT*, XXXII, p. 62, also quoted in *IMT*, V, pp. 172f.:

“Many executions by gas or shooting or injections took place right in the camp. The gas chamber was completed in 1944, and I was called by Dr. Rascher to examine the first victims. Of the eight or nine persons in the chamber there were three still alive, and the remainder appeared to be dead. Their eyes were red, and their faces were swollen. Many prisoners were later killed in this way. Afterwards they were removed to the crematorium where I had to examine their teeth for gold.”

Two days later, on 11 January 1946, Dr. Blaha testified at the Nuremberg Tribunal. The American Executive Trial Counsel, Thomas J. Dodd, read his testimony. Neither the prosecution nor the defense asked the witness for clarifications on the subject of the gas chamber. Very likely the Presiding Judge of the Tribunal, the British Lord Justice Lawrence, would not have allowed any such request for clarification, since, implicitly, “judicial notice” had been taken of the existence of the gas chambers as is indicated by the official reports of the various Allied commissions of inquiry on “war crimes” (Article 21 of the *IMT* Charter) and since questions thought to be too indiscreet were not really allowed. For example, when Dr. Blaha was asked a difficult question by Dr. Alfred Thomas, Alfred Rosenberg’s defense lawyer, Lord Justice Lawrence interrupted him to say: “[...] this is intended to be an expeditious trial [...]” (*IMT*, V, S. 194). Article 19 of the *IMT* Charter said: “The Tribunal shall not be bound by technical rules of evidence. It shall adopt and apply to the greatest possible extent expeditious and non-technical procedure, and shall admit any evidence which it deems to have probative value.”

- On 26 July 1946, Sir Hartley Shawcross, the British Chief Prosecutor at the Nuremberg Tribunal, mentioned “the gas chambers and the crematories” not only at Auschwitz and Treblinka but also at Dachau, Buchenwald, Mauthausen, Majdanek, and Oranienburg (*IMT*, XIX, p. 434). Shawcross is still alive in 1990, living in London and serving in the British House of Lords.
- Lieutenant Hugh C. Daly, *42nd “Rainbow” Infantry Division/A Combat History of World War II*, Army and Navy Publishing Company, Baton Rouge, Louisiana, 1946:

“Prisoners [were] herded into the gas chambers to die [...]. Thousands of men, women and children died this way in Dachau [...]; the business of murder by gas continued.” (p. 99)

On page 105, a photo caption says:

“Killed by gas, these bodies are piled in a ‘storage room’ awaiting cremation, but furnaces were shut down for lack of coal.”

- M.G. Morelli (Dominican priest), *Terre de détresse*, Bloud et Gay, 1947, p. 15 (original language: French):

"I look fearfully at that sinister porthole through which the Nazi executioners could peacefully watch the miserable people suffer after they were gassed."

On page 73:

"From time to time, they would pick out, from that crowd of unfortunates [in the sick block], the elements of a convoy which were sent to some gas chamber."

– Msgr. Gabriel Piguet (Bishop of Clermont-Ferrand), *Prison et déportation*, editions Spes, p. 77 (original language: French):

"I made a short stay in Block Z8, occupied by 800 Polish priests [...]. Several of the old priests, judged to be useless, were sent to the gas chamber."

– "The Müller Document." 1 October 1948 (original language: German). See R. Faurisson, "The Müller Document," *The Journal of Historical Review*, Spring 1988, pp. 117-126. According to the Austrian Emil Lachout, the Allied military police and its Austrian auxiliaries regularly received copies of reports drawn up by the commissions of inquiry on the concentration camps. Those reports were used for research on "war crimes." On 1 October 1948, Commander Anton Müller and his second-in-command, Emil Lachout, sent the following memo from Vienna to all interested parties:²⁴⁶

*"Military Police Service
Circular Letter No. 31/48.
Vienna, 1 Oct. 1948.
10th dispatch.*

1. The Allied Commissions of Inquiry have so far established that no people were killed by poison gas in the following concentration camps: Bergen-Belsen, Buchenwald, Dachau, Flossenbürg, Gross-Rosen, Mauthausen and its satellite camps, Natzweiler, Neuengamme, Niederhagen (Wewelsburg), Ravensbrück, Sachsenhausen, Stutthof, Theresienstadt.

In those cases, it has been possible to prove that confessions had been extracted by torture, and that testimonies were false. This must be taken into account when conducting investigations and interrogations with respect to war crimes. The result of this investigation should be brought to the cognizance of former concentration camp inmates who at the time of the hearings testified about the murder of people, especially Jews, with poison gas in those concentration camps. Should they insist on their statements, charges are to be brought against them for making false statements."

²⁴⁶ Nowadays (2005), Dr. Robert Faurisson considers that document as highly dubious. Cf. Klaus Schwenzen, "Zur Echtheit des Lachout-Dokuments," *Vierteljahreshefte für freie Geschichtsforschung* 8(2) (2004), pp. 166-178.

- Ludwig Paulin, “Die Lüge von den 238 000/Was geschah im Lager Dachau?,” *Der Weg für Freiheit und Ordnung*, monthly journal, Dürer-Verlag, Buenos Aires, May/June 1954, pp. 352f. (sketch, p. 351; original language: German):

“A gassing chamber is being reported about in which the ‘Jews’ – one basically talks only about ‘Jews’ – are said to have been gased. The truth is, however, that there never was a gassing chamber at Dachau. The only thing that existed was a delousing chamber, which had to be built during the war, because arriving inmates were frequently lice-infested to such a degree that they posed a danger to the entire camp. The location and type of this delousing chamber can be gleaned from the sketch on page 351. The inmates to be deloused removed their clothes in rooms no. 9 and 10 and were examined by a physician, in order to subsequently take a shower in the shower room (no. 11). Then they receive fresh underwear and clothes from the camp’s stock in the dressing room (no. 12), after which they left the delousing facility. Meanwhile their old clothes and underwear were deloused and disinfected in the cells of the delousing chamber (no. 8). Just like all military delousing facilities, which used this procedure instead of hot steam or dry heat because it was gentler to the fabric, these cells contained rails in the ceiling onto which iron coat hangers with the clothes could be hung. The last of these hangers were still inside the delousing chamber as late as fall 1946. In accordance with the purpose of this room, there is still today a boiler in the basement meant to provide hot water for the showers.

After the war and on American orders, the tiles in the dressing room were removed and added on top of the tiles already in place in the shower room. Then the ceiling of the shower room was lowered, and conical shower heads made of sheet metal were added, although they are not connected to anything. It was then claimed that with these shower heads the Germans wanted to merely give the impression that this was a shower room, while in reality gas streamed in through lateral openings. However, to this day there are six floor drains in this room, plus the room can be heated! In addition, the concrete of the newly lowered ceiling, the concrete used to replace the tiles in the dressing room, and the concrete used for the ‘gallows platform’ (see below) have the same structure. It turned out that all this was built during May/June 1945.”

- Gerald Reitlinger, *The Final Solution: The Attempt to Exterminate the Jews of Europe, 1939-1945*. London, Jason Aronson, Inc., 1987 (the first edition appeared in 1953), p. 134:

“Thus, eventually every German concentration camp acquired a gas chamber of sorts, though their use proved difficult. The Dachau gas cham-

ber, for instance, has been preserved by the American occupation authorities as an object lesson, but its construction was hampered and its use restricted to a few experimental victims, Jews or Russian prisoners of war, who had been committed by the Munich Gestapo."

- Stephen F. Pinter, Letter on "German Atrocities" in *Our Sunday Visitor*, 14 June 1959, p. 15:

"I was in Dachau for 17 months after the war, as a U.S. War Department Attorney, and can state that there was no gas chamber at Dachau."

- Martin Broszat, Institute for Contemporary History in Munich, letter to *Die Zeit*, 19 August 1960, p. 16 (original language: German):

"Neither in Dachau, nor in Bergen-Belsen, nor in Buchenwald, were Jews or other inmates gassed. The gas chamber in Dachau was never completed and put 'into operation.'"

- *Common Sense* (New Jersey, USA), 1 June 1962, p. 2, republished from *Combat*, London, England, "The False Gas Chamber":

"The camp had to have a gas chamber, so, since one did not exist, it was decided to pretend that the shower bath had been one. Capt. Strauss (U.S. Army) and his prisoners got to work on it. Previously it had flag-stones to the height of about four feet. Similar flag-stones in the drying room next door were taken out and put above those in the shower bath, and a new lower ceiling was created at the top of this second row of flag-stones with iron funnels in it (the inlets for the gas)."

- Nerin E. Gun, *The Day of the Americans*, New York, Fleet, 1966, between p. 64 and p. 65, three photo captions read:

"1. The 'shower.' Photographed by Gun [a former inmate] with stolen camera. This was, of course, the gas chamber;

2. Inside the gas chamber. The Zyklon B bomb [sic] made by the German industrial giant, I.G. Farben, was dropped on the floor. Prisoners were told they were going to take a shower;

3. The gas chamber. At the moment of the liberation, the hour of the last operation was still written on the door. Since then, Germans have tried to deny that there was a gas chamber in the camp. This photograph is proof: it was taken the day of the liberation."

On p. 129, the author indicates that in Dachau "3,166 were gassed."

- Paul Berben, *Dachau 1933-1945, The Official History*, London, The Norfolk Press, 1975 (original language: French; first published 1968). As the book jacket indicates, this is the "Official History" of the camp. This 329-page work contains only a few, very confused paragraphs about the gas chamber, on pages 13 and 201-202. The gas chamber had allegedly been designed, for homicidal purposes (?), at the beginning of 1942, but in April 1945, at the time the camp was liberated, it had not yet functioned as such

“because, to a certain extent, it seems [emphasis added], of sabotage carried out by the team of prisoners given the job of building it.” (p. 13 of the French edition; this does not appear in the English edition of the book: London, The Norfolk Press, 1975, p. 8)!

What is confusing is that this team of prisoners seems to have been given the job of building, in that location, a *disinfection gas chamber* in October 1944: “In October 1944, the ‘Construction and Repair Commando’ chosen from that of the heating plant (*Kesselhaus*) was given the job of installing the pipes in the gas chamber” (p. 202 in the French edition, but left out of the English edition, p. 176). “During the winter of 1944-45, the disinfection squad, under the authority of the chief doctor, started disinfecting [in that location], by gas, the piles of vermin-ridden clothes” (English translation, pp. 8-91).

Please allow me one hypothesis and a few questions:

- HYPOTHESIS: That mysterious room at Dachau which, for the obvious reasons given by Fred Leuchter, could not have been used to gas humans, could it not have been, in the first place, a shower (thus explaining the inscription “Brausebad” on the outside), and, later, starting at the end of 1944, a disinfection chamber? Couldn’t the heating team have changed a shower into a disinfection gas chamber (and the inscription “Brausebad” been left on the outside)? Couldn’t that disinfection have been done with steam? At Auschwitz, the disinfections were carried out either in gas chambers (using, for example, Zyklon B) or in steam chambers; all for the disinfection of clothes.
- QUESTIONS:
 1. A panel located on the door to the room, for the benefit of visitors, bears an inscription. Until the beginning of the 1980s the English text was: “GAS CHAMBER disguised as a ‘shower room’ – never used.” Then, probably about 1985, it was changed to: “GAS CHAMBER disguised as a ‘shower room’ – never used as a gas chamber.” Why are visitors not told straightforwardly that the room has been used, but ... for the disinfection of clothes?
 2. Behind that chamber, they have shielded from the curiosity of visitors the entire part of the building where there is an enormous insulated pipe, a hand-wheel like that of a boiler, and other heating elements; there is a vague glimpse of it in the Nuremberg film (see above, PS-2430) and today one can see that part of the building through the windows of the rear part of the building. Why do they deny visitors normal access to that part of the building? Is it because it would be too obvious to specialists in insulation and heating that the whole installation is relatively common-

place? Why is it not possible to visit the room from which the enormous insulated pipe apparently originates?

3. Paul Berben obviously does not mention all the sources that he has used to sketch, in his fashion, the story of that mysterious room. He is satisfied to refer people to the testimony of Karl Nonnengesser. Why?

– *Encyclopedia Judaica*, Jerusalem, 1971, article on “Dachau”:

“*Gas chambers [plural] were built in Dachau but never used.*”

– Earl F. Ziemke (professor of history at the University of Georgia), *The U.S. Army in the Occupation of Germany, 1944-1946*, Washington, D.C., Center of Military History, U.S. Army, 1975, p. 252, mentions “the gas chamber” as if it had functioned.

– Germaine Tillion, *Ravensbrück*, New York, Doubleday, pp. 221-222 (original language: French). G. Tillion firmly maintains that there was a gas chamber at Dachau and that it was used. She criticizes Martin Broszat for having written in *Die Zeit* that there was no “Brausebad” inscription, but Broszat wrote nothing of the kind (see above). She presents the report of Capt. Fribourg as if it established without any doubt the existence and operation of that gas chamber, but Capt Fribourg also wrote nothing of the kind (see above).

– Paul W. Valentine, “WWII Veteran Recalls His Sad Duty at Dachau,” *Washington Post*, 21 April 1978, p. B3: an interview with “George R. Rodericks, a young U.S. Army captain in May 1945 when his unit was assigned to count the bodies at Dachau [...], an assistant adjutant general for the 7th Army in Germany [...] commanded the 52nd Statistical Unit responsible for maintaining U.S. personnel inventories.” This G.R. Rodericks, supposedly a statistician, gives incredible numbers of bodies (20,000 piled in a warehouse) and of gas ovens (50 to 60) and talks about “‘shower’ facilities where prisoners were gassed to death.”

– Arthur Suzman and Denis Diamond, *Six Million Did Die/The Truth Shall Prevail*, Johannesburg, publication of the Committee of Jewish Representatives of South Africa, 1978, 2nd edition. On page 117 there is a quotation taken from a “Report on Dachau concentration camp [...] signed by C.S. Coetzee and R.J. Montgomery, who visited the camp on or about 7th May, 1945”:

“*The gas chamber, about 20 feet by 20 feet, bears all the characteristics of an ordinary communal shower room with about fifty shower sprays in the roof, cement ceiling and cement floor. But there is not the usual ventilation, and the sprays squirted poison gas. One noticed that the doors, as well as the small window, were rubber-lined and that there was a conveniently situated glass-covered peephole to enable the controller to see when the gas could be turned off. From the lethal chamber a door leads to the*

crematorium. We inspected the elaborate controls and gas pipes leading into the chamber. Behind the crematorium there was an execution place for those who had to die by rifle fire; and there were ample signs that this place had been in frequent use."

On page 122, the caption reads:

"Victims of the Dachau gas chamber lie piled to the ceiling in the crematorium."

Document L-159 is quoted on pages 127 and 129.

- International Dachau Committee, *Konzentrationslager Dachau, 1933-1945*, 1978, 5th edition (original language: German); p. 165:

"The gas chamber, disguised as a shower room, was never put into operation. Thousands of inmates destined for annihilation were sent to other camps or to Hartheim Castle near Linz for gassing."

- Robert Faurisson, *Mémoire en défensé contre ceux qui m'accusent de falsifier l'Histoire*, La Vieille Taupe, 1980 (original language: French). The author discusses, on pages 204-209, the correspondence that he exchanged in 1977 and 1978 with Barbara Distel, director of the Dachau Museum, and with Dr. A. Guerisse, president of the International Dachau Committee in Brussels, and deals with the impasse in which those people found themselves when asked to provide the slightest proof of the existence of a Dachau gas chamber used for executions.
- Robert Faurisson, *Réponse à Pierre Vidal-Naquet*, 2nd edition, Paris, La Vieille Taupe, 1980. On page 62, the author analyzes the testimony of Fernand Grenier, contained in his book, *C'était ainsi (1940-1945)*, published by Editions Sociales, 7th edition, 1970, and reported in these terms (p. 267):

"To the side of the four crematory ovens, which never stopped working, there was a room. Some showers with sprinkler heads in the ceiling. In the preceding year [1944] they had given a towel and a piece of soap to 120 children, from 8 to 14 years of age. They were quite happy when they went inside. The doors were closed. Asphyxiating gas came out of the showers. Ten minutes later, death had killed these innocents whom the crematory ovens reduced to ashes an hour later."

- René Levesque, *Memoirs*, Toronto, McClelland & Stewart Limited, 1986, pp. 192-193:

"Before putting their prisoners to work [at Dachau], the Germans always stripped them of all their possessions, including their gold teeth. Then they worked them to death, especially the last year when rations were becoming scarce. At the end of the road they were sent to the 'baths' (Baden), shabby-looking sheds linked to a reservoir by a couple of pipes. When the baths were full to the seams they opened the gas, and then, when the last groans had ceased, the bodies were taken to the ovens next door."

When news of this reached Quebec, and for some time after, people refused to believe. Heavy scepticism greeted such stories, which surpassed understanding ... I can assure you that it was real, all right, that the gas chamber was real in its nightmarish unreality. The loaders had gone, trying to save their skins, leaving behind their last load of corpses, naked as worms in their muddy pallor."

These 29 references amount to only a sketch of a bibliography of the supposed "gas chamber" at Dachau. A researcher would have to do research in the Dachau Museum and in various research centers in the United States or Germany to study the transcripts there of the pre-trial investigation and the trials of such people as Martin Gottfried Weiss or Oswald Pohl. One could likewise compare photographs thought to represent the gas chamber or gas chambers of Dachau: three of those photographs are well known:

1. That of a G.I. wearing a helmet and looking at the disinfection gas chambers, thought at the time of the photograph to be homicidal gas chambers at Dachau;
2. Two G.I.s wearing police headgear and looking at the "shower" (Brausebad), then thought to have been the "gas chamber;"
3. G.I.s along with several American senators or congressmen visiting the interior of the so-called "gas chamber."

ADDITION (1990):

- **Yad Vashem**, *Encyclopedia of the Holocaust*, New York, MacMillan, 1990, article on "Dachau," written by Barbara Distel, Director of the Dachau Museum:

"In Dachau there was no mass extermination program with poison gas [...]. In 1942 a gas chamber was built in Dachau, but it was not put into use."

- Gloria Goldreich, "Knowledge without Understanding", *Hadassah Magazine* (USA), April 1990, p. 40:

"The article on Dachau [in Encyclopedia of the Holocaust], curator of the Dachau Museum in Germany, repeats the view that there was only one gas chamber at Dachau and it was not used for gassing people. Oral testimony, photographs and other American documentary evidence contradicts this view. Photographs clearly show a row of five gas chambers with the victims' clothing hung just outside on hooks. Testimonies of survivors, American liberators and the report of the Office of Strategic Services offer further corroboration."

9.3. Mauthausen

- Document PS499, 8 May 1945. A part of this document consists of a “List of the Different Methods of Killing Inmates in Concentration Camp Mauthausen” (original language: German), p. 2:

“Gas chamber.

The sick, the weak and those inmates unfit for work were from time to time gassed in the gas chamber, in addition to political prisoners who were to be eliminated. Up to 120 inmates, naked, could be fit into the gas chamber and then ‘Cyklon B’ was introduced. It often took hours for death to occur. The SS murderers watched the proceedings through a glass window in the door.”

- Document PS-2285, 13 May 1945. Deposition under oath by Lieutenant-General Guivante de Saint-Gaste and by Lieut. Jean Veith, both members of the French army (IMT, XXX, p. 142):

“The K prisoners were taken directly to the prison where they were unclothed and taken to the ‘bathrooms.’ This bathroom in the cellars of the prison building near the crematory was specially designed for executions (shooting and gassing).

The shooting took place by means of a measuring apparatus. The prisoner being backed towards a metrical measure with an automatic contraption releasing a bullet in his neck as soon as the moving plank determining his height touched the top of his head.

If a transport consisted of too many ‘K’ prisoners, instead of losing time for the ‘measurement’ they were exterminated by gas sent into the bathroom instead of water.”

It is odd that two *French* officers would have given a deposition under oath in *English*. The authors were neither questioned nor cross-examined about it. The American Executive Trial Counsel, Col. Robert G. Storey, read it into the record on 2 January 1946. The official French translation is faulty (TMI, IV, p. 270).

- Document PS-1515, 24 May 1945 (original language: German). The so-called “Deposition of the Camp Commander of Mauthausen Concentration Camp, SS Colonel (*Standartenführer*) Franz Ziereis.” In its original form, this ten-page document, typewritten in German, does not bear any signature. It says: “Franz Ziereis, lying on a straw pallet, wounded in the stomach and the left arm by two shots, made the following declaration to questions put to him by two persons of Intelligence.” Franz Ziereis was interrogated for six to eight hours, and then he died. That torture session took place in the presence of the American General Seibel, Commandant of the 11th Armored Division (still living in 1989, in Defiance, Ohio). One of the two interroga-

tors was Hans Marsalek, a former prisoner, who now lives in Vienna, Austria, a high official of the police and the author of numerous works on Mauthausen:

“By order of the SS-Hauptsturmführer Dr. Krebsbach, a gassing facility camouflaged as a bathroom was built in Mauthausen Concentration Camp. The prisoners were gassed in that camouflaged bath-room [...]. Actually the gas chamber was constructed in Mauthausen by order of SS-Obergruppenführer Glücks, who advocated the viewpoint that it was more humane to gas prisoners than to shoot them.”

This “deposition” is sometimes interrupted by remarks on the part of the interrogators, e.g., about the “insolent arrogance” of Ziereis. It ends with the following words: “Furthermore, Ziereis declares that, according to his estimation some 16,000,000 (?) people have been murdered in the entire territory of Warsaw, Kowno, Riga and Libau.”

For the comments that Ziereis supposedly had on Hartheim Castle, see below, “Hartheim Castle.”

An extra page says:

“Do not use 1515-PS – This statement has been corrected and superseded. – See: 3870-PS. – [Signed:] D. Spencer.”

- Document PS-2176, 17 June 1945. “Report of Investigation of Alleged War Crimes” by Major Eugene S. Cohen, Investigating Officer, Office of the Judge Advocate General (American Third Army). One finds some extracts from this in *IMT*, XXIX, pp. 308-314. This report seems to be the principal document concerning Mauthausen and Hartheim Castle. One can find it in the National Archives in Washington, Record Group 238, “U.S. Counsel for the Prosecution of Axis Criminality Nuremberg Papers,” Box 26, but a large number of the documents or exhibits were not available at the time of our research. Exhibits 75 and 77 are supposed to be declarations made by Ziereis. Exhibit 216 is a “Specimen of poison gas used in the gas chamber at Mauthausen and Gusen No. 1 and No. 2” (actually, a can of Zyklon B disinfectant).
- Document F-274, before October 1945 (original language: French). Official report of the French government, *IMT*, XXXVII, p. 118:

“[...] political prisoners [killed] in the gas chambers [plural] at MAUTHAUSEN, [...]”
- Document PS-2223, 3 August 1945 (?). “Report of Investigation of Alleged War Crimes.” Among twenty reports or depositions under oath, a report dated 13/14 February 1945 on the interrogation of two Polish deserters, both former members of the Polish Army, who relate their experiences at Mauthausen and Gusen:

“A gas chamber with a capacity of 200 took care of many other victims; many women, among the Czech patriots, suspected of sabotage and refusing to give information, were gassed there.”

- Document PS-2753, 7 November 1945 (original language: German). Testimony of an SS-man Alois Höllriegl, *IMT*, XXXI, p. 93:

“The noise that accompanied the gassing process was familiar to me.”

On 4 January 1946, at the trial, the American Associate Trial Counsel, Col. John Harlan Amen, questioned Alois Höllriegl. Amen did not ask him any questions about the gassing mechanism. The “confession” by Höllriegl about the Mauthausen gasings played the same role as the “confessions” of Rudolf Höss on the gasings at Auschwitz. In both cases, the interrogation was conducted by Amen for the purpose of incriminating Ernst Kaltenbrunner.

- Summary of instruction, *IMT*, 20 November 1945. Some French officers, after their attempt to escape the prisoner-of-war camps, were transferred to Mauthausen, *IMT*, II, p. 51:

“When they arrived in the camp, they were either shot or sent to the gas chambers.”

- Document PS-2430: *Nazi Concentration and Prisoner-of-War Camps: A Documentary Motion Picture*, a film shown on November 29, 1945, *IMT*, XXX, p. 468. In contrast to the excerpt from the film that deals with Dachau, the excerpt dealing with Mauthausen does not contain any view of a “gas chamber.” The film limits itself to showing a naval lieutenant from Hollywood, California, who states that people had been executed by gas in the camp: among those was an American Army officer taken prisoner by the Germans.
- Document PS-3846, November 30 and December 3, 1945. Interrogation of Johann Kanduth, former prisoner, *IMT*, XXXIII, pp. 230-243:

“They were shot in the back of the neck. There were also women. Some were killed in the gas chamber [...]. Gissriegel/ he had led the sick to the gas chamber [...]. Altfudish [...] led the women to the room where they undressed, afterwards he brought the next 30. They had to go to the gas chamber [...]. A record [was] made of the prisoners of CC Mauthausen who were killed by shooting, gassing, cremating or by injections [...]. [These notes] are true, that 2-3,000 were killed in the gas chambers or on transports, we don't know the exact number [...]. Kaltenbrunner [on a visit] went laughing in the gas chamber. Then the people were brought from the bunker to be executed and then all the three kinds of executions: hanging, shooting in the back of the neck and gassing were demonstrated. After the dust had disappeared, we had to take away the bodies.”

This testimony was read by U.S. Associate Trial Counsel Col. John Harlan Amen on 12 April 1946 in order to incriminate Kaltenbrunner (*IMT*, XI, p. 324).

- Document PS-3845, 7 December 1945 (original language: English). A deposition under oath by Albert Tiefenbacher, former prisoner, *IMT*, XXXIII, pp. 226, 227, 229:

“Answer: There were Czech women gassed but we did not get the list of their names. I did not have anything to do with the books [...].

Question: Do you remember the gas chamber camouflaged as a bath house?

A. Yes, we always helped to carry the dead from the gas chamber.

Q. There were no shower baths in the chamber?

A. Yes. Cold and warm water was supposed to come out of them, but the flow of the water could be regulated from the outside of the room and mostly the water was turned off. On the outside of the room was the gas reservoir and two gas pipes led from the outside into the room. There was a slot at the back and the gas emanated from this slot.

Q. Gas never came from the showers?

A. All the showers were plugged. It was just to make the effect that the prisoners were entering a bathroom.

Q. [...]. Do you remember the last 800 people who were killed by a club or through drowning?

A. Yes, I know how people were led into the gas chamber and hot and cold water applied to them, and then they had to line up and were beaten until they died [...].

Q. Was Kaltenbrunner with [Himmler visiting Mauthausen]?

A. Kaltenbrunner is a dark fellow, I know him from the crematorium, but I cannot say whether he was with Himmler. I remember Himmler by his monocle.” (NB: Himmler wore glasses.)

On April 12, 1946, Col. Amen read to Kaltenbrunner, in court, a very short statement of A. Tiefenbacher’s sworn statement. In it Tiefenbacher claimed that he had seen Kaltenbrunner three or four times in Mauthausen. Kaltenbrunner replied that it was “absolutely false” (*IMT*, XI, p. 325). Tiefenbacher was not summoned to testify in court.

- *IMT*, VI, pp. 270, 276, 29 January 1946 (original language: French). Testimony of F. Boix, a Spanish refugee in France deported to Mauthausen. Mentions “the gas chamber” at Mauthausen.
- Document PS-3870, 8 April 1946 (original language: German). A statement by Hans Marsalek made more than ten months after the death of Ziereis, May 23, 1945. See above, PS-1515. *IMT*, XXXIII, pp. 279-286. Hans Marsalek swore that:

“Franz Ziereis was interrogated by me in the presence of the Commander of the 11th [U.S.] Armored Division Seibel; the former prisoner and physician Dr. Kopszeinski; and in the presence of another Polish citizen, name unknown, for a period of six to eight hours. The interrogation was effected in the night from 22 May to 23 May 1945. Franz Ziereis was seriously wounded – his body had been penetrated by three bullets – and knew that he would die shortly and told me the following. [...] A gassing plant was built in Concentration Camp Mauthausen by order of the former garrison doctor, Dr. Krebsbach, camouflaged as a bathroom [...]. The gassing of the prisoners was done on the urging of SS Hauptsturmführer Dr. Krebsbach [...]. The gassing plant in Mauthausen was really built by order of SS Obergruppenführer Glücks, since he was of the opinion that it was more humane to gas the prisoners than to shoot them.”

Parts of this affidavit were read by U.S. Associate Trial Counsel Col. Amen on 12 April 1946 (IMT, XI, p. 330-332). Kaltenbrunner protested and insisted on having Hans Marsalek on the witness stand for a confrontation, but the latter never came. This is especially odd since in 1945-46 Marsalek was the number one witness and the number one expert on Mauthausen. Today he is the official historian of the camp. He was never examined and cross-examined in court about the mechanics of gassing in Mauthausen.

As for what Ziereis, according to Hans Marsalek, is supposed to have said about Hartheim Castle, see below, “Hartheim Castle.”

- Sir Hartley Shawcross, British Chief Prosecutor at the IMT 26 July 1946, mentions “the gas chambers and the ovens” not only at Auschwitz and Treblinka but also at Dachau, Buchenwald, Mauthausen, Majdanek, and Oranienburg (IMT, XIX, p. 434). Shawcross is still alive in 1990, living in London and serving in the British House of Lords.
- Simon Wiesenthal, *KZ-Mauthausen*, Linz & Vienna, Ibis Verlag, 1946 (original language: German). The author reproduces what he calls the “confession” of the commandant of Mauthausen, pp. 7-13. In reality, he reproduces Document PS-1515, but only in part and with strange changes; for example, the number of 16,000,000 persons put to death in the whole of the territory of Warsaw, Kowno, Riga, and Libau is reduced by Wiesenthal to “10,000,000” (p. 13).²⁴⁷ Likewise, see below, “Hartheim Castle.”
- Gerald Reitlinger, *The Final Solution*, *op. cit.*, p. 474:

“On May 8th, when Patton’s troops entered the camp, Ziereis was identified in the camp precincts and shot in the stomach. His dying confession,

²⁴⁷ On page 53 of that same book, the author reproduced a drawing that he himself had done and that supposedly showed three prisoners executed by the Germans at Mauthausen. It is a fabrication. The drawing was made from a photo of three German soldiers shot as “spies” by an American firing squad and published in *Life* magazine, 11 June 1945, p. 50.

having been taken down by an inmate in the presence of American officers who could not understand German, is not very reliable.”

- Olga Wormser-Migot, *Le Système concentrationnaire nazi, 1933-1945*, Presses Universitaires de France, 1968 (original language: French). On page 541, the author of that doctoral dissertation, who is Jewish, wrote that, in spite of the confessions of the SS after the war and some “testimonies” claiming there was a gas chamber in the camp at Mauthausen, she does not believe it and thinks that such allegations “seem to be nothing more than myths.” She says also that a large number of prisoners denied the existence of such a gas chamber, but unfortunately she does not give the names of those prisoners. As a result of her skepticism, Olga Wormser-Migot was severely persecuted; she was especially denounced by Pierre-Serge Choumoff.
- Vincente and Luigi Pappaletta, November 1979, *Storia Illustrata* (an Italian monthly magazine), p. 78 (original language: Italian). They claim that in the showers the prisoners were drenched not by water but by a deadly gas which squirted from small holes. The nature of the gas is not specified.
- *Encyclopedia Judaica*, Jerusalem, 1971, article on “Mauthausen”:

“Prisoners were also killed by phenol injection at the euthanasia installation at Hartheim until a gas chamber was constructed at Mauthausen.”

- Evelyn Le Chene, *Mauthausen*, Pierre Belfond, 1974 (original language: English), p. 74:

“The gas chamber at Mauthausen was filled with carbon monoxide, which was pumped down from the gas van when required.”

- Edith Herman, “Thirty Years Later ‘Death Camp’ Horror an Indelible Memory,” *Chicago Tribune*, 4 May 1975, Section 1:

“[Mayer] Markowitz was 26 years old on May 4, 1945, three years after he had arrived at Mauthausen, a death camp in Austria. There was no gas chamber there, and perhaps in a way that made it worse.”

- Dr. Charles E. Goshen, M.D. (Professor of Engineering Management at the Vanderbilt University School of Engineering, “was a captain in the U.S. Army Medical Corps when the events he relates occurred”) *The Tennessean*, 23 April 1978:

“The deaths of the Jews led to examining the gas chambers. We found in the basement of the main prison building a small air-tight chamber and within it several empty and full tanks of HCN, a very lethal gas.

Our prisoner-friends told us that the chamber had been used for two different purposes. Mondays, Wednesdays, and Fridays to de-louse bedding and clothing; Tuesdays, Thursdays, and Saturdays to execute prisoners. The three gas-chamber victims [whom] we found there obviously had been killed just before the SS troops fled.”

– Pierre-Serge Choumoff, *Les Chambres à gaz de Mauthausen: La vérité historique, rétablie par P.S. Choumoff, à la demande de l'Amicale de Mauthausen*, Paris, Amicale, 1972. On pages 17-28, the author deals with the gas chamber. The adjacent room had been a control room for allowing gas into the chamber. The nature of the gas is not specified. A warm brick was brought into the gas cell. The gas was introduced into the gas chamber through a white-lacquered perforated pipe (p. 19). It is significant that the author, like all those who deal with this subject, avoids furnishing photos of the so-called gas chamber, with two exceptions: one shows the *exterior* of one of the two doors and the other, blown up to make it more dramatic, shows a *very small* part of the inside of the gas chamber. There is also a photo of a can of Zyklon B. On pages 83-87, the author strongly attacks Olga Wormser-Migot.

– Hans Marsalek, *Die Geschichte des Konzentrationslagers Mauthausen: Dokumentation*, Österreichische Lagergemeinschaft Mauthausen, Vienna, 1980, republished, first edition in 1974 (original language: German); p. 211:

“Before the gassings, an SS N.C.O. heated a brick in one of the Krema ovens and brought it into a small, divided room, located next to the gas chamber. This gas chamber contained a table, gas masks and the gas introduction unit connected with the gas chamber by means of a pipe. The hot brick was then laid on the bottom of the gas-introduction unit this served to accelerate the process of ‘Zyklon B’ crystals changing into liquid gas. With sufficient gas in the chamber, death by suffocation occurred in about 10-20 minutes.

When an SS doctor, watching through an observation ‘peephole’ in one of the two doors of the gas chamber, ascertained the onset of death, the gas chamber was cleared of gas by ventilators sucking it out into the open air.

The whole gassing process for one group, consisting of approximately 30 persons, beginning with undressing, the so-called medical examinations, murder, clearing the gas chamber of gas, and removal of cadavers took about one and half to two and a half hours.”

Hans Marsalek is considered the “official” historian of Mauthausen. See above, PS-1515 and PS-3970.

– Yehuda Bauer, *A History of the Holocaust*, Institute of Contemporary Jewry, Hebrew University of Jerusalem, assisted by Nili Keren, Toronto, Franklin Watts Publisher, 1982, p. 209:

“Although no gassings took place at Mauthausen, many Jews, as well as non-Jews, died there in a process the Nazis called ‘extermination through labor.’”

In 1988 Yehuda Bauer stated that he had made an “error” which would be corrected in the future editions of his book (Dokumentationsarchiv des österreichischen Widerstandes, *Das Lachout “Dokument,” Anatomie einer Fälschung*, Vienna 1989, pp. 33-34, which quotes a letter from Yehuda Bauer dated 2 September 1988).

- Eugen Kogon, Hermann Langbein, Adalbert Rückerl, *Nationalsozialistische Massentötungen durch Giftgas*, Frankfurt, S. Fischer Verlag, 1983 (original language: German):

“At the main camp, which had been established east of Linz in August 1938, the construction of a gas chamber began in the fall of 1941. The gas chamber was located in the basement of the hospital building, with the crematoria close by. It was a windowless room, camouflaged as a shower room, 3.8 meters in length and 3.5 meters wide. A ventilation unit was installed; the side walls consisted partly of tiles. There were two doors which could be closed airtight. All switches for electrical lighting, ventilation, water supply and the heating unit were located on the outside of this room. From an adjacent room, called the “gas cell,” gas entered through an enameled pipe that had a slot approximately 1 meter long cut into it on the side facing the wall, which was therefore invisible to the occupant of this room.

Remnants of this gassing unit are still discernable today.”

It is not true that “Remnants of this gassing unit are still discernable today.”

- Pierre-Serge Choumoff, *Les Assassinats par à gaz Mauthausen et Gusen, camps de concentration nazis en territoire autrichien*, Amicale des déportés de Mauthausen, 1987 (original language: French). Essentially this is the same study as the one published in 1972, but its confusion is greater. P.S. Choumoff, engineer by trade, shows great confusion regarding the gas chambers. He furnish neither proof nor technical details of the kind one could rightly expect from an engineer, but he is satisfied to call on the usual stories by “witnesses” (Kanduth, Ornstein, Roth, Reinsdorf...). He seems to consider the simple presence of the insecticide “Zyklon B” in the camp to be a proof of the existence of homicidal gassings. Choumoff estimates that at least 3,455 persons were gassed in the alleged gas chambers at Mauthausen.
- Michel de Boüard (former prisoner at Mauthausen), honorary dean of the faculty of letters at the University of Caen, member of the French Committee for the History of World War II, member of the Institut de France: statement made in an interview granted to *Ouest-France*, 2-3 August 1986, p. 6 (original language: French):

“In the monograph on Mauthausen that I presented in La Revue d’histoire de la Seconde Guerre mondiale in 1954, I spoke twice about a gas chamber. Having had time to think about that, I have said to myself:

where did I get the idea that there was a gas chamber at Mauthausen? It was not during my time in the camp because neither I nor anyone else suspected that there could have been one there, so it is therefore a bit of 'baggage' that I received after the war; it was generally admitted. Then I noticed that in my text, although I supported most of my statements with footnotes, there were none regarding the gas chamber [...]."

- The plaque displayed in the Mauthausen gas chamber (in April 1989) says the following (English version):

"The gas chamber was camouflaged as a bathroom by sham showers and waterpipes. Cyclone [sic] B gas was sucked in and exchanged through a shaft (situated in the corner on the right) from the operating room into the gas chamber. The gas-conduit was removed shortly before liberation on April 4th, 1945."

When the Fred Leuchter team inquired about the Mauthausen gas chamber on April 10, 1989, a staff member of the museum stated that the explanation given on the plaque regarding the shaft was not accurate. He explained that the gas had actually been introduced through a perforated pipe coming from a neighboring room. The pipe was no longer there and one could no longer find traces of its existence. The staff member said that the first explanation furnished about the functioning of the chamber came from the prisoners, who had said that the gas entered the chamber through shower heads; that explanation, he said, had long since been abandoned.

These 29 references amount to only a sketch of a bibliography of the supposed Mauthausen "gas chamber." A researcher would have to work in the archives of the Mauthausen Museum and in various archival sources in the United States and Germany.

ADDITION (1990):

- Yad Vashem, *Encyclopedia of the Holocaust*, op. cit., article on "Mauthausen." This recent encyclopedia is extremely vague on the subject of the Mauthausen gas chamber; pp. 948, 950:

"[...] the gas chamber [...] was disguised as a shower room [...]. [Some Czech women] were taken in groups to the gas chamber."

9.4. Hartheim Castle

- Document PS-1515, 24 May 1945, op. cit., according to which Franz Ziereis is alleged to have stated:

"By order of Dr. Lohnauer and of Dr. Re[na]ult, professional criminals, non-reformable, were classed as mentally ill and sent to Hartheim near Linz, where they were exterminated by means of a special system by

Hauptsturmführer Krebsbach [...]. SS Gruppenführer Glücks gave the order to designate the weak prisoners as sick and to kill them by gas in a large installation. There, around 1-1-1/2 million persons were killed. The area in question is named Hartheim and is located 10 kilometers in the direction of Passau [...]. The [insane] were taken to the provincial institution [Landesanstalt] of Hartheim near Linz. I [Franz Ziereis] found that with at least 20,000 prisoners, at the same time as the real mentally ill, it was necessary to have in the course of the year, according to my estimate (for I have seen the piles of files in the cellar) around 4 million persons gassed. The establishment in question at Hartheim used carbon monoxide. The room in question was laid out with tiles and camouflaged as a bathroom. The execution of this work was not entrusted to the SS, with the exception of Dr. L[ohnauer] and Dr. Rena[u]d, but to police officers.”

– Document PS-2176, 17 June 1945, *op. cit.*, Exhibit 213. This document can no longer be found at the National Archives in Washington. It came from a prisoner named Adam-Golebsk or Adam Golebski. Evelyn Le Chene mentions it (*Mauthausen*, 1971, *op. cit.*, pp. 104-107) and Pierre-Serge Choumoff is supposed to have reproduced it in a French translation (*Les Chambres à gaz de Mauthausen*, 1972, *op. cit.*, pp. 40-42). According to what Evelyn Le Chene and Pierre-Serge Choumoff say, the author of that document claims that on 13 December 1944 he came, along with 20 prisoners from Mauthausen, to Castle Hartheim to transform the entire place into a children’s home. Their work lasted 18 days. He saw a room which looked like a small bathroom; the iron door was isolated with rubber; its locks were massive with a sliding bolt, and there was a small round slot. The lower halves of the walls were covered with tiles and there were six showers. From that room a similar door led to another small chamber where there was a gas apparatus, gas bottles and several meters.

– Document F-274, prior to October 1945, *op. cit.*, p. 176:

“Some prisoners were taken from Mauthausen to Castle Hartheim to be gassed there.”

– Document PS-3870, 8 April 1946, *op. cit.*: [Franz Ziereis is supposed to have stated:]

“On the order of Dr. Lohnauer, professional criminals, non-reformable, were sent as mentally ill to Hartheim near Linz where they were exterminated by means of a special system of SS-Hauptsturmführer Krebsbach [...]. SS-Gruppenführer Glücks gave the order to classify the weak prisoners as mentally ill and to kill them in a gassing installation that existed at Castle Hartheim near Linz. There, about 1-1½ million human beings were killed [...]. The number of prisoners who were put to death at Hartheim is

not known but the number of victims of Hartheim is around 1-1½ million when you consider the civilians who were sent to Hartheim.”

- Simon Wiesenthal *KZ Mauthausen*, 1946, *op. cit.* Just as for Mauthausen, the author reproduced PS-1515 but with some strange differences, similar to his views of the same document in regard to Mauthausen (see listing under “III. Mauthausen” above).
- Gerald Reitlinger, *The Final Solution*, 1971 (originally published in 1953), *op. cit.*, p. 141:

“Hundreds of prisoners at Dachau, Aryan or Jewish, were gassed at Schloss Hartheim at the beginning of 1942, after having been judged only on their political past.”
- Olga Wormser-Migot, *Le Système concentrationnaire nazi 1933-1945*, 1968, *op. cit.* The author mentions Hartheim in an extremely vague manner as a place of “extermination” (pp. 154, 538, 540).
- *Encyclopedia Judaica*, 1971, *op. cit.*, article on “Mauthausen.” See the citation above, p. 312.
- Evelyn Le Chene, *Mauthausen*, 1971, *op. cit.* See above document PS-2176, Exhibit 213. A floor plan of Hartheim, done by the author, is located on page 105.
- Pierre-Serge Choumoff, *Les Chambres à gaz de Mauthausen*, 1972, *op. cit.* See above document PS-2176, Exhibit 213. A floor plan for Hartheim is on page 38. It is supposed to come from a Mauthausen prisoner named Bahier. It is dated “Linz, 6 September 1945” and is located in the files of the Criminal Police in Linz (reference number T.G.B. N.R.K. 2081/85).
- Lucy S. Dawidowicz, *The War against the Jews, 1933-1945*, New York, Bantam Books, 1975, pp. 178-179:

“Patients slated for killing [...] were then transferred to one of six ‘euthanasia’ installations (at Bernburg, Brandenburg, Grafeneck, Hadamar, Hartheim, and Sonnenstein) [...] The procedure was pragmatically simple and convincingly deceptive. In groups of twenty or thirty, the patients were ushered into a chamber camouflaged as a shower room. It was an ordinary room, fitted with sealproof doors and windows, into which gas piping had been laid. The compressed gas container and the regulating equipment were located outside. Led into the chamber on the pretext that they were to take showers, the patients were gassed by the doctor on duty.”

The author gives no source for the description of that procedure.

- Hans Marsalek, *Die Geschichte...* 1980, *op. cit.*, p. 213:

“As soon as a group was in the gas chamber, the steel doors were closed, the gas allowed in, and the victims killed. Then the room was ventilated with the help of ventilators.”

The author does not specify the nature of the gas used. He adds that a German named Vincenz Nohel had sworn, before being hanged by the Americans, that 30,000 persons had been killed at Castle Hartheim in the course of the “Euthanasia Action.”

- Eugen Kogon, Hermann Langbein, Adalbert Rückerl *NS Massentötungen...* 1983, *op. cit.* In this book, which is supposed to have reviewed all of the mass gassings, Hartheim is mentioned only in the chapter about “euthanasia” (pp. 62, 76-79); neither the type of gas supposedly used (CO?), nor the total amount of victims is clearly indicated.
- Raul Hilberg, *The Destruction of the European Jews*, 1985, *op. cit.*, pp. 872-873. The author, who does not mention any gas chamber at Mauthausen, states that Hartheim was one of the several “euthanasia stations equipped with gas chambers and bottled, chemically pure carbon monoxide gas.”
- Pierre-Serge Choumoff, *Les assassinats par gaz [...]*, 1987, *op. cit.*, gives no data about the gas chamber at Hartheim. He says that, according to the confessions of the German Vincenz Nohel, 8,000 inmates from Mauthausen and Gusen were gassed in Hartheim Castle.
- Hans Marsalek, Hartheim, *Establishment for Euthanasia and Gassing: Accessory Camp to the KZ (Concentration Camp) of Mauthausen* (abridged version for the Austrian Mauthausen Camp Community, translated by Peter Reinberg), 4 pages. Available at Hartheim Castle (1989). This pamphlet states that approximately 30,000 people were gassed at Hartheim by “Zyklon B” gas.

ADDITION (1990):

- Yad Vashem, *Encyclopedia of the Holocaust*, *op. cit.* This four-volume encyclopedia does not contain any entry for “Hartheim,” but only mentions it on pages 342, 452, 632, 952, 968, 1129, and 1408. The type of gas used at Hartheim supposedly was not Zyklon but carbon monoxide (p. 1129). The victims, especially the mentally ill, supposedly were prisoners transferred from Dachau (p. 342) and from satellite camps of Mauthausen like Gusen (p. 632) or Melk (p. 968).

9.5. 1988: Jewish Historians Face the Problem of the Gas Chambers

- Olga Wormser-Migot, *Le Système concentrationnaire nazi (1933-1945)*, Paris, 1968 (original language: French). A section of that thesis is entitled “The Problem of the Gas Chambers”; it is equivalent to three pages long (between p. 541 and p. 545). The author does not believe in the existence of gas chambers at either Dachau or Mauthausen.

- Lucy Dawidowicz, *The War against the Jews 1933-1945*, New York, Bantam Books, 1975. The author does not mention gas chambers or gassings at either Dachau or Mauthausen.
- Raul Hilberg, *The Destruction of the European Jews*, revised and definitive edition, New York, Holmes & Meier, 1985. In that “definitive” work of three volumes and 1,274 pages, Hilberg makes no mention of gas chambers or gassings at either Dachau or Mauthausen.
- Arno J. Mayer, *Why Did the Heavens Not Darken? – The “Final Solution” in History*, New York, Pantheon Books. 1988, pp. 362-363:

“Sources for the study of the gas chambers are at once rare and unreliable [...]. Most of what is known is based on the depositions of Nazi officials and executioners at postwar trials and on the memory of survivors and bystanders. This testimony must be screened carefully, since it can be influenced by subjective factors of great complexity. Diaries are rare, and so are authentic documents about the making, transmission, and implementation of the extermination policy. But additional evidence may still come to light. Private journals and official papers are likely to surface. Since Auschwitz and Majdanek, as well as the four out-and-out killing centers, were liberated by the Red Army, the Soviet archives may well yield significant clues and evidence when they are opened. In addition, excavations at the killing sites and in their immediate environs may also bring forth new information.”

10. Appendix

10.1. The Gas Chamber at Dachau: Now You See It, Now You Don't

By Carlos W. Porter

We are all familiar with an instrument called the kaleidoscope, in which loose bits of glass are reflected by plane mirrors showing each bit of glass in 6 places at once, creating the illusion of a symmetrical design.

A similar phenomenon occurs in "War Crimes Trials," in which gas chambers are shown in 3 different places at once, and anywhere from 1 to 6 in number, creating the illusion of a Common Design (sometimes referred to as a Common Plan) for the extermination of human beings.

An example of this illusion is the gas chamber at Dachau, which appeared in April of 1945, disappeared from Dachau by November of that year, only to reappear at Nuremberg in December, after which it disappeared from Nuremberg and only entered the scene again as "proven fact" in the trial of Oswald Pohl in 1947 (along with the steam chambers of Treblinka).

The following is, I believe, a complete list of pretrial exhibits mentioning this "gas chamber," which was to be "proven" in the First Dachau Trial (trial of Martin Gottfried Weiss, U.S. National Archives, M1174, 6 reels). The pretrial gas-chamber exhibits (report, diagrams, shower nozzle) are on Reel 1, but they were never introduced into evidence and are missing from the trial exhibits (Reel 4). The trial transcripts (Reels 2 & 3) contain no mention of any gas chamber at Dachau except for a few sentences in the testimony of Dr. Blaha (Volume 1, pp. 166-169). Hence, the gas-chamber accusation had been dropped before trial.

It is apparent that the U.S. Army Corps of Engineers knew before November 15, 1945, that no gas chamber could function in the manner described and that other stories of gas chambers functioning in a similar manner were not true. Yet a decision was made to continue this accusation in other trials for political reasons.

Microfilm pages 000050ff.: *"Report of the Atrocities Committed at Dachau Concentration Camp. Vol. 1. War Crimes Investigation Team No. 6823. Signed by David Chavez Jr. Colonel, JAGD, 7 May 1945."*

Microfilm pages 000071-000075: *"Exhibit F photograph of gas panel / S3 photograph of gas chamber / V2 plan of water and gas installations / V10 shower nozzle removed from gas chamber / V11 label removed from cans (Zyklon) found in or near gas chamber"*

Page 25 of “Chavez Report,” 00089 of microfilm pages: *“The new building had a gas chamber for executions. [...] the gas chamber was labelled ‘shower room’ over the entrance and was a large room with airtight doors and double glassed lights, sealed and gas proof. The ceiling was studded with dummy shower heads. A small observation peephole, double glassed and hermetically sealed was used to observe the conditions of the victims. There were grates in the floor. Hydrogen cyanide was mixed in the room below, and rose into the gas chamber and out the top vents. (Exhibit 34)*

Dr. Blaha witnessed the first test of the gas chamber in the new crematorium in early 1944, and examined the 7 victims used. Two were killed in the first test, an experiment to determine the amount of gas needed to kill a person (Exhibit 5).

Weight of general testimony shows that the gas chamber was developed successfully to get the desired results. Witness after witness mentions seeing living persons herded into the crematorium and never being seen again. When the chamber was not used it was because of the shortage of the materials to make the gas, the same reason for not using the crematorium continually, and certainly no change of heart on the part of the SS in charge. No witness can testify as an eye witness to an execution by gas except Dr. Blaha, because the crematorium and gas chamber [staff] was made up of condemned prisoners who lived in the crematorium yard and once in there, never left the area alive. Men picked for such duty knew that they were to be killed as persons too dangerous to the SS as possible future witnesses.”

Col. Chavez testified at trial on November 15, 1945, and made no mention of any gas chamber. There is no mention of any gas chamber in the testimony of Col. Lawrence Ball, another government expert witness. There is no mention of any gas chamber in the prosecution opening statement, summation, or judgement. No mention in the defense summations. No mention in the testimony, except for a few sentences in the testimony of Dr. Blaha. Not one of the forty defendants was asked a single question concerning any gas chamber. Dr. Blaha testified twice. In his second appearance as witness during prosecution “rebuttal,” he also makes no mention of any gas chamber. The Chavez report was rewritten and introduced into evidence at Nuremberg as “proven fact,” even though it was known to be untrue. (Documents L-159L, PS-2430).

The existence of a gas chamber at Dachau was not upheld in the judgement at Nuremberg.

Page 56 of this same report, the “Chavez Report” (000120 of the microfilm pages, Reel 1, M1174, National Archives): *“This new building also contained a gas chamber for execution. [...] the gas chamber was labelled ‘shower room.’ The first test of a gas chamber was in 1944, when prisoners were used to determine the amount of gas required to kill a person.”*

- 000132: “[Diagrams] drawing of piping section above chamber, ventilator, galvanized piping, open into gas chamber. Insulated piping. Gas chamber [...] gas chamber. Dachau prison camp.”
- 000133: “Grill covered inlets. Hinged door. Water[?] drains. Gas chamber. Dachau prison camp.”
- 000134: “Vents. Ceiling. Gas Chamber. Dachau prison camp. Shower heads flush with ceiling.”
- 000135: “[Diagram] Gas Chamber. Gas tight doors. Wooden shed believed to contain pump or compressor[?]. Piping system above chamber ceiling, dimensions of chamber 24’ x 18’ x 6’. Chamber constructed of smooth, pale-yellow brick like refractory brick, with small cement joints. Elevation. Gas chamber. Dachau prison camp.”

PRE-TRIAL WITNESS INTERROGATIONS AND OTHER EXHIBITS:

- 000199: “In February 1945, 65 Jewish children [...] arrived in the camp. [...]; the children started crying and said: Please don’t put us into the gas chamber. When we replied there was no such thing as a gas chamber, they said: oh yes, our parents told us that we were going into another camp and that we would be put into a gas chamber. We repeated there was no such thing, but they answered: oh yes, oh yes, our father or mother, or uncle or cousin, [...] were put into the gas chamber because they were Jews. The children were kept in the camp for 2 or 3 weeks and were sent to the extermination camp in Auschwitz. Even old and hardened prisoners who had witnessed great inhuman treatment were deeply moved by the sight of the children.”
- 000204: “There was no gas chamber in the camp in working order[!]. A gas chamber was being built in the crematorium and in January 1945, work was going on at a high speed. The chamber was soon completed except for the gas boiler[?]. A railway worker who had to go in and out of the camp told me that a boiler had arrived at the Ostbahnhof, Munich, from Auschwitz. But this boiler, together with many gas cylinders had been destroyed in an air raid.”
- 000212: “The years 1940/43 seem to have been the worst period in Dachau and other similar camps. I was told by eyewitnesses of the mass extermination of Jews who were sent in a gas chamber 500 at a time [...].” Report on Prison Camp conditions dictated by Captain P.M. Martinot, 23 May, 1945.
- 000248: “Another specific provision was for a crematorium of four ovens and one[!] gas chamber (called ‘disinfection chamber’)[!]. I do not know whether this camp was ever built.”

000250: *"The most important building projects which were planned and executed during my presence were as follows: [...] one crematorium called 'Barracke X' in the concentration camp at Dachau, containing six[!] individual gas chambers[!] and 2 combustion ovens."*

000277: *"The Polish priests were compelled to build the well-known crematory and gas chambers [plural...] they were dragged by their legs to the chambers[!] of death [...]"*

000379: *"Source said he visited a building that was designated as a shower room, but which in reality was a gas chamber."*

000417: *"The following Signal Corps photos are contained in 1222614 and have been retained in the War Crimes Office in Washington D.C. Gas Chambers." (plural)*

000420: Photo of soldier in front of door reading *"Gaszeit: (illegible) Vorsicht! Gas! Lebensgefahr! Nicht Öffnen!"* (gassing time... Attention! Gas! Danger to Life! Do not Open!) with the caption: *"Dachau Atrocity Camp: Gas Chambers [plural], conveniently located to the crematory, are examined by a 7th Army soldier. These are part of the horror chambers used by the Nazis before the 7th Army liberated the camp."*

The door shown actually belongs to one of the four Dachau delousing chambers, see Fig. 66, p. 189.

000445: *"The following Signal Corps photos are contained in 12226 and have been retained in the War Crimes Office in Washington D.C. [...] (Gas Chamber)." (singular)*

000455: *"Photo [...] Yank examines fake shower head in the gas chamber [singular] at the Dachau Concentration Camp. Located in the crematory, unknowing prisoners were brought into the shower room marked 'showers.' Here they were stripped and after the door was closed, they were gassed."*

000485: *"Here also, there were gas chambers [plural] camouflaged as 'showers,' into which prisoners were herded under the pretext of bathing, and the huge crematory ovens."*

000486: *"Inside as well as outside[?] were gas chambers [plural] with adjacent crematory ovens [...] almost 100 naked bodies were stacked neatly in the barren room with cement floors. They had come from a room on the left marked 'Brausebad' for 'shower bath.' It really was a gas chamber [singular] a low-ceilinged room about 30 feet square. After 15 or 20 were inside, the doors were firmly sealed and the faucets turned on[!] and poison gas issued[!]. Then the bodies were hauled into a room separating the gas chamber from the crematorium. There were four huge ovens with a huge flue leading to a smoke-blackened stack."*

000489: *"The troops also discovered gas chambers[!], torture chambers and ovens."*

000496: *"We saw the original gas chambers, four huge cells [!] into which victims apparently were crowded and put to death. Later on this method was improved by construction of a large chamber with a jet in the ceiling, similar to showerbath sprinklers. The prisoners undressed in a room, where a man sat, with flowers on his desk, who gave them soap and a towel. Herded into the shower room, the gas was turned on while the operator watched its effect through a telescopic peephole."*

000497: *"Gas chamber executions."*

000506: *"Here one can see for oneself the lethal chamber where the people the Nazis doomed were gassed. It has imitation shower baths, installations with dummy sprinklers set in a pipeless ceiling [!], and gratings looking like water drains in the floor through which gas was sent."*

So did it come through the floor or through the ceiling?

000508: *"'Shower rooms' [plural again] where gas was poured [!] into chambers."*

000509: *"Jarolin [deputy camp commander at Dachau, defendant in Trial of Martin Gottfried Weiss...] said he thought they had gone to the gas chamber."* (singular)

000513: *"Gas chamber deaths at Belsen."*

It was admitted by the prosecution that many inmates were mentally ill, had lost their minds, or were wandering around in a mental daze, yet their statements were accepted as "fact," no matter how contradictory. It was also admitted that Dachau had 6 hospitals and that 15,000 people died of disease in the last few months, and that emaciation is a symptom of dysentery. Defendants were convicted of "aiding and abetting in a common design," even if no accusations were made against them by inmates (case of Gretsche and Schoepp).

10.2. The Gas Chamber at Dachau Revisited

By Germar Rudolf

In July 2011 I visited the Dachau concentration camp twice within a short period of time – the first time with Prof. Dr. Thomas Dalton (author of *Debating the Holocaust*), and the second time with a good acquaintance of mine. On that occasion we took many photographs and made several observations, some of which I want to report here.²⁴⁸

As mentioned by Leuchter, there used to be a sign in the alleged gas chamber making visitors aware of the fact that this room has never been used as a gas chamber. That changed a short while later, though. In the summer of 2011. The museum authorities presented this room as follows to the many thousands of tourists visiting it each year:

“Gas chamber – Here was located the center of the possible [sic!] mass murder. The room was labeled with ‘Shower Room’ for camouflage purposes, and equipped with shower heads which were fake. This was meant to mislead the victims, and prevent that they refused to enter into this room. Up to 150 persons could be suffocated in one batch within 15 to 20 minutes using poisonous hydrogen cyanide gas (Zyklon ‘B’).”

Hence they intentionally leave it open whether or not a mass murder was committed here.

10.2.1. Introduction Chutes

The introduction chutes described by Leuchter – which originally were probably trash chutes – deserve closer attention.

The lids of these chutes could once be moved, but the museum authorities had them welded tightly to the frame to prevent tourists from playing with them. Grooves for a gasket can be seen, but there aren’t any gaskets (any more).

Leuchter mentions that the brickwork around those two chutes visible on the outside as well as the structure of the tiles around the chutes inside the building indicate that the original brickwork was broken to accommodate the chutes, and later walled back up again. This would be tangible physical evidence for subsequent manipulations, and thus deserves a closer look.

Careful observation of the mortar used for the bricks right around the chutes reveals the following (cf. Fig. 50a-c):

²⁴⁸ See his article “Reexamining the ‘Gas Chamber’ of Dachau,” in: *Inconvenient History*, 3(4) (2011); www.inconvenienthistory.com/archive/2011/volume_3/number_4/

Fig. 50a (left), b, c (right): external view of the alleged “Zyklon B introduction chutes” of the alleged gas chamber at Dachau. The different mortar used for the surrounding bricks proves that these holes were opened only after the wall had already been erected.

- a) The smooth mortar made with sand differs noticeably from the coarse mortar made with aggregate (crushed gavel) used for the rest of the building (see Fig. 50a-c).
- b) The mortar was obviously added later on, as results from the fact that in places it flowed over the old mortar (see Fig. 50c).
- c) The new mortar around the chutes has an irregular pattern, which clearly shows that these holes used to install the chutes were broken through a finished, closed wall not having any holes in those locations.
- d) The tiles around the chutes on the interior of the wall were partially added later on or were replaced by other kinds of tiles looking distinct-

Fig. 51: Newly added tiles, or rather, fake tiles, around the introduction chutes.

ly different from the rest of the tiles in that room. In some cases these may actually be mere fake tiles made of plaster, which only look like tiles (see Fig. 51).

We may therefore conclude that these chutes were not part of the original wall. Although it is possible that the builders simply forgot them when erecting the brick wall and added them only afterwards, it is more likely that this is a post-war alteration. This emerges logically as well, since the alleged use of such primitive chutes to introduce Zyklon B is at least surprising, if considering that the camp authorities installed advanced Zyklon B gassing facilities in the same building – for clothes. Had they really planned to mass murder people with poison gas, it has to be expected that, for the release and dissipation of the deadly gas, technical design standards at least similar to the neighboring delousing chambers would have been applied to the homicidal gas chamber.

10.2.2. Ceiling

In his second expert report, Leuchter writes that the ceiling in the room labeled as “shower room” in the building named “Baracke X” at Dachau, that is to say: the alleged former

Fig. 52: Missing shower head in the ceiling of the alleged gas chamber at Dachau, revealing concrete with brick fragments.

Fig. 53a&b: Fake shower head set in the ceiling of the alleged gas chamber at Dachau with traces of reworked concrete around it.

homicidal gas chamber, is some 7.6 feet high (2.30 m). That is incorrect. The room's floor slopes slightly toward the six floor drains, hence is not level. The distance between floor and ceiling is some 2.10 m close to the wall and some 2.15 m close to the drains.

A hole in the ceiling of this room where one of the false shower heads mentioned by Leuchter is missing (Fig. 52), as well as a photo taken in 1995 in the attic above this room (shown in the undressing room, archival no. 3408) indicate that this is a very primitive concrete made with brick fragments, rocks and all kinds of rubble. From beneath, a metal detector finds a great many iron objects scattered throughout the ceiling with no defined pattern. That ceiling is of very low quality, pointing to its having been made hastily and with severe shortage of building material. This is in stark contrast to the rest of the building.

On the other hand, most of the 15 locations originally sporting false shower heads show signs of reworked concrete/mortar, see for instance Fig. 53b. That may be a sign of repairs of the low-quality ceiling, or else it could mean that those shower heads were not part of the original ceiling and were mounted only later by chiseling out a conical hole and filling up the gaps with mortar afterwards.

10.2.3. Ventilation System

A look through the window on the building's rear side reveals on the viewer's right-hand side a pair of heavily insulated thick pipes close to the room's ceiling, hence a little above the gas-chamber ceiling. They apparently come out of the room above the gas chambers and go back into it. Directly next to it on the left-hand side runs a similar pair of pipes, yet uninsulated (see Fig. 54f.). Both pairs have a heavy valve operated by massive handwheels.

On May 25, 1945, hence shortly after the camp's occupation by the U.S. Army, a certain Captain Fribourg, member of the French military mission in Dachau, prepared a description as well as a number of drawings of this strange installation. A copy of it is exhibited in the undressing room (archival no. 3407). If these drawings are correct, the insulated pipe goes in a loop, which makes no sense at all (cf. Fig. 56).

An engineer's report requested by the Dachau museum and prepared by a certain architect Axel Will, however, describes the design of the pipes differently:²⁴⁹

²⁴⁹ The report comes from the Dachau archive, but was made available to Dr. Dalton only in fragments, from which it was possible to discover neither a date nor an archive number. However, a footnote refers to a document from 2001, so this report must be younger than this.

Fig. 54f.: Thick pipes in the room behind and in the area above the Dachau “gas chamber.”

“Air is drawn in via a pipeline of 400mm diameter extending over the roof, and is then led through a steam-operated heat exchanger. The pipeline is insulated behind the heat exchanger. It is split into two lines by means of a y-branch pipe, and leads with two pipes of 200mm diameter into the room adjoining the gas chamber. There the airflow can be adjusted with a valve each. Both these and the other two valves of the ventilation system are made

Fig. 56: Alleged design of the pipe in the attic area above the gas chamber. Air enters through a chimney extending over the roof on the right, then runs through a heat exchanger connected to the building's steam central heating. Shortly before the wall the pipe splits into two, then into four pipelines, only to merge with itself on the other side of the wall. (Part of a sketch by Captain Fribourg, Dachau archival no. 3407)

of massive cast iron and carry a \$ sign in a circle. Such valves are common in gas pipelines but not in ventilation systems.

Behind the valves both pipelines are again led back into the attic area above the gas chamber and merged back together into one pipe. This pipe enters into a sheet-metal shaft [Fig. 57], which again goes through the adjoining room and leads the heated air to the air intake at the floor of the gas chamber.

This sheet-metal shaft is not insulated. This raises questions. Design logic suggests that this shaft would be the suitable location to add substances to the heated air prior to entering the gas chamber. The examination of the sheet-metal shaft has so far not revealed any opening for such a manipulation. Yet the missing insulation points to such a possibility.

The air left the gas chamber through two grilled openings in the ceiling, entering into two pipes of 200mm diameter each. These two pipes were led into the adjoining room as well and could there

Fig. 57: Warm-air-supply shaft behind the Dachau gas chamber.

be closed with valves. The pipes are led back into the attic area and merged together to a single pipe of 400mm diameter. This pipe leads to the fan housing. The air coming out of the fan is pushed through pipes of 300mm diameter into the open. The reduced pipe diameter behind the fan results in a higher air speed und thus to stronger turbulences on exiting the pipe.”

Imagine this: in order to simply get warm air into the room, a pipeline is a) split into two, b) led outside the attic area, c) controlled via a cast-iron valve, d) led back into the attic area, e) merged back together into one pipe, f) led back out of the attic area and, g) fed into a shaft h) leading to the floor of the gas chamber, where i) it finally enters the chamber. Could it be any more complicated? A simple pipe with a simple valve would have been more than sufficient. None of this makes any sense at all.

Unwittingly Architect Will mocks the Zyklon B-introduction chutes as hare-brained nonsense by pointing out that any sane person wanting to kill people with Zyklon B in that chamber would have inserted the poisonous pellets in a basket inside the sheet-metal shaft, so that the heated air evaporates the poison steadily and distributes it quickly and evenly throughout the chamber.

Throwing pellets down a chute, however, raises endless problems, starting with the slow release of the poison and ending with the impossibility to get the pellets out of the chamber once all the victims were dead.

10.2.4. Peephole

The rear wall of the gas chamber is said to have sported a peephole, through which the executioners could observe what unfolds inside the chamber. A photo taken by the Americans shortly after the camp's occupation (archival no. 3410, also exhibited in the undressing room; see section enlargement Fig. 58) shows this hole beneath an electrical switch. This is evidently a hole crudely smashed through a closed wall, hence a hole that was broken through

Fig. 58: Alleged peephole in the back wall of the gas chamber, here in a photo taken right after the war.

Fig. 59: Peephole viewed from within the chamber.

only after construction. Since the room would have been inoperable for any claimed sinister purpose in such a state, it may safely be assumed that this shows the Americans at work rather than what they have found.

Today this hole is closed on the outside, but can still be seen from inside the gas chamber.

10.2.5. Steel Doors

The heavy steel doors leading into the chambers cannot be closed today. The door's latches do not have anything in the frame to catch, and steel pins welded to the doorframe actually prevent them from closing (Fig. 60a&b). These pins were welded in place probably on orders of the Museum authorities in order to prevent that this room's being closed by some prankster while tourists are inside. That assumption is supported by the fact that the doors of the de-lousing chambers in the same building have been completely decommissioned by welding them together, similar to the alleged Zyklon chutes.

Fig. 60a & b: The doors to the alleged gas chamber at Dachau cannot be closed nowadays: a missing closing mechanisms and blocking steel pins welded to the frame prevent this.

10.2.6. Floor Drains

The gas chamber has six large floor drains with cast-iron grates. Beneath each grate is located a large manhole with large sieves inserted to catch larger objects. At the bottom of the manhole is a drain pipe presumably leading into the sewage system. It is therefore evident that this room was designed for the use of lots of water, not gas (see Fig. 61 a&b).

The drains' heavy, cast-iron frames and grates are typical for street drains. They seem to have a year cast ([19]62), which would indicate that they were put in place by the museum authorities during the site's preparations to serve as a museum (the museum opened in 1965). The original shower drains would probably have been destroyed by the massive expected visitor traffic.

10.2.7 Summary

It is almost certain that the introduction chutes were added after the war and are therefore forgeries, because the mortar and tiling traces are unequivocal, and these devices don't make any sense considering the availability of a complex ventilation system which could have been used to administer poison gas.

It is questionable whether the lowered ceiling with the fake shower heads and the complicated but senseless ventilation system could have been installed by the Americans within a few days before they were ogled by visitors (among them several U.S. politicians). Maybe this room had been planned by the camp authorities for something completely different. Further research is required in order to come to definite conclusions in this regard. In spite of all the time which has passed since the war's end, this topic has not been seriously researched to this very day. At least no such research has been published.

Fig. 61a & b: One of the six floor drains inside the alleged gas chamber at Dachau. Left: grate removed, sieve in place; right: sieve removed; the exit drain pipe can be seen at the drain's bottom (top-most spot of the bottom).

10.3. Documents and Photographs

Fig. 62: Room in the Dachau Museum, allegedly a gas chamber, which was never in operation – so the Dachau museum claimed until the late 1990s on a sign in the middle of the gas chamber. Then they removed this sign and replaced it with a new one, claiming that some gassings occurred here after all.

Fig. 63: Air intake opening inside the alleged gas chamber of the Dachau Camp.

Fig. 64a&b: Alleged Zyklon-B-introduction shaft in the south wall of “Baracke X” at the Dachau Camp.

Fig. 65: Ceiling of the alleged gas chamber at the Dachau Camp; circular: four false shower heads; square-shaped with grates: the two air extraction holes. At the wall: three lamp recesses with grates.

Fig. 66: Door of disinfestation chamber at Dachau. The inscriptions on the door specify that the chamber was last used from 7:30 to 10 in the morning. The warning reads "Caution! Gas! Life danger! Do not open!" The U.S. Army caption for this photograph declares deceptively: "Gas chambers, conveniently located to the crematory, are examined by a soldier of the U.S. Seventh Army. These chambers were used by Nazi guards for killing prisoners of the infamous Dachau concentration camp."¹

Fig. 67-69: Crematorium building at Dachau; top two pictures: after the liberation; bottom picture: in 1998. Note the differences between those pictures:
 a) today, a ramp allows access for persons in wheelchairs;
 b) a shed (circle top two pictures) was removed; two openings (arrows lower picture) are now visible at this spot, allegedly used to insert Zyklon B into the shower room – the claimed gas chamber.²

The Third Leuchter Report

A Technical Report on the Execution Gas Chamber

0. Introduction

In October of this year (1989), I was asked by Mr. Ernst Zündel of Toronto Canada to inspect and document, in text, still photography, and video tape, an existing execution gas chamber in the United States.

This gas chamber was designed and constructed solely for the purpose of the execution of convicted criminals under United States law by means of hydrogen cyanide gas (Zyklon B). On November 15, 1988, I inspected the Execution Gas Chamber at the Mississippi State Penitentiary and documented said inspection with both still photography and video tape.

My international party consisted of Mr. Eugene Ernst, an experienced still and motion picture photographer, from Canada, who accompanied me to Germany and Austria earlier this year; and Mr. Karlheinz Geiger, from West Germany, a well-known documentary film producer. This report and subsequent on-site documentation are a result of that inspection.

1. Purpose

The purpose of this report and the inspection upon which it is based is to verbally and graphically demonstrate the design and construction requirements, operational protocol, and the personnel safety requirements of an execution gas chamber, which utilizes hydrogen cyanide (Zyklon B) gas for the execution of one or more condemned prisoners.

This report is intended to, and in fact does, support and corroborate the design and construction criteria defined in *The First Leuchter Report* of April 5, 1988. Because of the broad acceptance and use of this Leuchter Report in Europe and throughout the world, and a widespread demand for information and documentation on the only existing gas execution facilities, found only in the United States, Ernst Zündel commissioned this report. The information concerning the design and construction criteria for gas chambers and their operational protocol contained in this report is intended for use by all scholars, so that they may determine for themselves the impossibility of the existence of the alleged German (Nazi) Gas Chambers which are purported to be, or pur-

ported to have been, in various locations throughout German occupied Europe.

2. Background

The principal investigator and author of this report is a specialist in the design and fabrication of execution hardware in the United States utilized for the execution of condemned persons by means of hydrogen cyanide (Zyklon B) gas. Additionally, the investigator has constructed hardware for electrocution, lethal injection and hanging.

The investigator has inspected the alleged gas execution facilities at the German Concentration Camps in Poland and previously authored *A Technical Report on the Alleged Execution Gas Chambers at Auschwitz, Birkenau and Majdanek, Poland*.²⁵⁰ The investigator has likewise inspected the alleged gas chambers at Mauthausen Concentration Camp and Hartheim Castle in Austria; and Dachau Concentration Camp in Germany. He also has authored *A Technical Report on the Alleged Execution Gas Chambers at Dachau, Germany, Mauthausen and Hartheim Castle, Austria*.²⁵¹

The investigator has inspected the Gas Execution Chamber at the Mississippi State Penitentiary, has considered drawings of the chamber, consulted with the skilled operators of the chamber, studied the execution protocol utilized with the chamber and made drawings, photographs and video tapes of the chamber.

The investigator did not construct the Gas Execution Chamber at the Mississippi State Penitentiary, nor is he responsible for the protocol utilized there. This chamber was built in the early 1950s by the Eaton Metal Products Company of Denver, Colorado, who constructed this chamber, as they did most of the other chambers in the United States. In the construction of this chamber they utilized design criteria first developed and used in the early 1920s for the Arizona Gas Chamber. The protocol is wholly Eaton's, with the exception of special tailoring by the states.

3. Scope

The scope of this report includes a physical inspection and quantitative data obtained at the Death House (Parchman, Mississippi) at the Mississippi Department of Corrections, first-hand operational information supplied by oper-

²⁵⁰ See Section 1 of this book.

²⁵¹ See Section 2 of this book.

ating personnel and the investigator's own personal knowledge and work in the field.

Utilizing all of the above data, the investigator has limited the focus of this study to the development of a criteria package for the understanding, design, fabrication and use of execution gas chambers. This package is intended for use by those persons and scholars who would study the history and use of execution gas chambers and will enable the user to apply the aforementioned criteria to alleged existing gas execution facilities throughout the world and to make a scientific determination if any facility was ever used for, or could ever have supported the function of a homicidal execution gas chamber.

4. History

The history of the use of hydrogen cyanide gas for execution purposes and the development of the gas chamber is strictly a United States phenomenon. Prior to 1890, hanging was the legally utilized procedure for execution in the United States. In an attempt to find a more humane procedure, the New York State Assembly adopted electrocution. Many other states followed by accepting electrocution. Others were not satisfied, for one reason or another, and sought a more humane procedure. Because hydrogen cyanide gas was being utilized for fumigation purposes, some states began to look at the possibility of gas-sing.

In the early 1920s, Arizona passed enabling legislation and contracted with Eaton Metal Products of Denver, Colorado; Casper, Wyoming; and Salt Lake City, Utah to construct their new execution system utilizing hydrogen cyanide gas. Eaton developed a gas chamber to contain the gas, a generator to manufacture the gas, and a protocol to safely utilize the new equipment. Eaton subsequently installed chambers in Arizona, California, Colorado, Maryland, Mississippi, Nevada, North Carolina, Rhode Island and Wyoming. Missouri also utilized gas after the 1930s but their gas chamber, although as complex as the others, was constructed by a different company. Records at Missouri do not indicate who the builder was. The only major difference in all these chambers was whether they were for one or two executees.

In the years that have passed, most states have changed from gas to safer procedures. The only remaining states still utilizing gas are Arizona, California, Maryland, and Mississippi, and some of these states are considering changing to the safer procedure of lethal injection.²⁵²

²⁵² As of now there are no longer any States within the U.S. which use gas chambers for executions; editor's remark.

It is extremely fortunate that although gas-handling accidents have occurred, none has resulted in injury or death to gas chamber personnel as have accidents involving the use of hydrogen cyanide gas in other industries.

5. Mississippi Death House

The Death House at the Mississippi State Penitentiary is a one and a half story facility measuring some seventeen (17) by twenty (20) feet containing some three hundred forty (340) square feet and some two thousand, nine hundred ninety-two (2,992) cubic feet, owing to a ceiling height of some eight feet ten inches (8' 10"). It occupies part of, but is isolated from, the L-shaped Maximum Security Facility containing the maximum-security cells for the prison and Death Row. The entire facility is constructed of red brick. It has three steel doors, one from the Death Row area of the Maximum Security Facility opening into the Control Room (used to bring the executee into the Death House), a second in the rear of the building for official witnesses, which opens into the Witness Room, and the third or main door, which opens from the main yard into the Control Room.

The Lethal Gas Chamber, which occupies the proximate center of the Death Chamber, and the associated plumbing and hardware comprising the gas execution system, was installed by the Eaton Metal Products Company in October of 1954.²⁵³ It was reconditioned by Eaton in 1982. This system is a typical Eaton Lethal Gas Chamber and differs from other Eaton installations only by virtue of the fact that this has a single seat, where some of the others have two. The design and construction of the Eaton Lethal Gas Chamber has not changed since the original installation in Arizona in the early 1920s.

The Execution Chamber, 17 feet by 20 feet, is separated into three rooms by two partitions. The first partition divides the longer dimension of the chamber. From its anchor on a long wall, the partition extends slightly less than half-way towards its opposite anchor before encountering the mid-perimeter point of the hexagonal Gas Chamber, which has an interior diameter of 6' 2". Thus half of the Gas Chamber is in each room.

The partition is, in reality, a riveted steel bulkhead. It runs vertically from floor to ceiling. This divider separates the work area from the witness room, which is the largest of the three rooms. A second wall is fabricated of mortar, brick and plaster and runs perpendicularly from the steel bulkhead to the shorter, outside wall in the work area. It has a door and window, and separates the Chemical Room from the Control Room. The Chemical Room, which is the smallest of the rooms, has a trap door in the floor at the far end, which

²⁵³ See Figure 80 on p. 209.

accesses, via a ladder, a pit beneath the lethal gas chamber. In this pit is located the necessary plumbing for the lethal gas chamber and the gas generator. The Chemical Room contains a sink, counter, the acid mixing pot, the inlet valve and the necessary plumbing for the introduction of the acid/water and ammonia into the gas generator of the lethal gas chamber. The floor of the entire area is painted concrete.

6. The Lethal Gas Chamber

The lethal gas chamber is of welded and riveted steel construction.²⁵⁴ It is hexagonal in shape, but with the corners replaced with the base of an equilateral triangle whose theoretical third angle would have been the original corners of the hexagon. The base of this triangle measures some 7". Thus, each corner is actually two seams instead of one, each seam being one of the base angles of the equilateral triangle. The roof of the chamber is fabricated by a continuation of the side segments at a pitch of some 31 degrees from the horizontal. The height of the roof is some 23" above the top of the chamber. The chamber measures some 6' 2" in diameter from corner to corner and some 8' 10" high in the center. The floor area of the chamber is about 29.7 square feet and the volume of the chamber is some 263 cubic feet.

The lethal chamber has five gasketed windows of bulletproof glass set in riveted steel frames measuring 36" high by 25" wide. The tightness of the window gaskets is controlled by a series of nuts around the window frame which are loosened when the chamber is not being used, to extend the life of the gaskets. Three windows open into the Witness Room and two into the Control Room. The door aperture is 77" high by 34" wide and is oval in shape. A shaped neoprene gasket surrounds the opening which seals against a ribbed clamshell-like door.

Closure of the door and sealing is effected by means of a wormscrew assembly which is turned by a nautical-type wheel. The wormscrew is threaded through a curved bar which is fastened on one side to the hinge assembly and the other to a latching frame (dog). As the worm is turned, it bears against the curved bar which in turn pulls against the latching dog and the hinge, thus forcing the door against the gasket and sealing the aperture. The door is hinged in two places on the left side outside the chamber. The intake air valve is mounted at the base of the chamber to the left of the door on the outside. It is piped clockwise around the chamber to air intake grilles in the facets of the hexagon sides.

²⁵⁴ See Figures 83-85 on pp. 212f.

This comprises the air intake manifold system. There is one grille for each side (hexagon facet), except at the location of the door. An ammonia injection system is connected to the air intake manifold to neutralize any gas residue in the chamber and prevent any un-neutralized air-gas mixture from leaking back into the air intake manifold. A shroud completely covers the manifold piping for the intake air.

At the exact center of the top of the lethal gas chamber the exhaust valve and the 7"-diameter exhaust piping exit the chamber and continue on through the exhaust fan and the roof to the exhaust stack. The exhaust stack is some 13.5' above the roof. The Air Exhaust Valve is controlled by a lever and a mechanical connection external to the chamber and to the left of the door. The exhaust fan is coaxial to the exhaust piping above the chamber and is mounted on a frame on the roof of the chamber. The exhaust flue turns 90 degrees at the top of the chamber and enters the exhaust fan where it again turns 90 degrees to exit the building.

There is a mechanical plumbing vent from the gas generator under the chamber which connects to the exhaust system just prior to the exhaust fan. This vent passes through the floor of the gas chamber and the roof of the gas chamber before it inter-connects with the exhaust above the lethal chamber. The exhaust fan has a back-up motor in the event that the primary motor fails.

There are three explosion-proof lighting fixtures mounted in the ceiling of the chamber spaced at 120 degrees, the first being centered directly in line with the door. These fixtures are mounted at 90 degrees to the surface of the ceiling with the inlet being nearest the center of the chamber. Mounting these at 90 degrees to the surface allows for more head clearance when standing in the chamber. Additionally, there is an inlet and an outlet for both a mechanical stethoscope and an electronic heart monitor. These are to the right of the door as viewed from the outside.

There is also mechanical linkage for controlling the sodium cyanide pellet drop into the gas generator and opening the vent valve, which enters the right side of the chamber and traverses the floor to center of the chamber. A single chair occupies the center of the chamber directly over the gas generator. This chair is fabricated of steel and has head, arm and leg restraints. The chair is painted with black acid-resistant paint. The chamber interior and exterior has been painted with aluminum acid-resistant paint.

The lethal gas chamber is also equipped with a manometer, which reads the pressure in the chamber in inches of mercury. This enables the operators to determine if there is a pressure leak in the chamber at any time. There is also a shelf within the chamber upon which is placed a watch glass of phenolphthalein solution which is used as an indicator as to the presence of gas in the

chamber. When the chamber is clear of gas, the color of the phenolphthalein turns bright red.

The Gas Generator and plumbing system occupy the Lethal Gas Chamber, the Control Room, the Chemical Room, and the pit beneath the gas chamber. The Chemical Room contains the start of the system, and the gas generator in/under the lethal gas chamber is the termination of the system which dumps into a special sewer line.

The Chemical Room contains Acid Mixing Pot (9),²⁵⁵ trap #1, Ammonia Injector and Injector Valve (8), Inlet Valve (3), two water spigots at the Mixing Pot location, and a sink with running water elsewhere in the room.

The Control Room contains the Outlet Valve (4), being the only item not affixed to the lethal chamber. Affixed to the chamber are a Fan Damper Lever for Air Exhaust Valve (5), Ammonia Injector and Manifold Injector Valve (7), Air Valve Lever and Air Intake Valve (2), Gas Valve Lever (1), which controls Gas Generator Valve (10), Gas Generator Vent Stack Valve (A) and Cyanide Briquet Container (B), Packing Gland (11), Manometer (6), Vent Stack (C), and the Exhaust Fan which has a second back-up motor in event that the primary motor fails. Additionally, the switches for the emergency exhaust fans for all three rooms (Control, Witness, and Chemical) are located here.

The Pit beneath the Lethal Chamber contains trap #2, Gas Generator (D), two drain systems and one water supply system. All piping for the acid and gas drain and vent system is stainless steel. All piping for the sink drain and vent system is galvanized. The main drain is 4" black iron. This drain is not part of the prison's normal sewer system, which allows the hydrocyanic acid to biodegrade harmlessly into the environment.

There is an emergency exhaust-fan system to clear all three rooms in the event of a gas leak and emergency lighting in all three rooms as well. Further, in the event of a power failure, there is a back-up generating system which will supply electricity to ensure that the exhaust fan does not stop and the vacuum drop in the chamber, causing a leak of lethal gas.

Note: Numbers in parentheses are Eaton's numbers. Letters in parentheses are the investigator's. Number designations for Valves (numbers 3 and 4) are transposed in Eaton's text but not in the Eaton drawing. They are correct in all other locations.

The Gas Generator is comprised of the Gas Generator (D), Gas Valve Lever (1), the associated actuation linkage and Packing Gland (11), Gas Valve (10), Gas Generator Vent Stack Valve (A), and Cyanide Briquet Container (B). Gas Valve (10) is utilized as a seal for testing the integrity (pressure test) of the chamber as well as the mechanism for controlling the Cyanide Briquet (pellet) drop, while the actuator additionally controls the opening of the Gas Genera-

²⁵⁵ The numbers and letters in parentheses refer to the numbering in Figures 83-85 on pp. 212f.

tor Vent Stack Valve (A). When Gas Valve (10) is closed, the Gas Generator Vent Stack Valve (A) is open, and conversely.

The two Ammonia Injectors and their associated Injector Valves (7) and (8) are operated in the following manner: they consist of a glass bottle filled with ammonia with a rubber stopper. Through two holes in the rubber stopper, two tubes are inserted. The outlet tube is immersed in the ammonia (goes deep into the bottle) and is connected to the Injector Valve, which is in turn connected to the lethal chamber air-intake manifold or the piping directly beneath the Acid Mixing Pot (9), before Inlet Valve (3). The pressurizing tube barely enters the bottle and has a rubber pump ball on the other end. Air is pumped into the bottle utilizing the rubber pump ball, which creates pressure on the surface of the ammonia, forcing it out of the outlet tube into the system, when the respective Injector Valve (7) or (8) is open.

7. Lethal Gas Chamber Function

The function of a Lethal Gas Chamber is simple in theory, but complex in actual usage. Essentially, the executee is sealed into a chamber which is inwardly pressurized (evacuated) causing any leak of dangerous hydrogen cyanide gas to be inward. By means of an external actuator, sodium cyanide pellets (briquets) are dropped into warm, dilute sulfuric acid within the chamber. Hydrogen Cyanide (Zyklon B) gas is generated within the chamber due to the chemical reaction of the sodium cyanide and the sulfuric acid. The released gas surrounds the executee and terminates his life.

After a sufficient time has elapsed, the chamber is ventilated completely, with air in excess of 80 degrees Fahrenheit, many times over, and the subject is removed after proper neutralization with ammonia. The prussic acid, residual to the chemical reaction, must be disposed of. The Chamber must be neutralized by washing with ammonia and caustic soda or chlorine bleach. Care must be taken in handling the corpse, cleaning the chamber and gas generator, and evacuating the gas to see that no one other than the executee is killed.

The Mississippi Lethal Gas Chamber is operated in the following manner. First, it is tested to determine if all of the plumbing is clear and tight. This is done by opening Inlet Valve (3) and Outlet Valve (4) and running tap water into the Acid Mixing Pot (9) for five minutes. This determines that there are no blockages in the plumbing. Then Valve (4) is closed and tap water is run into the Acid Mixing Pot filling the Gas Generator (D) to the floor level of the lethal chamber. The piping in the pit is then inspected to determine that there are no leaks. The Gas Generator Valve (1) is then closed by utilizing Gas Valve Lever (1), trapping the water above the valve at floor level. Then, Out-

let Valve (4) is opened, allowing the water to drain into the sewer, since Gas Valve Lever (1) has opened the Gas Generator Vent Stack Valve (A).

Next is the vacuum test. First, check the Packing Gland and tighten the window frames onto the gaskets. Close and seal the door. Then place some water around Air Intake Valve (2) (to ensure a tight seal) and close Valve (2) by actuating Lever (2). Open Air Exhaust Valve (5) by means of Fan Damper Lever (5) and start exhaust fan. This will pull a vacuum on the chamber. We must now monitor the Manometer (6) to determine if it remains constant or indicates there is a leak. If there is no leak, the following is done to effect an execution: turn off fan and open the Air Intake Valve (2). This relieves the vacuum. Open the door. The heat must be turned on and the Death House brought to and maintained at a temperature of over 80 degrees Fahrenheit to prevent condensation of the hydrocyanic acid on the interior of the gas chamber, which would make cleanup extremely dangerous. Hydrogen cyanide gas condenses at 78.3 degrees Fahrenheit (25.7 degrees Celsius), and the intake air in the control room must be kept above this temperature.²⁵⁶

Utilizing the Gas Valve Lever (1), the Gas Generator Valve (10) should be opened and closed to eliminate any water trapped above the floor in the last test. The Sodium Cyanide briquet container above the valve should be thoroughly dried so that no moisture will reach the cyanide briquets until the execution begins. The door gasket, the window frames, the Packing Gland, the Manometer inlet, and the two heart monitor connections are coated with petroleum jelly as a guard against leakage. Two or more gallons of distilled water are poured into the system to insure that Traps #1 and #2 are full. All chemicals (acid and water as well as caustic soda) are mixed and readied.

Outlet Valve (4) should be closed to seal the system from the drain, and Intake Valve (3) should be closed to contain the acid/water mixture until ready. The Gas Generator Valve (10) should be verified as closed and the locking pin installed through the hole in the Gas Valve Lever. The sodium cyanide briquets should now be placed in the briquet container above the valve. The Acid should be mixed with warm distilled water and placed in Acid Mixing Pot (9). Air Intake Valve (2) should be closed. The Ammonia Injectors should be made ready by closing the Injector Valves and by pumping up the pressure. The watch-glass of Phenolphthalein solution is placed on the shelf within the chamber. The doctor tapes the mechanical stethoscope and the electronic heart monitor to the executee's chest. The door is closed and sealed.

²⁵⁶ HCN condenses on smooth surfaces only, if its vapor pressure reaches or exceeds 100% (dew point), i.e. if the air is saturated with HCN gas. At 25.7°C and normal pressure, all gas has to consist of HCN. The dew point of HCN for the concentration range of concern here (at maximum a few percent in air) lies way below the freezing point (0°C), so that basically no condensation of HCN can ever occur. Things are different in case of rough or moist surfaces, though, where absorption and capillary effects can occur, which can become quite dangerous.

The doctor verifies that the two heart monitors are working. The Air Exhaust Valve (5) should be closed and the exhaust fan should be started. The vacuum should be monitored on the Manometer (6). Inlet Valve (3) should be opened allowing the acid/water mixture into the gas generator, and then closed. The Acid Mixing Pot (9) should be completely filled with tap water to prevent backflow of gas. The Lethal Chamber is now ready for the execution.

The Emergency exhaust fans are now verified as operational. A monitor is stationed at the Manometer. A monitor is at each chamber window, Air Intake Valve (2), and the chamber door with a hand-held gas detector which senses Hydrogen Cyanide Gas to 10 ppm (parts per million). The emergency breathing apparatus (air packs) are verified as being immediately available to those present in the Death House. The execution can now proceed. The manometer (vacuum) is verbally verified and Air Intake Valve (2) is visually verified as closed. Additionally, special hydrogen cyanide first-aid kits are on hand in the Death House, special emergency physician's medical kits and two resuscitators are on hand at the infirmary, and two emergency ambulances are on standby inside the prison. The guard tower at the entrance sally port of the Maximum Security Facility is evacuated as a precaution against wind carrying the expelled air-gas mixture to the tower and killing the guard stationed there. This is the only time that this most-important security post is abandoned.

On command from the Warden, the execution is begun and the witness curtains opened. The locking pin is now removed from the Gas Valve Lever and the Gas Valve Lever (1) is thrown, opening the Gas Generator Valve (10) which drops the cyanide pellets into the acid solution beginning the generation of the gas. The monitors verify that the vacuum is holding and that there are no leaks detected. After several minutes, the executee will be dead and the doctor will verify this fact. The doctor will wait several more minutes and inform the Warden that the subject is dead. (Total time normally ten [10] minutes.) The Warden will then order the chamber to be cleared of gas and the witness curtains closed.

The Gas Valve Lever (1) will be returned to closed position which will close the Gas Generator Valve (10) (which will prevent any further gas from entering the chamber) and open the Gas Generator Vent Stack Valve (A) preparing the Gas Generator for draining. The Fan Damper Lever will be thrown, opening the Air Exhaust Valve (5). The Air Intake Valve (2) will be opened and the Manifold Ammonia Valve (7) opened. The Chamber will begin exhausting the air/gas mixture and the ammonia will begin to neutralize the hydrogen cyanide and protect against any leakage back through the Air Intake Valve (2). The Chamber will be cleared (according to tests) in one minute (Eaton says three). This exhaust procedure will continue for fifteen (15) minutes (at Eaton's instruction) to guarantee at least five full air changes.

Open Outlet Valve (4) allowing the prussic acid residue to pass into the sewer. Open Inlet Valve (3) allowing water in Acid Mixing Pot (9) to pass into the plumbing and flush the system while opening Ammonia Injector Valve (8) to insure no back-flow of poison gas. Pour Caustic Soda solution into Acid Mixing Pot (9) and flush continuously with tap water for fifteen minutes or more. Both Ammonia Injectors (Valves 7 and 8) should be turned off in ten (10) minutes.

After at least fifteen minutes of venting the chamber, the phenolphthalein solution should be checked for its characteristic red color, indicating that the chamber is clear. When the chamber is clear, two operators, wearing full chemical suits with air-packs and rubber gloves, will open the chamber and verify with gas detectors. (Previously, gas masks with hydrocyanic acid and ammonia were utilized.) The operators in the chemical suits ruffle the executee's hair to eliminate any trapped gas and then spray the executee and the chamber with ammonia. The doctor, now wearing a chemical suit with an air-pack, makes the final pronouncement of death.

The executee is now undressed and washed with a caustic soda or ammonia solution and is removed from the chamber and redressed in different clothing. His body is then ready for removal by the undertaker, who works on the body thereafter, with rubber gloves. The clothing worn by the executee at the time of execution is placed in a plastic bag and sealed, after which it is disposed of, generally by incineration.

The Gas Generator Valve (10) is now opened by throwing Gas Valve Lever (1). The Lethal Chamber and all its contents are washed with caustic soda (walls, floor and ceiling) and the residue flushed into the Gas Generator at the base of the chamber and thence down the drain. Gas Generator Valve (10) is then closed by throwing Gas Valve Lever (1) and the plumbing continuously flushed for another ten (10) minutes. Upon completion of the cleanup, approximately an hour after the execution ended, the Death House is secured with the exhaust fan left running.

The following day, the step-down maintenance is performed. An inspection is made to determine if everything is dry. The fan is then turned off. The equipment is then stored in its proper place. All valves are closed and then opened to half position to eliminate pressure on the packing. The nuts on the window frames are loosened to eliminate pressure on the gaskets. The door to the chamber is left open so there is no pressure on the gasket. The Air Exhaust Valve will not be closed, to eliminate pressure on the gasket. The Death House is now made permanently secure.

Prior to the next usage, all valves will be checked, the window gaskets will be tightened and the Packing Gland will be re-packed. The Chamber will be again tested to the procedure outlined above.

The two-man Lethal Gas Chambers built by Eaton were identical in design and construction to the one-man chamber at Mississippi, except that they had two seats and duplicate plumbing systems requiring that all chemical procedures had to be completed twice. Some of these chambers required that the cyanide pellets (often called “eggs”) be placed in a gauze sack and dipped into the acid solution in the generator below the chamber by a trip mechanism similar to the one in Mississippi, except that it was suspended from the chain instead of being fastened to the floor. This was changed because it was safer, in that no one had to handle the gauze sack after the execution.

The chemicals used by Mississippi are an approximate 37% Sulfuric Acid Solution (acid and distilled water) and an approximate 16 ounces of sodium cyanide. This requires twelve (12) pints of distilled water and six (6) pints of acid (98%), resulting in 18 pints of dilute sulfuric acid reacting with 24 briquets of sodium cyanide. This results in two (2) cubic feet of Hydrogen Cyanide gas at the 10-psi (approximate) operational pressure or an amount of approximately 7500 ppm.

8. Design Criteria for a Lethal Gas Chamber

This basic design was developed almost seventy years ago by those tasked with designing a device for the execution of condemned criminals. With very few exceptions, it is still state of the art. It is basic, effective and reasonably safe. Failure to follow these criteria in the design of a gas chamber would result in death to the operators and others not concerned with the execution process. These criteria were developed in the United States, where the only execution gas chambers were ever built, or used. These basic design principles have proven themselves for almost three-quarters of a century. They were even utilized by the Germans in the construction of their delousing chambers to fight vermin infestation and typhus in central Europe in the 1930s and 1940s.

Required: Design a Lethal Gas Chamber to utilize hydrogen cyanide gas for the execution of convicted criminals, knowing the gas is extremely deadly, explosive, and condenses at 78.3 degrees Fahrenheit.

The chamber and all inlets, whether electrical or mechanical, must be sealed to prevent leakage. The door must be gasketed with some type of pressure seal as used on water-tight doors at sea. The windows, if any, must be gasketed and sealed. Further, the chamber must be operated at a pressure less than the outside ambient pressure (vacuum) to insure that any leak would be inward.

Because the gas is explosive, all lighting and electrical hardware in the chamber must be explosion-proof. Any mechanical hardware must be pre-

vented from causing a spark, as well as the occupant who must be restrained from causing an explosion. The concentration of the gas at the generator or at its source (the inert carrier in the case of Zyklon B) is almost 100%, much greater than its 6% lower explosion level (lel).

Either the gas is to be generated, supplied from tanks or supplied from an inert carrier such as Zyklon B. If it is to be generated, mechanical means must be supplied to drop sodium cyanide into an acid solution. If it is to be supplied from tanks, a heated water jacket must be used to vaporize it from a liquid (its form in the tank). If Zyklon B is to be used, a hot air circulator must be employed to evaporate the gas (boil it off) from the inert carrier. The simplest means is to generate the gas in the chamber. If tanks are used, the heater and the valves must all be explosion proof. If Zyklon B is utilized, we need an expensive circulator, piping system, additional seals on the chamber and the pump and, further, must be concerned with possible gas leaks outside the chamber proper. Further, we must see that the heater never causes an electrical spark.

We must have a system for exhausting the air-gas mixture from the chamber and a stack above the tallest object to dissipate the gas before it can harm anyone. This requires an inlet valve and an exhaust valve, both gasketed, and an exhaust fan capable of sufficient flow to clear the chamber a number of times in a short span of time. The intake air must be heated to a temperature of greater than 78.3 degrees Fahrenheit (25.7 Celsius) to prevent condensation of the hydrocyanic acid in the chamber. We must add a strong base to the intake air to neutralize any leakage backwards to the operators.

After the usage, we must have a system or procedure to neutralize the executee's body of hydrocyanic acid and to purge the chamber of the same. This requires the washing of the subject, as well as the chamber, with a strong base while wearing protective suits and gas masks or air supplies. Further, we must have some type of indicator for gas leakage, as well as an air exhaust system to protect the operators. We require special hydrogen cyanide medical kits, resuscitators and doctors trained to handle an emergency. We must restrict the hydrogen cyanide gas and the residual prussic acid or Zyklon B carrier from unsuspectingly coming into contact with the operations.

9. Conclusion

The reader of this report should be able to immediately grasp the necessity for the utilization of these tried-and-tested principles for a lethal gas chamber design. Most of them are common sense. Even though the execution requirements only existed in the United States, we can immediately see that the Germans

utilized these criteria in the design and construction of the DEGESCH Delousing Chambers for Zyklon B. These were used only for pest and disease control.

If the readers of this report simply apply these basic common-sense design requirements to the alleged German Homicidal Gas Chambers in Poland, or elsewhere, they can immediately see the absurdity of considering these facilities as being gas chambers. It has been said that the United States chambers cannot be compared with the alleged German chambers because the problems encountered in executing two people are different from those encountered in executing hundreds. Not so. The problems are essentially the same, only greater and more dangerous. The larger the chamber and the greater the number of executees, the greater is the need to apply the basic design principles. Only a fool would attempt to execute one or more persons in a cold damp morgue such as the alleged Gas Chamber at Auschwitz I. Perhaps a dead fool.

Prepared this 6th day of December, 1989

at Malden, Massachusetts.

SAN QUENTIN STATE PRISON
LETHAL GAS CHAMBER
OPERATIONS
STEPS TO BE TAKEN DURING ACTUAL OPERATION AFTER
PRELIMINARY PREPARATIONS ARE COMPLETE

IN BRIEF:

1. Mix acid and water in mixing bowls (CHEMICAL OPERATOR)
2. Strap Prisoner in chair (CHAMBER OPERATOR ASSISTS)
3. Attach bag of sodium cyanide to immersing device (CHEMICAL OPERATOR)
4. Close and seal chamber door (BOTH OPERATOR)
5. Test chamber air tightness of chamber by use of Lever E and manometer M (CHAMBER OPERATOR)
6. Release acid to chamber receptacles (CHEMICAL OPERATOR)
7. Close supply valves A2 and B2 (CHEMICAL OPERATOR)
8. Fill mixing bowl with water (CHEMICAL OPERATOR)
9. Report "Everything Ready" in preparation room (CHEMICAL OPERATOR)
10. Report "Everything Ready" to Warden (CHAMBER OPERATOR)
11. Immerse sodium cyanide into acid (CHAMBER OPERATOR)
Note chamber now in operation - recommend not less than ten minutes.
12. Warden gives order to clear chamber.
13. Open exhaust valve by Lever E (CHAMBER OPERATOR)
14. Open receptacle drain valves A4 and B5 (CHAMBER OPERATOR)
15. Open supply valves A2 and B2 (CHEMICAL OPERATOR)
16. Open ammonia valves A3 and B3 (CHEMICAL OPERATOR)
17. Open water faucets A4 and B4 (CHEMICAL OPERATOR)
18. Open air manifold intake valve F (CHAMBER OPERATOR)
19. Open ammonia valve I (CHAMBER OPERATOR) Chamber is now being cleared of gas. it is recommended that period be about fifteen minutes.
20. Open chamber door - Physician's inspection - Body removal
21. Clean chamber and appurtenances and leave in condition for next execution.

---	---

Fig. 86: Document series of a proposal for the construction of an execution gas chamber by Fred A. Leuchter Associates for the State of Missouri, dated December 31, 1987.

<p>2.000 HISTORY. The Gas Chamber and Death House at the Missouri State Penitentiary was constructed and made operational c.1936. The Chamber appears to have been constructed at another location and either lowered through an opening in the roof of the building constructed around it. The age of the building has not been determined.</p> <p>2.001 The Death House at the Missouri State Penitentiary is a nearly square building measuring approximately 27.5' x 22.5' and containing some 619 square feet, and some 7119 cubic feet, owing to a ceiling height of 11.75'. It is constructed of a sedimentary-like stone, indigenous to Missouri. It contains two (2) exterior doors measuring 2'10" x 80" and five (5) windows measuring approximately 49" x 41". It contains two (2) cells averaging some sixty (60) square feet each with two antiquated cell doors and locks. Additionally, it is broken into three (3) rooms of varying size, centering around the Gas Chamber. These rooms we will designate Area A - control room (with adjacent cells), Area B - official witness area and Area C - condemned witness area. All rooms but the control room and cells have windows. Egress is through two (2) doors, one to the control room and cell area and the other to the official witness area. Egress to the condemned witness area is through the official witness area. Heat is by a simple steam boiler in the official witness area, near the egress door. Partitioning for the rooms is not complete. The cells are completely partitioned from all areas except via two (2) doors in the control room. The official witness area is open to the control room above the Chamber. The condemned witness area is partitioned completely from the other areas with only the one egress door. The roof appears to be of tar and gravel construction over wooden beams. All interior areas are finished and painted.</p> <p>2.002 The Gas Chamber is of a metal tank type construction. It is a welded steel polygon containing twelve (12) sides of varying dimensions measuring a 7.5' diameter in one direction and an 8' diameter in the other. It is 8.5' high and has a volume of some 510 cubic feet. It has a door aperture of 35.25" x 80" and a ribbed clamshell-like gasketed door of some 80" high by 37.25" wide. The door opens out and closure is effected by right hand hinges and three (3) mechanical screw type latches (dogs) on the left and three (3) mechanical spring loaded screw type pressure latches (dogs) on the right. The</p>	<p>sealing capability of this design is uneven and questionable. The Chamber contains two (2) seats for the condemned and a sheet metal flue of approximately 6" running through the dome of the Chamber and on through the roof some 40 feet in the air. It is guyed to the roof via wire. The Chamber is evacuated via a 1725 rpm fan of 1/3 horse power. It is a standard ventilation type fan. Air intake is through four (4) 3" diameter pipes welded into the base of the Chamber at an angle so as to develop a swirl type effect in the Chamber. These intakes have a small mechanical valve for admitting ammonia - a questionable agent for neutralizing the Hydrogen Cyanide Gas and a 3" diameter mechanical valve opening into the personnel area. For supplying replacement air, this design is inherently dangerous, in that these intakes open directly into the personnel area. A spring loaded valve is inset below the fan and opened for Chamber evacuation. There are five (5) windows approximately 29" square in the panels of the Chamber.</p> <p>2.003 The Hydrogen Cyanide Gas is generated by mechanically dropping two (2) dozen or so Sodium Cyanide briquets from a shelf under the right hand chair into a crockery pot containing several pints of Sulfuric Acid.</p> <p>2.004 External to the Chamber and to the right of the door in the control room are two (2) mechanical levers. One, mechanically via a connecting rod through the floor of the Chamber, drops the Sodium Cyanide briquets into the Sulfuric Acid. There is a questionable seal on the entry hole for this rod. The second lever opens the spring loaded valve at the top of the Chamber. It is spring loaded to close and is held open via a stop pin. It is extremely difficult to operate and may prove dangerous in use. A wire for a medical heart monitor has replaced an old mechanical stethoscope, but the seal around the wire through the Chamber wall is questionable.</p> <p>2.005 PROCEDURE. A crock of dilute Sulfuric Acid is installed under the right chair and two (2) dozen or so Sodium Cyanide briquets placed on the drop shelf. These briquets are extremely dangerous to handle. The condemned is strapped into the chair and the heart monitor installed on his body. The door is closed and compressed onto the gasket via</p>
<p>the mechanical dogs. On command, the lever is pulled and the Sodium Cyanide briquets dropped into the Acid. Hydrogen Cyanide Gas is generated and fills the Chamber, leaving a residual of Prussic Acid in the crock. After the condemned is pronounced dead by the attending physician, the Chamber is evacuated by the following procedure.</p> <ol style="list-style-type: none"> 1. The exhaust fan is energized and the mechanical valve opened via the lever. The fan is not an overloading type and the valve must be opened immediately to prevent burnout. 2. The intake ports are opened first and ammonia is fed into the intakes; then the main valves are opened manually. This procedure is dangerous since gas could leak into the personnel area. The intakes should be outside the Death House. Additionally, ammonia is not a proper agent to neutralize Hydrogen Cyanide Gas. Chlorine bleach should be used, but is not necessary and may cause Cyanide to precipitate in the Chamber. 3. After the Chamber is clear, some fifteen (15) minutes after the fan was turned on, the deceased is removed and wiped with ammonia (should use chlorine bleach). 4. Chamber is then washed with ammonia (should be bleach) and the crock of Prussic Acid removed and dumped (buried in the ground). The Prussic Acid is extremely dangerous and may be lethal to those handling the material. It does, however, biodegrade reasonably well in the environment. 5. In a test run with smoke candles on the Chamber, it was observed after fifteen (15) minutes of exhaust, the Chamber was mostly cleared of smoke, but not completely. <p>3.000 EXECUTION PROBLEM. Medical tests show that a concentration of Hydrogen Cyanide Gas of 300 parts per million (PPM) in air is rapidly fatal. Considering a Chamber volume of approximately 600 cubic feet, and a determination that 1600 PPM would be adequate to effect death, it is determined that a double dose of 3200 PPM would be reasonable in a 600 CF Chamber to ensure rapid death. This is</p>	<p>a volume of approximately two (2) cubic feet of gas at a weight of 120 to 150 grams. For ease and safety in handling, the HCN (Hydrogen Cyanide Gas) should be supplied as a liquid and vaporized. This would eliminate the need of handling the lethal Sodium Cyanide briquets or the dangerous Prussic Acid residue upon conclusion. The gas would be supplied in a bottle as a liquid and thence heated in a vaporizer to a gas.</p> <p>3.001 Since some 100 PPM of HCN gas is fatal within half an hour, a consideration for the safety of the operational and witness personnel is in order. Toxic effects are skin irritation and rashes, eye irritation, blurring of vision and permanent eye damage; nonspecific nausea, headache, dizziness, vomiting and weakness; rapid respiration; lowered blood pressure, unconsciousness, convulsions and death. Symptoms of asphyxia, dyspnea, ataxia, tremors, coma and death through a disruption of the oxidative metabolism.</p> <p>3.002 First, the Chamber should be pressure tested to 2.5 atmospheres to guarantee the integrity of the Chamber welds and seals. Second, the Chamber should be operated at a negative pressure (partial vacuum) of approximately 10 PSI (after gas release of +2 PSI) compared with a standard atmosphere of 14.7 PSI. This would ensure that if the integrity of any of the seals were breached, all leakage would be inward. This pressure should be constantly monitored and in the event that the Chamber pressure rises to 12 PSI, an automated safety procedure would activate, evacuating the Chamber through its evacuation system. Further, gas detectors should monitor gas levels outside the Chamber and audible and visual alarms should activate and exhaust fans should clear the personnel area in less than a minute. Emergency breathing apparatus should be available to all personnel and first aid kits and a resuscitator should be in the immediate area in case of personnel injury.</p> <p>3.003 The entire operational procedure should be automatic and sequentially controlled to eliminate error or accident and the gas condition internal to the Chamber should be monitored via a gas detector which would prevent the Chamber door from opening until the gas has cleared. This detector would also control a red and green light which would</p>

<p>provide a visual indication of the internal gas level in the Chamber. Mechanical and electrical over-rides should be provided for the system.</p> <p>3.004 REITERATION. A gas execution system should utilize an airtight Chamber that is operated at negative pressure. Further, the gas should not be generated on site, but should be supplied as a liquid and vaporized in the Chamber. An automated control system should be used to eliminate error and a safety system should be employed to evacuate both the Chamber and personnel areas in the event of a leak. Visual monitors as to gas condition and audible and visual alarms should be incorporated into the system. Emergency breathing apparatus, special Hydrogen Cyanide first aid kits and a resuscitator should be in the immediate area in case of accident.</p> <p>4.000 ANALYSIS AND CRITIQUE OF THE PRESENT SYSTEM. The present system in place at Jefferson City is extremely dangerous for the following reasons. First, the Chamber is old, gasketing is questionable, the door seal is dangerous and difficult to close (due to poor latching system), holes in the Chamber floor and wall for wires and pull rods are not properly sealed, the evacuation system is undersized and slow and the main exhaust valve is difficult to operate and may leak. Further, the air intake ports are likewise undersized and take return air from the personnel area, instead of the outside. Additionally, the ammonia ports are unnecessary and another source of potential leakage. Also, the ammonia may cause HCN to precipitate in the tank.</p> <p>4.001 The gas generator system is antiquated, obsolete and is no longer necessary. Personnel should not handle Sodium Cyanide briquets or the Prussic Acid residue.</p> <p>4.002 As the entire system is old, the fan may fail, the gaskets on the door and windows may leak and the valve may fail.</p> <p>4.003 Additionally, there is no overall control system, no gas detectors nor personnel safety system, no</p>	<p>exhaust fans for the work and viewing areas and no emergency breathing apparatus or first aid equipment on the premises.</p> <p>4.004 The three (3) areas of the Death House are not isolated from each other which would enable leaking gas to permeate the entire Death House.</p> <p>5.000 RECOMMENDED CHANGES. The following changes are recommended for the Gas Chamber and Death House at Jefferson City.</p> <p>5.001 Chamber. Replacement of door and frame with a standard naval type watertight assembly with a single control handle. Replacement of all five (5) windows with standard naval watertight bulkhead windows. Removal of all mechanical release hardware for the valve and Cyanide pellet drop and welding all holes and questionable seams. Installation of hermetically sealed electrical connectors, installation of ports for gauges, vacuum release and vacuum system. All to be welded. The tank now should be subjected to a positive pressure test of 2.5 atmospheres for twenty-four (24) hours to determine the integrity of the welds and seals.</p> <p>5.002 The gas generation system should be eliminated and a gas vaporizer and the associated plumbing installed in the Chamber. This vaporizer is essentially a heated water jacket for the gas cylinder which is temperature controlled. A Nitrogen burst HCN clearing capability is part of this system.</p> <p>5.003 A new gas evacuation system should be installed, consisting of a 13" diameter PVC air inlet feeding from the roof containing a coaxial 2285 CFM inline fan and an inward closing motorized valve; further, a 13" diameter air outlet exhausting through an inwardly closing motorized valve and a 40" PVC stack above the roof.</p> <p>5.004 A Chamber vacuum system should be installed containing a 17.7 CFM displacement vacuum pump, vented to the stack, with the associated mechanical and electrical valves, pressure switches and gauges.</p>
<p>5.005 An electrically controlled sequentially timed system should be installed to safely control operation and integration of the essential systems. This system will include means for locking the door, releasing the gas, monitoring gas and pressure levels in the Chamber and evacuating the gas after the execution is over.</p> <p>5.006 A personnel safety system should be installed to protect the lives of the operators and the witnesses. This should consist of gas detectors to sense gas leaks in the personnel areas, audible and visual alarms and a gas evacuation system installed in each of the three (3) personnel areas and inside the ceiling. This system will activate immediately on a leak and a gas concentration in an amount of 10 PPM. Additionally, special Hydrogen Cyanide first aid kits, emergency breathing apparatus and a resuscitator should be immediately available to the occupants.</p> <p>5.007 Further, a wall should be constructed between the control area and the official witness area to ceiling height (7.5') and the wall between the official witness area and the condemned witness area removed above 7.5'. This will segregate the areas below the ceiling and allow the emergency air evacuation system to function above the ceiling. Do not remove any cell area walls.</p> <p>5.008 A door should be installed from the condemned witness area to the outside to facilitate movement and the non-integration of the witnesses of different categories. The door between the two witness areas should be sealed or locked.</p> <p>5.009 In the cell area, two (2) new cell doors with Folger Adam 82-5 locks and paracentric keys installed. The left door should be sealed and a new door installed between the cells. The second door on the right should remain the same. This will establish an anti-room cell area for the chaplain.</p> <p>5.010 Intakes for the emergency air evacuation system for the personnel areas should be installed in each personnel area and inside the ceiling, exiting to the outside.</p>	<p>5.011 Installation of three (3) 25 kw suspended electric heat blower units in each of the three (3) personnel areas, at ceiling height.</p> <p>5.012 A suspended ceiling of 2' x 4' x 3" Fibreglass should be installed at 7.5' height to seal all areas. A good quality suspension system should be used equivalent to Chicago Rolling Mills. This ceiling will provide for ventilation, heat and sound insulation.</p> <p>5.013 Fluorescent lighting should be installed in all areas. Three (3) - four (4) lamp fixtures in both the control and official witness areas and two (2) four (4) lamp fixtures in the condemned witness area. One (1) - four (4) lamp tamper-proof fixture should be installed in the cell and one in the chaplain area.</p> <p>5.014 The Death House should be repainted and the Chamber stripped of its present coat of latex paint, inside and out, and repainted with two (2) heavy coats of good quality marine epoxy paint. The floor should be painted with a quality deck enamel.</p> <p>5.015 Door installation, carpentry, ceiling, painting, and masonry work shall be completed by prison personnel. All doors to be supplied by American Engineering, Inc.</p> <p>6.000 SAFETY. Personnel safety is a critical issue and at a minimum, an emergency air evacuation system must be installed which is controlled by gas detectors. Further, specialized first aid kits, emergency breathing apparatus and a resuscitator must be available at the Death House. It is further recommended that the gas generator be eliminated and a vaporizer installed, eliminating the need to handle Sodium Cyanide pellets or Prussic Acid. All gas detectors should be operated at a level of 10 PPM, as this is the OSHA limit of exposure for one day.</p>

<p>7.000 CHANGES AND NEW SYSTEMS. The Gas Chamber will be sealed and tested at 2.5 atmospheres of pressure [one (1) atmosphere being 14.7 PSI] after installation of the necessary through the wall hardware. This will consist of an inlet flange at the base on one side of the Chamber; an outlet flange top dead center on the dome; a vacuum port for evacuating the Chamber; a vacuum release port; a gauge port and a pressure switch port. One or more hermetically sealed electrical connectors for supply electricity and receiving sensor data [i.e. gas detector and subject pulse condition information].</p> <p>7.001 A gas vaporizer and delivery system will be installed within the Chamber to supply and deliver the Hydrogen Cyanide Gas. The vaporizer shall consist of a redundant temperature controlled and heated water jacket suitable for a hazardous environment. A lecture bottle of 60 grams of HCN liquid is connected to a delivery system containing a manual shutoff for the HCN, an electrical valve for the release of the HCN and a flame nozzle for distribution. Additionally, a Nitrogen bottle supplies a purge of the system via a regulator set at 75 PSI, a pressure gauge, a manual and electrical valve for release into the system. The gas is heated to 130°F and vaporized. The electrical valve releases the gas on command. During chamber purge (evacuation), the Nitrogen valve releases a Nitrogen purge to clear the plumbing of any residual HCN.</p> <p>7.002 An air inlet PVC pipe of 13" diameter will pick up outside air on the roof and feed it through a centrifugal coaxial fan of 2285 CFM capacity and an inwardly closing motorized inlet valve into the Chamber. An inwardly closing motorized outlet valve will exhaust the Chamber through a 13" diameter PVC pipe running through the roof 40' into the air. The inlet and outlet pipes are connected to the inlet and outlet flanges on the Chamber.</p> <p>7.003 A vacuumizer system will vacuumize the Chamber to a negative pressure value (partial vacuum) of 10 PSI [operational: 8 PSI plus 2 PSI of HCN]. This vacuum will be maintained utilizing the outside ambient pressure as a standard. This will ensure that any leak would only be inward.</p>	<p>7.004 This will consist of a 17.7 CFM displacement vacuum pump vented to the exhaust stack of the Chamber and a back flow valve, electrically operated ball valve and a mechanically operated ball valve. Additionally, a pressure switch set to shut down the pump at 8 PSI and trigger the emergency system if the pressure reaches a value of 12 PSI, 2 PSI above the Chamber operational pressure value of 10 PSI. Further, a mechanical gauge is utilized and a mechanical ball valve for vacuum release (break), if necessary.</p> <p>7.005 A system of four (4) air evacuation fans will be employed in the event of a gas leak. These will operate in conjunction with four (4) motorized air intake louvers.</p> <ol style="list-style-type: none"> 1. Control area - 15,200 CFM fan with motorized air intake through wall. Fan to be centrally located on roof. 2. Official witness area - 15,200 CFM fan with motorized air intake through existing window. Fan to be centrally located on roof. 3. Condemned witness area - 7,645 CFM fan with motorized air intake located over new door. Fan to be centrally located on roof. 4. Internal ceiling area - 3,970 CFM fan with motorized air intake through wall. Fan to be located through wall. <p>7.006 These fans will be activated by a single relay which will be controlled by the emergency safety system.</p> <p>7.007 The emergency safety system will consist of five (5) gas detectors. One in each of the personnel areas (3), one in the ceiling and one in the Gas Chamber. A sail switch will also be employed to verify that the gas is exhausting from the Chamber. This will be located in the stack.</p> <p>7.008 The safety system will also have monitor lights to determine vacuum condition, gas condition in the Chamber, gas valve open, gas valve closed and Chamber evacuation (purge) under way.</p>
<p>Additionally, there will be a vacuum-drop horn and beacon and a gas-leak bell and rotary beacon. The system will automatically trigger the alarms and evacuate the air in the personnel areas immediately, if a problem develops.</p> <p>7.009 The gas detector in the Chamber will monitor internal gas levels and announce condition with a red or green [gas or clear] light, as well as, prevent the Chamber door from opening via an electric latch, while a gas condition exists.</p> <p>7.010 A control system will monitor and sequentially control all functions and operations of the equipment and Chamber. It will open the gas valve to release the HCN gas. It will time the gas condition and start the Chamber purge fan, open the outlet valve, open the inlet valve, activate the Nitrogen purge and shut down the purge fan after the execution is complete. It will return all valves to closure condition.</p> <p>7.011 Additionally, a phase controlled relay will be installed to control all electrical functions in the Death House, preventing an external electrical phase error from interfering with proper systems operation.</p> <p>7.012 A 7.5' 3" Fibreglass suspended ceiling will be installed. Three (3) 25 kw suspended electric heaters will be installed in the three (3) personnel areas. Two (2) new cell door will be installed with Folger Adam 82-5 locks and one cell door sealed and moved to connect the two cells. An outside door to the condemned witness area will be installed. A wall will be erected separating the control area from the official witness area, not to exceed 7.5'. The wall between the control area and the condemned witness area will be opened above the 7.5' ceiling. The Death House will be painted. The Chamber will be stripped of all latex paint, primed and painted with two (2) heavy coats of a quality marine epoxy paint.</p> <p>7.013 Specialized HCN first aid kits and emergency breathing apparatus will be installed in the Death House with detailed HCN emergency treatment procedures. A resuscitator and first aid kits</p>	<p>will be supplied to the prison hospital with instructions for HCN exposure treatment.</p> <p>8.000 PROCEDURES. A manual will be written and supplied to prison personnel which shall include maintenance, operation, safety and emergency procedures for operating the Gas Chamber and associated systems. This will include an execution operational procedure which will guarantee a trouble-free execution, if followed.</p> <p>9.000 A description of materials and labor necessary to fabricate and install system.</p> <p>9.001 Electrical, main</p> <ol style="list-style-type: none"> 1. The Fourth Leuchter Report

A Technical Evaluation of Jean-Claude Pressac's Book
Auschwitz: Technique and Operation of the Gas Chambers

0. Introduction

Auschwitz: Technique and Operation of the Gas Chambers was written by Jean-Claude Pressac in 1989 and was subsequently published by and distributed through the Beate Klarsfeld Foundation of Paris and New York. This document, in the opinion of this author, is a blatant attempt at furthering exterminationist propaganda by a well-meaning, but incompetent author, who, although a first-rate researcher, is blinded by a belief so strong that he sets aside the fundamental laws of physics in which he, as a technician (pharmacist), definitely has been trained, and draws conclusions which certainly cannot logically result from the data he has amassed.

Subsequent to the publication and distribution of *Auschwitz: Technique and Operation of the Gas Chambers*, I was asked by Mr. Ernst Zündel to evaluate the content of the document from a scientific and engineering standpoint and render an opinion as to the value and efficacy of this presumed scholarly work. This document has been highly touted by Exterminationists and proponents of the Holocaust Gas Chamber Myth. It deals with and purportedly proves beyond any shadow of a doubt the existence of alleged Nazi Gas Execution (extermination) facilities at Auschwitz and Birkenau Concentration Camps in Poland. *It does not.* It in fact proves the contrary: *There were no gas execution chambers at Auschwitz and Birkenau.*

Ernst Zündel contacted me because of my background in the design and fabrication of execution equipment and my extensive prior experience and background with the facilities at Auschwitz and Birkenau.

The document in question was extremely difficult to obtain. Shelley Shapiro, who represents the Klarsfeld Foundation in the United States, refused to sell me a copy, even though it purportedly told the truth. After a long period, the document was obtained by another and sent to me.

1. Purpose

The purpose of this evaluation is to determine the veracity of the alleged new evidence brought forth by Mr. Pressac and the validity of his arguments and final conclusions. In order to accomplish this, the document was read, analyzed and evaluated in the light of other historical and scientific data. This

purpose does not include a determination of any numbers of persons who died or were killed by means other than gassing or as to whether an actual Holocaust occurred. It, further, is not the intent of this author to re-define the Holocaust in historical terms, but simply to scientifically review Mr. Pressac's work and eliminate any misconceptions caused by his ineptness in evaluating the evidence and prove, without question, that there were no gas execution facilities at the investigated and studied concentration camps.

The following evaluation is a result of these efforts.

2. Background

The principal investigator and author of this report is an expert in execution technology and a specialist in the design and fabrication of execution hardware of all types. He has worked on and designed hardware in the United States used in the execution of condemned persons by means of hydrogen cyanide gas. He has written an execution protocol which has been approved by the U.S. courts for execution purposes. He is an approved expert in execution technology for the federal court system of the United States and has also testified as an expert on gas execution technology and the facilities at Auschwitz and Birkenau, the very same facilities discussed in this evaluation.

This investigator has personally inspected the facilities at Auschwitz and Birkenau and is a specialist on the facilities there. Furthermore, this investigator conducted the only scientific study of these facilities and authored the only scientific report ever produced on these installations.

3. Scope

The scope of this scientific review includes a detailed study of *Auschwitz: Technique and Operation of the Gas Chambers*, a review of the historical and pseudo-technical data, as well as the application of the only scientific and technical analysis available to date: *An Engineering Report on the Alleged Execution Gas Chambers at Auschwitz, Birkenau and Majdanek*, written several years ago by this author. This review will deal with the technical and feasibility areas of the reviewed document and facilities discussed in said document. It is not intended to address historical or ethical questions, except where necessary in dealing with technical considerations.

4. Synopsis and Findings

After a detailed study of the document in question, a review of the historical and pseudo-technical documentation, the engineering report on the facilities in question and the application of the principles of execution technology, this author finds that the reviewed document has veracity only in the capacity of a

compendium of documents and blueprints, which are apparently real and authenticated. This is the only redeeming value contained within the document. The conclusions reached are fallacious, the translations are at times questionable and often taken out of context, and the opinions stated are clearly erroneous. Mr. Pressac shows at times that he is capable of clear, logical thought but, with a true “doublethink” mentality, manages to destroy all his fine work while he “undistributes his middle.”²⁵⁷ Clearly, the documents contained therein in no way suggest of, or even hint at, the possibility of the existence of a gas chamber anywhere.

5. Methodology

The procedures utilized in this evaluation and analysis were as follows:

1. A general background study of available materials.
2. Data obtained in previous on-site inspections by this investigator, which included physical data (measurements, photos and construction information) and chemical sample analysis as contained in the author’s earlier report.
3. A consideration of recorded and visual (on-site) logistic data.
4. A comparison of the acquired data with the document under evaluation.
5. An analysis of acquired information and a comparison of this information with known and proven design, procedural and logistic information and requirements for the design, fabrication and operation of actual gas chambers and crematories.
6. Conclusions based upon the application of all of the above to the document under review.

6. Construction of the Document

Auschwitz: Technique and Operation of the Gas Chambers is organized into five parts with a Preface and a Postface written by Serge Klarsfeld and Jean-Claude Pressac, respectively. The parts will be discussed, as necessary, throughout this review. The parts are defined as follows:

1. Part One: Delousing gas chambers and other disinfestation installations.
Seven Chapters
2. Part Two: The extermination instruments. Eight Chapters
3. Part Three: Testimonies. Three Chapters
4. Part Four: Auschwitz and the revisionists. Two Chapters
5. Part Five: The unrealized future of K.L. Auschwitz-Birkenau. Two Chapters

²⁵⁷ Reference to the “fallacy of the undistributed middle” in logic, see https://en.wikipedia.org/wiki/Fallacy_of_the_undistributed_middle

The document itself is a wealth of historical facts, some technical facts, photos, blueprints and drawings, and propaganda. Except for the clearly erroneous final conclusions and propaganda, the book is an excellent piece of work. Jean-Claude Pressac demonstrates himself as a fine researcher and archivist. Unfortunately, he fails in the technical department. I would have expected his background and training as a pharmacist to have acquitted him well in this area but, unfortunately, it does not. He demonstrates a complete lack of competence as a technician. His logic tends to be good until he reaches his final conclusion. His greatest error, where he lacks the technical competence, is his failure to consult with someone more competent than himself. Although this might be a problem in the area of execution technology, it certainly is not in the areas of heating, air handling, plumbing, and construction. His failure to get help in these areas is inexcusable.

Mr. Pressac has chosen an approach which introduces the data and documents first, mixed with comments on his conclusions before he presents them, generating a history for the reader which ostensibly is unbiased, but grounding everything in exterminationist terms. He will say “they didn’t intend to, but they really did.” “They didn’t start out to, but they did later.” The reader is repeatedly told that the original intent was not for gas chambers, but that it developed later.

Mr. Pressac’s THESIS: In the beginning the construction office at Auschwitz (the *Bauleitung*) began their work with good or neutral motives, but in the process of their work their motives became sinister. They decided to turn the facilities that they were designing and building into execution instruments. Thus Kremas I, II, and III were converted to gas chambers during construction, but Kremas IV and V were designed from the outset as gas chambers. The problem is that no evidence is available to support this. Further, Mr. Pressac even tells us what these construction engineers were thinking during the construction of these facilities. The problem still remains that none of these facilities had hardware which could support gas executions.

This review will begin with the specific items which Mr. Pressac puts forth to support his thesis and the reasons why they do not stand the test of logic. A subsequent consideration will be made of each chapter, in turn, discussing the documentation, its import and meaning.

7. Proofs

Part Two, Chapter 8 ““One proof...one single proof”: Thirty-nine criminal traces.” Part of this title is a quotation from Dr. Robert Faurisson, of whom he is unduly critical. After some unsupported statements, Mr. Pressac proceeds to the evidence (?).

Mr. Pressac lists the “criminal traces,” and since #17 has three parts, I make the count 36. He has apparently lost three “criminal traces” or simply cannot count, since no more are listed.

Krema II is credited with Traces #1 through #9, and #30 through #34 (in common with Krema III). Krema III is credited with #10 through #16, and #30 through #34 (in common with Krema I). Kremas IV and V are credited with #17 through #29, #17 having three parts.

8. Categories

There are three different categories of “criminal traces.” They are essentially all slips of the tongue or slips of the pen.

Category 1. Proofs dealing with documents concerning gas-tight doors, gas-tight windows (little doors), and hardware for these doors and windows, such as closures and anchors. Various hardware was ordered for the Kremas from DAW (the inmate metal and fabrication shop). On twenty-two different occasions hardware was ordered for doors with a distinction of being gas-tight (*gasdichte Türen*, *Gastüren*, and *luftdicht*). Also, on occasion, doors with peepholes were ordered, but not found installed, in photos.

First, it must be remembered that the doors in question were to be utilized in morgues (*Leichenkeller*), and as one might expect, the morgues are wont for some type of minimal seal on the openings. Second, *Leichenkeller* #1 was to contain the decomposing older bodies, which might be even more of a problem.

There is a distinct translation problem relative to gas-tight or air-tight for *gasdicht* or *luftdicht*. It must be remembered that non-technical persons make no distinction between gas-tight and gas-proof (*gassicher*), which is what the architects of the *Bauleitung* would have ordered. They did not, however, order gas-proof doors and windows. This is obvious when we consider that these doors were “sealed” with weather-stripping of felt. If, in fact, these doors were gas-proof, then everyone of us lives in a gas chamber, since our storm doors are sealed with rubber, the modern replacement for felt in construction.

The distinction is more than subtle, but few non-technical people ever take the time to consider it. Consider this: We all speak of our waterproof watches, but we really mean water-tight or water-resistant, since only a diver’s watch is really waterproof (*wassersicher*). It was standard construction to weather-strip all doors in Germany with felt (now rubber). Mr. Pressac should be more careful with his translation. Technical terms are technical terms in English, French, or German.

Proofs #3, 6, 7, 11, 13, 14, 15, 17, 17a, 17b, 18, 20, 22, 23, 24, 25, 26, 27, 28, 29, 32 and 34 fall into this category. Rooms with closures designated as such (gas-tight) were not gas-proof, and therefore unsafe and unusable for gas execu-

tions. It should be noted that gas-tight and weather-tight are being utilized synonymously, and do not indicate “hermetic” as Mr. Pressac says at one point.

Category 2. Proofs dealing with *Auskleideraum*, *Auskleidekeller* meaning undressing room and undressing cellar, respectively. These facilities were not for people about to be gassed to undress in, but rather for bodies of people who had died of natural causes to be undressed in before cremation. Most, if not all, mortuaries or crematories have such a room; why should we believe these are any different?

Proofs #4, 5, 10, 12 and 32 fall into this category. Undressing rooms for those already dead by natural causes, not execution.

Category 3. Other proofs. Most of these are individual cases and will be addressed as such.

“*Vergassungskeller*” slip by SS Captain Bischoff. In a letter to headquarters dated 29 January 1943, SS Captain Bischoff, then head of the Auschwitz Central Construction Office, discusses the construction progress of Krema II. It being winter, the cement work was delayed because of the cold and the concrete forms could not be removed from one of the *Leichenkeller* ceilings on schedule. He does not identify the *Leichenkeller*, but because of an additional construction report (29 January 1943) written by Kurt Prüfer, engineer for Topf and Sons, it is most likely that he (Bischoff) was talking about *Leichenkeller* 2. Bischoff says:

“Because of the frost, it has not yet been possible to remove the formwork from the ceiling of the corpse cellar. This is of no consequence, however, as the carburetion cellar [Vergassungskeller] can be used to this end.” (as a morgue)

Mr. Pressac, again incorrectly translates the word “*Vergassungskeller*” (carburetion cellar) as gassing cellar, which Pressac assumes to be *Leichenkeller* 1, the alleged gas chamber. It is unclear from the text exactly what Bischoff is saying, but he most likely means the furnace room. In the furnace room are the five secondary blowers (pulsed air), which mix air with the combusted gasses in the furnace. This carburetion process controls the air/gas mix in the crematory furnaces. Since it is winter, Bischoff does not want the corpses to freeze, and temporary placement in the furnace room, which is heating only to dry the brick and mortar, and not cremating corpses, will obviously prevent this.

Proof #1. Again, a little thought in a technical translation will prevent major misconceptions.

10 *Gasprüfer*. On 26 February 1943 Lieutenant Pollok sent an urgent telegram to Topf and Sons reading as follows: “Please send 10 gas testers [*Gasprüfer*] that we spoke about before. Quote price later.” Mr. Pressac translates “*Gasprüfer*” (again, a technical term) incorrectly as gas detectors. There

is a major distinction. Gas detectors are utilized for testing gas (leakage etc.). Gas testers are used to determine the amount (quantity) of gas present. The telegram would have read "*Gasentdecker*" if detectors were wanted.

Gas testers are utilized by every furnace installer and repairman for testing the proper carbon monoxide/air mixture to determine if the furnace is burning correctly. This MUST be done, particularly when using pulsed air installations. This is something Mr. Pressac should have known, or should have found out.

Proof #2. These gas testers have nothing to do with testing for hydrogen cyanide gas and do not imply the existence of gas chambers.

4 "*Drahtnetzeinschubvorrichtungen*" and 4 "*Holzblenden*." These items were found on an inventory list for *Leichenkeller 2*, Krema II, dated 24 June, 1943, supplied with the construction deed for the structure. Again, Mr. Pressac translates two technical terms incorrectly. 4 Wire net insertion contrivances and 4 wooden architectural facade dressings are the correct translations. Mr. Pressac translates as 4 wire mesh introduction devices and 4 wooden covers. Again, these are technical items and should be translated very precisely. In order to agree with the Pressac translation, it would have had to have said 4 "*Drahtsiebeinführvorrichtungen*" and 4 "*Holzdeckel*."

Mr. Pressac also claims, for no apparent reason, that the inventory was listed incorrectly for *Leichenkeller 2* and should have been *Leichenkeller 1*. The only apparent reason for this is to support the use of *Leichenkeller 1* as a gas chamber, which it could not have been.

The use of architectural dressings to cover something on a building is very common. The wire net insertion contrivances may have been for handling and inserting an autopsied body (in parts) into the retort. Neither of these devices has anything to do with equipment for gas executions.

Proofs #8 and #9 fall into this category, again showing no connection with execution gas chambers.

14 "*Brausen*" (shower heads). These appear on another inventory document for Krema II, *Leichenkeller 1*, dated 24 June 1943, supplied with the construction deed for the structure. Mr. Pressac incorrectly translates "*Brausen*" as dummy (phony) showers. He takes exceptional license with this translation, since "*Scheinbrausen*" is not the term used. The blueprints for *Leichenkeller 1* show the water pipes coming into the room (and there were faucets there) but do not show the showers. Thus, they had to be dummies.

Mr. Pressac, however, forgets the urgent telegram of 15 May 1943 from Bischoff to Topf requesting plans for a hot water heater, which would be attached to the incinerator of Krema III, with a capacity of about 100 showers. It should be obvious, even to Mr. Pressac, that the lack of a complete document file does not give him license to make foolish assumptions. It simply means

that documentation showing the installation of the showers and the water heater in Krema II has been lost or is not available to us at the present time.

Proof #16 falls into this category, clearly showing no connection with execution gas chambers.

Heat in *Leichenkeller* 1. Proofs #30 and 31 concern heat to be supplied in the basement of Krema II utilizing the excess heat from the motor rooms where the forced-draft blower system was installed. There are two documents that relate to this.

First, a letter from the *Bauleitung* (Bischoff) to Topf, dated 6 March 1943, discussing a prior letter (from Topf) in which a suggestion is made to PRE-HEAT Cellar 1 with the exhaust air from the three forced draft installations on the main furnace. Second, an inspection record written by Prüfer concerning a Topf inspection of Kremas II and III dated 25 March 1943. In this document he says that, since the forced-draft blower system on the cremation furnaces had failed and was discontinued, the HOT AIR SUPPLY for *Leichenkeller* 1 must be discontinued as well. This is because the hot air was from the forced-draft blower system. It should be noted that the terminology is different. Bischoff talks of PREHEAT and Prüfer (the designer) talks of hot air supply.

One must realize that a major mistake was made on the design of both Kremas II and III. Neither building had heat. The heat from the furnace would not be sufficient (if not ducted) to heat the rest of the building, especially the cellars, by convection. Some heat is necessary (even in the morgues) to prevent the pipes from freezing. Prüfer came up with an excellent plan to take the chill out of the cellar areas. But, he talks of hot air supply (heating system) not preheat for Cellar 1. There appears to be some confusion of terminology but it is most likely that the heat was for all cellar areas. It should be noted that with the distances that the air had to travel it would have been barely warm upon reaching the defined locations, supporting the fact that it was only to prevent the pipes from freezing.

Further, although Pressac misses it, on 3 February 1943, Messing, the Topf fitter, requested parts for a heating and air handling system from Kirschneck of the *Bauleitung*. This is Document B.W.30 page 97 of the P.M.O. (Pg. #359). These are warm air heating system parts to be used (as per the document) for *Leichenkeller* 1 and 2, the Autopsy and Washroom areas and the furnace room. Kirschneck orders (Document P.M.O. 030/27 page 55 dated 3 February 1943) (Pg. #375) some (not all) of the parts (apparently because the heating decision is not yet finalized), eliminating the metal dampers but including a wooden blower (cannot be used for gas). We must note that all of the basement areas have common air handling (and perhaps heating) components. This is impossible if the intention is to use hydrogen cyanide gas.

At this point we must look at the overall ventilation plan, for which there is no existing documentation. On page 369 of the reviewed document, Pressac defines the ventilation system of Krema II with text and a chimney drawing. This is his second attempt, the first being for *Album d'Auschwitz*, published by Editions du Seuil in November 1983. This new definition reverses one outlet, as can be seen on the same page. Again, Mr. Pressac is wrong. The approach he uses is contrary to all known laws of physics. *Leichenkeller 2* and the other cellar rooms, exclusive of *Leichenkeller 1*, have no air intake. It is categorically impossible to extract air from an underground room (or any room for that matter) without an air intake. If the fans were heavy enough and could continue to draw without stalling, the unvented *Leichenkeller 2* and the other rooms would implode and collapse under the suction. It is more likely that the fans could not sustain the load and would first stall and then overload and burn out. This apparently never happened. The German Engineers of the *Bauleitung* were not that stupid, nor was Prüfer. In truth, Mr. Pressac totally fails to understand the physics of the heating and air handling involved.

In reality, the system contained a common air intake for all underground areas and a common exhaust for the same. This means *Leichenkellers 1* and *2*, the autopsy and all other underground rooms shared common air, thus demonstrating that *Leichenkeller 1* could not have been used as a gas chamber. If one follows the chain of events, one can easily determine the evolution of the air system.

First, I will number the chimneys utilized for the air system. As per Pressac's drawing on page 369, we will assign numbers first to the large chimney with four flues. To the left of that is the single chimney of the air system and to the right (as per the photo) the main chimney for the furnaces. The four common flues will be #'s 1 through 4 from left to right (front of the Krema). The lone chimney to the extreme left will be #5. This definition is based upon the size of the flues and the air requirements of the system and is supported by historical events in construction. Originally, when the facility still had the forced-draft blower system, there were the four common chimneys. Chimney 2 was the original furnace [room] intake. Chimney 3 was the underground (cellar) intake. Chimney 1 was the underground exhaust. Chimney 4 was the furnace room exhaust. There was no Chimney 5. These assignments are based on a comparison of proportioned volumes. The furnace room received additional air through the open windows. This was necessary because of the pulsed air blowers on the furnace units.

With the elimination of the forced-draft blowers, the main furnace flue needed help. Chimney 4 was added to compensate for the elimination of the forced-draft system and used in conjunction with Chimney 2. If we add the sizes of Chimney 2 and Chimney 4, then we get 5000 square centimeters

(1500 plus 3500). Chimney 1 was taken for the exhaust. The exhaust Chimney 1 is only 4000 square centimeters, giving us a difference of 1000 square centimeters. This means that the volume of air entering the furnace room is now greater than that removed, the difference being utilized by the pulsed air blowers. The windows now would have to remain closed in order not to disturb the gravity-flow air chimney draft on the main furnaces. This required closure of the windows would have suffocated the furnaces without the increased air intake. Since the four-unit chimney had already been built, a new chimney (#5) had to be added to replace Chimney 1 taken for the Furnace Room exhaust. You will notice that intakes are always greater than exhausts to accommodate static pressure within the system (losses).

Thus we can readily see that the mechanics and engineering for the above configuration required a common ventilating system for all cellar areas. This is borne out by the testimony of Henryk Tauber before Judge Sehn of the Hitlerite Crimes Investigation, as shown on page 484 of the reviewed document. This is apparently the only part of Tauber's testimony that Pressac rejects.

Proofs #30 and #31 fall into this category and clearly demonstrate the impossibility of a gas chamber in *Leichenkeller 1*.

1 "*Schlüssel, für Gaskammer*" (Gas Chamber Key). Why is this included, since Mr. Pressac eliminates it himself, unless he just wants to have the reader exposed to the word GAS CHAMBER? It is most likely for the storage room for Zyklon B in Block 14. None of the alleged gas chambers in the Kremas had locks or required keys.

Proof #33 falls into this category. It clearly does not show the existence of any alleged gas chamber.

Proof #19 is a bit strange. It is an entry taken from a daily work report at a Krema. It is allegedly (by no means clearly) for work in a room in Krema IV and made by a foreman for the Riedel Company, a contractor. He says he tamped the ground and concreted the floor in the "gas chamber": "*betonieren in der Gaskammer*." This Entry #5 on said work report is from File BW 30/28, page 28 (p. 446) in the Auschwitz archives.

In the absence of other documentation, it means nothing and will remain an enigma. It, however, may be a joke. This foreman and his crew had been working here for a number of days and perhaps he or someone in his crew was flatulent during that period. I'm sure these people were no different than most construction workers, and he may have put this in the daily report as a joke. If he only knew that Pressac, some fifty years later, would try to hang his execution gas chamber theories on his words.

This is Proof #19 and falls into this category. I do not believe it merits any further comment.

All of these alleged “Criminal Traces” are either not properly translated or not properly interpreted. Not one of these alleged “Criminal Traces” is capable of supporting any gas-chamber theory. In short, these are not proof of anything.

9. Review

The following is a review of the sections and chapters. The purpose of addressing the chapters individually is to ensure that the document was completely reviewed. Most issues were covered in the proofs, but there are some items of note in the chapters themselves.

Preface by Serge Klarsfeld. This author has no comment beyond stating that this is propaganda.

Declaration by the Auschwitz Museum. This documents the fact that Mr. Pressac researched the document at the museum, and when.

Part One: Delousing Gas Chamber and Other Disinfestation Installations

10. Chapter 1: Foreword on Zyklon B

This chapter is straightforward and informative, except for Pressac injecting his erroneous opinions. He says that concentrations of gas in the alleged gas chambers were insufficient to cause an explosion. He is wrong. Although an air/gas mixture of 6% is needed to cause an explosion, it should be remembered that the concentration at the source is almost 100%. This concentration is highly explosive and, because of this, explosion-proof equipment is used and the executee is restrained in the United States.

Carbon monoxide was not utilized at Treblinka (or anywhere else) as an execution gas. It will not work unless introduced into a pressurized vessel at approximately 2.5 atmospheres (40 psi) or better.²⁵⁸

The facilities at Kremas II and III could not have operated with hydrogen cyanide gas, since they were not heated, were not gas-proof, had common ventilation and sewers, and had no means for introduction of the gas.

Pressac further says that in a room heated only by body heat, it took only five to ten minutes for the Zyklon B pellets, contained in a column of mesh (with a minimal surface area exposure), to sublime²⁵⁹ their gas and complete the execution. A further twenty-minute wait occurred, to ensure all were dead,

²⁵⁸ This error is addressed in the First Leuchter Report, Chapter 3.11., footnotes 79 and 81, p. 36.

²⁵⁹ Wrong term: sublimation is the direct transition of a solid to the gaseous state without melting/becoming liquid. Here HCN is a liquid, hence it evaporates; editor's remark.

and the fans were turned on and the bodies removed, immediately. This is stated by alleged witnesses (who saw nothing), unsupported by fact, and contrary to the physics that govern the operation of gas execution chambers. This would have killed the operators, as well. It clearly never happened.

A photo of a funnel and a valve appears on page 115. It was allegedly used for the introduction of water to gas crystals in an alleged gas chamber at Struthof. Please note the direction of flow on the gate valve as designated by the arrow. The flow is backwards; the valve would leak and the operator would die.

11. Chapter 2: The *Stammlager* Delousing Installations

This chapter deals with the delousing facilities at Auschwitz. It appears factual except for the following:

1. The door on the delousing facility in Block 26 was sealed with paper. This is insanity.
2. The account by Andreje Rablin is the ravings of a senile old man. He says he worked with Zyklon B naked and handled the pellets in his bare hands. HCN is absorbed through the skin. He must protect his body and wear rubber gloves.

12. Chapter 3: The Prussic Acid Delousing Installation in the Reception Building

This chapter is probably factual, but it contains many of Pressac's own conclusions, which may or may not be correct.

13. Chapter 4: Kanada and Its Clothing Delousing Installation

This chapter on the whole seems factual. The following points are in question:

1. Homicidal gas chamber doors had a protection grid over the peephole, where delousing chamber doors did not. No doors with the grid were ever found installed, only in stock. Since there were no homicidal gas chambers, the protection grid was used on delousing chambers only.
2. Pressac speculates that the gas for the alleged homicidal chambers was stored in Kanada. There were no homicidal gas chambers.
3. Delousing chamber doors were made of wood and generally used outdoors or in protected areas. They would not use them in an underground *Leichenkeller*. They would use steel. Wooden doors leak.

14. Chapter 5: The Delousing and Disinfestation Installations of BW 5a and 5b in *KGL Birkenau*

This chapter needs some clarification.

1. Hydrogen Cyanide will always leave blue stains if it is effectively used, unless the walls are painted steel or of some other inert, non-porous material and washed down with ammonia or bleach after every usage. The execution time may be only five minutes, but this is after the gas has sublimated, which requires heat, and the additional time of several hours for venting. In the United States it takes at least twenty minutes to ventilate a much smaller chamber (600 cf), and a much smaller dosage is used. The walls are then washed. As usual, Mr. Pressac is in error. His description is both impractical and impossible.
2. It should be noted that Pressac claims that an alleged gassing utilized 1% or 10,000 ppm of HCN in air, which is some forty times the lethal dosage. In U.S. gas chambers, 0.320% or 3200 ppm of HCN in air is used as the dosage. This means that the Germans allegedly utilized some 3.125 times the overkill dosage used in the U.S. U.S. gas chambers contain all-non-porous surfaces (painted steel) and must be washed with bleach after each execution. The normal exposure time is fifteen minutes to the HCN and all surfaces must be washed with bleach to prevent staining and corrosion. This is even with a preheated air intake to prevent condensation. It seems that the NAZIS were able to suspend the laws of nature to prevent staining.
3. A Photo #6 (page 59) has an erroneous explanation. Pressac claims that because of the short exposure time and low temperature, the HCN would only have had time to leave traces on metal hardware and not the brick and mortar. This is incorrect. We know from experience that brick and mortar will pick up cyanide quicker than metal. Mr. Pressac seems to have his facts backward, again. I would suggest that he study the American execution system to see what really occurs. The concept that delousing gassings leave blue stains and people gassings do not, is ludicrous.

15. Chapter 6: The Disinfestation Installation of the Gypsy Camp in Sector BIle of Birkenau.

This is a very brief chapter and adds nothing.

16. Chapter 7: The Birkenau “Zentral Sauna” with its Disinfection Autoclaves and Topf Disinfestation Ovens

This chapter lends nothing except to define and describe the Central Sauna Building and the various procedures for delousing and disinfestation. Pressac

seems to contradict himself, however, when he says an autoclave (a vessel for sterilizing by steam) is, and is not, a gas chamber. Photo #36 (p. 83) shows bricked-up windows, which contained exhaust fans at some point. Pressac erroneously describes the fans as ventilator fans.

Part Two: The Extermination Instruments

Foreword on the sources: Contains a listing of source documents.

17. Chapter 1: History of Topf

Chapter 1 is a history of Topf and Son, the crematory retort manufacturers. It is interesting primarily for the historical background. The following items are questionable:

1. On page 105 Pressac discusses a patent for a retort furnace that he thinks burns bones. This is impossible.
2. According to Pressac the crematory at Mauthausen had retorts which could burn two bodies per hour. He should know better, since the best retorts today (some fifty years later) can only handle one body per retort per 1.25 hours and cannot burn continuously or the furnace will burn out.
3. He also says that Messing of Topf tested the alleged gas chamber at Krema II with hydrogen cyanide to see if the ventilation system worked. There is no evidence at all to support this.

18. Chapter 2: *Krematorium* 1 or the “Old Crematorium” of the Main Camp (Auschwitz *Stammlager*).

This is a history of Krema I at Auschwitz proper. It is interesting but of little value. Pressac feels that the alleged gas chamber was utilized only briefly as a learning instrument, the first alleged gassing occurring on 3 September 1941 in the basement of Block 11. Krema I was used as a crematory from November 1940 until July 1943 and allegedly used as a gas chamber, sporadically, from the end of 1941 to 1942. In 1943 it was completely abandoned and [the furnaces] dismantled.

Krema I could never have been utilized as a gas chamber because it was too cold, contained the crematory, was never gas-proof, and had no means for introducing or utilizing the gas. (See *An Engineering Report on the Alleged Gas Chambers at Auschwitz, Birkenau and Majdanek, Poland* by this author, 1988 – Part One of the present study.)

Pressac improperly claims that my report (above) proves that this facility was used for gassings. Mr. Pressac knows better.

It should be noted that a recent study by the Polish Forensics Institute has confirmed my findings of no gas residue at the alleged Auschwitz gas chamber.²⁶⁰

It appears that a new crematory was planned for Auschwitz but was finally built at Birkenau as Kremas II and III. Krema I was subsequently used as a bomb shelter.

There is a wealth of documents and blueprints here, and one in particular (*Bauleitung* Drawing #4287b, p. 157) confirms the drains are commoned with those of the main camp sewer system.

19. Chapters 3 and 4: Bunker 1 or the “Red House” Bunker 2 (V) or the “White House”

These chapters deal with the “Red House, Bunker 1 and the “White House,” Bunker 2 (aka Bunker V).

Bunker 1 is allegedly the location of the first experimental gassings at Birkenau and Bunker 2, aka V, allegedly took the execution overflow from Kremas II, III, IV and V. Everything here is hearsay (except a drawing of the sewage plant) and has no intrinsic value at all.

20. Chapters 5 and 6: *Krematorien* II and III; The Ventilation Systems of *Krematorien* II and III

Chapters 5 and 6 are essentially a history of the design and construction of Kremas II and III. It is a treasure trove of documents and blueprints which can provide insight into the facilities themselves. There is no proof contained therein as to the existence of any gas chambers or occurrences of any gassings and, in fact, proves the contrary.

There are many misconceptions, errors and unsupported theories on the part of Mr. Pressac. All of these have been addressed in the discussion of the proofs. Anything not covered or of special interest, I will comment upon here.

1. Wooden ducts, blowers and valves are mentioned numerous times in reference to the ventilation of *Leichenkeller* 1. It is inconsistent to mix wood and hydrogen cyanide. Despite the shortage of materials, the *Bauleitung* would have used metal.
2. The fans of the forced-draft system probably failed ONLY because of the poor quality materials caused by the war effort and not because of the heat or Prüfer’s error. The chimneys and flue linings failed likewise because of poor quality materials and not because of over-use.
3. The use of the heat from the forced-draft system would have, at best, only served to “take the chill off” the basement area and prevent the water

²⁶⁰ See Footnotes 38-41 in the present book; editor’s note.

pipes from freezing. It was insufficient to raise the temperature to a level sufficient to sublime HCN.

4. Despite what Pressac says, there are no aerial or ground photos shown (or in existence) showing gas introduction ports or vents on the roof of *Leichenkeller* 1.
5. Drawing #1300 (page 297) clearly shows that the drains of *Leichenkeller* 1 are common with the other drains of Krema II and connected to the main drains of the camp. Pressac either cannot read blueprints or is misinterpreting them.
6. A wooden screen (called a wall) was built in front of the corpse chute in Krema II. Pressac claims that this was done because they no longer needed the chute because the people were walking in alive. It makes more sense to assume that it was built as a cosmetic screen so inmates and others could not see the bodies come down the chute. Why, ALWAYS, an ulterior motive?
7. Much is made of DeJaco's Drawing #933 (page 303). Pressac says he eliminated the corpse chute, added cellar stairs to bring in executees and replaced the double door with a single one that could have been sealed. Perhaps the door replacement was to keep the stench of rotting cadavers in the decaying body morgue, and the stairs were needed to get in. The drawing was never used. Why make so much out of a simple architectural exercise?²⁶¹
8. Photos of the *Leichenkeller* 1 ceiling (page 353) show no phony (dummy) wooden shower heads or holes for their mounting.
9. Kremas II and III were not built as, converted to, or utilized as gas execution facilities.

21. Chapter 7: *Krematorien* IV and V. Plans, Construction and General Study

This chapter deals with the construction of Kremas IV and V. Until 1980, little was known about these facilities. This is a history of the construction of these buildings. The following points are of interest.

1. These facilities were not built as execution facilities, but as cheap crematories, the cost of Kremas II and III proving too high for a war-poor Germany.
2. Stoves were not to sublime gas but to heat the building.
3. The drains were connected into the main sewers.

²⁶¹ The drawing itself states the reason why new basement stairs were added: in order to move the access stairs to the roadside. The original plans had been drawn for the Auschwitz main camp, but the crematoria's relocation to Birkenau required a number of architectural changes with no sinister background; editor's remark.

4. Room layout prohibits use as gas execution facility. Since ventilation was by natural convection and outside air, any shift in wind direction could contaminate the staff areas. Only a fool would design or use this facility for HCN.
5. Alleged gas-port windows were for morgue ventilation.
6. Polish resistance photos show only cremations, no gassings.
7. In Photo #33 (page 427) Pressac talks of special SMOOTH HEAD bolts used on window shutters. These are carriage bolts, designed to be used on wood and utilized everywhere. Mr. Pressac is unfamiliar with simple woodworking hardware.

Kremas IV and V were not built for, nor were they used as, gas execution facilities.

22. Chapter 8: “One Proof...One Single Proof”: Thirty-Nine Criminal Traces.

This was dealt with in the section under proofs. Suffice it to say that this chapter contains a listing of the alleged proofs and a rehash of the illogical reasoning that spawned them.

Part Three: Testimonies

23. Chapters 1, 2, and 3: Critical Examination of the “War Refugee Board”; Critical Examination of the Testimonies of Doctors Bendel and Nyiszli; the Deposition of Henryk Tauber

These three chapters, 1, 2, and 3, are a presentation of selected testimony from alleged survivors. The testimony is generally vague, sometimes incoherent, and for the most part valueless. Pressac selectively believes and disbelieves those portions that will help his case.

Pressac disbelieves *Sonderkommando* Henryk Tauber when he states that the ventilation systems of both *Leichenkellers* 1 and 2 were common. Tauber was correct. They were the same system.

Document #14 appears on page 487 and shows a drawing of the alleged wire mesh introduction device for Zyklon B based on a deposition of Michal Kula. As shown, this device will not fit together, and assuming it did, the Zyklon B would have been outside the chamber. Obviously it is something conjured up during those long, cold prison nights.

Page 487 shows photos (Documents #15, 16 and 17) of alleged air inlet grills for *Leichenkeller* 1. Fabrication indicates that they would be very ineffi-

cient because of the small aperture area. Further, the boot in the rear would interfere with airflow in the duct.

It is also stated that the furnaces operated at a temperature of 1200 degrees Celsius (2217.6 degrees Fahrenheit), when in reality, the normal operating temperature of a coke crematory is 795.5 degrees Celsius (1400 degrees Fahrenheit). These temperatures are ridiculous, considering that furnaces today operate at 2000 degrees Fahrenheit (1093.3 degrees Celsius) with an after-burner temperature of 1600 degrees Fahrenheit (815.50 degrees Celsius). These furnaces were in no way comparable to our modern retorts.

Additionally, there are a number of propaganda drawings by former inmates.

Part Four: Auschwitz and the Revisionists

24. Chapter 1: Auschwitz Explained by the Revisionists

This chapter is an attack upon Dr. Robert Faurisson and A. R. Butz. I think it speaks for itself.

25. Chapter 2: Auschwitz According to the Revisionists

This chapter deals with the revisionist position and why it is incorrect. Except for some interesting photos, it has little to say.

Part Five: The Unrealized Future of K.L. Auschwitz-Birkenau

26. Chapter 1: The Aborted Future of the *Stammlager* without Extermination

This is an interesting, but tedious description of Germany's plans for the Auschwitz area. It has interesting maps, blueprints and architectural renderings, all of which are meaningless today.

27. Chapter 2: Birkenau 1945: the Extermination Station

This is a hallucinated description of the future for Auschwitz. Completely useless.

28. Postface

This, again, is interesting, but useless.

29. Conclusion

After reviewing this document, *Auschwitz: Technique and Operation of the Gas Chambers* by Jean-Claude Pressac, I have some observations to make in summary.

Mr. Pressac is, presumably, a man of science, but fails to show it. At times he reasons clearly, but in the final analysis, he tries to make the facts conform to his preconceived notion of the existence of the gas chambers. He fails.

Jean-Claude Pressac has given the world a great deal of evidence, all of which fails to prove the existence of the gas chambers. Perhaps this will be enough.

After seeing his technical documentation, it is my best engineering opinion that nothing in this documentation supports the existence of gas execution chambers at Auschwitz-Birkenau. Further, based upon the detail design of the Kremas, so well documented here, I can unequivocally state that the gas chambers did not exist: Kremas I, II, III, IV and V could NOT EVER have supported a gas execution function and did not.

Kremas I, II, III, IV, and V were not, and did not contain, gas execution facilities.

Prepared this 17th day of October 1991.

Introduction

*The Destruction of the European Jews*¹ by Raul Hilberg is considered one of the most-important works of orthodox Holocaust historiography, “arguably the single most-important book about the Holocaust,” in Michael Berenbaum’s opinion (Gutman/Berenbaum, p. 78). Thanks to its massive number of references, the work meticulously documents the National-Socialist persecution of the European Jews. As for their alleged “destruction,” the documentation often proves highly deficient. This has been stressed by revisionist researchers such as Jürgen Graf (1999/2015), as well as by orthodox scholars such as Belgian historian Gie van den Berghe, among other things the author of a critique of “negationism” (2001). In an article devoted to Hilberg’s work, van den Berghe notes that, due to the lack of documentary sources, Hilberg was compelled to rely on testimonies regarding the alleged extermination camps, commenting (van den Berghe 1990, pp. 121f.):

“But many sources on extermination camps were destroyed, and on some aspects there have never been any nazi sources [...]. Hilberg had to turn to eye-witnesses. Because he has always avoided using the sources created by them, he had no relevant criteria to separate chaff from wheat, and he cannot interpret and analyze these more subjective sources more or less correctly.

From Hilberg’s choice of ego-documents it becomes clear that he has been led by rather irrelevant criteria, e.g. the profession of the eyewitnesses (with Hilberg almost only doctors and university graduates), and the availability of the reports. As far as ego-documents are concerned, he almost only uses what was available in English.

In this chapter on the killing centers, the otherwise very accurate and conscientious Hilberg uses the ego-material in a remarkably inaccurate and uncritical way. Of the many thousand eyewitness reports on the nazi camps he has only used about ten. He considers events sufficiently proved if one eyewitness mentioned them. He generalizes on the basis of one eyewitness report and even omits the conditional tense here. He is astonishingly ill informed about the consulted eyewitnesses and their writings. He also makes a number of capital errors. He bases himself on declarations and constructions of victims to reconstruct the motives of their persecutors. He relies on a few psychoanalytically

¹ The first edition appeared in Chicago in 1961; a “revised and definitive edition” appeared in 1985, with yet another revised, but this time definitely definitive edition following in 2003. In this study, I quote from the 2003 edition, referring to the page numbers only.

inspired interpretations by the survivor E.A. Cohen in Het Duitse concentratiekamp (The German Concentration Camp) (Amsterdam, 1952), a book that was almost immediately translated into English. Later, Cohen expressed his doubts about these interpretations, but the book in which he did this (De negentien treinen naar Sobibor, The Nineteen Trains to Sobibor, Amsterdam – Brussels, 1979) was not consulted by Hilberg, probably because it was not translated into English.

Unfortunately this unjudicious [sic] use of ego-documents makes the chapter on extermination camps less convincing than the rest of the book."

If we consider that this chapter represents the apex and the *raison d'être* of Hilberg's book, of which the more-than-900 preceding pages constitute merely an introduction and a prelude, van den Berghe's critical observations already inflict a serious blow to the credibility of the entire book. This, by the way, can already be glimpsed from the fact that – as noted by J. Graf – the chapter on the "killing centers," is a rather skimpy part of the work, consisting of 138 pages (pp. 921-1058) out of a total of 1388, while the author devotes only 18 pages to the core problems of the "Killing Operations"! (pp. 1027-1044)

But the problem is much broader than that mooted by the Belgian historian, because there is also a need to examine the fundamental question of the reliability and reciprocal consistency of these testimonies, as well as that of Hilberg's interpretation of the documents, which is just as important.

What I intend in this study is essentially a verification of its sources and its historiographic method.

Since Hilberg's work in general, particularly with regard to the matters of concern to us here, consists of an enormous multitude of often-insignificant details, from which he draws first of all the great preponderance of his sources as well as his evidentiary pretensions, I, too, shall be constrained to descend repeatedly into detail. In my analysis, I shall, insofar as possible, follow Hilberg's expository trajectory; in some cases, however, I will choose to deal with similar matters in a different context.

On January 15-18, 1985, Hilberg testified as an historical expert on the Holocaust during the First Zündel Trial.² The stenographic record of the proceedings (District Court), upon which my remarks will be based, were published in 2020 (Rudolf 2020a). Over the course of the cross-examination by defense attorney Douglas Christie, many topics relating to the first edition of his work were discussed. Hilberg's responses were often revealing, particularly regarding his methods. For this reason, I shall insert those most-significant in the following discussion. On the other hand, I shall deal in Chapter IV with the most-important problems discussed by Hilberg during that trial.

² Ernst Zündel was tried in Canada on a charge of "spreading false news" for distributing a brochure by Richard Harwood (1974). The trial was held in Toronto from January 7 to March 25, 1985.

It is important to keep in mind that, at the time, Hilberg had already completed the “definitive” second edition of his book, the publication of which he anticipated (as indeed occurred) in a few months.³

The Zündel Trial was held at the end of a period of intense debate by orthodox Holocaust historiography relating to one of its fundamental historical themes: the alleged Jewish extermination order. In 1982, an international conference was held in Paris, France; in 1984, another no-less-important conference was held at Stuttgart, Germany. Hilberg had participated in both. In Chapter V, I reprise my account of these two conferences as first published in 1991 (Mattoigno 1991, pp. 23-63) – with all due revisions and amendments – to highlight the historiographical “climate” in which Hilberg made his statements, and to gain a better understanding of their significance and their value.

³ District Court, p. 636/Rudolf 2020a, p. 118.

1. Origins and Significance of the “Final Solution”

1.1. The “Code Language”

At the beginning of Chapter Seven (“Mobile Killing Operations”), Hilberg writes:

“When the bureaucracy had completed all those measures that comprised the definition of the Jews, the expropriation of their property and their concentration in ghettos, it had reached a dividing line. Any further step would put an end to Jewish existence in Nazi Europe. In German correspondence the crossing of this threshold was referred to as ‘the final solution of the Jewish Question’ [die Endlösung der Judenfrage]. The word ‘final’ harbored two connotations. In a narrow sense it signified that the aim of the destruction process had now been clarified. If the concentration stage had been a transition to an unspecified goal, the new ‘solution’ removed all uncertainties and answered all questions. The aim was finalized – it was to be death. But the phrase ‘final solution’ also had a deeper, more significant meaning. In Himmler’s words, the Jewish problem would never have to be solved again. Definitions, expropriations, and concentrations can be undone. Killings are irreversible. Hence they gave the destruction process its quality of historical finality.” (pp. 275f.)

One would expect that this interpretation of the German term *Endlösung* would be based on German documents, all-the-more-so since Hilberg cites hundreds of them in great profusion. On the contrary, however, not only is he uncorroborated by any document in this regard, but practically all the documents in which the term “*Endlösung*” appears resoundingly refute his interpretations. In fact, such interpretations are nothing more than another specific case of the “coded language” first alleged by the Polish investigating judge Jan Sehn shortly after World War II (see Mattogno 2016, pp. 9f.) and adopted by the Nuremberg inquisitors in order systematically to distort innocuous documents for the purpose of creating fictitious “evidence” of the alleged extermination of the Jews, since the confiscated German archives seem curiously silent on the subject. Hilberg diligently catalogs the terms of this alleged “code language” (p. 338); the presence of any of these terms in any German document becomes for him “proof” of the extermination of the Jews.

In reality, adopting this false explanatory criterion, Hilberg systematically distorts the meaning of the documents concerned. This is particularly obvious in the documentation regarding German emigration-evacuation policy for Jews

as outlined by Hilberg in his Chapter Eight. But before checking the sources cited by Hilberg, we need a framework providing the historical-documentary context.

1.2. National-Socialist Emigration-Evacuation Policy for Jews

Shortly after Hitler's rise to power, the Reich government entered into the so-called Haavara Agreement with the Jewish Agency for Palestine, a capital-transfer agreement (haavara) for German Jews emigrating to Palestine. The basis of the agreement was created with "Circular Decree No. 54/33 by the Reich Ministry of Economics of August 28, 1933 to all German foreign-exchange control offices" (Vogel, p. 107). According to statistics of the Jewish Agency for Palestine, 52,463 Jews emigrated from Germany to Palestine from 1933 to 1942 on the basis of this agreement.⁴

Until the outbreak of the war – and during the war, as long as circumstances permitted – emigration to all countries willing to admit the Jews was the principal purpose of National Socialist policy, as confirmed by the report of the German Foreign Office titled "The Jewish Question as a Factor in Foreign Affairs in 1938" (*Die Judenfrage als Faktor der Außenpolitik im Jahre 1938*) dated January 25, 1939. The first four points of the document read as follows:⁵

- "1. The German policy on the Jews as a prerequisite and consequence of the foreign-policy decisions of 1938
2. Aim of German policy on the Jews: emigration
3. Means, ways and ends of Jewish emigration
4. The emigrated Jew as the best propaganda for the German policy on the Jews."

Then, "the necessity for a radical solution of the Jewish question" was recognized, which basically consisted in the following:

"The ultimate goal of German Jewish policy is the emigration of all Jews living in Reich territory."

The day before, 24 January, Reichsmarschall Hermann Göring had issued a decree establishing the Reich Center for Jewish Emigration (*Reichszentrale für jüdische Auswanderung*), the administration of which was entrusted to Reinhardt Heydrich. Göring first of all summarized concisely the principle that inspired National-Socialist policy (NG-2586-A):

"The emigration of Jews from Germany must be encouraged by all means."

Precisely with a view to what he instituted, the above-mentioned "*Reichszentrale*," which was responsible for "taking all the measures for the preparation

⁴ Vogel, p. 109; the topic is discussed on pp. 35-58, with reference to Documents 1-18, pp. 107-153.

⁵ Auswärtiges Amt 1953, pp. 780f.; cfr. PS-2258.

of an intensified emigration of the Jews," to provide for the preferential emigration of poor Jews, and finally to facilitate bureaucratic practices for single individuals.

On November 25, 1939, Erhard Wetzel and G. Hecht, who occupied official positions in the field of racial policy, wrote a memorandum titled "The Issue of treating the population of the former Polish territory from the point of view of racial politics," which constituted a first draft of the future "General Plan East." Among other things, the draft set forth a plan for Jewish resettlement in the occupied Polish territories, formulated as follows:⁶

"The remaining Polish territory which, at the moment, has a population of 12.7 million, would thus reach 19.3 million.^[7] In addition, there would be another 800,000 Jews from the Reich (Altreich area, Austria, Sudetenlands, and Protectorate). Finally, another 530,000 Jews from the former Polish territories now integrated into the Reich would have to be transferred as well."

The destination of these deportations was no doubt the General Government, which had been officially created on 12 October. The plan was a follow-up to the directives issued by Heydrich to all the Einsatzgruppen leaders on the "Jewish question in the occupied territories" by express letter dated 21 September 1939 (PS-3363), including the Nisko Plan (October 1939), which called for the creation of a Jewish reservation in eastern Poland, was a failed attempt at implementation, perhaps on the initiative of SS *Sturmbannführer* Adolf Eichmann's (see Goshen; see also Mattogno 2018, pp. 31f.). The idea of Jewish emigration was not abandoned, however (PS-660, p. 35):

"In order to make the Jew fit for emigration, it would be advisable, if need be, to provide him with a better educational training."

In a memorandum written in May 1940, Himmler wrote (1957, p. 197):

"I hope to see the term 'Jew' extinguished completely through the possibility of large-scale emigration of all Jews to Africa or some other colony"

On June 24, 1940, Heydrich, who headed the RSHA (*Reichssicherheits-hauptamt*, Reich Security Main Office), requested the Minister for Foreign Affairs Joachim von Ribbentrop to keep him informed of any possible ministerial meetings relating to the "Final Solution to the Jewish Question" (*Endlösung der Judenfrage*), justifying his request as follows (T-173):

"Dear Party Comrade Ribbentrop!

In 1939, the General Field Marshal [Göring], in his capacity as administrator of the Four-Year-Plan, entrusted me with the implementation of the Jewish emigration from the territory of the Reich. Subsequently, it was possible, even during the war and in spite of considerable difficulties, to carry on the Jewish emigration successfully.

⁶ "Die Frage der Behandlung der Bevölkerung des ehemaligen polnischen Gebietes nach rassenpolitischen Gesichtspunkte." PS-660, p. 25.

⁷ Following the planned evacuation of 6,636,000 Poles residing in the Polish territories annexed by Germany.

Since 1st January 1939, when my office took over this task, more than 200,000 Jews have so far emigrated from the Reich area. However, the whole problem – we are dealing with some 3¼ million Jews in the areas presently under German sovereignty – can no longer be solved by emigration. Thus, a final solution on a territorial basis will impose itself.” (Emphases in original)

As a follow-up to this letter, the minister for foreign affairs wrote the so-called “Madagascar Project.” On July 3, 1940, Franz Rademacher, head of the Jewish section of the Ministry of Foreign Affairs, wrote a report titled “The Jewish Question in the Peace Treaty,” which opened with the following declaration:

“The impending victory gives Germany the possibility and, I think, makes it our duty, to resolve the Jewish question in Europe. The most desirable solution is: All Jews out of Europe.”

The plan was approved by Ribbentrop and transmitted to the RSHA, which was responsible for implementing the technical preparations for the evacuation of the Jews to the island of Madagascar, and supervising the evacuated Jews (NG-2586-J). It was precisely this which comprised the “territorial Final Solution” to the Jewish Question advocated by Heydrich.

On August 30, Rademacher wrote a note “Madagaskar Projekt,” the “financing” paragraph of which opens with the following words (NG-2586-D):

“The implementation of the proposed final solution will require considerable resources.”

The “Final Solution” of the Jewish Question therefore simply referred to the transfer of the European Jews to Madagascar.

In October of 1940, Alfred Rosenberg wrote an article titled “Jews on Madagascar” (“*Juden auf Madagaskar*”), in which he reminded his readers that as early as the anti-Jewish congress at Budapest in 1927, “[...] the question of a future removal of the Jews from Europe [was] discussed, and here, for the first time, the proposal was made to promote Madagascar as the intended home-
stead of the Jews.” Rosenberg himself endorsed this idea and expressed his wish for the “Jewish high finance” in Britain and the USA to help with the creation of a “Jewish reservation” in Madagascar, which he considered “a world-wide problem.”⁸

According to the testimony of Moritz von Schirmeister, a former official at the German ministry of propaganda, even Joseph Goebbels spoke publicly of the Madagascar Plan several times (IMT, Vol. 17, p. 250), while Ribbentrop recalled the Führer’s intention to deport the European Jews to North Africa or Madagascar (IMT, Vol. 10, p. 398).

The deportation of the European Jews to Madagascar was not a fictitious plan, but a real and concrete project. In parallel with that plan, the authorities

⁸ CDJC, CXLVI-51, pp. 4, 7, 9.

of the Reich continued to promote the emigration of the Jews, particularly from Germany, by all means.

Zionist circles of Palestine fully supported this German policy. On January 11, 1941, one of their representatives sent a letter to the German Embassy in Ankara containing three attachments, including "a proposal from the National Military Organization of Palestine on the solution of the Jewish question in Europe," which stated:

"Germany's leading National Socialist statesmen have in comments and speeches more than once emphasized that a New Order in Europe requires a radical solution of the Jewish question through evacuation ('Jew-free Europe')."

The evacuation of the Jewish masses from Europe is a prerequisite for solving the Jewish question, which is possible only by resettling these masses in the homeland of the Jewish people, Palestine, and by establishing the Jewish State in its historic boundaries.

To solve the Jewish problem in this way and once and for all to liberate the Jewish people is the aim of the political activity and the ongoing struggle of the Israeli freedom movement, the National Military Organization in Palestine (Irgun Zevai Leumi)."

In this context, Irgun even offered "to actively take part in the war on Germany's side."⁹

On May 20, 1941, Heydrich prohibited the emigration of Jews from France and Belgium "in consideration of the doubtlessly approaching final solution of the Jewish question," that is, in view of the implementation of the Madagascar Project, which was considered imminent.¹⁰ First of all, Heydrich basically reaffirmed the principle that inspired National-Socialist policy towards the Jews:

"In accordance with an instruction emanating from the Reich Marshall of the Greater German Reich [Göring], the emigration of Jews from the Reich territory including the Protectorate of Bohemia and Moravia is to be implemented actively, even under the present state of war, within the conditions prevailing and taking into account the directives for the emigration of the Jews."

Heydrich then clearly explained the reasons for the prohibition (*ibid.*):

"As the Jews on the territory of the Reich, for example, have only a limited choice of departure [routes], mainly via Spain and Portugal, an emigration of Jews from France and Belgium would further reduce these possibilities."

Two months later, on July 31, Göring entrusted Heydrich with task of undertaking all necessary preparations for the "Final Solution," that is, emigration or evacuation of all Jews under German rule to Madagascar. This letter in fact declared (NG-2586-E, PS-710):

⁹ PA, E234152-58, quoted: E234152, E234155f.; for a transcript of the entire text see Weckert 2018, pp. 71-73; English translation in Weckert 2016, pp. 73-75.

¹⁰ NG-3104. The letter was signed by Walter Schellenberg on Heydrich's behalf.

"In addition to the task already entrusted to you by the decree of 14 January 1939, viz. to bring about an optimum solution to the Jewish question by emigration or evacuation in accordance with the conditions prevailing, I order you herewith to undertake all necessary preparations – organizational, administrative, and material – for a comprehensive solution of the Jewish question within the German sphere of influence in Europe. To the extent that the competence of other central agencies is concerned thereby, the latter are [to be requested] to participate.

I order you furthermore to submit to me in the near future a comprehensive proposal concerning the organizational, administrative, and material requirements for the implementation of the final solution of the Jewish question so envisaged."

This document is fully in accordance with the Madagascar Project. The directives issued by Göring "in addition" to those already issued to Heydrich by means of the decree of 24 January 1939 consisted, in fact, of completing the solution to the Jewish question "in the form of emigration or evacuation"¹¹ of the Jews of the Reich only, with a territorial "final solution" through evacuation to Madagascar of all the Jews from the territories occupied by the Germans. Precisely because it involved all the European Jews of the occupied countries, this solution was called the "comprehensive solution" (*Gesamtlösung*), a term which not accidentally recalled the "whole problem" of Heydrich's letter of June 24, 1940.

Writing on November 6, 1941, Heydrich himself, who had been responsible for preparing the "Final Solution" in Europe for years (PS-1624), clearly traced this responsibility back to the decree of January 24, 1939, and identified the "Final Solution" with the solution "in the form of emigration or evacuation" from Göring's letter dated July 31, 1941. This is also the context of the order conveyed to the foreign ministry by Adolf Eichmann on August 28, 1941, which prohibited "an emigration of Jews from the territories occupied by us in view of the impending final solution of the Jewish question in Europe now being prepared."¹²

The future "final solution" was therefore "impending", which peremptorily excludes even from Hilberg's perspective that it referred in any way to extermination, because he claims that the pertinent order for the European Jews had been given only subsequently (see Subchapter 1.6.).

Over the following months, the difficulties created by the war and the territorial prospects opened up by the Russian campaign led to an important change in destination in National-Socialist policies with regard to the Jews: the "Final Solution" through deportation of the European Jews to Madagascar was succeeded by a "territorial Final Solution" through the deportation of the European Jews into the German-occupied eastern territories.

¹¹ Legal emigration into other countries or deportation to the East (Poland: October 1939 – March 1940) or West (non-occupied France: October 1940).

¹² PA, Inland II A/B, AZ 83-85 Sdh. 4, Vol. 59/3.

This change was proposed on August 22, 1941 by SS *Sturmbannführer* Carl Theo Zeitschel, advisor at the German Embassy in Paris, in a note drawn up by Ambassador Otto Abetz:¹³

"The continuing conquest and occupation of large territories in the East could at present offer us a rapid solution of the Jewish problem throughout Europe. As we can see from the cries for help addressed to the American Jews in the press of all the Jews in Palestine, some 6 million Jews are living in the regions recently occupied by us, especially in Bessarabia,^[14] amounting to one third of world Jewry. In the course of any new disposition of the eastern space, these six million Jews would in any case have to be grouped and a special territory would have to be staked out for them. It should not be a major problem to include the Jews from the remainder of the European states and to move there as well the Jews who are presently crammed into the ghettos of Warsaw, Litzmannstadt (Łódź), Lublin etc.

As far as the occupied areas are concerned, such as Holland, Belgium, Luxembourg, Norway, Yugoslavia, Greece, it would be easy to issue military orders for the removal of the Jews to the new territory in mass transports; other states could be encouraged to follow this example and to expell their Jews to this territory. Within a short period of time, Europe could be made free of Jews."

In General Governor Hans Frank's diary, dated July 17, 1941, we read (Präg/Jacobmeyer p. 386):

"The Governor General does not favor any further ghettos because the Führer expressly declared on 19 June that the Jews will soon be removed from the General Government with the latter becoming, as it were, a mere transit camp."

On August 20, 1941, after a visit to the Führer's headquarters, Goebbels noted in his diary (Reuth, pp. 1660f.):

"Furthermore, the Führer promised me that I could remove the Jews from Berlin immediately after the termination of the eastern campaign."

Zeitschel's proposal was approved by Hitler a few months later, who decided to abandon the Madagascar Project temporarily, and deport East all Jews found in the occupied territories. The Führer's decision certainly dates back to September 1941 – according to some to September 17 (Konze *et al.*, p. 185). On October 23, Himmler prohibited Jewish emigration effective immediately,¹⁵ and the evacuation of 50,000 western Jews to the East was ordered the next day. On October 24, Kurt Daluge, head of the regular police (*Ordnungspolizei*), issued a decree bearing the subject "Evacuations of Jews from the Old Reich and the Protectorate," which ordered (PS-3921):

¹³ CDJC, V-15.

¹⁴ The figure is enormously exaggerated.

¹⁵ T-394: "Reichsführer-SS and Chief of German Police has ordered that the emigration of Jews must be prevented effective immediately."

"Between November 1 and December 4, 1941, 50,000 Jews will be deported by the security police from the Altreich, the Ostmark [Austria], and the Protectorate of Bohemia and Moravia into the region of Minsk and Riga in the East. The deportations will be carried out by Reichsbahn trains of 1000 persons each. The trains will be assembled at Berlin, Hamburg, Hannover, Dortmund, Münster, Düsseldorf, Cologne, Frankfurt/M., Kassel, Stuttgart, Nuremberg, Munich, Vienna, Breslau, Prague, and Brünn."

The new direction given to National-Socialist policies with regard to the Jews was officially communicated to the old Party hierarchy at the Wannsee Conference, which was convened for this primary purpose.

The conference, initially scheduled for December 9, 1941 (PS-709; NG-2586-F), was postponed due to the United States's entry into the war, and was eventually held in Berlin, at Am Großen Wannsee 56/58, on January 20, 1942. Heydrich was the speaker. The associated minutes open with an extensive recapitulation of National-Socialist policies implemented with regard to the Jews up until that time, as a consequence of which approximately 537,000 Jews had emigrated by October 31, 1941, including:

- approximately 360,000 from the Old Reich since January 30, 1933
- approximately 147,000 from the *Ostmark* [Austria] since March 15, 1938
- approximately 30,000 from the Protectorate of Bohemia and Moravia since March 15, 1939.

Then we read there, among other things (NG-2586-G):

"In the meantime, the Reichsführer-SS and Head of the German Police [= Himmler] has forbidden any further emigration of Jews in view of the dangers posed by emigration in wartime and the developing possibilities in the East.

As a further possible solution, and with the appropriate prior authorization by the Führer, emigration has now been replaced by evacuation to the East.

This operation should be regarded only as a provisional option, though in view of the coming final solution of the Jewish question it is already supplying practical experience of vital importance."

By Hitler's order, therefore, the "Final Solution of the Jewish Question" through voluntary or compulsory emigration of all the European Jews to Madagascar, was replaced by their evacuation to the occupied eastern territories, but only as a "provisional option," while awaiting the end of the war in order to return to the problem.

The Wannsee Conference was therefore convened to inform the authorities concerned of the abandonment of the policy of emigration or evacuation to Madagascar, and the commencement on a vast scale of a policy of deportation to the east, and to discuss the related problems.

The Madagascar Project was officially abandoned in early February 1942. An information letter from Rademacher to adjutant Harald Bielfeld of the Min-

istry of Foreign Affairs dated February 10, 1942 explains the reasons (NG-5770):

"In August of 1940 I transmitted to you for your files the plan elaborated by my department for the final solution of the Jewish question, whereby the island of Madagascar was to be ceded by France, with the practical implementation of this task to be entrusted to the RSHA. In accordance with this plan, Gruppenführer Heydrich was ordered by the Führer to carry out the solution of the Jewish question in Europe.

The war against the Soviet Union has meanwhile opened up the possibility of providing other territories for the final solution. The Führer has decided accordingly that the Jews will not be deported to Madagascar but to the East. Hence, Madagascar need no longer be considered for the final solution."

The "Final Solution of the Jewish Question" was therefore a territorial solution and consisted of the deportation of the European Jews into the German-occupied Eastern territories.

In contrast to this, Hilberg claims against all documentary evidence that the "‘territorial solution,’ or the ‘final solution of the Jewish question in Europe,’ as it became known, envisaged the death of European Jewry." (p. 4)

He does not mention this letter at all, the content of which is fully confirmed by another important document, the memorandum by Martin Luther (an official in the German Ministry of Foreign Affairs) dated August 21, 1942. In this document, Luther first recapitulates the essential points of National-Socialist policies with regard to the Jews (NG-2586-J):

"The basic premise of the German policy in respect of the Jews, starting with the seizure of power [by Hitler in 1933], was to promote Jewish emigration by all available means. For this purpose, Generalfeldmarschall Göring, in his capacity as head of the Four-Year-Plan, created a Reich central agency for Jewish emigration and assigned its leadership to Gruppenführer Heydrich, the chief of the security police."

After setting forth the origins and development of the Madagascar Project, which was now superseded by events, Luther continued by noting that Göring's letter of July 31, 1941 was a follow-up to Heydrich's letter of June 24, 1940 according to which the Jewish question would no longer be resolved through emigration, but required "a territorial final solution."

"For that reason, Reichsmarschall Göring requested Gruppenführer Heydrich on July 31, 1941 to carry out all necessary preparations for a comprehensive solution of the Jewish question within the German sphere of influence in Europe (cf. [Document] DIII 709g). On the basis of this order, Gruppenführer Heydrich convened a meeting of all German agencies involved for January 20, 1942, with secretaries of state from the other ministries and myself from the foreign office attending. Gruppenführer Heydrich explained at the meeting that Reichsmarschall Göring had issued his order being so directed by the Führer, and that the Führer had now approved the evacuation of the Jews to the East."

Based on this order, Luther continued, the evacuation of the Jews from Germany was undertaken. The destination consisted of the Eastern territories via the General Government:

"The removal to the General Government is a temporary measure. The Jews will be moved on to the occupied eastern territories as soon as the material means are available."

A circular letter dated October 9, 1942 titled "Preparatory measures for a solution of the Jewish problem in Europe. Rumors concerning the situation of the Jews in the East" containing "Confidential information" intended for party officials, inspired by the headings related to "very severe measures" in the occupied Eastern territories which began to be spread in Germany and which were "usually in a distorted or exaggerated manner," summarized the stages and clearly explained the meaning of the "Final Solution of the Jewish Question":¹⁶

Die alten Juden sowie Juden mit hohen Kriegsauszeichnungen (E.K.I., Goldene Tapferkeitsmedaille usw.) werden laufend nach der im Protektorat Böhmen und Mähren gelegenen Stadt Theresienstadt umgesiedelt. "The effort to expel the opponent completely from the territory of the Reich. In view of the fact that the living space available to the German people is very small, it was hoped that this problem could be solved by an accelerated emigration of the Jews.

Since the beginning of the war in 1939, emigration has become increasingly difficult; at the same time, the economic space of the German people has steadily increased in size compared to its living space so that, at the present time, a complete elimination through emigration is no longer possible in view of the large number of Jews present in this [economic] space. It is to be expected that already the coming generation will perceive this problem neither as vividly nor as clearly [as we do] on the basis of their own experience. Also, the matter has been set in motion and must be settled; hence, the problem as a whole must be resolved by the present generation.

Therefore, the complete expulsion or elimination of the millions of Jews present in the European economic sphere is an imperative task in the fight to guarantee the existence of the German people.

Starting in the Reich itself and then extending into the other European countries made part of the final solution, the Jews will be moved into large camps in the East, some already in existence, others yet to be set up, where they will be used directly as labor or moved on further east. Elderly Jews, as well as those with high military decorations (EK I [Iron Cross], Golden medal for bravery etc.) will be moved continuously to Theresienstadt, a town in the Protectorate of Bohemia and Moravia."

With regard to this document, Hilberg can only say that this was "an official explanation for the deportations" (p. 489) or that these deportations were part of a "process of repression" by the German authorities (p. 1087).

¹⁶ PS-3244; Document Political Leaders-49, IMT, Vol. 42, pp. 328-330.

In a report dated December 14, 1942 titled “Financing the Measures for the Solution of the Jewish Question,” ministerial advisor Walter Maedel summarized National-Socialist policies regarding the Jews in the following terms (NG-4583):

“Some time ago, the Reichsmarschall ordered the Reichsführer-SS and Chief of the German Police to prepare the measures aiming at the final solution of the Jewish question. The Reichsführer-SS has entrusted the Chief of the Security Police and SD with the execution of this task. The latter initially promoted the legal emigration of Jews overseas by special measures. When emigration overseas had become impossible after the outbreak of the war, he implemented the gradual cleansing of Jews from the Reich by their deportation to the East. Lately, within the Reich territory, old-age homes (old-age ghettos) for Jews have been set up, for example at Theresienstadt. For details see note of August 21, 1942. The establishment of other old-age homes in the eastern territories is being planned.”

In April 1943, Richard Korherr, the *Reichsführer’s* statistical inspector, wrote a report titled “The Final Solution of the Jewish Question in Europe,” in which he reported the following data (NO-5193):

Territory	Period of time from... to Dec. 31, 1942	Emigration	Excess mortality
Old Reich (with Sudeten Jews)	Jan. 31, 1933 (Sept. 29, 1938)	– 382,534	– 61,193
Ostmark [Austria]	March 13, 1938	– 149,124	– 14,509
Bohemia and Moravia [Czechia]	March 16, 1939	– 25,699	– 7,074
Eastern territories (with Bialystok)	September 1939 (June 1940)	– 334,673	
General Government (with Lemberg)	September 1939 (June 1940)	– 427,920	
Total (all columns)		– 1,402,726	

Therefore, 557,357 Jews emigrated from the Old Reich, Austria and Bohemia-Moravia, in addition to nearly 600,000 of the 762,593 Jews from the General Government and the eastern territories cumulatively indicated by Korherr under the headings “Emigration” and “Excess mortality” (see Subchapter 3.12.). Therefore, the National-Socialist regime, from 1933 to 1942, encouraged or induced the emigration of approximately one million Jews from the territories under their control.

1.3. Destruction or Emigration?

Hilberg opens Chapter Eight ("Deportations") of his work with the following remarks (pp. 409f.):

"The mobile killing operations in the occupied USSR were a prelude to a greater undertaking in the remainder of Axis Europe. A 'final solution' was going to be launched in every region under German control.

The idea of killing the Jews had its shrouded beginnings in the far-distant past. There is a hint of killing in Martin Luther's long speech against the Jews. [...] Finally, in 1939, Adolf Hitler uttered a threat of total annihilation in language far more explicit than that of his predecessors. This is what he said in his speech of January 30:

'[...] Today I want to be a prophet once more: If international-finance Jewry inside and outside of Europe should succeed once more in plunging nations into another world war, the consequence will not be the Bolshevization of the earth and thereby the victory of Jewry, but the annihilation [Vernichtung] of the Jewish race in Europe.'

These remarks by Hitler have much more significance than the suggestions and hints of earlier German writers and speakers. To start with, the idea of an 'annihilation' was now emerging in the context of a definite expectation: another world war. As yet the image was not a plan, but there was an implication of imminence in the utterance. In the second place, Hitler was not only a propagandist but also the head of a state. He had at his disposal not only words and phrases but also an administrative apparatus. He had power not only to speak but to act. Third, Hitler was a man who had a tremendous urge — one could almost say a compulsion — to carry out his threats. He 'prophesied.' With words he committed himself to action.

Only seven months were to pass before the war began. It provided physical and psychological conditions for drastic action against Jewish communities falling into German hands. Yet, even as the anti-Jewish regime was intensified, unusual and extraordinary efforts were made to reduce Europe's Jewish population by mass emigration. The biggest expulsion project, the Madagascar plan, was under consideration just one year before the inauguration of the killing phase. The Jews were not killed before the emigration policy was exhausted."

On the claim — which is rather far-fetched — that "the idea of killing the Jews" in Germany dated back to Martin Luther as its "shrouded beginnings," I will discuss in Chapter 5.

Before examining the actual meaning of Hitler's "prophecy," it is best to turn our attention to Hilberg's comments.

Hilberg claims that a "'final solution' was going to be launched in every region under German control," meaning the extermination of the Jews according to his interpretation, which was "not a plan" yet, but Hitler's words were "an implication of imminence": but how could an extermination be imminent for which there was no plan, and therefore not even a decision?

This incoherent interpretation reflects the basic contradiction which distorts all of Hilberg's writings: at the end of the 1970s, he had taken a decidedly functionalist position, in particular during the interview he granted in 1979 to Claude Lanzmann (see Subchapter 4.2.), but he was really a crypto-intentionalist. To the definition of these terms and to Hilberg's position, I shall return in Chapter 5.

Still more-contradictory is his claim that, "as the anti-Jewish regime was intensified," that is to say, while a policy of extermination was prepared, "unusual and extraordinary efforts were made to reduce^[17] Europe's Jewish population by mass emigration": in other words, Hitler was plotting the extermination of the Jews, but simultaneously implemented a forced-mass-emigration policy, and the alleged extermination was only carried out when the possibility of "the emigration policy was exhausted"! Therefore, if such possibilities had not become exhausted, according to Hilberg, there would not have been any extermination of the Jews at all, or in other words: Hitler did not wish to exterminate the Jews at all, or at least not "for the simple fact of being Jews"!

1.4. Hitler's "Prophecy" of January 30, 1939

In his speech of January 30, 1939 before the *Reichstag* mentioned by Hilberg, Hitler declared (Domarus 2007, p. 399):

"Once again I will be a prophet: should the international Jewry of finance (Finanzjudentum) succeed, both within and beyond Europe, in plunging mankind into yet another world war, then the result will not be a Bolshevization of the earth and the victory of Jewry, but the annihilation (Vernichtung) of the Jewish race in Europe."

I note first of all that the translation of the term "*Vernichtung*" to "annihilation" is inappropriate to say the least, because "annihilation" implies an unambiguous biological extermination, whereas *Vernichtung* not necessarily so.

Next, although Hilberg quotes the preceding phrases, he does not quote the following one which offers a perfectly clear explanation of Hitler's threat (*ibid*, pp. 399f.):

"Thus, the days of propagandist impotence of the non-Jewish peoples are over. National Socialist Germany and Fascist Italy possess institutions that, if necessary, permit opening the eyes of the world to the true nature of this problem. Many a people is instinctively aware of this, albeit not scientifically versed in it."

¹⁷ Hilberg uses this verb to narrow the effective scope of National-Socialist Jewish emigration policy, which until 1938 meant the emigration of *all* Jews living on Reich territory, as we have seen earlier.

Therefore the "annihilation of the Jewish race in Europe" would be achieved simply by pointing out to other peoples the German and fascist institutions that promoted scientific knowledge about the "Jewish question."

By its historical context, the motivation and its true meaning of Hitler's "prophecy" is revealed. In his speech to the Reichstag of January 30, 1941, Hitler reiterated (*ibid.*, p. 32):

"I would not like to forget the promise I made previously on September 1 [recte: January 30], 1939 before the German Reichstag, that is, that if the Jews should succeed in plunging the rest of the world into a world war, then the entire Jewish race will have played out its role in Europe. 1939 in the German Reichstag, namely the hint that, if the other [rest of the] world is plunged into a general war by Judaism, then Judaism as a whole will have ceased to play a role in Europe!"

If therefore Jewry ceased to carry on its role in Europe, the "Vernichtung" of 1939 was not a physical "destruction," but purely an annihilation of its political or societal role.

This is confirmed by Hitler's words in his speech at the *Sportpalast* on January 30, 1942 (*ibid.*, pp. 400f.):

"We are fully aware that this war can end either in the extermination of the Aryan peoples or in the disappearance of Jewry from Europe. I said as much before the German Reichstag on September 1, 1939. I wish to avoid making hasty prophecies, but this war will not end as the Jews imagine, namely, in the extermination of the European- Aryan peoples; instead, the result of this war will be the annihilation of Jewry. For the first time, the old, truly Jewish rule of 'an eye for an eye, a tooth for a tooth' will obtain.

And the more the fighting expands, the more anti-Semitism will spread—let that be said to world Jewry. Anti-Semitism will be fed in every prisoner-of-war camp, in every family enlightened to the reason why, in the end, it has to make this sacrifice. And the hour will come when the most evil enemy of the world of all time will at least be finished with for the next millennium."

This quotation confirms that the "Vernichtung" of the Jewish race in Europe of the speech of January 30, 1939 was not a biological extermination, because Hitler is speaking of the disappearance of Jewry "from Europe," which, together with the cessation of the political role of the Jews in the eastern occupied territories, can only be explained by means of the plans to deport the Jews into the occupied eastern territories, which were considered extra-European. As stated by the Security Service of the SS, the German population had interpreted the "prophecy" in the sense that

"the Führer's struggle against Judaism will be carried on to the very end with inexorable consistency, and soon the last Jew will be expelled from European soil." (Boberach, Vol. 9, p. 3235)

On February 24, 1942, the Führer returned to the argument. After affirming that the "conspiracy" of the plutocratic world and the Kremlin aimed at one

single and identical objective – “the extermination of the Aryan peoples and races” – he stated (Domarus 2007, p. 319):

“Today, the ideas of our National Socialist and Fascist revolution have conquered great and mighty states. My prophecy will be fulfilled that this war will not destroy the Aryan, but, instead, it will exterminate the Jew.”

In his annotations, Picker recorded the following on July 21, 1942 (p. 449):

“In fact – since he [Hitler] will have thrown the last Jew out of Europe with the end of this war – the Communist danger from the east will be extirpated root and branch.”

This figurative meaning of the verb “*ausrotten*” also appears – with the use of the corresponding substantive – in his speech of September 30, 1942, in which Hitler said (Domarus 2007, p. 405):

“At the Reichstag session of September 1, 1939 [recte: January 30, 1939], I said two things: First, [...]. Second, should Jewry instigate an international world war in order to exterminate the Aryan people of Europe, then not the Aryan people will be exterminated, but the Jews [original: “das Judentum” – Jewry].”

In his speech of November 8, 1942, Hitler paraphrased his “prophecy” of January 30, 1939 as follows (Domarus 1973, p. 1937):

“You will recall again the session of the Reichstag in which I declared: if Judaism deceives itself that it can cause an international world war for the extermination of the European races, then the result will not be the extermination of the European races, but the extermination of Judaism in Europe.”

Hitler then again explained his sense of this “extermination”: the recognition of the Jewish danger by the European peoples, and the introduction by them of anti-Jewish legislation similar to that which existed in Germany (*ibid.*):

“In Europe, this danger has been recognized, and state after state is adopting our legislation.”

Finally, in his speech of February 24, 1943, Hitler reiterated (Domarus 2007, p. 410):

“This fight will not end with the planned annihilation of the Aryan but with the extermination of the Jew [original: “des Judentums” – of Jewry] in Europe.”

With this, we also have the perfect equivalence of the terms “*Vernichtung*” and “*Ausrottung*,” both applied to the European peoples.

In his speech at Bad Tölz on November 23, 1942, Himmler declared (Smith/Peterson, p. 200):

“The Jewish question in Europe has also completely changed. The Führer said once in a Reichstag speech: should Jewry cause an international war, for instance in order to exterminate the Aryan peoples, it is not the Aryan peoples who will be exterminated, but Jewry. The Jew has been evacuated from Germany, he now lives in the East and works on our roads, railways, etc. This process has been implemented consistently, but without cruelty.”

Recapitulating, Hitler used the terms “*Vernichtung*” and “*Ausrottung*” in the figurative sense with reference to the European peoples and Judaism/Jewry, which is fully confirmed by the various quotations and their context.

That this is the correct interpretation – if there is any need for additional confirmation¹⁸ – has been declared explicitly by an orthodox historian beyond mainstream suspicion like Joseph Billig, a former researcher at the Center for Contemporary Jewish Documentation in Paris (Billig, p. 51):

“The term ‘Vernichtung’ (annihilation, destruction) indicated the absolutely negative determination with regard to the Jewish presence in the Reich. This determination declared itself prepared to go to any extremes if necessary. The term in question did not mean that extermination had already been achieved or even the deliberate intention to achieve it. A few days before the speech quoted [that of January 30, 1939], Hitler received the Czechoslovakian Minister of Foreign Affairs. He reproached his guest for his lack of energy of the government in Prague in its efforts to reach an understanding with the Reich, and recommended, in particular, energetic action against the Jews. To this end, he declared, by way of example, ‘With us [in Germany], they are being annihilated (bei uns werden sie vernichtet)’. Are we to believe that Hitler, during a diplomatic conversation recorded in the archives of the Ministry of Foreign Affairs,^[19] revealed a massacre in the Third Reich, which moreover was not correct at that time?”

Two years later, on January 30, 1941, Hitler recalled his 1939 ‘prophecy.’ But, this time, he clarified its meaning as follows: ‘...and I won’t forget the warning I once gave before the Reichstag, that is, that of the rest of the world (andere Welt) is plunged into war, Jewry will have completely played out its role in Europe.’

In his conversation with the Czechoslovakian Minister, Hitler mentioned England and the United States, which, according to him, could offer regions for the settlement of the Jews. In January 1941, he indicated that the role of the Jews in Europe will be liquidated, and added that this prospect would come true, because the other peoples understand the necessity in their countries. At this time, people believed in the creation of a Jewish reservation. But for Hitler, this was admissible only outside of Europe.

We have just noted that on January 30, 1941, Hitler simply announced the liquidation of the Jews’ role in Europe.”

Therefore, by placing Hitler’s “prophecy” of January 30, 1939 in relation with the “threat of total annihilation,” Hilberg completely distorts the meaning. This interpretation is all the more surprising since this “prophecy,” as Hilberg well knew, fit perfectly into the context of preparatory measures with a view to Jewish removal from Germany and Austria. A few days earlier, on January 24,

¹⁸ For additional corroborating examples see Chapter V.

¹⁹ There recorded as “*Niederschrift über den Empfang des tschechoslowakischen Aussenministers Chvalkovsky durch den Führer und Reichskanzler am 11. Januar 1939 von 17-18 Uhr*”. Auswärtiges Amt 1951, p. 170.

a "Reich Center for Jewish Emigration" had been set up, and on January 25, the Ministry of Foreign Affairs had drawn up the report "The Jewish Question as a Factor in Foreign Affairs in 1938" mentioned earlier.

1.5. National-Socialist Emigration/Evacuation Policies According to Hilberg

Hilberg then summarizes National-Socialist Jewish emigration policies:

"The first forced emigration schemes were worked out in 1938, after the Germans had acquired Austria. When Hitler came to power, Germany had about 520,000 Jews. After five years, emigration and death had brought that number down to 350,000. However, in March 1938, when the Germans took Austria, 190,000 Jews were added to the 350,000, bringing the total to approximately 540,000, that is, 20,000 more than the original number. Obviously this was not progress. Some extraordinary measures had to be taken.

Thus, especially toward the end of 1938, Schacht, Wohlthat, and a number of other officials were conferring with the Western democracies on ways and means of facilitating Jewish emigration." (p. 411)

In this context, Hilberg, among other things, describes the efforts of Secretary of State for Foreign Affairs Ernst von Weizsäcker to convince Polish Ambassador Lipski "to take back the 40,000 to 50,000 Polish Jews in the Reich" (p. 412), and mentions Ribbentrop's meeting with French Minister of Foreign Affairs Georges Bonnet on Jewish emigration, regarding which the German minister of foreign affairs said:

"I replied to M. Bonnet that we all wanted to get rid of our Jews but that the difficulties lay in the fact that no country wished to receive them." (p. 412)

In his speech of January 30, 1939, Hitler commented:

"It is a shameful example to observe today how the entire democratic world dissolves in tears of pity but then, in spite of its obvious duty to help, closes its heart to the poor, tortured Jewish people." (p. 412)

Hitler thought about the failure of the Evian Conference, which was held from July 6 to 15, 1938 in the well-known French health resort. The conference had been organized on President Roosevelt's initiative for the purpose of assisting the victims of National-Socialist persecution, primarily Jews. But the American president's good intentions appeared dubious from the start (Mazor, p. 23):

"At his press conference at Warm Springs, President Roosevelt already limited the possibilities of Evian by saying that neither any revision nor any increase in immigration quotas to the United States were anticipated as a result.

In his invitation to this conference directed at 33 countries, Roosevelt stressed that no country was expected to consent to receiving a larger number of immigrants than allowed by its current legislation."

With such preconditions, the Evian Conference was destined to fail from the outset. The results were in effect that "the free world abandoned the Jews of Germany and Austria to their pitiless fate" (*ibid.*, p. 25). The *New York Herald Tribune* of July 8, 1938 carried this headline: "650,000 Exiled Jews Refused at Evian" (Thalmann).

The position of the Reich government was clearly laid out in the report "The Jewish Question as a Factor in Foreign Affairs in 1938" (Auswärtiges Amt 1953, pp. 782f.):

"Both issues, whose resolution is a condition of orderly Jewish emigration, remained open: firstly, the question of how this emigration should be organized and financed, and secondly, the question of where emigration should be directed.

In order to answer the first question, international Jewry in particular did not seem inclined to make a contribution. Rather, the conference – and the committee it later formed in London under the leadership of the American Rublee – saw it as its main task to force Germany under international pressure to release Jewish assets as much as possible. Germany was therefore supposed to buy the emigration of its 700,000 Jews by giving up German national wealth. It is doubtful whether international Jewry seriously wishes at all the mass emigration of its racial comrades from Germany and from other states without the equivalent of a Jewish state. [...]

The second question, to which target countries an organized emigration of Jews should be directed, could not be answered by the conference in Evian either, since all of the participating countries, while generally professing their concern about the refugee problem, declared themselves unable to accommodate larger numbers of Jewish emigrants on their territory."

This, by contrast, is Hilberg's incredible comment (p. 412):

"This was not an idle accusation [by Hitler]; it was an attempt to drag the Allied powers into the destruction process as passive but willing accomplices."

Thus, the refusal of the future Allied powers to welcome Jewish emigrants at the beginning of 1939 was distorted by Hilberg into an attempt to involve the Allies in a "destruction process", when in fact at that time the entire objective of the Reich government's Jewish policy aimed at the "the emigration of all Jews living in Reich territory," when, therefore, the alleged extermination had neither been decided upon nor planned!

Hilberg then summarizes the measures adopted by the government of the Reich to encourage Jewish emigration, culminating in the creation of the "Central Office for Jewish Emigration" at Vienna on August 26, 1938, and the "Reich Center for Jewish Emigration" on January 24, 1939 (p. 413), to which was added a "Central Office for Jewish Emigration" created at Prague on July 15, 1939 (Adler 1958, p. 8). He then continues as follows:

"Emigration was still the policy after the war had broken out. In fact, the first reaction to the victories in Poland and in France was to punish these countries

for their attitude toward Jewish emigration by sending there some of the Jews who had previously been kept out." (p. 413)

Therefore, if we follow Hilberg's interpretation, first Hitler made his "threat of total annihilation" in his speech of January 30, 1939 in the event that international Jewry succeeded in plunging the peoples into another world war. Then, after that war had broken out (from Hitler's point of view), instead of implementing his alleged threat, he "punished" the defeated nations of France and Poland by sending them *some* of the Jews whom he had allegedly threatened to exterminate *totally*!

After correctly outlining the Madagascar Project, Hilberg comments:

"The Madagascar plan was the last major effort to 'solve the Jewish problem' by emigration. Many hopes and expectations had been pinned on this plan by offices of the Security Police, the Foreign Office, and the Generalgouvernement. Even as it faded, the project was to be mentioned one more time, during early February 1941, in Hitler's headquarters. [...]

Originally, he had been in a position to address himself at most to the Jews of Germany, but now the goal had to be the elimination of Jewish influence in the entire Axis power sphere." (p. 415; emphasis added)

Precisely this was the meaning of the "*Vernichtung*" of the Jewish race in Europe in Hitler's speech of January 30, 1939, as I have explained earlier. But if Hilberg was aware of this, why did he fallaciously interpret that term as the "threat of total annihilation"?

Hitler – Hilberg notes – had taken the Madagascar Project very seriously:

"When Bormann asked how the Jews could be transported there in the middle of the war, Hitler replied that one would have to consider that. He would be willing to make available the entire German fleet for this purpose, but he did not wish to expose his crews to the torpedoes of enemy submarines. Now he was thinking about all sorts of things differently, and not with greater friendliness (Er dachte über manches jetzt anders, nicht gerade freundlicher).

While Hitler was thinking, the machinery of destruction was permeated with a feeling of uncertainty." (p. 415)

While Hitler was still thinking about the Madagascar Project, for the realization of which he was even "willing to make available the entire German fleet," there nevertheless supposedly existed a "machinery of destruction" which no one had decided upon and which no one had planned: a sort of metaphysical entity equipped with its own existence which proceeded autonomously towards the objective of extermination, independently of the emigration policy adopted by the Reich government!

To render less-uncertain the "feeling of uncertainty" that permeated the machinery of destruction, Hilberg then plucks without comment quotes from documents containing the alleged terms in "coded language" such as "*Evakuierung*" (evacuation), "*Lösung der Judenfrage*" (solution to the Jewish question) and "*judenfrei*" (Jew-free). With that, as I have explained, he insinuates that

such documents referred to the "machinery of destruction." At the same time, the author exempts himself from the duty to explain them in their historical context. Somewhat later on, I shall examine the most-striking cases of this systematic distortion of documents. Here I shall reveal only that the term "*judenfrei*" could of course be used in a misleading sense, but not in the manner imputed by Hilberg. For example, the German-language daily newspaper *Lemberger Zeitung* of October 17, 1942 carried the following news item ("Die erste..."):

"Lublin is the first city in the General Government which has become free of Jews, and now steps are taken to liberate the territories of the individual counties from the Jews as well, who have thrown the economic life of this country into considerable upheaval. The first county which no longer has any Jews is Biala Podlaska. The procedure is carried out as follows: the heads of the counties establish a zone of residence for all the Jews of the county. During this cleansing, the two counties of Biala Podlaska and Radzin agreed to pick a town as the Jewish zone of residence, namely Międzyrzec. But since this town is located on the territory of Radzin County, Biala Podlaska no longer has any Jews."

According to Yitzhak Arad, the Jews of Biała Podlaska had been deported to Sobibór on June 10, 1942, and to Treblinka between September 26 and October 6. Those of Radzyń Podlaski were deported to Treblinka on October 1, and those of Międzyrzec Podlaski to the same camp on August 25-26 (Arad 1987, pp. 391, 395), therefore, if these assertions were true, there should have been no Jews left in these three localities by October 17, 1942.

Continuing his discussion, Hilberg writes (p. 416):

"In the neighboring Wartheland, a grass-roots movement to eliminate the Jews became even more pronounced."

He then mentions SS *Sturmbannführer* Rolf-Heinz Höppner's letter to Eichmann dated July 16, 1941, according to which a "camp for 300,000 was to be created with barracks for tailor shops, shoe-manufacturing plants, and the like." Hilberg moreover quotes the following passage, which to he even adds the original German text:

"'This winter' said Höppner, 'there is a danger that not all of the Jews can be fed anymore. One should weigh earnestly,' he continued, 'if the most humane solution might not be to finish off those of the Jews who are not employable by some quick-working device. At any rate, that would be more pleasant than to let them starve to death. [Es besteht in diesem Winter die Gefahr, dass die Juden nicht mehr sämtlich ernährt werden können. Es ist ernsthaft zu erwägen, ob es nicht die humanste Lösung ist, die Juden, soweit sie nicht arbeitseinsatzfähig sind, durch irgendein schnellwirkendes Mittel zu erledigen. Auf jeden Fall wäre diese angenehmer, als sie verhungern lassen].'" (Ibid.)

For the sake of exactitude, "*nicht arbeitseinsatzfähig*" means "unfit for labor deployment," "*durch irgendein schnellwirkendes Mittel*," by contrast, means

“with some quick-acting agent.” This file memo relating to the “Solution to the Jewish question” begins with these words:²⁰

“In the talks in the Reich prefecture [Reichsstatthaltereil], the solution to the Jewish question in the Wartheland was raised by several parties. The following solution was proposed:”

Hilberg’s presentation is therefore inexact, because there is no question of a “grass-roots movement” here (but rather, proposals from local SS leaders or government agencies), nor of any movement “to eliminate the Jews,” but of possible killings of Jews unfit for work as a “more humane solution” compared to a possible death by starvation.

In the letter accompanying the file memo, Höppner specified that “these things sound fantastic at times,” even though he believed they were feasible.²¹

Hilberg comments:

“According to Höppner, the Reichsstatthalter had not made up his mind about these suggestions, but by the end of the year the Jews of the Wartheland were being killed in a death camp, Kulmhof, in the province (Gau).” (p. 416)

In this way, he seeks to enter into the “true” nature of the alleged elimination of the Jews, which he improperly attributes to the document with an apodictic reference to the alleged extermination camp at Chełmno (Kulmhof in German), to which I shall return in Subchapter 3.1.

Hilberg then continues his shell game of equivocations in this manner:

“On June 7, 1941, the Chief of the Reich Chancellery, Lammers, addressed two almost identical letters to the Interior and Justice Ministries, in which he wrote simply that Hitler considered the measure unnecessary. Lammers then addressed a third letter to his counterpart in the party, Bormann. In that letter Lammers repeated the message with a confidential explanation. ‘The Führer,’ he wrote, ‘has not agreed to the regulation proposed by the Reich Minister of the Interior, primarily because he is of the opinion that after the war there would not be any Jews left in Germany anyhow. [Der Führer hat der vom Reichsminister des Innern vorgeschlagenen Regelung vor allem deshalb nicht zugestimmt, weil er der Meinung ist, dass es nach dem Kriege in Deutschland ohnedies keine Juden mehr geben werde.]’ Hence it was not necessary to issue a decree that would be difficult to enforce, that would tie up personnel, and that would still not bring about a solution in principle.” (p. 417)

In this context, the reader is led to interpret the statement that there would be no Jews left in Germany after the war as the result of extermination measures, also because, with his useless quotation from the German text, Hilberg seems to attribute great importance to the document, and he does nothing to dissuade the reader from this false interpretation, for instance by explaining that, “after the war,” the Jews would be elsewhere, alive, according to Hitler.

²⁰ Facsimile of the original document in Leszczyński, pp. 60f.

²¹ YVA, O.51-68, p. 43.

As early as August 1940, Hitler had expressed his intention to evacuate all the Jews from Europe after the war. On August 15, 1940, Luther wrote to Rademacher (Auswärtiges Amt 1963 p. 399):

"On occasion of a meeting with Ambassador Abetz in Paris, he told me that the Fuehrer had told him during his lecture about France, which took place about two weeks ago, that he intends to evacuate all Jews from Europe after the war."

Hilberg does not mention this document at all, evidently because it makes clear the groundlessness of his interpretation regarding Hitler's "prophecy" in his speech of January 30, 1939.

A note from the Reich Chancellery of March-April 1942 states (PS-4025):

"Reich Minister Lammers informed me that the Fuehrer had repeatedly told him that he wanted the solution of the Jewish question to be postponed until after the war."

On July 24, 1942, Hitler expressed this same intention in colorful language (Picker, p. 456):

"After the end of the war he would rigorously take the position that he would smash up town by town if the Jews didn't come out and migrate to Madagascar or another Jewish nation-state."

The same point of view was expressed in Rosenberg's so-called "Brown Folder" ("*Braune Mappe*") of June 20, 1941, as we will see in Subchapter 1.8.

Here Hilberg, always eager to refer to all the sources favorable to his theories, even neglects Hans Lammers's statements before the Nuremberg Tribunal on April 8, 1946.

In 1943, rumors arose according to which the Jews were being killed. Lammers attempted to trace the rumors to their source, but without positive success, because they were always found to be based on other rumors, as a result of which he concluded that they originated in Allied radio propaganda.

Nevertheless, to clarify the matter, he addressed himself to Himmler, who denied that Jews were being legally [sic] killed: they were simply being evacuated to the East, and that this was the mission to which he had been assigned by the Führer. During such evacuations, fatalities could certainly occur among elderly or sick persons, and accidents, aerial attacks and revolts could happen, which Himmler was compelled "to suppress severely and with bloodshed, as a warning," but that was all (IMT, Vol. 11, p. 52).

Lammers then went to Hitler, who gave him the same answer as Himmler:

"He said, 'I shall later on decide where these Jews will be taken and in the meantime they are being cared for there.'" (*ibid.*, pp. 52f.)

At this point, Dr. Alfred Thoma, defense counsel for Rosenberg, asked him (*ibid.*, p. 53):

"Did Himmler ever tell you that the final solution of the Jewish problem would take place through the extermination of the Jews?"

LAMMERS: That was never mentioned. He talked only about evacuation.

DR. THOMA: He talked only about evacuation?

LAMMERS: Yes, only about evacuation.

DR. THOMA: When did you hear that these 5 million Jews had been exterminated?

LAMMERS: I heard of that here a while ago."

The head of Hitler's chancellery therefore declared that he had only learned of the alleged extermination of the Jews at Nuremberg. This declaration may be questionable, but cannot simply be omitted in a work like Hilberg's.

As we shall see, a similar omission is also found in Hilberg's discussion of Hans Frank's testimony at Nuremberg.

Hilberg then cites another document:

"Toward the end of the spring of 1941, officials in France were still approached with applications from Jews who were trying to emigrate. On May 20, 1941, a Gestapo official from the RSHA, Walter Schellenberg, informed the military commander in France that the emigration of Jews from his area was to be prevented because transport facilities were limited and because the 'final solution of the Jewish question' was now in sight." (p. 417)

Here, as well, by virtue of the meaning attributed by Hilberg to the term "final solution" on his pages 275f., he leads the reader to understand that the extermination of the Jews was approaching fast.

The source cited by Hilberg is Nuremberg Document NG-3104 (his note 27, *ibid.*). In reality, as I have explained earlier, the expression "in view of the doubtlessly approaching Final Solution of the Jewish Question" did not refer to any phantasmagorical extermination, but rather to the Madagascar Project, whose implementation was then considered imminent.

In his imaginary reconstruction of the origins of the alleged extermination, Hilberg at this point introduces Göring's letter to Heydrich which I quoted in its historical context in Subchapter 1.2. (see p. 14), and commented:

"With the receipt of this letter, Heydrich held the reins of the destruction process in his hands." (p. 418)

But what "destruction process" is he writing about? The letter referred to the Madagascar Project, as Hilberg well knew, since, as we have already seen, he wrote that the emigration project to Madagascar had been discussed in Hitler's headquarters in early February 1941, and that Hitler was "willing to make available the entire German fleet" for this project.

At the Zündel Trial, Hilberg maintained that Hitler's above-mentioned answer to Bormann implied that the Madagascar Project had now been abandoned,²² while it was officially abandoned only in early February 1942, as documented earlier (see also Section 5.1.2.).

²² District Court, p. 1232/Rudolf 2020a, p. 216.

1.6. The "*Führerbefehl*"

After this labored and inchoate run-up, Hilberg finally arrives at the fateful "extermination order":²³

"Then, one day toward the end of the summer, Eichmann was called into Heydrich's office, where the RSHA chief told him: 'I have just come from the Reichsführer: the Führer has now ordered the physical annihilation of the Jews. [Ich komme vom Reichsführer; der Führer hat nunmehr die physische Vernichtung der Juden angeordnet.]'" (p. 418)

The source, indicated in his Footnote 31 on p. 419, are pages 178f. and 229f. of Aschenauer's 1980 account of the Eichmann trial. In the same footnote, Hilberg explains:

"In his memoirs, Eichmann dates the meeting to around the end of the year (zur Jahreswende 1941/42). During his interrogation by Israel police in Jerusalem, he suggested more plausibly that Hitler's order had come two or three months after the June 22 German assault on the USSR. Jochen von Lang, ed., Eichmann Interrogated (New York, 1983), pp. 74-75. Auschwitz commander Höss recalls having been summoned to Himmler in the matter of killing the Jews during the summer. Höss also states that Eichmann visited Auschwitz shortly thereafter. Rudolf Höss, Kommandant in Auschwitz (Munich, 1963), pp. 138, 157-60. Chronology and circumstances point to a Hitler decision before the summer ended."

It is very odd that a matter of such fundamental importance as that of Hitler's alleged order to exterminate the Jews, in a book over 1,300 pages long, should be relegated to a mere footnote by Hilberg. Perhaps he did not wish to draw too much attention to this issue? He would have had every reason to hide it.

The source cited by him says in fact on the page indicated (Aschenauer, p. 177):

"Around the turn of the year 1941/42, Heydrich, the chief of the Security Police and the Security Service, informed me orally that the Führer had ordered the physical extermination of the Jewish enemy."

The same date is repeated on the following page (*ibid.*, p. 178):

"At the time mentioned at the turn of the year 1941/42, Heydrich, the chief of the Security Police and the Security Service, informed me about the 'physical destruction order'."

A few lines further down, this is followed by the words cited by Hilberg:

"When Heydrich said to me 'I'm coming from the Reichsführer; the Führer has now ordered the physical extermination of the Jews' [...]" (*ibid.*)

In the second reference to this source, Eichmann reiterates that the "physical extermination order was given as of the end of 1941" (*ibid.*, p. 230).

²³ For a more in-depth treatment of the question of the alleged extermination order and its historiographic implications, see Mattogno/Kues/Graf, pp. 166-377.

Over the course of his interrogations by the Israeli police, Eichmann declared that Heydrich had transmitted Hitler's alleged extermination order to him two or three months after the beginning of the war against the Soviet Union, or at any rate during the late summer of 1941.²⁴ But this date cannot be considered "more plausible" than the other, because it is inserted into quite an anachronistic historical context. Heydrich, in fact, is said to have ordered Eichmann to travel to Lublin to "Globocnigg" [*Globocnik*], to whom Himmler is said to have issued already "pertinent instructions," to see how far along he had gotten with the task. Having reached Lublin, Eichmann visited a place whose name he could not recall, perhaps Treblinka, in which the Jews were being "poisoned" with the exhaust gases of a Soviet submarine engine, in a sort of cottage with two or three rooms. This was in the late summer or autumn of 1941.²⁵ But the first of SS *Brigadeführer* Odilo Globocnik's alleged "killing centers" – Belżec – was opened only in March 1942 according to Hilberg (p. 936), so that he must have been aware that it could not have been visited by Eichmann in the late summer or in the autumn of 1941.

Therefore, considering the real context of his account, neither one of the two dates suggested by Eichmann is possible. What is more, as we will see instantly, the dating claimed by Rudolf Höss, the former commandant of the Auschwitz Camp, is in further contradiction with these two dates. Hilberg attempted to overcome these difficulties by completely confounding the alleged extermination "decision" with the claimed extermination "order": Hitler is therefore said to have taken the extermination "decision" before the end of the summer of 1941, but is said to have issued the extermination "order" itself toward the end of the summer of that year. Nonetheless, Höss spoke unequivocally of an "order."

In his declaration of March 14, 1946, adopting the language of his interrogators, Höss had declared (NO-1210; but see Subchapter 4.3.):

"In June 1941 I was summoned to Himmler in Berlin where he basically told me the following. The Fuehrer has ordered the solution of the Jewish question in Europe."

And in his affidavit of April 5, 1946, which Hilberg repeatedly quotes in his Chapter Nine, Höss explicitly reiterated (PS-3868):

"I was ordered to establish extermination facilities at Auschwitz in June 1941."

Hilberg explicitly makes the same claim himself on p. 1062:

"Oral orders were given at every level. Höss was told to build his death camp at Auschwitz in a conversation with Himmler."

Höss repeatedly mentioned June or, more generally, the summer of 1941. During his interrogation on April 1, 1946, he insisted that his summons to Berlin

²⁴ State of Israel, Vol. 7, p. 169. Hilberg cites von Lang, pp. 74f.

²⁵ State of Israel, *ibid.*, pp. 171-174; von Lang, p. 76.

had taken place "before the Russian campaign had started," "before the date that the Russian campaign was launched," which puts it at the first 20 days of June (see Mattogno 2020, pp. 184-186). For Eichmann, on the other hand, the order was issued two or three months after the start of the war against the Soviet Union. These two testimonies are therefore irreconcilable, and putting them together while pretending that they corroborate each other amounts to blatant imposture. In his book *Perpetrators, Victims, Bystanders*, Hilberg returned to the same question (Hilberg 1992, p. 18):

"On July 31, 1941 he [Heydrich] received authorization from Göring to prepare a final solution of the Jewish question in Europe. But what kind of solution, precisely? Heydrich's specialist in Jewish affairs, Adolf Eichmann, noted in his memoirs after the war that Heydrich had heard from his superior, Himmler, of a decision by Hitler to annihilate the Jews physically."

Here, Hilberg once again refers to Eichmann's implausible declarations taken from Aschenauer's book as discussed earlier, referring to the turn of the year 1941/1942, and based on these statements, with sublime indifference to the chronological contradiction, he interprets the "real" meaning of Göring's letter from five months earlier!

To finish the hack job, Hilberg passes in silence over the statement by former SS *Hauptsturmführer* Dieter Wisliceny, Eichmann's representative in Slovakia, relating to a *written* extermination order by Himmler dating back to the spring of 1942, which Eichmann is said to have shown him in August of that year.²⁶ Already during the IMT's afternoon hearing of January 3, 1946, Wisliceny had stated that this alleged extermination order dated back to April 1942 (IMT, Vol. 4, pp. 358f.). In his cross-examination by the prosecutor for the Slovakian National Tribunal on May 6 and 7, 1946, Wisliceny confirmed:²⁷

"This order [to exterminate the Jews] was dated April 1942 and bore Himmler's handwritten signature, which I knew well. In the order, it said that Jews fit for labor should be temporarily exempted from extermination and be used for labor in the activities of the concentration camps. This was the content of the order."

In his Footnote 57 on p. 1056, Hilberg refers to Wisliceny's affidavit of November 29, 1945 (*"Conspiracy and Aggression, VIII, 610"*). In it, Wisliceny declared that he met Eichmann in his office in Berlin in July or August 1942, who told him that *all* the Jews were to be exterminated by Himmler's order. Wisliceny continued as follows:²⁸

"I requested to be shown the order. He took a file from the safe and showed me a top secret document with a red border, indicating immediate action. It was

²⁶ Declaration of Dieter Wisliceny dated November 18, 1946, in: Poliakov/Wulf, p. 94.

²⁷ LST, 36/48, p. 142.

²⁸ *Nazi Conspiracy...*, Vol. 8, p. 612, *Affidavit C* of Dieter Wisliceny ("This affidavit is substantially the same as the testimony given by Wisliceny [...] before the International Military Tribunal at Nurnberg, 3 January 1946"; see IMT, Vol. 4, pp. 355-373).

addressed jointly to the Chief of the Security Police and SD [Heydrich] and to the Inspector of Concentration Camps [Richard Glücks]. The letter read substantially as follows: 'The Fuehrer has decided that the final solution of the Jewish question is to start immediately. I designate the Chief of the Security Police and SD and the Inspector of Concentration Camps as responsible for the execution of this order. The particulars of the program are to be agreed upon by the Chief of the Security Police and SD and the Inspector of Concentration Camps. I am to be informed currently as to the execution of this order'. The order was signed by Himmler and was dated some time in April 1942.'

Hilberg was therefore well aware of this declaration, and his omission must have been intentional.

To summarize, the alleged extermination order is said to have been issued sometime between June 1941 and April 1942!

In fact, since the earliest alleged order, the one issued to Höss, provided for the extermination of *all* Jews unable to work, it is necessary to postulate two orders, one for the total extermination of all Jews, and one for the partial extermination of some Jews only, with a temporary exemption for Jews able to work, while revoking this exemption for the alleged total-extermination camps of Chełmno, Bełżec, Sobibór and Treblinka!

These mutually contradictory declarations, and the historiographical problems they imply, mean absolutely nothing to Hilberg. His only interest is to extrapolate from them, and surreptitiously insinuate as fact, the arbitrary conjecture of Hitler's alleged extermination decision before the end of the summer of 1941, and an alleged extermination order in the late summer, permitting him to interpret all later documents as a confirmation for this alleged extermination. In so doing, as Robert Jan van Pelt would say, he is creating a purely fictitious "convergence of evidence" between the documents misinterpreted based on the alleged "coded language," and evidence misinterpreted based on the purported extermination decision.

1.7. The Final Objective of Jewish Emigration

The documents relating to the early Jewish deportations, which, for Hilberg, were obviously aimed at extermination fit primarily into this context:

"Deportations were now in the offing. On September 18, 1941, Himmler wrote to Greiser about Hitler's wish to empty the Reich-Protektorat area, and suggested Lodz as a stopover for about 60,000 of the deportees." (p. 419)

Hilberg's treatment of this document is rather superficial. The letter in question says:²⁹

²⁹ Letter from Himmler to Greiser, Sept. 18, 1941. BAK, NS 19/2655, p. 3; reproduced in Witte, p. 50.

"The Führer wishes that the Old Reich and the Protectorate shall be emptied and liberated from Jews as quickly as possible from west to east. I therefore aim at transporting, possibly still this year, the Jews from the Old Reich and the Protectorate initially as a first step into the Eastern territories newly acquired by the Reich two years ago, in order to expel them even further east next spring.

I plan on deporting for the winter approximately 60,000 Jews from the Old Reich and the Protectorate into the Litzmannstadt ghetto, which, as I have heard, has enough space to accommodate them. I ask you not only to understand this measure, which will surely entail difficulties for your Gau, but to support it with all available resources in the general interests of the Reich.

In due time, SS-Gruppenführer Heydrich, who is to implement this Jewish migration, will address himself to you or through SS-Gruppenführer Koppe."

Among other things, this document, which attests to the new National-Socialist policies of transferring the Jews to the occupied eastern territories, refutes Hilberg's insinuations relating to Höppner's letter to Eichmann of July 16, 1941.

Hilberg then goes on to another document:

"On October 10, at a Final Solution conference in the RSHA, Heydrich spoke about possible deportations of 50,000 Jews to Riga and Minsk, and of still others to camps prepared for communists by Einsatzgruppen B and C in the military areas of the occupied USSR." (p. 419)

On p. 932, Hilberg summarizes this document again (giving as his source "Israel Police 1193": his Footnote 24) in the following terms:

"On October 10, 1941, at a 'final solution' conference of the RSHA, Heydrich alluded to Hitler's desire to free the Reich of Jews, if at all possible, by the end of the year. In that connection, the RSHA chief discussed the impending deportations to Lodz, and mentioned Riga and Minsk. He even considered the possibility of shipping Jews to concentration camps set up for Communists by Einsatzgruppen B and C in operational areas."

The source is a prosecution document presented by the Israeli police during the Jerusalem Eichmann Trial and accepted into evidence by the Court as Document T/37(299).

I note first of all that the meeting in question did not take place "in the RSHA," which would have been its main office in Berlin, but in Prague, and it did not concern the "Final Solution," but the "solution of Jewish issues," plural (*"Lösung von Judenfragen"*). The document is in fact titled "Notes from the meeting of October 10, 1941 on the solution to Jewish issues," and the second line confirms that the meeting was called to discuss the measures "for [the] solution of Jewish issues" in the Protectorate and partly in the Old Reich.

Since, according to Hilberg's fallacious interpretation, the "Final Solution" was synonymous with the extermination of the Jews, Hilberg misleads the reader to understand that precisely this was the object of the meeting.

Equally misleading is the following phrase: "In that connection, the RSHA chief discussed the impending deportations to Lodz, and mentioned Riga and Minsk." In this regard, the document says:

"Difficulties arose due to the evacuation. The plan was to begin with it around October 15, to run the transports one by one until November 15, up to some 5,000 Jews – only from Prague. For now, the Litzmannstadt authorities have to be taken into account. Minsk and Riga are to receive 50,000 [Jews]. [...] 5,000 Jews are to be evacuated from Prague over the coming weeks. SS Brigadeführers Nebe and Rasch can accommodate Jews in the camps for Communist inmates in the zone of operations. According to a communication from SS Sturmbannführer Eichmann, this has already been initiated."

Heydrich then mentions Theresienstadt:

"After evacuation from this temporary collection camp (whereby the Jews were already severely decimated) into the eastern areas, the entire area could then be developed into an exemplary German settlement."

The document presents the plan for the future Jewish deportations from Bohemia and Moravia and partly from the Old Reich and has absolutely nothing to do with any extermination intentions. With his cunning set of equivocations, by contrast, Hilberg insinuates that the document is proof of such alleged intentions. The reference to "decimation" in this document is a mere rhetorical device that does not detract from the pursued objectives of evacuation in the eastern territories.³⁰

With his careful game of equivocations, however, Hilberg insinuates that the document is proof of alleged exterminating intentions.

1.8. The Wannsee Conference

Hilberg claims that the Wannsee Conference was convened to resolve

"such knotty problems as intermarriage, the Jews in the armament industry, and the foreign Jews." (pp. 419f.)

He then reports the second paragraph (which contains the term "final solution") from Heydrich's letter of invitation to the officials concerned, dated November 29, 1941, but not the first paragraph, which refers to the task assigned to him by Göring on July 31, 1941 (PS-709):

"On August 31, 1941, the Reich Marshal of the Greater German Reich commissioned me, with the participation of the other central authorities in question, to make all the necessary organizational, factual and material prepara-

³⁰ On the question of "decimation," which is a completely different concept than that of total extermination, see Mattogno/Kues/Graf, pp. 201-212, 276f., 358f., 450f., 507-509.

tions for a comprehensive solution to the Jewish question in Europe and to submit a comprehensive draft to him as soon as possible."

There is therefore a close link between Göring's conferral of responsibility and the Wannsee Conference, which, as I have already stressed, was in fact convened to inform the high government hierarchies of the Party about the new orientation of National-Socialist policies toward the Jews, that is, about the fact that emigration had been replaced by evacuation of the Jews to the East, and to discuss the related problems.

When discussing the Wannsee Conference, Hilberg slips in a memorandum whose title he renders as "Requests and Ideas of the Foreign Office in Connection with the Intended Final Solution of the Jewish Question in Europe," explaining that the

"memorandum was a kind of priority deportation schedule, indicating which countries were to be cleared of Jews first." (p. 421)

The source is "Memorandum by Abteilung Deutschland submitted to *Unrerstaatssekretär* Martin Luther (chief of the division). December 8, 1941, NG-2586-F" (his Footnote 40, *ibid.*).

Hilberg only cites it to bandy the expression "Final Solution," which does not even appear in the document. The title of the document is in fact "*Wünsche und Ideen des Auswärtigen Amts zu der vorgesehenen Gesamtlösung der Judenfrage in Europa*" – "Wishes and ideas of the Foreign Office on the envisaged comprehensive solution to the Jewish question in Europe." The term used, therefore, is "comprehensive solution" ("*Gesamtlösung*"), not "final solution" ("*Endlösung*").

Incredibly, Hilberg mentions this irrelevant document from the Ministry of Foreign Affairs but passes over Luther's fundamental memorandum of August 21, 1942 in complete silence. At the First Zündel Trial, Hilberg declared under cross-examination regarding this document:

"There was a phase in which Jews were deported from Germany to the so-called Government General, into ghettos, prior to the establishment of killing centres, prior to the establishment of death camps.

Now, as he [Luther] is writing this memorandum, these death camps had begun operation, in the case of one of them a month earlier, in the case of the other two, several months earlier; but he is writing a memorandum – we don't know the exact date on which it was drafted – in which he is recapitulating history [of National-Socialist policies between 1939 and 1942].

One aspect of this history was the temporary lodging of Jews from Germany in ghettos of Poland until such time as gas chambers were erected in order to receive them for gassing."

Douglas Christie, Zündel's defense counsel, elicited Hilberg's admission that the memorandum bore the date August 21, 1942, and was an expression of future intentions, to which Hilberg replied that Luther was behind compared to

the information possessed by the SS, or was not aware of the latest developments of National-Socialist Jewish policy.³¹

The superficiality of these explanations reveals that Hilberg omitted discussing the fundamental aspects of this important document in his *opus magnum*, because it severely undermined his theory.³²

Hilberg then returns to the Wannsee Conference, which he summarizes as follows:

"Heydrich opened the conference by announcing that he was the plenipotentiary for the preparation of the 'Final Solution of the Jewish question' in Europe; his office was responsible for the central direction of the 'Final Solution' regardless of boundaries. Heydrich then reviewed the emigration policy and cited statistics on emigrated Jews. Instead of emigration, he continued, the Führer had now given his sanction (Genehmigung) to the evacuation of the Jews to the East as a further 'solution possibility' (Lösungsmöglichkeit)." (pp. 421f.)

Here, as well, he confines his references to the passages that contain the magic term "final solution." By contrast, he does not mention the figures contained in these "statistics on emigrated Jews": 537,000 people are certainly not an insignificant number. He also passes over the immediately following passage in complete silence, because it does not lend itself to his interpretation of what the "final solution" was (NG-2586-G, p. 5):

"However, these actions are only to be considered as fallback procedures, but practical experiences are already being gathered here which are of important significance with regard to the coming final solution of the Jewish question."

Hence, if the evacuation actions to the east were to be considered "fallback procedures" in view of "the coming final solution of the Jewish question," how could these be actions aiming at extermination? The meaning of this phrase is clear from comparison with the following passage of the chapter headlined "Guidelines for the Handling of the Jewish Question" from the so-called "*Braune Mappe*" (Brown Folder), drawn up by Rosenberg on June 20, 1941, and subsequently incorporated into the so-called "*Grüne Mappe*" (Green Folder) of September 1942.³³

"All measures on the Jewish question in the occupied eastern territories must be taken from the point of view that the Jewish question will be resolved generally for all of Europe after the war. They are, therefore, to be designed as preparatory partial measures, and must be coordinated with the decisions otherwise made in this area."

³¹ District Court, pp. 1170f./Rudolf 2020a, pp. 205.

³² Hilberg cites the document in question several times, but only in peripheral matters: for example, FN 87, p. 464; FN 11, p. 577; FN 18f., p. 652; FN 17f., p. 761 and subsequent pages; and FN 71, p. 1076.

³³ "Richtlinien für die Führung der Wirtschaft in den neubesetzten Ostgebieten (*Grüne Mappe*)," Berlin, September 1942. EC-347. IMT, Vol. 36, p. 348.

On the other hand, the experience gained in dealing with the Jewish question in the occupied eastern territories can point the way for the solution of the overall problem, since the Jews in these areas together with the Jews of the General Government form the largest contingent of European Jewry.

Purely vexatious measures are to be avoided in any case as unworthy of a German."

And this is how Hilberg describes the fate of the Jews deported according to the "Wannsee Protocol":

"Next, Heydrich explained what was to happen to the evacuees: they were to be organized into huge labor columns. In the course of this labor utilization, a majority would undoubtedly 'fall away through natural decline [wobei zweifellos ein Grossteil durch natürliche Verminderung ausfallen wird].' The survivors (Restbestand) of this 'natural selection' process, who represented the tenacious hard core of Jewry, would have to be 'treated accordingly' (wird entsprechend behandelt werden müssen), since these Jews had been shown in the light of history to be the dangerous Jews, the people who could rebuild Jewish life. Heydrich did not elaborate on the phrase 'treated accordingly,' although we know from the language of the Einsatzgruppen reports that he meant killing." (p. 422)

First, I shall reproduce the related passage in the German original, and will then give my translation (NG-2586-G, pp. 7f.):

"Unter entsprechender Leitung sollen nun im Zuge der Endlösung die Juden in geeigneter Weise im Osten zum Arbeitseinsatz kommen. In großen Arbeitskolonnen, unter Trennung der Geschlechter, werden die arbeitsfähigen Juden straßenbauend in diese Gebiete geführt, wobei zweifellos ein Großteil durch natürliche Verminderung ausfallen wird.

Der allfällig endlich verbleibende Restbestand wird, da es sich bei diesem zweifellos um den widerstandsfähigsten Teil handelt, entsprechend behandelt werden müssen, da dieser, eine natürliche Auslese darstellend, bei Freilassung als Keimzelle eines neuen jüdischen Aufbaues anzusprechen ist. (Siehe die Erfahrung der Geschichte.)"

"As part of the Final Solution, the Jews are now to be deployed for work in the East in a suitable manner under appropriate guidance. In large labor columns, with the sexes separated, the Jews fit to work are led into these areas building roads, with a large part undoubtedly being lost through natural reduction.

Any eventually, finally remaining stock, as it is undoubtedly the most resistant part, will have to be treated accordingly, since this, being a natural selection, is to be addressed as the nucleus of a new Jewish reconstruction when released. (See the experience of history)."

Hilberg's translation presents a misrepresentation and an error of omission. First of all, "through natural decline" can only refer to natural mortality, hence cannot have referred to any direct or indirect policy of extermination. Next, this is fully confirmed by the words "when released" omitted by Hilberg, as I will explain momentarily.

There is no doubt that, in this context, this expression had a direct relationship with what was called "natürlicher Tod" "natural death" in documents relating to National-Socialist concentration camps, that is, all those deaths that cannot be traced back to any homicide or death sentences imposed by the courts, which were of course unnatural deaths. But "natural reduction" was also a demographic term. For example, in a document dated May 18, 1938 we read (Faludi, p. 187, Doc. 19):

"These figures show an overall reduction in the number of Jews since 1933 of 136,000 people. However, this number is not only due to emigration, but is also increased to a certain extent by the strong natural reduction in the number of Jews, which in 1937 alone amounted to 5,500 people. The fact that the natural decline will increase to a great extent in the coming years can be seen from the following statistics on the age distribution of the Jews of Mosaic Confession in Germany:

<i>1. from 0-20 years</i>	<i>15.5%</i>
<i>2. from 20-45 years</i>	<i>31.8%</i>
<i>3. from 45 years onward</i>	<i>53.7%."</i>

In our present context, "natural reduction" depended on the predominance of elderly cohorts among the deported Jews, but it was also synonymous, or more-exactly, a consequence of the "excess mortality," that is, an excess of deaths over births, as seen for example in the Korherr Report.³⁴ And it is clear that deportation to the East "with the sexes separated," hence preventing any procreation, would "finally" have further increased this excess of deaths over births.

As for the words "when released," the use of this expression, omitted by Hilberg, shows that the SS had in their prospects, albeit as a simple eventuality, the final liberation of the (surviving) Jews. If their intentions had aimed exclusively and irrevocably at extermination, even mentioning any possibility of their eventual release would have been absurd, and this is precisely the reason for Hilberg's omission: to hide this absurdity.

Finally, with regard to the construction of roads to the East, there are important parallels.

A report dated June 22, 1942 sent by the "Government of the General Government – Main Department Construction" to the local "Main Department Labor" reports that in the "maintenance and upgrading road works in the districts of Krakow, Warsaw, Lublin, Radom and Galicia" 18,365 Jews were deployed, who were urgently needed for "important work at the military transit roads of the General Government."³⁵

On October 5, 1942, Luther communicated to the Hungarian Ambassador Döme Sztojaj that "all evacuated Jews, and therefore of course also the Hun-

³⁴ NO-5193, p. 4. The pertinent table shows an excess of Jewish mortality from January 30, 1933 to September 29, 1938 of 61,193 individuals for Germany, 14,509 for Austria to March 13, 1938, and 7,074 for the Protectorate of Bohemia and Moravia to March 16, 1939.

³⁵ APL, sygn. 746, p. 387.

garian Jews, are at first deployed in the East in the construction of roads, and then they will be placed in a Jewish reservation" (Auswärtiges Amt 1963a, p. 26).

In his report of June 30, 1943, SS *Gruppenführer* Friedrich Katzmann spoke of Thoroughfare 4, a road over 2,000 km long which was to connect Berlin to the Caucasus via Galicia and Ukraine. In his area of responsibility, Katzmann had built 160 km of roads using 20,000 Jewish workers housed in 15 concentration camps.³⁶

The "General Plan [for the] East," the German colonization project for the annexed eastern territories, anticipated a highway network linking the individual settlements. For its realization, 230 million working hours were calculated with a total cost of 1.2 million Reichsmarks and the employment of prisoners of war and foreign workers in working columns (*kolonnenweise*).³⁷ When Soviet POWs could not be deployed for this construction anymore, the SS resorted to Jewish inmates (see Schulte 2002).

Hilberg then briefly summarized the rest of the document, accurately mentioning the passages in which the term "*Endlösung*" appears, and adding:

"Gradually the news of the 'Final Solution' seeped through the ranks of the bureaucracy. The knowledge did not come to all officials at once. How much a man knew depended on his proximity to the destructive operations and on his insight into the nature of the destruction process. Seldom, however, was comprehension recorded on paper. When the bureaucrats had to deal with deportation matters, they kept referring to a Jewish 'migration.' In official correspondence the Jews were still 'wandering.' They were 'evacuated' (evakuiert) and 'resettled' (umgesiedelt, ausgesiedelt). They 'wandered off' (wanderten ab) and 'disappeared' (verschwanden)." (p. 423)

These terms were taken from documents not indicated by Hilberg. Playing on the dishonest identification of "final solution" with "destruction process," Hilberg uses this theory of gradual awareness to attempt to explain the fact that later documents continue to speak of deportation to the East. But what they really explain is something quite different. He admits that Heydrich announced at the Wannsee Conference that "Instead of emigration, he continued, the Führer had now given his sanction (*Genehmigung*) to the evacuation of the Jews to the East as a further 'solution possibility' (*Lösungsmöglichkeit*)." and recognizes that the Jews, according to the document, were *really* going to be transferred to the East to be employed in work columns. He only insinuates (dishonestly, by omitting the expression "when released") that the survivors of "natural reduction" were to be killed.

This alleged new orientation of National-Socialist policies, replacing emigration, was communicated to the cognizant authorities – and was therefore

³⁶ L-018. IMT, Vol. 37, p. 393.

³⁷ IfZ, MA 1497, "Generalplan Ost. Rechtliche, wirtschaftliche und räumliche Grundlagen des Ostaufbaues." Presented by SS *Oberführer* Prof. Dr. Konrad Meyer. Berlin-Dahlem, June 1942, pp. 28, 53.

fully in force – on January 20, 1942. But then, how can Hilberg claim that Hitler had already taken the extermination decision before the end of the summer of 1941, and that, at the end of 1941, “by the end of the year the Jews of the Wartheland were being killed in a death camp, Kulmhof”? Why should these Jews not have been included in a general plan to transfer all the European Jews to the East?

This claimed reorientation is also in conflict with the statements of Frank, whom Hilberg adduces in favour of his theory of “destruction.” He anticipates the question with this brief comment:

“In the Generalgouvernement the news of the ‘final solution’ conference was the thought, if not the topic, of the day. Frank was so impatient that he sent Staatssekretär Bühler to Berlin to sound out Heydrich. In personal conversation with the RSHA chief, Bühler found out everything there was to know.” (p. 420)

The source is the government meeting of the General Government of December 16, 1941, PS-2233. In Footnote 38 on that page, Hilberg refers to Josef Bühler’s testimony at the Nuremberg Trial, and states:

“In this testimony Bühler did not disclose how much he had been told. That Bühler had definitely been informed about the projected ‘liquidation’ of the Jews was revealed by Frank in a conference with his main division chiefs on December 16, 1941, Frank Diary, PS-2233. Frank’s remarks were recorded verbatim.”

Hilberg later supplies an ample summary of Frank’s speech in question and cites the passages which are supposed to show that Bühler “had definitely been informed about the projected ‘liquidation’ of the Jews.” The first quotation begins this way:³⁸

“‘I want to say to you quite openly,’ he began, ‘that we shall have to finish with the Jews, one way or another.’” (p. 502)

The second quotation is as follows:

“‘Certainly,’ said Frank, ‘a major migration is about to start. But what is to happen to the Jews? Do you think they will actually be resettled in Ostland villages? We were told in Berlin: Why all this trouble [Scherereien]? We can’t use them in the Ostland either; liquidate them yourselves! Gentlemen, I must ask you to arm yourself against all feelings of sympathy. We have to annihilate the Jews wherever we find them and wherever it is at all possible.’” (p. 502)

The third and last quotation says:

“‘The Jews are for us also very parasitical eaters. We have in the Generalgouvernement an estimated 2,500,000 [a gross overestimate], maybe – together with Mischlinge and all that hangs on [dependants], 3,500,000 Jews. We can’t shoot these 3,500,000 Jews, we can’t poison them, but we will be able to take some kind of action that will lead to an annihilation success, and I am referring

³⁸ For the original German text see PS-2233. IMT, Vol. 29, passages quoted from pp. 502f.

to the measures to be discussed in the Reich. The Generalgouvernement will have to become just as judenfrei as the Reich. Where and how this is going to happen is a task for the agencies which we will have to create and establish here, and I am going to tell you how they will work when the time comes. '" (p. 503)

Hilberg claims that Bühler visited Berlin and had a preliminary meeting with Heydrich *before* the Wannsee Conference (before December 16, 1941, to be exact), because, according to Hilberg, Frank was burning with impatience and wanted some advance news. In reality, Bühler never made this preliminary trip at all, but simply attended the conference. Hilberg was perfectly well aware of this, since Bühler's related testimony at Nuremberg, which Hilberg considered incomplete, began with Frank's above-mentioned speech. At the hearing of April 23, 1946, Dr. Alfred Seidl, defense counsel for Rudolf Hess and Hans Frank, asked Bühler (IMT, Vol. 12, p. 68):

"The Prosecution submitted an extract from Frank's diary in evidence under Number USA-281 (Document Number 2233(d)-PS.)^[38] This is a discussion of Jewish problems. In this connection Frank said, among other things:

'My attitude towards the Jews is based on the expectation that they will disappear; they must go away. I have started negotiations for deporting them to the East. '"

I shall now open a parenthesis. Hilberg himself mentions these negotiations, writing:

"On October 13, 1941, Frank spoke to the Minister for the Occupied Eastern Territories, Rosenberg. On this occasion he raised the question of moving the Generalgouvernement Jews into Rosenberg's new domains. Rosenberg replied that at the moment there was no possibility of such a resettlement. '" (p. 501)

Hilberg's summary of this meeting is not exactly beyond reproach. The related document actually says, in my translation (Berenstein *et al.*, p. 252):

"The governor general then mentioned the possibility of deporting the Jewish population of the general government to the occupied eastern territories. Reich Minister Rosenberg remarked that similar requests had already been made to him by the military administration in Paris.^[39] At the moment, however, he does not see any possibility of implementing such relocation plans. For the future, however, he declared himself ready to promote the emigration of Jews to the East, especially since the intention was to send asocial elements within the Reich to the sparsely populated eastern areas. '"

Now let's return to Dr. Seidl's quote from Dr. Frank's diary, which continues as follows:

"This question will be discussed at a large meeting in Berlin in January, to which I shall send State Secretary Dr. Bühler. This conference is to take place

³⁹ A clear allusion to the proposal by SS *Sturmabführer* Zeitschel dated August 22, 1941 – later approved by Hitler – to resolve the "Jewish Question" by deporting the Jews under German jurisdiction into the eastern occupied territories. See Subchapter 1.2.

at the Reich Security Main Office in the office of SS Obergruppenführer Heydrich. In any case Jewish emigration on a large scale will begin."

This anticipation of the themes of the conference is strictly in accordance with reality. Defense counsel Dr. Seidl then asked Bühler (IMT, Vol. 12, p. 68):

"I ask you now, did the Governor General send you to Berlin for that conference; and if so, what was the subject of the conference?"

Bühler replied (*ibid.*, pp. 68f.):

"Yes, I was sent to the conference and the subject of the conference was the Jewish problem. I might say in advance that from the beginning Jewish questions in the Government General were considered as coming under the jurisdiction of the Higher SS and Police Leader and handled accordingly. The handling of Jewish matters by the state administration was supervised and merely tolerated by the Police.

During the years 1940 and 1941 incredible numbers of people, mostly Jews, were brought into the Government General in spite of the objections and protests of the Governor General and his administration. This completely unexpected, unprepared for, and undesired bringing in of the Jewish population from other territories put the administration of the Government General in an extremely difficult position.

Accommodating these masses, feeding them, and caring for their health—combating epidemics for instance — almost, or rather, definitely overtaxed the capacity of the territory. Particularly threatening was the spread of typhus, not only in the ghettos but also among the Polish population and the Germans in the Government General. It appeared as if that epidemic would spread even to the Reich and to the Eastern Front.

At that moment Heydrich's invitation to the Governor General was received. The conference was originally supposed to take place in November 1941, but it was frequently postponed and it may have taken place in February 1942.

Because of the special problems of the Government General I had asked Heydrich for a personal interview and he received me. On that occasion, among many other things, I described in particular the catastrophic conditions which had resulted from the arbitrary bringing of Jews into the Government General. He replied that for this very reason he had invited the Governor General to the conference. The Reichsführer SS, so he said, had received an order from the Führer to round up all the Jews of Europe and to settle them in the Northeast of Europe, in Russia. I asked him whether this meant that the further arrival of Jews in the Government General would cease, and whether the hundreds of thousands of Jews who had been brought into the Government General without the permission of the Governor General would be moved out again. Heydrich promised me both these things. Heydrich said furthermore that the Führer had given an order that Theresienstadt, a town in the Protectorate, would become a reservation in which old and sick Jews, and weak Jews who could not stand the strains of resettlement, were to be accommodated in the future. This information left me definitely convinced that the resettlement of the Jews, if not for

the sake of the Jews, then for the sake of the reputation and prestige of the German people, would be carried out in a humane fashion. The removal of the Jews from the Government General was subsequently carried out exclusively by the Police."

Bühler's declarations fully comport with the Wannsee Protocol, and this is all the more important since, at the time of his testimony, this document was still unknown. It was introduced into evidence only the year afterward, at the Wilhelmstrasse Trial.

It is therefore not conducive to judge Bühler's statements in the light of Frank's statements, as Hilberg does, but rather Frank's statements in the light of Bühler's. That Frank's statements reflected mere vain personal threats and not real intentions of the Reich government is clear from the fact that, *after* the Wannsee Conference, when he was informed by Bühler of its contents, he made no *threatening* comment any more at all. In fact, the only reference to the Wannsee Conference in Frank's diary as published by Werner Präg and Wolfgang Jacobmeyer is by the editors and concerns the text mentioned above in the government meeting of December 16, 1942 (Präg/Jacobmeyer, p. 457).

Bühler himself asserted during his pre-trial interrogation of February 26, 1946 with reference to Frank's radical declarations, that "the circle to which Dr. Frank spoke, knew to the last man that he was exaggerating."⁴⁰

In contradiction to Hilberg's assertion that Frank "sent Staatssekretär Bühler to Berlin to sound out Heydrich," he writes in Footnote 26, p. 933:

"When Generalgouverneur Frank was in Berlin (middle of December 1941), he was told that 'nothing could be done with the Jews in the Ostland.'"

The reference is still to the government meeting on December 16, 1941. Thus, from this document (PS-2233) Hilberg deduces two visits to Berlin, one by Bühler, and one by Frank, but both visits are fictitious!

How much Frank felt himself accused by his diary, is made clear by the following fact, reported by David Irving (Irving, p. 174):

"On January 11, 1946, Hans Frank's lawyer Alfred Seidl would apply to the court for the former governor-general of Poland to be allowed to use his own diaries, of which he had voluntarily turned over forty volumes to the Seventh Army. Those volumes were now in the courthouse document room, but he too was allowed to use only those extracts that had been picked by the prosecution. Permission was refused."

Instead of the entire diary, a mere selection of it was presented at the trial, which constitutes document PS-2233.⁴¹ It contains all the important elements

⁴⁰ NARA, RG 238, M1270/2, OCCPAC. Interrogation Records Prepared for War Crimes Proceedings at Nuremberg 1945-1947, p. 149.

⁴¹ The prosecution selected passages from 38 volumes. The individual extrapolations were then presented as evidentiary material (*Beweisstücke*). Document US-281 was taken from Volume 17, and contained extracts from the minutes of meetings held between October-December 1941 by the General Government. IMT, Vol. 29, p. 725.

supporting the prosecution's case, yet not a single extract cited by the defense in Frank's favor.

The least that can be said, therefore, is that Hilberg's exposition of the Wannsee Protocol is superficial and inconclusive. Moreover, he completely neglects an essential aspect that remains in the dark in the document: the question of Jews unable to work.

The fate reserved for the Jews is described in two apparently contrasting ways (NG-2586-G, pp. 7f.):

1) *"As part of the Final Solution, the Jews are now to be deployed for work in the East in a suitable manner under appropriate guidance. In large labor columns, with the sexes separated, the Jews fit to work are led into these areas building roads, with a large part undoubtedly being lost through natural reduction."*

2) *"In the course of the practical implementation of the Final Solution, Europe will be combed through from west to east. [...] First the evacuated Jews are taken step by step to so-called transit ghettos, from where they are transported further east."* (Emphases added)

If this distinction is to make any sense, then the second passage must refer to Jews unfit for work. In other words, those able to work would be deported "for work in the East", while those unfit for labor would first be sent to transit ghettos and then "further east." In his speech at the conference, Bühler hoped that the "final solution" would begin with the General Government: "Jews must be removed as quickly as possible from the territory of the General Government," specifying that "Of the approximately 2,500,000 Jews in question, the vast majority are unable to work" (*ibid.*, pp. 14f.) This is a confirmation of the fact that Jews unable to work were to be deported out of the General Government, that is to say "further east".

A note from Luther to Eichmann dated January 10, 1942 confirms this (Auswärtiges Amt 1969, p. 198):

"In response to the telephone inquiries there, it is reported that the governments of Romania, Croatia and Slovakia have given their consent to their Jews living in Germany being deported together with the German Jews into the ghettos toward the east."

A few weeks after the Wannsee Conference, on February 2, 1942, Heydrich explicitly hinted at the future fate of all European Jews, both fit and unfit for work, during a speech before officials and Party members in the Protectorate (Friedländer, 2006, pp. 370f.):

"Those who cannot yet be Germanized may perhaps, with the further development of the Arctic-Ocean region – where we will take over the concentration camps of the Russians, who, to our current knowledge, have around 15-20 million deportees there, and which therefore will be the ideal homeland of the 11 million Jews from Europe in the future – perhaps we can now deploy the

Czechs who cannot be Germanized in the supporting role of a pro-German task as overseers, foremen, etc."

Finally, on page 422, Hilberg trivializes the project to establish a ghetto for the elderly in Theresienstadt, which openly contradicts the extermination policy he attributes to the document:

"The intention is not to evacuate Jews over the age of 65, but to transfer them to an old people's ghetto – Theresienstadt is slated for this."

Immediately afterward, the Wannsee Protocol states that, as of October 31, 1941, about 30% of the 280,000 Jews present in the Old Reich and Austria were over the age of 65 (NG-2586-G, p. 8). It follows that about 84,000 elderly Jews, unable to work and therefore presumed to be the first to be killed, were exempted from the alleged extermination measures. Of course, Hilberg remains absolutely silent about this contradiction.

1.9. Goebbels and the Alleged Extermination of the Jews

To demonstrate the National-Socialist hierarchy's alleged gradual awareness of the extermination plan, Hilberg cites Goebbels as an example:

"When Goebbels found out that the SS and Police Leader in Lublin, Globocnik, was constructing killing centers, he wrote: 'Not much will remain of the Jews... A judgment is being visited upon the Jews [which is] barbaric... The prophecy which the Führer made about them for having brought on a new world war is beginning to come true in a most terrible manner.'" (p. 423)

The source is an entry in Goebbels's diary entry of March 27, 1942 (Hilberg's Footnote 44, *ibid.*).

This entry must be placed in its historical context. On March 7, Goebbels wrote (Fröhlich, Part II, Vol. 3, pp. 431f.; Reuth, pp. 1762f.):

"I read a detailed report from the SD and police regarding the final solution of the Jewish Question. An innumerable number of new viewpoints results from this. The Jewish Question must now be solved within an all-European framework. There are still more than 11 million Jews in Europe. Later at some point they will have to be concentrated initially in the East; possibly an island, such as Madagascar, can be assigned to them after the war. In any case, there can be no peace in Europe until the Jews are utterly shut off (ausgeschaltet) from the European area."

The "detailed report from the SD and police regarding the final solution of the Jewish Question" was the protocol of the Wannsee Conference, from which the figure of 11 million Jews was taken as well. Goebbels affirms that it contained "tremendous number of new viewpoints", which consisted in the solution of the Jewish question "within a pan-European frame" (and no longer just in the territory of "Greater Germany" alone), that is, in the "comprehensive so-

lution" (*Gesamtlösung*) mentioned earlier by deporting Europe's Jews to the East, to be sent elsewhere "after the war," perhaps to Madagascar. The concentration of these 11 million Jews in the East obviously did not imply their biological extermination, since they were to be sent to an island after the war.

Hilberg acknowledges that Goebbels "had received a copy of the protocol of the January 20 conference" (p. 438), therefore he was well aware of the start of the new policy of Jewish deportation to the eastern territories communicated by Heydrich during the conference, and he also knew that it did not involve an "extermination program."

On March 20, Goebbels noted that, in the Jewish question,

"Here the Führer remains implacable. The Jews must get out of Europe, if necessary, using the most brutal means." (Fröhlich, Part II, Vol. 3, p. 513)

Suddenly, on March 27, 1942, the following entry appears in Goebbels's diary (*ibid.*, p. 561; Reuth, p. 1776):

"Beginning with Lublin, the Jews in the General Government are now being evacuated eastward. The procedure is a pretty barbaric one and not to be described here more definitely. Not much will remain of the Jews. On the whole it can be said that about 60 percent of them will have to be liquidated whereas only about 40 percent can be used for forced labor.

The former Gauleiter of Vienna, who is to carry this measure through, is doing it with considerable circumspection and according to a method that does not attract too much attention. A judgment is being visited upon the Jews that, while barbaric, is fully deserved by them."

Less-circumspect historians quote the passage in full; Hilberg, on the other hand, who is more subtle, avoids the embarrassing reference to the 40% who can be deployed for labor (a percentage even higher than that claimed for Auschwitz).

What happened between March 20 and 27, 1942? On March 17, the alleged Belzec extermination camp started operating, but who had decided when to transform the policy of transferring European Jews to the East, outside Europe, in order to resolve the Jewish question "after the war" by assigning them an island, into a program of total extermination?

The decisions communicated on March 16, 1942 by SS *Hauptsturmführer* Hans Höfle, a deputy senior officer of the SS and Police Leader of the Lublin District (Globocnik), contain no reference to the alleged extermination program: Belzec was considered a transit camp for disabled Jews, who would have been deported "across the border" to the eastern territories. Their "shutting off" announced by Goebbels can only be interpreted in this sense, as is confirmed by his reference to Hitler's "prophecy", which, as we have seen, concerned the end of the political role of Jewry in Europe. Goebbels indeed added (*ibid.*):

"The prophesy which the Führer made about them for having brought on a new World War is beginning to come true in a most terrible manner."

The fact, well pointed out by Hilberg, that just then the "prophecy" was being fulfilled, was part of Goebbels's rhetoric, which was no-less-virulent than Frank's. Goebbels had said the same things four months earlier, in an article published in the newspaper *Das Reich* on November 16, 1941 (Goebbels 1941):

"The historic responsibility of world Jewry for the outbreak and widening of this war has been proven so clearly that it does not need to be discussed any further. The Jews wanted war, and now they have it. But the Führer's prophecy of January 30, 1939 to the German Reichstag is also being fulfilled: If international finance Jewry should succeed in plunging the world into war once again, the result will be not the Bolshevization of the world and thereby the victory of the Jews, but rather the destruction of the Jewish race in Europe.

We are seeing the fulfillment of the prophecy. The Jews are receiving a penalty that is certainly hard, but more-than-deserved.^[42] World Jewry erred in adding up the forces available to it for this war, and now is gradually experiencing the destruction that it planned for us, and would have carried out without a second thought if it had possessed the ability."

A little further on, in the entry of March 27, 1942, Goebbels stated:

"The ghettos that will be emptied in the cities of the General Government will now be refilled with Jews thrown out of the Reich. This process is to be repeated from time to time." (Fröhlich, *ibid.*; Reuth, p. 1777)

On April 27, he returned to the evacuation/expulsion policy:⁴³

"I talked to the Führer once more in detail about the Jewish Question. His attitude toward this problem is unrelenting. He absolutely wants to push the Jews out of Europe. That is the right thing to do. The Jews have brought so much misery to our continent that the severest punishment meted out to them is still too mild. Himmler is presently implementing the large resettlement of the Jews from German cities to the eastern ghettos."

It is therefore clear that the German evacuation/expulsion policy had not changed, so the entry of March 27, 1942 must be considered in the light of it.

Moreover, the documents on Jewish deportation to the East deny that there was a "rather barbaric procedure".

At the beginning of January 1942, the "Guidelines for the technical implementation of the evacuation of Jews to the General Government (Trawniki near Lublin)" were issued, which begin with a general consideration:⁴⁴

"For the evacuation of Jews from the Reich territory and the Protectorate of Bohemia and Moravia to the General Government, the following guidelines have been issued, which must be strictly observed in all points."

⁴² Note, by all accounts, that this was well before the "Holocaust" began. Evidently the "penalty" involves being ghettoized, marked with a star, selectively deported to the East and, for those in the battle zone, risk of being shot.

⁴³ Fröhlich, Vol. 4, p. 184; Reuth, p. 1786; the last sentence was omitted from Reuth; here taken from Barth, p. 197.

⁴⁴ Eichmann Trial Document T/1395 [15-18].

The document first sets out the directives concerning "competent evacuation offices," followed by those on "Determining the scope of persons to be evacuated," which begins as follows:

"In the course of these evacuation actions, all Jews can be included (§ 5 of the 1st decree to the Reich-Citizen Law of Nov. 14, 1935, RGBl. I, p. 1333), apart from the following exceptions for the time being:"

Four categories of Jews were exempt from evacuation:

1. Jews who lived in mixed Jewish-German marriages.
2. Jews with foreign citizenship, including Soviet citizens, with the exception of stateless ones, former Polish citizens and those of Luxembourg citizenship.
3. Jews employed in war industries for which the competent authorities had not given the authorization for deportation.

The fourth exempted category is also the most-important one in the present context, so it is worth reporting the text of the document in full:

"4./ Jews

a) aged over 65 years;

b) as well as Jews at the age of 55-65 years who are particularly weak and therefore unfit for transport.

In Jewish marriages, in which one spouse is under 65 years and the other is over 65 years, both spouses can be evacuated, if the considered spouse is not older than 67 years and an attest of a public health officer for the ability to work can be provided for this spouse. No further exceptions are allowed under any circumstances.

(For the Jews not to be deported due to age a future separate regulation will be provided.)

Jewish legal advisers are to be included only in a corresponding relationship to the number of the initially remaining Jews.

Separation of spouses as well as separation of children up to 14 years from the parents is to be avoided."

The transport directives required each train to contain a maximum of 1,000 people and prescribed what each deportee had to bring along:

"Means of payment RM 50.- in Reich Credit Cashier Certificates or 100 Zloty

One suitcase or backpack with outfit items (no bulky items)

Complete clothing (sturdy shoes)

Bed linen with blanket

Provisions for 2 weeks (bread, flour, pearl barley, beans)

Dinnerware (plate or pan with spoon)"

Eichmann's express letter of January 31, 1942 addressed "to all State police (main) offices in the Old Reich (incl. Sudetengau), the State police office in Vienna, the Central Office for Jewish Emigration Vienna", issued the directives for deportations from the Old Reich, specifying (T/730):

"The evacuation of Jews to the East recently carried out in certain areas constitutes the beginning of the final solution of the Jewish question in the Old Reich, Ostmark [Austria] and the Protectorate of Bohemia and Moravia."

Various categories of Jews were exempted from the evacuation, including:

"Jews a) aged over 65 years; b) as well as Jews aged 55-65 years who are particularly weak and therefore unfit for transport." (Emphasis in original)

On March 6, 1942, a meeting on Jewish deportations was held at the RSHA Office IV B 4; in a report dated three days later, we read:

"In his introduction, SS Obersturmführer Eichmann initially spoke about the further evacuation of 55,000 Jews from the Old Reich, as well as from the Ostmark [Austria] and the Protectorate.

Among other things, Prague with 20,000 and Vienna with 18,000 Jews to be evacuated take the biggest share in this connection. The strength of the other transports is regulated proportionally according to the number of Jews still present in the district of each Stapo (main) headquarters. In connection with this, a further transport of 1,000 Jews has been allocated to Düsseldorf." (Emphasis in original; T/37(39), p. 1; cfr. Adler 1958a, p. 9)

The next part of the document must be considered particularly in light of Hilberg's claim that the Jewish extermination decision was allegedly made well before the Wannsee Conference, which took place nearly two months prior to the compilation of this report (*ibid.*):

"In this context SS-Obersturmführer Eichmann emphasized that the issued guidelines, especially with regard to age, infirmity etc., must be closely observed, because during the transport to Riga some 40-45 cases were claimed by the Jewish Elders in Riga via District Commanders Lohse and Meyer to SS-Obergruppenführer Heydrich as wrongfully evacuated. Even though upon closer investigation the majority of these cases proved to be justified evacuations, everything ought to be done to avoid such complaints in the future. Hence SS-Obergruppenführer Heydrich will hold the Stapo heads solely responsible for the implementation of the guidelines in this context.

In order not to further expose individual Stapo posts to 'the temptation of deporting elderly and for them uncomfortable Jews,' SS-Obersturmführer Eichmann explained for reassurance that the Jews left in the Altreich will most probably be deported already during the summer or rather in the fall to Theresienstadt, which is earmarked as an 'elderly ghetto.' This town is currently being evacuated, and already 15 – 20,000 Jews from the Protectorate could temporarily be relocated there. This takes place in order 'to save face' to the outside world."

The guidelines mentioned here are the previously mentioned "Guidelines for the technical implementation of the evacuation of Jews to the General Government (Trawniki near Lublin)." The document in question completely confirms their validity, especially with regard to the prohibition of deporting elderly or weak Jews to the East. Indeed, in order to prevent the local Gestapo units

from illegally inserting them into transports, Eichmann felt compelled to reassure them, announcing that they would be transferred to the "ghetto for the elderly" in Theresienstadt, which was therefore a real "elderly ghetto". If this served to "save face", it does not mean that Theresienstadt was a propaganda ghetto, but that the SS wanted to avoid the reproach of deporting these categories of people. Everything is completely outside the logic of extermination.

Here are the guidelines regarding transports (*ibid.*, pp. 2f.):

"Only empty trains for Russians/worker transports to the Old Reich are available, which are supposed to roll back empty to the General Government and which will now be utilized by the RSHA in agreement with the OKW [Supreme Command of the Wehrmacht]. [...]"

The trains have a capacity of only 700 persons, but 1,000 Jews are to be accommodated in them. It is therefore recommended to timely reserve with the Reichsbahn freight cars for luggage in an adequate number."

The document thus unequivocally demonstrates that no Jewish extermination order existed back then, and that the deportations were planned in a rational way, with the cooperation of the Supreme Command of the Wehrmacht. It also shows that the transports took place in passenger cars, and that freight cars for luggage had to be ordered from the German Railway.

On May 26, 1942, the Essen branch office of the State-Police Headquarters in Düsseldorf sent the central office a report on the distribution of local Jews according to established categories. Out of a total of 654 Jews, 245 were slated for deportation to Theresienstadt, and only 83 were available for "evacuation to the East" (T/1396 [110]).

The guidelines concerning the exemption from deportation of Jews unfit for labor were not mere statements of principle. On May 27, 1942, the State-Police Headquarters of Düsseldorf sent the RSHA a telex summarizing the deportations from its area of cognizance with reference to Eichmann's express letter of January 31, 1942 (T/1395 [89]):

"The Jews slated for the elderly ghetto Theresienstadt are divided as follows:

1. Over 65 years old or frail Jews over 55 years of age 1545, 571 of them male and 974 female."

Then there were 56 spouses of mixed marriages that no longer existed (No. 2), 83 "*Mischlinge*" (mixed-blooded, No. 3), 51 "Jews who were severely injured during the war [WWI] or who have the Wound Badge or high decorations for bravery." The report concludes that

"from the local district, 154 Jews can be deported to the east, and 1735 Jews to the elderly ghetto in Theresienstadt."

Candidates for deportation underwent a medical examination certifying or denying their suitability for work, the results of which were transcribed in a special form called "examination result" signed by a "police-certified physician" (T/1395 [45-48]).

On May 29, 1942 Josef Löwenherz, the head of the Israelite religious community of Vienna, met Eichmann in Berlin, at the RSHA headquarters. On June 1, Löwenherz wrote a file memo in which he wrote that Eichmann had informed him

"that Jews under 65 years of age emigrate to the East, and those over 65 years of age as well as some categories under 65 years, such as seriously war-disabled persons, those decorated during World War I, etc., shall be brought to Theresienstadt for permanent residence.

In accordance with the decree of 16 February 1942, the Czech inhabitants of Theresienstadt have to leave the town until 31 May 1942, so that the whole city area will be at the disposal of the Jews.

As a result, the deportation of the Jews assigned there for permanent residence will be started as well. The administration of the town is to be conducted autonomously by the Jewish Council of Elders. Except for the elderly, a number of several thousands of younger people ought to remain there as well, in order to carry out the necessary tasks in the city and in the country (approximately 250 hectares of land properties are available) and to take care of the old people." (T/821)

Hans Günther Adler reports an order from Himmler to Heydrich dated May 1, 1942 for the transfer to Theresienstadt of 120 sick Jews who were at that time in Munich (Adler 1958a, p. 15):

"120 sick Jews still remain in a Munich hospital. We want to establish this Jewish hospital as a midwives and nurses school for 'Lebensborn.'^[45] Please ensure that the 120 Jews are taken to Theresienstadt as quickly as possible."

On June 6, 1942, Eichmann sent an express letter (*Schnellbrief*) to the State-Police Headquarters in Düsseldorf bearing the heading "Reichssicherheitshauptamt IV B 4 a 2093/42g (391)" with the subject "Evacuation of Jews to Izbica near Lublin," to which the new "Guidelines for the technical implementation of the evacuation of Jews to the East" were attached (T/1396, [128]).

To the four categories of Jews exempted from deportation already indicated, a fifth was added:

"Holder of the Wounded Badge and holder of high awards for bravery (Iron Cross, Class I, Gold Medal for Bravery, etc.)."

As before, the directives prescribed (T/1395 [121-127]):

"When the Jews are unregistered, the destination is not shown in the resident register of the registration offices, but only 'address unknown' or 'emigrated.'"

As for the Lublin District, Polish Jews were being moved further east to make room for Jews from the Reich. The directives of the government office in charge of the transfer, sent as an annex to the local authorities by the district

⁴⁵ "Spring of Life," a National Socialist welfare organization for unmarried mothers.

senior administrative councillor Lothar Weirauch on February 9, 1942, prescribed (Kermisz, p. 15):

"The Lublin District Office, Department of Internal Administration subdepartment Population and Welfare, is responsible to me that the Jews to be relocated receive sufficient accommodation as far as possible. The resettling Jews are allowed to bring sheets and blankets with them. They can also carry 25 kg per person of other luggage and household items. After arriving in their new settlement areas, the Jews must be medically monitored for three weeks. Any suspected typhus case must be reported immediately to the district doctor in charge."

On March 22, a transfer of Jews was carried out from Biłgoraj to Tarnogród, a village located 20 km south of this city. The related report states (*ibid.*, p. 46):

"On March 22, an evacuation of 57 Jewish families from Biłgoraj to Tarnograd occurred with a total of 221 people. Each family received a vehicle to take along the necessary furniture and beds. Custody and surveillance were ensured by the Polish Police and the command of the Special Service. The action went according to plan without incidents. The evacuees were all accommodated in Tarnograd the same day."

It is evident that Goebbels's entry of March 27, 1942 must be considered in the light of these documents, and it is revealing that Hilberg does not mention any of them.

2. The Deportations

2.1. Hilberg and the Einsatzgruppen

2.1.1. The Extermination Order

Before discussing the question of the deportations to the alleged “killing centers,” we must focus on Hilberg’s assertions regarding the *Einsatzgruppen* activities. These activities are in fact a summary of Hilberg’s theory of the “destruction process” of the European Jews:

“The annihilation phase consisted of two major operations. The first was launched on June 22, 1941, with the invasion of the USSR. Small units of the SS and Police were dispatched to Soviet territory, where they killed Jewish inhabitants on the spot. Shortly after these mobile killings had begun, a second operation was instituted, in the course of which the Jewish populations of central, western, and southeastern Europe were transported to camps equipped with gassing installations.” (p. 276)

The historiographical presupposition of this thesis regarding the first “major operation” is an alleged Hitler order, but Hilberg adduces no evidence of its existence.

At the Zündel Trial, defense counsel Douglas Christie noted that Hilberg had written in the first edition of his book on p. 177:⁴⁶

“How was the killing phase brought about? Basically, we are dealing with two of Hitler’s decisions. One order was given in the spring of 1941, [...] Shortly after the mobile operations had begun in the occupied Soviet territories, Hitler handed down his second order.”

The one is said to have been issued to the *Einsatzgruppen*, and the other to the “killing centers.” With regard to the first order, the cross-examination proceeded as follows:⁴⁷

“Q. Is there a footnote to indicate where that order is?”

A. No. This is an introductory passage to a chapter.

Q. On page 177?

A. Yes. This is an introductory passage to an eighty-page chapter.

Q. I didn’t ask you what it was. I asked you if there is a footnote.

⁴⁶ District Court, pp. 829, 851/Rudolf 2020a, pp. 147, 150.

⁴⁷ District Court, pp. 829-831/Rudolf 2020a, p. 147. Q = Christie; A = Hilberg

A. No, there is no footnote here.

Q. What order were you referring to?

A. In this particular case I have elaborated, in my second edition, since there is so much discussion and controversy over the nature of this order. So I could tell you not solely on the basis of what was published here in 1961, if you wish to hear it, but on the basis of all my knowledge to this date, to what I am referring to.

Q. What was the order?

A. Within the high command of the armed forces a plan was made for 'treatment of populations' inside the territories that were to be occupied following the invasion of the U.S.S.R. That order was submitted through channels to Adolph Hitler for his approval. He indicated that he wanted certain editions and changes made in this directive. We have, and I have quoted here, the directive dated March 1941. Excuse me, I am speaking of a directive not a Hitler order.

Q. I am interested in what it says here, one order was given by Hitler — [...]

THE WITNESS: The question was about the Hitler order. There was a draft directive. Hitler wanted changes made in it. The changes were subsequently made in April and were then resubmitted to Adolph [sic] Hitler's approval.

Q. MR. CHRISTIE: Okay. So there is a Hitler order, you say, that was approved by Adolph Hitler in 1941 in April.

A. By April, yes.

Q. By April, or in April?

A. Now you want the exact date.

Q. No, I don't. I want to know whether it was in April.

A. We are talking about several weeks, at the end of March when these discussions took place."

Hilberg stated immediately afterwards that he was referring to the so-called "Kommissarbefehl," the order relating to Soviet commissars:⁴⁸

"A. Adolph Hitler said that he wanted the Jewish Bolshevik Commissars to be liquidated.

Q. That's the order you refer to.

A. Well, that was the first part of it.

Q. I'm sorry I interrupted you. Go ahead.

A. He said that for this task he wanted organs of the S.S. and police to be directly involved and responsible. He then pointed out that for this purpose the military should discuss with the S.S. and police the details. Now, that was the content of the order as described by General Jodl.

Q. So we don't have the order?

A. The order was oral, and all we have are the reflections of Adolph Hitler's words as described by Jodl. We have, however, the words also of other people who were talking to Adolph Hitler which were more direct and more specific, but those words occurred in different contexts, such as Henry [Heinrich]

⁴⁸ District Court, pp. 832-834/Rudolf 2020a, p. 147.

Himmler's words, and words spoken by other people. In any case, the order was oral.

Q. The order was oral, and you don't know what the exact words were, I suppose.

A. You are quite correct. No one knows the exact wording.

Q. No. So you say there is an order to exterminate the Jews from Adolph Hitler that was oral, the content of which you don't know, and apparently nobody knows, and it was in the spring, in fact the month of April, 1941.

A. When I say that we do not know the words, I do not mean the general content. I meant the specific words.

Q. Now, you said it referred to Commissars. Right?

A. Jewish dash Bolshevik Commissars.

Q. Jewish-Bolshevik Commissars. There is a dash in it?

A. Yes, because there was a document and I am quoting Jodl."

Hilberg stated that the document in question had come to light in 1971 and that it could be found in the national archives of West Germany.

Mr. Christie then summarized the data revealed by the cross-examination:⁴⁹

"Q. Mm-hmmm. So really we don't have an order in existence in any written form. We have from you an interpretation of what Mr. Jodl is supposed to have said Adolph Hitler was supposed to have said, which you say was in the Archives of West Germany, and which you say has a dash between Jewish and Bolshevik.

A. That is my best recollection.

Q. Your best recollection.

A. Yes.

Q. So there is a dash in —

A. Well, it's a hyphen.

Q. So it, wasn't just Jewish-Bolshevik Commissars that had to be killed. It was Jewish people, was it?

A. Well, this particular problem is the one that caused a lot of discussion. There is no precise, clear answer as to what the exact wording was. We could only deduce from subsequent explanations by lowerranking individuals who passed on this particular command, particularly to the Einsatzgruppen, what it was that was being ordered.

Q. Oh, this was the Commissars' order to the Einsatzgruppen, was it?

A. Ultimately it was the order not only to the Einsatzgruppen, it was to the armed forces as well.

Q. So I want to understand clearly. This order says 'Annihilate Jewish-Bolshevik Commissars'. Right?

A. Mm-hmmm.

Q. And you interpret that to mean, Annihilate Jewish people and Bolshevik Commissars. Right?

A. Correct."

⁴⁹ District Court, pp. 835-837/Rudolf 2020a, pp. 147f.

In the "definitive," 1985 edition of his book, which, it should be stated again, was already finished at the time of the first Zündel Trial, Hilberg wrote the following about the topic of this exchange:

"A [first] written notation of the [Einsatzgruppen's] mission appeared in the war diary of the OKW's^[50] Wehrmachtführungsstab (WFSt) on March 3, 1941, at a time when invasion plans were already far advanced. The topic of the entry was a draft directive to troop commanders, which had been prepared by Warlimont's office Landesverteidigung in the WFSt, and which had been submitted by WFSt Chief Jodl to Hitler for approval. The war diary contains Jodl's enclosure of Hitler's comments, including a philosophical point defining the coming battle as a confrontation of two world views, and several specific statements, in one of which Hitler declared that the 'Jewish-Bolshevik intelligentsia [Intelligenz]' would have to be 'eliminated [beseitigt].' According to Hitler, these tasks were so difficult that they could not be entrusted to the army. The war diary went on with Jodl's instructions to Warlimont for revising the draft in conformity with Hitler's 'guidelines.' One question to be explored with the Reichsführer-SS, said Jodl, was the introduction of SS and Police organs in the army's operational area. Jodl felt that such a move was needed to assure that Bolshevik chieftains and commissars be 'rendered harmless' without delay. In conclusion, Warlimont was told that he could contact the OKH about the revisions, and that he was to submit a new draft for signature by Keitel on March 13, 1941." (1985, pp. 280f.; 2003, pp. 282f.)

As source, Hilberg adduces: "*Kriegstagebuch des Oberkommandos der Wehrmacht (Wehrmachtführungsstab)*, ed. Percy Schramm and Hans-Adolf Jacobsen (Frankfurt am Main, 1965), vol. 1, pp. 340-342" (his Footnote 8, p. 281 (1985), 283 (2003)). In this work, we read as follows in Hitler's above-mentioned "comments" (Schramm/Jacobsen, Part I, p. 341):

"This coming campaign is more than just a battle of arms; it also leads to a conflict between two worldviews. In order to end this war, given the vastness of the space, it is not enough to defeat the enemy's armed forces. The whole area must be dissolved into states with their own governments, with whom we can make peace. [...]

Today's Russia can no longer be imagined without the socialist idea. It alone can be the domestic political basis for the formation of new states and governments. The Jewish-Bolshevik intelligentsia, as the current 'oppressor' of the people, must be eliminated. The former bourgeois-aristocratic intelligentsia, insofar as it is still present, especially among emigrants, is also ruled out.'"

The document continues as follows:

"In accordance with these guidelines by the Führer, the order must be changed as follows: [...]

It must be examined with the Reichsführer SS whether it is necessary to involve units of the Reichsführer SS in addition to the Secret Field Police already

⁵⁰ *Oberkommando der Wehrmacht: High Command of the Armed Forces.*

there. The necessity to render harmless [=dispose of] all Bolshevik chieftains and commissars suggests that this is so."

It is therefore clear that, according to Hitler's directives, the Jewish-Bolshevik intellectual class had to be "eliminated" within the framework of a profound political reorganization of the territory of the Soviet Union, more for being Bolshevik than for the fact of being Jewish, and Alfred Jodl's instructions placed the accent upon the "Bolshevik chieftains and commissars," not on the Jewish-Bolshevik leaders.

Hilberg continues his narration as follows:

"On the specified date, the revised directive was signed by Keitel. The decisive paragraph was a statement informing the troop commanders that the Führer had charged the Reichsführer-SS with carrying out special tasks in the operational area of the army. Within the framework of these tasks, which were the product of a battle to the finish between two opposing political systems, the Reichsführer-SS would act independently and on his own responsibility. He was going to make sure that military operations would not be disturbed by the implementation of his task. Details would be worked out directly between the OKH^[51] and the Reichsführer-SS. At the start of operations, the border of the USSR would be closed to all nonmilitary traffic, except for police organs dispatched by the Reichsführer-SS pursuant to directive of the Führer. Quarters and supplies for these organs were to be regulated by OKH/GenQu (High Command of the Army/General Quartermaster-Wagner)." (pp. 283, 287; pp. 284-286 contain tables)

Here, Hilberg refers to a "Directive by OKW/L (signed Keitel), March 13, 1941, NOKW-2302" (his Footnote 9, p. 287).

Nevertheless, this directive speaks of "special tasks" (*Sonderaufgaben*) entrusted to Himmler by Hitler, but makes no mention either of "the Jewish-Bolshevik intelligentsia" (Hitler's words) or of "Bolshevik chieftains and commissars" (Jodl's words), let alone of the Jewish population in general. In practice, along the chain of command from Hitler to Keitel, every mention of Judeo-Bolshevism disappears. But then, how could Hilberg seriously and honestly interpret Hitler's original statements as if they constituted an order to "[a]nnihilate Jewish people and Bolshevik Commissars"?

Since during the trial, Hilberg explicitly referred to the discussion of the matter contained in the "definitive" (1985) edition of his book, which refutes his assertion as to the meaning of these instructions, his statements at trial constituted perjury.

Hilberg moreover referred to Otto Ohlendorf's affidavit of November 5, 1945:

"The four commanders of the Einsatzgruppen were briefed by Himmler personally. According to Ohlendorf, the only one of the four who testified after the war, they were informed that an important part of their task would be the elim-

⁵¹ *Oberkommando des Heeres: High Command of the Army.*

ination [Beseitigung] of Jews – men, women, and children – and of Communist functionaries.” (pp. 292f.)

In Footnote 26 on page 293, Hilberg states:

“Affidavit by Ohlendorf, November 5.1945. PS-2620. Ohlendorf’s veracity, and that of others testifying about predeparture orders to kill Jews, has been called into question by Alfred Streim, Die Behandlung sowjetischer Kriegsgefangener im ‘Fall Barbarossa’ (Heidelberg, 1981), pp. 74-93.”

Alfred Streim, a prosecutor working for West Germany’s Center for the Investigation of National-Socialist Crimes in Ludwigsburg, asserted, in fact (Streim, pp. 107f.):

“Ohlendorf’s statements and defense responses regarding the disclosure of the ‘Führer order’ by Streckenbach a few days before marching into the area of ‘Barbarossa’ on the occasion of a work meeting at Pretzsch are false. At the Einsatzgruppen Trial, the former leader of Einsatzgruppe D succeeded in persuading his fellow-defendants to adopt a defense strategy designed by himself, stating that, if the extermination actions against the Jews had been carried out from the start on ‘Führer order’, a milder sentence could be expected.”

In Chapter 5 we shall see that, with regard to the alleged Führer order, Holocaust historiography is groping around completely in the dark.

To be able to adduce Ohlendorf’s sworn statement as proof of his theory, Hilberg is compelled to ignore the statements signed by this SS officer over the course of his trial, which decisively disprove this theory. Interrogated by his defense counsel Rudolf Aschenauer whether he was aware of any plans or directives having as object any extermination based on racial or religious grounds, Ohlendorf assured him that he had never heard of any such plans; in the years 1938, 1939 and 1940, on the contrary, there existed plans for Jewish emigration, advocated by Heydrich with the cooperation of Jewish organizations. In 1941, he himself, Ohlendorf, intervened in favor of individual cases of emigration. When Himmler, in 1941 at Nikolayev, issued the alleged order summarized in Ohlendorf’s statement as cited by Hilberg, Himmler did not mention any race-based extermination (NMT, Vol. 4, p. 245).

I have investigated extensively the question of the claimed extermination order allegedly issued to the *Einsatzgruppen* in another study, to which I refer the reader for details (Mattogno 2018).

2.1.2. The Two Sweeps

Hilberg distinguishes between two “sweeps” of massacres:

“The first sweep was completed toward the end of 1941. It had a limited extension in newly occupied territories of the Crimea and the Caucasus during the spring and summer months of 1942. The second sweep began in the Baltic area in the fall of 1941 and spread through the rest of the occupied territory during

the following year. Hence, while the first sweep was still proceeding in the south, the second had already started in the north." (p. 382)

Between these two "sweeps," Hilberg finds his chance to insert, we know not how, an "intermediate stage" (p. 353) – but "intermediate" to what, if the end of the first sweep is chronologically superimposed upon the beginning of the second? This stage is said to have consisted of ghettoization, with regard to which Hilberg himself writes in further self-contradiction:

"When the civil administration took over part of the occupied territory in July and August of 1941, the mobile killing units had already completed a large part of the ghettoization process." (p. 356)

Which is true, but it contradicts the theory of any general order of extermination of all Russian Jews. In this regard, Streim noted (Streim, p. 114):

"Not compatible with the assumption that the 'Führer order' was disclosed in the period from the end of July to the end of August 1941, however, is that at that time the Einsatzgruppen reported the establishment of ghettos and the registration of Jews 'as ordered,' because ghettoization and registration are not conducive to extermination, but rather to preservation."

This contradiction, observes Streim, could also be explained as preparatory measures for extermination, which is precisely how Hilberg interprets it, asserting that "at least 2,000,000" Jews were still alive, and that, to the Einsatzgruppen, these "masses of bypassed Jews presented a crushing burden" (p. 353). But this explanation does not escape contradiction either, because – as Graf noted (2015, pp. 42-44) – the alleged mass extermination and ghettoization were virtually concurrent, meaning that, if the Einsatzgruppen had really been ordered to ghettoize the Jews, they could not at the same time have received an order to shoot them all *en masse*, and vice-versa. On the other hand, if the Einsatzgruppen had received an order to exterminate all the Jews in Russia, as Hilberg averred, ghettoization with all the problems that it involved could have been a mere exception – even if only temporary – from that order. This in turn would have required another order, of which there is no trace either. Hilberg does not even consider the matter. He writes simply, "The Polish-type ghetto thus made its appearance in the occupied USSR" (p. 356).

2.1.3. The Origins of the "Gas Vans"

On pp. 343f., Hilberg dwells at length on Himmler's well-known visit to Minsk "on August 15, 1941," which I have dealt with in detail elsewhere (Matogno 2018, pp. 283-291). Hilberg reports an anecdote how Himmler, with growing uneasiness, observed the mass shooting of Jews, and after having been informed that this mass slaughter was causing irreparable trauma among the firing squads, Himmler asked to think about "other killing methods more humane than shooting" (p. 344). As his source for this, Hilberg contented himself with citing an article titled "The Life of an SS General" (*Leben eines SS-*

Generals") as published by the Jewish-American periodical *Aufbau* – without bothering to trace the original document, which should not have been difficult for him, given that it is the protocol of a pre-trial interrogation carried out by the Americans. In fact, Hilberg specified:

"My early probing had been concentrated principally on Nuremberg evidence and on stores of captured German records located in the United States at the time." (p. XII)

The source of the statement published by *Aufbau* is known only in the official English translation titled "Declaration von dem Bach," which undoubtedly dates back to March 1946.⁵²

Hilberg later adds:

"The eventual answer to Himmler's request was the gas van. Such a vehicle had already been used in 1940 for the gassing of East Prussian and Pomeranian mental patients at Soldau, a camp located in the former Polish corridor." (p. 344)

Here, he no longer refers to documents as his source, but rather to works of Holocaust literature:

"Wilhelm in Krausnick and Wilhelm, Die Truppe des Weltanschauungskrieges, pp. 543-51. Indictment of Wilhelm Koppe by prosecutor in Bonn, 8 Js 52/60 (1964), pp. 174-89. See also Adalbert Rückerl, NS-Vernichtungslager (Munich, 1977), pp. 258-59" (Footnote 211, p. 344)

However, the first work cited also refers to von dem Bach-Zelewski's account and to other works of Holocaust literature (Krausnik/Wilhelm, Footnote 26, pp. 543f.), and presents a long extract from the post-war interrogation of former Higher SS and Police Leader Friedrich Jeckeln dated December 11, 1945 (*ibid.*, pp. 548-552). Rückerl, on the other hand, limits himself to stating (Rückerl 1979, p. 259):

"During the pre-trial investigations relating to the Soldau Transit Camp, it was stated by witnesses that the Sonderkommando Lange was using gas vans for killings already back then."

Hilberg therefore adduces no documentary evidence whatsoever for the use of the alleged "gas vans." He continues as follows:

"The 1940 model, a product of the RSHA's technical branch (II-D) under Obersturmbannführer Rauff, was equipped with bottled carbon monoxide. A gas chamber on wheels, it was camouflaged with a sign saying 'Kaisers-Kaffee.' Carbon monoxide bottles, however, were too expensive and cumbersome for use in the occupied USSR." (p. 344)

Once again, Hilberg refers to works of Holocaust literature (Footnote 212, p. 345) – three, to be exact, one of which is the German anthology *Nationalsozialistische Massentötungen durch Giftgas* (Kogon *et al.* 1983, pp. 80-86). But

⁵² YVA, O.18-90, pp. 20-81.

here, at the beginning of the chapter titled "Killings in the Gas Vans behind the Front," it is claimed without any documentary evidence (*ibid.*, p. 81; I quote from the translated English edition, 1993, p. 52):

"But the procedures that had been used in the 'euthanasia' operations were not suitable for the occupied territories of the Soviet Union – the transportation of metal tanks of gas over long distances would have proved too difficult."

This is followed by a few pages on the "development of the gas vans," as Hilberg puts it (Footnote 212, *ibid.*), in which the sources consist merely of post-war testimonies by Albert Widmann, Walter Rauff, Friedrich Pradel and Theodor Leidig (*ibid.*, 1993, pp. 52-54).

As I demonstrated in another study, the orthodox narrative about the origins of the "gas vans" has no basis in documentary fact, and the related literature is utterly unreliable and inconclusive (Mattoigno 2017, pp. 9-16; see also Alvarez).

Hilberg then asserts:

"The RSHA's invention lent itself to out-of-sight killing operations in Poland and Serbia. Starting in December 1941, two or three vans were sent to each of the Einsatzgruppen as well." (p. 345)

However, if we follow the *Einsatzgruppen* reports, which Hilberg cites profusely, the victims were all shot. Hilberg adduces not one single document mentioning killing in "gas vans," indeed, he doesn't even care about this problem.

And yet, according to the above-mentioned anecdote, on Himmler's order, executions carried out after August 1941 should have been carried out using other methods of execution, more-humane than firearms, meaning precisely by way of "gas vans." The *Einsatzgruppen* reports' silence is all the odder since, according to the *Enzyklopädie des Holocaust*, a good 250,000 Jews were allegedly murdered by means of "gas vans" "in the occupied territories of the Soviet Union"! (Jäckel *et al.*, p. 597)

2.1.4. The Ghettoes

Hilberg claims that "the mobile killing units were interested only in concentrating the Jews to facilitate the second sweep" (p. 367) and later adds:

"But in August 1942, the mass shootings began." (p. 402)

He describes the method of extermination employed during this "second sweep" on roughly four pages (pp. 402-405). Apart from a document introduced into evidence by the Soviets at Nuremberg (USSR-119(a)), all of his sources merely consist of three post-war affidavits of two witnesses:

- Alfred Metzner, October 15, 1947 (FN 91, p. 403); September 18, 1947 (93, p. 403; FN 97, 99, 101, p. 404; FN 102f., p. 405);
- Hermann Friedrich Graebe, November 10, 1945 (FN 92, 95, p. 403; FN 98, 100, p. 404).

Hilberg later also quotes a few passages from Graebe's affidavit (p. 1188).

In 1965, the German newsmagazine *Der Spiegel* published an article on Graebe's testimony, who, before moving to the United States and obtaining U.S. citizenship (in 1954), called himself Gräbe. His post-war affidavit of November 10, 1945 was accepted into evidence during the Nuremberg International Military Tribunal as Document PS-2992 (IMT, Vol. 31, pp. 441-450). On March 23, 1965, he was declared a *Righteous among the Nations* at Yad Vashem in Jerusalem. *Der Spiegel* wrote ("NS-Prozesse"):

"But this renowned witness to the German past shies away from the German present. He, who had so much to say about violent National-Socialist crimes, no longer wishes to appear before German courts today without full immunity. He has good reason to avoid the Federal Republic [=West Germany]: The public prosecutor's office at Stade is investigating against him – for suspicion of perjury.

Because in the final legal reckoning of the National-Socialist past, serious doubts have been raised as to prosecution witness Graebe's trustworthiness. The Nuremberg/Fürth Jury Court attested in 1963 that he had made 'false statements,' and considered him suspect of perjury; and the Celle Upper District Court also recognized the same year that Graebe was 'at least suspected of negligently swearing a false oath.'"

Gräbe did not return to Germany to clarify his position before the German courts.

For having been a mere preparation "the second sweep," the Russian ghettos had a rather long life. For example, Hilberg writes regarding Vilnius:

"By August and September 1943, the Vilna Ghetto was dissolved. Most of its inmates were sent to Estonia and Latvia, where they were subjected to attrition and shootings, and from where the remainder was subsequently routed to the Stutthof concentration camp. Other thousands were transported to the Sobibór death camp, and still others were rounded up and shot." (p. 398)

The last assertion is simply dumbfounding: the Germans, who had already shot 136,421 Jews in Lithuania (p. 407), instead of shooting a few "other thousands" of Jews from the Vilna Ghetto right there, sent them to die at Sobibór after a journey of over 400 kilometers! Hilberg cites no source, but Arad writes:

"The liquidation of the Vilna ghetto took place on September 23-24, 1943. [...] During the final liquidation, all the Jews were taken outside the ghetto to Rossa Square; there the men were separated from the women and children. The men and women who were able to work were selected and sent to concentration camps – men to Estonia and women to Latvia. About 4,300 to 5,000 elderly women and children were sent to Sobibor in the last days of September 1943." (Arad 1987, p. 137)

However, to back this up, Arad does not refer to any document, but merely to an earlier book by him published in 1982,⁵³ although there he wrote:

"Another 4,300-5,000 women and children were sent to the Maidanek gas chambers." (Arad 1982, p. 432)

Hence, there is no evidence that any elderly inmates and children were "sent to Sobibor in the last days of September 1943."

With reference to the dissolution of the Baltic camps, Hilberg asserts:

"From August 1944 to January 1945, several thousand Jews were transported to concentration camps in the Reich. In a camp in Klooga, Estonia, where the Einsatzgruppe Russland Nord of the Organisation Todt operated a sawmill and barracks production plant with Jewish labor brought up from Lithuania, the inmates were shot just before the arrival of the Red Army." (p. 401)

Hilberg's source is Franz W. Seidler's 1998 book *Die Organisation Todt*, and to a photo showing people lying between a number of logs on page 807 of Gutman's *Encyclopedia of the Holocaust* (FN 83, p. 401). As for the shooting of the Klooga inmates shortly before the arrival of Soviet troops, Hilberg fails to produce even one single documentary source. A critical analysis of this and similar other photos concluded, according to the author, that they were staged by living people posing between fresh wooden logs, while Soviet soldiers were observing this performance (see Kuras).

As for the transferees, we know for certain that 16 Jewish transports carrying a total of 25,043 persons from the Baltic concentration camps reached the Stutthof Camp between July 12 and October 14, 1944, including precisely 10,458 from Kovno (Kaunas), and 14,585 from Riga. These fragmentary transport lists also contain the names of approximately 1,250 "boys" and "girls" between six and fifteen years of age (Mattogno 2018, pp. 230-232).

2.1.5. The Death Toll

The death toll of the Einsatzgruppen, as estimated by Hilberg, is a cause of perplexity. He writes:

"When the Einsatzgruppen crossed the border into the USSR, five million Jews were living under the Soviet flag. The majority of the Soviet Jews were concentrated in the western parts of the country. Four million were living in territories later overrun by the German army:" (p. 295)

These Jews were distributed as follows: 1,910,000 in the "Buffer Territories," and 2,160,000 in the "Old Territories" (p. 295), for a total of 4,070,000.

As for the massacres, Hilberg claims, first of all, with reference to the "first sweep," that a "half million people were shot by the Einsatzgruppen" (p. 304). He then states:

⁵³ Arad 1987, FN 13, p. 413; see Mattogno 2018, Part 1, Subchapter 4.2., "The Liquidation of the Ghettos in the Baltic Countries," pp. 228-234.

"An administrative task of drastic proportions had been tackled successfully, but it was by no means solved. Of 4,000,000 Jews in the area of operations, about 1,500,000 had fled. Five hundred thousand had been killed, and at least 2,000,000 were still alive. To the Einsatzgruppen the masses of bypassed Jews presented a massive burden." (p. 353)

Those remaining Jews were therefore destined for extermination in the "second sweep." But in the final statistics which appear on page 408, Hilberg asserts:

"These partial figures, aggregating more than 900,000, account for only about two-thirds of the total number of Jewish victims in mobile operations. The remainder died in additional shootings by Einsatzgruppen, Higher SS and Police Leaders, Bandenkampfverbände, and the German army, as result of Romanian operations in Odessa-Dalnik and the Golta camp complex, and in the course of privations in ghettos, camps, and the open woods and fields."

On p. 1320, under the heading "Open-air shooting," Hilberg supplies the figure of "1,400,000" victims, which includes everything:

"Einsatzgruppen, Higher SS and Police Leaders, Romanian and German armies in mobile operations; shootings in Galicia during deportations; killings of prisoners of war; and shootings in Serbia and elsewhere."

But if 500,000 Jews were killed in the "first sweep," 2,000,000 were still left after that, and a total of 1,400,000 Jews had been exterminated at the end of all operations, the number of victims of the "second sweep" would have amounted to $(1,400,000 - 500,000 =) 900,000$; but in that case, what happened to the remaining $(2,000,000 - 900,000 =) 1,100,000$ Jews who were never listed, either among the dead or among the survivors?

Of the 900,000 Jews recorded by Hilberg in his above-mentioned "partial figures," a good 363,211 refer to the period between August and November 1942 (p. 408). This data is derived from Document NO-1128,⁵⁴ which is a letter from Himmler to Hitler dated December 29, 1942 regarding "Southern Russia, Ukraine, Bialystok" (FN 113, p. 407). The data contained in this document are not even remotely corroborated by the data contained in the documents on the executions of Jews, and therefore present completely unreliable orders of magnitude (see Mattogno 2018, pp. 242-251).

Hilberg introduces the topic by asserting that, during the summer of 1942, the new wave "was launched without delay, and the feverish pitch of the killing infected the bureaucracy" (p. 393), but instead of documenting the extent of the massacres and the numbers of their respective victims, he limited himself to referring to *how* they were allegedly committed, based, moreover, on the few affidavits listed here in Section 2.1.4. In this context, he makes a fleeting mention of killings in the ghettos of Slonim, Janów (Yanov) and Pinsk (pp. 404-406), but without supplying any figure. These localities were located in the *Reichskommissariat* Ukraine, one of the three administrative areas re-

⁵⁴ A partial translation of this document into English (also classified NO-511) was published in: *Trials of War Criminals*, Vol. 13, pp. 269f.

ferred to in Document NO-1128. Another area was the Białystok District, which Hilberg does not mention anymore in this context in the 2003 edition of his book.

The third area was the *Reichskommissariat Ostland*. Hilberg asserts that there were approximately 100,000 Jews in this region at the end of 1942 (p. 394), then states that a total of 68,000 Jews lived under German control in the ghettos of the Ostland (p. 395) and concludes:

"In conjunction with the antipartisan operations, the stage was set for the destruction of the remaining Ostland ghettos." (p. 396)

But these ghettos, as is known, were liquidated in the years 1943-1944, so they cannot be included in the data contained in Document NO-1128. In this context, Hilberg mentions one single massacre chronologically compatible with it, which is the killing of 1,826 Jews in Byelorussia (p. 395). In conclusion, Hilberg does not even attempt to prove the figure of 363,211 Jews alleged murdered according to Document NO-1128.

The fact that Hilberg cites Document NO-1128 at all, knowing perfectly well that the figures it contains are at least extremely exaggerated, is proof of his carelessness.

2.1.6. "Action 1005"

On p. 406, Hilberg mentions the so-called "Action 1005":

"In June 1942, Himmler ordered the commander of Sonderkommando 4a, Standartenführer Paul Blobel, 'to erase the traces of Einsatzgruppen executions in the East.' Blobel formed a special Kommando with the code designation 1005. The Kommando had the task of digging up graves and burning bodies. Blobel traveled all over the occupied territories, looking for graves and conferring with Security Police officials. Once he took a visitor from the RSHA (Hartl) for a ride and, like a guide showing historical places to a tourist, pointed to the mass graves near Kiev where his own men had killed 34,000 Jews."

The source for Himmler's alleged order is Blobel's affidavit of June 18, 1947, Document NO-3947 (FN 110, *ibid.*). As source for Blobel's alleged guided tour with Hartl, Hilberg refers to Albert Hartl's affidavit of October 9, 1947, NO-5384 (FN 111, *ibid.*). In this affidavit, Hartl stated:

"In March or April 1942, I met Paul Blobel in Kiev. We both were making a trip to the area of the commander in chief in Kiev, Dr. Thomas; on the outskirts of the city, in the vicinity of the cemetery, Blobel showed me a certain place and said that Jews whom he had shot together with his unit were buried there. It was an old tank ditch, which had since been filled in."

Before signing this affidavit, Hartl, who had been arrested on May 26, 1945, had already undergone three interrogations by the Americans, on March 22, 1946, May 18, 1946 and January 9, 1947. In the latter, he had stated:⁵⁵

⁵⁵ NARA, RG 238, M1270, OCCPAC. Interrogation Records Prepared for War Crimes Proceedings

"SS-Standf [Standartenführer] Blobel told me personally that in KIEV he had shot 60,000 [persons] in an antitank ditch and 30,00 in another place."

But in none of the known versions of the claimed executions at Babij Yar were the victims buried in an "antitank ditch". In the "Preamble" of the analysis of the interrogation drawn up by the American investigators we read that Hartl "is known as a boaster of the highest order." In the account of the alleged event he is said to have made in the presence of Gitta Sereny, he fully confirmed the accuracy of this assessment (Sereny, p. 97):

"At one moment – we were driving along a long ravine. I noticed strange movements of the earth: clumps of earth rose into the air as if by their own propulsion – and there was smoke: it was like a low-toned volcano; as if there was burning lava just beneath the earth."

On the alleged "Action 1005," I refer the reader to a study of mine, in which I document that the evidence adduced for its origin, its implementation and its conclusion are a mixture of senseless, at-times-absurd, technically impossible and contradictory testimonies interspersed with very few documents of ambivalent meaning (Mattogno 2018, Part Two).

That said, let's move on to the Jewish deportations to the alleged "killing centers".

2.2. The Purpose of the Deportations

Hilberg claims that the deportations of Western Jews to the East were intended to destroy them, even before the "killing centers" began their operations. Already on p. 213, he postulates this assertion as a proven fact:

"In October 1941, mass deportations began in the Reich. They did not end until the destruction process was over. The object of these movements was not emigration but the annihilation of the Jews."

This assertion is refuted by the evacuation order given by Hitler himself, which appears in a note of October 24, 1941 regarding a "Meetings in Berlin on October 23, 1941 at [Office] IV B 4, chaired by SS-Sturmbannführer Eichmann." The document with the subject "Führer order. (Evacuation of 50,000 Jews from the Old Reich including Ostmark [Austria] and the Protectorate of Bohemia-Moravia)" starts with the following sentence:

"In the period from Nov. 1 until Dec. 4, 50,000 Jews are evacuated from the aforementioned areas to Minsk and Riga."

That such an "evacuation" did not aim at extermination is demonstrated by the fact that, according to the note under discussion, Jews over 60 years old as well

as the sick and infirm, regardless of age, were exempt from deportation, among others.⁵⁶

From these provisions then developed the "Guidelines for the technical implementation of the evacuation of Jews to the General Government (Trawniki near Lublin)" of January 1942, as examined earlier.

Hilberg subsequently claims that the Łódź Ghetto "was to be the recipient of tens of thousands of Jews who were sent [...] to some form of destruction," and adds:

"The late fall months of 1941 were a transition period during which deportations were already under way, but killing centers had not yet been established." (p. 364)

In support of this alleged homicidal intention, almost 600 pages later, Hilberg asserts:

"By the end of the month [of October 1941] the race expert (Sonderdezernent für Rassenpolitik) in Bräutigam's office in the East Ministry, Amtsgerichtsrat Wetzel, drafted a letter in which he stated that Brack was prepared to introduce his gassing apparatus in the East. Brack had offered to send his chemical expert, Dr. Kallmeyer, to Riga, and Eichmann had referred to Riga and Minsk in expressing agreement with the idea. 'All things considered,' wrote Wetzel, 'one need have no reservation about doing away with those Jews who are unable to work, with the Brackian devices [Nach Sachlage, bestehen keine Bedenken wenn diejenigen Juden, die nicht arbeitsfähig sind, mit den Brackschen Hilfsmitteln beseitigt werden]' There were, however, some second thoughts about directing a continuing flow of transports to the icy regions of the occupied USSR. Dr. Kallmeyer, told to wait in Berlin because of the cold in the east, spent Christmas at home. The scene of the action had already been shifted to the Generalgouvernement." (p. 933)

In Footnote 25 on that same page, Hilberg refers to the following source: "Draft memorandum by Wetzel for Lohse and Rosenberg, October 25, 1941, NO-365," but immediately adds: "In Jerusalem, Eichmann declared that he had *not* discussed gas chambers with Wetzel" (emphasis by Hilberg).

This document is described as the "draft" (*Entwurf*) of a letter which, as far as is known, was never sent, and which bears a single handwritten notation at the end, which the analysts of the Staff Evidence Analysis at the Office of US Chief Counsel interpreted as "Wet 25/10." Above this, the letters "N.d.H.M." are said to appear, written faintly in pencil, which are said to mean "*Nachschrift dem Herrn Minister*," "Copy for the Minister,"⁵⁷ except that "*Nachschrift*" does not mean "copy," but rather, "postscript." In the original document, this handwritten addition does not appear. I have discussed this docu-

⁵⁶ YVA, O.53-76, p. 2.

⁵⁷ Translation of Document NO-365. Office of U.S. Chief Counsel. Staff Evidence Analysis, p. 2. NA, Record Group No. 238, NO-365.

ment extensively in another study, to which I refer (Mattogno 2018, pp. 146-152).

The chemist Helmut Kallmeyer is mentioned by Hilberg only on this occasion. In Footnote 32 on p. 934, Hilberg writes:

"Kallmeyer to Stahmer, June 18, 1960, Belzec case, vol. 5, pp. 974-75. In the letter Kallmeyer asserts that he was not needed."

As for Erhard Wetzel, Hilberg says that he was "In Soviet captivity. Released, 1955. Ministerialrat in Lower Saxony. Retired, 1958. Subsequent West German investigations terminated without trial" (p. 1193), which is surprising, considering the contents of the draft letter attributed to him. At any rate, as far as one can tell, no one asked him to confirm the letter's authenticity.

This document, which is addressed to *Reichskommissar für das Ostland* Lohse and relates to the *Solution of the Jewish Question*, begins as follows:

"Referring to my letter of 18 Oct. 1941, you are informed that Oberdienstleiter Brack of the Chancellery of the Fuehrer has declared himself ready to collaborate in the manufacture of the necessary shelters, as well as the gassing devices. At the present time the devices in question are not on hand in the Reich in sufficient numbers; they will first have to be manufactured. Since in Brack's opinion the manufacture of the devices in the Reich will cause more difficulty than if manufactured on the spot, Brack deems it most expedient to send his people directly to Riga, especially his chemist Dr. Kallmeyer, who will have everything further done there." (NO-365)

Since for Hilberg, "the Brackian devices" consisted of the utilization for homicidal purposes of "bottled, chemically pure carbon monoxide" (p. 931), one might wonder what these "gassing devices" consisted of: simple cylinders of carbon monoxide? In that case, production would doubtlessly have been easier in the Reich, contrary to the assertion made in the letter. The passage which precedes the passage cited by Hilberg moreover contradicts the theory of planned homicide:

"On information from Sturmbannfuehrer Eichmann, camps for Jews to be set up in Riga and Minsk to which Jews from the old Reich territory may possibly be sent. At the present time, Jews being deported from the Old Reich are to be sent to Litzmannstadt [Łódź], but also to other camps, to be later used as labor in the East so far as they are able to work."

But the alleged planned homicide also contradicts what Hilberg writes on p. 364:

"On October 11, 1941, the Generalkommissar of Latvia, Dr. Drechsler, was sitting in his private apartment in Riga when a visitor arrived: Brigadefuehrer Dr. Stahlecker, chief of Einsatzgruppe A. Stahlecker informed his surprised host that, in accordance with a 'wish' of the Fuehrer, a 'big concentration camp' was to be established near Riga for Reich and Protektorat Jews. Could Drechsler help out with necessary materials?"

Hilberg's insinuation that the Jews were no longer sent "to the icy regions of the occupied USSR," presumably because they were to be gassed with the phantasmagorical "gassing devices" instead, since the "scene of the action had already been shifted to the Generalgouvernement," is far-fetched and anachronistic, because the evacuation "Führer order" mentioned earlier dated to October 23, and already provided for the deportation of 50,000 Jews "to Minsk or Riga".

With regard to the deportations, Hilberg asserts:

"By November 8, 1941, Lange sent a letter to Lohse, reporting that 50,000 Jews were on the move. Twenty-five thousand were due in Riga, 25,000 in Minsk. A camp was being built at Salaspils, near Riga. Since the Reichskommissar was in Bertin, his political expert, Regierungsrat Trampedach, wrote to the capital to urge that the transports be stopped. The chief of the ministry's Political Division, Dr. Leibbrandt, replied that there was no cause for worry, since the Jews would be sent 'farther east' anyway (that is, they would be killed)." (p. 364)

This interpretation is totally misleading, as shown by the historical context (see Mattogno 2018, pp. 85-100). Here it is worth mentioning the two documents to which Hilberg alludes. On November 9, 1941, Lohse sent Rosenberg a secret telegram, in which he reported the following:⁵⁸

"Security police report carrying out of transport of 50,000 Jews to Ostland. Arrival of the 1st transport in Minsk on November 10, in Riga on November 19. Urgent request to prevent [further] transports, since Jewish camps must be re-located much further east."

On November 13, Dr. George Leibbrandt sent the following telegram to the Reichskommissar for the Ostland Lohse saying:⁵⁹

"Regarding the transport of Jews to the East. Detailed letter underway. Jews come further east. Camps in Riga and Minsk are only provisional measures, so no concerns here."

It follows that, in order to better kill the Jews, Lohse asked to prevent the departure of the transports that were to be exterminated!

A more-serious objection comes from Andrej Angrick and Peter Klein, who comment (Angrick/Klein, p. 189):

"Why this transfer farther east was necessary remains a mystery, but Trampedach seemed to know, at least in the case of Minsk, that the Security Police there in fact wanted to send two arriving transports to Borisov and Bobruisk. This would have meant that the civil-administered General Commissariat Byelorussia would have merely served as another stop along the way for additional evacuations to military administered Rear Area Army Group Center."

⁵⁸ GARF, 7445-2-145, p. 52.

⁵⁹ GARF, 7445-2-145, p. 54. The telegram is written in capital letters without umlaute.

But the railroad situation in Army Group Center refused to permit this during the battle for Moscow."

In support of his theory, Hilberg mentions only two extermination actions involving Western Jews, which would in any case have involved less than 10% of the deportees. Hilberg asserts:

"Meanwhile, other transports were arriving in Kaunas and Minsk. Five thousand Jews from the Reich and the Protektorat were shot in Kaunas by the efficient personnel of Einsatzkommando 3 on November 25 and 29 [1941]." (p. 366)

As his source, Hilberg refers to a report by SS *Standartenführer* Karl Jäger dated December 1, 1941⁶⁰ (FN 42, *ibid.*), which describes the executions in "Fort IX" of 2,934 "evacuees" Jews from Berlin, Munich and Frankfurt upon Main on November 25, 1941, and of 2,000 Jews from Vienna and Breslau on November 29,⁶¹ for a total of 4,934 persons, all members of the five transports. Nonetheless, according to the existing partial data, over 160 inmates from these transports, mostly Jews from the Reich, as well as a few Jews from Austria and the Protectorate, were still alive at Kovno in the summer of 1944, almost two years later.⁶²

The second alleged extermination, mentioned by Hilberg in Footnote 37 on page 365, concerns a transport sent to Riga:

"A transport from Berlin, the first to be directed to the Riga area, departed on November 27 [1941]. Three days later the victims were unloaded in the Rumbula forest and shot."

But here, the source is not even a document, but merely a book published in 1979! (Schneider 1979, pp. 14f., 155).

At the Zündel Trial, Hilberg flatly declared that all the Jewish transports sent to Riga were destined for immediate execution:⁶³

"When you are referring to deportations of Jews to Riga from Berlin and from other German cities, in the late fall of 1941, following the operation of the Einsatzgruppen, the idea was, to the best of my reconstruction of events, that these Jews were to be shipped there in order to be shot upon arrival by Einsatzgruppen personnel stationed in Riga. This was not colonization."

In the footnote mentioned above, Hilberg continues as follows:

"A telephone log kept by Heinrich Himmler in his own handwriting at the Wolfschanze (Hitler's headquarters) contains a cryptic note about a conversation with Heydrich at 1:30 P.M. on November 30. Five words of the entry are:

⁶⁰ The document is said to have been discovered in the central archive of Lithuania at Vilnius in March 1959. Jäger, after his arrest, committed suicide in June 1959, before he could be asked about the authenticity and reliability of the report.

⁶¹ RGVA, 500-1-25/1, p. 113a (p. 5 of the document). The report was published in the documentary appendix of Rückerl 1971.

⁶² AMS, I-IIB-10.

⁶³ District Court, p. 856/Rudolf 2020a, p. 150.

'Judentransport aus Berlin. Keine Liquidierung. [*Jewish transport from Berlin. No liquidation.*]' Facsimile in David Irving, *Hitler's War* (New York, 1977), p. 505. Riga is not mentioned, but no other transport left Berlin during November 27-30, and on December 1 there was another Himmler-Heydrich conversation about 'executions in Riga' (Exekutionen in Riga). See Martin Broszat. 'Hitler und die Genesis der Endlösung,' *Vierteljahrshefte für Zeitgeschichte* 25 (1977): 760-61."

In the passage indicated by Hilberg, Broszat reports the following entry in Himmler's log, dated December 1, 1941 (Broszat 1977, FN 46, p. 761):

"13.15 h, SS-Obergruppenführer Heydrich. Executions at Riga.)"

But this entry does not prove that the Jews deported in the transport of November 27 were shot in Riga. This is simply deduced from the fact that there was talk of "executions," but it is not known in what terms. The editors of Himmler's service diary comment that the annotation referred "probably" ("wahrscheinlich") to the shooting of the transport in question, but this is only a conjecture (Witte/Wildt/Voigt, p. 280, FN 3).

Hilberg concludes his footnote with the following observation:

"Subsequent transports, however, were not killed off immediately."

Of course, this is in blatant contradiction to his theory. In fact, various Jewish transports were directed to the East *after* the inauguration of the alleged "killing centers," bypassing Auschwitz and Treblinka, while other Jewish transports from the West were sent at the same time to these camps for the alleged purpose of extermination.

The "Comprehensive Report from October 16, 1941 to January 31, 1942" contains an entire section titled "Jews from the Reich" which states:⁶⁴

"Jewish transports have been arriving from the Reich at short intervals since December 1940 [recte: 1941]. 20,000 of these Jews were sent to Riga and 7,000 to Minsk. The first 10,000 Jews evacuated to Riga were housed partly in a provisionally extended collection camp, partly in a newly-erected camp of huts in the vicinity of Riga. The other transports were sent to a separate part of the Riga Ghetto at first. Deploying all Jews fit for labor, construction of the camp of huts is being carried out at such a pace that by spring it will be possible to house all evacuated Jews in this camp who survive the winter. Only a small percentage of the Jews from the Reich are fit for work. Approximately 70-80% are women and children as well as elderly people unable to work. The mortality rate is constantly rising, also due to the extraordinarily hard winter. The performance of the few able-bodied Jews from the Reich is satisfactory. As a workforce, they are more valuable than Russian Jews due to the fact that they speak German and are relatively cleaner. The Jews have a remarkable ability to adapt, trying to change the way they live to fit the circumstances.

⁶⁴ RGVA, 500-4-92, pp. 63f.

The crowding of the Jews into the smallest space, which occurs in all ghettos, necessarily leads to a greater danger of epidemics, which we are attempting to prevent through the use of Jewish doctors, insofar as possible. In individual cases, infected, contagious Jews were separated on the pretext of taking them to an old people's home or a hospital, and executed."

Hilberg affirms that "[t]he veto, possibly prompted by arguments from the Reichskommissariat, had evidently been without effect" (FN 37, p. 365), but this presupposes that the transports to Riga were all destined for execution, and that a "veto" was issued only for the one from Berlin – no one knows why. To substantiate this interpretation, he resorts to a little trick, asserting, as we have seen, that "[s]ubsequent transports, however, were not killed off immediately" (so were there other "vetoes"?), which means that the Jews of some transports were killed immediately: this, as he well knew, is false, because after that of November 30, 1941 there were no more executions of entire convoys.

Neither Hilberg nor the other Holocaust historians who have dealt with the question have been able to provide a reasonable explanation of the meaning of "No liquidation," because it leads to senseless conclusions, no matter how it is interpreted from an orthodox point of view. This is due to the fact that this point of view is based on a wrong assumption.

As I have shown in another study, in which I dealt with the issues raised in this subchapter, "No liquidation" did not even refer to a "Jewish transport from Berlin," but was a separate note that more likely concerned public executions in the Protectorate (Mattogno 1918, pp. 208-217).

It is important to point out the fact that many Jewish transports kept being directed to the East *after* the alleged inauguration of the "killing centers." At least 28 transports carrying approximately 1,000 Jews each arrived at Minsk between May 6 and November 28, 1942 (Mattogno/Graf, pp. 199-201). The 24 transports from Vienna followed the Vienna-Lundenburg-Prerau line, and were then directed to Auschwitz by way of Oppeln (Opole) and Tschenstochau (Częstochowa), and continued on to Warsaw. From Warsaw, some transports continued to Volkovysk-Minsk via Białystok, and therefore passed through Malkinia, 4 km from the Treblinka "killing center." Others travelled by way of Siedlce, passing directly through the "killing centers" of Treblinka to the north and Sobibór to the south.

For example, the notice appearing on Timetable No. 40 of the German Central Railway Administration with headquarters in Minsk on May 13, 1942, reads:⁶⁵

"According to an announcement by RBD [Reichsbahndirektion, Reich Rail Administration] Königsberg, there will be a weekly special train (Zugg [sic] 30,9) on Friday/Saturday with about 1,000 persons from Vienna via Białystok-

⁶⁵ *Hauptseisenbahndirektion Mitte, Fahrplananordnung Nr. 40*, dated May 13, 1942. NARB, 378-1-784.

Baranowitsche to Minsk Gbf [freight station] *having the following schedule: [...]*"

And the notice appearing on Timetable No. 517 of the Vienna Railway Administration dated May 18, 1942 indicates the following route for the transports from Vienna to Minsk.⁶⁶

"Vienna Station Aspang – Vienna North Station – Lundenburg – Prerau-Olmütz – Gross Wisternitz – Jägerndorf – Neisse – Oppeln – Częstochowa – Warsaw West Station – Siedlce – Platerow – Czeremcha – Volkovysk – Minsk."

The fragmentary name lists of passengers traveling on the transports from Kovno and Riga to Stutthof during the summer of 1944 mentioned above include at least 959 German Jews. One of these, Berthold Neufeldt, was born on June 17, 1936.⁶⁷ He was deported at the age of 5 or 6 and was still alive in the summer of 1944.

There are at least 102 other survivors of the Jewish deportation from Theresienstadt to Riga on January 9, 1942, and 15 survivors of the deportation of January 15, in addition to another 40 survivors from the deportation of September 1, 1942 to Raasiku, in Estonia. These Jews were liberated from the following locations:

Bergen-Belsen, Bratislava (Pressburg), Bromberg, Buchenwald, Burggraben, Bydhost, Dachau, Danzig, Gottendorf, Gottenhof, Hamburg, Jagala, Kaiserwald, Kaufering, Kieblasse, Kiel, Langenstein, Lauenburg, Kattowitz, Libau, Magdeburg, Neuengamme, Neustadt, Raasiku, Raguhn, Riga, Sachsenhausen, Salaspils, Sophienwalde, Strassenhof, Stutthof, Terezin (Theresienstadt), Torun (Thorn). More than seven survivors of the transport from Theresienstadt to Minsk of November 16, 1941 were liberated at Auschwitz, Bergen-Belsen, Dachau, Flossenbürg, and Terezin (data taken from Kárny).

These transfers did not involve individual persons, but rather entire groups of people, who would have been treated uniformly as a group. If we have evidence that some of them survived, this means that there was no policy to kill them all. This applies for instance to the transports of January 9 and January 15, 1942, of which five respectively four Jews were liberated at Magdeburg, and seven respectively three at Buchenwald.

These persons even survived the hygienic-sanitary catastrophe which swept the German camps in 1945. Therefore, the number of survivors should have been much higher in 1944.

⁶⁶ *Deutsche Reichsbahn. Reichsbahndirektion Wien, Fahrplananordnung Nr. 517*, dated May 18, 1942. NARB, 378-1-784.

⁶⁷ AMS, I-IIB-10, p. 176.

2.3. The Deportations to the "Killing Centers"

In a chapter titled "Deportations" that is over 500 pages long (pp. 409-919), Hilberg deals at great length with the individual countries from which the Jews were deported by the Germans. But do the purpose, preparations, methods, implementation and the destinations of these deportations really comport with Hilberg's theory of a "destruction process" initiated by an order from Hitler "before the summer [of 1941] ended"? In other words, were the deportations really a part of any "destruction process" ordered by Hitler before the end of summer 1941?

In this chapter, I shall deal with these questions as regards France, Serbia, Croatia, Slovakia and Hungary.

2.3.1. France

2.3.1.1. The Documents

Contrary to the claims of some orthodox Holocaust historians, the beginning of the deportations from France had nothing to do with exterminations. For example, Ian Kershaw affirms (Kershaw, p. 166):

"Some Nazi leaders, at least, were well aware by now, what deportation to the east meant. When Goebbels, still pressing to have the Jews of Berlin deported as quickly as possible, referred in mid-December to the deportation of Jews from the occupied part of France to the east, he said it was 'in many cases synonymous with the death penalty'."

On December 12, 1941, the Germans carried out a reprisal operation in Paris following a series of attacks on occupying German forces. 1,043 Jews were arrested, then locked up in the Compiègne Camp. Kershaw refers to an entry in Goebbels's diary of December 14, 1941, which was a commentary on the proclamation by General Carl-Heinrich von Stülpnagel, military commander in France, issued on that day. In addition to the imposition of a fine of one billion francs on the Jews of occupied France, it announced (Daniel/Krumeich, p. 77):

"2. A large number of criminal Jewish-Bolshevik elements are deported to the east for forced labor. [...]"

3. 100 Jews, communists and anarchists who are close to the group of perpetrators are being shot."

This document explicitly states that the purpose of the deportation was forced labor, not killing. Executions actually took place in France by firing squad and concerned the aforementioned "100 Jews, Communists and Anarchists." Therefore, only malicious intent would adduce this passage of Goebbels's diary as evidence of an intention to exterminate the Jews. Especially since here Goebbels's rhetorical "death penalty" concerned "many cases", not all cases.

Here emerges a striking orthodox contradiction regarding Goebbels's state of knowledge, who either knew or did not know, depending on what might serve a current purpose: until the day before March 27, 1942, he knew practi-

cally nothing about plans to exterminate the Jews, but on December 14, 1941, he was already perfectly informed!

The news of Stülpnagel's proclamation reached London immediately. On December 15, the *Jewish Telegraphic Agency* reported the following news from the day before ("French Jews..."):

"The execution of 100 hostages in Paris, including many Jews, the announcement that French Jews will be deported 'east' for hard labor and the imposition of a billion francs fine on Jews in the occupied territory were reported to-day by the Vichy radio.

In Paris, the Vichy radio said, General Von Stuelpnagel, commander of the Nazi occupation forces in France, ordered the execution of 100 hostages, charging that attacks on German soldiers in occupied France were the work of 'an organized Jewish, anarchist, Anglo-Saxon plot' to ruin France.

He also announced that 'a large number of criminal Judeo-Bolshevik elements' will be deported to hard labor in the eastern territories (probably Poland). Other deportations of still greater numbers will follow immediately should there be further attacks, and this independently of any other measures that may be taken."

Even Rosenberg intervened in the affair and urged Hitler "to shoot 100 or more Jewish bankers, lawyers, etc. instead of 100 Frenchmen," because the instigators of the communist bomber plotters were the Jews of London and New York, so it was only just that their French co-religionists paid for it, but "not the small Jews; all leading Jews."⁶⁸ This suggestion was ignored, though.

In fact, the deportation to the East of the Jews from occupied France as a whole was not even related to the reprisal measures, but the implementation of a general decision prior to these events.

On October 8, 1941, Zeitschel sent a letter to SS *Hauptsturmführer* Theodor Dannecker, responsible for Jewish affairs in France stating that the Jewish deportation had already been approved by Himmler (Klarsfeld/Klarsfeld, p. 25):

"On occasion of the last visit of Ambassador Abetz to the headquarters, I gave him the record^[69] you are familiar with, with the suggestion that our Jews in the concentration camp should be deported to the east as soon as possible because of the shortage of camps. On the basis of this record, Ambassador Abetz personally consulted the Reichsführer SS and was promised by him that the Jews in the concentration camp in the occupied area can be deported to the east as soon as the means of transportation permit. I ask you to not give up in this regard, in which I have succeeded in obtaining the Reichsführer's basic consent, and to send a report to Berlin every few weeks with the urgent request that the Jews be deported from occupied France as soon as possible."

⁶⁸ "Aktennotiz für den Führer," December 18, 1941. PS-001, IMT, Vol. 25, pp. 1f.

⁶⁹ Zeitschel's file memo of August 22, 1941.

Moreover, on December 23, 1941, 73 of the 1,043 Jews were released, some of them because they were over the age of 65 or were sick, others because of political pressure. On December 24, the head of the Gestapo, Heinrich Müller, informed the Security Police in France that the announced deportation of the 1,000 Jews was to be postponed for lack of rail transport capacity (Klarsfeld 1983, pp. 32f.).

This was reiterated on January 6, 1942 by the military commander in France in a letter to the representative of the head of the Security Police and the Security Service in Paris (F-967. IMT, Vol. 37, p. 388):

"According to the OKH, the 1,000 Jews made available for the deportation can currently not be deported to the east. Their deportation is not expected to be possible until February or March of this year."

A letter from Eichmann to German Foreign Office of March 10, 1942 informs about the developments (Kempner, p. 186):

"It is intended to deport 1,000 Jews to the Auschwitz Concentration Camp (Upper Silesia) who were arrested on the occasion of the reprisal measures carried out in Paris on December 12, 1941 for the attacks on German Wehrmacht members."

On March 11, Eichmann communicated that, in addition to the 1,000 Jews mentioned above, it was planned to deport another 5,000 to Auschwitz (*ibid.*, p. 189). Finally, on March 20, Rademacher informed Eichmann that the German Foreign Office had no objection to the "deportation of 6,000" Jews to Auschwitz (*ibid.*, p. 192).

In the report dated March 10, 1942, Dannecker wrote, with reference to the meeting held in March at Office IV B 4 of the RSHA, that they could undertake the preliminary negotiations with the French authorities "regarding the deportation of some 5,000 Jews to the East" (RF-1216). Dannecker continued:

"In this regard, the people involved ought to consist initially of Jews fit for work, no more than 55 years old"

The mass deportation of Jews residing in France, as well as of Dutch and Belgian Jews, was decided upon three months later. On June 22, 1942, Eichmann wrote a letter addressed to Consular Adviser Rademacher of the German Foreign Office with the subject "Labor Deployment of Jews from France, Belgium and Holland," in which he wrote (Kempner, p. 199):

"The plan is to deport initially some 40,000 Jews from the occupied French territory, 40,000 Jews from the Netherlands, and 10,000 Jews from Belgium, to Auschwitz Camp for labor deployment, in special trains, running daily, each carrying 1,000 persons, starting in mid-July or early August of this year."

On June 28, Luther transmitted the text of Eichmann's letter to the German embassies at Paris, Brussels and The Hague (NG-183). The persons to be deported was to be limited to "Jews able to work" (*ibid.*).

During this period, the Germans, with their policy of deportating only Jews fit for labor to Auschwitz, aimed essentially at procuring slave-labor manpower, therefore the problem of persons unfit for labor was still marginal. Thus, on June 15, Dannecker wrote a note on the future deportation of Jews from France:

"a) Topic. For military reasons, it will no longer be possible to deport Jews from Germany into the area of eastern operations during the summer. For this reason, the Reichsführer-SS has ordered the transfer to Auschwitz Concentration Camp of larger numbers of Jews from south-eastern Europe (Rumania), or the occupied regions of the West, for the purpose of utilizing their labor. The basic condition is that the Jews (of both sexes) are aged between 16 and 40 years. 10% Jews unfit for work can be deported along with them.

b) Decision. It has been agreed upon that 15,000 Jews from the Netherlands, 10,000 from Belgium and a total of 100,000 from France, including the non-occupied zone, will be deported." (RF-1217)

The "Guidelines for the Evacuation of Jews," issued on June 26, 1942 by the leaders of the Security Police and Security Service in France and signed by proxy by Dannecker, prescribe, in Point 1), that, "within the framework of the evacuation action, all Jews of both sexes between the ages of 16 and 45 and fit for work who are subject to compulsory marking [=wearing the Star of David] can be included" (RF-1221).

A month later, on July 27, 1942, Karl Otto Klingenfuss, an official of the German Foreign Office, communicated to Eichmann (T/448):

"The Foreign Office has basically no objections to the planned deportation to the Auschwitz camp of the specified number of Jews from the occupied French territory, from the Netherlands and Belgium for labor deployment."

A telegram from the German Deputy Ambassador to Paris Rudolf Schleier to the Foreign Office dated September 11, 1942 sums up the National-Socialist Jewish policy in France (Auswärtiges Amt 1974, p. 485):

"In the meantime, the Reich Security Main Office ordered at the beginning of July 1940 [sic] that, for the purpose of the final solution to the Jewish question, Jews should begin to be transported on a larger scale from the areas occupied by Germany for the purpose of labor deployment. The Jewish question should be resolved in these areas by deporting the Jews in stages. As the first stage, stateless Jews should be transported off. The Reich Security Main Office has contacted the Reich Ministry of Transport regarding the provisioning of railway material required for the transport. This has to make available the necessary trains in such a way that from July 17, 1942, 3 trains a week can leave from the unoccupied area of France with 1000 Jews each. Transport material will initially be available until the end of September, but probably even until November 15, 1942. As part of these measures, from July 17 to September 4, 22,931 stateless Jews have been deported to the east, which, together with the

5,138 evacuated earlier, results in a total of 28,069 Jews deported from France."

The problem of the deportation of children and non-able-bodied adults was discussed in July and August. In a memorandum dated July 21, 1942, Dannecker wrote with reference to a telephone conversation the day before (RF-1233):

"The question of the evacuation of children was discussed with SS Obersturmbannführer Eichmann. He decided that, as soon as deportation into the General Government is possible again, children transports can move. SS Obersturmbannführer Novak assured to make possible some 6 transports to the General Government at the end of August–beginning of September, which can contain Jews of all types (including Jews unable to work and elderly Jews)."

It is necessary to point out that, from the official German point of view at that time, Auschwitz was not located in the General Government, but in the territory of the Reich. During that period, 14 Jewish transports reached that camp between July 17 and 31, 1942: four from the Netherlands, two from Slovakia, seven from France, and one whose country of origin is not known (Czech 1990, pp. 198-207). Therefore, the six transports mentioned above, which should have contained children and adults unfit for labor, were not intended to go to Auschwitz, but in fact to the ghettos of the General Government (meaning occupied Poland).

The RSHA later decided differently. On August 13, SS *Sturmbannführer* Rolf Günther sent the SS authorities at Paris a telegram with the subject: "Deportation of Jews to Auschwitz. Here, evacuation of Jewish children," in which he stated that the Jewish children housed in the camps at Pithiviers and Beaune-la-Rolande could be "gradually allocated to the planned transports to Auschwitz," but no transports consisting solely of children were to be permitted.⁷⁰ This provision originated from the RSHA ("according to the instructions of the Reich Security Main Office, trains with only Jewish children may not be deported"), and served an obvious propagandistic purpose. It was therefore decided to mix the Jewish children housed in the camps at Pithiviers and Beaune-la-Rolande with adults, in a proportion of 300 children and 500 to 700 adults, but in no case fewer than 500 (RF-1234).

The first transport carrying a small number of children (approximately 10% of the total) reached Auschwitz already on August 14,⁷¹ although the program drawn up on July 28, 1942 provided for the departure of the first transport with "Jewish children arrested in Paris on July 16 and 17, 1942" on August 19, and another three on 21, 24 and 26 August.⁷²

⁷⁰ CDJC, XXVb-126.

⁷¹ Klarsfeld 1978, table of transports based on the ages of the deportees (unpaginated book).

⁷² Klarsfeld 1983, pp. 292-294. Facsimile of an excerpt from the original document in: Klarsfeld 1978, page relating to Convoy No. 11.

These documents constitute unequivocal proof that the initial intentions of the SS were to deport children and elderly adults unfit for work to the General Government, first directly, and later by way of Auschwitz as a transit camp.

In accordance with the guidelines set forth earlier, the first transports sent to Auschwitz contained exclusively Jews fit for labor who were all duly registered in that camp. The following table summarizes the data relating to the first 18 transports (Czech 1990, on dates indicated).

Date	No. of deportees	Origin	Men registered		Women registered

Total	16,767		10,332		6,435	

The transports originating from Slovakia carried Jews unfit for work only from July 4, and from France from July 17.⁷² As we shall see in the next chapter, Auschwitz served as a transit camp for the Jews deported within the framework of the *Ostwanderung* (migration to the East): those able to work remained at the camp, while those who were not, including children, continued on their way east.

The locations to which at least some of these people were diverted is shown by the report of SS *Untersturmführer* Horst Ahnert on a meeting held on August 28, 1942 at Office IV B 4 of the RSHA. The meeting was organized to discuss the Jewish problem, particularly on the “Jewish evacuation” into the occupied countries, and to discuss the problem of the transports. The evacuation of the Jews to the East was to occur through the Auschwitz Camp. Among the matters discussed, under Point c) we read, in fact:⁷³

⁷³ “Tagung beim Reichssicherheitshauptamt am 28.8.1942 über Judenfragen.” Report from SS *Untersturmführer* Ahnert dated September 1, 1942. CDJC, XXVI-59.

"Inclusion of blankets, shoes, and eating utensils for the transport participants.

It was demanded by the commandant of the Auschwitz internment camp that the necessary blankets, work shoes, and eating utensils are absolutely to be included in the transports. Insofar as this has not been done so far, they are immediately to be sent on to the camp."

Point e) refers to the "purchase of barracks":

"SS-Obersturmbannführer Eichmann has attempted to purchase the barracks ordered by the Befehlshaber der Sicherheitspolizei (commander of the Security Police) at The Hague, effective immediately.

The camp must be built in Russia. The transport of the barracks may be effected in such a way that 3-5 barracks can be carried on each train."

This document is never mentioned by Hilberg for obvious reasons, like all the others that do not fit into his preconceived notion.

Some orthodox simpleton actually tried to erase the import of this document by imaginatively hypothesizing that it contains a blunder, that Ahnert mistakenly wrote "Russland" but really meant "Rheinland," because there was a German project to establish a Jewish "collection camp" in the western part of Germany, precisely in Düsseldorf, in the Rhineland (Rheinland), in fact in North Rhine-Westphalia. Of course, this would entail the insane logistics of first sending the inmates, together with pre-fabricated barracks entrained in the Netherlands, northwest of the Reich, to Auschwitz at the very southeast of the Reich, only to turn them around and send them straight back to the very west of the Reich. Such attempts at rewriting documents in trying to make inconvenient evidence go away is telling. As written, this document further refutes the alleged intentions to exterminate the Jews deported from France to Auschwitz.

On August 17 1942, SS *Standartenführer* Rudolf Siegert, an official of the RSHA's Office Group II C, wrote the following letter to the Reich Minister of Finance (Lichtenstein, insert between pp. 80 and 81):

"As part of the general solution to the Jewish question and to secure the occupation troops in the occupied French territories, Jews are constantly being transported from France to the Reich. First, the evacuated Jews will be accommodated in the Auschwitz Concentration Camp, but a special collection camp is to be built in the western part of the Reich. The barracks required for this are stored in the occupied French territory [and not The Hague] ready for dispatch and can be transported to the Reich immediately after payment of the purchase price of 340,000 RM.

It is intended to dispatch 13 railway trains with Jews to the Reich territory every month. By August 10, 1942, 18 trains have left France for the Auschwitz Camp, causing the following transportation costs:

a) 76,000 RM [from France] up to the Reich border,

b) 439,000 RM from the [Franco-]Reich border to the Auschwitz Camp.

The costs for b) can be reduced significantly in the future by setting up a collection camp in western Germany."

A note by SS *Obersturmführer* Heinz Röthke for Ahnert dated August 26, 1942 (CDJC document, VI-194), contains these questions under Point VIII (Klarsfeld 1983, pp. 365f.):

"When can we count on the construction of the barracks at the Düsseldorf camp? Has construction already begun there? Where exactly should the camp be set up?"

There is not a hint of extermination in any of these documents. Stupefyingly, that didn't stop Hilberg from claiming otherwise anyway. After noting that the payment of deportation transports was complex, because the transports passed through various countries with different currencies, he wrote the following mindboggling comment with reference to Siegert's letter (*École...*, p. 231):

"Les opérations nécessitées par ces transactions étaient si coûteuses et si difficiles qu'à un certain moment on envisagea la possibilité d'établir un camp de mort dans l'Ouest de l'Allemagne pour les Juifs des pays occidentaux."

"The operations necessary for these transactions were so expensive and difficult that at a certain point the possibility was considered to set up a death camp in West Germany for Jews from Western countries."

Hence, for Hilberg, a "collection camp" a "death camp" with the stroke of his pen!

2.3.1.2. Hilberg's Interpretation

Hilberg writes (p. 672):

*"On March 11 [recte: 10, 1942] Eichmann decided to get the Foreign Office's permission to deport the 5,000 Jews to Auschwitz, along with the 1,000 whose deportation was already scheduled."*⁷⁴

These 1,000 Jews were sent to Auschwitz in reprisal for partisan attacks on German soldiers in France (NG-4954).

A few lines on, Hilberg adds:

"On March 18, 1942, an embassy official commented that the appointment of a Higher SS and Police Leader in France (Oberg) would have 'an especially favorable effect on the Final Solution' in the country, and on the 27th the first train left Compiègne for Auschwitz."

Immediately afterwards, with reference to a document dated May 13, which he plucked from Klarsfeld (Klarsfeld 1983, p. 200; cf. Billig, p. 94), Hilberg reports that Lieutenant General Otto Kohl

"revealed himself to the Hauptsturmführer as an absolute opponent of the Jews and a wholehearted supporter of a 'Final Solution to the Jewish problem' with a view to complete annihilation (restloser Vernichtung)" (p. 673)

⁷⁴ These 1,000 Jews were sent to Auschwitz in reprisal for partisan attacks on German soldiers in France. NG-4954.

It is a "memo" by Dannecker dated May 13, 1942 with the subject "Assignment of rolling stock for Jewish transport" which mentions an interview with Generalleutnant Kohl, head of the rail-transport section way, Dannecker reports:

"In the conversation lasting one and a quarter hour, I gave the general an overview of Jewish issues and Jewish policy in France. By so doing, I was able to confirm that he [Kohl] was an implacable enemy of the Jews, and approved a 100% Final Solution of the Jewish Question for the purpose of total annihilation of the adversary."

Then Dannecker reports these words from Kohl:

"If you tell me. 'I want to transport 10,000 or 20,000 Jews from France to the East,' you can definitely count on me to provide the necessary material and the locomotives."

Thus, Dannecker had given Kohl "an overview of Jewish issues and Jewish policy in France", on the basis of which Kohl had stated that he "approved a 100% Final Solution of the Jewish Question for the purpose of total annihilation of the adversary," but at the time the "Jewish policy in France" pursued by Dannecker was the one I outlined earlier.

Hence, if Dannecker's guidelines regarding the deportation of Jews to Auschwitz related as late as June 26, 1942 solely to Jews of both sexes, aged 16 to 45, who were fit for work, precisely because the purpose of their deportation was labor deployment, the phrase "annihilation of the adversary" may not be understood to refer to annihilation in a biological sense.

Hilberg, by contrast, tacitly frames the deportations of Jews from France within the alleged process of "destruction," implying that they were destined for extermination at Auschwitz. Precisely for this reason, he passes in silence over the fact that the 5,000 Jews mentioned earlier had to be Jews *fit for labor*, as well as the fact that *all of them were registered* at Auschwitz. He then gives the game away by writing:

"On June 11 Eichmann called together his experts from The Hague, Brussels, and Paris to discuss further measures. The experts were considering statistics to be used in negotiations with ETRA West. The figure was an initial 100,000. The deportees were to consist of men and women in the age group 16-40, and a sum of 700 Reichsmark per person was mentioned as the transportation fee to be charged the French state. The first train was to roll on July 13." (p. 674)

Such a project obviously aimed at the utilization of Jewish labor, rather than gassing them; but Hilberg simply ignored this fact.

With regard to the case of the Netherlands, Hilberg writes:

"On June 22, 1942, the deportation chief of the RSHA, Eichmann, informed the Jewish affairs expert in the Foreign Office, Rademacher, that arrangements had been concluded with the railways for the deportation of 90,000 Jews from the Netherlands, Belgium, and occupied France to Auschwitz. The Dutch quota was 40,000." (p. 615)

The source is: "Eichmann to Rademacher, June 22, 1942, NG-183" (FN 67, p. 615). Hilberg makes no mention of the fact that this letter had as its subject the "Labor Deployment of Jews from France, Belgium and the Netherlands," which explicitly cites the reason for the deportation of these 90,000 Jews – "for labor deployment to the Auschwitz Camp" – and the fact that the measure regarded, first and foremost "Jews fit for labor" (NG-183).

Hilberg later asserts:

"Now the SS men could go ahead with their plans. On June 26, 1942, Dannecker drew up a set of guidelines (Richtlinien) for the deportation of the French Jews. He fixed the age limits at 16-45 and decided that the deportations could embrace Jews of French nationality as well as those 'stateless' Jews who were not effectively protected by a foreign power. Next he prepared a list of things that the victims were to take along: two pairs of socks, two shirts, two pairs of underdrawers, a towel, a cup, a spoon, etc. For the guidance of the transport command, he itemized the quantities of food to be stocked in the supply car of each train. Since the trains were to be made up of freight cars, he directed that each car be provided with a pail." (p. 676)

These directives are also in contradiction to the alleged plan of exterminating the deportees. What the document says about food supplies is worthy of note:

"Furthermore, a food supply for a total of 14 days (bread, flour, barley, beans etc. in bags) is to be added to the transport in a separate freight car." (RF-1221)

The provisions for a 14-day journey are in accordance with the transfer to Russia mentioned in the report by SS *Untersturmführer* Ahnert of September 1, 1942.

In conclusion, the origins of the Jewish deportations from France, their purpose and their destination, are in open contradiction with Hilberg's theory of the "destruction process," with regard to which he moreover produces no documentary proof whatsoever.

2.3.2. Serbia

Hilberg writes:

"In Russia the German army had been very nervous about the partisans, and that same scourge struck the Germans in Serbia. The Serbs dislike foreign domination in practically any form, and German-occupied Serbia was consequently the scene of continuous partisan warfare. As in the case of Russia, so also in Serbia, the German army reacted to the rebellious outbreaks by shooting hostages, especially Jewish hostages."

In the beginning the shootings were carried out on a relatively small scale. [...] During the late summer of 1941, however, two camps were set up, one in Belgrade, the other in Sabac. At the same time, systematic roundups of Jewish men were set in motion in the entire Serbian territory. Apparently the military was already beginning to think in terms of large-scale shootings of Jews." (p. 729)

He then refers to the proposal of the Plenipotentiary for Foreign Affairs at Belgrade, Felix Benzler, to deport 1,200 Jews from the Šabac Camp, which was on the border at the time. But his suggestion was impracticable.

"Rademacher then turned to Adolf Eichmann for advice. The RSHA's expert on Jewish affairs had a remedy: 'Eichmann proposes shooting.' The idea appealed to Rademacher very much, and on September 13 he wrote Luther that there was really no necessity for deporting the 1,200 Jews in the Sabac camp. The shooting of 'a large number' of hostages would solve the problem just as well.

On September 28, 1941, however, another message was received from Serbia. Benzler now explained that General Böhme, the plenipotentiary commanding general, wanted to deport all 8,000 Jewish men in Serbia. Böhme could not place 8,000 people into camps; besides, the general had heard that deportations had successfully been carried out in other countries, such as the Protektorat." (p. 730)

At the town of Topola, Hilberg continues, a truck convoy was ambushed by partisans. 22 German soldiers were killed immediately. Two days later, General Böhme ordered the execution of 2,100 inmates of the Sabac and Belgrade Camps as a reprisal. The shootings started on October 9 (p. 731).

"At first there was some doubt as to whether the hostage order also applied to women, but that question was clarified in the negative. Only men were to be shot.

The army was now fully involved in the destruction process." (p. 732)

Further along, he writes:

"While the German army was completing the shooting of 4,000 to 5,000 Jewish men in their prime of life, it stopped short of killing the old men, the women, and the children, for 'it was contrary to the viewpoint [Auffassung] of the German soldier and civil servant to take women as hostages,' unless the women were actually wives or relatives of insurgents fighting in the mountains. The Jewish women and children consequently had to be 'evacuated.'" (p. 735)

For Hilberg, as we shall see below, "evacuation" was an obvious euphemism for "killing." But the issue is not that simple. On September 8, 1941, Benzler sent the German Foreign Office a telegram saying (Kempner, pp. 289f.):

"It has been verified that Jews emerged as accomplices in many acts of sabotage and insurgence. It is therefore now urgently necessary to provide in an accelerated manner for the securing and removal of all male Jews. The number to be considered for this purpose may be about 8,000. At present a concentration camp is under construction, but in view of the future development it seems advisable to get these Jews out of the country as soon as possible, i.e. with empty freight barges down the Danube river, in order to disembark them on Romanian territory (islands in the Danube delta). I ask for the creation of the pertinent required prerequisites regarding acceptance on part of Romania."

On 11 September, Luther replied (*ibid.*, p. 290; NG-3354):

"No approval can be given for the deportation of Jews into foreign territory. In this way a solution of the Jewish question will not be achieved. It is suggested to secure the Jews in labor camps and to use them for necessary public labor."

Benzler replied in another telegram the next day, saying:

"Accommodation in labor camps under current internal conditions [is] not possible, because containment [is] not ensured. Jewish camps hamper and endanger even our troops. Therefore, an immediate clearing of the camp with 1,200 Jews in Sabac is necessary, because Sabac [is] combat zone and in the surroundings insurgent gangs with the force of several thousand men have been identified."

He added that the "deportation of initially the male Jews is the essential prerequisite for the re-establishment of orderly conditions." Benzler therefore reiterated his proposal; if it were to be denied once more time, then only the "immediate deportation to the General Government or to Russia" would be left, even though this would imply transport difficulties (*ibid.*, p. 291, facsimile of the document).

Rademacher then involved Eichmann: he called him by telephone on 13 September, taking down a note of the discussion in which reads:

"According to information from Sturmbannführer Eichmann RSHA IV D VI accommodation in Russia and General Government impossible, not even the Jews from Germany can be accommodated there. Eichmann proposes shooting." (*ibid.*, p. 292; NG-3354)

Nonetheless Ribbentrop, according to a note by Walter Weber, embassy advisor to the Foreign Office dated October 2, 1941, decided that it was necessary to get in touch with Himmler to clarify "whether he could not take over 8,000 Jews, in order to bring them to Eastern Poland or elsewhere" (*ibid.*).

On October 25, Rademacher summarized the decisions taken:

"The male Jews are shot by the end of this week, so that the problem raised in the mission's report is solved."

Regarding the "remaining about 20,000 Jews^[75] (women, children and elderly people) as well as about 1,500 Gypsies, of whom the males will also be shot," the decision was the following (Kempner, p. 293):

"As soon as the technical possibility exists within the framework of the comprehensive solution of the Jewish question, the Jews will be deported on the waterways to the reception camps in the East."

All this has nothing to do with programmed "destruction" or a deliberate determination to exterminate the Jews of Serbia because they were Jews. The shootings affected only male Jews as reprisal victims, and on grounds of security, and even this was simply a stop-gap action, because the possibility of de-

⁷⁵ This figure is greatly exaggerated; in April 1941, at the onset of the German occupation, there lived an estimated 16,700 Jews – men and women – in Serbia, including the Banat region; Romano, p. 3.

porting them outside the country was not available. The women and children, by contrast, were to be deported to the East. Since this constituted the alternative to shooting, this deportation was real, and could not be considered a "legend," as claimed by Hilberg (p. 800).

According to Hilberg, women and children were exterminated in the Semlin Camp. In this regard, he supplies the following description:

"In early March, a special vehicle arrived from Berlin. It was a gas van. [...] Every day except Sundays and holidays, batches of women and children were loaded on the van and driven several hundred yards to a damaged Sava River bridge on which traffic had to alternate. On the Belgrade side, the hose was connected with the van's interior and the vehicle moved with the dying Jews through the city to a shooting range where graves had been dug by Serbian prisoners. A small detachment of men from the 64th Police Battalion, under Polizeimeister Wetter, supervised the burial.

*The depopulation of the camp proceeded apace. In March 1942 the inmate count fluctuated between 5,000 and 6,000. In April the number dropped to 2,974, and on May 10 the operation was over. Up to 8,000 died in the camp or in the van. Counting those that were shot, the toll was close to 15,000. Grati-
fied, Dr. Schäfer reported that apart from Jews in mixed marriages there was no longer any Jewish problem in Serbia (keine Judenfrage mehr). At the same time he returned to Berlin the gas van, which was to see further service in White Russia."* (pp. 736-738)

This description, insofar as it concerns the alleged extermination, is not based on documents, but on a book by Christopher Browning (1985), cited by Hilberg three times (FN 39+41, p. 736; FN 43, p. 737).

He adduces not one single document showing that any Jews were actually murdered. The reduction in numbers at the camp pending its closing is also explicable through the deportation of its inmates to the East.

The verdict of the trial against former SS *Oberführer* Emanuel Schäfer, who had been commander of the Security Police and the Security Service in Serbia, as pronounced by the District Court of Cologne on June 20, 1953, mentions various documents on Semlin (Rüter/Fuchs, p. 153):

"From the report of the commanding general of December 20, 1941, it emerges that 'the newly established Jewish and Gypsy Camp in Semlin was brought to 5281 people by December 15, 1941'. In the report of March 10, 1942, under VI it states: '5780 people (mostly women and children) were in the Jewish camp Semlin.'"

The other documents cited there mention variations in the strength of the Semlin Camp, none of them mentions killings. The verdict states further:

"Although, according to a report of March 19, 1942, another 500 Jews were transported from Kosovska-Mitrovica to Semlin, who are not included in the previous figures, the camp occupancy decreased from February 26, 1942 to March 25, 1942 to 5293 Jews. (Compare report from March 10th and March

31st, 1942). According to the report of April 20, 1942, there were still 4005 Jews in the camp on April 15, 1942. According to the report of April 30, 1942, this number fell to 2,974 Jews. In the ten-day report of July 1, 1942, Jews are no longer mentioned." (*ibid.*, pp. 153f.)

The verdict also states that the victims were loaded 25 at a time into the "death vehicle," which was then set in motion. "While driving, the driver used a lever to direct the engine's exhaust gases through a hose into the interior of the vehicle, so that the occupants fell asleep in the manner described above, and died of carbon-monoxide poisoning within a quarter of an hour," then the corpses were unloaded, and the gas van returned to the camp to pick up a new human load (*ibid.*, p. 153).

What device made it possible to divert the vehicle's exhaust gases into the cargo box with a simple "lever"?

As for the alleged extermination, it can easily be calculated that the alleged "gas vans" made $(5,780 \div 25 =)$ 231 gassing trips of half an hour each, that is, at least about 3,500 km (at an average of about 30 km/h) in order to "gas" all these Jews and Gypsies, all of whom could easily have been shot in a single day. And luckily the SS were so attentive to the economic aspects of the extermination that they planned a "death camp" in Germany!

Here it is appropriate to examine the figures of the alleged gassings, which I summarize in this table:

Date	Occupancy	"gassed"	days	"gassed" per day
Dec. 15, 1941	5,281	/		
Feb. 16, 1942	$5,780 + 500 = 6,280$	/		
March 25, 1942	5,293	987	27	37
April 20, 1942	4,005	1,028	31	42
May 30, 1942	2,974	1,031	15	69
Totals		3,046	73	42

In practice, for the first two periods, less than two "gassings" with a full load (25 people per batch) would have been carried out per day, in the third less than three, hence on average less than two!

The arrival of a "gas van" at Semlin is not attested to by any document. Browning refers to a letter from Harald Turner, head of the military administration in Serbia, to Karl Wolff, dated April 11, 1942, from which he quotes the following excerpt:⁷⁶

"Already a few months ago, I shot all the Jews that could be captured in this country, and I had all the Jewish women and children confined to a camp; at the same time, with the assistance of the Security Service, I acquired a 'delousing vehicle' which will now have completely cleared out the camp within about two to four weeks..."

⁷⁶ Browning 1999; for the original document see Alvarez, pp. 339-341.

Nevertheless, as Browning also confirms, the Serbian male Jews were shot in reprisal in their capacity as hostages (Browning 1978, pp. 56-67), and it was Turner himself who created an "obstacle" with regard to the last 1,500 designated hostages, seeking to obtain their deportation through Benzler (*ibid.*, p. 61).

While the shootings are documented, however, no document shows that the decision to deport the Jewish women and children to the East was changed later: when, by whom, and why is this supposed to have happened? Turner's letter speaks only of a "delousing vehicle." On the other hand, Emmanuel Schäfer's telegram to Friedrich Pradel dated June 9, 1942 cited by Hilberg in his FN 48 (p. 738), mentions a "special vehicle" (*Spezialwagen*) shipped by rail from Belgrade to Berlin after the two drivers had "carried out a special assignment," without the slightest mention of gas or killing, so that here as well, writers like Hilberg are compelled to fall back upon "code language." Santiago Alvarez, who subjected these documents to meticulous historico-linguistic analysis, reached the conclusion that they are forgeries fabricated by the Americans.⁷⁷

In summary, the case of Serbia only illustrates cases of reprisal shooting of male Jews. As far as women and children are concerned, the sequence of events has nothing homicidal about it:

- On September 8, 1941, Benzler proposed to move them to an island in the Danube.
- On September 12, he renewed the suggestion of their "immediate deportation to the General Government or to Russia."
- On October 2, Ribbentrop ordered that Himmler should be contacted, so he would decide whether these Jews could be transported "to Eastern Poland or elsewhere."
- on 25 October, it was decided that the "remaining about 20,000 Jews (women, children and elderly people) as well as about 1,500 Gypsies" – except for the males – were to be locked up in a ghetto in Belgrade and then "deported on the waterways to the reception camps in the East," as soon as "the technical possibility exists within the framework of the comprehensive solution of the Jewish question."
- on December 8, 1941, Rademacher wrote the following "memo":⁷⁸

"Ambassador Benzler, who is currently in Berlin, communicated by phone: Regarding the plan for the further treatment of the Serbian Jews, a change had occurred at the Belgrade meeting insofar as the Jews were no longer brought to a Serbian island, but to the Semlin Camp. The initially planned island is submerged. The Croats agreed that the Jews be brought to Semlin as a temporary camp. Ambassador Benzler asked for the Jews to be removed to

⁷⁷ Alvarez, pp. 55-59, 87-92; the documents are reproduced on pp. 291 and 339-342. See also Weckert 2019.

⁷⁸ Auswärtigen Amt 1970, p. 805; original: TNA, GMF 33/346, Serial 482.

the east as soon as possible. I replied that this would by no means be possible before the spring, since the deportation of the Jews from Germany has priority. Deportation in the spring is also still doubtful."

The Serbian Jews (women and children) were sent to Semlin Camp as a "temporary camp" (*"Übergangslager"*), a term synonymous with "transit camp" (*"Durchgangslager"*), waiting to be sent "to the East". This project was part of the real plan for the deportations of Jews from the Reich to the East. In the spring of 1942, the Semlin Camp was gradually emptied according to plans, and a "delousing vehicle" was sent, evidently for the disinfestation of those who were to be relocated.

When is this logical sequence of events supposed to have been broken? How, when, why and by whom would it have been decided to "gas" these Jews? If these questions are not answered sensibly, any claim regarding alleged gassings remains a mere unfounded conjecture.

2.3.3. Croatia

Hilberg lists the camps for Jews created in Croatia. From the Tenje Camp

"In August 1942, a transport was sent to Auschwitz, followed by a second transport in August to Jasenovac. A third transport was directed via Loborgrad to Auschwitz."

"One transport went to Auschwitz" from the Loborgrad Camp (p. 760). According to Czech's *Auschwitz Chronicle*, four transports from Yugoslavia arrived at Auschwitz on August 18, 22, 26 and 30, 1942 (Czech 1990, pp. 222, 225, 227, 230). The strange thing is that, according to Hilberg, there were two "death camps" in Croatian territory: Jasenovac and Stara Gradiška (p. 760). It is therefore unclear why the four above-mentioned transports were sent to Auschwitz instead of being exterminated locally. On the other hand, Hilberg is unusually laconic about these alleged "death camps":

"More than half of Croatian Jewry had been delivered to these camps. Shunted from one to the other, the Jews were marked for attrition and annihilation. They died in this process of typhus, starvation, shootings, torture, drownings, knifings, and blows with hammers to the head." (*ibid.*)

These accusations are not based on any document. In the associated footnote (FN 10, *ibid.*), Hilberg refers "particularly" to "photographs" reproduced in two books describing the crimes committed against the Jews in Yugoslavia. But attempting to prove the existence of two "death camps" on the basis of a few photographs is presumptuous, to say the least. Some of these photographs, originating from the "State Commission for the Investigation of the Atrocities of the Occupying Powers and their Lackeys in Yugoslavia" and introduced into evidence at Nuremberg, allegedly show scenes of "German atrocities" (including the crushing of one victim's head with a huge hammer) which are said to

have been committed against Yugoslavian partisans (IMT, Vol. 30, pp. 403-413).

Hilberg says nothing about the number of alleged victims.

2.3.4. Slovakia

On the beginning of the deportations of Jews from Slovakia, Hilberg asserts:

"In January 1942, the Slovaks repeated the tender [exchanging Slovak expats working in Germany for Jews in Slovakia], mentioning 20,000 Jews. This time Himmler seized the opportunity, instructing the RSHA to place a request through the Foreign Office for the deportation of '20,000 young, strong Jews' to the East." (p. 776)

A few lines down, he adds:

"The exaction consisted of a bill presented by the Reich to the Slovak government for 'shelter, food, clothing, and [professional] retraining [Unterbringung, Verpflegung, Bekleidung und Umschulung].' For these fictitious expenses the charge was not less than 500 Reichsmark per head, or 45 million Reichsmark if all 90,000 Slovak Jews were to be deported. [...] To the surprise of the Foreign Office, the Slovak authorities agreed 'without any German pressure.'" (pp. 776f.)

Here, too, Hilberg distorts the facts. Slovakia undertook the deportation to the East of its own Jews upon the proposal of the Reich government. On February 16, 1942, Luther sent a teletype to the German ambassador at Bratislava informing him that, "within the framework of measures for the Final Solution of the European Jewish Question," the Reich government was prepared to transfer "20,000 young, strong Slovakian Jews" "to the East," effective immediately, where there was a need for labor manpower (T-1078).

As in the case of France, the origins of the Jewish deportations from Slovakia were closely related to the need for labor deployment of Jews fit for work.

With reference to the above-mentioned teletype, Luther wrote in his report to the Minister of Foreign Affairs dated August 21, 1942 (NG-2586-J, pp. 5f.):

"The number of Jews deported to the East in this way was not sufficient to meet the demand for work force there. On directive of the Reichsführer-SS, the Reichssicherheitshauptamt [RSHA] therefore approached the Foreign Ministry in order to ask the Slovak government to make available 20,000 young strong Slovak Jews from Slovakia for deportation to the East. The embassy in Bratislava reported to D III 1002 that the Slovak government took the proposal with eagerness, that preliminary steps could be initiated."

The initial timetable of Jewish transports from Slovakia was drawn up on March 13, 1942, and consisted of ten trains to Auschwitz and ten to Lublin in the following chronological order (Hubenák, pp. 59f.):

Date	Convoy No.	Origin	Destination
March 25	1	Poprad	Auschwitz
March 26	2	Zilina	Lublin
March 27	3	Patrónka	Auschwitz
March 29	4	Sered	Lublin
March 30	5	Novák	Lublin
April 1	6	Patrónka	Auschwitz
April 2	7	Poprad	Auschwitz
April 4	8	Zilina	Lublin
April 6	9	Novák	Lublin
April 7	10	Poprad	Auschwitz
April 8	11	Sered	Lublin
April 10	12	Zilina	Lublin
April 11	13	Patrónka	Auschwitz
April 13	14	Poprad	Auschwitz
April 14	15	Sered	Lublin
April 16	16	Novák	Lublin
April 17	17	Poprad	Auschwitz
April 18	18	Patrónka	Auschwitz
April 20	19	Poprad	Auschwitz
April 21	20	Novák	Lublin

Every transport was to carry 1,000 persons (*ibid.*, pp. 38f.).

On March 24, SS *Obersturmbannführer* Arthur Liebehenschel, head of Office DI (Central Office) of the SS-WVHA (Economic and Administrative Main Office of the SS), sent a teletype to the commander of Lublin POW Camp, SS *Standartenführer* Karl Otto Koch, with the subject "Jews from Slovakia," in which he wrote (Leszczyńska, p. 182):

"As already communicated, the 10,000 (ten thousand) Jews from Slovakia destined for the camp there are being transferred there with special trains starting on March 27, 1942. Every special train carries 1,000 (one thousand) inmates. All trains are routed via the border station Zwardon (Upper Silesia), where each of them arrives at 6:09 in the morning, and during a two-hour stop they are forwarded toward their destination by escort commands of the security police under the supervision of the Kattowitz branch of the state police."

On March 27, an employee of the State Police Office in Kattowitz, a certain Woltersdorf, forwarded a report to Office Group D of the SS-WVHA and two other offices on the first transport of Slovakian Jews to Lublin, bearing the subject "Labor Deployment of 20,000 Jews from Slovakia," stating:

"Arrival of the 2nd train at Zwardon with 1,000 Jews fit for work on March 27, 1942 at 6:52 h. Departure from Zwardon at 8:05 h. for Lublin Concentration Camp. The transport also carried a Jewish doctor, so that the total number is 1,001 persons." (reproduced in Dziadosz/Duszak, Photo 38)

On April 29, the German ambassador at Bratislava transmitted a "verbal note" to the Slovakian government with the subject "Costs for food, clothing and ac-

commodation for Jews transferred from Slovakia to Reich territory," where we read:

"The Jews already transported and others still to be transported from the territory of Slovakia into the territory of the Reich, following preparation and occupational retraining will be deployed for labor services in the General Government and in the occupied Eastern territories.

The housing, provisioning, clothing and occupational retraining of the Jews including their relatives caused expenses which cannot be covered by the initially only small labor output of the Jews, since occupational retraining will show effects only after some period of time, and since only some of those already transported or still to be transported are able to work."

To cover these expenses, the Reich government asked the Slovak government for a reimbursement of 500 Reichsmarks per person, a figure allegedly resulting from previous experience (Hubenák, p. 105).

On May 11, SS *Hauptsturmführer* Wisliceny, Eichmann's representative in Slovakia, wrote the following letter to the Slovak minister of domestic affairs (*ibid.*, pp. 108f.):

"As the Reich Security Main Office, Berlin, informed me telegraphically on May 9, 1942, the possibility exists of accelerating the deportation action of the Jews out of Slovakia, by being able to send additional transports to Auschwitz. However, these transports may only contain only Jews fit for labor, no children. It would then be possible to increase the deportation quota by 5 trains per month. For practical implementation, I permit myself to present the following proposal: When transferring the Jews from the cities, Jews considered fit for labor are picked out and taken to the two camps of Sillein [Zilina] and Poprad."

The proposal was not accepted, because in the month of May, the 19 Jewish transports which left Slovakia were all sent into the district of Lublin, intended for Lubartów, Luków, Międzyrzec Podlaski, Chełm, Dęblin, Puławy, Nałęczów, Rejowiec and Izbica. Overall, approximately 20,000 Jews were deported.⁷⁹

In a letter dated March 24, 1943, Gisi Fleischmann, the well-known Slovak Zionist leader whom Hilberg mentions on p. 780, wrote (Weissmandel, Doc. 23, outside of text):

"However, these days schlichtim [=deportees] brought us reports justifying our small hope that small remains are still there. We received about 200 letters from Deblin-Irena and Konskowola, Lublin District, where, in addition to our

⁷⁹ The list of Jewish transports departing Slovakia in 1942 as preserved in the Moreshet Archives (archive reference: D.1.5705), 18 transports are listed for May 1942 with a total of 18,937 deportees. This does not include the transport from Trebišov on May 4, however, which appears in the evacuation list for the month of May drawn up on April 16, 1942. On the other hand, the summary of deportations carried out in 1942 drawn up by the Slovak Ministry of Foreign Affairs on January 14, 1943, mentions 19 transports for the month of May (Hubenák, pp. 41, 48). The total number of deportees for the month of May was therefore approximately 20,000.

Jews, there are also Belgian ones that have been added during the last few weeks."

It should be noted that, until March 1943, all transports of Jews from Belgium had been routed to Auschwitz (Klarsfeld/Steinberg, pp. 42-45), therefore the Belgian Jews who were in Dęblin-Irena⁸⁰ and Końskowola, a small village some 6 km from Puławy in the Lublin region, necessarily must have come through Auschwitz – as part of the migration to the East mentioned earlier.

The deportations to Auschwitz only began again starting on 19 June 1942.

Hilberg does not say that the "20,000 young, strong Jews" were *really* deported to the East, approximately 10,000 to Auschwitz and 10,000 to Lublin-Majdanek, perhaps because they were not exterminated in these two alleged "killing centers," but rather registered and given work. Therefore, his claim concerning the "'resettlement' legend," a term he mentioned in this context in his 1985 "definitive" edition (p. 728), but deleted in the 2003 edition, also falls apart.

The transports sent to Auschwitz also carried a small percentage of children, all of whom were regularly registered. In the early women's transports there were children between 12 and 16 years of age who were assigned to the so-called children's squad (*Kinderkommando*) and given the easiest work, such as pulling weeds in the Rajsko gardens (Kubica, p. 214).

The 5,094 Slovakian Jews who arrived at Auschwitz between April 17 and July 11, 1942 included 85 children aged 8 to 15. The youngest, Ernst Schwarcz, born August 21, 1934, formed part of the transport of April 19, and was registered under Number 31527. The transport which arrived on April 29 carried 56 children between 11 and 18 years of age. The transport of June 20 carried 9 children aged 11 to 15. The youngest were Markus Ullman, born February 22, 1931, registered under Number 40071, and Paul Schlesinger, born March 2, 1930 and registered under Number 40075 (*ibid.*, pp. 214f.). A large proportion of these deportees perished in the early months of their stay at the camp due to the severe hygienic and sanitary conditions which prevailed there.

Hilberg reports the following anecdote:

"In Budapest, the Papal nuncio, Monsignor Angelo Rotta, received an unsigned, undated Jewish note from Bratislava. It said: 'We are condemned to destruction. With certainty we know that we are to be transported to Poland (Lublin).'" (p. 778)

In the related Footnote 59, Hilberg writes:

"Rotta to Cardinal Maglione, March 13, 1942, enclosing Jewish note, in Secrétairerie d'Etat de sa Sainteté, Actes et documents du Saint Siège relatifs à la Seconde Guerre Mondiale, vol. 8 (Vatican, 1974), pp. 457-58. See also Vatican Secretary of State to Slovak legation, March 14, 1942, expressing anxiety about the imminent expulsion of 80,000 Jews to Galicia and Lublin without regard to religious adherence. Ibid., pp. 459-60."

⁸⁰ Irena is a suburb of Dęblin.

Attached to the letter of March 13, 1942, Nunzio Rotta sent the Vatican "a petition to the Holy Father of the unfortunate Jews of Slovakia threatened with a general expulsion to Poland." The petition, drawn up in German by the Jewish community of Pressburg (Bratislava), begins with these words (*Actes et documents*, Vol. 8, pp. 457f.):

"Holiest Father!

The Jews of the whole of Slovakia, 90,000 souls, turn to Your Holiness for help and rescue. We are doomed. As you certainly know, we are to be transported out to Poland (Lublin)."

Here, there is no mention of "destruction" (as understood by Hilberg: "*Ausrottung*," "*Vernichtung*"), but rather, of "doom" ("*Untergang*"). This actually referred to the pending deportation of the aforementioned 10,000 Jews fit for work to the Lublin-Majdanek Camp for labor deployment.

The letter from the papal secretary of state to the Slovak Delegation of March 14, 1942 contains the following sentence (*ibid.*, p. 460):

"These persons (approximately 80,000) are to be deported to Galicia and in the region of Lublin, and the deportation would be carried out separately for men, women and children."

On May 23, 1942, Karol Sidor, plenipotentiary minister of the Republic of Slovakia before the Holy See, provided Secretary of State Luigi Maglione with a note on the solution to the Jewish question. This note, dated May 8, 1942, was the response to a Holy See request for information of November 12, 1941. After explaining the reasons for the delay in sending the response, the note states:

"But a change occurred regarding the solution to the Jewish question during this period of time [between November 1941 and January 1942]. Negotiations on the solution to the Jewish problem in Europe were held between the Slovak government and the German government, and the emigration of the Slovak Jews was considered as only one part of a broader overall program. Half a million Jews will be sent from Europe to Eastern Europe at the present time. Slovakia would be the first country whose residents of Jewish origin will be accepted by Germany. The emigration of the Jews from France (from the occupied part), from Holland, Belgium, the Protectorate, and the territory of the Reich will be carried out at the same time. Thus, also Hungary expressed its preparedness to send away 800,000 Jews, as stated by the president of the council, Dr. Kallay, in his speech of April 20 of this year.

The Slovak Jews will be placed in various locations in the vicinity of Lublin, where they will remain permanently. The Aryan population will be transferred from those territories, and instead an exclusively Jewish district will be organized with its own administration, where the Jews will be able to live together and provide for their existence through their own labor. Their families will remain united." (*Ibid.*, pp. 542f.)

This is fully confirmed by a file memo of April 10, 1942, of which only the Slovak translation exists. I report the main part:⁸¹

"The president of the government, Dr. Vojtech Tuka, today met with the plenipotentiary of the Reichsführer-SS and Chief of the German Police Himmler and the plenipotentiary of the Reich Marshal Göring, who received the order to resolve the Jewish question in Europe from the Reich Chancellery and the Führer Adolf Hitler. At the meeting it was established that resettlement of Slovak Jews is only part of the plan. The resettlement of half a million Jews from Europe to Eastern Europe is now being implemented. Slovakia is the first state whose Jews the German Reich was ready to take charge of. At the same time, a resettlement of Jews from France (occupied territory), Holland, Belgium, the Protectorate as well as the Reich territory is carried out. Slovak Jews are resettled to some localities in the Lublin area (Lublin District), where they will remain permanently. Families will stay together. From the point of view of international law and citizenship, the Jews will be Schutzbefohlene [German in text; wards] of the German Reich."

On page 787, Hilberg wrote:

"The nuncio in Bratislava, Monsignor Giuseppe Burzio, had a long conversation with Tuka at the beginning of April 1943. Fearing more deportations, Burzio brought up the 'sad reports' about Jewish deportees in Poland and Ukraine (sic). Everyone spoke of it."

The original text says (*ibid.*, Vol. 9, p. 249):

"Your Excellency is undoubtedly aware of the sad news about the atrocious fate of the Jews deported to Poland and Ukraine. The whole world talks about it."

As stated in the introduction to Vol. 9 of the *Actes et documents*, this does not mean that Burzio or Rotta had any reliable news about this (*ibid.*, Vol. 9, pp. 37f.):

"Until 1942 and even more in 1943, the word 'deportation' implied the feeling of a nameless tragedy. What was the real fate of the victims at the end of their deportation? Starting in 1942, the charge d'affaires of the Holy See at Bratislava, Monsignor Burzio, wrote that the deportation 'was equivalent to certain death'.^[82] A few weeks afterwards, the nunzio at Budapest, Angelo Rotta, reported in the same manner the conviction of Jewish circles in Hungary that the Slovakian deportees were 'destined in large part for certain death'. A year later, in his conversation with Minister Tuka, Monsignor Burzio is said to have made reference to the 'sad news about the atrocious fate of the Jews deported to Poland and Ukraine'. In the meantime, the news of the treatment inflicted upon the Polish Jews or non-Jews in the concentration camps had been broad-

⁸¹ Engel *et al.*, pp. 6f. (my numbering, as the book is unpaginated).

⁸² The exact text reads: "Deportation 80,000 persons into Poland at the mercy of the Germans is equivalent to a certain death sentence for a great many of them." *Actes et documents*, Vol. 8, p. 453.

ly disseminated by the Polish government in exile. The world, including the papal representatives in the eastern countries, was probably aware of the fact that a special treatment was reserved for the Jews, that they were being exterminated upon arrival, at least those incapable of doing any work?”

The question is obviously rhetorical. The source of the news, by contrast, is perfectly typical: the Polish government in exile in London, that is, the largest anti-German propaganda machine on the planet at that time.

The above-mentioned statements do, however, contain one significant reference: the destination of the deportations was not just Poland, but Galicia and the Ukraine, regions to the east of the “killing centers” or even the Bełżec and Sobibór Transit Camps.

In 1942, the deportation of the Slovakian Jews to the region of Lublin was carried out as shown in the following table (Mattogno/Graf, pp. 242-244):

Departure Date	Destination	# of Deportees
27 March 1942	Lublin	1,000
30 March 1942	Lublin	1,000
31 March 1942	Lublin	1,003
5 April 1942	Lublin	1,495
12 April 1942	Lubartów	1,040
14 April 1942	Lubartów	1,038
16 April 1942	Rejowiec	1,040
20 April 1942	Rejowiec	1,030
22 April 1942	Nałęczów	1,001
27 April 1942	Nałęczów	1,251
5 May 1942	Lubartów	1,040
6 May 1942	Łuków	1,038
7 May 1942	Łuków	1,040
8 May 1942	Międzyrzec Podl.	1,001
11 May 1942	Chełm	1,002
12 May 1942	Chełm	1,002
13 May 1942	Dęblin	1,040
14 May 1942	Dęblin	1,040
17 May 1942	Puławy	1,028
18 May 1942	Nałęczów	1,025
19 May 1942	Nałęczów	1,005
20 May 1942	Puławy	1,001
23 May 1942	Rejowiec	1,630
24 May 1942	Rejowiec	1,022
25 May 1942	Rejowiec	1,000
26 May 1942	Nałęczów	1,000
29 May 1942	Izbica	1,052
30 May 1942	Izbica	1,000
1 June 1942	Sobibór	1,000
2 June 1942	Sobibór	1,014
5 June 1942	Sobibór	1,000
6 June 1942	Sobibór	1,001

Departure Date	Destination	# of Deportees
8 June 1942	Sobibór	1,000
9 June 1942	Sobibór	1,010
11 June 1942	Sobibór	1,000
12 June 1942	Sobibór	1,000
13 June 1942	Sobibór	1,000
14 June 1942	Sobibór	1,000
	Total:	39,889

On May 13, 1942, the district chief of Puławy sent a letter to the governor of the Lublin District, which stated (Berenstein *et al.*, p. 438):

"In the period from May 6 to May 12 inclusive, 16,822 Jews were expelled from the Puławy District beyond the Bug on the instructions of the SS and Police Leader."

The Jews who were "expelled [...] beyond the Bug" traveled through the Bełżec and Sobibór Transit Camps.

Hilberg then makes fleeting mention of a fact worth mentioning (pp. 787f.):

"Tuka wanted a Slovak commission, composed of a parliamentary deputy, a journalist, and perhaps a Catholic priest, to inspect the camps to which the Jews had been sent. The legation passed on the request to the Jewish expert of the Foreign Office, von Thadden, and, helpless, the Legationsrat transferred the burden to Eichmann. This was Eichmann's reply dated June 2, 1943:

'With reference to the proposal put forward by Prime Minister Dr. Tuka to the German Minister in Bratislava to send a mixed Slovakian commission to one of the Jewish camps in the occupied territories, I wish to state that an inspection of this kind has already been undertaken recently on the part of Slovakia, by Fiala, the chief editor of the periodical Der Grenzbote [Ethnic German newspaper].

With regard to the description of conditions in Jewish camps requested by Prime Minister Dr. Tuka, attention should be drawn to the comprehensive series of articles by this editor that have appeared with numerous photographs, etc., in the periodicals Der Grenzbote, Slovak, Slovenska Politika, Gardiste, Magyar Hirlap, and the Pariser Zeitung...

For the rest, to counteract the fantastic rumors circulating in Slovakia about the fate of the evacuated Jews, attention should be drawn to the postal communications of these Jews with Slovakia, which are forwarded directly through the adviser on Jewish affairs with the German legation in Bratislava [Wisliceny] and which, incidentally, amounted to more than 1,000 letters and postcards for February-March this year. Concerning the information apparently desired by Prime Minister Dr. Tuka about the conditions in Jewish camps, no objections would be raised by this office against any possible scrutinizing of the correspondence before it is forwarded to the addressees.'"

Regarding Fritz Fiala's inspection, notwithstanding its obvious importance, Hilberg has not one word to say. It is worthwhile reporting what Wisliceny stated in this regard in an affidavit dated July 15, 1946:⁸³

"Subject: Editor-in-Chief of the 'Grenzbote', Fritz F i a l a .

During the deportation of the Jews from Slovakia, in early summer 1942, at a social event, I believe it was the so-called 'advisors' evening' at the automobile club, I met Fritz Fialla [sic], editor of the 'Grenzbote', whom I knew since 1940. Over the course of the conversation, Fialla asked me whether it would be possible for him to visit such a labor center in Poland to which the Jews allegedly had been brought. He would then publish a report in the Grenzbote and in the Slovakian press, and he believed that such a report would do a lot to calm public opinion. I told Fialla that I would forward his proposal. I then spoke with Eichmann once on the phone about this suggestion, without him expressing an opinion on this. A few weeks later, Eichmann called me and told me that Himmler had ordered that articles on the labor camps in Poland be published in the foreign press. The Foreign Office, meaning Ribbentrop, was also very interested in the idea. He had thought about a visit to Theresienstadt by the Berlin representatives of the neutral press, but did not expect it to be a success. [He asked] whether I could go with Fialla to Sosnowice, to which representatives of the Slovakian government had already been in 1941. I was to speak with Fialla immediately. So I spoke with Fialla, who objected, however, that his articles in the Slovakian press would have any impact only if he could talk to Slovakian Jews. Fialla moreover stated that he was the senior correspondent of the 'Pariser Zeitung' [German-language newspaper in Paris], and that his reports could reach the French press also in this way. I in turn reported this to Eichmann, who responded that he would talk to Höss, the commandant of Auschwitz, so that Fialla could talk to Slovakian and French Jews in the 'labor camp' there. This way, the details of the visit were arranged by Eichmann. Since the Foreign Office was on it, Envoy Ludin was involved in this matter as well, and I went to see him with Fialla shortly before our trip. On Eichmann's order I had to inform Fialla, however, that his articles would be submitted to Himmler personally for preliminary censorship. Fialla agreed to this as well. He then led me to understand that he was working as a confidant for the Security Service. The trip took place in mid-summer of 1942. We first took my car to Žilina, where Fialla visited the barracks in the concentration camp and took photographs. There he also 'interviewed' a certain Antal, who claims to have been a state secretary in the government of Bela Kun in Hungary. We left early the next morning via Čadca for Kattowitz, where, by Eichmann's order, we had to report to a detective superintendent, whose name I no longer recall, at the office of the State Police. He acted as our escort and guide during the visit to Sosnowice and Bendzin. Some 100,000 Jews lived at that time in the city district Bendzin, who had been concentrated there from all over Upper Silesia. During the morning, we visited a series of industrial and non-industrial work-

⁸³ Affidavit of Dieter Wisliceny dated July 15, 1946. LST, 36/48, pp. 174-178.

shops. Fialla spoke with the manager and with workers, and he also talked to the head of the Jewish Council of Elders. The general impression was not bad. We had lunch at Sosnowice. We then drove to Auschwitz. We arrived there at around 14.00 hours. Höss was waiting for us at the headquarters. After the introductions, he took us to a complex of buildings located near the headquarters. There, we saw a dormitory, a washing and a shower room, a very modern kitchen facility and a concert hall where the camp orchestra was rehearsing. We then left by automobile and went to a laundry facility, where Jewish girls from Slovakia were working. Fialla spoke with these girls and took photographs. Then we went to a large joinery workshop by car. Here, Fialla spoke with Jews from Slovakia and France, who worked there, and again took photographs. With this, the visit was over. I turned down Höss's invitation because we wanted to cross the border before it got dark. So, we left Auschwitz towards 16.00 hours, and reached Žilina only that night, because we had a breakdown on the road. Approximately 14 days later, Fialla delivered to me his articles and the photographs. I sent them to Berlin via courier. The articles then were forwarded to Himmler, who only found time to read them weeks later. Then, Government Councilor Bosshammer came to Vienna on Eichmann's orders and raised several objections, which Himmler had annotated with green pencil. Bosshammer demanded that the articles be completely rewritten. I rejected this, saying that Fialla was an accredited journalist who would not put up with this. In the end, Bosshammer only changed a few items. After approximately 8 days, Eichmann called me and released the articles for publication. During these weeks, Fialla called me almost every day and pushed for the release of the articles. He declared that he was not at all in the mood of having to wait for weeks for the articles. The articles then appeared toward the end of October or early November. –

During our visit to Auschwitz, we saw absolutely nothing that would have been indicative of an extermination of Jews.

As regards the publication of the articles, Fialla is a victim of his journalistic curiosity and his convictions at that time."

Fiala's report, although rose-tinted, was not substantially untrue. In the article published in the *Pariser Zeitung* on December 23, 1942, he reported having interviewed four Jews deported from France, supplying exact personal data, and, as noted by Adam Rutkowski, "it turns out that three (and maybe all four) names correspond to real characters," since the name of the fourth person was probably merely garbled (Rutkowski, pp. 26 and 30). Since the check was performed against the list of deportees, which during the war was accessible only to the SS and officials from Vichy, one can hardly consider the article a product of pure propaganda.

2.3.5. Hungary

Hilberg deals with the deportation of the Jews from Hungary within the framework of his theory of "destruction," ignoring the background of these de-

portations. He discusses the topic on almost 70 pages (pp. 853-919), yet tears it entirely out of its historical context. Only later in his book does he provide some context, where he writes:

"On March 1, Speer and Milch had formed the Jägerstab (Pursuit Planes Staff), a coordinating committee that had the job of building aircraft factories in huge bunkers. [...] For its building projects the Jägerstab needed about a quarter of a million construction workers. The experts took one look at the labor supply and decided that Jews would have to be employed. On April 6 and 7, 1944, Saur talked about the problem to Hitler personally, with the result that Hitler consented as a last resort to the utilization of 100,000 Hungarian Jews who were shortly expected in Auschwitz." (p. 1000)

As Eberhard von Thadden communicated to the Foreign Office on April 29, 1944, the Reich plenipotentiary in Budapest had reported "that [the] Hungarian minister president makes available 50,000 Jews for labor in Germany."⁸⁴ On May 9, Hitler ordered the withdrawal of 10,000 men from Sevastopol to supervise the approximately 200,000 Jews who were to be sent to the concentration camps of the Reich to work in the "interceptor-plane construction program" ("Jäger-Bauprogramm"; NO-5689). The project was also mentioned by Himmler on May 24, 1944 in his speech to the generals at Sonthofen (Smith/Peterson, p. 203):

"Currently, however – this is peculiar in this war – we first bring 100 000, then later another 100 000 male Jews from Hungary into concentration camps, with whom we build underground factories."

During a meeting held on May 26, 1944, Albert Speer, in his capacity as chairman of the *Jägerstab*, asked how things were coming along with the Hungarian Jews. SS *Gruppenführer* Hans Kammler, at that time plenipotentiary of the *Reichsführer* SS before the Ministry of Armaments and War Production and head of the *Jägerstab*, replied:

"They are on route. At the end of the month, the first transports arrive for the surface bunker installations."

Architect Walter Schlempp, in charge of building the underground factories, reported that Xaver Dorsch, who was in charge of aircraft construction and Schlempp's superior, had told him the day before that he wished to employ 100,000 Hungarian Jews (NOKW336).

Hilberg describes the preparations for the deportations as follows:

"To bring about the rapid disappearance of Hungary's Jews, the Germans wasted no time. A railroad conference was planned for May 4-5 in Vienna to consider the dispatch to Auschwitz of four daily transports, holding 3,000 Jews each, beginning in mid-May." (p. 895)

As his source, Hilberg refers to a note by Eberhard von Thadden, head of the Domestic Department *Inland II* of the Foreign Office, to the German Consulate

⁸⁴ YVA, O.51-112, p. 107.

at Budapest dated May 5, 1944 (FN 133, *ibid.*), although that document mentions neither the four convoys with 3,000 Jews, nor Auschwitz (Braham, 1963, p. 369). The figures – but not the destination – appear instead in the telegram of SS *Standartenführer* Edmund Veesenmayer to the Foreign Office of May 4, 1944 (*ibid.*, p. 366; NG-2262). Hilberg continues (*ibid.*):

"The Foreign Office foresaw difficulties with routes: Lvov might be unavailable for military reasons, Budapest-Vienna was undesirable because the Jewish community in the Hungarian capital might become alarmed, and the German legation in Bratislava was jittery about a traversal of Slovak territory. The railway men, meeting in the offices of the Wehrmachttransportleitung Südost, hammered out the transport program with Slovakia, as the shortest way, in mind." (Emphasis added)

In this case as well, Hilberg supplies an imprecise and tendentious reconstruction of the events. I summarize what I have already written with regard to this in my study of the deportation of the Hungarian Jews (Mattoigno 2007a, pp. 31-35).

On May 2, von Thadden sent the following telegram to the German Embassy at Bratislava (Braham 1963, p. 364):

"The itinerary for the deportation of a larger number of Hungarian Jews for labor deployment in the Eastern territories will be assembled in Vienna on May 4 and 5. Probably a large proportion of these transports will have to be routed through Slovakia. If serious reservations should exist against this, please send wire report."

On May 3, Hans Ludin, German minister in Bratislava, replied (*ibid.*, p. 365):

"When transporting large numbers of Hungarian Jews to the eastern territories for labor deployment, please do not touch the territory of Slovakia if possible."

On May 5, von Thadden sent Ludin another message bearing the subject "Deportation Hungarian Jews for labor deployment in the Eastern territories," in which he stated (*ibid.*, pp. 367f.):

"The following difficulties arise with the issue indicated: A transport route through Lemberg is extraordinarily difficult for military reasons, a transport from eastern Hungary – in this territory the deportation is supposed to start – via Budapest-Vienna would lead to a considerable and partly undesirable disquieting of the population in Budapest. Therefore, the RSHA desires very much that at least the transports from Eastern Hungary are routed through Slovakia, if they cannot run via Lemberg. [...]"

Note: The RSHA is also very much interested in a transport route via Lemberg, because it would be the shortest way. To the extent that the Lemberg route is made accessible at all by the military authorities, it shall be made use of for the transports." (Emphasis added)

These documents clearly show that the deportation of the Hungarian Jews was to begin in eastern Hungary, that the purpose of the transports was "labor de-

ployment," that the destination of the transports was the "Eastern territories," and that the shortest route to reach this destination was via Lvov (Lemberg in German). Hence, Hilberg's claim that the shortest route would have been through Slovakia is wrong. But when departing from eastern Hungary, the shortest route passing through Lvov was precisely the route to the "Eastern territories", not to Auschwitz.

Many transports from eastern Hungary (Felsővisó, Kőrösmezó, Máramarosziget, Huszt, Iza, Munkács) in fact travelled through Lvov via Stryi (Gilbert, p. 197), and it is therefore very probable that some transports, instead of turning west towards Przemyśl-Auschwitz, continued north towards the Eastern territories according to the original plan. This no doubt explains the presence of Hungarian Jews at Kaunas (in German documents: Kauen).

The following Hungarian Jewish females reached the Stutthof Camp in 1944 from Kaunas:⁸⁵

- 54 (registration Numbers 48947-49000) on July 19, 1944 in a transport carrying 1,097 Jewish females.
- 588 on August 4, 1944, in a transport carrying 793 Jewish females, 743 of whose names are known.

The following Hungarian Jewish females arrived at Stutthof from Riga:

- 484 on August 9, 1944, in a transport carrying 6,382 Jewish females, 1,858 of whose names are known, so that the percentage of Hungarian Jewish females of known names amounts to 26%.⁸⁶
- 15 on October 1, 1944, in a transport carrying 1,777 Jewish females, 817 of whose names are known.⁸⁷

Overall, a minimum of 1,141 Hungarian Jewish females arrived at Stutthof from Kaunas and Riga. Many of them probably traveled through Lvov, including the 10,000 Jewish females requested on May 14, 1944 by SS *Standartenführer* Gerhard Maurer for the Płaszów Camp, located in the outskirts of Krakow, and the transport which reached Lublin-Majdanek from Hungary on May 25, 1944.⁸⁸

On the other hand, precisely in conjunction with the beginning of the deportations from Hungary, a transport of 878 Jews, almost all of them fit for work, departed Drancy with destination Kaunas on May 15, 1944 (Klarsfeld 1978, pp. 13 and 20; my page numbers).

As I noted in my study mentioned earlier, Auschwitz then became a "collection camp" ("*Sammellager*") for Hungarian Jews, probably for, or at least partially for, the "*Jäger-Bauprogramm*," but only as a stop-gap solution: the Auschwitz camp administration was surprised by the arrival of this enormous

mass of persons, and did not have the time to organize the proper accommodation of these forced laborers for the Reich. Of course, this would apply even more to the alleged extermination installations (Mattoigno 2007a, pp. 12-18 and 35).

Not even the deportation of the Hungarian Jews can therefore be explained with Hilberg's "destruction" theory.

The story of Joel Brand renders Hilberg's theory even more inconsistent. He summarizes it on pp. 903-905, asserting that Eichmann proposed, with Himmler's consent, "a scheme whereby the lives of the Hungarian Jews could be saved for a price, to be paid in goods" (p. 903). He then lists these goods, but does not indicate the number of Jews which Himmler was prepared to release in exchange for such goods. At the end of his book, Hilberg returns to the issue, laying it out accurately (pp. 1218-1226). He explains what was at stake: a million Jews for 10,000 trucks, plus a few thousand tons of tea, coffee, soap and other items (p. 1219).

This is how Rudolf Kastner, secretary of the Zionist assistance committee of Budapest, described the terms of the plan (Kastner, p. 93):

"For the delivery of one million Hungarian Jews, the Germans requested 200 tons of tea, 800 tons of coffee, 2 million crates of soap, 10,000 trucks as well as other strategic merchandise, particularly tungsten, the quantity of which was not indicated."

Brand, who carried on the negotiations, was arrested by the British while attempting to enter Palestine. At Cairo, he met Lord Moyne, at that time British minister of state for the Middle East, who asked him for information on Eichmann's proposal.

"Brand replied that the offer encompassed a million people. 'But Mr. Brand,' the British host exclaimed, 'what shall I do with those million Jews? Where shall I put them?'" (p. 1226)

How can one reconcile Himmler's proposal to exchange one million Hungarian Jews with Hilberg's theory of "destruction"?

In conclusion, in no case does Hilberg show that the Jewish deportations constituted the implementation of a "destruction process" by virtue of a specific order issued by Hitler "before the end of the summer of 1941." On the contrary, the existing documentation, as a whole, plainly debunks this theory.

It now remains for us to examine whether the evidence adduced by Hilberg demonstrates that the camps to which most of the Jewish transports were sent were really "killing centers."

3. The "Killing Centers"

3.1. Chełmno

Hilberg opens his Chapter Nine ("Killing Center Operations") with these words:

"The most secret operations of the destruction process were carried out in six camps located in Poland in an area stretching from the incorporated areas to the Bug." (p. 921)

These camps were: Chełmno (Kulmhof for Germans), Bełżec, Sobibór, Treblinka, Lublin-Majdanek and Auschwitz.

The first center mentioned by Hilberg is that of Chełmno. He writes:

"In 1941 Gauleiter Greiser of the Wartheland obtained Himmler's permission to kill 100,000 Jews in his Gau." (pp. 927, 929; p. 928 has a table)

The source (FN 15, p. 929) is a letter from Greiser to Himmler dated May 1, 1942 (Document NO-246). But no mention is made of "killing" in that document, where we read only:

"Reichsführer!

The operation of special treatment of approximately 100,000 Jews in the territory of my Gau as approved by yourself, in agreement with the head of the Reich Security Main Office, SS-Obergruppenführer Heydrich, may be concluded in the coming 2-3 months."

This "special treatment" was nothing other than the extension of an order by Himmler to the Jews of the Wartheland. That order, transmitted to Greiser on September 28, 1941, originally related only to the expulsion, "next spring," that is, the spring of 1942, of the Jews of the Old Reich and the Protectorate through the Łódź Ghetto. I have discussed the matter in detail in another study (Mattogno/Kues/Graf 2015, pp. 247-250).

Hilberg adds:

"Three [gas] vans were thereupon brought into the woods of Kulmhof (Chełmno), the area was closed off, and the first killing center came into being." (p. 929)

The source for this assertion is the article "Extermination Camp at Chełmno" by investigating judge Władysław Bednarz published in 1946 in the compendium *German Crimes in Poland* (FN 16, *ibid.*). But this source cites not one

single document on the use of the three alleged gas vans in that camp (Bednarz 1946a&b).

On page 938, Hilberg repeats that "Kulmhof in the Wartheland was being set up with gas vans," but he fails to cite any source in support of that assertion. In fact, the orthodox narrative about the Chełmno "extermination camp" has no basis in historical or documentary facts. In my study of this camp (Matogno 2017), I showed that:

1. The establishment of Chełmno Camp fits perfectly into the National-Socialist policy of deporting the Jews to the east.
2. No documentary or material trace exists for the use of "gas vans" in this camp. The truck photographed by the Commission of Inquiry into the German Crimes in Poland in the courtyard of the Ostrowski Factory was used to disinfest clothing or to transport furniture.
3. There is no evidence for the first alleged systematic extermination of Jews in the Warthegau, and no one can specify when or how it was perpetrated.
4. The first witness account about the alleged extermination at Chełmno, the "Szlamiek Report," is completely unreliable. Similarly unreliable and even mutually contradictory are the witnesses of the postwar era.
5. Only one cremation furnace has been confirmed archeologically in the Chełmno Camp. It would have taken almost nine years to cremate all the bodies of the alleged victims of homicidal gassings in that furnace. There are no material traces of the alleged mass cremation.
6. Rudolf Höss's visit to the "field incinerators Aktion Reinhardt" had nothing to do with Chełmno.
7. The camp's claimed death-toll number is not based on any documentation. It was set to 1,300,000 by the Commission of Inquiry into the German Crimes in Poland, but later reduced to 340,000 by Judge Bednarz. Polish historiography today assumes a figure of about 152,000 victims, which in practice coincides with the number of Jews who, according to the Korherr Report, were led "through the camps of the Warthegau... 145,301," (NO-5194, p. 9).
8. The transports of Jews sent to the Łódź Ghetto included a high percentage of people unable to work (elderly and children), only some of whom were evacuated to make room for Jews fit for work.
9. The Chełmno Camp ceased operations in April 1943, which would be inexplicable if it really had been an extermination camp for the Jews in the Warthegau, especially for the Jews of the Łódź Ghetto. This is all-the-more-inexplicable because on March 1, 1944, 4,495 children under 8 years of age and 392 elderly persons aged 70 years and over were still alive in the ghetto.
10. Even more inexplicable, from the perspective of orthodox Holocaust historiography, is the reopening of the camp in April 1944. The claim that it had to exterminate the Jews of the Łódź Ghetto has no documentary support,

and there is no evidence that the 10 Jewish transports evacuated from the ghetto "for labor" between June and July 1944 were gassed at, or even went to, Chełmno. In fact, the analysis of name lists of the deportations permits us to rule out this possibility, as they included almost exclusively people fit for work.

11. No documentary evidence exists for the alleged extermination at Chełmno of Gypsies from the Łódź Ghetto.
12. No documentary evidence exists either for the alleged extermination at Chełmno of the children of Lidice.

3.2. Bełżec, Sobibór, Treblinka

On the origins of the alleged eastern extermination camps, Hilberg writes:

"Under primitive conditions, three camps were built by Amt Haushalt und Bauten (after the reorganization of March 1942, the WVHA-C) and its regional machinery at Belzec, Sobibor, and Treblinka. The sites were chosen with a view to seclusion and access to railroad lines. In the planning there was some improvisation and much economizing; labor and material were procured locally at minimum cost." (p. 933)

The implementation of Hitler's alleged "extermination order" was therefore not taken very seriously by Globocnik, its alleged executor.

In less than a page and a half, Hilberg then summarizes the origins of the camps at Bełżec, Sobibór and Treblinka, citing a few post-war testimonies and two documents relating to the construction of the Treblinka Camp. In this regard, he writes:

"Dr. Eberl also availed himself of the resources of the ghetto for supplies, including switches, nails, cables, and wallpaper. Again, the Jews were to be the unwitting contributors to their own destruction." (p. 935)

As a source, he refers to the book by the Jewish Historical Institute of Warsaw titled *Faschismus – Getto – Massenmord*,⁸⁹ and more specifically to a letter sent by Eberl to the commissioner of the Jewish District dated June 26, 1942 (Hilberg's FN 38, *ibid.*). This document states (Berenstein *et al.*, p. 304):

"Subject: Treblinka Labor Camp.

The following items are urgently needed for the expansion of the Treblinka labor camp: ..."

Hilberg therefore omitted the embarrassing term "labor camp." That term appears again in another letter from Eberl, dated July 11, 1942, requesting construction material and stating:⁹⁰

⁸⁹ I use the 1960 edition, whose pagination corresponds to the 1961 edition cited by Hilberg.

⁹⁰ <http://www.deathcamps.org/treblinka/pic/bigeberl.jpg> (last accessed on April 20, 2021).

"Subject: Treblinka Labor Camp.

The Treblinka Labor Camp will be operational on Saturday, July 11, 1942."

There are two other requests for materials from Eberl: one from June 19, 1942, and the response by the commissar of the Warsaw Ghetto, Dr. Heinz Auerswald, about shipping the requested materials as listed by Eberl (Wojtczak, pp. 167f.; Gumkowski/Rutkowski). These documents make no allusion in favor of the "extermination camp" thesis.

Hilberg then describes the SS preparations for the alleged extermination of the Jews:

"Even while the three camps were being erected, transports with Jewish deportees from the Krakow District, the Reich, and the Protektorat were arriving in the Hrubieszow-Zamosc area. The director of the Population and Welfare Subdivision of the Interior Division in the Gouverneur's office of Lublin (Türk) was instructed by the Generalgouvernement Interior Main Division (Siebert) to assist Globocnik in making room for the Jews pouring into the district. Türk's deputy (Reuter) thereupon had a conversation with Globocnik's expert in Jewish 'resettlement' affairs, Hauptsturmführer Höfle. The Hauptsturmführer made a few remarkable statements: A camp was being built at Belzec, near the Generalgouvernement border in subdistrict (Kreis) Zamosc. Where on the Dęblin-Trawniki line could 60,000 Jews be unloaded in the meantime? Höfle was ready to receive four or five transports daily at Belzec. 'These Jews would cross the border and would never return to the Generalgouvernement [Diese Juden kämen über die Grenze und würden nie mehr ins Generalgouvernement zurückkommen].'" (p. 936)

The source is the already-cited book *Faschismus – Getto – Massenmord*, pp. 269-270 (FN 39, *ibid.*). Hilberg implies that the Jewish transports sent to the Hrubieszów-Zamość region were destined for extermination (and to this end they arrived "[e]ven while the three camps were being erected"); that they were unsure where to unload 60,000 Jews along the Dęblin-Trawniki railway line, but that "Höfle was ready to receive four or five transports daily at Belzec," meaning that these 60,000 Jews all had to be exterminated.

In reality, however, the document in question says something quite different. I shall summarize the analysis which I have already performed in my study of the Belżec Camp, to which I refer for a general discussion of the matter (Mattogno 2016g). I shall first of all cite the translation of the document (Berenstein *et al.*; pp. 269f.):

"I agreed to a talk with SS-Hauptsturmführer Höfle for Monday, 16 March 1942, at 17:30 h. During the talk, SS-Hauptsturmführer Höfle declared as follows:

1. It would be advisable to subdivide the Jewish transports arriving in the Lublin District into those who are able-bodied and those who are not, as early as at the station of departure. If subdivision at the station of departure is impracticable, it might be necessary to subdivide the transport at Lublin based on the above-mentioned criteria.

2. Jews unable to work should all be sent to Be[l]zec, which is the outermost borderline station in the Zamość District.

3. Hstuf. Höfle is thinking of building a large camp in which the employable Jews can be registered in a file system according to their occupations and requisitioned from there.

4. Piaski will be relieved of the Polish Jews and will become the collection point for Jews arriving from the Reich.

5. For the moment, Jews will not be quartered at Trawniki.

6. H. asks where on the Dęblin-Trawnicki route 60,000 Jews can be unloaded. Informed of the Jewish transports now departing from here, H. explained that of the 500 Jews arriving in Susiec, those who were unemployable could be sorted out and sent to Belzec. According to a government teletype dated March 4, 1942, a Jewish transport, whose destination was the Trawnicki station, is rolling out of the Protectorate. These Jews are not unloaded in Trawnicki, but have been brought to Izbiza. An inquiry of the Zamosz District, asking to be able to request 200 Jews from there for work, was answered in the affirmative by H.

Finally, he declared that he could accommodate 4-5 transports of 1,000 Jews per day with final destination Be[l]zec station. These Jews will be taken further on, beyond the border and would never return to the General Government."

This document does not reconcile with Hilberg's thesis of a deportation for the purpose of extermination, because the Jews fit to work had to be used for work, while those unfit for labor would all be sent to Bełżec. This camp could "accommodate 4-5 transports of 1,000 Jews per day," who were to be deported "beyond the border and would never return to the General Government." For this reason, Bełżec was called "outermost borderline station in the Zamość District." This phrase only makes sense based on a real cross-border transfer, that is, into the Reichskommissariat of the Ukraine, whose border was close-by.⁹¹

Piaski was to become the "the collection point" for Jews arriving from the Reich. This locality is located 24 km southeast of Lublin by road and 104 km from Bełżec. The distance from Bełżec by rail is even greater (approximately 155 km).

This fact is fully confirmed by the report dated April 7, 1942 from SS *Hauptsturmführer* Richard Türk, head of the Population and Welfare Department in the offices of the district governor of Lublin. The report, relating to the month of March, in fact contains a chapter titled "Jewish Resettlement Operation of the SS and Police Leaders," in which Türk reports:

⁹¹ Calculating the times on the basis of the data provided by the "eyewitness" Rudolf Reder, the gassing of 10,000 Jews per day (sic) in the six alleged gas chambers of the camp's second phase, with all the related and connected operations, would have required about three days and three nights of uninterrupted work, or about six working days, because the SS only operated from dawn to dusk, that is, at most for about 12 hours a day. In this regard, see Mattogno 2007, pp. 45-48; 2021, pp. 81-83. Thus, the gassing of 4,000-5,000 Jews a day in the three alleged gas chambers of the first phase of the camp was *a fortiori* impossible.

"The possibilities of accommodation, limited to places along the Dęblin-Rejowiec-Belzec railway line, were and are currently being discussed with the representative of the SS and Police Chief. Alternative possibilities were determined.

On the basis of my proposal, there is a fundamental understanding that as Jews from the west are being settled here, local Jews are to be evacuated in like numbers, if possible. The current status of the settlement process is that approximately 6,000 were settled here from the Reich, approximately 7,500 have been evacuated from the district, and 18,000 from the City of Lublin.

Individually, 3,400 have been evacuated from Piaski, District of Lublin, and 2,000 Reich Jews have come in so far; 2,000 from Izbica, Krasnystaw district, and 4,000 Reich Jews arriving in it; from Opole and Wawolbnica, Puławy district, 1,950 have been evacuated."

The report later mentions the resettlement of Jews from Mielec and Bilgoraj and makes clear that the majority of the evacuees was unfit for labor:⁹²

"On March 13, 1942, the Cholm District received approximately 1,000 Jews, of whom 200 were accommodated in Sosnowice and 800 in Włodawa.

On March 14, 1942, Międzyrzec, Radzyn District, received 750 Jews. On March 16, 1942, the Hrubieszow District received 1,343 Jews, 843 of which have been accommodated in Dubienka and 500 in Belz. The majority were women and children, with men fit for labor only a minority. On March 16, 1942, the Zamosz district received 500 Jews, all of whom have been lodged in Cieszanow.

On March 22, 1942, 57 Jewish families with 221 persons were resettled from Bilgoraj to Tarnograd."

The transports were organized by the Central Office for Jewish Emigration. An order of the headquarters of the regular police of Vienna dated March 20, 1942 specified:⁹³

"In the near future, the Central Office for Jewish Emigration will again carry out evacuation transports of 1,000 Jews each to Jewish ghettos in the Eastern Territory from the Vienna-Aspang Station."

The history of the National-Socialist policy of transferring the Jews into the Lublin district fully confirms Höfle's above-mentioned directive and openly contradicts the orthodox theory of the extermination of the Jews. Within the framework of this policy, in the Lublin District, where the creation of a "Jewish reservation" was originally planned, 69,084 Jews in 72 transports were deported from the Old Reich, Slovakia, Vienna and the Theresienstadt Ghetto between March 11 and July 15, 1942. Some of these Jews were later assigned to local labor camps, while others were transported into the Eastern Territories.⁹⁴

⁹² Berenstein *et al.*, p. 271. Cf. Kermisz, pp. 10-46.

⁹³ YVA, O.51-88a, p. 11.

⁹⁴ Mattogno/Graf, 234-267, in particular pp. 242-245 (list of transports).

The "Protocol No. 14/138 of the first meeting of the *Judenrat* (Jewish Council) of Lublin on March 17, 1942" documents the discussion regarding the "decree on the resettlement issue," which "was read to the president of the council on the night of March 16-17, 1942." The following instructions were given:⁹⁵

"For the resettlement, each individual person can carry along 15 kg of baggage, any amount of money and valuables.

For the seriously ill who cannot be transported, a place must be organized in the hospital between Ghettos A and B. The Judenrat [Council of Jews] provides doctors and medical personnel.

Jews who are subject to resettlement must prepare for it, meaning they have to walk about 3 km, then continue the journey [in a vehicle].

Epidemic hospitals remain behind with the sick and the staff.

Around 1,400 people will be resettled each day.

The resettlement begins from the top, and precisely from Unicka Street.

Jews who remain in empty houses after the eviction are shot.

Authorized Jews [stemplowi: stamped] who move from Ghetto A to Ghetto B can take everything with them.

The dead must be buried immediately."

These provisions testify in favor of a real resettlement rather than an extermination.

Hilberg goes on to write that

"The gas first used at Belzec was bottled [!], either the same preparation of carbon monoxide that had been shipped to the euthanasia stations or possibly hydrogen cyanide." (p. 936)

In Footnote 40 (*ibid.*), Hilberg explains:

"Bottled gas (Flaschengas) is mentioned by Oberhäuser [recte: Oberhauser] (Obersturmführer at Belzec). See text of his statement in Rückerl, NS-Vernichtungslager, pp. 136-37. The court judgment in the Oberhäuser case identifies the gas as cyanide (Zyklon B). Ibid. [=Berenstein et al.], p. 133."

In this source, Josef Oberhauser is, in fact, speaking of gassings "with bottled gas" (Rückerl 1979, p. 137), yet the verdict mentions the use of "Zyklon B-Gas" (*ibid.*, p. 133).

Zyklon B was "hydrogen cyanide" or "hydrocyanic acid," a liquid absorbed on a porous substance and packaged in hermetically sealed cans. Hilberg, by contrast, implies that the substance in question might have been bottled hydrogen cyanide, perhaps in order to create a fictitious confirmation of Kurt Gerstein's claim of having transported steel bottles with liquid hydrogen cyanide to Bełżec (see Subchapter 3.7.).

As for the three above-mentioned "killing centers," Hilberg states:

⁹⁵ "Protokół Nr 14/138 Walnego zebrania Rady Żydowskiej w Lublinie z dnia 17.3.1942," in: GFHA, Catalog No. 6862.

"The limited capacity of the camps troubled SS and Police Leader Globocnik; he did not wish to get 'stuck.'" (p. 937)

The source is Viktor Brack's letter to Himmler dated June 23, 1942, Document NO-205. But this document does not even mention a "limited capacity of the camps" at all; that is an expression invented by Hilberg. The text says:

"On this occasion, Brigadeführer Globocnik expressed the opinion to carry out the entire Jewish operation as quickly as possible in order to avoid getting stuck in the middle of it one day, if any difficulties require stopping the operation."

Such a concern can also be explained from the point of view of real evacuations.

The Main Department Justice of the General Government decreed on August 27, 1942 that, as a rule, Jews subjected to criminal proceedings could be resettled, but this did not apply to criminal proceedings that could result in the death penalty. "In these cases, a revocation of detention for the purpose of resettlement is out of the question."⁹⁶ Hence, in the eyes of that authority, a resettlement did not equal a death sentence, quite on the contrary, it allowed convicts to escape any kind of prison sentences *except* capital punishment.

In ten lines, Hilberg summarizes the alleged expansion of the gassing capacity in the three camps mentioned earlier by way of the erection of newer, better, larger gas chambers (p. 937), commenting in a footnote:

"Information about the number and size of gas chambers in each camp rests not on documentation but on recollection of witnesses." (FN 44, *ibid.*)

It is indeed a fact that no documents have been found in this regard. To judge the value of these testimonies, it suffices to examine the case of Bełżec in this regard. For this camp, Hilberg adduces three testimonies: Kurt Gerstein, with whom I shall concern myself later, Rudolf Reder, and Chaim Hirszman (FN 59, p. 1037), all three of whom are considered "unreliable" by one of the greatest orthodox Holocaust experts on the Bełżec Camp, Michael Tregenza (Tregenza, pp. 242f.). In fact, the first two statements are irreconcilable: while Gerstein attributed the death of the victims in the gas chambers to the exhaust gases produced by a "Diesel engine,"⁹⁷ Reder spoke of a "gasoline-driven engine" which consumed "4 cans of gasoline per day,"⁹⁸ a "gasoline-driven engine" ("*motor pędzony benzyną*") which consumed "approximately 80-100 liters of gasoline per day" (Reder, pp. 44, 46). However, the exhaust gases of this engine were *not* used to kill the victims. In fact, during his interrogation of December 29, 1945, Reder demolished the story of the homicidal gassings with motor exhaust at Bełżec, declaring:⁹⁹

⁹⁶ YVA, O.21-3, p. 77.

⁹⁷ PS-1553, p. 6; PS-2170, p. 6; T-1310, p. 14.

⁹⁸ Interrogation of December 29, 1945. AGK, OKBZN Kraków, 111, pp. 3-3a.

⁹⁹ Reder, pp. 50f. For a detailed analysis of Reder's various statements and a comparison with Gerstein's testimony, see Mattogno 2021.

"I don't know whether any gas was released through these pipes into the chambers, whether the air in the chambers was compressed or whether the air was pumped out of the chambers. [...] The air in the rooms, after their opening, was clean, transparent and odorless. In particular, no smoke or combustion gases from the engine could be perceived. These gases were discharged by the engine directly to the outside and not into the chambers."

See in this regard my detailed study *Rudolf Reder versus Kurt Gerstein: Two False Testimonies on the Belzec Camp Analyzed* (Mattogno 2021).

In his 1992 book *Perpetrators, Victims, Bystanders*, in the chapter dedicated to the "messengers," Hilberg – in addition to the ubiquitous Gerstein – also cites Jan Karski, who claims to have visited the Belzec Camp in October 1942. After outlining Karski's testimony, Hilberg states (Hilberg 1992, pp. 223):

"In fact, Jewish transports from Warsaw were routed to Treblinka, not Belzec. No transport left Warsaw in October. The guards in Belzec were mainly Ukrainian, although a few Baltic nationals may have been among them. The same composition applies to the guard force in Treblinka. Above all, trains did not leave Belzec or Treblinka so that the passengers could die in the cars. Belzec and Treblinka were death camps with gas chambers, and these facilities were not mentioned in Karski's account."

In practice, Karski was a false witness who invented his visit to Belzec. But if that is so, why did Hilberg choose him as one of the two most-representative persons among the "messengers" – "people who brought the dire news of annihilation to the outside world"? (*ibid.*, p. 217) Unless, of course, this was a sort of "Freudian slip," indicating that the "dire news" was a purely propagandistic invention...

On p. 504, Hilberg lists the Belzec Camp as intended for the extermination of the Jews of Galicia, but later on, with reference to December 31, 1942, he states that in "the Galician District the remaining Jews were being shot" (p. 558). In the related footnote, Hilberg informs us that "[t]he deportation figure as of November 10, 1942, was 254,989, and the total by June 27, 1943, was 434,329. Katzmann to Krüger, June 30, 1943, L-18" (FN 187, *ibid.*).

According to Höfle's report to SS *Obersturmbannführer* Willi Heim, dated January 11, 1943 and intercepted and deciphered by the British secret service, the number of persons transferred to Belzec by December 31, 1942 was 434,508. No transport reached the camp in the 14 preceding days.¹⁰⁰ The figure of 550,000 victims cited by Hilberg in the 1985 "definitive edition" of his book (p. 1219, based on secondary orthodox Holocaust literature) therefore exceeded the total number of deportees by approximately 115,000. He revised that down to Höfle's number in his 2003 edition, though (p. 1320).

If we are to believe the list of Jewish transports to Belzec drawn up by Y. Arad, approximately 30,000 Jews were deported to the camp from mid-No-

¹⁰⁰ Witte/Tyas; cf. Mattogno 2016g, Doc. 17, p. 127.

vember to mid-December 1942, most of them from Galicia,¹⁰¹ so that the number of deportees to Belżec from this region by December 31, 1942 amounted to (254,989 + 30,000 =) approximately 285,000 Jews. It follows that, according to Hilberg's interpretation, approximately 285,000 Galician Jews were gassed at Belżec, while the remaining (434,329 – 285,000 =) roughly 149,000 were shot instead! But if there were so many Jews still left to "process," why was the "killing center" closed in November or December 1942?

Hilberg neglects to mention that on November 10, 1942, when the alleged "killing center" at Belżec was winding down its activities or had already ceased them, SS *Obergruppenführer* Friedrich Wilhelm Krüger, in his capacity as higher SS and police leader in the General Government and as secretary of state for security, created as many as 32 residential areas for Jews in the Galicia District (Mattogno/Graf, pp. 266f.). Hilberg's omission is all-the-more-surprising since the creation of these zones is explicitly mentioned by SS *Gruppenführer* Fritz Katzmann precisely where Katzmann cites the deportation figures cited by Hilberg (IMT, Vol. 37, p. 398):

"By the time the Higher SS- and Police Leader intervened in a general manner in the Jewish question with his police decree on the creation of Jewish residence areas dated November 10, 1942,

254,989 Jews

had already been evacuated or transferred."

Katzmann then speaks of the use of some part of the remaining Jews in the German armaments industries, whose conditions of detention he describes as follows (*ibid.*, pp. 399f.):

"In addition to the main meal, we also have to supply lunch and dinner. We need to guarantee a complete diet, even in the case of illness. [...]

The Jewish workers are permitted to take abundant clothing, especially winter clothing, with them before being transferred to the camp. [...]

The Higher SS and Police Leader of Galicia and the armaments command at Lvov agree that it is necessary to keep the Jewish workers fit for work, which requires appropriate lodgings, clothing and medical assistance."

On June 26, 1943, there were 21,156 of these Jews, scattered among 21 labor camps (*ibid.*, p. 401).

As for the number of "victims" cited by Hilberg, the report states (*ibid.*):

"In the meantime, further resettlement was carried out energetically, so that all Jewish residential areas could be dissolved effective June 23, 1943. In this way, with the exception of the Jews located in the camps under the control of the SS and Police Leader, the district of Galicia has therefore been made
f r e e o f J e w s .

¹⁰¹ Arad 1987, pp. 383f. This list names approximately 517,000 deportees, at least (517,00–434,508=) 82,492 of whom are fictitious.

Jews captured individually are subject to special treatment by the related Security Police and Gendarmerie stations. As of June 27, 1943, a total of

4 3 4 , 3 2 9 J e w s

have been resettled."

The report speaks of "special treatment" and twice of "specially treated" ("sonderbehandelt") in relation to the "indolent and asocial Jewish riffraff," and to Jews who had obtained work certificates by fraudulent means (*ibid.*, pp. 393f.). Since Hilberg considers that even this "special treatment" is a "euphemism" for killing, we must believe that Katzmann used two series of "euphemisms": resettlement-resettled/evacuation-evacuated for the Jews presumably murdered at Belżec, and special treatment-specially treated for those presumably murdered in Galicia. The 149,000 Jews presumably shot, as mentioned earlier, would also have to form part of these. Hence, they should fit into the second category, but for Hilberg they are included in the 434,329 who had been resettled, therefore this "euphemism" would simultaneously refer to those alleged gassed at Belżec (254,989 Jews) and those allegedly shot in Galicia (149,000 Jews)!

A secret memorandum dated August 6, 1942 with the subject "Conversation on the resettlement of the Jews" shows that the expedient of "euphemisms" is without basis in fact. This document says:¹⁰²

"Brigadeführer Katzmann informed me that within half a year, there will be no more free Jews in the General Government. These people are partly resettled, partly brought into camps. The Jews living here and there in the countryside are being killed by individual units. The Jews concentrated in the cities are partly liquidated, partly resettled, partly brought together in labor camps."

It is therefore obvious that "resettled" was not synonymous with "liquidated" or "killed."

Of the alleged 149,000 Jews presumably shot, Hilberg only attempts to document them in part, to a very limited extent:

"The general mode of procedure in Galicia may be illustrated by events in three towns.

In Stanislawow, about 10,000 Jews had been gathered at a cemetery and shot on October 12, 1941. Another shooting took place in March 1942, followed by a ghetto fire lasting for three weeks. A transport was sent to Belzec in April, and more shooting operations were launched in the summer, in the course of which Jewish council members and Order Service men were hanged from lampposts. Large transports moved out to Belzec in September and October, an occasion marked by the bloody clearing of a hospital and (according to reports heard by a German agricultural official) a procession of Jews moving to the train station on their knees." (p. 517)

But he never bothers to document any of it; rather, he relies solely on post-war "eyewitness testimonies" from the years 1947-1948 (FN 61, *ibid.*).

¹⁰² DALO, R-35,13, p. 70.

I shall now close this subchapter with Jean-Claude Pressac's comments on the "killing centers," who also mentions Hilberg. In an article titled "Inquiry into the Death Camps," Pressac wrote (1995, p. 121):

"Instead of starting with the assumption of a facility for killing people, the hypothesis must be accepted that from the end of 1941 until mid-1942, three de-lousing facilities were established in Belzec, Sobibór, and Treblinka. The fact that places were chosen for this at a border that had become obsolete, can be explained if one recalls the concepts of prophylactic hygiene and the battle against typhus by means of killing the insects carrying it, the lice, and if one considers that the Germans had typhus more or less under control in their zone of occupation, but not in the conquered Soviet territories. Thus, the program for the deportation of the Jews to the east, as decided upon at the Wannsee Conference of January 20, 1942, was adhered to by processing the deportees through these three hygiene facilities."

In his opinion, the alleged homicidal gas chambers were built later; but with regard to these same installations, he declared in an interview granted to Valérie Igounet on June 15, 1995:¹⁰³

"I have attempted to determine the number of victims of the camps designated as extermination camps on the basis of material facts: the surface area of the gas chambers and number of the persons which they could hold; time for a gassing; number of gassings daily; number of transports arriving daily with consideration of the actual capacity of the chambers, etc. In comparison with the numbers of Hilberg, which are based upon Polish sources, I arrive at the following figures:

<i>Chełmno:</i>	<i>80,000 to 85,000</i>	<i>instead of 150,000;</i>
<i>Belzec:</i>	<i>100,000 to 150,000</i>	<i>instead of 550,000;</i>
<i>Sobibor:</i>	<i>30,000 to 35,000</i>	<i>instead of 200,000;</i>
<i>Treblinka:</i>	<i>200,000 to 250,000</i>	<i>instead of 750,000;</i>
<i>Majdanek:</i>	<i>fewer than 100,000</i>	<i>instead of 360,000."</i>

Assuming the minimum figures, Pressac reduced the total number of the victims of the "so-called" extermination camps from 2,010,000 to 510,000 and concluded (Igounet, p. 641):

"Concerning the massacre of the Jews, several fundamental notions must be questioned. The numbers arrived at [by orthodox historiography] are to be thoroughly revised. The expression 'genocide' is no longer suitable [le terme 'génocide' ne convient plus]."

Since Galicia formed part of the General Government, Bełżec also functioned as the "outermost borderline station" for those leaving for the Reich Commissariat of the Ukraine.

As mentioned earlier, Hilberg sets forth his knowledge of the alleged "extermination operations" at Chełmno, Bełżec, Sobibór, Treblinka, Majdanek and Auschwitz-Birkenau in a total of only 18 pages (pp. 1027-1044), which are

¹⁰³ Igounet, p. 640. Note that Hilberg claims 50,000 Jewish victims of the Majdanek Camp (p. 1320).

haphazardly and uncritically cobbled together – 18 pages out of 1,388! Yet Hilberg is supposed to have been the world's supreme expert on the Holocaust!

3.3. Lublin-Majdanek

Hilberg then discusses the Lublin-Majdanek Camp, with regard to which he asserts:

"In September-October 1942, three small gas chambers, placed into a U-shaped building, were opened. Two of them were constructed for the interchangeable use of bottled carbon monoxide or hydrogen cyanide gas, the third for cyanide only. [...] The gassing phase, which resulted in about 500 to 600 deaths per week over a period of a year, came to an end with the decision to wipe out the entire Jewish inmate population in one blow. After the Lublin camp acquired administrative control of the Trawniki and Poniatowa labor camps, mass shootings took place at all three sites in the beginning of November 1943." (p. 938)

The story of the alleged homicidal gas chambers at Majdanek has no basis in historical fact. It is not supported by either documents or testimonies. Quite the contrary: it is contradicted by both documents and testimonies.

The alleged "U-shaped building" mentioned by Hilberg never existed as such; rather, there was a disinfestation complex consisting of two sets of barracks located side by side (Barracks 41 and 42, denominated Bath and Disinfection I and II), and by a concrete structure located behind Barracks 41, which was alleged to contain two of the three homicidal gas chambers mentioned by Hilberg. The third – the one located inside Barracks 41 – is no longer considered a homicidal gas chamber by orthodox Holocaust historians (Shermer/Grobman, p. 162).

The original plan of the concrete structure, a drawing of which has been preserved – the drawing by the Construction Office titled "PoW Camp Lublin. Disinfestation Facility. Building XII^A" dated August 1942 – shows a rectangular block measuring 10.76 m × 8.64 m × 2.45 m which had two disinfestation chambers measuring 10 m × 3.75 m × 2 m. The existing documentation shows beyond a shadow of a doubt that it was a "disinfestation installation of the hydrogen-cyanide-disinfestation system" intended "for the Lublin Fur and Garments Workshops" (Graf/Mattogno, pp. 126-136). No document indicates that this installation was used for homicidal purposes; the scarce testimonies which do exist were made long afterwards and are very vague.

As for the alleged carbon-monoxide installation, I should like to note first that no orthodox historian has ever explained why the SS, in spite of allegedly having already two homicidal gas chambers using Zyklon B, one of them equipped with an air heater, would have divided Chamber II into two parts, using only the first part (measuring approximately 17 square meters) as a carbon-

monoxide chamber, while equipping Chamber I, which worked with Zyklon B, with a carbon-monoxide system, too. And this, although Zyklon B was never in short supply at Majdanek. According to the related documentation – which is complete – the camp was supplied with a total of 6,961 kg of Zyklon B between June 1942 and June 1944.¹⁰⁴

But there is another argument which is much-more-important. There is no proof that the piping installed in the two above-mentioned rooms was ever used for injecting carbon monoxide into these rooms. There are no documents and no testimony in this regard. The only “proof” consists of two steel cylinders which were placed by the Poles in an adjacent room after the war. During the 1990s, a sign in five languages stated that “From here the supply of carbon monoxide to two chambers was regulated.” But where is the proof that the two cylinders actually contained carbon monoxide? There is no such proof. In fact, the following engraving on the cylinders was visible:¹⁰⁵

“Dr. Pater Victoria Kohlensäurefabrik [carbonic acid factory] Nußdorf Nr 6196 Full. 10 kg [illegible...] und Fluid Warszawa Kohlensäure [carbonic acid; illegible...] Fluid Warszawa Lukowski. Pleschen 10,1 kg CO₂ gepr.[üft = tested]”

Hence, the two cylinders did not contain carbon monoxide (CO), but rather carbon *dioxide* (CO₂), which is not a toxic gas, as is well known.

As regards the testimonies, the journalist Constantin Simonov, who visited Majdanek Camp immediately after the arrival of the Soviets and wrote a report which was published in the form of a booklet in 1944, related the following, allegedly based on inmate testimonies, regarding the claimed homicidal carbon-monoxide gas chamber, in front of which two Zyklon-B cans reportedly lay on the floor when he inspected it (Simonov, p. 8):

“The contents of the cans were introduced through the pipes into the adjoining room when it was full of people. [...]

The ‘Zyklon’ was introduced through the pipes; the SS-man leading the operation supervised the asphyxiation process which, according to different eyewitness accounts, took between two and ten minutes.”

Therefore, upon the liberation of the camp, not one single witness knew anything about homicidal gassings using bottled carbon monoxide, while the procedure of gassing with Zyklon B described by the witnesses is unfeasible, as the gypsum granules of Zyklon B cannot be fed through pipes.

During the show trial staged by the Poles in 1945 against a few former members of the camp staff, only one witness, Tadeusz Budzyn, spoke of killings in the chambers equipped with pipes, but with a system that did not include “cylinders” (*Majdanek*, p. 52):

¹⁰⁴ Graf/Mattogno, pp. 191-206; see in particular the table on p. 202.

¹⁰⁵ *Ibid.*, p. 143. On-the-spot inspection by the author in July 1992 and in June 1997, as well as a letter of confirmation from the Archives Director of Majdanek Museum sent to the author on January 30, 1998.

"President – Was there also asphyxiation?"

Witness – It began with the fact that, when there was no Zyklon B [yet], there was already the first gas chamber, and it could poison with exhaust gas [przy pomocy gazu spalinowego]. This chamber is made in such a way that on one side there are pipes connected to a Diesel engine that led the gas into the chamber. Ultimately, the Germans in Majdanek had the idea of building trucks that were gas chambers at the same time. These trucks were structured so that, when the driver drove off, the gas was conveyed inside through the exhaust pipe, and after the driver had arrived, the prisoners were already dead."

On the supplies of Zyklon B to Majdanek Camp, Hilberg refers to three documents published in facsimile in a Polish work of 1979, and to one testimony, but then states: "The gas was routinely used in camps also for fumigation" (FN 45, p. 938), meaning disinfestation. But if that is so, what do the documents adduced by Hilberg actually prove?

If he had taken the trouble to visit the camp, Hilberg would have learned that a collection of approximately 60 original documents on the supply of Zyklon B to Majdanek for disinfestation purposes still existed in the archives of the local museum.¹⁰⁴

The story of the alleged mass shooting of up to 42,000 Jews in November 1943, 12,000 to 17,000 of them Majdanek inmates (FN 46, *ibid.*), is based exclusively on "eyewitness testimonies" unsupported by either documents or physical evidence. These "testimonies," such as those by SS *Oberscharführer* Erich Mussfeldt, for example, are moreover demonstrably false (Graf/Mattogno, pp. 207-228).

Recourse to shooting in order to eliminate from 12,000 to 17,000 inmates in an alleged "killing center" abundantly equipped with Zyklon-B gas chambers for mass murder is already inexplicable due to the fact that it would have been impossible to maintain secrecy. Even more inexplicable is the fact that this alleged shooting is said to have involved specifically not just inmates who were unable to work, but rather practically *all* of the inmates, since the camp only had a total of approximately 15,400 inmates in August 1943 (PS-1469).

Hans Frank's service diary published by Präg and Jacobmeyer does not contain any hint, not even veiled, of this alleged wanton mass execution. The entire month of November 1943 is covered on just six pages (Präg/Jacobmeyer, pp. 754-759). It is evident that Hilberg's sources are a drastic selective presentation of the documentation, in turn based entirely on hostile testimony.

For the month of October, however, there appears a note worthy of interest in Frank's diary. On the 19th, a government meeting on security in the General Government was held in Krakow, in which there was mainly talk of the resurgence of partisan activity, but also with a reference to Jews (*ibid.*, p. 741):

"The meeting turned to this question, and the Governor General gave the head of the Armaments Inspection, General Schindler, SS Oberführer Bierkamp and Major General Grünwald the task of looking through the lists of the Jewish camps in the General Government to see exactly how many of the inmates were

employed as workers. The rest should be deported from the General Government."

Frank's order therefore concerned the expulsion from the General Government of Jews not employed as workers in the armaments industry. They all were to be expelled, not murdered.

Therefore, while in Galicia, it was "necessary to keep the Jewish workers fit for work," which included "appropriate lodgings, clothing and medical assistance," at Majdanek they were allegedly and incomprehensibly subjected to wholesale executions.

3.4. Auschwitz

Hilberg outlines the origins of the alleged extermination at Auschwitz, embracing uncritically all the Höss declarations consisting of an inextricable tangle of absurdities, contradictions and falsehoods, which is impossible to summarize even briefly (see Mattogno 2020). I will therefore limit myself to showing how ruthlessly Hilberg uses these statements, starting with the following quote:

"Höss recalled that in the summer of 1941 he was summoned to Berlin by Heinrich Himmler himself. In a few spare words, Himmler told him of Hitler's decision to annihilate the Jews. One of the factors in the choice of Auschwitz, said Himmler, was its location near railways. The details of this assignment would be brought to Höss by Eichmann. [...] During the following weeks, Eichmann came to Auschwitz, and Höss attended a conference in Eichmann's office about railroads and arrangements for trains." (pp. 940f.)

His sources are Höss's autobiographic text written while in Polish custody (Höss 1959), Höss's deposition at the Nuremberg IMT (Vol. 11, p. 398), and his affidavit of March 14, 1946 (NO-1210; FN 56f., p. 941).

On the utter unreliability of Höss's various Holocaust claims, please see my separate study *Commandant of Auschwitz: Rudolf Höss, His Torture and His Forced Confessions* (Mattogno 2020).

It is indeed true that Höss repeatedly and unflaggingly claimed after the war to have received this order from Himmler "in the summer of 1941" during a meeting in Berlin as the "final solution of the Jewish question" (see Mattogno 2020, pp. 184-186). But Hitler cannot have ordered the "Final Solution" in terms of total physical extermination of the Jews in the summer of 1941, because as I documented in Subchapter 1.2., and as is confirmed by a major Hilberg source, this term did not possess that meaning at the time.

In fact, Eichmann's memoirs, cited by Hilberg in his footnote 31 (p. 419), states the following (Aschenauer, p. 230):

"The concept of a 'Final Solution of the Jewish Question' was clarified after the reunification with Austria. 'Final Solution' had nothing to do with the physical end, or the end of a physical person. The bureaucratic term of 'F i n a l

Solution of the Jewish Question' was used continually. No one thought that this concept could include the killing of Jews. When physical extermination was ordered later, after the end of 1941, the innocuous designation 'Final Solution of the Jewish Question' was kept also for this for camouflage purposes. That which had initially meant the satisfaction of both parties through emigration, through separation from the host people, was now a camouflage term for physical extermination. But the term 'Final Solution' still retained its original meaning even during this period, since, for example, the emigration through Kastner in Hungary or the ghettoizations had nothing to do with extermination, but was nevertheless subsumed under the term 'Final Solution'; it was therefore an umbrella term, a bureaucratic term, which should be clear."

Ignoring for the sake of argument the insurmountable contradictions discussed earlier about the existence and dating of the alleged extermination order, this important source, often cited by Hilberg, asserts that at least until the end of 1941, the expression "final solution of the Jewish question" did *not* refer to the extermination of the Jews. But then, how could Hitler have ordered it in this sense in the summer of 1941?

This dating also conflicts with the statements of Wisliceny, who said:¹⁰⁶

"Starting with the outbreak of the war with Russia and the entry of the United States into the war, a profound change began to appear in our treatment of the Jewish problem. This change did not come about from one day to the next, but gradually, reaching its apex only in the spring of 1942."

I should like to remind the reader that for Wisliceny the extermination order allegedly issued by Himmler to Höss in the summer of 1941 "actually" dated to April 1942. Hilberg has nothing to say about these major contradictions.

For his claim cited above, Hilberg also refers to Höss's so-called autobiographical text, which was first published as an English translation in 1959 (Höss 1959). Already earlier, he had referred to Höss's autobiography when discussing Hitler's alleged extermination decision, stating that "Höss recalls having been summoned to Himmler in the matter of killing the Jews during the summer [1941]" (FN 31, p. 419). He does not mention Höss's even more detailed statements in this regard contained in his affidavit of April 5, 1946, which he cites only later in a different context. This is easy to explain.

In his memoirs, Höss asserted that the extermination order had already been issued during the summer of 1941, and that Himmler had explained to him (Höss, p. 205):

"The existing extermination centers in the East are not in a position to carry out the large actions which are anticipated."

In his affidavit of April 5, 1946 (PS-3868, IMT, Vol. 33, pp. 275-279, here p. 277), Höss specified which camps were the "existing extermination centers":

¹⁰⁶ Declaration by D. Wisliceny of November 18, 1946, in: Poliakov/Wulf, p. 90.

"I was ordered to establish extermination facilities at Auschwitz in June 1941. At that time there were already in the General Government three other extermination camps; BELZEK, TREBLINKA and WOLZEK."

No camp by the name Wolzek or any similar name ever existed. Hilberg omitted this passage intentionally, because he claims that the Belżec Camp was opened only a few days after March 16, 1942, that the Treblinka Camp was operational by July 1942, while Sobibór (not Wolzek) was only opened in April 1942 (pp. 934-936). So how could these camps have existed as early as June 1941?

The peculiar thing is that the affidavit in question was read in open court during the same hearing mentioned by Hilberg. In the transcript, it is located only 18 pages after the pages cited by Hilberg (Vol. 11, starting on p. 414; the sentences quote here are on p. 416).

But this anachronism is not the only contradiction contained in Höss's statements. There is another contradiction, no less serious, which Hilberg tried to conceal already in his 1985 "definitive" edition, where we read:

"In the meantime, Höss went ahead with the construction of killing installations, which were to contain two major improvements. The first of these was compactness. Höss built his installations as combination units, each of which contained an anteroom, a gas chamber, and an oven for body disposal. Second, he decided after visiting Treblinka that the carbon monoxide method was not very 'efficient.' Accordingly, he introduced in his camp a different type of gas: quick-working hydrogen cyanide (prussic acid – commercial name, Zyklon)." (1985, p. 882)

The source is Höss's affidavit of April 5, 1946 (FN 55, *ibid.*). Hilberg refers to Crematoria II and III, which, according to the orthodox Auschwitz narrative, each had an undressing room ("anteroom") and a gas chamber, and not one, but five triple-muffle furnaces. But this is irrelevant in view of Höss's statements about Treblinka. Here is the relevant passage from his affidavit (PS-3868, p. 2):

"I was ordered to establish extermination facilities at Auschwitz in June 1941. At that time there were already in the General Government three other extermination camps; BELZEK, TREBLINKA and WOLZEK. These camps were under the Einsatzkommando of the Security Police and SD. I visited Tremblinka [sic] to find out how they carried out their exterminations. The Camp Commandant at Tremblinka told me that he had liquidated 80,000 in the course of one-half year. He was principally concerned with liquidating all the Jews from the Warsaw Ghetto.

He used monoxide gas and I did not think that his methods were very efficient. So when I set up the extermination building at Auschwitz, I used Cyclon B, which was a crystallized Prussic acid which we dropped into the death chamber from a small opening"

Therefore, Höss introduced Zyklon B at Auschwitz *after* his visit to Treblinka, where he considered the killing system with carbon monoxide to be not very effective. When did Höss's visit to Treblinka take place? It must have happened before Höss started building his own "extermination facilities," the first of which is said to have been the crematorium in the Main Camp, which according to Hilberg was used for gassings from "February-December 1942" (Table 9-4, p. 949). It follows that Höss's visit to Treblinka must have happened before "February 1942," although that camp started operating only in July 1942!

In the typed transcription of Höss's handwritten declaration of March 14, 1946 (NO-1210), a passage was added by the typist that is not included in Höss's handwritten text, according to which the alleged visit to Treblinka took place "in the spring of 1942" (Mattogno 2020, p. 360), but during the interrogation of April 3, 1946, Höss corrected this: the year was 1941 (*ibid.*, pp. 60f.). Either way, it follows that Höss had the privilege of visiting this camp even before it was built, and at the time of the visit, Höss claimed that the Treblinka Camp had already been in operation for six months, and had already "liquidated" 80,000 Jews from the Warsaw Ghetto (*ibid.*, p. 66), although it is well known that this "liquidation" began only on July 22, 1942!

Hilberg not only did *nothing* to resolve this inextricable tangle of contradictions that already by itself demolishes his artificial reconstruction, he dishonestly hushed it up. In the 2003 edition, this entire passage was completely rewritten. It now contains no reference anymore to Höss's visit to Treblinka at all (pp. 941-946). The only trace left from the passage quoted above is the following sentence on page 946:

"Thus an altogether more efficient system [based on Zyklon B], which guaranteed much more rapid processing than in other camps, had been devised in Auschwitz."

Unable to face, let alone resolve, the inextricable contradictions created by Höss's statements, Hilberg simply relegated Höss's claimed visit to Treblinka to the memory hole.

But the contradictions do not end here. As already quoted at the beginning of this subchapter, Hilberg writes on p. 941:

"The details of this assignment would be brought to Höss by Eichmann. [...] During the following weeks, Eichmann came to Auschwitz, and Höss attended a conference in Eichmann's office about railroads and arrangements for trains."

The source is Höss's deposition at Nuremberg, where he stated (IMT, Vol. 11, p. 399):

"I met Eichmann about 4 weeks after having received that order from the Reichsführer. He came to Auschwitz to discuss the details with me on the carrying out of the given order. As the Reichsführer had told me during our discus-

sion, he had instructed Eichmann to discuss the carrying out of the order with me and I was to receive all further instructions from him."

It should be noted that the term "details" was not used by Höss during his testimony at Nuremberg, but it does appear in Höss's memoirs (Höss, p. 205):

"You will learn further details from Sturmbannführer Eichmann of the Reich Security Head Office who will call on you in the immediate future."

Eichmann's visit to Auschwitz is supposed to have taken place in July 1941, but there is no documentary trace of it.

During the pre-trial interrogations in preparation for Israel's 1961 show trial against Adolf Eichmann, Eichmann stated rather confusedly that in 1941 he was sent by the head of the Gestapo Müller "to all these centers," meaning the "extermination camps," in order to report to Müller. In this context, he claimed to have visited the Auschwitz Camp as well (*State of Israel*, Vol. 7, pp. 363f.). Hence, Eichmann was not sent to Auschwitz by Himmler in order to discuss details about Himmler's extermination directives with Höss, but he was sent by Gestapo Müller in order to report back to him. But to report on what exactly? We don't know.

Today, after the two studies by Jean-Claude Pressac (1989, 1993) and after the 1999 article by Karin Orth, no competent historian believes anymore that Auschwitz was an "extermination camp" already in 1941.

While it is true that Hilberg could not have been familiar with Czech's 1990 *Auschwitz Chronicle* when he published the 1985 "definitive" edition of his book (or the 1989 German original *Kalendarium*, for that matter), which I quote here repeatedly, it is also true that he was familiar with the first edition of the "Kalendarium," which appeared in a series of articles in the late 1950s and 1960s, hence way before 1985. Already there we can read that the first alleged use of Zyklon B for homicidal purposes is said to have occurred on September 3, 1941 (Czech 1959, p. 109). In his 2003 edition, Hilberg endorses this anachronistic dating with explicit reference to Höss and Czech (FN 58, p. 941). This brings us straight back to the contradiction noted above, given that Höss claimed to have introduced Zyklon B at Auschwitz only after his alleged visit to Treblinka.

On the origins of the alleged gas chambers, Hilberg constructs a version which contradicts that of Höss. He writes:

"In the summer of 1941, when the physical destruction of the Jews was in the offing for the whole of the European continent, Himmler consulted with the Chief Physician of the SS (Reichsarzt-SS und Polizei), Gruppenführer Dr. Grawitz, on the best way to undertake the mass-killing operation. Grawitz advised the use of gas chambers." (p. 932)

The source is Konrad Morgen's affidavit of July 13, 1946, Document SS(A)-65 (FN 23, *ibid.*). The related passage of the document states (IMT, Vol. 42, p. 559):

"In order to carry out the mass extermination ordered by Hitler, Himmler had asked him [Grawitz] to propose a method of killing that was both painless and saved the victims from fear of death. That is why a procedure has been chosen that leaves those concerned in complete ignorance of their fate until the moment of the unexpected use of a rapidly acting, highly volatile gas."

This version is at least more-logical than that of Höss, although, like the latter, it is not supported by any proof. For the execution of a Hitler order, Himmler is said to have addressed himself reasonably to the highest medical authority in the SS, who is said to have immediately suggested the most suitable gas for extermination. According to Höss, by contrast, Himmler is said to have had recourse to Eichmann, who stated four months after his alleged visit to Auschwitz that he "had not yet discovered a suitable kind of gas" (Höss, p. 207).

3.5. Höss and the Origins of the "Gas Chambers"

Hilberg then goes on to describe the origins and development of the alleged extermination installations:

"One day, when Höss was away on business, his deputy, Fritzsche, locked some of the prisoners into a cellar and killed them with hydrogen cyanide, a gas in stock for fumigation. The experiment was repeated when Höss returned. The building (or 'block' as it was called in Auschwitz), numbered 11, had to be aired out for two days, and the next gassing was therefore planned for a somewhat larger number of Russians in the crematorium. Holes were made in the earth and in the concrete roof over the crematory's morgue. After the cyanide was introduced into the room, some of the Russians shouted, 'Gas!' and tried to break down the door, but the bolts did not give way. Höss observed the corpses and listened to the explanations of the camp physician. The victims, he was assured, had not suffered in agony. He concluded that death from the gas was bloodless and that its use would spare his men a great psychological burden."

The mortuary now became the first gas chamber. It was in operation, with an interruption for repair of the smokestack, for a year. Since the size of the chamber and the capacity of the two ovens were not sufficient for the task at hand, Höss looked for a new location to carry out additional gassings. Accompanied by Eichmann, he found two small farmhouses in Birkenau that seemed suitable. Work was begun to fill in their windows. The interior walls were removed and special airtight doors installed. The two gas buildings were placed in operation during 1942, the smaller one in March, the larger in June. They were called Bunker I and II. [...]

The bodies of the people gassed in the two bunkers were buried in mass graves. A survivor reports that in the summer of 1942 the corpses swelled, and a 'black, evil-smelling mass oozed out and polluted the ground water in the vicinity.' From the end of summer to November 1942, the accumulated decom-

posing bodies infested with maggots had to be uncovered and burned." (pp. 941f.)

In separate studies I demonstrated that the claims about the first homicidal gassing with Zyklon B cannot be substantiated with documents (Mattoigno 1992, 2016c), that the morgue in Crematorium I was never used as a homicidal gas chamber (2016e), and that the so-called "bunkers" at Birkenau never existed as extermination installations (2016f).

For the claimed first gassing in the basement of Block 11, Hilberg refers to Höss's "autobiography," to the German edition of Czech's *Auschwitz Chronicle*, and to a 1994 article on the "Gas Chambers and Crematoria" of Auschwitz by Franciszek Piper (FN 58, p. 941). For the alleged gassings in the Main Camp's crematorium, Hilberg relies on the two books by Pressac (1989, 1993) and the German edition of Czech's *Auschwitz Chronicle*. For the claims about the "bunkers," he cites Pressac's 1989 book, the German edition of Czech's *Auschwitz Chronicle*, and a post-war affidavit by former Auschwitz physician SS *Hauptsturmführer* Friedrich Entress (April 14, 1947; NO-2368; FN 59, p. 942). Hilberg's claims about the mass graves are supported by Höss's memoirs and by Filip Müller's 1979 memoirs (FN 60f., *ibid.*).

For starters, it is worth noting that the three entries Hilberg quotes from Czech's *Auschwitz Chronicle* also refer as their source to Höss's memoirs, and two of them also to a post-war declaration by former SS *Rottenführer* Pery Broad.¹⁰⁷ The same is true of Piper's paper, which relies to a considerable extent also on the statements made by Höss, Broad and Müller, although drawing also from numerous witness accounts given during the Polish show trials of the immediate post-war time and from the Auschwitz Museum's collection of testimonies recorded decades later, its anecdotal source base being considerably wider.¹⁰⁸ When it comes to substantiating homicidal gassing claims, Pressac relies in his two books exclusively on post-war witness statements as well, among them again Höss, Broad and Müller, but also Charles Bendel, Miklós Nyiszli, Henryk Tauber, Szlama Dragon and Stanisław Jankowski, among others.

I will abstain from reviewing them all here, as I have done this already in the three studies mentioned above, as well as in additional studies published more recently, where I show that all of these testimonies are to some degree or

¹⁰⁷ Czech 1989, pp. 174f., 186f., 238f. The equivalent entries in Czech 1990 are: a claimed gassing in Crematorium I on February 15, 1942, p. 135, which Czech backs up with Höss and Broad; the claimed start of operation of "Bunker 1" on March 20, 1942, p. 146, backed up with Höss and Broad; the claimed start of operation of "Bunker 2" on June 30, 1942, p. 189, backed up with Höss. Broad's declaration can be found in Bezwińska/Czech 1973, pp. 137-200 (German); 1992, pp. 139-198 (English).

¹⁰⁸ Apart from Höss, Müller and Broad, Piper refers to witness statements by Dybus, Feijkel, Tondos, Glinski, Przeda, Szweda, Szczerbowski, Kłodziński (first gassing); Badenitz, Stark, Sulkowski, Koczorowski, Hałgas, Kula, Korkowski (Crematorium I); Gulba, Wisinska, Dragon, Wohlfarth, Puchala, Bilan, Rosin, Merbach, Przeda, Kula, Plaskura, Wolken (bunkers); Tauber, Kula, Dragon, Girska, Nyiszli, Jankowski, Markus (Crematoria II-V). Most of these statements, however, are superficial and thus of mere marginal importance.

another riddled with absurdities, technical impossibilities as well as internal and external contradiction.¹⁰⁹

Here, I will focus on the less-known affidavit by Friedrich Entress, and juxtapose it with claims made by Höss, the most-frequently quoted key witness for the orthodoxy's narrative on how gas chambers came to be at Auschwitz. These are two out of a plethora of unreliable and contradictory testimonies on these alleged extermination installations, which also contradict each other, as is amply demonstrated in the three above-mentioned books. Dr. Entress, who served as a physician at Auschwitz between December 11, 1941 and October 20, 1943, declared about the so-called "bunkers":¹¹⁰

"The first gassings at Auschwitz-Birkenau began in the summer of 1942. They concerned gassings of Jews from Poland and Russia. [...]"

Two old farmhouses were used as the first gas chambers; they had been modified specifically for the gassings. The construction work was done by the SS construction office. The windows were walled up, the inner walls removed and a special door put in, which sealed the room air-tight.

The capacity was laid out for about 300 people. The detainees had to undress in a barrack nearby and were led into the gas chamber from there."

In contrast to this, Höss wrote in this regard (Höss, p. 208):

"I cannot say on what date the extermination of the Jews began. Probably it was in September 1941, but it may not have been until January 1942."

He stated that "Bunker 1" could accommodate 800 persons (*ibid.*, p. 207), while "Bunker 2" could hold 1,200 (*ibid.*, p. 210). Moreover, "Two huts near bunker I and three near bunker II were erected, in which the victims undressed" (*ibid.*).

Therefore, the exterminations in the "bunkers" began for Höss at the latest in January 1942, but for Entress only in the summer of 1942. The total capacity of the installations was (800+1200=) 2,000 persons for Höss and (2×300=) 600 for Entress; there were five undressing barracks in all for Höss, but only two for Entress. Can one seriously believe that Hilberg was not aware of these blatant contradictions?

I should add that Höss also contradicted himself, since in the above-mentioned declaration of March 14, 1946 (NO-1210), he asserted in this regard that the victims undressed in the open, "behind erected brushwood screens" – therefore, the five undressing barracks did not exist – and that the naked victims entered the rooms, 200-300 at a time, depending on their size, and therefore a total of 400-600 for both facilities, not 2,000.

Hilberg asserts that Himmler, *Gauleiter* Fritz Bracht and Higher SS and Police Leader Ernst Heinrich Schmauser "watched a procedure from the unload-

¹⁰⁹ Mattogno 2020 on Höss; 2020b on Nyiszli and Bendel; 2021b on Müller, Jankowski and others; 2021c on Tauber and Dragon.

¹¹⁰ Affidavit of F. Entress dated April 14, 1947 (NO-2368), pp. 3f.

ing of the living to the removal of the dead at Bunker II" (p. 942). As a source, he cites Höss's autobiography (FN 60, *ibid.*).

Himmler's visit to Auschwitz took place on July 17 and 18, 1942. On these two days, two trains arrived at Auschwitz with Jews from the Dutch camp of Westerbork, and one train with Jews from Slovakia. Based on the camp records showing when some of the deportees on these trains were registered, the first transport arrived no earlier than 8 pm on the 16th, and no later than 6 am on the 17th, while the other two arrived no earlier than 8 pm on the 17th and no later than 6 am on the 18th.

According to Himmler's service diary, he landed at Kattowitz Airport at 3:15 pm on the 17th. Therefore, he could not have seen the alleged gassing of the Dutch Jews from the first transport, which is said to have happened before 6 am on that day. His visit to Auschwitz was concluded at 8 pm, with dinner in the officers' quarters. After dinner, Himmler was accompanied to Kattowitz, where he was put up for the night by Gauleiter Bracht. On the morning of July 18, at 9 am, he was still at Bracht's house, and visited Auschwitz again after breakfast. Therefore, he could not have seen even the other two Jewish transports, which were presumably gassed between 8 pm on the 17th and 6 am on the 18th (for details and sources see Mattogno 2016, pp. 16-25).

Therefore, Himmler could *not* have been present at *any* of the alleged gas-sings.

3.6. The Birkenau Crematoria

In the 1985 "definitive" edition, Hilberg displayed a poor understanding of the Birkenau crematoria's design, and of the complexities of their design (1985, pp. 883f.). One might object that, for chronological reasons, he could not have been familiar with the works of the latter-day Western experts on this camp – Jean-Claude Pressac and Robert Jan van Pelt – whom I have thoroughly refuted in a specific study (Mattogno 2019). But Hilberg was equally ignorant of the sole historical sources available to him at the time, that is, the abundant literature produced by the Auschwitz Museum, which at least would have provided him with an elementary understanding of the camp's history, and this neglect is inexcusable for the author of the "single most-important book on the Holocaust."

Hilberg amended these flaws to some degree in the 2003 edition, where he relies mainly on Pressac's two books (pp. 942-948), mentioning a number of "criminal traces" which Pressac notoriously listed in his books. Already in my first critique of Pressac's second book, published in the U.S. in 1994,¹¹¹ I documented that his methods of cherry-picking, misrepresenting and outright dis-

¹¹¹ Mattogno 1994; cf. more thoroughly: Mattogno 2019.

torting documentary evidence are highly flawed, but Hilberg paid no attention to this.

Here I want to focus on Hilberg's claim that the Auschwitz Camp's Central Construction Office implemented the "secret" project of mass extermination using gas chambers by building the Birkenau Crematoria. In fact, Himmler is said to have issued his extermination order to Höss with the following admonition (Höss, p. 205):

"The departments concerned will be notified by me in due course. You will treat this order as absolutely secret, even from your superiors."

However, if we understand the bureaucratic structure and practices of all agencies involved, it becomes very clear that "secrecy" from Höss's superiors would have been an impossible illusion.

The Central Construction Office formed part of Office Group C of the WVHA, the SS's Economic and Administrative Main Office, headed by SS *Oberführer* Hans Kammler. This was just one of the office groups in which the WVHA was organized, which in turn was headed by SS *Gruppenführer* Oswald Pohl.¹¹² The WVHA was created on February 1, 1942. In June 1941, the Construction Office of Auschwitz, as it was called then, was subordinate to Office II of the *Hauptamt Haushalt und Bauten* (HHB), the Main Office Budgeting and Construction, which later became Office Group C within the WVHA, and which was also headed by Kammler. The HHB had been created by Pohl in 1940, as Hilberg correctly notes (p. 924). SS *Brigadeführer* Richard Glücks was inspector of concentration camps. At the time, the Inspectorate of Concentration Camps was still subordinate to the SS *Führungshauptamt* (SS Leadership Main Office). When this office, and the Main Office Budgeting and Construction were merged into the SS-WVHA on February 1, 1942, the Inspectorate of Concentration Camps was incorporated into Offices Group D – Concentration Camps, command of which was retained by Glücks.

Now that we know the main characters in charge of that organization, let us return to Höss's alleged meeting with Himmler. As we have seen, Himmler put Höss directly in charge while ignoring the chain of command, bypassing all the superiors in between for reasons of secrecy, foremost RSHA Chief Reinhardt Heydrich, Gestapo Chief Heinrich Müller, WVHA Chief Oswald Pohl, concentration-camp Chief Richard Glücks, and construction Chief Hans Kammler. All of these bigwigs were to be left in the dark by Höss as to what he was doing in Auschwitz.

Therefore, Himmler entrusted the Construction Office of Auschwitz with the technical implementation of the "final solution" by way of mass murder in gas chambers, but that office could do *nothing* without the approval and knowledge of Kammler and therefore Glücks, not to mention all the other high-caliber individuals in the chain of command, who would have been very

¹¹² Hilberg himself describes the WVHA's organizational structure on pp. 924-926. For more details on the organization of the Auschwitz Central Construction Office, see Mattogno 2015.

familiar with what was going on anyway, as they were implementing a vast array of other measures in fulfillment of the "final solution," if we are to believe the orthodox narrative! This shows just how absurd Höss's lead story of "secrecy" is which he put forward to justify his claim that Himmler approached him directly with this order.

No less absurdly, Höss asserted during his interrogation by U.S. investigators at Nuremberg on April 1, 1946 (Mendelsohn/Detwiler, Vol. 12, p. 26):

"Q. What did you do in Auschwitz?"

A. I immediately got in touch with the chief of a construction unit and told him that I needed a large crematorium. I told him that we were going to receive a large number of sick people, but I did not give him my real reason.

Q. And then?"

A. And after we had completed our plans, I sent them to the Reichsfuehrer. After I had changed them in accordance with the real purpose of his instructions, they were approved."

Thus, SS *Sturmbannführer* Karl Bischoff, head of the Central Contruction Office of Auschwitz, is supposed to have built a homicidal gas chamber without even knowing it!

What is more, as we have seen earlier, according to Dieter Wisliceny, Himmler's alleged extermination order of April 1942 was explicitly addressed not only to Heydrich, but also to the "Inspector of Concentration Camps," hence to Glücks, the superior with regard to whom Höss was supposed to treat "as absolutely secret" Himmler's alleged order!

Hilberg takes no interest in this whole muddle of contradictions. He doesn't even consider the matter.

To shore up the theory of the alleged homicidal gas chamber in Crematorium I, Hilberg asserted during the Zündel Trial, "I have studied the documents," then added:¹¹³

"Including those pertaining to construction and, thus, was aware, many years before I ever set foot in Auschwitz, that there was a gas chamber in Auschwitz in the first old part of the camp which was in use prior to the establishment of additional gas chambers in Auschwitz 2, known as Birkenau."

In the end, Hilberg stated:

"In 1942, and I now speak on the basis of documents, not observation, two gas chambers were established."

Here he is referring to the so-called "bunkers" at Birkenau. In reality, there are *no documents* relating either to the alleged gas chambers in Crematorium I or to the alleged "bunkers," and Hilberg was well aware of this – so well that, in the final edition of his work, there is no mention of any documentary sources at all.

The whole matter amounts therefore to nothing more than more perjury.

¹¹³ District Court, pp. 775f./Rudolf 2020a, p. 139.

3.7. Zyklon B

Hilberg then concerns himself with a detailed discussion of Zyklon B, dedicating a good eight pages to this topic, which he starts as follows:

"Hydrogen cyanide, or Zyklon, was a powerful lethal agent – a deadly dose was 1 milligram per kilogram of body weight. Packed in containers, the Zyklon was put to use simply by opening the canister and pouring the pellets into the chamber; the solid material would then sublime." (p. 951)

In fact, hydrogen cyanide is a highly volatile liquid at room temperature, and it is not equivalent with Zyklon B, which was just a trade name. The type of Zyklon B used at Auschwitz consisted of gypsum pellets that were soaked with hydrogen cyanide.¹¹⁴ Once a can was opened, the liquid began to evaporate, leaving behind the solid gypsum pellets, which had to be collected after a fumigation and treated as hazardous material due to remnants of hydrogen cyanide in them (see NI-9912). Hence, the "solid material" – the gypsum carrier – did not "sublime," meaning turn directly from a solid into a gas.

Hilberg then explains:

"TESTA sold Zyklon in different concentrations. Invoices presented to municipal or industrial clients for fumigations of buildings were printed with columns headed C, D, E, and F, each denoting a category of potency and price. As explained in a letter to the Ostland, strength E was required for the eradication of specially resistant vermin, such as cockroaches, or for gassings in wooden barracks. The "normal" preparation, D, was used to exterminate lice, mice, or rats in large, well-built structures containing furniture. Human organisms in gas chambers were killed with Zyklon B." (p. 955)

As for the various categories of Zyklon, Hilberg is referring to three documents dating back to February-March 1942, on non-classified microfilm (FN 115, *ibid.*).

The fact is that the Tesch & Stabenow Company had a cost-estimate questionnaire for the disinfestation of buildings (regardless of whether they were public or private, large or small) which included only two types of products: Zyklon B and T-Gas (ethylene oxide).¹¹⁵ Furthermore, the financial statements of the Tesch & Stabenow Company for the years 1941-1944 only mentioned Zyklon B.¹¹⁶

A document introduced during the Tesch Trial, with partially burnt margins (owner and date missing) mentions these letters:¹¹⁷

<i>"For gassing with Zyklon:</i>	<i>with gas potency 'D' and...</i>
<i>for objects up to 10,000 cubic meters in volume...</i>	<i>RM 130</i>

¹¹⁴ The contents of Zyklon-B cans left behind by the Germans were analyzed in 1998; see Mazal.

¹¹⁵ Tesch & Stabenow, "*Fragebogen für Kostenvoranschlag*," undated, APMM, I, d.2, Vol. 1, pp. 119f.

¹¹⁶ Affidavit by Alfred Zaun, accountant of the Tesch & Stabenow Company, dated October 20, 1945, NI-11396.

¹¹⁷ TNA, WO 309-1603.

"	"	over 10,000/30,000 cubic meters	"	"	...	"	120
"	"	"	30,000/60,000	"	"	"	115
"	"	"	60,000 cubic meters of volume...			"	110
		every 1,000 cubic meters of volume (external dimensions)					

Although the fight against more resistant parasites, such as cockroaches, requires higher gas potencies, ... the basic price increases from time to time corresponding to the greater use of chemicals, for gas potency 'F' (double of 'D') for example of 80... compared to the rates for normal gas potency 'D'."

In German contemporaneous manuals for pest control, the term "*Gasstärke*" ("gas potency") meant concentration, hence referred to the *quantity* of gas applied on a given volume to be fumigated, not to a different kind of gas. For example, in Walter Dötzer's manual we read (Dötzer, p. 113):

"At the latest after one hour of working in the gas (with normal gas potency), the gas filter must be changed."

As the example of T-Gas clearly shows, the "gas potency" was actually the quantity of product used per cubic meter of volume to be disinfested (*ibid.*, p. 129):

"Gas potency. For a fumigation are needed: 45 grams of ethylene oxide = 50 grams of T-Gas per cubic meter of volume."

In the lecture "Improper use of hydrogen cyanide as a delousing agent," Erich Wüstinger confirmed (NI-9098, p. 38):

"Every fumigation expert knows that the usual gas potency for fumigating a space and the exposure time of hydrogen cyanide – mostly 10 g/m³ for 20 hours..."

This explains the presence of the various volumes in the questionnaire quoted above, even if the pricing criterion is not clear. But it is certain that the relative "gas potency" always referred to Zyklon B. A text from 1929 speaks, for example, explicitly of the use of "Zyklon B, gas potency C," and adds that "usually for cargo spaces of ships, gas potency B is used" (Staatsinstitut..., p. 90).

From this it can be deduced that the Tesch & Stabenow Company provided for the use of Zyklon B at various concentrations in its estimates, depending on the type of parasite to be eliminated and the volume of the space. This also explains the difference in price. In fact, if the "gas potency" went from 5 to 10 grams per cubic meter, for example, the quantity of Zyklon B necessary for disinfestation doubled, and so did the price.

Hilberg, on the other hand, erroneously suggests that there were various types of Zyklon, called B, C, D, E, F, which were all different kinds of "preparations," of which Type B was used for homicidal gassings, the others for disinfestations. In reality, however, it was always Zyklon B, but applied in various quantities which produced certain concentrations of gas (e.g. 5, 10, 15 g/m³).

The source of the alleged killing of human beings with Zyklon B, by contrast, is Höss, as Hilberg informs us in his footnote 116 (p. 955), where he nev-

ertheless adds: "The same preparation was used for the delousing of clothes," meaning that Zyklon B was used also for disinfestations after all.

One last observation: on p. 951, Hilberg writes that "Zyklon was one of eight products manufactured by these firms, which undertook large-scale fumigations of buildings, barracks, and ships," in support of which he refers to "Lectures by Dr. Gerhard Peters and Heinrich Sossenheimer (gas experts), February 27, 1942, NI-9098" (FN 103, *ibid.*). In this lecture with the title "Development and Expansion of the 9 Degesch Processes," Heinrich G. Sossenheimer declared (NI-9098, p. 15):

"The following forms of Zyklon are in use today. Zyklon, liquid hydrogen cyanide absorbed in diatomaceous earth (Diagriess), or a synthetic gypsum substance (Erco), and Zyklon-Discoids, liquid hydrogen cyanide absorbed on wood-fiber discs."

Since 1924, 250 million cubic meters of space had been disinfested using Zyklon B, 100 million of them in Germany.

On the amount of Zyklon B used at Auschwitz, Hilberg writes:

"The amounts required by Auschwitz were not large, but they were noticeable. At various times sizable portions of these deliveries were used for gassing people.¹¹⁷" (p. 955)

This is a noticeable change to what he wrote in 1985, where we read:

"The amounts required by Auschwitz were not large, but they were noticeable. Almost the whole Auschwitz supply was needed for the gassing of people; very little was used for fumigation.⁸⁵" (pp. 889f.)

What had changed? The footnotes still point to the same anecdotal sources, although the 2003 edition has Höss added to the roster of eyewitness testimonies. But Höss only made statements about the amount of Zyklon B used per gassing, not about what portion of the total deliveries were used for homicidal purposes, as Hilberg himself indicates in his Footnote 117.

Fact is that this issue is dealt with by orthodox historians in such an arbitrary manner that Jean-Claude Pressac, the world's greatest orthodox Holocaust expert on Auschwitz, asserted precisely the opposite, although with no better reasons than Hilberg. For Pressac, only 2-3% of the Zyklon-B supplies would have sufficed for the claimed gassings, so that "between 97 and 98% of the gas could be dedicated to delousing" (Pressac 1993, p. 47).

The three anecdotal sources listed by Hilberg in his Footnote 117 (p. 955) are:

"Testimony of Dr. Charles Sigismund Bendel (Jewish survivor) at trial of Bruno Tesch, tr. pp. 28-31, NI-11953. Heinrich Schuster, former Austrian intelligence agent imprisoned in Auschwitz, estimated the annual consumption of Zyklon for fumigations of barracks and freight cars at 1,700 kilograms (3,750 lbs.). Affidavit by Schuster, October 13, 1947, NI-11862. Höss estimated that only 13 lbs. (in six one-kilogram cans) were needed for the gassing of 1,500 people. See his affidavit of May 20, 1946, NI-03."

It is quite true that Bendel, a professional liar (see Mattogno 2020b, pp. 304-333), stated in the aforementioned testimony:¹¹⁸

"During the whole period from 10th December 1943 until the 18th January 1945 I remember only one disinfection of barracks."

Hilberg took Bendel's claims at face value, never examining the witness's reliability, and does not appear greatly concerned with the matter. Here are a few more of Bendel's claims regarding the consumption of Zyklon B:¹¹⁹

"During the month of June [1944] the number of gassed was 25,000 every day. [...]"

[Question] *In the months of May and June 1944 how many tins of Zyklon B do you estimate were used for exterminating people? [...]"*

Bendel – Two tins for one thousand persons; 25,000 per day; then we may say 50 tins per day."

This amounts to some 1,500 cans of Zyklon B per month. But in contradiction to this figure, he also asserted:¹²⁰

"During the months of May and June of 1944 I estimate that a total of 400 tins of Zyklon per month were used for killing people."

Moreover, if 25,000 Jews were gassed daily in June 1944, the total number for the entire month would have amounted to 750,000. But in reply to the question: "How many were gassed in May and June 1944?," Bendel replied: "About 400,000" (NI-11953, p. 3).

To avoid going into too much detail, this is how the witness described the alleged gas chambers of Crematoria II and III (NI-11390, p. 1):

"There were 2 gas chambers, underground, roughly 10 metres long, 5 metres wide and 1 1/2 metres high, each one."

Hilberg knew the real dimensions of Morgue #1, the semi-subterranean morgue of Crematoria II and III allegedly repurposed as homicidal gas chambers, because in the 1985 "definitive" edition, he correctly indicates their surface area: 210 square meters ("250 square yards," p. 884). He derived this information from the above-mentioned article by Jan Sehn (his FN 64), which states:

"Leichenkeller 1 (Cellar 1) had a surface area of 210 square meters and a height of 2.4 meters." (Sehn 1946b, p. 84)

These measurements correspond to those of the blueprints (30m × 7 m × 2.41 m). In the 2003 edition, he repeatedly refers to blueprint reproductions in Presac's 1989 book, especially in his Footnotes 77f. on page 945, so Hilberg was familiar with these buildings down to the smallest detail.

For Bendel, by contrast, these premises had a surface area of 50 square meters and were only 1.5 meters high, hardly high enough for any grown-up to

¹¹⁸ Interrogation of C.S. Bendel on March 2, 1946. NI-11953, p. 4.

¹¹⁹ *Ibid.*, pp. 2f.

¹²⁰ Affidavit of C.S. Bendel dated October 21, 1945. NI-11390, p. 7.

stand upright. It is important to note that Bendel was a self-proclaimed member of the so-called Sonderkommando, therefore presumably an "eyewitness"! But for Hilberg, no contradiction was even strident enough to merit his attention. As I demonstrate abundantly in Subchapter 4.3., Hilberg is never the slightest bit interested in verifying the trustworthiness of any witness or the veracity of their claims, as long as they are useful in proving his theory.

Let us now turn to the witness Schuster. In the affidavit cited by Hilberg, Schuster declared:¹²¹

"The whole Birkenau camp consisted of the three main sectors, BI, II, III (see enclosed diagram). Altogether, there were 263 huts. As mentioned before,^[122] one can of Cyklon containing about 5 kilogram was required to fumigate one hut. In this connection, it must be remembered that many huts were also sprayed with various other disinfectants.^[123] However, assuming that each hut was fumigated once a year with Cyklon B, we arrive at a yearly consumption of 1,350 kilogram. Taking into consideration the remaining two important camps (Auschwitz and Monowitz with 28 and 44 huts, respectively, a total of 68 [huts; recte: 72]), we get a further requirement of 350 kilogram Cyklon B per year. Thus, there would be an annual consumption of approximately 1,700 kilogram Cyklon for disinfecting purposes, always assuming that only Cyklon B was used."

This calculation is worthless, since it is based on erroneous assumptions.

1. The Zyklon-B cans delivered to Auschwitz in 1944¹²⁴ by Gerstein contained 500 grams hydrogen cyanide, not 5 kg. The largest Zyklon-B can available contained 1.5 kg of hydrogen cyanide.
2. The dosage of Zyklon B for disinfestation purposes was 8-10 grams per cubic meter (NI-9912, p. 1. This document is even cited by Hilberg: FN 102, p. 951). Therefore, the disinfestation of a housing barracks, with a volume of approximately 1,032 cubic meters, required approximately 8 to 10 kg of Zyklon B, or some 16 to 20 cans.
3. The total number of barracks was greater than that indicated by Schuster.
4. The witness disregards the Zyklon-B disinfestation chambers which also existed in the camp and thus consumed Zyklon B.
5. The disinfestation of the barracks only once a year is refuted by the existing documentation.

On the other hand, a general disinfestation of the entire camp complex Auschwitz-Birkenau-Monowitz, with a total volume to be disinfected of about 500,000 m³ of building space and a concentration of 8-10 g/m³ would have re-

¹²¹ Affidavit of H. Schuster dated October 24, 1947. NI-11862, p. 8.

¹²² The witness had previously described Zyklon B as "cylindrical cans with a content of approximately 5 kg."

¹²³ But "disinfectants" are not effective against parasites. The witness is confusing "disinfestation" with "disinfection."

¹²⁴ The witness was transferred to Birkenau in November 1943 and remained there until January 18, 1945.

quired approximately 4,024-5,035 kg of Zyklon B, as I have shown in detail elsewhere (Mattoigno 2019, pp. 444-449). This ignores the three Zyklon-B disinfestation chambers which certainly existed in 1944 (one in *Block 3* of the Auschwitz Main Camp, one in so-called *Kanada I* and one in *BW5a* at Birkenau), and it also does not consider the other satellite camps belonging to that camp complex.

Hilberg goes on, and writes:

"The camp administration itself did not buy the gas. The purchaser was Obersturmführer Gerstein, Chief Disinfection Officer in the Office of the Hygienic Chief of the Waffen-SS (Mrugowski). As a rule, all orders passed through the hands of TESTA, DEGESCH, and Dessau. From the Dessau Works, which produced the gas, shipments were sent directly to the Auschwitz Extermination and Fumigation Division (Abteilung Entwesung und Entseuchung). [...] Deliveries to SS installations for fumigation purposes were made every six months or so, but Auschwitz required a shipment every six weeks because Zyklon deteriorated easily and a supply had to be on hand at all times. To discerning eyes that frequency was noticeable too." (pp. 955f.)

The source is Höss's interrogation of 14 May 1946, Document NI-36 (FN 121, p. 956), in which the former commandant at Auschwitz declared (see Mattoigno 2020, p. 111):

"My conclusion I can draw from this is that the company [Tesch & Stabenow] could have known it [of the alleged homicidal use of Zyklon B at Auschwitz] only because Auschwitz constantly requested it, while it was delivered to the other units of the SS troops only once or at intervals of half a year."

He added that at Auschwitz, the deliveries were made on average every six weeks (*ibid.*, p. 112). These statements are, however, completely unfounded, as Hilberg well knew, because the document which he cites in his Footnote 118 (p. 955: NI-7278) lists 12 invoices from Degesch addressed to Gerstein that concern the supply of the quantities of Zyklon B to Auschwitz and Oranienburg in 500-gram cans as listed in the table overleaf.¹²⁵

Therefore, the same quantities of Zyklon B at very similar intervals were delivered to both the Auschwitz Camp and to Oranienburg, which was not a so-called extermination camp. Only thanks to this omission is Hilberg able to present Höss's false statements as the truth.

At this point, a reference to Hilberg's related testimony during the Zündel Trial is indispensable. In the first edition of his book, on page 570, he translated the heading "Abteilung Entwesung und Entseuchung," which appears on the invoices produced by Gerstein, as "Extermination and Fumigation Division."

While it is true that pest-control contractors are called "exterminators" in the English language, this term never refers to exterminating humans. Furthermore, while "exterminator" is a term that is pretty much limited to pest

¹²⁵ PS-1553, pp. 15-26.

control, the term “extermination” has a much broader meaning, and can refer to the destruction/annihilation of anything. Vice-versa, the German term Hilberg translated here – “*Entwesung*” – *never* refers to killing of humans, but only to pest control. Therefore, translating “*Entwesung*” with “extermination” in the present context of claims involving the extermination of human beings is highly misleading, if not outright mendacious. Even more serious was Hilberg’s shamelessness when he defended himself about this mistranslation under cross-examination during the 1985 Zündel Trial (Q: defense counsel; A: Hilberg):¹²⁶

“Q. What is the translation for ‘*Entwesung*’?
A. To deprive something of life – that is extermination. There is no very accurate translation which doesn’t carry connotations, but I think you will find that that’s an acceptable translation of the German term.
Q. I put it to you that it means ‘delousing’, and it refers specifically to vermin.
A. No.
Q. That word —
A. No. The term ‘*Wesen*’ is a live thing; anything alive. The prefix ‘*Ent*’ is to negate life, to deprive it of life. The suffix ‘*ung*’ in ‘*Entwesung*’, and having been deprived of life, or depriving something of life.”

After some additional discussion, defense counsel Christie asked Hilberg:

“Q. You agree that ‘*Entwesung*’ is a term meaning to use just disinsecticidization.
A. It refers to any killing, any deprivation of the quality of life of something that is alive.
Q. I see. So it could refer to anything, according to you.
A. Well, ‘*Entwesen*’ is anything that walks, anything that has life.”

¹²⁶ District Court, pp. 1131f./Rudolf 2020a, pp. 198f.

Hilberg grew up in Austria, hence he was fluent in German. He therefore knew that he was lying here. First, “*ent-*” is a prefix of the general meaning of removing something, like the English prefix “*de-*”. A “*Wesen*” in this context means “creature.” The suffix “*-ung*” serves to turn verbs into nouns, like the English suffix “*-ing*”. Hence “*Entwesung*” literally translates to “de-creature-ing” – pest control. While humans are creatures, too, Hilberg should have been aware that the use of “*Entwesung*” is strictly limited to pest control in the German language, with pests referring to small animals – and animals only – that are a nuisance, cause damage or spread disease, in the English language also referred to as “vermin.”

Hilberg did not wish to admit that the term “*Entwesung*” means “disinfestation” or “pest control,” and he even induced the prosecutor, Peter Griffiths, to present before the court and to introduce into evidence a photocopy of the page from a German-English dictionary showing the definition of the word “*Wesen*,”¹²⁷ without ever even bothering – either one of them – to consult the translation of the word “*Entwesung*”!

The lawyer Christie could have countered with any specialist work on disinfestation from the 1940s, such as that of Walter Dötzer, the second half of which is dedicated entirely to “*Entwesung*,” the meaning of which is explained as follows (Dötzer, p. 72):

“Entwesung is the destruction of small animals which are harmful to man or to human health, to the extent to which they live together with him or occur in his habitat. Entwesung forms part of the struggle against vermin, which concerns itself with the destruction of all forms of animal life harmful to livestock, crops or supplies.”

One could quote here even the well-known German war-time “Guidelines for the Use of Prussic Acid (Zyklon) for the Destruction of Vermin (Disinfestation)”: “*Richtlinien für die Anwendung von Blausäure (Zyklon) zur Ungeziefervertilgung (Entwesung)*”, as issued by the Health Authority of the Protectorate of Bohemia and Moravia in Prague (NI-9912).

Hilberg’s mendacious attempt to turn a term strictly used for pest control into one that sounds like the extermination of human beings is refuted also by a source he added to his 2003 edition, the work by Norbert Frei *et al.* on garrison and headquarters orders of the Auschwitz Concentration Camp, cited by Hilberg in Footnote 2 on page 1028. Frei’s book contains a subject index, in which the term “*Entwesung*” is listed with four entries, always with reference to disinfestation. In particular, the Garrison Order No. 55/43 of December 15, 1943 prescribes that to all lodgings (of SS family members, members of the SS troop, civilian workers and inmates) “in which a *Entwesung* [disinfestation] is carried out,” access was allowed only after the disinfector in charge, SS *Oberscharführer* Klehr, had given permission (Frei *et al.*, p. 380; see also pp. 174, 179, 199).

¹²⁷ *Ibid.*, p. 1237/p. 217.

Hilberg's bad faith is further demonstrated by the fact that Zyklon-B shipments from Dessau to Oranienburg, for which the orthodoxy claims no exterminations of human beings, were also directed to the local disinfestation and disinfection section (PS-1553):

"... von Dessau an das Konzentrationslager Oranienburg Abt. Entwesung und Entseuchung, Station"

After falsely translating the expression *"Abteilung Entwesung und Entseuchung"* with "Extermination and Fumigation Division", Hilberg not only refused to acknowledge his "mistake," but insisted on it, trying to bamboozle the jury with sophisticated, misleading gyrations, and repeated the falsehood in the 1985 edition (p. 891) as well as in the last edition of 2003, where he again wrote: "Auschwitz Extermination and Fumigation Division (Abteilung Entwesung und Entseuchung)" (p. 955). A truly astounding perseverance in lying!

It is moreover clear that his introduction of the various types of Zyklon, C, D, E and F, were solely intended to insinuate that Zyklon type B was used essentially for extermination purposes by the alleged "Extermination Department" at Auschwitz.

In this manner, he committed another perjury.

Regarding the quantities of Zyklon B delivered to Auschwitz, a list of invoices from Degesch to SS *Obersturmführer* Kurt Gerstein, Oranienburg, Account No. G 36, also contains an invoice for 210 kg of Zyklon B dated March 18, 1944, and the following ones for 1943 (NI-7278):

- June 30, 1943: 240 kg
- September 21, 1943: 200 kg (twice)
- October 4, 1943: 195 kg
- November 9, 1943: 195 kg (twice)

Two invoices dated November 19 only bear the wording "Zyklon," without indicating the quantity or even the intended recipient.

Let us return to the book. Continuing with his tactic of deliberate omissions, Hilberg then writes:

"The SS in the meantime began to be concerned over the possibility that it had received the Zyklon too early. On May 24 [1944], the disinfection officer, Obersturmführer Gerstein, wrote a letter to Dr. Peters inquiring how long the shipment would last. When would it deteriorate? So far, it had not been used at all. 'On the other hand, under certain circumstances large quantities — that is to say, actually the entire quantity — might have to be used all at once [Andererseits werden erhebliche Mengen — d.h. eigentlich die ganzen verwahrten Mengen — unter Umständen plötzlich benötigt]." (p. 957)

The source for this is Document NI-9808 (FN 127, *ibid.*). Hilberg is apparently referring to a possible use of stocks of Zyklon B for homicidal purposes, all the more-so since at that time the Hungarian Jews were being deported to Auschwitz. That those Jews were slated to be killed with Zyklon B, Hilberg hints at in his next paragraph:

"The SS did not have to wait too long. By end of May transports were rolling into Auschwitz, and on August 6 the Referat für Schädlingbekämpfung der Waffen-SS und Polizei in Auschwitz (Anti-vermin Office of the SS and Police in Auschwitz) asked for more Zyklon. The supply was kept up to the very end. The SS did not run out of gas." (p. 957)

However, the first trains with Jews from Hungary had arrived there already on May 17, so a week *before* Gerstein wrote his letter (see Mattogno 2007a, p. 47). Hence, if the Hungarian Jews were being killed *en masse* already for a week straight, why would Gerstein have worried about the Zyklon-B supply on hand in Auschwitz going bad? In fact, Hilberg states that Gerstein wrote the Zyklon B "had not been used at all." One week of mass gassings with Zyklon B, and the Zyklon B available at Auschwitz had not been used at all?

In his 1985 "definitive" edition, Hilberg stated in this regard expressly that "the great bulk of the 1944 deportees [from Hungary] were gassed in the Auschwitz killing center upon arrival" (1985, p. 936), but that sentence got excised from the 2003 edition (p. 1002). Yet still, Hilberg maintains that "[d]uring May and June [1944] the Hungarian Jews alone were gassed at a rate of almost 10,000 a day" (p. 1044), which requires that almost all Jews arriving at Auschwitz from Hungary were killed upon arrival.¹²⁸

Hilberg's allusions to mass gassings with Zyklon lose their last semblance of credibility if we consider the entire text of Gerstein's letter, from which Hilberg cherry-picked a few statements (NI-9908):

"Also, please tell me how long you consider the shelf life to be of the special delivery Oranienburg and Auschwitz. Should there be any doubt as to the duration of the storage, we ought to use the supplies from the first shipments for disinfection purposes (zu Entwesungszwecken) and in each case only store fresh deliveries. So far, none of these quantities has been used. On the other hand, considerable quantities – that is, actually the entire quantity in storage – could be needed suddenly in some circumstance. But of course, safety and shelf life are the primary considerations."

The letter therefore *explicitly* refers to the use of Zyklon B for *disinfection* purposes at Auschwitz and Oranienburg.

Dr. Peters transmitted the letter to Degesch, which replied to Gerstein on June 9, 1944 as follows (PS-1553, p. 11):

"As regards the question of the shelf life of the goods, we can inform you that we provide a one-year warranty. We do not doubt that the goods can also be stored longer, but we wish to request, in view of the present precarious situation, that you not exceed the recommend storage period, but rather use the oldest shipments already for disinfection purposes together [with newer shipments]. [...]"

Regarding the shelf life of the goods, we also wish to stress in particular that a decomposition of them can hardly occur, but that it is after all possible for the

¹²⁸ On the claimed extermination of Hungarian Jews deported to Auschwitz, see Mattogno 2007a.

cans to become corroded. The slightest impurity in the sheet metal, which is often visible only under a microscope, are the cause of corrosion. Thus, small holes develop, through which small quantities of hydrogen cyanide can escape. But even in this case, there is no danger, provided that the goods are kept in a well-ventilated warehouse, as is stipulated by us. In the event of any perceptible odor of hydrogen cyanide, it is recommended to examine the respective crates and to use damaged cans as soon as possible."

Hilberg's claim that "Auschwitz required a shipment every six weeks because Zyklon deteriorated easily" is therefore completely without basis in fact, as he must have been aware, since he was familiar with the above set of documents, quoting other parts of it several times, but only those that suited his purpose (in particular Gerstein's "confession," see below).

A few lines further on, Hilberg asserts:

"The advantages of Zyklon as a lethal gas became known. Even while Höss was still building his gas chambers in 1942, a distinguished visitor from Lublin, Brigadeführer Globocnik, visited Auschwitz in order to learn of the new method [of extermination]." (p. 957)

The source is Höss's interrogation of March 14, 1946, NI-36, cited earlier (FN 129, *ibid.*). This is the text relating to Hilberg's topic (Mattogno 2020, p. 109):

"Q 12) What do you know about Globotschnigg [Globocnik] regarding his friendship with Wolf¹²⁹?"

A. I know absolutely nothing about the friendship Globotschnigg-Wolf. I know Globotschnigg only from a visit to Lublin, and Globotschnigg was once in Auschwitz.

Q 13) At what point in time was that?

A. I can no longer tell the point in time, 1942-1943. At any rate, it was at that point in time when the crematoria had already been finished."

Höss said nothing about the reason for Globocnik's visit. The Birkenau crematoria were completed between March and June 1943, as is well known. Therefore, Globocnik's alleged visit to Auschwitz cannot have taken place before this period of time. This means that Hilberg selectively attributes to Höss both the date of the presumed visit (1942), and the reason for it, because it suits his purpose ("in order to learn of the new method [of extermination].") The latter doesn't even make sense, because by mid-1943, Globocnik's alleged extermination camps were already at the end of their activity, and he, together with his staff from the "Aktion Reinhardt," was transferred in early September 1943 to Trieste, where he then assumed the position of "Higher SS and Police Leader in the Operational Zone Adriatic Coast." For what purpose, then, could he have had any need "to learn of the new method" of extermination involving Zyklon B? This is moreover in contradiction with Kurt Gerstein's alleged "mission," which I will address in a moment.

¹²⁹ SS *Obergruppenführer* Karl Wolff, Himmler's adjutant.

What is more, no visit to Auschwitz by Globocnik is attested to by any document, and he is not even mentioned in Czech's *Auschwitz Chronicle*.

Hilberg then tells us his version of Kurt Gerstein's "mission":

"This rivalry [about which method is the best] came to a head one day in August 1942 when Eichmann's deputy, Günther, and the chief disinfection officer, Kurt Gerstein, arrived in Belzec." (p. 957)

The source is: "Statement by Gerstein, April 26, 1945, PS-1553" (FN 130, p. 960), which he later characterized as an "Affidavit" (FN 8, p. 1028; FN 101, p. 1042). This is already a mischaracterization, because Gerstein's text is not an "affidavit," meaning a statement sworn to be true before an official, but merely a private text written in several different versions, one of which Gerstein delivered to two U.S. officers (Document PS-1553; see Mattogno 1985, 2021; Roques 1989).

According to this document, SS *Sturmbannführer* Rolf Günther did not accompany Gerstein to Belzec at all, but limited himself to transmitting to him the assignment on the part of the RSHA of procuring 100 kg of hydrogen cyanide (PS-1553, p. 4).

Hilberg continues his narration as follows (pp. 957, 959; p. 958 has a table):

"They had about 200 pounds of Zyklon with them and were about to convert the carbon monoxide chambers to the hydrogen cyanide method."

A pound corresponds to some 0.45 kg, therefore "approximately 200 pounds" would have been roughly equivalent to Günther's 100 kg, which were not "Zyklon" at all, however, but "hydrogen cyanide." The testimony cited by Hilberg does not mention Zyklon in connection with Belzec at all. This is not an irrelevant detail, because, when interrogated by French Investigating Judge Mattei on July 19, 1945, Gerstein declared that he picked up, at Kolin, not 100 kg, but 260 kg, and not *hydrogen cyanide*, but "potassium cyanide" in 45 *steel bottles*.¹³⁰ The substance was nevertheless liquid, and could only have been hydrogen cyanide. In addition to being self-contradictory, this is also nonsensical for a number of reasons:

- The procedure of disinfestation using liquid hydrogen cyanide had not been in use since 1934 (Lenz/Gassner, p. 8).
- The RSHA is said to have ordered Gerstein to travel over 700 km in mid-August 1942 with an extremely dangerous cargo. In fact, due to its low boiling point and the possibility of decomposition (polymerization), liquid hydrogen cyanide could only be transported under refrigeration, at night and in a special vehicles (Rüter *et al.*, p. 137).
- Prior to the invention of Zyklon B, liquid hydrogen cyanide for disinfestation purposes was filled in steel bottles. For use, it was nebulized by means of compressed air or evaporated by warming the bottle, then led through appropriate tubing. Both procedures were dangerous (Lenz/Gass-

¹³⁰ Wellers 1980, p. 28; Mattogno 2021, pp. 98f., 118f.

ner, pp. 8f.). Hydrogen cyanide in glass flasks, used in France and the French colonies in particular as well as in England, constituted the so-called "Galardi Process," which consisted in pouring liquid hydrogen cyanide from the flask into a bowl or directly onto the floor (Peters 1933, pp. 54f.). This is evidently an unfeasible procedure for homicidal gassings.

- It is truly noteworthy that a couple of weeks before Gerstein's departure for Lublin (where Globocnik was awaiting him), the Tesch & Stabenow Company had supplied the Majdanek Camp with 360 cans of Zyklon B weighing 1.5 kg each, for a total of 540 kg (see Graf/Mattogno, p. 202). No person in their right mind would have hauled, or ordered hauling, a dangerous cargo of 45 steel bottles of liquid hydrogen cyanide on a 700 km trip across Europe, if all he needed was available next door, so to say, and in a much-safer and -easier-to-handle format to boot.

Hilberg goes on to say:

"Gerstein obliged, ordering the Zyklon to be buried on the pretext that it had spoiled." (p. 960)

In this regard, Gerstein made the following contradictory statements before French Investigating Judge Mattei (Wellers 1980, pp. 28, 31; Mattogno 2021, pp. 118f.):

"The forty-four bottles that remained were not taken to the BELCEC camp but were hidden by the driver and myself about twelve hundred meters away from the camp."

"I arrived with the cyanide at the camp and told the camp commandant what had happened to me along the way with regard to the bottle, which had not been closed properly."

The judge noted the contradiction and confronted Gerstein about it:

"This morning you told us that forty-four cyanide bottles – your entire load, one of the bottles having been emptied – had not arrived at the BELCEC Camp because they had been hidden by the driver and yourself at about twelve hundred meters away from the camp; just now you just told us that you arrived at the camp with your load. When are you telling the truth?"

Hilberg returns to this issue later, asserting:

"When Obersturmführer Gerstein, the gas expert, completed his tour of the Generalgouvernement camps in the late summer of 1942, he spilled the whole secret on the Warsaw-Berlin express to a fellow passenger, Swedish diplomat Baron von Otter. The baron reported the existence of the killing centers to Stockholm, but the Swedish government did not disseminate the information to the world." (pp. 1029f.)

Hilberg's source in his footnotes 13f. are the 1953 transcript of one of Gerstein's texts in a German orthodox history journal, plus the comments of one of the journal's editors (Rothfels 1953).

In practice, he relied on a witness – Kurt Gerstein – about whom he himself declared during the Zündel trial that he was “was a very excit[e]able person [...] capable of all kinds of statements,” and that certain parts of Gerstein’s statement are “pure nonsense.”¹³¹

As for von Otter’s “confirmation”, the source cited by Hilberg reports (Rothfels 1953, FN 10, p. 181):

“Likewise, a letter from the Swedish Foreign Office (November 10, 1949) to the Centre de Documentation Juive Contemporaine in Paris confirms that G.[erstein], in the last days of August 1942 while on the train from Warsaw, gave this the relating information to von Otter, a member of the Swedish embassy in Berlin, and that it was forwarded to the Foreign Office.”

Fact is that von Otter decided only in 1964 to reveal “all the details” of what Gerstein allegedly had confided to him, by having his account published in a German weekly newspaper (Braumann 1964). But instead of relying on his own records or memories of the event, which evidently didn’t exist, he brazenly plagiarized Léon Poliakov’s 1964 article “*Le dossier Kurt Gerstein*,” in which the latter had presented a falsified version of Gerstein’s French text of April 26, 1945 – and von Otter faithfully copied all of Poliakov’s changes, typos included! (cf. Mattogno 2021, pp. 143f.) Hence, von Otter’s “confirmation” was dictated merely by political opportunism, which renders Hilberg’s reference to him, repeated in the final 2003 edition (FN 14, p. 1030), pathetic at best.

Hilberg continues, asserting (p. 960):

“Höss and Wirth were henceforth enemies. The Auschwitz commander, even after the war, spoke proudly of his ‘improvements’. [...] among these architects of the killing centers there was fierce competition and rivalry.”

The source is: “Affidavit by Höss, April 5, 1946, PS-3868” (FN 131, *ibid.*).

This refers to Höss’s invented visit to Treblinka, which I discussed earlier. Höss claimed that the killing system with carbon monoxide allegedly implemented at Treblinka was not “very efficient”; he then declares: “another improvement we made over Tremblinka was...” (see Mattogno 2020, p. 67). This is where Hilberg got his “improvements” from, not only by hiding from his readers the insurmountable anachronism concerning Höss’s alleged visit to Treblinka, but he also created a fictional context for the alleged rivalry between Höss and Christian Wirth by shifting to a time after August 1942 what in Höss’s fictional chronology referred to 1941.

On p. 1076, Hilberg regurgitates this fictitious tale:

“Again, within the SS itself, a jealous struggle was waged between two technocrats of destruction, Obersturmbannführer Höss and Kriminalkommissar Wirth, over the replacement of carbon monoxide with Zyklon B in the death camps.”

¹³¹ District Court, pp. 904f.; Rudolf 2020a, pp. 158f.; see Subchapter 4.3.

This presumed “jealous struggle” is also taken from Kurt Gerstein’s contradictory tale about his absurd alleged “mission,” which I have adequately exposed elsewhere (Mattogno 2021, pp. 95-136). Hilberg fallaciously justifies his theory of a “jealous struggle” by referring to Höss’s interrogation of May 14, 1946 and to Gerstein’s statement of April 26, 1945 (FN 72, *ibid.*). But Höss didn’t mention Wirth at all, and Gerstein never mentioned Höss! Hilberg was possibly thinking instead of Konrad Morgen’s affidavit of July 19, 1946, in which he stated:¹³²

“With Auschwitz, Hoess entered the mass extermination at a much later point in time. Hoess only exterminated the Jews unfit for labor. Because of his methods, Wirth called him his untalented student.” (Emphasis added)

On the one hand, this contradicts the date of Himmler’s summoning of Höss (June 1941), on the other it contradicts Globocnik’s alleged trip to Auschwitz “in order to learn of the new method [of extermination],” and also Gerstein’s alleged “mission” aimed at introducing Zyklon B in the eastern camps.

3.8. Euthanasia and the “Killing Centers”

The chapter “Organization, Personnel, and Maintenance,” which begins on p. 960, deals with marginal issues regarding the central topic of the claimed extermination. I examine only the most important issues discussed by Hilberg.

Hilberg notes that “[a]lmost all of Wirth’s German personnel had euthanasia experience” (p. 961), and as such this staff is said to have been the precursor of the “Final Solution.” Thus, the personnel specializing in the murder of mental patients in the euthanasia centers are said to have been sent to the camps at Bełżec, Sobibór and Treblinka to carry out the extermination of the Jews in these camps. But Hilberg also writes that for most members of these units, “there was a hiatus between euthanasia and the Generalgouvernement assignment. Several of them were sent during that interval to the occupied USSR to care for wounded or frostbitten German soldiers, but were soon recalled” (FN 10, p. 962). But why would expert personnel trained in mass-murdering people be sent to look after the wounded? This evidently means that they were *not exclusively* trained to murder people, which alone would unambiguously indicate that they were sent to these camps as professional mass murderers.

In effect, the orthodox theory, according to which the gas chambers in the Aktion Reinhardt camps were built by the personnel of the euthanasia operation following the model of the chambers at their former institutes is not only without basis in fact, but implies devastating consequences for orthodox histo-

¹³² IMT, Vol. 42, pp. 563-565; Affidavit SS-67.

riography, as I have explained elsewhere (Graf/Kues/Mattogno, pp. 270-281; Mattogno 2016a, pp. 62-72).

Hilberg dedicates some six pages just to the production and distribution of Zyklon B (pp. 951-957). In this regard, thanks to the numerous documents that exist, practically everything is known. In the face of this detailed knowledge, what is known about the carbon-monoxide cylinders allegedly used for homicidal purposes in the euthanasia institutes and in Lublin-Majdanek? Hilberg merely states in this regard (p. 931):

"During 1940 and the first eight months of 1941, the annihilation of 70,000 adults in euthanasia stations equipped with gas chambers and bottled, chemically pure carbon monoxide gas."

Since he opines that "'Euthanasia' was a conceptual as well as technological and administrative préfiguration of the 'Final Solution' in the death camps" (p. 932), in the economy of the *The Destruction of the European Jews*, it should have received central importance. Hilberg, however, disposes of this topic in a couple of pages, where he refers to general literature on the topic for "detailed descriptions" (FN 20, p. 931).

This incredible superficiality raises more than legitimate questions:

1. What documentary evidence is there that carbon-monoxide cylinders were used for homicidal purposes by the euthanasia centers?
2. Which companies produced carbon monoxide in cylinders? And which supplied it to the euthanasia centers?
3. What documentary evidence is there that the euthanasia centers were equipped with carbon-monoxide gas chambers?
4. What documentary evidence is there that people were murdered there with carbon monoxide?

Neither Hilberg nor any other Holocaust historian has so far answered these simple questions,¹³³ so the murder of the mentally ill in carbon-monoxide gas chambers in euthanasia centers cannot be considered a historically established fact.

Therefore, the claim that the alleged gas chambers at Belzec (and then Sobibór and Treblinka) were built on the model of those of the euthanasia centers is unsupported by any known documents.

From the Holocaust point of view, the only link between the euthanasia centers and the eastern "extermination camps" would be the "gassing devices" (*Vergasungsapparate*) mentioned in Wetzel's letter of October 25, 1941 examined earlier, which, from the point of view of orthodox historiography, could

¹³³ The alleged involvement of the Mannesmann Röhrenwerke in the supply of steel cylinders to euthanasia centers – which are said to have been fitted with a pressure gauge by chemist August Becker and then filled with carbon monoxide by IG Farben's Ludwigshafen factory (Kogon *et al.* 1993, pp. 30f.) – is not based on documentary evidence, and the only two documents mentioned in this context – two letters from IG Farben dated 17 December 1943 and 18 February 1944 (*ibid.*, Note 86, p. 256) – were never published neither in original nor in transcript.

only be simple carbon-monoxide cylinders.¹³⁴ But in that case, when, why and by whom were they replaced by exhaust gases produced by either a Diesel or a gasoline engine? The only two persons who could have carried out this task were the alleged gas-chamber experts Helmut Kallmeyer, chemist, mentioned in Wetzel's letter, and Albert Widmann, head of Section VD2 (chemistry and biology) at the Institute for Forensic Technology (*Kriminaltechnisches Institut* or KTI) within the *Reichssicherheitshauptamt*. But Kallmeyer declared that he had never concerned himself with gas chambers within the framework of his position in the euthanasia operation, that he had never been sent to Riga, or any extermination camp, and no one has ever proven the contrary. And not even Widman had any part in this task. By whom then was this change carried out? According to orthodox Holocaust historiography, the task of designing and constructing the alleged gas chambers is said to have been entrusted to SS *Scharführer* Lorenz Hackenholt for Belżec, to him and to SS *Unterscharführer* Erwin Lambert for Treblinka, and to this same pair of men for the expansion of the "gassing installation" at Sobibór. But Lorenz Hackenholt has been linked to the alleged gas chambers only on the basis of the "Gerstein Report" – a notoriously unreliable document (see Mattogno 2021) – while Lambert was a mere master builder and bricklayer. And these, a sergeant major and a sergeant, are supposed to have been the "experts" on "gas chambers" within the framework of a general extermination plan devised by the top echelons of the National-Socialist regime?

But there is an even-more-serious problem. Wetzel's just-mentioned letter fully confirms the policy of deporting the Jews to the East:¹³⁵

"At the present time, Jews being deported from the old Reich are to be sent to Litzmannstadt [Łódź], but also to other camps, to be later used as labor in the East so far as they are able to work."

The only thing that is new about this letter consists of the plan to "doing away with those Jews who are not able to work," in camps to be built at Riga and Minsk. The killing, according to the orthodox interpretation, was to be carried out by means of the "gassing devices," but it is well known that this did not happen. Now, since it is certain that National-Socialist policies with regard to Jews did not involve their extermination, but rather their deportation to the East, since there is no documentary evidence of any change of course in this regard, of a point of interruption (which would correspond to the phantasmagorical *Führerbefehl*), the *only* reasonable conclusion which orthodox historiography could draw from the transfer of the euthanasia personnel to the Aktion Reinhardt camps is the extension of the *euthanasia* program to the Jews who were to be deported to the East. But in this case, not *all* deportees sent to the camps at Belżec, Sobibór and Treblinka (except for the small number of those

¹³⁴ Alvarez suggests that the "*Vergasungsapparate*" could have consisted of disinfestation equipment (2016, p. 96).

¹³⁵ NO-365; NMT, Vol. 1, p. 870.

selected to work in those camps) would have been murdered there, but only a small part. It would therefore be impossible to speak any longer of "pure extermination camps." Belżec, Sobibór and Treblinka would have served a double function: a *principal* function as transit camps (*Durchgangslager*) for the resettlement to the East, and a *secondary* function as euthanasia centers for mental patients and the incurably ill.

Therefore, this Holocaust argument backfires against one of the cornerstones of orthodox Holocaust historiography: the notion of the pure extermination camps.¹³⁶ In fact, from an orthodox perspective, there never was any kind of "selection" of deportees fit for labor in the camps at Belżec, Sobibór and Treblinka that would have been even remotely comparable to that claimed for Auschwitz.

3.9. The Camp Administration

3.9.1. Sadism and Corruption

Another topic discussed by Hilberg in this chapter regards the sadism and corruption of the SS.

"The personnel problem arose in two different forms: sadism and corruption. The former was posed primarily by the guards, the latter chiefly by the old officials of the camps." (p. 969)

He then draws a horrifying picture based almost exclusively upon "survivor testimonies" (p. 970). For example, for Hilberg, "*Sport machen* ('to do sport')", meaning to have the inmates do some physical exercises, was essentially "a way in which the guards relieved their boredom, and while not exactly encouraged in official directives, little was done to stop this practice" (*ibid.*). Hilberg explains that

"The whole problem of sadism was therefore narrowed to a special kind of activity: the so-called excesses. In general, an "excess" involved a massive orgy or a sexual aberration." (*ibid.*)

He then reports the unfounded stories about Irma Grese and Otto Moll repeated by the "survivors' literature" (*ibid.*), and describes the horrific living conditions at Majdanek and Auschwitz, based on the same sources (pp. 973-978).

In *Perpetrators, Victims, Bystanders*, Hilberg shows a truly remarkable degree of credulity and absence of critical sense when credulously reporting with all seriousness the following propaganda claptrap of immense caliber (Hilberg 1992, p. 54):

¹³⁶ For an in-depth examination of the matter, please refer to my comments in Chapter 8.4. ("Euthanasia and Aktion Reinhardt") of Graf/Kues/Mattogno, pp. 270-281.

"Again and again, witnesses recalled that small children were thrown out of windows, or tossed like sacks into trucks, or dashed against walls, or hurled live into pyres of burning corpses.

In some instances, sadism was pristine. This form of conduct emerged in face to face contacts of those men who wanted to exhibit their mastery over Jews. Essentially these individuals played with their victims. In the early days, they gave toothbrushes to Jews to clean sidewalks. In newly occupied Polish towns, they cut the beards of pious Jews or used Jews as ponies for rides. In the permissive environment of a camp, they could make use of Jews for target practice, or they could select women as sex slaves. In Auschwitz, the arch sadist Otto Moll promised life to an inmate if he could run barefoot twice across a ditch of burning corpses without collapsing. The master of life and death also had its reverse side. An Auschwitz inmate was flogged for having unsuccessfully tried to commit suicide."

Before examining in detail any of the specific aspects of this alleged "sadism," we should note that Hilberg forgets to mention here the following statements made at Nuremberg by Höss, the witness whom he believed anything uncritically if it helped shoring up his theory of "destruction" (IMT, Vol. 11, pp. 403f.):

"Until the outbreak of war in 1939, the situation in the camps regarding feeding, accommodations, and treatment of internees, was the same as in any other prison or penitentiary in the Reich. The internees were treated severely, but methodical beatings or ill-treatments were out of the question. The Reichsführer gave frequent orders that every SS man who laid violent hands on an internee would be punished; and several times SS men who did ill-treat internees were punished.

Feeding and billeting at that time were on the same basis as those of other prisoners under legal administration.

The accommodations in the camps during those years were still normal because the mass influxes at the outbreak of the war and during the war had not yet taken place. When the war started and when mass deliveries of political internees arrived, and, later on, when prisoners who were members of the resistance movements arrived from the occupied territories, the construction of buildings and the extensions of the camps could no longer keep pace with the number of incoming internees. During the first years of the war this problem could still be overcome by improvising measures; but later, due to the exigencies of the war, this was no longer possible since there were practically no building materials any more at our disposal. And, furthermore, rations for the internees were again and again severely curtailed by the provincial economic administration offices.

This then led to a situation where internees in the camps no longer had the staying power to resist the now gradually growing epidemics.

The main reason why the prisoners were in such bad condition towards the end of the war, why so many thousands of them were found sick and emaciated in the camps, was that every internee had to be employed in the armament indus-

try to the extreme limit of his forces. The Reichsführer constantly and on every occasion kept this goal before our eyes, and also proclaimed it through the Chief of the Main Economic and Administrative Office, Obergruppenführer Pohl, to the concentration camp commanders and administrative leaders during the so-called commanders' meetings.

Every commander was told to make every effort to achieve this. The aim was not to have as many dead as possible or to destroy as many internees as possible; the Reichsführer was constantly concerned with being able to engage all forces available in the armaments industry.

DR. KAUFFMANN: There is no doubt that the longer the war lasted, the larger became the number of the ill-treated and tortured inmates. Whenever you inspected the concentration camps did you not learn something of this state of affairs through complaints, et cetera, or do you consider that the conditions which have been described are more or less due to excesses?

HOESS: These so-called ill-treatments and this torturing in concentration camps, stories of which were spread everywhere among the people, and later by the prisoners that were liberated by the occupying armies, were not, as assumed, inflicted methodically, but were excesses committed by individual leaders, subleaders, and men who laid violent hands on internees.

DR. KAUFFMANN: Do you mean you never took cognizance of these matters?

HOESS: If in any way such a case came to be known, then the perpetrator was, of course, immediately relieved of his post or transferred somewhere else. So that, even if he were not punished for lack of evidence to prove his guilt, even then, he was taken away from the internees and given another position."

Note that Hilberg drew the term "excesses" from this very passage! In this context, he forgets to cite another source, whom he cites when required to shore up his theory: SS Judge Konrad Morgen. In his affidavit of July 13, 1946, mentioned by Hilberg several times, this witness supplies the following description of some positive aspects of the concentration camps:¹³⁷

"The food ration for working inmates was 2,750 calories per day. Mostly in the form of potatoes, legumes, farinaceous products, vegetables and bread. The camps, and especially the companies that employed the inmates, consistently made efforts to procure additional provisions, on occasion by intentionally ignoring laws of war economy. In camp canteens, inmates could also acquire additional food within the limits of the military situation, and could also receive unlimited packages, foreigners through or by the Red Cross. The general nutritional condition of the inmates was good. I saw small numbers of badly undernourished prisoners only in the hospitals. This depended on the constitutional physical weakness or was the consequence of illnesses such as dysentery, typhus, or tuberculosis. The medical and sanitary installations were good, some of them exemplary. In addition to the SS physicians, inmate physicians were employed, including international authorities. Medicinal supplies were limited by military conditions just as they were for German civilians, but SS pharma-

¹³⁷ Affidavit of K. Morgen dated July 13, 1946. SS(A)-65. IMT, Vol. 42, pp. 552-554.

cists were always ready to assist, insofar as possible. For labor deployment, attention was paid to an inmate's physical condition, skills and social background while considering possible past criminal convictions and conduct in the camp.

Apart from exceptions, the rate of work and the inmates' performance was considerably lower than that of the civilian work force. The principle was not to goad the inmates, but rather to give them an incentive in the form of premiums and other compensations. This also explains why the supply of tobacco to the inmates during the war was much better than to the German civilian population or even to concentration-camp guards.

The lives and property of the inmates were protected in this way:

It was strictly forbidden to kill or strike inmates. This was repeatedly stressed in warnings to the camp personnel. The commandant had to confirm knowledge of this order in writing. The related declaration was found in the personnel file. Habeas-corpus hearings were made at regular intervals by the RSHA. For the first time 3 months after the internment of an inmate, later at longer intervals. For the investigation and prosecution of crimes by inmates, there was a criminal secretary in every camp from the nearest office of the State Police, the head of the so-called Political Department of the concentration camp. Only the common courts had exclusive jurisdiction over the punishment of crimes committed by inmates. For crimes against inmates committed by members of the SS, the local SS and Police court had exclusive jurisdiction. In the camp, a sworn legal official served to assist that court. Every death of an inmate had to be communicated by teletype, and in the case of any obvious or suspected unnatural death, a report had to be submitted to the SS court accompanied by documents – autopsy reports, photographs of the crime scene, situation map, testimonies of inmates and SS members. Only the inspector of concentration camps could order any corporal punishments of a disciplinary nature, after an investigatory report and a statement by the accused inmate and signed in his own hand had been submitted. The punishment could only consist of blows on the buttocks administered in the presence of a physician and an officer. The maximum number of precisely defined blows was 25. This maximum punishment was inflicted only rarely on criminals with serious criminal records in the camp. Execution of the punishment, usually by another inmate, only after a medical examination and issuance of a medical certificate of non-objection.

Inmate property was stored separately against issuance of a receipt.

Within the camp, the inmates enjoyed freedom of movement, camp radio, a camp library, they could send and receive letters, receive newspapers and packages; there were variety shows, films, a brothel, sports and games of all kinds, including sports competitions.

The internal affairs of the concentration camp were managed and directed by the inmates themselves.

All these measures did not just remain a dead letter."

And all these things, as I have shown in a separate study, are backed up by documents, including for Auschwitz, and applied also to Jewish inmates, in-

cluding the provisions regarding their property (see Mattogno 2016b, Part One, pp. 13-85).

Hilberg's historical ignorance with regard to the concentration camps is stupefying: nearly all his information is derived exclusively from eyewitness testimonies, which are extremely dubious.

As we have seen, Hilberg attributes the alleged sadism of the SS to orgies or sexual aberrations. This Freudian fixation inevitably leads to serious misunderstandings, such as in the case of the brothels in the concentration camps. In this regard, he writes:

"Although Auschwitz was to become the subject of a special Nazi investigation, these particular incidents appear to have been overlooked. There was no concerted effort to curb sadism. Such an effort would have been difficult in any case. The only prescribed remedy would have rendered the offending guards into 'asocials' (sex criminals). However, the problem was recognized. For one thing, the camp administration established a number of brothels." (p. 971)

On June 12, 1943, the head of the *Bauinspektion Reich-Ost* forwarded to the Central Construction Office of Auschwitz a request from Office Group D of the WVHA to construct rapidly a "inmates' special building 'B'". An attachment contained a sketch of the "special barracks" (*Sonderbaracke*), for the construction of which Himmler stressed a particular urgency.¹³⁸ The surviving documents show that this special barracks was a brothel. In actual fact, the letter "B" stood for "*Bordell*," German for brothel. The barracks was not built, but the brothel was created regardless. However, the brothel was *not* intended for use by the SS, as claimed by Hilberg, but rather for male inmates (see Mattogno 2016, pp. 110f.). As we have seen, this fact was also explicitly stated by Judge Morgen, so that Hilberg could not have been unaware of it.

3.9.2. Inmate Living Conditions

On this topic, Hilberg writes on p. 974:

"Lublin, for example, in the fall of 1942 had five blocks with a total of twenty-two barracks. The barracks were partially unfinished. Some had no windows. Others had cardboard roofs. None had water. Provisional latrines (fill-in type) spread odors throughout the habitat."

This description is based on an "[a]ffidavit by Ruppert, August 6, 1945, NO-1903" (FN 64, *ibid.*). Friedrich Wilhelm Ruppert, former SS *Obersturmführer*, was transferred from the Dachau Camp to the Lublin-Majdanek Camp on September 18, 1942. He was one of the defendants during the Dachau show trial (November 15 to December 13, 1945) and was hanged in Landsberg prison on May 28, 1946. In this affidavit, he painted a catastrophic picture of the Majdanek Camp for obvious reasons. But keep in mind that the letter from the

¹³⁸ Letter from the *Leiter der Bauinspektion Reich-Ost* to the *Zentralbauleitung* of Auschwitz dated June 12, 1943. RGVA, 502-2-108, p. 3.

Central Construction Office of the Lublin Camp to the SS economist at the higher SS and police leader in the General Government, dated October 22, 1942, describes the completed work as follows:¹³⁹

"108 housing barracks, 5 kitchen and 5 washing barracks, 10 inmate supply barracks, 5 workshop barracks, 1 housekeeping barracks, 2 disinfestation barracks with baths, built partly on wooden pilings and partly on a solid foundation, were erected, in addition to 7 barracks in the area of the headquarters and 19 barracks in the area of the guard battalion."

For the water supply, 1,200 meters of piping was installed inside the camp and 5,500 outside; for the sewage, 300 and 1,100 meters respectively.

"B work (finishing work)^[140] was executed to the extent that they were necessary within the scope of the camp's degree of occupancy."

The camp structure was therefore already well organized, and the barracks remaining unfinished were obviously not yet occupied by inmates.

The "Breakdown of buildings for the construction of a women's concentration camp in Lublin" dated November 20, 1942 reports under Point 4:¹⁴¹

"Building IV – 2 washing and toilet barracks."

The washing and toilet facilities are installed into 2 barracks. [...] For water supply and drainage, the barracks are connected to the fresh-water and waste-water networks."

Hilberg manages to distort even the claims of his witness, who stated:¹⁴²

"The Lublin Camp consisted of five separate sectors with 22 barracks each, although some of them were not yet finished and in very poor structural condition. In some, the windows had no panes and the roofs were only covered with cardboard, so that when it rained it was almost impossible to live or sleep in the barracks. The barracks had no water supply, and it took several months to install it. The makeshift latrines gave off a terrible stench."

Hilberg manifests his surprising ignorance even of the Majdanek Camp's basic terminology: the camp was in fact divided into "*Felder*" (fields), which Ruppert improperly calls "complexes" ("*Anlagen*"), a term Hilberg translated into "blocks".

In Footnote 59 on p. 909 of the 1985 edition, Hilberg offered another, equally unfounded description:

"In Auschwitz II at that time [June 1944], up to 32,000 women shared a single latrine barracks."

The testimony cited as evidence is that of Gisella Perl. In reality, in the women's camp at Birkenau, Camp Sector BI, there were ten latrine barracks (*Abort-*

¹³⁹ WAPL, ZBL, 8, p. 22.

¹⁴⁰ The "B-Arbeiten" were interior finishing jobs which could be done during the winter.

¹⁴¹ WAPL, ZBL, 8, p. 13.

¹⁴² Affidavit by F.W. Ruppert of August 6, 1945; transcript in: *Zeszyty Majdanka*, XXIII, 2005, pp. 101-107; the quoted passage is on p. 103.

baracken) of brick, five in Sector BIa, and five in Sector BIb (Czech 1990, p. 5), and on August 22, 1944, the occupancy of this camp amounted to 39,234 female inmates (*ibid.*, p. 695). This undoubtedly implied an uncomfortable situation for the inmates, but the witness cited by Hilberg renders it eight times as serious. Maybe this is the reason why that sentence and Perl as its source were deleted from this footnote in the 2003 edition (FN 65, p. 974).

In the context of the inmate living conditions, Hilberg claims:

"When a Jew died, no special report had to be made; a death list sufficed. Whether an individual Jew lived or died did not matter." (*ibid.*)

However, the sources cited by Hilberg – a letter from Glücks (yet signed by Liebehenschel) to the camp commandants dated July 15, 1943 (NO-1246) and an undated file memo by Rudolf Höss (NO-1553; Hilberg's FN 62, p. 974) – are actually about *communication rules* of inmate-mortality data to Office Group D of the WVHA: the deaths of Jewish inmates had to be communicated in lists, not individually, in contrast to the deaths of other inmates, but this does not at all imply that "no special report had to be made."

The letter of July 15, 1943 was preceded by an order from Glücks dated November 21, 1942, bearing the subject "Communication procedure relating to mortality cases in the concentration camps," which ordered the listing of the deaths of Jews, both male and female, in a common list, containing a serial number, first and last name, nationality, domicile, date of death, cause of death, and the authority having ordered the arrest of the deceased inmate – data which could only be obtained from the relevant death certificates.¹⁴³

Hilberg's unfounded deduction is refuted in a striking manner by the Auschwitz Death Books. To cite only a few examples, the last death certificate in Volume 25, concluding the year 1943, is that of the Jew Zelik Gieclik, who was born at Poddebice on May 25, 1909, died on December 18, 1943 due to sudden cardiac arrest.¹⁴⁴ The Jewess Johanna Sara Seiner, who was born at Bejscht on January 26, 1871, died on December 27, 1943 at the age of 72 years due to weakness caused by old age (*Alterschwäche*).¹⁴⁵ The Jew Josef Hoffmann died of the same cause on June 22, 1942 at the age of almost 90 years, having been born on August 12, 1852 at Vrutky.¹⁴⁶

The text which I cited above continues as follows:

"There only had to be a sufficient number of inmates to take care of work requirements, and if the supply was more than sufficient, the SS could weed out

¹⁴³ NO-1543. I have sufficiently well refuted Hilberg's theories in Mattogno 2016b, Chapter 5.2, pp. 91-96.

¹⁴⁴ *Standesamt II Auschwitz. Sterbebuch (Zweitbuch) 1943*, Vol. 25, Certificate No. 36991, December 31, 1943. These documents are currently in the archives of the Auschwitz Museum (*Politische Abteilung, Sterbebücher*). The RGVA, where they were originally located, retains only photocopies of them.

¹⁴⁵ *Ibid.*, Certificate No. 36299, December 31, 1943.

¹⁴⁶ *Ibid.*, 1942, Vol. 9, Certificate No. 12134, June 27, 1942.

the Jewish inmate population by sending the excess number to the gas chamber." (*ibid.*)

However, according to the orthodox Holocaust narrative, these alleged gasings concerned inmates who were unable to work, not the "excess number" who were quite able to work. As is well known, these "excess workers" were housed in the Birkenau Transit Camp, from where they were transferred to other camps. The letter from the head of the Birkenau inmate-clothing department to the camp's clothing administration of July 14, 1944 informs that, just during the period from May 16 to July 14, 1944, 48 transports with 45,132 inmates had left the Birkenau transit camp.¹⁴⁷ I will return to this topic later.

Not even the story of the gassings of inmates unable to work is based on any documented fact, as I have shown elsewhere (Mattogno 2016b, Part Two, pp. 87-216).

Hilberg goes on to assert:

"Depending on the arrival of new transports or a selection of victims to be put to death, the camp population could be doubled or halved within a short time." (*ibid.*)

The afflux of new convoys in itself was irrelevant for purposes of the alleged extermination. On the other hand, the case cited by Hilberg is unique. It involves in fact a letter from SS-*Hauptsturmführer* Rudolf Wagner of Auschwitz "reported to WVHA D-IV on March 25, 1942, that it expected an inmate increase from 11,000 to 27,000 in the next few days; NO-2146" (FN 63, *ibid.*). Wagner, who was the camp kitchens manager, knew of the imminent transfer to Auschwitz of 5,000 male inmates and 11,000 female inmates. Wagner therefore informed his superiors that the kitchens were not equipped to deal with the number of anticipated new arrivals.¹⁴⁸ Nothing strange about that. In fact, if this proves anything, then the fact that the camp kitchen was expected to feed *all* these inmates, hence that they *all* were expected to remain alive.

The alleged halving of the number of inmates in a short time due to the "selection of victims to be put to death," by contrast, fits in perfectly with the theory of the "killing centers." Hilberg notes in this regard:

"On October 17, 1944, the women's camp in Auschwitz II had 29,925 inmates. On November 25, 1944, the number was 14,271. Frauen-Lager LK Au II/Abt. IIIa (Birkenau) strength reports, October 18 and November 26, 1944, Dokumenty i materialy, vol. 1, p. 118." (FN 63, *ibid.*)

His source is Blumental's 1946 collection of documents. The data are reported correctly, but he has misinterpreted them. Incredibly, Hilberg seems to have been completely unaware of the fact that Auschwitz was in the process of evacuating inmates at that time due to the approaching front line. As a result,

¹⁴⁷ AGK, NTN, 88, pp. 111-113. I provided the text and translation of the most-important passage of this letter in Mattogno 2007a, pp. 12-14.

¹⁴⁸ Letter from SS-*Hauptsturmführer* R. Wagner to the administration of Auschwitz Concentration Camp dated March 25, 1942. NO-2146.

he neglected the "transfers," a category which appears clearly under the heading "departures" in the above-mentioned documents. This series of documents clearly shows that the majority of missing inmates simply had been transferred; for example, 1,009 on October 20, 510 on October 21, 2,100 on October 23, 497 on October 27, 1,812 on October 28, 653 on October 29, 2,351 on November 1, 798 on November 2, 2,366 on November 4. Dozens of inmates were also released from the camp during this period (listed under "releases").¹⁴⁹ For the reduction of the camp's occupancy due to "special treatment," albeit in considerably fewer numbers than transfers, I refer to my discussion of the matter in my study specifically dedicated to this topic (Mattoigno 2016b, pp. 179-210).

After his unfounded assertions concerning the sanitary installations at the Lublin-Majdanek Camp as examined earlier, Hilberg adds in this regard:

"During an Auschwitz construction conference on June 16, 1944 (Pohl, Maurer, Höss, Bischoff, Baer, and Wirths participating, among others), the 'completion' (Ausbau) of barracks in Camp II was still a subject of discussion. In this connection, it was pointed out that the installation of washing and toilet facilities was necessary only in every third or fourth barrack." (ibid.)

The source is Document NO-2359 (FN 65, *ibid.*), which is a file memo by Karl Bischoff, at that time the head of the Auschwitz Central Construction Office, with the subject "Talk on the occasion of the visit of the head of the Main Office, SS *Obergruppenführer* and General of the *Waffen* SS Pohl, on construction issues at Auschwitz." The point mentioned by Hilberg concerned the "upgrading" ("*Ausbau*") of already existing barracks in KL (II)," not their "completion." This "upgrading" consisted in the "installation of washing and toilet rooms" in every third or fourth barracks. A later document in fact reports as follows:¹⁵⁰

"Ausbau von Baracken im KL II (Wasch- und Aborträume)"

"Upgrading of barracks in KL II (washing and latrine rooms)"

This however was not a negative measure denoting a particular degree of "sadism" on the part of the SS, but rather, quite the contrary. The inmates' lodging barracks were normally without sanitary installations, which were found in separate barracks. In fact, Construction Sector II at Birkenau had 14 washing barracks (Building 6b) and 14 Latrine Barracks (Building 7b).¹⁵¹

The installation of wash basins and latrines in separate rooms inside some of the lodging barracks (in every third or fourth of them), was therefore an improvement in general hygienic conditions.

¹⁴⁹ APMO, *Stärkemeldung*, AuII- 3a, FKL.

¹⁵⁰ "Aufstellung der im Bau befindlichen Bauwerke mit Fertigstellungsgrad" ("List of structures currently under construction, with degree of completion"), compiled by the head of Zentralbauleitung, SS *Obersturmführer* Werner Jothann, on September 4, 1944. RGVA, 502-1-85, p. 195a.

¹⁵¹ "Kostenvoranschlag zum Ausbau des Kriegsgefangenenlagers der Waffen-SS Auschwitz." RGVA, 502-2-60, p. 85.

When describing the alleged "sadism" of the SS, Hilberg also mentions the overcrowding of the lodging barracks, without realizing that, by so doing, he is refuting his theory of mass extermination:

"The overcrowding in the barracks was a constant plague for the inmates; there was simply no limit to the number of people who could be put into a hut. Inmates slept without blankets or pillows on so-called Pritschen, wooden planks joined together. On October 4, 1944, the administrative division of Auschwitz II wrote to the central administration for 230 new Pritschen. Instead of having been used by five inmates, as regulations prescribed, each of the Pritschen had held up to fifteen inmates. Because of this weight, the upper layer of the Pritschen had broken apart, and all the inmates had fallen on top of the people lying on the middle layer. The second layer had thereupon collapsed, and everybody had crashed through the lowest layer." (pp. 974f.)

The source is again Blumental's *Dokumenty i materialy*, pp. 95f. (FN 66, p. 975. Hilberg's account is inexact and incomplete to say the least. First of all, the request, sent by the Administration of KL Auschwitz II (Birkenau) to the Central Construction Office (not the central administration), was not just for 230 *Pritschen*, but also for "6,000 woolen blankets" and 8,000 bottom boards for *Pritschen* (*Pritschenbodenbretter*). Point 2 of the document also says:

"The woolen blankets are to be distributed in such a way that each block gets 500 of them, and every inmate gets 2 of them."

The result of the collapse mentioned by Hilberg was that "the bottom boards and to some extent also the *Pritschen* could no longer be used." Therefore, what Hilberg calls *Pritschen* – long wooden boards – were in reality the bottom boards, while the *Pritschen* were straw mattresses placed on top of the planks. The inmates were therefore supplied with straw mattresses and woolen blankets.

Point 1 of the document says:

"This camp is used as a reception and transit camp."

To Hilberg, it must have seemed so incredible that there was a transit camp *Durchgangslager* in the alleged extermination camp of Birkenau that he preferred not even to mention the matter. And yet this camp not only existed, but at least 98,600 inmates were transferred to other camps from there (Mattogno 2003, p. 397; 2004, pp. 26f.), including at least 79,200 Hungarian Jews (Mattogno 2007a, p. 20), and at least 11,500 Jews from the Łódź Ghetto (Mattogno 2004a, pp. 30f.).

The "overcrowding" mentioned by Hilberg resulted precisely from the fact that the "excess" was not sent "to the gas chamber," but to the transit camp at Birkenau.

With regard to the Łódź Ghetto, Hilberg writes:

"In fact, Lodz had become the largest ghetto by default, its 80,000 people struggling with a prison diet and a twelve-hour day for two more years. Then,

in August 1944, announcements were posted in the ghetto under the heading 'Verlagerung des Gettos [transshipment of the ghetto].'" (p. 543)

"By the end of August [1944] the ghetto was empty except for a small cleanup Kommando. The victims were shipped not to Germany, to work in plants, but to the killing center in Auschwitz, to be gassed to death." (pp. 544f.)

In reality, as I have documented elsewhere, the Jews evacuated from the Łódź Ghetto amounted to 65,000 people at the most, no more than 22,500 of them reached Auschwitz (Mattogno 2004a, pp. 27-29), of whom approximately 11,500 women were transferred to Stutthof. Of the approximately 11,000 male Jews deported to Auschwitz from the Łódź Ghetto, approximately 3,100 were registered; the fate of the remaining 7,900 is not documented. It is nevertheless known that the transport which departed from Auschwitz on September 3, 1944 included about forty Jewish babies or children between the ages of 6 months and 14 years from the Łódź Ghetto. These were not gassed, but regularly registered and transferred to Stutthof with their mothers (*ibid.*, pp. 32f., names list). This makes it extremely questionable that the 7,900 adult Jews mentioned above were gassed.

Hilberg's claim is all the more inconsistent since he refers as a source to a letter from the WVHA dated August 15, 1944 (Document NO-399; FN 142, p. 545). This document is identical to PS-1166 (IMT, Vol. 27, pp. 46-49).

On August 15, 1944, the head of Office Group D IV (Concentration-Camp Administration) of the WVHA, SS *Sturmbannführer* Wilhelm Burger, sent the head of Office Group B, SS *Gruppenführer* Georg Lörner, a letter relating to a "inmates report" and "inmates clothing." The letter says that on August 1, 1944, the occupancy of the concentration camps amounted to 379,167 male inmates and 145,119 female inmates, to which had to be added the already-announced new admissions of inmates from seven more locations, among them 60,000 inmates "from Lodz (police jail and ghetto)." The list of new admissions – 612,000 persons in total – closed with the following comment:

"A large part of the inmates is already on the move, and will arrive for internment at the concentration camps over the next few days" (*ibid.*, p. 47)

Burger declared that there was not enough clothing for the 612,000 new inmate arrivals and requested the allocation of "special quotas of textile material and leather." Office DIV/4 was in fact in charge of "clothing," therefore the WVHA really anticipated having to issue clothing to these inmates, particularly the 60,000 Jews from Łódź, whose evacuation into the concentration camps had already been underway for several days by August 15.

Therefore, the document cited by Hilberg strikingly debunks his theory: not only does it not mention Auschwitz at all, but it asserts that all these 60,000 Jews, practically all of whom were evacuated from the ghetto, were to be registered, clothed and lodged.

Hilberg then describes the problem of the lack of food for the inmates:

"The basic diet of Jewish inmates was watery turnip soup drunk from pots, supplemented by an evening meal of sawdust bread with some margarine, 'smelly marmalade,' or 'putrid sausage.'" (p. 976)

Here Hilberg refers once again to Gisella Perl (FN 73-75, *ibid.*). But Jan Sehn's article, which he cites in connection with the crematoria at Birkenau refutes this description: the daily bread ration (Sehn does not even mention the ridiculous claim of "sawdust bread") was 350 grams, but Sehn says that the inmates only received 300 grams. For breakfast they received half a liter of coffee or tea (according to the regulations) and 3 kg of sugar every 300 liters. At lunch, there were two types of soup: one with meat, four times a week, and a vegetable soup three times a week. Moreover, every day, every inmate was entitled to 40-50 grams of margarine, sausage or marmalade (Sehn does not confirm that these foods were "putrid" or "smelly"), although those rations were allegedly reduced before being handed out (Sehn 1946b, pp. 63-70).

Of course, the picture drawn by Sehn is based on witness testimony as well, although they are at least a little more credible. But it is worthwhile recalling Judge Morgen's declaration in this regard as quoted earlier:

"The food ration for working inmates was 2,750 calories per day. Mostly in the form of potatoes, legumes, farinaceous products, vegetables and bread."

In his directive of October 26, 1943 on the improvement of living conditions for inmates in the concentration camps, including Auschwitz, Pohl listed 22 provisions on the subject of nutrition (see Mattogno 2016b, pp. 15-17).

Hilberg adds:

"The living conditions in the killing centers produced sickness and epidemics including dysentery, typhus, and skin diseases of all kinds. Sanitation measures were almost nil. The Auschwitz grounds were not suitable for canalization; hence fill-in latrines were the only facilities available." (p. 976)

These assertions are based, as usual, upon a single testimony (FN 76, *ibid.*).

If Hilberg had possessed enough curiosity to study a map of the Birkenau Camp with a minimum of attention, he would have realized that there was a suitable sewer system with three sewage-treatment plants (*Kläranlagen*), one located to the south of Crematorium II, one – the main one – between Crematorium III and the *Effektenlager* (known as Kanada, a personal-effects warehouse) and the third, in Sector BIII, to the north of Crematorium V. Obviously, the latrine barracks were all connected to this system.

His sanctimonious self-righteousness prevented Hilberg from inspecting what remains of the alleged "extermination centers." If he had visited Birkenau, he would have seen the gigantic network of drainage channels that still exists today.

As regards hygienic arrangements, it is sufficient to refer to Jean-Claude Pressac's first book, in which he dedicated six chapters to the camp's hygienic-sanitary installations, three of which were located at Birkenau and are still recognizable as such today (Pressac 1989, Chapters 2-7).

Hilberg concludes his review of the horrors at Auschwitz with this observation:

"Water was not purified. Soap and articles for cleansing were very scarce. Rats ran loose in the barracks. Only occasionally was a block fumigated with Zyklon. Hospitals were barracks, and inmate doctors worked with few medicines and few instruments. When the sickrooms became overcrowded, the SS doctor made an inspection and dispatched the worst cases to the gas chamber." (ibid.)

Without going into detail, the Auschwitz-Birkenau complex was equipped with several hospitals for the inmates. The main one was located in the Main Camp. There was a women's hospital at Birkenau in Sector BIa, and a men's hospital in Sector BIIf. Another hospital was located at Monowitz. In December 1943, the Main Camp's hospital consisted of the following departments: a radiological department, chemical laboratory, an ear, nose and throat department, optical laboratories, healing (UV) lamps department, medicinal herbs pharmacy, diet kitchen, dentistry department. The same hospital was equipped with an operating theater, a physiotherapy department and a convalescent unit.¹⁵² The records of the surgical operations show that 11,246 surgical operations were performed between September 10, 1942 and February 23, 1944, an average of twenty per day! (Świebocki, p. 330)

In May 1943, construction of a vast inmate hospital began in Sector BIII of Birkenau, providing, among other things, for 114 barracks for non-critically ill patients and another 12 for the seriously ill. The project was completed only in part because of the military situation (see Mattogno 2016b, Chapters 2-4, pp. 42-85).

In terms of testimonies, it is worth remembering the expert eye-witness testimonies by the Italian Jewish physician Leonardo de Benedetti as well as by the well-known author Primo Levi. Both were deported to Auschwitz on February 26, 1944. In 1946, they published a "Report on the Hygienic-Sanitary Organization of the Monowitz Concentration Camp for Jews (Auschwitz, Upper Silesia)," from which the following passages are taken:¹⁵³

"Illnesses of the stomach and digestive tract. [...] The standard treatment was of a dual nature and encompassed both nutrition and pharmacological therapies. [...] For this nutritional regimen, the sausage ration as well as the soup was eliminated from lunch, white bread substituted for black bread, and for supper there was a very nutritious sweet semolina soup. [...] The pharmacological treatment consisted of three or four Tannalbin pills and the same number of activated-carbon tablets; in severe cases the patients also received five

¹⁵² Quarterly report on the health service of Auschwitz Concentration Camp, compiled by the Auschwitz camp physician on December 16, 1943, and addressed to Office DIII of the SS WVHA. GARF, 7021-108-32, pp. 93-98.

¹⁵³ L. de Benedetti, P. Levi, "Rapporto sull'organizzazione igienico-sanitaria del campo di concentramento per Ebrei di Monowitz (Auschwitz – Alta Slesia)." ISR, C 75; for more extracts see Mattogno 2016b, pp. 54-57.

drops of tincture of opium each day as well as some drops of 'Cardiazol.'" (p. 8)

"Infectious diseases. [...]"

The severe cases of psoriasis were transferred to the Auschwitz hospital to receive x-ray treatments." (p. 9)

"Surgical Cases.

[...] We shall cover such matters with the remark that even surgeries requiring a high surgical standard were performed, above all those involving penetration of the body wall such as gastroenteroanastomosis for duodenal ulcers, appendectomies, rib resectioning for emphysema, as well as orthopedic interventions for fractures and sprains. Where the overall condition of the patient did not assure that the trauma of the surgery could be withstood, the patient received a blood transfusion before initiating the procedure; transfusions were also performed to alleviate secondary anemia as well as severe hemorrhage from an ulcer or trauma sustained in an accident. For donors, recent arrivals to the camp were selected who were in good health; donation of blood was voluntary and was rewarded with 15 days' stay in the hospital, during which time the donor receives a special diet, so that there was never any lack of volunteers for blood donation. [...]"

On the subject of aseptic surgery, we note that inguinal hernias were regularly operated upon at the request of the patient, at least until mid-Spring 1944; after that such operations were discontinued, except in cases of very serious hernias that were actually a hindrance to work; it had to be assumed that the patients requested the operation in order to secure a month's rest in the hospital. The greatest number of interventions were against phlegmons and were conducted in a department specifically for septic surgery. Next to diarrhea, phlegmons were the most common sickness in the concentration camp. [...]"

Acute ear infections were also rather numerous, which arose in extraordinary numbers from complications of mastoiditis; these also were regularly operated on by specialists in otorinlaryngology." (pp. 9-11)

[...] during our stay in the camp, the following departments were in regular operation:

Clinic for general medicine; clinic for general surgery; ear, nose and throat clinic; dermatology clinic; dental office (where also fillings were done as well as the crudest of dentures); suite for aseptic surgery with attached otorinlaryngological department; suite for septic surgery; suite for general medicine with a section for nervous and mental ailments (the latter even equipped with a small electroshock device); suite for infectious diseases and diarrhea, as well as finally a ward designated for 'recovery,' in which dystrophic and edematous patients were placed along with certain convalescents. The hospital possessed a physical therapy room with a quartz lamp for ultraviolet light as well as a lamp for infrared light; in addition, a room for chemical, bacteriological and serological analyses.

There was no x-ray machine, and when an x-ray was judged necessary, the patients were sent to Auschwitz, where there was a good facility of the kind available, and from which they returned with an x-ray diagnosis." (p. 12)

All this is reflected in the documents. Hence, the testimonies upon which Hilberg relies with mind-boggling credulity in this connection are seriously unreliable.

On pp. 976f., Hilberg writes:

"Up to the end of 1942, Lublin had received 26,258 registered Jewish inmates. A total of 4,568 had been transferred; 14,348 had died. Auschwitz had obtained 5,849 registered Jewish inmates up to the same date; 4,436 had died."

But the source he cites, the Korherr Report of March 27, 1943 (NO-5194; his FN 78, p. 977) does not use the word "registered" anywhere. According to D. Czech's *Auschwitz Chronicle*, over 58,000 Jews had been registered at Auschwitz by December 31, 1942. The Korherr Report instead refers to Jews *not included* in the evacuation action (*Evakuierungsaktion*).

As for Lublin Camp, 4,560 Jews transferred out of 26,258 interned is decidedly too many for a "killing center."

A few pages further along, Hilberg observes:

"Thus, by hook and crook, the guards, the weapons, and the transport were assembled. But Pohl was still worried. There were many doomed people in the camps. In a report to Himmler dated April 5, 1944, Pohl outlined the preparations he had made for the eventuality of a mass break from Auschwitz. The count of Auschwitz inmates was then 67,000. From this number, Pohl deducted 18,000 sick inmates and 15,000 in work parties who could be 'done away with' (abgesetzt), 'so that practically one has to count 34,000 inmates.'" (p. 980)

Hilberg's source is Document NO-21, a letter by Oswald Pohl to Himmler (FN 94, *ibid.*), but that document says something quite different:

"From the total number of 67,000 inmates, we need to subtract the inmates located in external camps and the hospital in-patients, if we must take into consideration the question of the danger for Upper Silesia of a possible revolt or escape."

On this basis, Pohl performs the following computation (NO-21, p. 2):

<i>"Of the total number of</i>	67,000 [inmates]
<i>those lodged in the external camps (Lager III)</i>	15,000 are deducted
<i>The number of in-patients and invalids is currently</i>	18,000
<i>Therefore, in practice, we must calculate</i>	34,000 inmates."

Therefore "*abgesetzt*" does not mean "done away with," but deducted, subtracted, which is more than obvious, since the 15,000 inmates *lodged* (*untergebracht*) – not "in work parties"! – in 14 external camps, and the 18,000 stationary patients and invalids (!) at Auschwitz-Birkenau would not have represented any danger in the event of a revolt or mass escape from that camp.

The presence of such a large number of *in-patients* and *invalids* radically contradicts Hilberg's theory of deferred extermination, which, among other things, is in further contradiction with the plan for the above-mentioned camp hospital in Construction Sector III of Birkenau, with its 114 barracks for non-critically ill patients and its 12 barracks for the seriously ill.

Hilberg does not inform his readers that the "sick inmates" were in-patients, meaning that they had been admitted to a hospital, and he hides the fact that this number of 18,000 inmates also included *invalids*. He has nothing to say about this fact which directly contradicts his thesis of extermination. On the other hand, he himself draws attention to a document dated June 1943 according to which "the 160,000 prisoners of the WVHA camps", the most-important of which was Auschwitz, 22% were unable to work as of spring of 1943, hence 35,200 (p. 985).

3.9.3. The Activity of the SS Courts

Hilberg also dedicates a couple of pages to the activities of the SS courts regarding the conduct of commandants and SS officials of the concentration camps. In fact, he mentions the case of the commandant of Buchenwald, SS *Standartenführer* Karl Otto Koch, and Höss. For the first, the information that he was sentenced to death by an SS court and executed appears on half a line, after more than half a page in which Hilberg describes the alleged obstacles placed in the way of Koch's arrest (p. 972).

Hilberg's account of these events gives the impression that the SS courts prosecuted very few members of the SS, as he only mentions the sentencing of Koch and two of his subordinates, and this against the resistance of superior authorities. Strangely, to describe the activities of SS Judge Morgen, he never refers to Morgen's statements, but rather to the statements of Judge Werner Paulmann, whom he cites five times (FN 50, 51, 54, 56, 57, pp. 972f.). But, even in reporting this testimony, Hilberg is very far from exact. For example, he asserts that, in 1941, the legal proceedings against Koch "failed" (p. 972), but this did not happen due to any sort of cover-up, but rather, as Paulmann says, "*mangels Beweises*" "due to a lack of evidence."¹⁵⁴ Koch's subsequent arrest was not due to the fact that the "the court did not let loose" (*ibid.*), but rather due to Himmler's intervention: "Based on the new investigations, Himmler immediately authorized Koch's re-arrest," as Paulmann put it, who carried out the arrest in August 1943.¹⁵⁴

Hilberg refers in this context to this anecdote:

"In Buchenwald a Hauptscharführer, Koehler, was arrested as a material witness. A few days after his arrest, he was found dead in his cell, apparently poisoned. The investigating official, Dr. Morgen, was furious. Suspecting the camp doctor (Dr. Hoven) of the murder, Morgen ordered that samples of the chemical found in the dead man's stomach be administered to four Soviet pris-

¹⁵⁴ Sworn statement by W. Paulmann dated July 11, 1946. SS-64. IMT, Vol. 42, p. 545.

oners of war. The four men died in the presence of several witnesses, including Morgen, corruption officer Wehner, and Hoven's colleague Dr. Schuler (alias Ding). Armed with this proof, Morgen arrested Hoven." (p. 972)

In practice, therefore, Judge Morgen is said to have been no less criminal than the criminals he prosecuted! In reality, however, this story is not only not attested to by Morgen's statements, but is refuted by Paulmann's statements. These explicitly state that the camp physician Waldemar Hoven had been sentenced to death for committing illegal killings of inmates at the camp hospital (IMT, Vol. 42, p. 547).

Hilberg's source is the testimony of ex-Buchenwald inmate Eugon Kogon during the NMT's Medical Case (FN 53, p. 972), which was held between December 9, 1946 and July 27, 1947. Kogon testified on January 6-8, 1947. However, the fragment of the interrogation published in the trial transcripts refutes Hilberg's version of the story (NMT, Vol. 1, p. 637):

"In the first case various preparations of the so-called alkaloid series were put into noodle soup and administered to 4^[155] of these prisoners of war who were in Block 46. They, of course, had no idea what was going on. Two of these prisoners became so sick that they vomited, one was unconscious, the fourth showed no symptoms at all. Thereupon, all four were strangled in the crematorium. They were dissected and the contents of their stomachs and other effects were determined. The experiment was ordered by the SS court, by the SS investigating judge, Sturmbannführer Dr. Morgen. It was carried out in the presence of Dr. Ding, Dr. Morgen, Dr. Wehner, SS Hauptsturmführer and SS judges, and one of the three camp leaders, I do not know whether it was SS Sturmbannführer Schubert or SS leader Florstedt."

Therefore, instead of relying on direct witnesses, Hilberg incautiously refers to a hearsay witness with no first-hand knowledge of the matter who was repeating simple rumors.

In a file memo on the criminal case against Koch dated Weimar, September 11, 1944, Morgen wrote among other things (NO-2380, p. 2):

"According to matching witness testimony, a new era begins in the concentration camps with the beginning of SS Gruppenführer Glücks's office term in 1939, which mandates the maintenance and care of the prisoners as workers and forbids the unauthorized killing of prisoners of any kind. The head doctor with the inspectorate of the concentration camps, SS Standartenführer Dr. Lolling, states that these orders were communicated repeatedly to all physicians, and that compliance with them was monitored. SS Gruppenführer Glücks and SS Gruppenführer Müller, head of the State Police, stated that they had no idea about these incidents and disapproved of them."

As Judge Morgen reported in his affidavit of July 1946, the criminal investigations against high-ranking SS members were vastly more numerous than can be inferred from Hilberg's account (SS-65. IMT, Vol. 42, p. 556):

¹⁵⁵ The text erroneously says 40.

"The commandants of the Buchenwald, Lublin, Warsaw, Herzogenbosch and Cracow-Plasow camps were arrested. The commanders of Buchenwald and Lublin were shot. Several hundred cases were tried. Severe and most severe punishments were imposed on members of all ranks. The total number of cases examined was around 800, with one case often involving several people."

And it all happened with Himmler's full consent (*ibid.*, p. 557):

"Upon my first submission, Himmler immediately released the investigation, mercilessly dropped the former concentration-camp big-wigs who had been arrested, and ordered uncompromising action in repeated orders."

As for Höss, Hilberg wrote (p. 973):

"SS and Police Court XXII in Kassel now constituted itself into the 'SS and Police Court for Special Purposes.' Preparations were made to capture the greatest prize of all: Obersturmbannführer Höss of Auschwitz. A special commission (chief, Hauptsturmführer Drescher) was installed in the camp, and an informer in the person of Hauptscharführer Gerhard Palitzsch gave information about Höss. The commander, he said, was responsible for the pregnancy of an inmate, Eleonore Hodys, born in 1903 in Vienna. After considerable difficulties, corruption officers interrogated Hodys. But the Auschwitz campaign was doomed to failure. The suction mechanism of the camp began to work. Open threats were sent to the SS and Police court. In the camp itself, Hauptscharführer Palitzsch was discovered with a Jewish woman and thrown into a coal bunker. Höss had won."

The story is essentially based on Gerhard Wiebeck's affidavit of February 28, 1949 (NO-2330; FN 58, *ibid.*). Wiebeck was an SS judge under Judge Morgen, promoted to SS *Oberscharführer* in November 1943. In the aforementioned affidavit, he reported that, when he began to investigate Auschwitz, "Höss was in particular responsible for the extermination of the Polish intelligentsia and the mass extermination of human life [sic] in this camp," a sop to the victors which he then intensified further, as we shall see.

On the Hodys affair, he asserted:

"From an SS-Unterrführer (SS-Hauptscharführer Gerhard Pallitsch [sic]) I learned that Hoess supposedly impregnated the inmate Eleonore Hodys (born 1909 in Vienna) while in headquarters' detention at Auschwitz,^[156] and that he had her get severely mistreated, and wanted to kill her as an uncomfortable witness against him. [...]"

Hodys's interrogation could only be carried out in the fall of 1944 because she refused to testify in Auschwitz out of fear for her life. She was interrogated under oath in Munich roughly in mid-October 1944 by Dr. Morgen."

During his visit to Auschwitz on an unspecified date, Wiebeck claims to have noted

¹⁵⁶ *Kommandantur arrest*: The prison cells in the basement of Block 11 at the Auschwitz Main Camp.

"that there was a huge cloud of smoke over the camp area. When I asked what this flame meant, I was told that this cloud of smoke came from the cremated corpses, and that it was hovering over the camp for months."

On that occasion he also claims to have learned that "the gassing of inmates in Auschwitz was no secret."¹⁵⁷

There is no need to dwell on this naive propaganda: a "cloud of smoke", which was at the same time a "flame", which covered the "camp area" (Auschwitz? Birkenau? Both?) And remained there "for months." And the "gassing", not of Jews, but of "prisoners", was a well-known fact!

During the Frankfurt Auschwitz Trial, Wiebeck stated on October 1, 1964 (95. Session) that this alleged fact had been reported to him by SS *Unterscharführer* Theodor Gehri (Palitzsch disappears from his account). Mrs. Hodys was taken to the judge on a stretcher, because she was sick with bone tuberculosis. Höss wanted to kill her. Despite this, the woman was not killed, and in 1947 she was living in Leipzig (Langbein 1965, pp. 145f.). Wiebeck also claimed that no investigation was initiated against Höss:

"Presiding Judge: [...] Was Mr. Höss later charged with this case as well? Was he indicted for this at all?"

Witness Gerhard Wiebeck: No investigation was initiated against Mr. Höss." (Fritz Bauer..., p. 19601)

This contradicts Judge Morgen's statements, but also in part those of the detainee. In fact, she reported that there had been a "meeting with the Commander Hoss in the presence of the SS Judge Untersturmführer Wiebeck," but there was only talk of her detention in a solitary cell, not of sexual relations between her and the camp commandant (Howes, p. 59).

Furthermore, in his affidavit of February 26, 1947, Wiebeck did not mention at all his alleged interrogation of the detainee at Auschwitz.

The story of Palitzsch, who was allegedly "thrown into a coal bunker" after having been discovered with a Jewess, comes from a book by Polish investigative judge Jan Sehn, where we read (Sehn 1946b, p. 84):

"In 1943 Palitsch fell in love with a Jewess who was a prisoner, and for having relations with her was lodged in the coalhole of the XIth Block."

However, this is an obvious translation error, because the original Polish text says "*w bunkrze bloku 11*" – "in the Bunker of Block 11" (Sehn 1946a, p. 119), which was precisely the basement of this building used as the camp's prison. What matters, however, is the fact that Sehn does not cite any sources here either. According to the "perpetrators' biographies" of Auschwitz written by Aleksander Lasik, Palitzsch was arrested for embezzlement on a date after October 1943, and transferred to the SS Penal Camp in Danzig-Matzkau, and

¹⁵⁷ *Eidesstattliche Erklärung* by Gerhard Wiebeck dated February 26, 1947. NO-2331, pp. 4f. (The original document shows at the top "NO-2330," which was corrected to "NO-2331," and immediately below that "NO-2331").

from there he was perhaps sent to the front with a *Waffen SS* unit; his fate is unknown (Staatliches..., Vol. 1, p. 292).

Judge Morgen stated that, among those he had investigated, there was also

"SS Stubaf H o e s s, Kommandant Auschwitz, (ein Teil des Hoess belastenden Materials und zwar ein langer Auszug aus meiner eidlichen Vernehmung des Haeftling Hoyds [sic] wurde von den Amerikanern als Propagandamaterial gegen die SS in der Schrift SS Dachau verwandt.)" (IMT, Vol. 42, p. 556)

In fact, the brochure *Dachau*, edited by Major Alfred L. Howes, G-2 Sect., 7th Army, presumably in 1945, contains a long "Statement of E.H." on pp. 46-59, where this former inmate recounts the lewd attentions of the commandant of Auschwitz towards her: "All in all we had 4 or 5 nights of sexual intercourse." The inmate became pregnant and was forced to have an abortion. She eventually was transferred from Auschwitz (Howes, p. 58).

During the Nuremberg IMT, at the hearing on August 8, 1946, defense counsel Horst Pelckmann asked Morgen if he knew the brochure in question, which was Exhibit SS-4. Morgen replied in the affirmative. The following exchange unfolded between the two (IMT, Vol. 20, p. 513):

"HERR PELCKMANN: On Page 46, there is the testimony of a Mrs. E. H. Was this testimony made before you as the investigating judge?"

MORGEN: Yes, this was a Mrs. Eleanora Hodis, a prisoner in Auschwitz; I questioned her under oath.

HERR PELCKMANN: And did you examine the article and make certain this was the evidence which the woman gave? Yes or no.

MORGEN: Yes.

HERR PELCKMANN: When was that?

MORGEN: In the fall of 1944.

HERR PELCKMANN: The testimony is against Hoess?

MORGEN: Yes.

HERR PELCKMANN: Were proceedings then instituted against Hoess?

MORGEN: Yes. The testimony was submitted to Hoess in the original.

HERR PELCKMANN: The testimony concerns conditions in Auschwitz; is that true?

MORGEN: Yes.

HERR PELCKMANN: It is not true that it concerns the situation in Dachau?

MORGEN: No."

Hilberg does not mention Morgen's statements, but instead refers only to Werner Paulmann's affidavit of July 11, 1946 (SS-64; FN 56, p. 973). Paulmann was an SS *Sturmbannführer* assigned on November 1, 1942 as second judge at the SS and Police Court XXII in Kassel, and as such was a superior of Morgen. He actually stated that the camp commandants, especially those of Sachsenhausen and Auschwitz, heavily opposed the investigations and that "the court was threatened very openly by Auschwitz" (IMT, Vol. 42, p. 548), but also specified:

"The court's work would never have been carried out without the most energetic support of the following authorities:

1. Himmler. He gave practically all the necessary instructions, permissions, arrest warrants and the like. He overcame difficulties that had arisen. This was not only about prosecuting financial misconduct, but also about those against life and limb." (*ibid.*, p. 549)

In conclusion, it is possible that the Hodys affair is true – although it is not clear why Hodys's name, who according to her own statement was "detained 9 months under special arrest in Bunker 11 in the men's camp," and precisely in "*Kommandantur Arrest*" (=headquarters' detention; Howes, p. 46), does not appear in the Bunker register¹⁵⁸ – but the question really is whether "Höss had won," as Hilberg claims. What seems certain is that Höss was investigated for this matter, but the result of the investigation against him is unknown, so Hilberg's statement is purely hypothetical.

3.9.4. The Inmates' Labor Deployment

Hilberg opens the chapter headed "Labor Utilization" with these considerations:

"The primary reason for keeping up an inmate population was labor utilization, although the use of Jews for construction projects, maintenance, or industry was merely an intermediate step to be followed by killing." (p. 983)

This is refuted by the fact that, in the year 1944 alone, approximately 166,000 Jews, including the approximately 98,600 unregistered Jews sent through the Birkenau Transit Camp, were transferred from Auschwitz to other concentration camps,¹⁵⁹ for which the alleged "killing center" was therefore not "an intermediate step to be followed by killing." Hilberg continues:

"As in the case of the mobile killing operations in the East, the Jews were to be granted only a respite, or, in the ponderous words of Pohl, 'Employable Jews who are migrating to the East will have to interrupt their journey and work in war industry [Die für die Ostwanderung bestimmten arbeitsfähigen Juden werden also ihre Reise unterbrechen und Rüstungsarbeiten leisten müssen]'" (*ibid.*)

Here, Hilberg forgets one rather-relevant detail, namely that this interruption of the journey had to take place *at Auschwitz*. Let us briefly summarize the document.

¹⁵⁸ A list of names of inmates locked up in the bunker was published by Brol *et al.*

¹⁵⁹ See Mattogno 2004a, pp. 7-15. From the tables published there, a total of about 103,200 Jews result, to which have to be added at least half of seven mixed transports with a total of 8,900 deportees, for which the exact number of Jews is not indicated, thus resulting in a total of about 107,400. Since the number of non-Jewish detainees transferred from Auschwitz-Birkenau in 1944 is approximately 84,900, and the total number is approximately 250,800, the total number of Jews transferred is approximately 165,900, a figure which includes the approximately 98,600 non-registered Jews transferred from the transit camp.

On September 15, 1942, Speer and Pohl had a meeting. The day afterward, Pohl wrote a detailed report for Himmler. The discussion was organized in four points, the first of which was the "expansion of Auschwitz barracks camp resulting from the migration to the East." On this point, Pohl reported:¹⁶⁰

"In this manner Reichsminister Prof. Speer wants to swiftly ensure the deployment of initially 50,000 Jews fit to work in existing enclosed plants with existing possibilities for accommodations.

We will divert the workers required for this purpose primarily in Auschwitz from the eastern migration, so that our existing industrial facilities will not be disrupted in their performance and their setup by a continuously changing labor force.

The Jews fit for work who are slated for the eastern migration will therefore have to interrupt their journey and perform armament work."

The "migration to the East," synonymous for "evacuation of the Jews," was the deportation of the Jews to the East. In this context, the last phrase means that Jews unfit for labor destined for the "migration to the East" were not interrupting their journey – therefore they did not stop at Auschwitz – but continued their "journey" to the East (for details see Mattogno 2016, pp. 54-60). This is further confirmation that Auschwitz served as a transit camp for Jews not fit for work.

But if Auschwitz, at that time, already had been a "killing center," why were the Jews unfit for labor not simply gassed on arrival? Why were they sent on to the East?

In Subchapter 2.2. I have already documented the fact – inexplicable according to Hilberg's theory – that, between May and November 1942, at least 24 transports with Jews from Vienna were directed to Minsk, bypassing the Auschwitz Camp and passing very close by the Treblinka Camp.

Hilberg had carefully read the document in question, which in fact he correctly summarizes a few pages further along:

"On September 15, 1942, a major move was made toward the realization of these plans. Reichsminister Speer and four of his top men – Staatsrat Dr. Schieber (honorary SS-Brigadeführer), Dipl. Ing. Saur, Ministerialrat Steffen, and Ministerialrat Dr. Briese – met in conference with Pohl and Kammler. Two items were on the agenda: enlargement of the Auschwitz camp in consequence of the 'eastern migration' and 'taking over complete armament tasks of major proportions by the concentration camps.'

There was no difficulty on the first point. Speer approved the acquisition of building materials (in the amount of RM 13,700,000) to construct 300 barracks with room for 132,000 inmates at Auschwitz." (p. 996)

Hence, Hilberg's forgetfulness is not an accident.

Discussing the behavior of the SS, Hilberg asserts:

¹⁶⁰ Pohl's report to Himmler dated September 16, 1942 with the subject: "a) Armaments work b) Bomb damage." BAK, NS 19/14, pp. 131-133.

"The newly arrived transports were handled in an extremely careless manner. At times of labor shortages in Auschwitz, the camp doctor would often send almost an entire transport to the gas chamber. Such happenings infuriated the authorities in charge of camp labor allocation, WVHA D-II Chief Standartenführer Maurer and his assistant, Sommer. Two instances may be cited.

On January 27, 1943, Sommer informed Höss that 5,000 Jews from Theresienstadt were being sent to Auschwitz. He requested that the prospective workers among them be selected 'carefully' (sorgfältig zu erfassen) because they were needed by the construction department at Auschwitz and by the I. G. Farben Works there. After some delay, Schwarz sent the following statistical reply. Out of 5,022 Theresienstadt Jews, 4,092 had been gassed (gesondert untergebracht). The men had been too 'frail' (gebrechlich); the women were mostly children.

On March 3, 1943, Maurer announced that transports of skilled Jewish workers were beginning to roll from Berlin. He reminded Höss that these workers had been employed in war industry; they were consequently employable in the camp. The I. G. Farben Company was to fill its needs from these transports. To make sure that the selections would be made more carefully this time, Maurer suggested that the trains be unloaded 'not in the usual place' (at the crematorium) but, more suitably (zweckmässigerweise), near the I. G. Farben plant. Two days later, Obersturmführer^[161] Schwarz made his reply, adopting a gruff tone. A total of 1,750 Jews had arrived from Berlin; 632 were men, the rest women and children. The average age of men selected for work was between fifty and sixty. Of the 1,118 women and children, 918 had to be subjected to 'special treatment' (SB). 'If the transports from Berlin continue to have so many women and children as well as old Jews,' he wrote, 'I don't promise myself much in the matter of labor allocation.' The following four transports did not fare much better (2,398 killed, 1,689 saved for industry)." (pp. 983f.)

The source is the already-quoted Blumental collection *Dokumenty i materialy*, Vol. I, pp. 108-110, 115-117 (FN 3-5, p. 984).

Hilberg interprets or rather misrepresents these documents relying on the theory of the claimed "code language," meaning that the expressions "gesondert untergebracht" – which does not mean "gassed" but "lodged separately" – "S.B." (*Sonderbehandlung*, special treatment) and "sonderbehandelt" ("specially treated") appearing in these documents are said to be implicit references to killing.

In reality, these documents should be placed within the framework of the policy of Jewish deportations to the East, with an interruption at Auschwitz to cull manpower, as discussed earlier. Pohl's report to Himmler dated September 16, 1942 shows unequivocally that Jews unfit for labor destined for the "migration to the East" did not stop at Auschwitz, but continued their journey East.

¹⁶¹ Heinrich Schwarz, head of Department IIIa (forced labor) of the Auschwitz Camp, was an SS Hauptsturmführer.

On this point, Hilberg has no grounds for objection: he simply limits himself to ignoring the fact that the center for manpower collection was Auschwitz.

In the light of this document, "special treatment" consisted of the fact that Jews unfit for labor were not held back to work at the camp, and that "separate lodgings" (*"Sonderunterbringung"*) consisted literally of the fact that the inmates who had just arrived were not to be admitted to the camp because they would shortly continue their journey had to be kept separated from the other inmates to prevent the latter's infestation by fleas or infection with contagious diseases. This is explicitly shown by Bischoff's letter to the WVHA dated June 4, 1943 relating to the design of the *Zentralsauna (Bauwerk 32)*, the central disinfection, disinfestation and bathing facility of the Birkenau Camp, where we read:¹⁶²

"The large dressing and undressing rooms are absolutely necessary, since those coming in from an entire transport (approx. 2000), which mostly arrive at night, must be locked up in one room until the next morning. Having the arrivals wait in the fully occupied camp is out of the question due to the danger of transmission of lice."

For this reason, the practice of "separate lodgings" also applied to inmates who were to be released or transferred out of the camp, when they formed part of the category "preparation for transport," after having been disinfested (Mattogno 2016b, pp. 117f.).

The British intercepted and deciphered a radio message sent on October 10, 1942 by Arthur Liebehenschel, then head of the SS-WVHA Office DI, to Hans Aumeier, at the time 1st Leader of the Auschwitz Protective-Custody Camp. Here is the text:¹⁶³

"Secret! Confidentially: SS Hauptsturmführer Aumeier. In the coming week, from Monday to Thursday, a French construction committee will inspect labor installations at Auschwitz. Inspecting the camp is not planned. Special camp installations (special accommodation) are not to be shown. If possible, no shootings of prisoners attempting to escape should be carried out on outside work sites of Auschwitz. Signed Liebehenschel."

It is nothing short of extraordinary from an orthodox point of view that a "French construction committee" could safely visit the "extermination camp" in October 1942. The fact is, however, that special camp installations for special accommodation existed. This is confirmed by other documents.

A letter by Karl Bischoff to the department for labor deployment at the Auschwitz headquarters dated January 7, 1943 speaks of "special measures (accommodating the scheduled transports of Jan. 10 to 31, 1943)," for which the transport of "construction materials" was needed "for setting up the stoves" (Bartosik *et al.*, p. 235).

¹⁶² RGVA, 502-1-336, pp. 106f. For details see again Mattogno 2016, pp. 54-60.

¹⁶³ TNA, HW 16-21. German Police Decodes Nr 3 Traffic: 10.10.42. ZIP/GPDD 262b/25.10.42, n. 33/34.

With a teletype message of January 15, 1943 to the head of Office B/V of the SS WVHA, SS *Sturmbannführer* Rudolf Scheide, Karl Bischoff requested the "immediate assignment of 6 dump trucks" for construction purposes "with regard to the instant operation ordered by the Reichsführer SS – accommodation of 47,000 Jews" (*ibid.*, p. 241).

This operation is explained in the radio message sent on December 16, 1942 by the head of the Gestapo Heinrich Müller to Himmler, according to which the deportation to Auschwitz of 45,000 Jews was planned between January 11 to 31, 1943, of which 30,000 came from the Białystok District, 10,000 from the Theresienstadt Ghetto, 3,000 from the occupied Dutch territories, and 2,000 from Berlin. The document specifies (PS-1472. IMT, Vol. 27, pp. 251-253, here p. 253):

"The number of 45,000 includes the relatives (underlined) unfit for labor (old Jews – and children). If a suitable criterion is applied during the inspection of the arriving Jews at Auschwitz, at least 10,000 to 15,000 workers (underlined) will result."

It was therefore expected that these transports would contain 10,000 to 15,000 Jews fit for labor, and 30,000 to 35,000 Jews unfit for labor. Despite this, the "accommodation of 47,000 Jews" had to be arranged in Auschwitz, a figure evidently revised upwards between December 16, 1942 and January 7, 1943. In practice, all deportees had to be accommodated at the camp, both those able and those unable to work, meaning they were not slated for "gassing".

According to the *Auschwitz Chronicle*, 51,417 deportees arrived in Auschwitz from January 11 to 31 1943, of whom merely 7,653 were registered and the remaining 43,764 were allegedly gassed, which is refuted by the aforementioned documents. (For details see Mattogno 2020a, Points 62-64, pp. 145-150.)

Another exemplary case of Hilberg's unjustified interpretations is his assertion that "Maurer suggested that the trains be unloaded 'not in the usual place' (at the crematorium)." Maurer's letter in question is dated March 3, 1943 (Blumental, p. 108), but the orthodox narrative has it that the first homicidal gassing-cum-cremation in a crematorium at Birkenau (Crematorium II) presumably occurred on the night of March 13-14, 1943 (Pressac 1993, p. 73f.). And this doesn't even consider the fact that, at the time, only the so-called old ramp existed, which was located outside the Birkenau Camp near the Auschwitz railway station, so that Hilberg's assertion is even more unjustified.

On p. 986, Hilberg writes:

"In Auschwitz the DAW received the patronizing attention of Höss. From the Bauleitung it acquired two workshops and orders for doors and windows to be fitted into the gas chambers."

The source is SS *Hauptsturmführer* Mey's report dated June 11, 1942 (NO-1216; FN 11f., *ibid.*). But this document contains no reference to ordering

“doors and windows to be fitted into the gas chambers.” Doors and windows are mentioned only once, but in these terms:¹⁶⁴

*“Negotiations between Dr. Hohberg and the purchasing director of IG Farbe-
nindustrie AG Auschwitz, Dr. Heinz Savelberg, showed that the capacity of the
German Equipment Works for the manufacture of the doors and windows for
the new hydrogenation and buna works is much too limited”*

These doors and windows were therefore intended for the chemical factories under construction at Monowitz.

Hilberg’s comment reveals his deplorable lack of knowledge, because on June 4, 1942, the Birkenau crematoria did not yet exist, and for the claimed mass extermination, the so-called “Bunker 1” is said to have been in operation, hence fully equipped for months already, meaning it evidently needed neither doors nor windows at that point in time. Besides, it is claimed that both alleged “bunkers” didn’t even have any windows.

A few lines further down, Hilberg asserts:

“A special enterprise was ordered by Himmler for Sobibor. This camp was set aside for the disassembly of captured ammunition in order to salvage the metals and explosives. The enterprise was not going to be incorporated into the WVHA industry network, inasmuch as it was designated to work for the SS-Führungshauptamt exclusively. In the end, the projected plant was dropped altogether.” (p. 986)

He adduces as reference a letter from Himmler to Pohl dated July 5, 1943 (Document NO-482, FN 13, *ibid.*). On p. 1028 Hilberg returns to the document, in completely different terms, as an exemplification of the alleged “code language”:

“For camps, there were a variety of headings. When Soviet prisoners of war were awaited in the Lublin camp and in newly established Birkenau at the end of 1941, the two sites were named Kriegsgefangenenlager (PW camps), but later both received the generic label Konzentrationslager (concentration camps), Birkenau as part of Auschwitz, and by November 1943, nominally independent, as KL Au II.2 Sobibor was appropriately called a Durchgangslager (transit camp).^[165] Since it was located near the Bug, on the border of the occupied eastern territories, the designation fitted the myth of the ‘eastern migration.’ When Himmler proposed one day that the camp be designated a Konzentrationslager, Pohl opposed the change.” (Emphases added)

His sources also include Pohl’s response to Himmler dated July 15, 1943 (FN 3, *ibid.*).

In reality, Himmler never proposed “that the camp be designated a *Konzentrationslager*”; rather, he ordered that it be “converted into a *Konzentrations-*

¹⁶⁴ NO-1216, Points 4 and 6 of the report on Auschwitz.

¹⁶⁵ This essential phrase does not appear in the Italian translation, but it may be found in the German translation published in 1999 (*Die Vernichtung der europäischen Juden*. Fischer Taschenbuch Verlag, Frankfurt am Main, 1999, vol. 2, p. 1029).

slager" ("in ein Konzentrationslager umzuwandeln") – an important difference. The camp was to be the site of "a disassembly facility for captured ammunition" ("eine Entlaborierungsanstalt für Beutemunition").¹⁶⁶ Pohl responded to Himmler that there was no need to transform Sobibór into a concentration camp just to build the disassembly facility.¹⁶⁷ It was not a naming issue, but a bureaucratic one, as Hilberg himself explained:

"The enterprise was not going to be incorporated into the WVHA industry network, inasmuch as it was designated to work for the SS-Führungshauptamt exclusively." (p. 986)

Hence, this has nothing to do with the alleged "code language."

Let us now consider the term "*Durchgangslager*," transit camp. Himmler's letter of July 5, 1943 is marked "*Geheime Reichssache!*," Secret State Matter. Point 1 says:

"The Sobibór transit camp in the Lublin District is to be converted into a Konzentrationslager."

Pohl's reply bears the subject "*Durchgangslager Sobibór*," a term repeated a few lines down. How can one seriously believe that Himmler and Pohl would use alleged "code language" even in internal top-secret documents?

Hilberg's psychological explanation, the alleged "process of repression," which consisted of omitting the "mention of 'killings' or 'killing installations' even in the secret correspondence in which such operations had to be reported." (p. 1090; emphasis added), has the same *historical* value as all the other Freudian explanations: none. Hilberg also fails to explain why this alleged "process of repression" did *not* apply to the reports relating to the activities of the *Einsatzgruppen*, in which the "killings" are mentioned very explicitly.

As for the alleged "myth of 'eastern migration,'" fitting with the fact that the camp "was located near the Bug," I remind the reader of the report by the district chief of Puławy to the governor of the Lublin District dated May 13, 1942, cited earlier (Section 2.3.4.), according to which 16,822 Jews had been "expelled from the Pulawy District beyond the Bug" between May 6 and 12, 1942.

In a long and pedantic description of the organization of the I.G.-Farbenindustrie trust, Hilberg writes:

"About 35,000 inmates passed through Buna[= the Monowitz Subcamp]. At least 25,000 died." (p. 996)

In his Footnote 44 on p. 996, he refers to a witness who mentioned the figure of 35,000 inmates, but the figure of 25,000 deaths is completely unfounded. From an arithmetic point of view, this could result if we consider the 10,000 inmates who, according to Höss and as quoted by Hilberg in the same footnote, constituted the average strength of the camp, as "survivors" (35,000 – 10,000 =

¹⁶⁶ Letter of Himmler to Pohl dated July 5, 1943. NO-482.

¹⁶⁷ Letter of Pohl to Himmler dated July 15, 1943. NO-482.

25,000), but this makes no sense, so that the origin of this figure remains inexplicable. At any rate, it is enormously exaggerated. Documents show instead that a total of 1,625 inmates died at the Monowitz Camp (Makowski, p. 137).

Hilberg continues, stating:

"The life expectancy of a Jewish inmate at I. G. Auschwitz was three or four months, while in the outlying coal mines it was about one month." (p. 996)

His first source is an affidavit by Dr. Berthold Epstein of March 3, 1947 (NI-5847, FN 45, *ibid.*). This witness stated (NI-5847, p. 1):

"The average working ability of an inmate worker working at I.G. Buna Auschwitz was 3-4 months,"

specifying that

"After about 3-4 months, the inmate was a 'Muselmann', meaning unable to work, and was transferred to Auschwitz. It was clear to everyone in the camp what danger this entailed: the gassing in one of the crematoria."

Hence, Epstein was referring to the ability to work, not to life expectancy, and the fate of prisoners who became unable to work was not taken for granted, because in Epstein's opinion, based not on first-hand experience but necessarily on rumors, the "danger" of "gassing" loomed.¹⁶⁸ The description of the Monowitz camp hospital by de Benedetti and Levi summarized earlier is sufficient refutation for Epstein's testimonial whims.

If this tale were to be taken seriously, it would follow that within one year the entire inmate population of the Monowitz Camp would have turned over three or four times, i.e. the number of dead would be three or four times the average occupancy. As I just pointed out, Hilberg mentions an average occupancy of 10,000 inmates in his Footnote 44, so in one year there would have been 30,000-40,000 new arrivals and as many deaths. In the same footnote, Hilberg states that the register of the Monowitz Hospital contains 15,684 admissions between June 7, 1943 and June 19, 1944 concerning 8,244 distinct individuals, of whom "some having been delivered to the hut more than once"; about 6,800 of them had been Jews, 632 of whom died in hospital (less than 10%) and "1,336 were sent to Birkenau (Auschwitz II) to be gassed". Therefore, those allegedly gassed within a year were less than 20%. However, that those transferred to Auschwitz and Birkenau were gassed there is an unfounded story.

3.9.5. Medical Experiments

The brief chapter on the "Medical Experiments" which Hilberg inserts into pages 1002-1013 generally does not have any direct connection with the "killing centers." In fact, medical experiments were also carried out in camps –

¹⁶⁸ I have discussed Epstein's black-propaganda activities in Mattogno 2020b, pp. 290-295.

such as Dachau, Buchenwald and Sachsenhausen – which he does not consider to have been “extermination centers” at all. But there is an aspect to the matter which requires discussion. Hilberg puts it this way:

“These were all physicians who made use of human guinea pigs. But some went one step further, carrying out experiments that were no longer characterized by any desire to help patients. These experiments had an altogether different direction, for they were identified with Nazi aims. In these activities one may glimpse an attempt to widen the destruction process.” (p. 1006)

This category basically included experiments in sterilization, performed by Drs. Carl Clauberg and Horst Schumann, which Hilberg describes in detail on more than four pages. At the end, he concludes:

“All these experiments, which consumed many hundreds of victims, led to nothing. Not one of the rivals succeeded.” (p. 1011)

Therefore, no mass-sterilization procedure was ever implemented.¹⁶⁹

No more than a few hundred inmates were ever subjected to all these other experiments carried out at Auschwitz. For example, 125 during pharmaceuticals experimentation, a few dozen during experiments involving toxic substances, 115 for the collection of skeletons, and 20 in research experiments concerning tuberculosis (Strzelecka, pp. 441, 444f.).

We may therefore hypothesize that no more than about 2,000 inmates were subjected to experimentation at Auschwitz. In the other camps, the order of magnitude was similar or even less. For example, at Dachau, 200 inmates (17 of whom died) were subjected to an initial series of experiments on malaria, and some 1,500 inmates were subjected to all types of experiments altogether. At Buchenwald, experiments involving typhus were performed on 450 inmates, of whom 158 died (Kogon 1946, pp. 136f.). The number of inmates subjected to experimentation was therefore on the order of 5,000 at most, the majority of whom survived.

In *Perpetrators, Victims, Bystanders*, Hilberg returns to the topic of sterilizations at Auschwitz (Hilberg 1992, p. 67):

“To this end, thousands of Jewish women and men in Auschwitz were sterilized in medical experiments designed to find an efficient method of performing the procedure quickly and without the knowledge of the victims.” (Emphases added)

He refers to the “report of Dr. Carl Clauberg (Auschwitz) to Himmler, June 7, 1942 [recte: 1943], Nuremberg trials document NO-212” (*ibid*, FN 8, p. 281).

In this letter, introduced into evidence at the NMT’s Medical Case (NMT, Vol. 1, pp. 730-732), Clauberg asserted that his method of sterilization was “almost ready,” although not yet in use. He says nothing about the number of women sterilized with other methods at Auschwitz; the only figure mentioned regards a question which Himmler is supposed to have asked him almost a year

¹⁶⁹ The Italian edition has a translation error here, stating “*diverse centinaia di migliaia di vittime*,” “several hundreds of thousands of victims,” Hilberg 1995, p. 1031.

before, "i. e., within what timespan it would be possible to sterilize 1,000 women this way," and Clauberg's answer (NO-212, pp. 1f.), but this has nothing to do with sterilizations already performed.

The most-surprising fact about this chapter is the fact that Hilberg never wondered why this powerful medical experimentation apparatus was never used for the purpose of exterminating the Jews. I have pointed out earlier that there are two conflicting versions of how the alleged instrument of extermination – gas chambers using hydrogen cyanide – came to be invented. To devise this instrument, Himmler is said to have addressed himself simultaneously to *Reichsarzt* Grawitz and to Eichmann, but in the end, as Höss recalls, they stumbled upon it almost by accident, because one day, in the fall of 1941, a few months after allegedly having received the order to exterminate the Jews from Himmler, Höss's deputy, SS *Hauptsturmführer* Karl Fritzsche used Zyklon B "on his initiative" to kill Soviet prisoners of war (Höss 1959, p. 162). However, this anecdote has no basis in historical fact (see Mattogno 2016c). But even if we leave that aside, how can one seriously believe that the whole apparatus of SS medical experimentation was not right away mobilized for the purpose of carrying out Hitler's alleged mass-extermination order?

It is in fact known that experiments were conducted using mustard gas in the camps of Sachsenhausen and Natzweiler-Struthof, and later phosgene, starting in September 1939, to find therapeutic remedies for these aggressive chemical agents (Mitscherlich/Mielke, pp. 215, 222).

Over the course of the First World War, aggressive chemical agents of all kinds were used by both sides. The aggressive power of the various substances was indicated by the mortality product or toxicity index which it bore on the so-called Haber Scale of Toxicity, and indicated "the milligrams of toxic substance per m³ to be breathed in one minute to obtain the death of the individual." The substances considered most toxic are listed in the table overleaf.¹⁷⁰ As is made clear by this table,

"the most dangerous of the war gases, according to Haber's Rule, is phosgene, followed immediately by diphosgene." (Izzo, pp. 45f.)

At that time, Germany was at the forefront of the chemical sector, and the above data could be found in any specialist text, such as Flury's and Zernik's 1931 *Schädliche Gase, Dämpfe, Nebel, Rauch- und Staubarten*, one of the best (for Italian works see Giua and Sartori). Another precious source of information was the journal *Gasschutz und Luftschutz*, the first issue of which appeared in 1931.

Hence, can anyone seriously believe that, within the framework of Himmler's implementation of the Führer's alleged mass-extermination order – after

¹⁷⁰ Halogens, derivatives of carbon oxide, hydrogen cyanide and its derivatives, formic acid derivatives, acetic acid derivatives, acetone derivatives, sulfuric acid ethers, nitromethane derivatives, aliphatic arsines, glycol derivatives, glycerol derivatives, toluene derivatives, aromatic arsines, heterocyclic compounds; see Izzo, table "Principali aggressivi chimici" (Principal aggressive chemicals), table outside of text.

Toxicity of Poison Gases Used in WWI			
COMPOUND	TOXICITY INDEX [†]		
Phosgene	450	highly	toxic
Diphosgene	500		
Mustard gas	1,500		
Ethyl-iodo-acetate	1,500		
Chloro-picric acid	2,000		
Chloro-ethylsulfate	2,000		
Hydrogen cyanide*	1,000-4,000		
Ethyl-bromo-acetate	3,000		
Perchloro-methylmercaptan	3,000		
Chloro-acetone	3,000		
Bromo-acetone	4,000		
Bromo-xylene	6,000		
Chlorine	7,500		
Carbon monoxide	70,000	slightly	toxic

[†] according to Haber’s Rule; * depending on concentration

having received Dr. Grawitz’s advice to use a “rapidly acting, highly volatile gas” (as claimed by Dr. Morgen) – no one ever conducted experiments using inmates to determine the effects of the most-appropriate of the above-mentioned gases in suitably constructed gas chambers?

But this never happened – not in order to find out which substance to choose for the killings, but not even with regard to the substance eventually chosen: the SS doctors never carried out any toxicological experiments using hydrogen cyanide (or any of the other above-mentioned substances), to verify experimentally Haber’s Rule on human beings. In fact, nothing was ascertained in this regard in the NMT’s Medical Case or in the IG-Farben trial either. So at the end of the war, after millions of people allegedly were gassed using Zyklon B, no more was known about the toxicological characteristics of hydrogen cyanide than during the pre-war period!

This also applies to cremation, by the way: at Auschwitz, not a single cremation experiment was ever carried out to improve the technology of civilian crematory furnaces, in which the Topf Company would have been very interested for obvious reasons.

Another closely related topic is that regarding the best “methods” of the alleged extermination: gas vans, stationary gas chambers using motor exhaust, or gas chambers based on Zyklon B. In practice, to carry out Hitler’s order, not only was there never any preliminary experimentation by the SS doctors concerned, but every commandant of every single “killing center” is said to have done everything off his own bat. This is true of the alleged mass cremations of the victims’ corpses as well. In fact, if we follow the orthodox narrative, Himmler is said to have ordered the cremation of the bodies after his second

visit to Auschwitz, on July 17 and 18, 1942 (Piper 1994, p. 163). As a result of this order, the open-air cremation at Auschwitz of the bodies began on September 21 (Czech 1990, p. 242). In the same vein, Himmler presumably ordered SS *Standartenführer* Blobel through Gestapo Head Heinrich Müller "to destroy the mass graves in the eastern occupied territories" (p. 1042). Hilberg forgets to mention that, according to his source – Blobel's affidavit of June 18, 1947 (NO-3947; FN 102, *ibid.*) – this order is said to have been given in "June 1942."

Notwithstanding this fact, the cremation of cadavers at Chełmno is said to have begun in the spring of 1942 (see Section 3.9.7.), at Auschwitz on September 21, 1942, at Sobibór in the summer of 1942 (Arad 1987, p. 171), at Bełżec in mid-December of 1942 (*ibid.*, p. 172), and at Treblinka in March 1943! (*Ibid.*, pp. 173f.). To hide this chronological chaos in any way he can, Hilberg asserts (p. 1043):

"By 1942-43 exhumations were in progress at all of the killing centers."

He is thus constrained to proclaim a sort of anarchy in the presumed machinery of extermination:

"The machine of destruction was an aggregate; no one agency was charged with the whole operation. Even though a particular office might have exercised a supervisory ("federführende") function in the implementation of a particular measure, no single organization directed or coordinated the entire process. The engine of destruction was a sprawling, diverse. And, above all, decentralized apparatus." (p. 52)

Nevertheless, as shown by the chapter titled "Confiscations" (pp. 1013-1027), and in particular by the table summarizing "The administration of the killing center loot" (p. 1026), the machinery of confiscation and the exploitation of Jewish property was not only extremely vast, but also centralized and well-organized. It existed in the WVHA and affected all the alleged "killing centers," including Chełmno. This part of the story was therefore an anarchy, a well-disciplined and organized anarchy – meaning no anarchy at all.

3.9.6. "Concealment" and Propaganda

In the chapter "Concealment," Hilberg describes the procedure by means of which the procedure through which the SS is said to have maintained the "secrecy" of their crimes, although what they were allegedly trying to hide was obviously an open secret, because according to Hilberg himself, everybody knew everything. This procedure consisted, above all, in "verbal camouflage":

"A standard concealment measure was verbal camouflage. The most important and possibly the most misleading term used for the killing centers collectively was the 'East.' This phrase was employed again and again during the deportations." (p. 1028)

But as we have seen, these deportations were indeed directed precisely to the East! Hilberg continues (*ibid.*):

"In Auschwitz, the architect Ertl of the Zentralbauleitung referred to a project of constructing barracks that were to hold the belongings of gassed Jews as 'Effects Barracks for Special Treatment 3 Pieces' (Effektenbarracke für Sonderbehandlung 3 Stück). He called the underground gas chambers 'special cellars' (Sonderkeller) and the surface chambers 'bath houses for special actions' (Badeanstalten für Sonderaktionen)."

Expressions such as *Sonderbehandlung* (special treatment), *durchgeschleust* (passed through, misspelled by Hilberg as *durchgeschleusst*) and *gesondert untergebracht* (lodged separately) are also said to have formed part of this "code language" (pp. 1028f.). The sources are two documents of the Auschwitz Central Construction Office as stored in a Moscow archive (FN 4f., *ibid.*).

Hilberg's list of documents related to Auschwitz containing the German term "special" ("*sonder*") in one form or another could be extended to fill an entire book. Considering the importance of the issue, all of these documents deserve to be investigated in detail, indeed. This is exactly what I have done with my already-cited study *Special Treatment in Auschwitz* (Mattogno 2016). The first, Italian, edition of this study appeared already in 2000, from which Hilberg could have learned a lot, if only he had been able to read anything besides German and English. (The first German and English editions of this study appeared only in 2003 and 2004, respectively.) I will limit my excursion here to a few essential points and direct the reader interested in learning more to said study itself.

First of all, the term "special" was used in Auschwitz mainly for two quite different topics. One concerned the entire operation of pushing Jews out of Europe and confiscating their possessions. Since this operation was distinctly different than anything else the German camp system had been set up for (imprisonment of criminals, dissidents, resistance activists, PoWs, so-called "asocial elements" etc.), anything connected with the Jews was potentially called "special". This is true for the "Effects Barracks for Special Treatment 3 Pieces" quoted by Hilberg, which were meant to store property confiscated from Jews admitted into or passed through Auschwitz (see Mattogno 2016, pp. 36-39, 62-64), as well as for "special actions," which broadly referred to the deportation of Jews in general or to individual transports of Jews sent to and processed in Auschwitz in some way (reception, selection, registration, bathing/disinfection, lodging, transfer; *ibid.*, pp. 65-95).

The second topic where the term "special" was frequently used concerned an ambitious construction program labeled "Special Construction Measures" launched mainly on the initiative of Auschwitz garrison physician Dr. Eduard Wirths in late 1942 and early 1943 in order to improve the hygienic and sanitary conditions of the camp (*ibid.*, pp. 60-62, 64f.), and to vastly improve medical care for the inmates by creating a huge hospital camp in Birkenau's Con-

struction Sector III with all kinds of medical amenities (Mattogno 2016b, pp. 61-72).

Particularly revealing is a cost estimate for a massive expansion of the Birkenau Camp dated October 29, 1942, which specifically mentions in its headline that this camp was now dedicated to "carrying out the special treatment". However, the only item in the long list of construction projects that is meant to serve "for special treatment" is a large new disinfestation facility (BW 32) generally nicknamed "*Zentralsauna*." While the Birkenau crematoria are also on that list, they have no particular emphasis and are not assigned to carrying out any "special treatment" (Mattogno 2016, pp. 39-42).

Hence, if we were to follow Hilberg's logic of "code language," special treatment clearly was a camouflage word in those instances for keeping the Jews deported to Auschwitz clean and healthy.

As to the term "special cellars" used in a few Auschwitz camp documents, this simply referred to the basement rooms of Crematoria II and III used for the storage of corpses (*ibid.*, pp. 102-105).

Similarly innocuous were the "bath houses for special actions" mentioned by Hilberg. On August 19, 1942, the Topf Company's head engineer Kurt Prüfer had a meeting with SS *Untersturmführer* Fritz Ertl, at the time head of the Department of Above-Ground Construction of the Central Construction Office, regarding the "expansion of the cremation installations in the PoW camp." On August 21, Ertl wrote a file memo about that meeting where he mentioned those "bathing facilities for special operations." However, these facilities had nothing to do with any of the future crematoria said to have included homicidal gas chambers. Instead, that expression referred to a briefly envisioned hygienic-sanitary structure which was never built (*ibid.*, pp. 70-76).

Fact is that not a single document contained in the vast documentation about Auschwitz has a "*sonder*" term of any kind that even hints at a homicidal activity, let alone spells it out expressly; quite to the contrary: in most cases, the context proves that "*sonder*" meant innocuous or even favorable treatments.

The situation is a little more complex when we look at the use of terms such as "special treatment" outside the narrow confines of the Auschwitz Camp. In general, "*Sonderbehandlung*" was a bureaucratic term which, depending on the circumstances and context, could refer either to killing or to favorable treatment, as in Document PS-660, in which the "special treatment of non-Polish minorities" refers to exemption from deportation and the lifting of certain restrictions on their living conditions.¹⁷¹ Another, better-known case of "special treatment" is the one mentioned by Ernst Kaltenbrunner during the Nuremberg IMT, in which political VIPs were detained in two luxurious hotels with food rations nine times larger than those granted to the general German population,

¹⁷¹ "Die Frage der Behandlung der Bevölkerung der ehemaligen polnischen Gebiete nach rassenpolitischen Gesichtspunkten." November 25, 1939, PS-660, p. 25.

including champagne and other amenities (IMT, Vol. 11, pp. 338f.). "Special treatment" was also the preferential treatment of Germanizable Ukrainians, who were hired as household helpers in Germany (PS-025); the gentler handling of eastern populations compared to harsh regimens of military and police requirements (PS-1024); releases from imprisonment (PS-1193); the consideration given for supplying the Balts and White Russians with food (EC-126), as well as financial support by the Reich government for the Evangelical-Lutheran Church.¹⁷²

Concentration-camp regulations stipulated that "prisoners of honor" (*"Ehrenhäftlinge"*) had to be "treated in a special way" (*"besonders behandelt"*), that is, they enjoyed wide privileges compared to other inmates.¹⁷³

The term "passed through" (*"durchgeschleust"*) appears in the Korherr Report referring to the Jewish inmates who were made to pass through the camps of the General Government and the Warthegau (NO-5194, p. 9). This word can be considered a "cryptonym" only if it is assumed *a priori* that these Jews were not deported to the East, but instead sent to "killing centers."

Hilberg then goes on to discuss the second procedure, intended to maintain "secrecy":

"Next to verbal camouflage it was most important to close the mouths of the inner circle; hence all camp personnel, especially top personnel, were sworn to silence." (p. 1029)

He adds, however:

"Not all the participants could keep the burden of their knowledge to themselves." (*ibid.*)

He cites testimonies the reliability of which cannot be verified, such as the statement attributed to Frieda Jörg, or, if they can be verified, are found to be false, such as the various Gerstein statements, who "blew the whistle" with Göran von Otter (see Mattogno 2021, pp. 138-144; 1998, pp. 67f.). Hilberg also refers to documents which he misrepresents, such as the circular letter from SS *Sturmbannführer* Günther dated April 29, 1943, in which the "disturbing remarks" about the deportation of Jews merely referred to "the place and nature of their future utilization" or to "their intended quarters" at Auschwitz (pp. 1029f.).

Hilberg then writes (p. 1030):

"Closely related to the oath of silence was the control of visitors. Occasionally high officials of the Reich or of the party would arrive for 'inspections.' The concentration camp administration was especially touchy about these visits. On November 3, 1943, Glücks ordered that the guests were not to be shown the brothels and the crematoria; neither was there to be any talk about these installations. In case anyone did happen to notice the smoking chimneys, he was

¹⁷² Mallmann *et al.*, p. 89, which is *Ereignismeldung* No. 156 of January 16, 1942.

¹⁷³ GARF. NTN, 131, p. 183.

given the standard explanation that the crematorium was burning corpses that resulted from epidemics."

This order by Glücks was directed at *all* concentration camps (and not exclusively to the "killing centers"), and also mentioned the brothels: does that mean that these also were some sort of weapon of mass destruction of the Jews?

For this final anecdote to make sense, meaning to have been a camouflaging lie, it is necessary to assume that the crematoria at Birkenau exclusively cremated the bodies of gassing victims. No Holocaust historian of any color would maintain such an absurdity, all the less because documents exist which explicitly mention the conveyance to the crematoria of bodies of registered inmates who had died of natural causes (including typhus; see Mattogno 2004b, pp. 279-283).

In this specific case, Hilberg refers to Wilhelm Steffler's affidavit of January 28, 1948 (NI-13953). He points out that "Steffler was Ministerialrat in charge of raw materials of the Office of the Four-Year Plan. He visited Auschwitz with a party that included Krauch and Körner. Affidavit by Dr. Karl Rühmer of February 7, 1947. NO-1931" (FN 16, p. 1030).

In the more-important works of Holocaust literature, these two documents are cited only by Hilberg. Why he would quote Rühmer in this context is unclear, since he was not part of the group that visited Auschwitz. In this context, however, Hilberg omitted two even-more-important testimonies.

At the IG-Farben Trial, during the interrogation at the afternoon hearing of January 14, 1948, Carl Krauch, the main defendant and former chairman of the board of directors of the I.G. Farbenindustrie trust, reported that, once in the summer of 1943, he had visited the industrial plants near Monowitz and then the Auschwitz Camp. On the way to the camp, he took a wrong turn and found himself near a very tall chimney, which did not smoke. Walter Dürrfeld, a co-defendant of his, told him that it was probably the chimney of a crematorium, but when Krauch accurately described it, it was established that it was the chimney of a super-phosphate plant no longer in use. But then Krauch was asked, how did Dürrfeld explain the presence of a crematorium in Auschwitz? He replied:¹⁷⁴

"Duerrfeld said, 'You must take into account that this camp is constantly filled with 100 to 120 thousand human beings. A city of 100 to 120 thousand people has a crematory of the same size for people who died there; this is just the same as they have in any other city.' Besides that he told me that in the Auschwitz concentration camp very serious typhus epidemics had broken out, which resulted in the deaths of thousands of people who were then burned in this way."

During the afternoon hearing of April 19, 1948, Dürrfeld reported that he had participated in the aforementioned visit to Auschwitz in the summer of 1943

¹⁷⁴ United States Military Tribunals Nürnberg. Case No. 6, Tribunal VI, U.S. vs Carl Krauch *et al.* Vol. 16, Transcripts (English), pp. 5242, 5246f.

together with Krauch, which, however, did not include Birkenau ("I am quite certain that I was never in Birkenau").

In the summer of 1944, while passing north of the Auschwitz Camp, towards Neuberun and Kattowitz, he noticed a peculiar smell. His chauffeur told him that it came from bodies being burned. Dürrfeld then consulted the commander of the Monowitz Camp, SS *Hauptsturmführer* Heinrich Schwarz, who "admitted frankly that the odor came from cremating of bodies. He explained this with the high mortality rate in the camp resulting from the typhus epidemics which had actually never come to an end and other epidemics which had come in from the east."¹⁷⁵

It is therefore legitimate to doubt whether the statements that Hilberg justifies with reference to Steffler are really attributable to him, but even if that were the case, he would still have abusively generalized a single testimony contradicted by two others.

Hilberg then relates an anecdote by a passer-by about the Belżec Camp which is said to date back to August 31, 1942. At Rawa Ruska (a town less than 30 km from Belżec), a non-commissioned officer asked a policeman where a convoy of Jews was headed: "To Belzec. And then? Poison (*Gift*)" (p. 1031). In the source quoted by Hilberg we read (Rothfels 1959, p. 334):

"I asked: 'How far will they still go?' He then: 'To Belcec.' 'And then?' 'Poison.' I asked: 'Gas?' He shrugged. Then he also said: 'In the beginning, I think they always shot them.'"

The follow-up to this story takes place on the train from Rawa-Ruska to Chełm. Hilberg summarizes it as follows (*ibid.*):

"The woman was going to point out Belzec on the way. 'Now it comes [Jetzt kommt es schon]. 'A strong sweetish smell greeted them. 'They are stinking already [Die stinken ja schon], 'said the woman. 'Oh nonsense, that is the gas [Ach Quatsch, das ist ja das Gas]' her husband explained."

In his source, we actually read (Rothfels 1959, p. 334):

"When the woman called out 'now it's coming', all you could see was a high hedge of pine trees. A strong, sweet smell was clearly noticeable. 'They are stinking already,' said the woman. 'Oh nonsense, that's the gas,' laughed the railway policeman. In the meantime – we had driven about 200 meters – the sweet smell had turned into a pungent smell of burning. 'This is from the crematorium,' said the policeman."

But, as Hilberg well knew, there was never a crematorium at Belżec and – according to Holocaust historiography – the burning of bodies only began in December 1942. Furthermore, the gas allegedly used – engine exhaust – did not smell sweet and couldn't have been smelled at a distance anyway, and if the smell had emanated from thousands of rotting corpses, the intense, disgusting smell of rotting flesh would never have been mistaken as "sweet."

¹⁷⁵ *Ibid.*, Vol. 33, pp. 11777f., 11780, 11782f.

The same source also reports this other little fairy tale on the presumed extermination technique employed at Bełżec, which Hilberg ignored (*ibid.*, p. 335):

"When asked how the Jews were being killed, the policeman replied: 'They are told that they have to be deloused, and then they have to take off their clothes, and then they come into a room where a heat wave is first let in, and there is already a small dose of the gas in it. That is enough for anesthesia. The rest follows then afterwards. And then they are burned straight away.'"

During the war, rumors like this circulated everywhere. At Bełżec even more fantastic extermination methods were bandied about: electrical shocks in many variants (floors consisting of an electrified metal plate; exposed electrical wires coming out of the floor and walls; an electrified basin full of water equipped with an elevator which lifted the bodies and carried them to the "crematorium"; electrical furnaces; underground rooms – accessed by trains through a tunnel – supplied with flooring that functioned as an enormous freight elevator lowering the victims into an underlying electrocution tank; a cremation plate using high-voltage current for cremation; depletion of oxygen by means of a vacuum pump; trains of death with floors sprinkled with quicklime; not to mention the "human-soap factory," etc.; see Mattogno 2016g, pp. 9-34).

Hilberg passes over these testimonies in complete silence, which contradict his theory of gassings using the exhaust gas from a Diesel motor; he conceals even the fact that the electrocution version was officially sanctioned at the Nuremberg IMT during the hearing of February 19, 1946 (IMT, Vol. 7, pp. 576f.; cf. Mattogno 2016g, pp. 35f.). He even seeks to shore up his theory by citing an irrelevant post-war testimony in his chapter on the deportations:

"Sometimes the information spilling out of the camps was quite specific. In the Lublin District the council chairman of the Zamosc Ghetto, Mieczyslaw Garfinkel, was a recipient of such news. During the early spring of 1942 he heard that the Jews of Lublin were being transported in crowded trains to Bełżec and that the empty cars were being returned after each trip for more victims. [...] After a few more days, two or three Jewish strangers who had escaped from Bełżec told him about gassings in barracks. [...] The next day, the thirteen-year-old son of one of the council functionaries (Wolsztayn) came back from the camp. The boy had seen the naked people and had heard an SS man make a speech to them. Hiding, still clothed, in a ditch, the young Wolsztayn had crawled out under the barbed wire with the secret of Bełżec." (p. 514)

This testimony is in fact so irrelevant that one of the greatest orthodox experts on Bełżec, Israeli scholar Yitzhak Arad, never even mentions Garfinkel at all. Yet still, Hilberg refers to Garfinkel's oral testimony of October 5, 1945, which is included in the trial documentation of the Munich Bełżec Trial (FN 46, *ibid.*).

The witness stated that he had heard alarming news about Bełżec "in the middle of March 1942"; since the camp was opened only on March 17, it is

clear that this dating appeared excessively early even to Hilberg, who changed the dating to a more general "during early spring 1942".

Garfinkiel further stated that, "towards the end of March," "two or three" Jews unknown to him showed up telling him that they had fled from the camp and that the Jews there "were poisoned with gas in the aforementioned shacks," with reference to "several wooden shacks" located there.

As for Wolsztayn's son, Garfinkiel reports that he came to him on Monday April 13, 1942 "very early" and told him that on Sunday, evidently the day before, he had been deported to Bełżec; there he managed to hide in a "cesspool," where he remained until evening. He saw that people were pushed "into the barracks," from which no one came out. After some time, naked corpses were pulled out from the other side of "the barracks" and loaded onto carts. During the night, he crawled "under the barbed wire" and, with the help of Gypsies, reached Zamość.¹⁷⁶

According to all the maps drawn by witnesses after the war, there was no cesspool anywhere in the Bełżec Camp. Any such cesspool had to be in the vicinity of the latrines, but, if we are to believe the camp map of May 1942 as published by the "Aktion Reinhard Camps" website,¹⁷⁷ the only latrine of the camp was in the sector reserved for Jewish service personnel, far away from the alleged gassing barracks. On the other hand, if this cesspool was used for the excrement of hundreds of people working at that camp, such a pool must have been several meters deep, and it is not explained how the boy could see what was happening around him while hiding therein. It is not even clear whether the alleged gassing took place in one or more barracks, because the text uses both the plural and the singular. According to Garfinkiel's narrative, the camp was "a heavily guarded area surrounded by several rows of barbed wire." Despite this, escapes were evidently the order of the day. Finally, Zamość is located 42 km north of Bełżec (by road). The boy therefore fled from Bełżec during the night, and the next morning, "very early", he presented himself in Zamość, not to his father, who had not been deported, but to Garfinkiel!

This is another example of Hilberg's total lack of interest in verifying the reliability of the testimonies he cited.

On p. 1203, Hilberg writes that the *New York Times* of November 26, 1942 had reported the news that "in Belzec they [the Jews] were being subjected to death by electric current," but only to conclude that, in the press, "accurate statements" regarding the alleged extermination had gotten "mixed with the rumors of electrocutions and soap making." But if it had been so easy to obtain these "accurate statements" since mid-March 1942, why did the most-unlikely stories circulate during the war and afterwards as summarized above? And why was the electrocution story accepted by the Soviets during the Nuremberg IMT

¹⁷⁶ ZStL, 208AR-Z 252/59, Vol. VI, pp. 1100-1103.

¹⁷⁷ Online at <http://www.deathcamps.org/belzec/pic/bmap18.jpg>.

as an "accurate statement"? According to his custom, Hilberg does not even touch the problem.

Hilberg's petty anecdotes do not end here. He goes on to write:

"One railroad man, observing the fences and guard posts of Auschwitz I on one side of the tracks and of Auschwitz II on the other, concluded that he was in the midst of it all (mitten drin)" (p. 1031)

It is not easy to understand why he attributes to this phrase, uttered by a certain Willy Hilse on December 9, 1964 (FN 21, *ibid.*), an importance such as to require even the quotation of the German text. In another book, Hilberg elaborated a little more on this testimony (Hilberg 1981, p. 96):

"A railroad worker (Hilse), who had been transferred to this station [Auschwitz], realized that his post was 'in the middle', that is, in the center of the camp. Fences and watchtowers were erected on both sides of the tracks. The chimneys could be seen from the moving train; at night they could be seen from a distance of about twenty kilometers. Barthelmäß, another railroad worker, testified that this was an indication of the 'public' burning of the corpses."

From the context it is clear that the chimneys were belching massive flames, and precisely for this reason they could be seen at night from almost 20 kilometers away, so Hilberg indirectly endorses this fairy tale. But he also does it explicitly when writing of "flames belching from the chimneys" with reference to Birkenau (p. 1038).

Soon afterwards, Hilberg regales us with this anecdote (p. 1031; also in Hilberg 1981, p. 96):

"Another railroad functionary noticed that his apartment was filled with a sweetish odor, and the windows were covered with a bluish film."

In this case as well (this is another testimony from 1964 of the just-mentioned Barthelmäß), it is impossible to understand how this is related to the alleged exterminations. The story of the "sweetish odor" emanating from the cremations, like the "crystals" of Zyklon B, was very widespread and is even mentioned in Filip Müller's book, where he speaks of a "sweetish smell."¹⁷⁸

On p. 1063, Hilberg presents another anecdote on Auschwitz, based on the inevitable "oral testimony," this time from 1969 (FN 11, *ibid.*):

"A railroad man in Krakow, responsible for scheduling death trains, recalls that he was told by his immediate superior to run the transports whenever they were requested by the SS."

This, too, is arrant nonsense. Auschwitz was the crossroads of three main railway lines managed by the *Generaldirektion der Ostbahn in Krakau* (General Eastern Railways Management in Krakow): Line No. 149 (Oderberg-Dzieditz-Auschwitz-Trzebinia-Krakow and back, in which express trains to and from Vienna and Warsaw ran, some of which also stopped at Auschwitz); Line No. 146d (Kattowitz-Auschwitz and back) and Line No. 532e (Krakow-Auschwitz

¹⁷⁸ Müller 1979a, p. 214; the English translation has here only "sickly smell" 1979b, p. 134.

and back; Generaldirektion..., p. 8). Each of these lines had a specific timetable for rail traffic,¹⁷⁹ and they were obviously drawn up in coordination with the traffic of the other lines. If the claim of Hilberg's witness were true, it inevitably would have thrown the entire rail system gravitating around Auschwitz into utter chaos.

Hilberg closes his "Concealment" chapter by exposing the false rumors of soap made of human fat (pp. 1032f.), almost as if to suggest that all the testimonies cited by him with regard to the "killing centers" are equally unreliable; as if he were saying that these are all baseless rumors which culminated in the false rumor of human soap – another Freudian slip, no doubt.

3.9.7. The "Extermination Operations"

In the chapter titled "The 'Conveyor Belt,'" Hilberg uncritically reports other anecdotal extracts. Already the title itself is misleading, because he justified it in this way:

"Although there were breakdowns and mishaps in this system, it was perfected to a degree that justified its characterization by an SS doctor as a conveyor belt (am laufenden Band)" (p. 1034)

By this expression, he implies that the alleged extermination process was organized "with a series of precise orders", starting with the "notification of the camp that a transport was arriving." The source cited by Hilberg is an affidavit by Friedrich Entress of April 14, 1947, NO-2363 (FN 31, *ibid.*). But the witness was referring solely to the crematoria at Birkenau:

"Next to the gas chambers there were the cremation furnaces, so that the crematoria could carry out the extermination of the inmates non-stop."

This German expression used – "*am laufenden Band*" – literally means "on a conveyor belt," meaning non-stop, without interruption, continuously and applied only to the final step of the claimed extermination process and only to Birkenau. This testimony, therefore, does not at all justify Hilberg's general "conveyor-belt" argument.

Pages 1034-1938 contain insignificant anecdotes taken from testimonies and claims based on them, including this one on page 1038:

"At Birkenau, illusion was the rule. It was not always simple or possible, inasmuch as at least some of the deportees had observed the sign Auschwitz as the train passed through the railway yards, or had seen flames belching from the chimneys, or had smelled the strange, sickening odor of crematoria."

The source for the first assertion, the one relating to the railway "sign Auschwitz", is: "Elie Wiesel, *Night* (New York, 1969), p. 36" (FN 73, *ibid.*). The sense is that the inmates already knew that Auschwitz was a "killing center,"

¹⁷⁹ Generaldirektion..., pp. 68, 54 and 104, with the related train timetables; reproduced in Mattogno 2019, Docs 50a, 50b, 50c, pp. 654-656.

therefore, when they saw the sign, they could no longer be fooled. However, this is explicitly refuted by Wiesel's account (2006, p. 27):

"But we were pulling into a station. Someone near a window read to us: 'Auschwitz.' Nobody had ever heard that name."

Primo Levi, whom Hilberg cites on page 1040 (FN 83), was similarly ignorant on his arrival (Levi, p. 17):

"We learned our destination with relief. Auschwitz: a name without significance, then and for us; but it should correspond to some place on this earth."

Hilberg moreover forgets that a few pages earlier he had cited the testimony of a deportee who commented on the Auschwitz sign as well as on "the shouts and whistles of command" that he heard: "We did not know their meaning" (p. 1034).

The absurd report of the flaming chimneys (see Mattogno 2004c; Mattogno/Deana, Vol. 1, pp. 375-379) was taken from Olga Lengyel's fairy-tale book *Five Chimneys* (FN 74, p. 1038), in which the author compiles every single one of the most nonsensical propaganda yarns circulating immediately after the war, among them that of "a red brick building," where "[g]reat flames belched from the chimney" (Lengyel, pp. 25f.). She also reports that a French doctor from the *Sonderkommando*, Dr. Pasche, had supplied her with a number of victims gassed between May and July 16, 1944: 1,314,000 (*ibid.*, p. 66) – in less than three months, more than what Hilberg attributed to the entire existence of the camp: 1,000,000! (p. 1320)

And here is her description of the crematoria of Birkenau, obtained by herself, we must presume, always from first-hand observation (Lengyel, p. 65.):

"Of the four crematory units at Birkenau, two were huge and consumed enormous numbers of bodies. The other two were smaller. Each unit consisted of an oven, a vast hall, and' a gas chamber.

Above each rose a high chimney, which was usually fed by nine fires. The four ovens at Birkenau were heated by a total of thirty fires. Each oven had large openings. That is, there were 120 openings, into each of which three corpses could be placed at one time. That meant they could dispose of 360 corpses per operation. That was only the beginning of the Nazi 'Production Schedule.'

Three hundred and sixty corpses every half hour, which was all the time it took to reduce human flesh to ashes, made 720 per hour, or 17,280 corpses per twenty-four hour shift. And the ovens, with murderous efficiency, functioned day and night.

However, one must also reckon the death pits, which could destroy another 8,000 cadavers a day. In round numbers, about 24,000 corpses were handled each day. An admirable production record—one that speaks well for German industry."

The cremation capacity of 17,280 bodies in 24 hours is pure fantasy, while the description of the furnaces' structure was plagiarized from the well-known Vrba-Wetzler Report, whose data are no less distorted with the claim that there

were nine four-muffle furnaces arranged in a semi-circle around the chimney in each of Crematoria II and III at Birkenau, while in reality there were five three-muffle furnaces arranged in a straight line along the longitudinal axis of the furnace room. Lengyel misnamed the nine furnaces of the Vrba-Wetzler Report as nine "fires." According to her, all four crematoria had a total of 30 of these "fires", with 120 "openings" (=muffles) altogether, hence four muffles per furnace, just as Wetzler and Vrba had claimed erroneously, although the total number of 120 muffles is Lengyel's creation (see Mattogno 2021a, pp. 385-387).

It is truly noteworthy that Hilberg's fame as a scholar rests on him relying on such spurious sources.

Hilberg goes on to recount the legendary rebellion of a "transport that had come in from Belsen" (p. 1039), which is linked to the edifying fable of the Jewish woman who disarmed *and shot* SS man Schillinger, killing him in the process. The sources are Höss and Müller (FN 78, p. 1039). I have discussed this tall tale elsewhere in detail (Mattogno 2020, pp. 312-316), which I summarize here. Höss reported that various transports from Belsen reached Auschwitz requiring particular precautions, because the deportees could have been informed of the fate awaiting them. Hilberg summarized Höss's narrative of the event, although according to Höss there was one single SS victim, who was *stabbed to death* (NO-1210). Höss does not mention any SS victim wounded by a firearm, nor does he mention the name Schillinger. In reality, the *Auschwitz Chronicle* records only one transport from the Bergen-Belsen Camp, which allegedly arrived at Auschwitz on October 23 1943, and here Danuta Czech duly inserts the above-mentioned little story (Czech 1961, pp. 72f.; 1990, p. 513). I say "allegedly" because no existing document attests to the historic reality of this transport. Furthermore, the death of SS *Unterscharführer* Josef Schillinger is not mentioned in any of the later garrison orders, which also reported on SS deaths at the camp, as in the case of the three victims of the presumed "*Sonderkommando*" revolt of October 1944, SS *Unterscharführer* Rudolf Erler, Willi Freese and Josef Purke.¹⁸⁰

Müller does nothing but copy and imaginatively expand Höss's account and the entry it created in the first German edition of the *Chronicle* (Müller 1979b, 81-89).

Hilberg continues with more anecdotes. The first involves Primo Levi:

"A young intellectual from Italy, who was in an Auschwitz hospital because of a swollen foot, was told by a gentile Polish inmate: 'Du Jude, kaputt. Du schnell Krematorium fertig' [You Jew, finished. You soon ready for crematorium]" (p. 1040)

This refers to Primo Levi, although he was in the Monowitz inmate hospital (*Krankenbau*), not Auschwitz (Levi, p. 59). On the next page, Levi describes life at the hospital as follows (*ibid.*, pp. 60f.):

¹⁸⁰ Frei *et al.*, p. 499. *Standortbefehl* No. 26/44 of October 12, 1944.

"Life at the K-Be is a life of limbo. Material hardships are relatively few, apart from hunger and the suffering inherent to the disease. It is not cold, you do not work, and, unless you commit some serious fault, you are not beaten. The alarm clock is set to four, even for the sick; you have to make your bed and wash yourself, but there is no rush or strictness. At half past five they distribute the bread, and you can cut it comfortably into thin slices, and eat lying down calmly; then you can go back to sleep, until the distribution of the broth at noon. Until about 4pm is Mittagsruhe, afternoon rest; at this time, there is often the medical examination and administration of medicine; you have to get off the bunks, take off your shirt and queue in front of the doctor. Even the evening ration is distributed in the beds; after which, at 9:00 pm, all the lights go out, except the veiled bulb of the night guard, and it is silent."

Primo Levi spent three weeks at the inmates' hospital, from March 30 until April 20, 1944.¹⁸¹ Sounds truly like an effort at exterminating the Jews, doesn't it?

On that same page, a few lines down, Hilberg wastes another few lines on one of his anecdotes:

"A nineteen-year-old girl asked the Auschwitz women's camp commander, Hössler, to excuse her. He replied, 'You have lived long enough. Come, my child, come.'" (p. 1040)

The source is Helene Klein's testimony at the Belsen Trial (FN 85, *ibid.*). The witness recounted that, over the course of a selection which took place in January 1944, she "was chosen for the gas chamber," but before SS *Obersturmführer* Franz Hössler had taken her registration number, she tried hiding from him. A little later, she approached him and begged him to spare her; the latter, who evidently hadn't noticed anything, replied as reported by Hilberg (Phillips, p. 128). This fairy tale is so implausible that it was justly considered "a pure invention" by the defense attorney, the British Major Andrew S. Munro (*ibid.*, p. 129).

On p. 1048, Hilberg supplies another striking example of his surprising credulity:

"Another party had to clean out eighteen-inch deposits of fat in the chimneys."

He has taken this absurdity from the story of a certain Irene Schwarz, "a survivor" (FN 19, *ibid.*). In reality, in a cremation furnace, the adipose tissue of corpses is the combustible substance which burns first and best, without leaving any solid deposit, but merely combustion gases (mainly carbon dioxide and water).

The account of the presumed extermination procedure at Auschwitz, which Hilberg discusses on pages 1041f. is a perfect example of his operational method, which consists of extrapolating from cherry-picked phrases of otherwise contradictory and at-times-absurd testimonies in order to create an appar-

¹⁸¹ APMO, D-AuIII-5/1, register of the *Häftlingskrankenbau* of Auschwitz III-Monowitz, p. 360, serial number 21669.

ently coherent, yet fictitious overall picture, seemingly supported by many testimonies:

"When the Auschwitz victims filed into the gas chamber, they discovered that the imitation showers did not work.⁹¹ Outside, a central switch was pulled to turn off the lights,⁹² and a Red Cross car drove up with the Zyklon.⁹³ An SS man, wearing a gas mask fitted with a special filter, lifted the glass shutter over the lattice and emptied one can after another into the gas chamber. Although the lethal dose was one milligram per kilogram of body weight and the effect was supposed to be rapid, dampness could retard the speed with which the gas was spreading.⁹⁴ Untersturmführer Grabner, political officer of the camp, stood ready with stopwatch in hand.⁹⁵" (p. 1041)

This is followed by a long description of what allegedly transpired inside the gas chamber, which I shall examine in part below.

In these few lines, Hilberg relies on five eyewitnesses and one judge: Judge Jan Sehn, FN 91; Miklós Nyiszli, FN 92; Charles S. Bendel, FN 93; Rudolf Höss and Filip Müller, FN 94; and Perry [recte: Pery] S. Broad, FN 95. In addition, these extrapolated claims at times refer to a context other than that implied by Hilberg. For instance, Sehn did not say that "they discovered that the imitation showers did not work," but simply asserted, "from which water never poured" (Sehn 1946b, p. 85). The assertion that "Grabner [...] stood ready with stopwatch in hand" is quite misleading, because Broad was referring to the *only* presumed homicidal gassing which he claims to have observed, from a distance, in July 1942 at Crematorium I of the Auschwitz Main Camp, which he described in an essay dated July 13, 1945, a fragment of which he quoted in his affidavit of December 14, 1945, which in turn was cited by Hilberg. This fragment reads: "after 2 more minutes, Grabner lowers his watch" (NI-11397, p. 2). From this simple phrase, Hilberg deduces that Grabner normally timed the duration of the alleged gassings with a stopwatch *in the crematoria at Birkenau*. And where did Hilberg read about the "glass shutter over the lattice"? This is a real mystery. None of the two witnesses cited by him ever mention this. The "lethal dose" for hydrogen cyanide "one milligram per kilogram of body weight" is taken from Document NI-9912 (his FN 102, p. 951); but as Jan Sehn remarked (Sehn 1946b, p. 86):

*"Hydrogen cyanide (HCN or HCN) is extremely poisonous. A man is poisoned by inhaling air containing no more than 0.12 mg of it per litre (i.e. · 0012 per cent)."*¹⁸²

Hilberg does not even wonder about the reasons for such different data. The lethal dose of 1 mg/kg refers to poisoning *by ingestion*, whereas we are talking about *gassings* at Auschwitz, which is a different matter requiring different units.

Equally misleading is the assertion that "dampness could retard the speed with which the gas was spreading." Actually, dampness could reduce the speed

¹⁸² Note: A liter of air is 1200 mg; 0.12 mg is 0.01%, not 0.0012%

with which the gas was *evaporating* from the carrier material (gypsum), if moisture condensed on it, a scenario quite likely for the damp, unheated underground morgues of the Crematoria II and III during any weather (see Rudolf 2020, pp. 237-239). But once the hydrogen cyanide had evaporated, moisture in the air would not stop the gas from spreading. In his affidavit of May 20, 1946, Rudolf Höss asserted that, in case of cold and wet weather, it was necessary to add two or three additional cans of Zyklon B for the alleged gasings (NI-034). Müller said the following about this (Müller 1979b, p. 116):

"It was a fact established by experience that whenever Zyklon B crystals came into contact with water or were exposed to humidity the gas was prevented from taking full effect."

Hence, Hilberg's witnesses did not mention the "the speed with which the gas was spreading."

The speciousness of Hilberg's method of operation is particularly obvious in these two phrases:

"Outside, a central switch was pulled to turn off the lights [witness Nyiszli], and a Red Cross car drove up with the Zyklon [witness Bendel]."

But Miklos Nyiszli's testimony contains both claims (NI-11710, pp. 3f.):

"According to my personal observations [...] I know that the doors were closed and the light was extinguished centrally, as soon as the mass of people was in the gas chambers. At this time a blackpainted red-cross car arrived. An SS officer and an SDG alighted from the car. They held 4 green enameled cans in their hands"

What need was there to take the second statement from Bendel's testimony? To impress the reader while at the same time hiding that the narratives told by Nyiszli and Bendel are both at the same time physically impossible, absurd and mutually exclusive? (See Mattogno 2020b for details, esp. pp. 304-333).

Hilberg continues his account of the extermination procedure at Auschwitz as follows (pp. 1041f.):

"As the first pellets sublimated on the floor of the chamber, the victims began to scream. To escape from the rising gas, the stronger knocked down the weaker, stepping on prostrate victims in order to prolong their own lives by reaching gas-free layers of air. The agony lasted for about two minutes, and as the shrieking subsided, the dying people slumped over. Within fifteen minutes (sometimes five), everyone in the gas chamber was dead.

The gas was now allowed to escape, and after about half an hour, the door was opened. The bodies were found in tower-like heaps, some in sitting or half-sitting positions, children and older people at the bottom. Where the gas had been introduced, there was an empty area from which the victims had backed away, and pressed against the door were the bodies of men who in terror had tried to break out. The corpses were pink in color, with green spots. Some had foam on the lips, others bled through the nose. Excrement and urine covered some of the bodies, and in some pregnant women the birth process had started. The

Jewish work parties (Sonderkommandos), wearing gas masks, dragged out the bodies near the door to clear a path and hosed down the dead, at the same time soaking the pockets of poison gas remaining between the bodies. Then the Sonderkommandos had to pry the corpses apart."

Hilberg refers to Müller book, to Nyiszli's affidavit dated October 8, 1947 (NI-11710), to Broad's affidavit dated December 14, 1945 (NI-11397), to Höss affidavit dated April 5, 1946 (PS-3868) and to Jan Sehn's already-mentioned book (FN 96, p. 1042). The principal structure of the tale is taken from Nyiszli's affidavit and from Müller's book, though. First Nyiszli (NI-11710, p. 4):

"Since the gas granules fell on the floor, the gas developed first in the lower layers of air and then gradually rose higher. This is how I explain that after the termination of the gassing the corpses were not scattered out in the room but were lying in tower-shaped piles. The stronger ones probably threw the weaker ones down, climbed on those lying below in order to prolong their life by reaching [air] layers still free of gas. This way women, children, and the elderly usually ended up lying at the bottom."

The year before, Nyiszli had published a book with his Auschwitz memoirs (Nyiszli 1946), which were published in English translation in 1961, both of which were inexplicably ignored by Hilberg. In this book, Nyiszli had written that Zyklon B was "chlorine in granular form" ("*Cyclon, vagy Chlór szemcsés formája*"; 1946, p. 35). Because chlorine is 2.49 times heavier than air, he invented the story that the gas filled the alleged gas chambers from the bottom up, as water would (*ibid.*, p. 36; Mattogno 2020b, p. 41):

"The bodies do not lie all over the length and breadth of the room but rather in a single, story-high heap. The explanation for this is that the fallen gas granules first permeate the air layer above the concrete floor with their deadly vapors and only gradually saturate the higher layers of air in the room. This forces the unfortunate victims to trample each other, to climb over one another. In the higher layers the gas thus reaches them later."

But, as noted by Georges Wellers:

"A second notable property of this acid is its density in its gaseous state: 0.95 compared to air. In other words, hydrocyanic acid vapors are lighter than air and thus rise in the atmosphere." (Wellers 1993, p. 207)

Hence, if anything, precisely the opposite scenario of what Nyiszli claimed would unfold. But since the difference in density is marginal, hydrogen cyanide actually fills any space evenly. The scenario described by Nyiszli is therefore completely invented.

As I have documented elsewhere (Mattogno 1986; 2021b, pp. 56-77), Müller impudently plagiarized Nyiszli's book by way of the first German translation published by the Munich *Quick* magazine in 1961 under the title "*Auschwitz. Tagebuch eines Lagerarztes*" ("Auschwitz: Diary of a Camp Doctor"),

lifting the fictitious gassing scene almost down to the letter (Müller 1979a, pp. 185f.; 1979b, pp. 116-118).

Hilberg also took his description of the gassing victims from Müller, but Müller, the "witness," in turn plagiarized it from the so-called Gerstein Report (Mattogno 2021b, 65-67). Layers of plagiarism!

Hilberg therefore describes a purely imaginary scene, even adding his own invented details to it when stating that the gassing victims "were pink in color, with green spots," while his source merely asserts that "[m]any had turned blue" (Müller 1979b, p. 117). In this context, the color pink is mentioned only by Nyiszli, but not in reference to the gassing victims, but rather to Zyklon B: "Zyklon-B in granular form with pink-lilac color" (NI-11710, p. 4).

No-less-imaginative, Müller speaks of "blue-violet Zyklon-B crystals"!¹⁸³ During the pre-war years, Zyklon B's inert carrier material consisted of diatomaceous earth (*Diagrieß*), "a reddish-brown granular mass," which was gradually replaced during the 1930s by "small bluish cubes (Erco)" made of gypsum (NI-9912). Hilberg repeats the story of the "crystals" like a parrot, without ever wondering what Zyklon B was really made of.

He adds another feature he made up when he claims that, with jets of water, they eliminated the "*soaking the pockets of poison gas* remaining between the bodies"; his source, by contrast, says (Müller 1979b, p. 117):

"When some room had been made behind the door, the corpses were hosed down. This served to neutralize any gas crystals still lying about, but mainly it was intended to clean the dead bodies."

As for Müller, in another study I examined his various declarations in appropriate detail, showing that, in his testimony during the Polish show trial against the former staff of the Auschwitz Camp (on December 11, 1947),¹⁸⁴ he did not mention at all his alleged activities as a member of the so-called "Sonderkommando" at the Birkenau crematoria. In his 1946 declaration published by Kraus and Schön/Kulka (1946; 1957; 1966), Müller mentioned it, but his narration, which barely covers half of his text, contains only a series of imaginative anecdotes, such as, for example, cutting the flesh off inmates who had been shot to death in order to cultivate bacteria, or systematically bleeding to death young women to gain their blood for German military hospitals, or SS *Haupt-scharführer* Otto Moll throwing small Jewish children into "boiling human fat"! Only in his 1979 book of memoirs did Müller focus the majority of his text – some 75% – on events relating to the Birkenau crematoria: from 0% to 75%: a staggering literary development! (See Mattogno 2016e, pp. 36-52.)

As mentioned earlier, Müller's story is full of details plagiarized from other authors, such as Nyiszli, Gerstein and Kraus/Kulka.

Even though he claims to have worked in the Birkenau crematoria for many months, his flawed description of the furnaces and how they were operated

¹⁸³ Müller 1979a, p. 111; the English translation gives no color here, 1979b, p. 71.

¹⁸⁴ APMO, *Proces zalogi* (Auschwitz camp garrison trial), Vol. VII, pp. 1-4.

clearly shows that he had no first-hand experience at all. Regarding the cremation capacity he assigns to these furnaces, he simply repeats technically impossible propaganda claims. The same is true for his stories about outdoor cremation pits and his elaborate tale of boiling human fat allegedly recovered from those pits. His claims in this regard are absurd, technically impossible and above all refuted by Allied air photos taken over Birkenau during the war.

Furthermore, many camp events he claims to have witnessed – from certain deportation trains arriving at Auschwitz at specific dates to a fire he claims to have caused in the Main Camp's crematorium – are refuted by the extant documentation. (For details see Mattogno 2021b, pp. 13-131)

In other words, the entire story narrated by Müller is completely invented. In the light of this fact, Hilberg's opinion of Müller's book, voiced by him during the Zündel Trial, sounds pathetic:

"I regard it as rather accurate, yes. I have been through this book page by page, and I am hard-put to find any error, any material significant error in this book. It is remarkable." (District Court, p. 1138; Rudolf 2020a, p. 200)

When asked by lawyer Christie whether he considered it "an accurate historical account," Hilberg answered in the affirmative (*ibid.*, p. 1138/p. 200). Soon thereafter, Hilberg called Müller "a remarkable, accurate, reliable person" (*ibid.*, p. 1159/p. 203). Was this ignorance? Sloppiness? Dishonesty?

Let us return to our examination of Hilberg's book. After speaking of Gestapo Müller's already-mentioned alleged order of June 1942 to Blobel "to destroy the mass graves in the eastern occupied territories" (p. 1042), Hilberg continued as follows:

"Blobel and his 'Kommando 1005' also moved into Kulmhof to investigate what could be done with the graves there. He constructed funeral pyres and primitive ovens, and even tried explosives." (pp. 1042f.)

Blobel's presumed experimentation at Chełmno was completely unknown to investigating judge Władysław Bednarz, who, in his report about the findings of his investigation, wrote only (Bednarz 1946a, Vol. I, p. 115):

"Two crematoria were built in the spring of 1942, after which all the bodies were cremated (including the bodies which had previously been buried)."

Hilberg cites this source, although in a different context, in FN 16 on p. 929. Immediately after the passage which I have cited above, Bednarz says:

"There are no details on the furnaces, because the examining magistrate could not find any witnesses who were in the forest in 1942 or 1943. Those who lived nearby only observed smoking chimneys inside the fences. The furnaces were blown up by the camp authorities on 7 April 1943. Nevertheless, two new furnaces were built in 1944, when they took over the camp activities."

He also supplies a description and dimensions (*ibid.*). Hilberg was therefore well aware that – according to Judge Bednarz – two crematoria had been built at Chełmno in the *spring* of 1942 – without any intervention on Blobel's part

whatsoever, who claimed to have received his order only in June 1942! Hilberg avoids mentioning this contradiction.

In this context, Hilberg mentions a “bone-crushing machine (*Knochenmühle*)” (p. 1043), which was actually a ball mill used in road construction, a topic that I have discussed elsewhere, to which I refer the interested reader.¹⁸⁵

At this point, I shall examine the end of Hilberg’s narration:

“When Höss visited Kulmhof, Blobel promised the Auschwitz commander that he would send him a mill ‘for solid substances.’ Höss, however, preferred to destroy his bone material with hammers.” (p. 1043)

The source is Höss’s affidavit of March 14, 1946 (FN 107, *ibid.*). In it, the former commandant of Auschwitz declared (NO-1210):

“After cleaning out the pits, the remaining ashes were crushed. This happened on a cement slab where inmates pulverized the remaining bones with wooden pounders”

This text was later plagiarized by Müller, who enriched it by inventing the dimensions of the claimed cement slab (Müller 1979b, p. 133):

“In this connection Moll had thought up a new technique to expedite the removal of ashes. He ordered an area next to the pits adjoining crematorium 5 and measuring about 60 metres by 15 metres to be concreted; on this surface the ashes were crushed to a fine powder before their final disposal.”

There is no documentary trace or physical trace of this cemented surface, which should have had a surface area more-extensive than the footprint of Crematorium V, in the vicinity of which it should have been located; nor is there any trace of it in the aerial photographs of Birkenau taken in 1944 (see Mattogno 2016d).

What Hilberg says regarding these photographs demonstrates once again his shocking sloppiness:

“No one analyzed these pictures at the time to discover what was revealed in their corners: the gas chambers.” (p. 1214)

As if an analysis of aerial photographs showing the Birkenau crematoria’s *exterior* could reveal the presumed presence of gas chambers located *inside* the buildings!

3.9.8. Open-Air Cremations

On this topic, Hilberg writes:

“Anticipating these developments, the Auschwitz specialist in charge of body disposal, Hauptscharführer Moll – a man described as a sadist with indefatigable energy – directed the digging of eight or nine pits more than forty yards in length, eight yards wide, and six feet deep.” (p. 1044)

¹⁸⁵ Mattogno 2018, pp. 481-484; see also Schwensen 2013.

Hilberg's source here is Müller's book (FN 114f., *ibid.*). According to this witness, two pits measuring 40 to 50 meters long, 8 meters wide and 2 meters deep were dug in the northern courtyard of Crematorium V in early May 1944, followed by another three in mid-May, in addition to four pits – presumably with the same dimensions – near the so-called "*Bunker V*," so that there were a total of nine pits (Müller 1979b, pp. 130, 133). But if we examine the other sources Hilberg quotes in this chapter, and beyond that other witnesses who testified in this regard, we see that the claims about these pits do not match.

Judge Jan Sehn (Hilberg's FN 120) says in this regard that "so six huge pits were dug beside crematorium V" (Sehn 1946b, p. 88). Charles S. Bendel spoke of three with the dimensions 12 m × 6 m × 1.5 m (Phillips, p. 131); Henryk Tauber mentioned four in one testimony, five in another; Stanisław Jankowski claimed two pits of 20 m × 2 m × 2 m; Szlama Dragon had five pits of 25 m × 6 m × 3 m; Miklos Nyiszli had two pits of 50 m × 6 m × 3 m; Dov Paisikovic claimed two pits of 30 m × 6 m or 10 m; and so it goes on (see Mattogno 2016d, p. 28).

In this context, Hilberg does not shy away from uncritically repeating the absurd story of collected human fat:

"On the bottom of the pits the human fat was collected and poured back into the fire with buckets to hasten the cremations." (p. 1044)

O, Sancta Simplicitas! This nonsense was bandied about by witnesses such as Rudolf Höss (Hilberg's source, FN 116; Höss 1959, p. 168) and Filip Müller (1979b, pp. 130-132). I have dealt with this in detail elsewhere, to which I direct the reader (Mattogno 2014; 2021b, pp. 126-129). It suffices here to say that the corpses are not said to have been lying like steaks in frying pans where their fat could accumulate, but rather in raging blazes of huge proportions. Under such circumstances, any fat exuding from any corpse would have burned off instantly where it surfaced. Assuming anything else is sheer madness.

Incredibly, Hilberg also bruited the grim tale of children being burned alive (p. 1044):

"Survivors report that children were sometimes tossed alive into the inferno."

It was mentioned by two witnesses (Gisella Perl and the inevitable Filip Müller; FN 117, *ibid.*), which for Hilberg evidently was a guarantee of its historical veracity!

The witness Werner Krumme is quoted in Hilberg's Footnote 118 as a source for the following claim:

"The rotten remains were cleaned up once in a while with flame throwers." (p. 1044)

However, in Krumme's affidavit of September 23, 1945, we read instead (NO-1933, p. 4):

"A large pit was dug in the vicinity of the crematoria, into which a considerable number of bodies was thrown. The special troop had to stack up the corpses

and the wood, then gasoline and heating oil was poured over it. At times they even needed to use flame-throwers to accelerate the process."

As we can see, there is no trace of "rotten remains were cleaned up once in a while with flame throwers," but merely speculation on how the claimed cremation process was kick-started, and Krumme spoke only of "a large pit," not several. Krumme also stated that "great tarps were hung around the cremation site so that the flames could not be seen from far away," but Hilberg assures us:

"From the Katowice direction the fires of Auschwitz were visible from a distance of twelve miles." (p. 1032)

Pery Broad, who obviously possessed much-more-acute eyesight, was able to see these same fires at a distance of 30 km, and he claimed ten cremation pits to boot in his affidavit of October 20, 1947 (NI-11984, Point 6):

"There were some 10 large burning sites in the vicinity of Birkenau, where 200-1,000 people were burned each time. The glare of these fire sites was still visible within a radius of at least 30 kilometers. The unmistakable odor of burnt flesh was perceptible at the same distance."

In an affidavit of October 24, 1947, Heinrich Schuster, by contrast, contented himself with just two "gigantic funeral pyres" whose glare was visible at a distance of 20 km (NI-11862, p. 9):

"Near crematoria III and IV, therefore, 2 gigantic funeral pyres were erected, on which mountains of gassed inmates were burned the whole time. The fire and the smoke could be seen 20 kilometres away."

3.10. Hans Frank and the "Killing Centers"

Hilberg writes:

"Lublin was evacuated more hurriedly. At the end of July 1944, a Red Army salient overtook the camp, and with it huge stores of Aktion Reinhardt. The discoveries made by the Soviets in Lublin were immediately publicized in the world press, to the great consternation of Generalgouverneur Frank. The frightened Frank immediately accused Koppe, the former Higher SS and Police Leader in the Wartheland, who had replaced Krüger in the Generalgouvernement. 'Now we know' Frank said, 'you cannot deny that.' Koppe replied that he knew absolutely nothing about these things and that apparently it was a matter between Heinrich Himmler and the camp authorities. 'But already in 1941' said Frank, 'I heard of such plans, and I spoke about them.' Well then, the Higher SS and Police Leader replied, that was Frank's business, and he, Koppe, could not be expected to worry about it." (pp. 1045f.)

To be precise, the Soviets reached the Lublin-Majdanek Camp on July 23, 1944. When quoting his source – Hans Frank's deposition at Nuremberg (FN

12, p. 1046), Hilberg omitted the prelude to the passage he summarized, which is absolutely necessary to understand what Frank was talking about.

Asked by his defense lawyer Alfred Seidl when he heard about Majdanek for the first time, Frank replied (IMT, Vol. 12, pp. 17):

"I heard the name Maidanek for the first time in 1944 from foreign reports."

Frank knew, however, that a large concentration camp was to be built near Lublin in 1941 with workshops for the production of clothing, shoes and linen for the *Waffen* SS. He had heard something about the fate of the Jews "through enemy broadcasts and enemy and neutral papers," therefore he attempted to investigate:

"In answer to my repeated questions as to what happened to the Jews who were deported, I was always told they were to be sent to the East, to be assembled, and put to work there. But, the stench seemed to penetrate the walls, and therefore I persisted in my investigations as to what was going on. Once a report came to me that there was something going on near Belcec. I went to Belcec the next day. Globocznik showed me an enormous ditch which he was having made as a protective wall and on which many thousands of workers, apparently Jews, were engaged. I spoke to some of them, asked them where they came from, how long they had been there, and he told me, that is, Globocznik, 'They are working here now, and when they are through – they come from the Reich, or somewhere from France – they will be sent further east.' I did not make any further inquiries in that same area.

The rumor, however, that the Jews were being killed in the manner which is now known to the entire world would not be silenced." (ibid., p. 18)

When Frank expressed the desire to visit the SS workshops near Lublin, he was informed that it would require a special permit from Himmler; he requested it, but the Reichsführer SS asked him not to visit the camp, Then:

"On 7 February 1944 I succeeded in being received by Adolf Hitler personally – I might add that throughout the war he received me three times only. In the presence of Bormann I put the question to him: 'My Führer, rumors about the extermination of the Jews will not be silenced. They are heard everywhere. No one is allowed in anywhere. Once I paid a surprise visit to Auschwitz in order to see the camp, but I was told that there was an epidemic in the camp and my car was diverted before I got there. Tell me, My Führer, is there anything in it?' The Führer said, 'You can very well imagine that there are executions going on – of insurgents. Apart from that I do not know anything. Why don't you speak to Heinrich Himmler about it?' And I said, 'Well, Himmler made a speech to us in Kraków and declared in front of all the people whom I had officially called to the meeting that these rumors about the systematic extermination of the Jews were false; the Jews were merely being brought to the East.' Thereupon the Führer said, 'Then you must believe that.'

When in 1944 I got the first details from the foreign press about the things which were going on, my first question was to the SS Obergruppenführer

Koppe, who had replaced Krüger. 'Now we know,' I said, 'you cannot deny that.'" (*ibid.*, pp. 18f.; emphasis added)

Shortly beforehand, in reply to the question of his defense attorney whether he had ever participated in any manner in the extermination of the Jews, Frank replied (*ibid.*, p. 13):

"I say 'yes;' and the reason why I say 'yes' is because, having lived through the 5 months of this trial, and particularly after having heard the testimony of the witness Hoess, my conscience does not allow me to throw the responsibility solely on these minor people. I myself have never installed an extermination camp for Jews, or promoted the existence of such camps; but if Adolf Hitler personally has laid that dreadful responsibility on his people, then it is mine too, for we have fought against Jewry for years; and we have indulged in the most horrible utterances – my own diary bears witness against me. Therefore, it is no more than my duty to answer your question in this connection with 'yes.' A thousand years will pass and still this guilt of Germany will not have been erased." (Emphasis added)

Therefore, all of Frank's knowledge of the alleged "killing centers" in the General Government was derived from the Allied press and from the "evidence" presented at Nuremberg! Moreover, his diary contained simple "utterances," which, although "horrible," are unsupported by facts.

The following, by contrast, is Hilberg's explanation (p. 1148):

"'My own diary bears witness against me,' said Frank as he surveyed the situation and saw that he was doomed. The crushing written evidence was reinforced by oral testimony from former subordinates of the defendants [...]"

If we follow Frank's testimony, not even Koppe knew anything about the "killing center" of Majdanek, and this also applies to Secretary of State Bühler, who, in a meeting on September 15, 1944 as cited by Hilberg as an additional source (FN 12, p. 1046), declared that "über diese Angelegenheit der Regierung des Generalgouvernements nichts bekannt sei" "the government of the Government General knew nothing about this matter" (PS-2233. IMT, Vol. 29, p. 720).

But Hilberg, who considers Frank one of the principal architects of the "destruction of the Jews" (see, for example, pp. 501-503), has nothing to say about this singular contradiction; on the contrary, he hushes it up entirely. But he does not hesitate to extrapolate two passages from the text which I have set forth above (p. 1030). I reproduce it and insert my comments.

"Frank, the Generalgouverneur of Poland, was extremely anxious to get details about killing centers."

This presupposes that he already knew of the existence of these centers, while he only wished to ascertain whether the rumors corresponded to reality.

"Once, he got a report 'that there was something going on near Belzec'; he went there the next day. Globocnik showed him how Jews were working on an

enormous ditch. When Frank asked what would happen to the Jews, he got the standard answer: they would be sent farther east."

The text cited speaks of "many thousands" of Jews excavating "an enormous ditch" "as a protective wall." The event refers to the second half of 1940. In the month of June, in fact, the supreme command of the Wehrmacht launched "Project Otto," which consisted of digging a huge anti-tank ditch between the Bug and San rivers on the German-Soviet borders, and in road construction. Bełżec was the main camp in the program, with ten subordinate forced-labor camps employing a total of approximately 15,000 Jews. The 4,331 Jews working at Bełżec were released in October 1940.¹⁸⁶

Hilberg was perfectly well aware of these things, as results from what he wrote on p. 256:

"In the course of further planning the Himmler line was trimmed a bit. The ditch was confined to the Bug-San gap, a stretch of territory without a river to hold up a Red advance. The project required the employment not of millions of Jews, as originally envisaged, but only of a few thousand. Labor camps were set up at Bełżec, Plaszów and a few other locations. By October 1940 the project was nearing its end."

Three pages later, Hilberg adds:

"In October 1940 the Bełżec labor camp was broken up. Thousands of Jews were to be sent elsewhere." (p. 259)

Let us return to Hilberg's narration (pp. 1030f.):

"Frank made another attempt. He expressed to Himmler the wish to pay a visit to Lublin, and Himmler urged him not to go there. Finally, Frank tried to spring a surprise visit to Auschwitz. His car was stopped and diverted with the explanation that there was an epidemic in the camp."

Hilberg recounts these episodes in the chapter on "Concealment," as testimony to the fact that not even Frank was permitted to visit the "killing centers." In reality, there was nothing secret at Auschwitz. At least 20 civilian companies with hundreds of workers worked in Birkenau Camp. The relatives of the SS men employed at Auschwitz could visit them and spend a few weeks with them, on the condition that they obtained a "residence permit." For example, Garrison Order No. 16/43 of April 22, 1943 lists 18 of them (Frei *et al.*, pp. 258f.). In total, there is documentary proof of approximately 270 visits.¹⁸⁷

It is also known that serious epidemics were indeed raging at Auschwitz, which were escalating in July 1942, leading to a complete camp lock-down. This implied a wide variety of restrictions, including the following, issued on July 23, 1942 with Garrison Order No. 19/42 (*ibid.*, p. 156):

¹⁸⁶ See Mattogno 2016g, pp. 97-99. The use of these Jews in "Project Otto" is also mentioned in documents published in one of Hilberg's principal sources: Berenstein *et al.*, pp. 217-222.

¹⁸⁷ On the legend of the "terrible secret" of Auschwitz, see Mattogno 2019, pp. 568-583; see also Rudolf/Böhm 2020.

"External visits for departments should be avoided or, if urgent, processed in the Waffen-SS building."

This order also affected visitors traveling to Auschwitz for service-related reasons. Hence, if Frank attempted to visit the camp during an epidemic for non-service-related reasons, and even more so if doing a "surprise visit," that is, without even advance notice, there is nothing suspicious about the fact that he was prevented from accessing the camp according to the above-mentioned order.

3.11. The Order to "Stop Gassings"

Hilberg writes (p. 1046):

"By November 1944, Himmler decided that for practical purposes the Jewish question had been solved. On the twenty-fifth of that month he ordered the dismantling of the killing installations."

The source is Kurt Becher's affidavit dated March 8, 1946 (PS-3762; FN 13, *ibid.*). That affidavit indicates, however, that Himmler's alleged order was issued some time between mid-September and mid-October, and moreover that it was *written*. The witness in fact declared (IMT, Vol. 33, pp. 68):

"Between the middle of September and the middle of October 1944 I caused the Reichsführer SS Himmler to issue the following order, which I received in two originals, one each for SS Obergruppenführer Kaltenbrunner and Pohl, and a copy for myself:

'By this order, which becomes immediately effective, I forbid any extermination of Jews and order that, on the contrary, care should be given to weak and sick persons. I hold you' – and here Kaltenbrunner and Pohl were meant – 'personally responsible even if this order should not be strictly adhered to by subordinate offices.'"

But at least after 1983, Hilberg no longer believed in any *written* order to start exterminations, nor in any *written* order to end the exterminations, neither one of which, incidentally, has ever been found. In both the 1985 and the 2003 edition of his book, he confirms (p. 1062; p. 996 in the 1985 edition):

"Hitler himself may never have signed an order to kill the Jews. On the other hand, there are records of his utterances in the form of comments, questions, or wishes.' What he actually meant, or whether he really meant it, might have been a matter of tone as well as of language." (emphasis added).

Thus, the *Führerbefehl* is now reduced to a matter of the exegesis of Hitler's utterances, comments, questions or "wishes"!

Himmler's supposed order relating to the dismantling of the alleged extermination installations at Birkenau of November 25, 1944 is taken from Czech's *Auschwitz Chronicle*. But the most surprising thing is that Czech also

refers to Becher's affidavit!¹⁸⁸ The date, which is completely invented, serves to justify the alleged gassings which were allegedly committed after mid-October 1944 – or after the alleged "end gassings" order anyway, which is said to have been effective immediately. Czech listed those post-order gassings diligently (1964, pp. 78-88).

The question was also discussed during the Zündel Trial. Defense attorney Doug Christie read the English translation of Becher's affidavit out before the court, and asked Hilberg to explain why he had changed the alleged Himmler order to November 1944, while the document speaks of the period between mid-September and mid-October: was this perhaps an error? Here are Hilberg's answer and the exchange that ensued (A: Hilberg; Q: defense lawyer D. Christie; District Court, pp. 865f./Rudolf 2020a, pp. 151f.):

"A. Not necessarily, because Becher does not recollect precisely when he acted. He said that sometime between the middle of September and the middle of October he approached Himmler. He was successful in convincing Himmler. That doesn't mean that Himmler carried out the order, gave the order the next day.

Q. With the greatest respect, sir, it doesn't say, 'approached Himmler'. It says, 'induced Himmler'.

A. Induced, fine. Induced Himmler.

Q. That, in effect, means he accomplished the objective of giving his order. Is that right?

A. Well, it doesn't mean he got the order on the precise date.

Q. So you know when the precise order was?

A. No, I wouldn't say that I know very precisely. I would say that it is November, because I do believe, knowing how long it takes for orders to be written, to be filtered down and to be carried out, that the great likelihood was for the order to have been given in November – not September or October, particularly because gassings were going on in Auschwitz in October. And here we would be implying gassings going on despite specific orders [to the contrary] already having been received."

Hilberg's assertion that "Becher does not recollect precisely when he acted" was fallacious, because the context of Becher's statements shows rather clearly that Himmler wrote the alleged order immediately, two originals and a copy of which Becher received. When interrogated on March 27, 1946 about this, here is what Becher explicitly declared:¹⁸⁹

"The order, in its present form, was dictated by Himmler in my presence. He dictated it to his secretary, Miss Meinert."

¹⁸⁸ Czech explicitly cites as a source the IMT protocol (Vol. 11, p. 370 of the German edition, pp. 334f. of the US edition), which reproduces/translates the wording of the document, as well as the document itself, PS-3762, "Affidavit" by Kurt Becher, published in IMT, Vol. 33, pp. 68-70. Czech 1964, FN 125, p. 89; 1990, p. 754.

¹⁸⁹ NARA, RG 238, M1270, OCCPAC. Interrogation Records Prepared for War Crimes Proceedings at Nuremberg 1945-1947, Kurt Becher, p. 13.

Christie then went on to Hilberg's assertion regarding the "dismantling of the killing installations." Hilberg declared that in this regard he should have included "one or two other sources." This is the dialogue that followed (District Court, p. 873/Rudolf 2020a, p. 153):

"Q. Was there another source?"

A. Yes. There were several other sources, and one of these was from a man who also talked to Becher and got that information.

Q. So you have some other source that didn't talk to Himmler but talked to Becher.

A. Yes. That's correct.

Q. Oh, I see. That wasn't referred to in your book at all.

A. That wasn't referred to, no."

Hilberg does not refer to this source even in the last edition of his work, simply because it does not exist. The only source is in fact Czech's *Auschwitz Chronicle*, which, as mentioned earlier, also exclusively relies on Becher's affidavit.

Having moved the alleged "stop order" from early fall to November 1944, Hilberg had no qualms including a gassing story that is questionable already for chronological reasons: On page 1040, Hilberg reports the following anecdote taken from a book by Ella Lingens-Reiner:

"In the fall of 1944, 2,000 Jewish women were packed into Block 25, which had room for 500. They were kept there for ten days. Soup cauldrons were pushed through a gap in the door by the fire guard. At the end of ten days, 700 were dead. The rest were gassed."

In view of the fact that gassings shouldn't have occurred anymore after the "stop order," it would have behooved Hilberg to check the reliability of his source, rather than uncritically repeating every splotch of ink he finds on any scrap heap supporting his preconceived notions. In this case, Hilberg should have been aware that there is no trace of this alleged extermination in Danuta Czech's *Auschwitz Chronicle*.

When writing his text on pages 1053f., Hilberg evidently completely forgot that just a few pages earlier he had written about a "stop order", because there he claims that, in February 1945, "[i]n Theresienstadt, Obersturmführer [=lieutenant] Rahm was involved in a last attempt to resume the destruction process," building "gas-tight" rooms, which the inmates watching this immediately interpreted as homicidal "gas chambers."¹⁹⁰ Therefore, Hilberg was prepared to believe that a mere lieutenant, on his own initiative and in open violation of Himmler's order to end mass gassings, built homicidal gas chambers at Theresienstadt to "resume the destruction process" as late as February 1945!

¹⁹⁰ Deposition of Adolf Engelstein at the Eichmann Trial in Jerusalem, 45th Hearing, May 18, 1961; State of Israel, Vol. 2, p. 815; source indicated by Hilberg, FN 45, p. 1054.

3.12. The Death Toll in Poland

It is now an undisputed fact that the fateful number of six million victims is only of purely symbolic and kabbalistic value (see Dalton 2020, pp. 53-73; Hedgesheimer 2018; Weintraub). This is so well-accepted that Hilberg, notwithstanding all his efforts, arrives at his figure of 5,100,000 victims only with very great difficulty (pp. 1320f.), a good 3,000,000 of whom are said to have died in Poland. In this chapter, I shall examine the manner in which Hilberg arrives at that figure.

In his related discussion, he introduces an "Official Polish estimate of Jewish population as of August 1939" amounting to 3,351,000 Jews (p. 1313). The figure is not supported by any reference. Earlier in his book, he mentions the figure of 3,300,000 Jews in September 1939, here as well without any source (p. 189). On page 1128, he publishes a table with Jewish population losses of various countries, according to which Poland is said to have had a Jewish population of 3,350,000 persons in 1939. The source, even if not explicitly indicated, is no doubt the *Report of the Anglo-American Committee* mentioned in his table footer, as has also been confirmed by Reitlinger (1953, p. 497):

"The starting point of the Anglo-American Committee's assessment is a figure of 3,351,000 Jews in Poland in 1939."

He comments (*ibid.*, pp. 497f.):

"This is not a census figure but an allegedly official estimate. The last Polish census on December 9th, 1931, showed 2,732,600 'racial' Jews, an increase of 622,000 in the past ten years. Assuming the same prodigious rate of increase, a figure of 3,250,000 Jews would not be impossible in September, 1939, but it is doubtful whether such a figure allows enough for emigration."

Frank Golczewski reports these diverging figures for the Jewish population of Poland on August 31, 1939 (Benz, p. 419):

- according to Seraphim: 2,719,000
- according to Krakowski: 3,163,000
- according to Kulisher/Proudfoot: 2,845,000
- according to Dąbrowska, Waszak, Grynberg: 2,642,000.

The difference between the lowest figure listed above and Hilberg's figure is already 709,000!

Hilberg moreover writes that "[a]bout 150,000 to 200,000 Jews fled from this area, particularly to the interior of the Soviet Union" (p. 1310), but Reitlinger concluded: "thus the flight from Poland into Russia may have been in the neighborhood of 700,000 when all these sources are considered" (1953, p. 498).

In September 1942, the *Daily News Bulletin* of the Jewish Telegraphic Agency published a report according to which the Joint Distribution Commit-

tee had provided medical treatment “for 600,000 Polish Jewish refugees in desperate circumstances in Asiatic Russia.”¹⁹¹

A British paper titled “*Postal & Telegraph Censorship. Report on Jewry*” of October 21, 1942 relating to the period January-June 1942 says that the Joint Distribution Committee

*“launched a program to help the 600,000 Jews in Russia by co-ordinating its efforts with those of the Polish Government-in-Exile. For this the J.D.C. budget calls for \$ 100,000 a month for the first months of 1942. We are at this moment buying \$ 50,000 worth of medical supplies, which will be consigned to the Polish Embassy at Kuibyshev.”*¹⁹²

The reference was undoubtedly to the city located in the Novosibirsk oblast, in Asian Russia, near the border with Kazakhstan, about 600 km north-east of Astana, an area never reached by German forces.

On December 30, 1944, the American ambassador to Moscow, William Averell Harriman, sent a report (“Paraphrase of telegram received”) containing detailed information on Polish Jews in Russia to the State Department in Washington. The number of these Jews was estimated at 250,000, of which 80% had Russian passports; the others were stateless. About 70% were young people between 18 and 35 years old, which arose from the fact that young people were more ready to undertake the evacuation ordered by the Soviet authorities in the years 1939-1940, but also

“by the fact that mortality has been much higher among the very young and the very old due to hardships to which all of them have been subjected since they arrived in the Soviet Union, where hardships have been great.”

These Jews were still allowed to consider themselves Poles, but they had little cultural contact and no organized contact with Soviet Jews. As to their future fate, Harriman wrote:

“Still obscure remains the prospects for the return of Polish Jews to Poland. The Soviet authorities have not shown themselves to be willing to let these people leave,”

apart from some exceptions.¹⁹³

It is difficult to believe that 350,000 Jews had died in a couple of years, so it is likely that the figure of 250,000 only referred to Jews in European Russia, probably Moscow.

In the summary of survivors on p. 1313, Hilberg mentions:

1. Reported registration of survivors on Polish soil in 1945:	55,000
2. Repatriations from USSR:	185,000
3. Displaced persons in Germany, Austria, Italy, Romania, Czechoslovakia, and elsewhere, in 1946:	over 100,000

¹⁹¹ *Daily News Bulletin*, Vol. 23, No. 215, September 15, 1942, pp. 1f.

¹⁹² TNA, FO-371-32681, p. 62 (p. 19 of the report).

¹⁹³ FDRL, Box 7, WR 0143, 000735-000737.

4. Polish Jews in military forces, 1945:	ca. 15,000
5. Emigrants to Palestine and other areas, 1939-44:	over 15,000
6. Survivors in Polish areas annexed by USSR:	thousands
7. Refugees remaining in prewar territory of USSR:	thousands
8. Victims of Soviet deportations:	thousands
9. War casualties:	thousands

And this is his comment (p. 1313):

"Although accuracy is difficult to achieve even in postwar counts, these numbers are small enough to suggest that the survivors, and the dead from non-Holocaust causes, could not have been more than about 400,000. Thus, the overall picture is that of a toll approaching three million."

In practice, he subtracts the alleged total number of survivors (355,000) from the alleged population total in 1939 (3,351,000). But a statistical report from the Institute of Jewish Affairs in 1945 estimated the number of Polish Jewish survivors at between 475,000 and 525,000, 80,000 of whom lived in Poland, 20,000 had emigrated, and 350,000-400,000 were displaced.¹⁹⁴

The Jewish Telegraphic Agency's *Bulletin* of August 17, 1945 stated:¹⁹⁵

"In addition to the 80,000 Jews now in Poland, the transfer of at least 150,000 Polish Jews from Russian territory to Poland will start next month, the delegation revealed."

A few days earlier, the *Bulletin* had reported the presence of 20,000 Polish and German Jews in Shanghai:¹⁹⁶

"More than 20,000 Jewish refugees from Germany and Poland interned by the Japanese in Hongkew section of Shanghai will be liberated as soon as the surrender of Japan is announced, it was stated here today by leaders of Jewish relief organizations."

It follows that there were at least $(475,000 + 150,000 =) 625,000$ survivors, to which must be added the $(600,000 - 150,000 =) 450,000$ who were in Asian Russia in 1942, therefore at least 1,075,000. If therefore in 1939 the Polish Jews were 2,845,000, according to the evaluation of Kulisher and Proudfoot as quoted by Golczewski, the death toll was at most 1,770,000.

Hilberg attempts to give a numerical account of the death toll:

"Polish Jewry as a whole lost more than 500,000 people in the ghettos, well over 700,000 in shootings, and up to 1,700,000 in camps." (p. 1312)

In his "definitive" 1985 edition, the numbers were little bit different:

¹⁹⁴ Institute..., p. 4, Table II, "Jewish Survivors in European Countries under Axis Domination According to the Present Residence."

¹⁹⁵ JTA, August 17, 1945, "J.D.C. Legalized in Warsaw; 150,000 Jews Will Be Repatriated from Russia to Poland".

¹⁹⁶ JTA, August 14, 1945, "20,000 Jewish Refugees, Interned in Shanghai, Will Be Liberated by Japan's Surrender".

"Polish Jewry as a whole lost more than 500,000 people in the ghettos, well over 600,000 in shootings, and over 1,800,000 in camps." (p. 1212)

I will discuss the reason for the increase in the number of those shot by 100,000 (and for the reduction of the camp victims by 100,000) in Subchapter 5.4.

On p. 274, he writes:

"In absolute figures the long lasting Łódź Ghetto, with a cumulative population (including new arrivals and births) of about 200,000, had more than 45,000 dead. The Warsaw Ghetto, with around 470,000 inhabitants over the period from the end of 1940 to the end of the mass deportations in September 1942, buried 83,000 people. The two ghettos contained less than a fourth of the Polish Jews, and although there were communities with attrition rates lower than those of Łódź and Warsaw, the impact of ghettoization in any locality was but a matter of time."

In a footnote, Hilberg explains:

"SS-Statistician [Richard] Korherr calculated a Jewish population deficit, not attributable to deportations, of 334,673 for the incorporated territories (including Białystok) and 427,920 for the Generalgouvernement (including Galicia) from the time these areas had been seized to December 31, 1942. Korherr to Himmler, April 19, 1943, NO-5193. In effect, these figures may be translated into three-quarters of a million victims, including a half million dead prior to and during the period of ghettoization, and most of the remainder killed in ghetto-clearing operations, particularly in Galicia, Lublin, and Białystok." (FN 339, *ibid.*)

As I have noted in Subchapter 1.2, in the Korherr Report, the figures of 334,673 and 427,920 refer not only to the "excess mortality," as Hilberg would have us believe, but to "emigration" as well, a fact moreover confirmed by Hilberg himself, when he writes in open contradiction to himself:

"Korherr had no count for 'emigration' and 'excess mortality,' and he could not separate the two concepts when he calculated their combined totals as 334,673 for the incorporated territories and 427,920 for the Generalgouvernement. [...] The addition of 334,673 and 427,920, which is 762,593, may therefore be taken as an indication of a real deficit for the two regions as a whole, but not as the unqualified measure of deaths from privation. About 150,000 to 200,000 Jews fled from this area, particularly to the interior of the Soviet Union." (p. 1310)

As already pointed out, that latter figure of Jews fled into the USSR is certainly too low. But then, how can Hilberg claim that "these figures may be translated into three-quarters of a million victims" based on these same data?

Assuming the same mortality rate as in the Łódź Ghetto – 22.5%¹⁹⁷ – for the 762,593 Jews mentioned by Korherr, then approximately 171,600 of them

¹⁹⁷ The actual percentage was much higher, because a large proportion of the population of the ghetto was deported; but this is true for all the ghettos.

would have died and approximately 591,000 would have emigrated. Either way Hilberg's estimate of the mortality in the ghettos is highly inconsistent and without basis in historical fact.

The situation is no better regarding the 700,000 people allegedly shot. Hilberg mentions specific figures for people shot, adding up to a total of 154,622 Jews, plus various "many thousands" (p. 1311f.). To arrive at the above mentioned 700,000, he adds (*ibid.*):

"On December 29, 1942, Himmler reported to Hitler that from August to November 363,211 Jews had been 'executed' in the Ukraine, South Russia, and the Bialystok District. There is little doubt that the large majority of these victims had lived in the Volhynian portion of the Generalbezirk Volhynia-Podolia."

but the total is $(154,622 + 363,211 =) 517,833$.

The document in question, already cited by Hilberg on p. 407, bears the subject "Reports to the Führer about the struggle against gangs." The document is known as "Report No. 51" on "Russia South, Ukraine, Bialystok," regarding the "Success in fighting gangs from Sept. 1 to Dec. 1, 1942."¹⁹⁸ The report contains three categories of persons: "bandits," "gang helpers and gang suspects" and "defectors"; the second lists 16,553 arrests, 14,257 executions and 363,211 "Executed Jews." Hilberg never mentions the context of the document at all, in particular, the that these Jews were shot, not just as Jews, but as "supporters of gangs suspected of gang membership." The subject line of the report clearly states that the Jews concerned were Russian Jews, but according to Hilberg they mostly lived in a region which belonged to Poland at the beginning of the war, so that "the large majority of these victims" consisted of Polish Jews, who, as we have seen, brought the total of persons shot up to approximately 517,833.

Nevertheless, in the case of the Soviet Union, Hilberg writes about the list of victims of the "Einsatzgruppen operations" (p. 1315):

"Old Soviet portion of 363,211 Jews killed in 1942 in Bialystok District, Ukraine, and south Russia: thousands"

In practice, he counted these 363,211 twice, considering them once as Polish Jews and then again as Russian Jews. Furthermore, as I have shown elsewhere, no more than 12-13% of these alleged shootings are actually documented (Mattoigno 2018, pp. 242-251).

Assuming the data set forth above, the cases of Poland and Russia alone show a number of at least $(591,000 \text{ emigrants} + 363,211 \text{ double counts} =)$ some 954,000 fictitious victims, who should be subtracted from the 3,700,000 victims claimed by Hilberg for these two countries (p. 1321).

¹⁹⁸ BAK, NS19/291.

This shows in general how unreliable the statistics of Jewish losses actually are, and, in particular, the inconsistency of the data cited by Hilberg, not to mention his method, which is anything but flawless.

4. Hilberg's Testimony at the 1985 Zündel Trial

4.1. Summary of the Testimony

In the stenographic transcript of the trial, Hilberg's deposition covers over 600 pages. In this chapter, I shall only occupy myself with a few of the problems discussed which are closely related with everything I said above with reference to his work. First, however, it is conducive to show a general picture of Hilberg's testimony. To do this, I shall avail myself of the masterful summary prepared by Robert Faurisson, who acted as an advisor to defense attorney Doug Christie during the trial (Faurisson 1999, pp. 955-957):

"He stumbled starting with the first question. Mr. Christie informed him that he intended to read out a list of concentration camps so that the witness could say how many he had examined and how many times. It turned out that he had never even examined a single one, neither prior to the publication of the first edition of his major work in 1961, nor after this date, and not even in the 'definitive' edition in 1985. Since he started researching the Holocaust in 1948, Hilberg had therefore earned a reputation as the world's first and foremost historian in his specific field of research, without ever having examined a single concentration camp, not one single time in 37 years. He only visited two camps, Auschwitz and Treblinka, in 1979: 'One day at Treblinka and perhaps a half day at Auschwitz and half a day at Birkenau': what is more, it was on occasion of ceremonies. He had never been curious to inspect the locations, nor, once at the spot, the Auschwitz archives. He had never visited the sites referred to as 'gas chambers'. Having been asked to supply a few explanations of the plans for the crematoria, photographs, graphics, he refused, declaring:

'If you start to show me blueprints of buildings, photographs, diagrams, I do not have the same competence [in this area] as for written documents.'

He estimated at over a million the number of Jews who died at Auschwitz and 'perhaps three hundred thousand' as the number of non-Jews, but did not explain how he arrived at this estimate, nor why the Poles and Soviets arrived at a total of four million, the figure inscribed on the monument at Birkenau [at the time].

Mr. Christie questioned him then on the camps which are said to have contained homicidal gas chambers. He rattled off the names of these camps, asking him each time whether this camp had possessed one or more of these gas chambers. The response should have been easy for this eminent specialist, but here, as well, Hilberg lost his footing. Next to camps 'with' and camps 'with-

out' gas chamber, he created, in the disaster of his improvisations, two more categories of camp: those which 'may' have had a gas chamber (Dachau, Flossenbürg, Neuengamme, Sachsenhausen) and those which had had a 'very small gas chamber' (for example, Struthof-Natzweiler in Alsace), so small that one wondered whether it was even worth talking about it; he did not reveal his criteria of distinction between these four categories of camp. He was asked whether he was aware of any expert report establishing whether or not a certain room had really been a gas chamber. Hilberg turned a deaf ear to the question, then squirmed around and supplied a host of inappropriate answers. His dilatory manoeuvres became so obvious that Judge Locke, generally so quick to assist the prosecution, felt himself obliged to intervene, requesting an answer. Only then did Hilberg, having run out of places to hide, reply that he was not aware of any report of this kind. These are 14 pages of transcript (pp. 968-981) between the moment in which this embarrassing question was asked and the moment in which he finally answered it.

Did he know of any autopsy report showing that any concentration-camp inmate had died as the result of poisoning with poison gas? The answer, here again, was 'No'.

Since Hilberg, on the other hand, accorded such importance to testimony, he was questioned as to the testimony of Kurt Gerstein. He attempted to say that, in his book, he had not used the confessions of this SS officer. To which Christie replied that, in *The Destruction of the European Jews*, Gerstein's name appears twenty-three times, and Document PS-1553 of that same Gerstein was quoted on ten occasions. Then, a few fragments of these confessions, in different forms, were read out to the jury. Hilberg finished by agreeing that certain parts of these confessions by Gerstein were 'pure nonsense.'

The same scenario with the 'confessions' of Rudolf Höss. Hilberg, prostrate, had to admit at one point: 'It's terrible,' which, in context, meant: 'It's indefensible.' As for the most important of the 'confessions' signed by Höss (Document NO-1210 [recte: PS-3868]), Hilberg acknowledged that we are dealing with a man who made a deposition in a language (English) other than his own (German), a deposition with totally unacceptable contents, 'a deposition which seems to have been a summary of things that he had said or which he could have said or which he thought he had said, by someone who had thrown in front of him a summary that he had signed, which is **unfortunate**.' With regards to the fact that, according to this 'confession,' two million five hundred thousand persons had been gassed at Auschwitz, Hilberg went so far as to say, that this was

'an clearly unverified, grossly exaggerated figure that may have become well-known and widely publicized following the erroneous conclusions of a Soviet-Polish commission of inquiry into Auschwitz.'

Perceiving that he was being forced to throw off all the ballast, he had no problem with admitting, along with Doug Christie, that 'historians' like William L. Shirer had no value, so to speak."

On this occasion, Christie read out a passage from William Shirer's book *The Rise and Fall of the Third Reich* containing a grotesque distortion of Lammers' statements at Nuremberg:¹⁹⁹

"Thus Hans Lammers, the bullheaded chief of the Reich Chancellery, when pressed on the witness stand replied: 'I knew that a Führer order was transmitted by Goering to Heydrich... This order was called 'Final Solution of the Jewish Problem.'"

In reality, Lammers stated on April 9, 1946 when cross-examined by Col. Pokrovsky, deputy prosecutor for the Soviet Union (IMT, Vol. 11, pp. 141):

"I only knew that a Führer order was transmitted by Reich Marshal Göring to Heydrich, who was at that time head of the RSHA. [...] This order was called, 'Final Solution of the Jewish Problem,' but no one knew what it dealt with or what the term meant. In the period which followed I made several efforts to clarify the real meaning of the term 'final solution' and what was to happen. I attempted yesterday to explain this question, but I was not allowed to say all I wanted."

Lammers then repeated what he had asserted the day before, that is, "there were rumors about Jews being killed," which he attempted to verify, but after his investigations, the rumors continued. He then turned to Hitler and Himmler who spoke only of evacuations (*ibid.*, pp. 141f.; see Subchapter 1.5.).

Hence, Lammers's reference to a "Führer order" transmitted by Göring to Heydrich concerned Göring's letter dated July 31, 1941, already cited several times, which had nothing to do with any extermination of Jews.

Let us return to Professor Faurisson's summary of the Toronto trial (Faurisson 1999, pp. 957f.):

"[Hilberg] was asked about his opinion of Filip Müller's testimony, author of Three Years in an Auschwitz Gas Chamber [= Auschwitz Inferno]. Passages of the purest anti-Nazi sex shop nonsense were read out before the court and Mr. Christie showed the jury, thanks to an analysis by the Italian revisionist Carlo Mattoigno, that F. Müller or his ghostwriter, Helmut Freitag, had simply committed plagiarism by taking an entire episode, almost word for word, from Doctor at Auschwitz [= Auschwitz: A Doctor's Eyewitness Account], this notorious forgery signed by Miklos Nyiszli. At this point, Hilberg suddenly changed tactics: he feigned emotion and pathetically declared that Müller's testimony was too shocking for anyone to be able to doubt his sincerity. But everything sounded false in this new Hilberg who had, until that moment, responded with a monotonous tone and with the caution of a cat who is afraid of the fire. D. Christie thought it useless to continue."

Faurisson then discusses the question of the alleged Hitler order, which I will cover in the next chapter.

¹⁹⁹ Shirer 1960, p. 965; District Court, pp. 1205f./Rudolf 2020a, p. 211; unless noted otherwise, subsequent page numbers in the text are from there following the pattern [District Court]/[Rudolf 2020a]

4.2. The Alleged Hitler Extermination Order

In Chapter 2, I demonstrated that Hitler's first extermination order cited by Hilberg has no basis in historical-documentary fact. Let us go on to the second such alleged order.

In 1983, Hilberg, at Avery Fisher Hall, discussed a theory in open contradiction with that which he had advocated in his book (see de Wan):

"But what began in 1941 was a process of destruction [of the Jews] not planned in advance, not organized centrally by any agency. There was no blueprint and there was no budget for destructive measures. They [these measures] were taken step by step, one step at a time. Thus came about not so much a plan being carried out, but an incredible meeting of minds, a consensus mind reading by a far-flung [German] bureaucracy."

Defense attorney Douglas Christie read out these words to Hilberg, who confirmed them, but declared that they did not exclude the existence of an extermination order (pp. 846f./149).

"Q. Was there an order, or wasn't there?"

A. I believe that there was a Hitler order.

Q. Okay.

A. Professor Krowslich (ph)^[200] believes this. Others believe that there was not.

Q. So it's an article of faith based upon your opinion?

A. No, it is not an article of faith at all. It is a conclusion. One can come down one way on it, or the other.

Q. Because there is no evidence to prove one side or the other. Right?

A. There may be evidence, but there is a question in this case of what is sufficient evidence.

Q. One order was given in the spring of 1941 is what you said in your book.

A. That is one man's opinion – mine." (pp. 849f./149)

Christie then turned to page 177 of Hilberg's book (the 1961 edition):

"Q. 'Shortly after the mobile operations had begun in the occupied Soviet territories, Hitler handed down his second order.' Now, where is his second order?"

A. The problem with that particular order is the same as it is with the first. It is oral.

Q. It is oral.

A. And there are people who say, no, it was not one order at all. It was a series of orders that were given to various people at various times.

Q. Mm-hmmm.

A. This is a matter for dispute and for argument among historians, and for this purpose one has meetings and second editions of books, too.

Q. I see. So you have to correct that statement in your second edition. Right?"

²⁰⁰ Probably Helmut Krausnick.

A. No, I am not saying that I have to correct this statement, but there are corrections in the second edition, of course." (pp. 851f./150; emphasis added)

In the rest of the cross-examination, Christie asked Hilberg if he could produce any proof of the existence of the second Hitler order, and he mentioned Göring's letter to Heydrich dated July 31, 1941. Defense attorney Christie objected that the German document spoke of "resettlement" (English translation of the German term "*Evakuierung*") of Jews to the East, to which Hilberg replied:

"A. Well, the term 're-settlement' became the word used throughout the correspondence in World War II in German records to refer to the process of deporting people to killing centres. In short, this was to be distinguished from bringing the killers to the victims. Here the victims are being brought to the killers.

Q. Well, that is your interpretation of —

A. That was my interpretation, and it still is now.

Q. But it wasn't an order or a letter from Hitler at all.

A. No, it is not.

Q. But it says here, 'Hitler handed down his second order'. Correct?

A. That is correct.

Q. That could be a little misleading, couldn't it?

A. Yes, it could be misleading, and for that reason we write second editions." (pp. 854f./150)

Under pressure from Christie, Hilberg maintained the reality of Hitler's Jewish extermination order in the spring of 1941, which, as I have shown earlier, is absolutely unfounded. As to the second order, he declared that there was "a divided opinion on whether there was one or whether there were several orders," but only a couple of German historians asserted that "there was no need for a Hitler order" (pp. 858/150f.). Personally, however, as we have seen earlier, he believed that such an order really existed in oral form, and that there was no need to make corrections on this point in his work. Improvising clumsily, Hilberg attributed the verbal character of the alleged order to the fact that Göring's letter of July 31, 1941 had been "written at the behest of Adolph Hitler" (pp. 855/150). Hence, Hilberg based the historical reality of it on the simply distortion of a mere word from a document referring to the Madagascar Project! He even went so far as to assert that written documents exist which demonstrate the existence of the alleged Hitler order (pp. 1203/211):

"A. It's not the Hitler order that exists in the form of a document, because that appears to have been oral, but there are documents that state that there was a Hitler order.

Q. Yeah. There are testimonies of the people —

A. No, no, no. There are documents. I repeat, there are documents. Even in the Wannsee Conference you will find reference to that."

Hilberg then stated this singular theory as follows (pp. 1204/211):

"A. It includes a reference insofar as Heydrich speaks of the evolution of the policy arriving at the final solution and makes specific reference to Hitler in that connection."

In this regard, Faurisson notes (Faurisson 1999, pp. 960f.):

"Shortly after the trial, I discovered that Hilberg had committed perjury. In January 1985, under oath, in the presence of the judge and jury, he had had the effrontery to assert that, in the new edition of his book, still being printed, he maintained the existence of these Hitler orders, of which he had just admitted that no 'trace' existed. Well, he lied. In this new edition, the preface to which is dated September 1984 (Hilberg gave his deposition under oath in January 1985) any mention of a Hitler order is systematically deleted; his colleague and friend Christopher Browning noticed this in a review titled 'The Revised Hilberg':

'In the new edition [the 1985 edition], all references in the text to a Hitler decision or Hitler order for the 'Final Solution' [understood by Browning as equivalent to 'extermination'] were systematically deleted. Buried at the bottom of a single footnote stands the solitary reference: 'Chronology and circumstances point to a decision before the summer [of 1941] ended'. In the new edition, decisions were not made and orders were not given.'^[201]

This is serious. It shows that, to be sure of obtaining the conviction of Ernst Zündel (whose theory was, in particular, that no such Hitler order – or any order by anybody else – to exterminate the Jews ever existed), a university professor was not been afraid to resort to lies and to perjury."

And this was Hilberg's fifth perjury!

Seven years later, this already-uncertain picture was even fuzzier. Hilberg was now completely renouncing Hitler's "order", replacing it with elaborations about a "decision," which then faded in his hands into a no-less-elusive "will" (Hilberg 1992, p. 16):

"Yet the decision was not a simple one, and it was not written and signed like the euthanasia order or the directive to invade the USSR. There is no particular moment or day that can be identified as the turning point in the interplay between preparations of scheming functionaries and Hitler's own utterances. We may assume a period of irresolution, followed by his cryptic intimations and predictions. We may also surmise that finally he articulated the unmistakable words that even his SS and Police chief Heinrich Himmler called frightful. The words were not recorded, but they were alluded or referred to over and over. They were used repeatedly to counter arguments put forward by German and non-German authorities for exemptions or delay. The final solution was not evadable; it was the Führer's will." (Emphases added)

This confirms that for Hilberg the *Führerbefehl*, the Führer order, was really an *article of faith* based on his opinion.

²⁰¹ The source indicated by Faurisson is: *Simon Wiesenthal Center Annual*, 1986, p. 294.

Hilberg sealed this nebulous disquisition with a sort of "confession" by the Führer (*ibid.*, p. 19):

"He killed himself on that day after writing a testament in which he left no doubt that it was he who had prophesied the end of Jewry and that the Jews had indeed atoned for their sins."

The reference Hilberg cites is "Hitler's political testament, April 29, 1945, Nuremberg trials document PS-3569" (*ibid.*, p. 272, FN 47). This document says (PS-3569, p. 3; IMT, Vol. 41, p. 549):

"But I also have left no doubt that, if the peoples of Europe are seen once more only as stock portfolios of these international conspirators in money and finance, then that very people will be held responsible which is the actual culprit for this murderous struggle: Jewry! I have further left no one in the dark that this time not only millions of children of Europeans of the Aryan peoples will starve to death, not only millions of grown men will suffer death, and not only hundreds of thousands of women and children will be burned and bombed to death in the cities, without he who is the actual culprit having to atone for his guilt, although by more humane means."

These "more humane means" refer to the cessation of the Jewish role in Europe mentioned in Hitler's "prophecies," to which this text clearly alludes; precisely this is what explains Hilberg's cautious omission. This is how Hilberg interpreted Hitler's testament in his main work (p. 1083):

"At the conclusion of the destruction process, Hitler remarked in his testament that the Jewish 'criminals'^[202] had 'atoned' for their 'guilt' by 'humane means.' The 'humaneness' of the destruction process was an important factor in its success. It must be emphasized, of course, that this 'humaneness' was evolved not for the benefit of the victims but for the welfare of the perpetrators."

Hilberg distorts the meaning of the text, first of all, by eliminating the comparative, which deprives the text of its meaning: In his conflict with the Jews, Hitler used the term "more humane means" as compared to the means employed against European men, women and children – this referred in particular to the British bombing of Dresden. He then further distorts this meaning through a bit of trickery which moreover clashes with Hilberg's theory of sadism as an essential component of the alleged extermination process. On pp. 1076f., Hilberg extends this phantasmagorical decision to exterminate the Jews even to the Polish, Russian and Gypsy populations:

"When that attempt [of the judiciary to conserve its jurisdiction in Jewish affairs] was finally given up, Justice Minister Thierack wrote to his friend Bormann: 'I intend to turn over criminal jurisdiction against Poles, Russians, Jews, and Gypsies to the Reichsführer-SS. In doing so, I base myself on the

²⁰² In his translation of Hitler's testament, Hilberg mistranslated "*Schuldige*" = "the guilty one"/"culprit" as "criminals"; p. 1057.

principle that the administration of justice can make only a small contribution to the extermination of these peoples.''' (Emphasis added)

Here he mentions Document NG-558, "Thierack to Bormann, October 13, 1942" (FN 73, p. 1077). The passage cited by him is rendered as follows in NMT, Vol. 3, page 675:

"With a view to freeing the German people of Poles, Russians, Jews, and gypsies, and with a view to making the eastern territories incorporated into the Reich available for settlements of German nationals, I intend to turn over criminal proceedings against Poles, Russians, Jews, and gypsies to the Reich Leader SS. In so doing I work on the principle that the administration of justice can only make a small contribution to the extermination of members of these ethnicities. Undoubtedly the administration of justice pronounces very severe sentences on such persons, but that is not enough to constitute a material contribution toward the realization of the above-mentioned aim. Nor does it make sense to keep such persons in German prisons and penitentiaries for years, even if they are utilized as workers for war purposes, as is done today on a large scale." (NG-558)

There is no doubt that these intentions were part of the directive agreed upon by Thierack in his meeting with Himmler of September 18, 1942 concerning the

"Delivery of asocial elements from the implementation of a sentence to the Reichsführer SS for extermination through labor" (PS-654),

but there is a great difference between the extermination of "these peoples", as Hilberg wrote, and the extermination of "members of these ethnicities", who were individual "persons" against whom penal measures were implemented. This is just one of Hilberg's innumerable quotations out of context, amounting to egregious distortion of the source.

I conclude this chapter with a more-complete quotation from Browning's opinion on the second, 1985 edition of Hilberg's *opus magnum* as mentioned by Robert Faurisson (Browning 2007, pp. 14f.):

"The second edition appeared at the height of the intentionalist-functionalist controversy. While he did not address or even acknowledge that historiographical controversy explicitly, he was clearly affected by it.

All references to Hitler's decisions and orders for the 'Final Solution' disappeared from the second edition – with one exception. Buried in a single footnote stood the solitary reference: 'Chronology and circumstances point to a Hitler decision before the summer [of 1941] ended.' [...] In the second edition, decisions were not taken and orders were not given; rather, Hitler prophesied, commented, and wished. Within the bureaucracy ideas crystallized, thinking converged, and atmosphere and expectation facilitated individual initiative."

In the interview he gave to film director Claude Lanzmann in January 1979,²⁰³ Hilberg showed that he had completely abandoned the *Führerbefehl* theory, expressing an openly functionalist position:

"[...] that one cannot find a specific document, a specific plan, outline or blueprint which states: 'Now the Jews will be killed.' Everything is left to influence from general words. [...]"

The very wording Final Solution or total solution, or territorial solution leaves something to the burocrate [sic] that he must infer." (p. 45)

"It was an authorisation to invent, it was an authorization to begin something that was not as yet capable of being put into words." (p. 46)

The idea of extermination was practically born in the bureaucracy from a radicalization of the measures adopted against the Jews:

"The plan, the outline, the goal emerges from the steps as they are being taken. There is a sense of direction, you see, there is a sense that one is going in every [sic] more drastic steps towards something unprecedented." (p. 47)

As early as March 1941, the *Einsatzgruppen* had been given the task of "the killing of the Jews, as many as possible" (p. 73), which began to take place on June 22, 1941, so that "the Final Solution has begun for the area East, East of German dominated Europe as of June 22nd" (p. 74). Hilberg lays out his opinion as follows:

"And this operation, which in a few months resulted in the death of at least a half million Jews, was the opening. At this point however, there is as yet no clear... clear idea of what to do with the Jews in the Rest of Europe. Now, as of June 22, 1941, there simply is no document that can fairly be described an order to annihilate the Jews of Europe." (p. 75)

"What we do not have for the Final Solution is a written document signed by Hitler himself. So all of these Führer directives, Führer wishes, Führer orders, are inferred from things that he must have said. Perhaps he said them to Göring, perhaps he said them to Himmler, perhaps he said them to someone else. Evidently, he s[a]id them several times and in several contexts, but not necessarily clearly." (p. 76)

The system, according to Hilberg, was not based on "prescriptions", on orders, but on the "understandings" of Hitler's words:

"We now know that prescriptions can be written and ignored. Prescriptions are useless if they are not followed. But understandings, once they exist, can utilize any words, spoken or even unspoken, to achieve a goal. And those people had an understanding of what they were supposed to do." (ibid.)

The "Final Solution" was therefore "the product of everybody, and it could not possibly have been manufactured by a single person", therefore there was no extermination order; one can only say that the situation was "ripe" (p. 77).

²⁰³ Claude Lanzmann, transcript of the interview with Raul Hilberg, *Shoah*, Part 1, online: <https://archive.org/details/ClaudeLanzmannInterviewWithRaulHilbergShoahPart1> (last accessed on April 20, 2021). Subsequent page numbers in the text from there unless indicated otherwise.

Given the premises, Hilberg embarked on a rather-imaginative historical reconstruction. With the letter of July 31, 1941, Göring authorized Heydrich "to undertake all necessary preparations [...] for a comprehensive solution of the Jewish question", which, as I recall, referred to the Madagascar Project, but for Hilberg this meant:

"Let us take the Jews first off the Reich, off the Protectorate Bohemia and Moravia, and let us ship them out into the area which is now the scene of operations of the Einsatzgruppen, because there we have our eingearbeitete [trained] Einsatzgruppen who already know what to do, and that which they have done to the Lithuanian Jews, the Russian Jews, they can also do to the new transports, which we will send them.' So the first thought indeed is to send the Jews to Riga, to Minsk and to Kaunas." (p. 80)

In this context, Hilberg mentions the alleged execution of the 5,000 Jews of the Reich and the Protectorate on November 25 and 29, 1941 (p. 81), which I dealt with earlier. He stated later:

"But in 1940, in 1941, that was the period of experimentation. And that was the point at which transports seemed to be moving almost aimlessly, just in a rather general direction: the East. Now of course, for Heydrich in the Reichssicherheitshauptamt, it is clear what the East means in the narrow sense. It means the area in which he has his Einsatzgruppen who are already killing Jews in Russia." (p. 88)

That these Jews were transferred to the above-mentioned locations for the purpose of extermination is blatantly false, as I have demonstrated in detail earlier. Moreover, on July 3, 1942, Report No. 10 of the "Reports from the occupied eastern territories" states in the section "Evacuation of Jews from the Reich" that the 25,103 Jews of the Reich deported to Riga in 25 transports from November 17, 1941 to January 6, 1942 were still there.²⁰⁴ For Hilberg, however,

"the Final Solution has now encompassed not only Jews found in the territories East of the line which existed on June 22 [1941], but already it has become European. Already it has taken victims from the West. And this is the beginning of... in November, the end of November. But – it is not yet the point at which this idea is accepted or acceptable. The people in the East, the Gebietskommissare [territorial commissars], the Stadtkommissare [municipal commissars], the people in charge of these ruined cities cannot... cannot understand what is happening. And they have a vision of tens of thousands of Jews, of hundreds of thousands of Jews arriving to these ruins for them to do the job, and they protested. They protested from White Russia and perhaps from other places." (p. 81)

Faced with this problem, the bureaucrats

²⁰⁴ RGVA, 500-1-775, p. 233.

"have to invent something else. And the first thing of course that they invent is still provided by that same office, the Reichs Security Main Office, the Reichssicherheitshauptamt. That's the gas van." (p. 81)

Hence the opening of the Chelmno Camp in December 1941 (p. 87).

This historical figure, which goes back, it is worth remembering, to 1979, is in total contrast with what Hilberg declared during the Zündel trial and wrote in 1985, but it is also intrinsically contradictory. On the one hand, he actually claimed that tens, even hundreds of thousands of Western Jews were sent to the eastern territories to be shot by the *Einsatzgruppen*, a rather simple task, as he puts it, since these units had already killed "at least a half million Jews" within a few months. On the other hand, however, these Jews were not shot, but had to be welcomed by the local bureaucrats who, not knowing what to do, invented the gas vans! This notion is both historically false and also logistically impossible, for how was some gas van that could hold a few tens of people at a time supposed to dispose of hundreds of thousands of Jews?

4.3. Hilberg's Method

In the summary reproduced above, Prof. Faurisson refers to Hilberg's concessions regarding the low credibility of various elements of Gerstein's and Höss's testimonies. At this point I shall examine in greater depth the question from another point of view, that of the manner in which Hilberg dealt with these testimonies in particular, and testimonies in general.

While cross-examined by Doug Christie, Hilberg declared about Gerstein:

"A. All right. I would be very, very careful in the use of certain statements, that I would put Gerstein's statement as one that one must be most careful about. Parts are corroborated; others are pure nonsense."

Q. You would take parts that are, in your view, credible."

A. Yes."

Q. And leave out the parts that, in your view, were incredible."

A. That's a fair assessment, yeah." (pp. 904/158)

Christie then questioned Hilberg on Gerstein's well-known statement regarding the crowding together of 700-800 persons into a gas chamber measuring 25 square meters, which would result in a density of 28-32 persons per square meter. Hilberg replies:

"Q. But I am asking you whether, as a commonsense principle, if you meet somebody that tells you that between twenty-eight and thirty-two people can be packed into one square meter, 1.8 meters high, that that person is either a fool or is a liar? Would you agree with me?"

A. Well, on this particular datum I would be very careful, because Gerstein, apparently, was a very exciteable [excitable] person. He was capable of all

kinds of statements which he, indeed, made not only in the affidavit but its context.

Q. He wasn't totally sane.

A. I am not a judge of sanity, but I would be careful about what he said." (pp. 905/159)

Hilberg later added:

"A. It's very hard to characterize the man, because he was capable, in his excitement, of adding imagination to fact." (pp. 906/159)

As to Gerstein's claim of 700-800 persons in a gas chamber measuring 25 square meters, Hilberg justified himself, asserting:

"He may have said it three times as far as I know, but I didn't use that statement." (pp. 907/159)

He declared that Gerstein was above all an important witness of the existence of the extermination camp at Belżec, and added:

"Beyond that I realized, of course, clearly, what sort of person this was from the context of the language he used, and did not rely upon any statements that appeared to me, either imaginative or exaggerated. I did not use them.

Q. In fact, in your book, in your use of his statement, you eliminated all such ridiculous parts.

A. Well, I eliminated anything that seemed not to be plausible or credible, certainly." (pp. 920f./161)

Later, in his 1992 book *Perpetrators, Victims, Bystanders*, Hilberg explained what did not seem plausible or credible to him in the Gerstein statement:

"In these recollections, there are errors in rendering ranks and names, and there is an account, based on a fictitious story told to him, of a visit by Hitler to Lublin, complete with a conversation that was supposed to have taken place between Hitler and the SS and Police Leader in the Lublin District, Odilo Globocnik." (Hilberg 1992, p. 221)

Are we to believe, therefore, that all the absurdities with which this imaginary statement is teeming in addition to what Christie mentioned – such as, for example, the pile of shoes at Belżec and clothes at Treblinka 35-40 meters high; the collection of something like 400,000-800,000 tons of garments taken from the killed victims by August 1942, which would amount to some 60,000 to 120,000 railway freight cars full; the extermination capacity of 35,000 persons per day for the camps at Belżec, Treblinka and Majdanek; the 20 million gassing victims at Belżec and Treblinka, etc. (see Mattogno 2021, pp. 91-144) – were perfectly plausible and believable for Hilberg?

During cross-examination, Hilberg later explained his peculiar method:

"Yes, but I quoted only those portions of his statement that seem to be credible, and I made no use of those that were not. [...]"

If a statement contains ten points, be they numbered or not, and I decide that two or three of them are credible, are correct, are plausible, I will make use of them. If I decide others are not so, I will not make use of them." (pp. 927/162)

He then made a sort of disquisition of his method of extrapolation:

"I explained to you what I mean by 'out of context'. Out of context means the use of words by an author in such a way as to render the meaning he intended differently from the way that he intended it to be. That, to me, means out of context. It means to leave out qualifications. It means to leave out ifs, buts, however; but if a person makes a statement which can easily be segmented into ten different assertions or twelve different assertions or twenty different assertions and I find that ten are credible and ten are not credible, or that five are credible and fifteen are not credible, if I happen to choose those, which I find to be confirmed by others, which I find to be plausible in the light of events as I know them, then I'm not taking these statements out of context, of what he [the person in the hypothesis] is saying." (pp. 945/166)

Hilberg confirmed this, his, method, also in the discussion of the testimony of Rudolf Höss:

"Q. So you leave out parts of testimony that you consider ridiculous, and you keep what you consider credible. Right?"

A. I plead guilty.

Q. Well, that process of selective perception was inclined to convince your readers that this man, Hoess, was a credible witness, wasn't it?"

A. He was credible in some respects. In fact, in most respects, under most circumstances in which he made statements." (pp. 1096/192)

In this case there was the aggravating factor of the torture well-known to have been inflicted on Höss by the British, of which Hilberg knew nothing, just as he knew nothing of the following rather strange fact, to say the least:

"Q. Are you aware of the fact that upon his initial capture a statement was written for him in English, in handwriting, by a person other than him, and he signed it?"

A. Now, that I don't know." (p. 1088/191)

The lawyer then referred to Höss's statement of March 16, 1946, where we read:²⁰⁵

"I personally arranged on orders received from Himmler in May 1941 the gassing of two million persons between June/July 1941 and the end of 1943 which time I was commandant of Auschwitz."

And one need not be an expert graphologist to note the great difference between the handwriting of the text and that of the signature and rank of Höss, particularly obvious in the word "Auschwitz" as written in an unknown English hand, and as signed by Höss. This declaration dates the presumed Himmler

²⁰⁵ Russell 1954, page outside text between pp. 180 and 181. See Mattogno 2020, pp. 32f., and Doc. 8, p. 369.

order to May 1941, lets the presumed extermination at Auschwitz begin in June-July 1941, and mentions two million gassing victims by the end of 1943: three assertions, three absurdities.

Even the affidavit of April 5, 1946 (PS-3868), mentioned several times already, was drawn up in English and was simply signed by Höss.²⁰⁶

Over the course of the cross-examination, another more-than-questionable method of Hilberg's emerged which takes as a criterion for the truthfulness of a claimed event the number of testimonies that claim it. He in fact declared that he accepted as true certain facts in a testimony "Insofar as they confirmed other information or were confirmed by other information" (pp. 1103f./194) the "other information" being other testimonies. Hilberg also mentioned a couple of examples of the application of this method. He noted that "The Schillinger episode is recorded in a number of accounts." (pp. 1140/200). In reply to Christie's question whether he believed the story of the flaming chimneys, Hilberg replies:

"Let me simply say that there are many accounts of substantially similar nature of the same phenomenon, not only by survivors, but by persons and in the vicinity of Auschwitz." (pp. 1160/203)

There is no need to dwell on the aberration of such a method, which, for example, would have led Hilberg to endorse the Soviet fairy tale of four million victims at Auschwitz, since there are "many" similar tales in this regard!

Hilberg openly declared that his "specialization is the gassing of Jews" (pp. 897/157). But he had never inspected any presumed extermination camp. His first and only visit to Auschwitz and Treblinka was *not* in fact dictated by the historical interest of the places, but occurred during ceremonies. He in fact remained one day at Treblinka and perhaps half a day at Auschwitz and half a day at Birkenau (pp. 771-774/139). He justified himself asserting that he had "studied the documents" (pp. 775/139), but neither in the "definitive," 1985 edition nor in the last, 2003 edition of his book does he even mention any documents from the Auschwitz archives. The documents studied by him by the time of his cross-examination were a poor lot, for the most part: "aerial photographs," "contemporaneous documents about the lethality of the gas that was employed," "filters for gas masks," things which were, according to him, "all connected with gas chambers" (pp. 969f./170); moreover "railway materials [documents]," "correspondence pertaining to the construction of gas chambers," which is a false assertion if we are speaking of *homicidal* gas chambers, and "correspondence about the delivery of gas" (pp. 1240f./217f.).

Hence, I have to agree with Robert Faurisson's characterization of Hilberg as

"a man lost in the fog of his ideas, a sort of theologian who has built himself a mental universe in which the materiality of things had no place; he was simply

²⁰⁶ Mattogno 2020, pp. 65-69; Doc. 10, pp. 374-376.

too aloof a professor, a 'paper historian' like Vidal-Naquet." (Faurisson 1999, pp. 954f.)

5. Hilberg on the *Führer* Order during the 1980s

5.1. The Paris Conference

Between June 29 and July 2, 1982, the *École des Hautes Études en sciences sociales* and the Sorbonne held an important international conference at Paris on the theme of "Nazi Germany and the Jewish Genocide." The related documents were published in 1985 in a volume with the same title. An English translation appeared in 1989 containing only 15 of the original 23 contributions (Furet). Hilberg also participated at the conference with two presentations: "The Bureaucracy of Annihilation" (Furet, pp. 119-133)²⁰⁷ and "The Statistics" (pp. 155-171).

5.1.1. Intentionalists and Functionalists

The conference was organized to curb the progress of revisionist historiography, as admitted by French historian François Furet, one of the organizers, without mincing his words (pp. viif.):

"Our initial idea was quite simple. We knew that it was time, even high time, almost forty years after World War II, to collect in a single volume what specialists had discovered about one of the most tragic episodes of that war: the genocide of the Jews by the Nazis. Like many others, I had been surprised and shocked by the efforts of small partisan groups to cast doubt upon the veracity of the facts, or to banalize their import. But indignation does not constitute knowledge: it may even be an obstacle to knowledge, like prejudgment of materials or partisanship. Therefore, it was necessary to let some people speak who had devoted their principal efforts to historical research on nazism, World War II, and the 'final solution of the Jewish problem.' As the professional jargon puts it, the time had come for summing up the 'state of the question.' Hence, the initiative of a colloquium organized by the École des Hautes Études en Sciences Sociales (School for Advanced Studies in the Social Sciences) at the beginning of July 1982."

Israeli historian Saul Friedländer stressed:

²⁰⁷ All subsequent page numbers in the text from Furet, unless stated otherwise. Assuming that Hilberg and other anglophone contributors submitted their original English texts for the publication of the English version of this book, I quote from the English edition whenever possible rather than translate from the French of École....

"Since the end of the 1960s, the historiography of National Socialism at this level, in the Federal Republic [of Germany] in particular but in other Western countries too, has tended to adopt [École..., p. 20: se divise – implicitement ou explicitement – en = is divided – implicitly or explicitly – into] two opposite positions: 'intentionalism' and 'functionalism.'

For the intentionalists there is a direct relationship between ideology, planning, and policy decisions in the Third Reich. As for the absolute centrality of the supreme leader, Adolf Hitler, it is obvious to such a degree that Klaus Hildebrand claims: 'One should not talk about National Socialism, but of Hitlerism.' The functionalist position, on the other hand, implies that there is no necessary relationship between the ideological basis and the political initiatives of the Nazis. It holds that decisions are functionally linked to each other and to a given state of the political context, that through the constant interaction of various semiautonomous agencies the role of the supreme decision-maker may sometimes be quite limited, and that his decisions often take on the aspect of planned policy only from the vantage of hindsight. We have the image of a system in which every crucial decision depends on the will of Adolf Hitler on the one hand, and that of a more or less anarchic polycracy on the other hand.

The opposition between these two theses appears with particular clarity in terms of their interpretations of Nazi policies toward the Jews." (pp. 11f.)

While the intentionalist position asserts the "continuity between the ideology of the 1920s and the final extermination" (p. 12), the functionalist position, which presents contrasting aspects, maintains that "the Nazi system was to a great extent chaotic, and major decisions were often the result of the most-diverse pressures, without any imperative central planning, forecasting, or clear orders given from the top" (p. 14).

In his paper presented at the Paris conference, of which the article published in the later book is a revised version, Friedländer noted that both positions are basically unfounded (Friedländer, p. 419):

"Neither the theory of the inexorable continuity and of a plan for the total extermination of the Jews before the attack on the USSR, nor that of the discontinuity and improvisation can actually be demonstrated with the present state of the sources: this is the conclusion arrived at by Krausnick and Wilhelm at the end of their monumental study of the Einsatzgruppen. It is also the only conclusion which seems plausible to us at this stage."

He then delineated a "picture of the acquisitions of historiography" on the Holocaust, where he admitted (*ibid.*, p. 420):

"The question of the date when the total physical extermination of the Jews was decided upon, as well as the problem of the development of the plan for the 'final solution' remain unresolved."

The reworked text which appears in the book about that conference does not contain this frank admission of the vacuity of the related historiographical dis-

cussion, but the fundamental problem of the extermination order is also depicted as unresolved (p. 14):

"No historian today believes that such an order was issued in writing. In its oral form it could have been either a clear instruction passed on to Goring or Himmler, or, more probably, a broad hint understood by everybody."

Martin Broszat's interpretation was rather more radical (*École...*, p. 23):

"there was never a comprehensive order concerning the extermination of the Jews."

In the English edition, this was toned down to (pp. 16f.):

"Broszat believes that such an order probably never existed."

As for Friedländer, he attempted a synthesis between the two opposing positions: recognizing on the one hand that functionalism "in many ways fits better within the mainstream of modern historiography" than intentionalism, yet sustaining on the other hand that, in Jewish policy, no important decision was made without Hitler knowing about it (p. 18). But his conclusion that "the existence of an overall plan for the extermination of the Jews of Europe, by the fall of 1941, can hardly be questioned any longer" (p. 26) was a mere conjecture, just like those of his colleagues.

Eberhard Jäckel supports the radical intentionalist theory, according to which Hitler was hell-bent at implementing a bloody solution to the Jewish question since the 1920s. He started from the analysis of the fundamental step of "Hitler's first political document," a letter to his friend Adolf Gemlich dated September 16, 1919:²⁰⁸

"Anti-Semitism for purely emotional reasons will find its ultimate expression in the form of pogroms. Anti-Semitism of reason, however, must lead to the systematic legal fight against and elimination of the privileges of the Jew, which he has in contrast to the other strangers living between us (aliens legislation). Its ultimate goal, however, must inevitably be the removal of the Jews above all."

Jäckel commented on this passage as follows (*École...*, p. 102):

²⁰⁸ *École...*, p. 101; Jäckel's contribution is not included in Furet. The text cited here was translated from the original German text in Deuerlein, p. 204. The French translation of this text contains a crude error: the translator correctly renders "*Beseitigung*" as "*élimination*," but repeatedly translates "*Entfernung*," which means "removal," as "*élimination*." The phrase "*muss unverrückbar die Entfernung der Juden überhaupt sein*" does not mean "must immutably be the elimination of the Jews in general," but "must immutably be the removal of the Jews above all." These tricks allow the translator to insinuate the idea of a "general elimination of the Jews," completely distorting the actual meaning. For the sake of consistency, the translator always renders the noun "*Entfernung*" (removal) and the verb "*entfernen*" (remove) as "*élimination*" and "*éliminer*," beginning with the very title of E. Jäckel's paper: "*L'élimination des Juifs dans le programme de Hitler*." Hilberg shifts the goal posts in his 1992 book *Perpetrators, Victims, Bystanders*, in which he interprets the term "*Entfernung*" as the "ambiguous, yet total removal, disappearance, or elimination of the Jews" (p. 5), with each term moving away from the actual meaning (removal) to one close to "extermination" (elimination)!

"What measures did Hitler propose? It is obvious that this is the most important question. Neither pogrom nor excess. It was necessary to proceed in a legal and programmed manner. Hitler distinguished two phases. First of all, it was necessary to subject the Jews to the foreigner legislation, to withdraw their civil rights, to treat them for what they really were: foreigners. Then, eliminate them altogether. Hitler did not clarify this concept of elimination, which was repeated incessantly since then. What can be said at least is that he wanted their emigration or expulsion out of Germany; but it is not excluded that he already thought of their extermination."

This hypothesis is allegedly confirmed by *Mein Kampf*, in which Jäckel found "a frankly monstrous radicalization of measures recommended in the fight against the Jews" (*ibid.*, p. 108):

"The elimination of the Jews demanded until then – while partly conserving the term elimination, annihilation – became the extirpation of the Jews and, quite openly, their physical liquidation, their killing. Even if Hitler had previously imagined this solution, perhaps unconsciously, he proclaimed it here publicly for the first time."

The theory advocated by Jäckel was refuted by another conference participant, Karl A. Schleunes. In his paper on the "Nazi policy towards the Jews" between 1933 and 1939, he discussed the same argument. At the beginning, he summarized the intentionalist theory (p. 55):

"Did Hitler know, when he became chancellor in 1933, what he hoped to accomplish concerning the Jewish question? Was Auschwitz the product of such a clearly conceived design? Or did Hitler, as some suggest, have his objectives defined even before 1933? As early as 1919, after all, before joining the German Workers' Party, Hitler had communicated to one of his superiors his views on the Jewish problem and his belief that a 'rational anti-Semitism' must have as its fixed goal the 'removal of the Jews altogether.' By 1924, when he wrote Mein Kampf, he was clearly in possession of a full-blown racist Weltanschauung [world view] that had anti-Semitism as its centerpiece. Even the gassing of Jews is mentioned in Mein Kampf. If, during the world war, Hitler wrote, Germany had placed 'twelve or fifteen thousand... Hebrew corrupters of the people under poisonous gas,' so they might have suffered at home what hundreds of thousands of German soldiers endured on the battlefield, the sacrifices at the front 'would not have been in vain.'

The view that Hitler knew from the outset, possibly as early as 1919, what the outline of a Jewish policy should be, has been most fully and persuasively argued by Lucy Dawidowicz, principally in her book The War Against the Jews, 1933-1945 (1975). To support her case she cites Hitler's 1919 letter,^[209] appropriate passages from Mein Kampf, and numerous other references Hitler made to Jews before he was made chancellor. Each one of these utterances, she argues, 'prefigures the political realities of the German dictatorship under

²⁰⁹ The just-mentioned letter to Gemlich. Lucy Dawidowicz correctly translates "Entfernung" as "removal"; Dawidowicz 1979, p. 43.

Hitler... ' When these prefigurations are placed in light of Hitler's subsequent warning on January 30, 1939, that if Jews should 'succeed in plunging the nations once more into a world war,' the result would be 'the annihilation of the Jewish race in Europe,' the argument that the 'Final Solution' was the inevitable culmination of a grand design becomes all the more persuasive. "

Schleunes, by contrast, maintained that an intention or a project to exterminate the Jews never existed, neither in the 1920s, nor even in the period from 1933 to 1939:

"Did Hitler, or anyone else in the Nazi leadership, know in January 1933, or even before then, what the objectives of a Jewish policy should be? The evidence suggests that he did not, and that no one else did either. " (p. 56)

Anti-Jewish rhetoric undoubtedly constituted the central theme of Nazi propaganda from the very beginning.

"[...] but in 1933, to say nothing of 1919 or 1925, no one yet imagined where that energy might lead.

In reference to the first six years of Hitler's rule, one cannot speak of a Nazi Jewish policy. Instead, one must speak of many Jewish policies, no one of them truly official, no one of them coordinated with the others, and many of them pursued in contradiction to each of the others. Not until 1939, in the aftermath of difficulties produced by the Reichskristallnacht [the November 1938 pogroms], is there brought into Jewish policy a measure of coordination that reflects clearly the intervention of Adolf Hitler. Until then Jewish policy had been the object of extraordinary contention within the Nazi leadership, the object of internal power struggles that resembled nothing so much as they did jungle warfare. It was a warfare in which the fittest prevailed. By 1939 that had proved to be Heinrich Himmler and his various police agencies, particularly the SS and its SD adjunct. " (p. 56)

This multiplicity of policies depended on the fact that

"When the Nazis did come to power some eight months later, Jewish policy did not receive the immediate priority that ideological considerations might lead one to suspect. " (p. 58)

In these early years, Hitler's action was solely restrictive and indicative:

"A solution to the Jewish problem in the sense of there being mounted a concentrated and centrally coordinated policy did not yet have a sufficiently high priority for Hitler to place someone clearly in charge; neither did he contribute specific ideas as to what a solution might actually entail. " (p. 62)

The consistent policy which took shape in 1939 aimed at the emigration and expulsion of the Jews from Germany. Starting in 1934, the SS, in a "Report on the Jewish Question," had proposed organizing the mass emigration of the Jews out of Germany. The idea was also put forward of encouraging Zionist sentiments among the Jews in order to induce them to leave.

"The SS was not to gain full control over Jewish emigration (and therefore over Jewish policy) until 1939 when Hitler commissioned it to organize the emigration of Jews from the entire Reich." (p. 64)

This assignment was the consequence of the success achieved by the SS in Austria, in particular by Adolf Eichmann, who, in the months following the *Anschluss*, organized the emigration of almost one quarter of the Austrian Jews.

"It is the emergence of Eichmann as an important figure in Jewish policy that provides some of the most persuasive evidence that the Final Solution was not the result of a long-standing grand design." (p. 64)

In the light of this policy of emigration, Schleunes concluded, Hitler's menacing expressions during 1938 and 1939 must be interpreted in a purely metaphorical sense:

"There was a great deal of talk in late 1938 and early 1939 about a solution to the Jewish problem being imminent. 'The problem will soon be solved,' Hitler told South Africa's minister for defense, Oswald Pirow, on November 24, 1938. To Czech Foreign Minister Frantisek Chvalkovsky a few weeks later, he said: 'We are going to destroy the Jews.'^[210] They are not going to get away with what they did on 9 November 1918. The day of reckoning has come.' And on January 30, 1939, he made his forecast to the Reichstag that war, if it should come, would lead to 'the annihilation of the Jewish race in Europe.' Did Hitler mean actual physical annihilation? Probably not yet, although the viciousness of his rhetoric certainly served to bring that day nearer. Eberhard Jäckel has pointed out that Hitler did not mean physical killing every time he used the word 'extermination.' There is a wealth of evidence to indicate that throughout 1939 the Nazis still saw a Germany rendered judenrein ('cleansed of Jews') by emigration as their vision of a solution to the Jewish problem. On January 24, 1939, one week before Hitler's much quoted Reichstag speech, Göring had commissioned Reinhard Heydrich to coordinate the accelerated emigration of Jews from Germany. Heydrich had been at the meeting in the Aviation Ministry following the Kristallnacht and used the opportunity to boast about the successes Eichmann had achieved in organizing emigration from Austria. Eichmann's techniques were now to be employed also in Germany. From within the SS, Heydrich appointed Gestapo official Heinrich Müller to direct the new Central Office for Jewish Emigration. Offices similar to the one Eichmann had established in Vienna were to be created in Berlin, Breslau, Frankfurt, and Hamburg." (pp. 68f.)

Emigration policy, Schleunes notes, was continued even after the outbreak of the war, although with ever-decreasing success, until the military situation forced its abandonment:

²¹⁰ The German text is "*Bei uns werden sie vernichtet*," meaning "With us [at home=in Germany], they [*the Jews*] are annihilated." See Chapter 1.4.

"Emigration schemes that had been unable to keep pace with Hitler's peacetime acquisitions fell apart almost completely with the outbreak of war in September 1939. The war was larger than Hitler had anticipated, involving an unexpected front in the west, as well as one to the east. One more emigration scheme, the so-called Madagascar Plan, did briefly dominate Jewish policy in the period immediately following the outbreak of war. Originating in the Foreign Office, the plan called for the settling of Jews from Nazi-controlled Europe in this French protectorate. Briefly stated, the scheme called for France to cede Madagascar, thereby making it available for Jewish immigration. The settlement in turn was to be financed by Jewish assets the Nazis would seize in Europe. Himmler and Heydrich found the idea acceptable because Madagascar was to be governed by the SS. Nothing came of the plan. The war virtually precluded its success or that of any other emigration scheme. Not only was the war larger than expected, but it also transformed dramatically the nature of the Jewish problem. The conquest of Poland brought at least 3 million Jews into the Nazi orbit. Their emigration or expulsion, Rosenberg's grandiose visions notwithstanding, was out of the question." (p. 69)

5.1.2. The Extermination Order

Uwe Dietrich Adam examined National-Socialist Jewish policy from September 1939 to June 1941, a period which "may be considered as that of the escalation towards the 'Final Solution.'" He nevertheless made it immediately clear that

"the chronological placing of an order to carry out the 'Final Solution' constitutes a classic [École..., p. 177: non résolu = unsolved] dating problem in both German and world history." (p. 84)

As to the origins of the "Final Solution," Adam sided decisively against the radical intentionalist theory maintained by Jäckel, declaring himself in accord "with the overwhelming majority of historians that an order to wipe out the Jews under German control, in whatever form it may have taken, was not given or even planned until the beginning of the war" (p. 85). Since "it has not been possible so far to give documentary proof of such an order" and it is improbable that any such order will ever be found in the future,

"the job is left to the historian to determine a more accurate date for such an order through interpretation. Since this is being done by different methods and hypotheses, we have a considerable range of opinion as to the time at which a decision of Hitler's could have been given. One estimate places the conception of the 'Final Solution' in the time of Landsberg (Jäckel, Dawidowicz), others fix the time as March 1941 (Krausnick) or July 1941 (Wilbert [sic; Hilberg], Browning), and another indicates late autumn 1941 (Adam, Broszat).

Neither the legislative nor the administrative steps taken by the Third Reich itself against the Jews may be considered appropriate means of answering the question as to the possible date for an extermination order. But if one is famil-

iar with the institutional structure of the Reich after the war broke out, knowing which steps were taken narrows down the possibilities for interpretation and even provides grounds for the elimination of certain dates or the confirmation of other ones with a greater degree of certainty." (Emphasis added; p. 85)

At the outbreak of the war, the Jewish question, which was formulated in the Party program and by the primary protagonists of racial legislation, was resolved.

"If it is possible to summarize most of the measures in a general Nazi Party policy against the Jews, we find one dominant and repeated goal: the separation of 'Aryans' and Jews. That political and racial target of party ideology – the elimination of the Jews from the German Volkskörper – was achieved in 1938." (p. 86)

After the beginning of the hostilities, Nazi policy with regard to the Jews aimed at consolidating this separation, but:

"Shortsighted considerations, offices which thought themselves powerful enough to force through an issue, an accidental or intentional utterance by Hitler – these and other imponderables formed and characterized the anti-Jewish policy to a large degree. The lack of unity and the erratic shifts in this legislation were influenced not least of all by the fact that there existed no central authority able to coordinate, administer, or direct all the anti-Jewish measures." (p. 93)

The Reich Security Main Office (RSHA) continued the pre-war policy of emigration during this period.

"Before the beginning of the war, the Security Service (SD) in particular argued vehemently for a 'solution to the Jewish question' by emigration and even obtained Hitler's approval in February 1938. The establishment of the Zentralstelle für jüdische Auswanderung (Central Agency for Jewish Emigration) in January 1939 gave Heydrich a voice in the determination of Jewish policy on the ministerial level. Heydrich pushed the emigration plans of the SD quickly and had his first substantial success in July 1939 when he founded the Reichsvereinigung der Juden in Deutschland (Reich Association of Jews in Germany). Because the Reichsvereinigung was subordinate to the RSHA, he not only succeeded in gaining control over the important Jewish cultural associations, but also became the ultimate authority in all financial and organizational questions of Jewish emigration." (pp. 93f.)

But the RSHA had not taken into consideration "the anarchic structure of the Third Reich," which created obstacles in the way of Jewish emigration, and did not permit it to "achieve Eichmann's stupefying emigration figures" for Vienna and Prague for Germany as well.

"After the outbreak of the war, we may assume that the policy of the RSHA was in accord with Hitler's intentions to produce a 'judenreines Deutschland' (Germany purified of Jews) as quickly as possible." (p. 94)

The RSHA attempted to solve the pressing emigration problem.

"It is true that the emigration fee increased steadily, but at the same time the RSHA worked to weaken the regulation on currency. Contrary to all legal restrictions, the RSHA even permitted the employment of Jews in agriculture 'in order to facilitate the emigration of Jews and to give them a professional education.'

The RSHA was also able to weaken or abolish a large number of special tax and currency-limitation regulations for the Jews. In December 1940 it succeeded in convincing the Reichswirtschaftsminister to throw all his regulations overboard and to direct his currency and revenue offices and to speed up financial procedures in all emigration cases.

The general purpose of solving the 'Jewish question' was still visible in May 1941 when the RSHA tried to obtain a general emigration clause from Göring, an order^[211] which later was often interpreted incorrectly because of its content and its wording. Göring directed all institutions to facilitate the emigration of Jews from the Reich, including the Protectorate, as far as possible, even during the war. On the other hand, the emigration of Jews from Belgium and France was to be prevented because of the 'final solution doubtlessly coming.' This deceptive term 'final solution' was interpreted by later generations of historians as meaning physical destruction, but at that time it meant only the emigration of Jews to Madagascar.

Not until August 1941 onward was the net around the Jews drawn tighter. The RSHA imposed an emigration prohibition on able-bodied Jews.^[212] At the end of August 1941, Eichmann extended the order to all Jews in the areas occupied by Germany. On October 23, 1941, the RSHA informed all police authorities and the SD of Himmler's order to prohibit the emigration of Jews during the war, without exception." (pp. 94f.)

Adam's paper ends like this, without specifying what the "net" consisted of.

Christopher R. Browning addressed the specific theme of the decision concerning the Final Solution. Above all, he stressed the essential divergences of opinion dividing the two Holocaust interpretations at the time:

"The decision concerning the Final Solution has been the subject of a wide variety of historical interpretations. The major differences emerge over two related questions: first, the nature of the decision-making process, with particular focus on the role of Hitler and his ideology; and second, the timing of the decision. Such a variety of interpretations warns us, as Martin Broszat has correctly pointed out, that any thesis concerning the origins of the Final Solution is a matter of probability not certainty." (Emphasis added; p. 96)

Browning then sets forth a summary picture of the essential disagreements:

"According to Dawidowicz, conception of the Final Solution preceded implementation by twenty-two years; according to Broszat, conception emerged from practice – the act of sporadically killing groups of Jews gave birth to the idea

²¹¹ W. Schellenberg's letter dated May 20, 1941. NG-3104.

²¹² Eichmann's order regarded men "fit for military service" (*wehrfähige*) and was obviously intended to prevent supplying the enemy with potential soldiers. Walk 1981, Margin No. 227, p. 347.

of systematically killing all Jews. A wide variety of interpretations flourishes between these distant poles. For example, Eberhard Jäckel argues that the idea of murdering the Jews crystallized in Hitler's mind around 1924. Emphasizing Hitler's threatening statements of the late 1930s, Karl Dietrich Bracher assumes that the intention was there by then. Andreas Hillgruber and Klaus Hildebrand assert the primacy of ideological causation but do not offer a specific date. Others, not all of them functionalists, have focused on 1941, though within that year a number of possible turning points have been suggested. Léon Poliakov has urged early 1941 as most plausible, and Robert Kempner and Helmut Krausnick have argued for a Hitler decision in the spring, connected with preparations for the invasion of Russia. Raul Hilberg has argued for a summer date, when the mass murder put into practice in Russia beckoned as a European-wide solution available to victorious Germany. Uwe Dietrich Adam supports a fall decision, when the stalled military offensive precluded a 'territorial solution' through mass expulsion into Russia. And Sebastian Haffner, certainly no functionalist, argues for early December, when the first premonition of eventual military defeat caused Hitler to seek an irreversible victory over the Jews.

Why can such diversity of interpretation over the nature and timing of the decision for the Final Solution flourish?" (p. 98)

Browning explains this diversity with a subjective reason – the different perspectives from which the intentionalists and functionalists view things – and an objective reason, which is actually the real reason:

"A second reason for such diversity of interpretation is the lack of documentation. There are no written records of what transpired among Hitler, Himmler, and Heydrich concerning the Final Solution, and none of them survived to testify after the war. Therefore, the decision-making process at the center must be reconstructed by the historian, who extrapolates from events, documents, and testimony originating outside the inner circle. Like the man in Plato's cave, he sees only the reflection and shadows, but not reality. This hazardous process of extrapolation and reconstruction inevitably invites a wide variety of conclusions." (Emphases added; p. 99)

Browning repeatedly insisted on the near-total absence of documents as to the origins of the decision concerning the "Final Solution":

"Despite all that is known of German preparations for the invasion of Russia, however, specific documentation concerning the intended fate of the Russian Jews is lacking. Conclusions must be drawn from postwar testimony, circumstantial evidence, and scattered references in later documents." (p. 102)

"If the decision to murder the Jews of Russia had been taken before the invasion, precisely how and when this decision was reached remains obscure. It is not possible to determine if the initiative was Hitler's or came from someone else, such as Heydrich. Moreover, it is not possible to determine if Hitler's mind was already set by March, when he made clear to the military that the Russian war would not be a conventional war, or if the degree of military com-

pliance tempted him subsequently to expand the circle of intended victims beyond the 'Jewish-Bolshevik intelligentsia.' The scant documentation does not permit a definitive answer to these questions, merely informed speculation." (Emphases added; p. 103)

"Precisely how and when Heydrich and his immediate superior, Himmler, became aware of their new task, is not and probably never will be known." (p. 106)

And finally:

*"There was no written order for the Final Solution nor any explicit reference to a verbal order other than the assertions of Himmler and Heydrich that they were acting with the *führer's* approval."* (Emphases added; p. 117)

Browning noted that "the relationship between Hitler's anti-Semitism and the origin of the Final Solution still remains controversial" (p. 100). Nevertheless, the intentionalist theory is clearly refuted by the emigration policy implemented by the National Socialists with regard to the Jews until the fall of 1941:

"The assumption of Nazi Jewish policy as the premeditated and logical consequence of Hitler's anti-Semitism cannot be easily reconciled with his actual behavior in the years before 1941. For example, Hitler's views of the Jews as the 'November criminals' who caused Germany's defeat in World War I was as fervently held as any of his anti-Jewish allegations. Indeed, the oft-cited passage from Mein Kampf lamenting that twelve or fifteen thousand Jews had not been gassed during the war makes far more sense in the context of the stab-in-the-back legend than as a prophecy or intimation of the Final Solution. The 'logical' consequence of the thesis of the Jew as wartime traitor should have been a 'preventive' massacre of German Jewry before the western offensive or at least before the attack on Russia.

In actual practice Nazi Jewish policy sought a judenrein Germany by facilitating and often coercing Jewish emigration. In order to reserve the limited emigration opportunities for German Jews, the Nazis opposed Jewish emigration from elsewhere on the continent. This policy continued until the fall of 1941, when the Nazis prohibited Jewish emigration from Germany and for the first time justified the blocking of Jewish emigration from other countries in terms of preventing their escape from the German grasp.^[213] The efforts of the Nazi Jewish experts to facilitate Jewish emigration both before and during the war, as well as their plans for massive resettlement, were not merely tolerated but encouraged by Hitler. It is difficult to reconcile the assumption of a long-held intention to murder the Jews with this behavior. If Hitler knew he was going to murder the Jews, then he was supporting a policy that 'favored' German Jews over other European Jews and 'rescued' from death many of those he held most responsible for Germany's earlier defeat.

²¹³ According to the Wannsee Protocol, Himmler prohibited Jewish emigration "in consideration of the dangers of emigration during the war and in view of the possibilities of the East." See Subchapter 1.2.

It has been argued that Hitler was merely awaiting the opportune moment to realize his murderous intentions. Not only does that not explain the pursuit of a contradictory policy of emigration in the meantime, it also does not explain the long delay. If Hitler was merely awaiting the outbreak of conflict to pursue his 'war against the Jews,' why were the millions of Polish Jews in his hands since the fall of 1939 granted a thirty-month 'stay of execution'? They were subjected to sporadic massacre and murderous living conditions but not to systematic extermination until 1942." (pp. 100f.)

"In short, the practice of Nazi Jewish policy until 1941 does not support the thesis of a long-held, fixed intention to murder the European Jews.

Hitler's anti-Semitism is more plausibly seen as the stimulant or spur to a continuous search for an increasingly radical solution to the Jewish question rather than as the source of a logically deduced and long-established 'blueprint' for extermination." (p. 101)

For his part, Browning maintains the following theory:

"The intention of systematically murdering the European Jews was not fixed in Hitler's mind before the war, but crystallized in 1941 after previous solutions proved unworkable and the imminent attack upon Russia raised the prospect of yet another vast increase in the number of Jews within the growing German empire. The Final Solution emerged out of a series of decisions taken that year. In the spring Hitler ordered preparations for the murder of the Russian Jews who would fall into German hands during the coming invasion. That summer, confident of military victory, Hitler instigated the preparation of a plan to extend the killing process to European Jews. In October, although military expectations had not been realized, Hitler approved the rough outline of that plan, involving deportation to killing centers that used poison gas." (pp. 96f.)

But even this reconstruction was purely conjectural. Apart from that, Browning declared that this presumed decision could not fit into a general plan of Jewish extermination:

"This did not, however, immediately alter German policy toward the Jews on the rest of the continent. Emigration, expulsion, and plans for future resettlement still held sway. In the fall of 1940 Jews from Baden, the Palatinate, and Luxembourg were expelled to unoccupied France, as were Jews from Vienna to Poland in early 1941. In February 1941, Heydrich was still speaking of 'sending them [the Jews] off to whatever country will be chosen later on.' And the Foreign Office continued to cooperate with the RSHA (Reich Main Security Office) to block Jewish emigration from other countries, so as to monopolize the limited emigration possibilities for Jews from Germany. This policy was reaffirmed as late as May 20, 1941, in a circular signed by Walter Schellenberg, chief of security in the occupied territories, forbidding Jewish emigration from Belgium and France. The old policy of emigration, expulsion, and postwar resettlement was officially dismantled only gradually. In July 1941 the RSHA informed the Foreign Office that no further expulsions to France were intended. In October Jewish emigration from Germany was forbidden. In February 1942

the Foreign Office formally cancelled the Madagascar Plan. Thus, the preparations for the murderous assault upon the Russian Jews did not have immediate repercussions on Nazi Jewish policy elsewhere." (p. 104)

Notwithstanding the above, it never even occurred to Browning to consider whether his conjecture of an order to massacre the Russian Jews itself was without basis in fact; on the contrary:

"The emergence of the Final Solution for the European Jews was a separate process resulting from a separate decision." (p. 104)

But since not even that presumed decision either is supported by any documentary evidence, here the field remained open for the most-disparate conjectures as well, summarized by Browning as follows:

"Hilberg opted for a date no later than July 1941; Uwe Dietrich Adam has argued for a point between September and November; Sebastian Haffner has suggested December; and Martin Broszat has challenged the whole notion of a comprehensive decision on a particular date, and has argued instead for a gradual and unconscious process of escalation." (p. 105)

As to the presumed extermination order, Browning's own position was as follows:

"In July 1941, after Nazi armies had torn through Russian border defenses, encircled huge numbers of Russian troops, and raced two thirds the distance to Moscow, he [Hitler] approved the drawing up of a plan for the mass murder of European Jewry. And in October 1941, with the great encirclement victory of Vyasma and Bryansk and a brief rekindled hope for a final triumph before Winter, he approved the Final Solution." (Browning 1992, p. 27)

This is yet another conjecture based on no documentary evidence at all.

5.1.3. Hilberg's Contribution

At the Paris conference, Hilberg presented two papers which, although fitting into the section "The Extermination," were only of marginal import compared to the central theme as presented by Uwe Dietrich Adam on "The Gas Chambers" (pp. 134-154).

Equipped with a minimum of critical sense, the latter dealt with issues which were then addressed, albeit uncritically, by Hilberg in the "definitive," 1985 edition of his work, in particular with regard to the Belżec Camp. For example, Adam noted:

"It is rather unlikely that the Jews in the first convoys were all exterminated with bottled gas, as Joseph Oberhauser, Wirth's assistant, stated (Rückerl, op. cit., p. 136), even though [École..., p. 258: de même que = just as] the indications of the number of victims are inexact. However, it is certain that the tribunal reached a false conclusion when they stated that Belżec 'used Zyklon B during the first weeks, and later, for reasons of economy, diesel motor exhaust gas.'" (FN 72, p. 352)

"The Munich assize court's indications on the 'output' of Belzec were certainly false. [...] The assertion by Kogon (op. cit., p. 185) that the newer gas chambers were able to kill 4,000 persons at once, is not documentable [École..., p. 258: pas défendable = not defensible]." (FN 81, p. 353)

"Kogon, op. cit., p. 171, erroneously placed this episode in the first period of Belzec's functioning. Gerstein's indications about the number of victims killed at Belzec are so unlikely that even the uninitiated might immediately recognize it: Gerstein speaks of 700 to 800 persons gassed in an area of 25 square miles [sic, an embarrassing translation error; École..., p. 260: 25 m² = 25 square meters, not miles!]." (FN 85, p. 353)

Yet nevertheless and incredibly so, for Adam "But an error [sic] of this type, on the contrary, reinforces the credibility and good faith of the witness"! (*Ibid.*)

Adam moreover established the number of presumed gassing victims at Auschwitz, without any references, at between 1,000,000 and 1,200,000 persons (p. 151). The editor added a footnote which referred to the well-known article by Georges Wellers titled "An Attempt to Determine the Auschwitz Camp's Death Toll" (Wellers 1983), according to which "the number of persons gassed at Auschwitz has been raised to at least 1,334,700, of whom 1,323,000 were Jews" (FN 108, p. 354), but Hilberg adduced the figure of one million Jews in his work (1985, p. 1318; 2003, p. 1320), without any justification and without ever even citing Wellers's article, which back in 1985 was the most-important study on the number of the presumed gassing victims at Auschwitz.

In an appendix to the volume of conference papers, a 1982 article by Jean-Claude Pressac is reprinted, albeit with the changed titled "Design and Realization of Crematoria IV and V of Auschwitz-Birkenau." It is accompanied by numerous photographs and documents and with archive references to the Auschwitz Museum (École..., pp. 539-584; not included in Furet). In the "definitive," 1985 edition of his book, Hilberg does not mention this study and was never assiduous enough to visit this archive, of which he knows nothing.

In contrast to Adam's paper, the two papers presented by Hilberg dealt with secondary topics – the bureaucracy of the alleged extermination and the death statistics – which are in no specific way relevant to the present study.

5.2. The Stuttgart Conference

5.2.1. The Problems Discussed

The problem of the origins of the decision concerning the "Final Solution," which remained unsolved at the Paris conference, was taken up and examined again at a conference in Stuttgart, southwest Germany, which was held between May 3 and 5, 1984 on the topic of "The Murder of the Jews during the Second World War. Genesis of the Decision and Realization." The related pa-

pers were published the following year in a volume of the same title (*Der Mord an den Juden im Zweiten Weltkrieg: Entschlußbildung und Verwirklichung*).

Eberhard Jäckel explained the "principal task" in very clear terms:

"How, when and where, and possibly by whom, was the decision or decisions developed to kill the European Jews in which sequence and in which manner? The question could also be put in simpler terms: how did it come to the realization of the murder of the European Jews during the Second World War?" (Jäckel/Rohwer, 1985, p. 11)²¹⁴

The response to this question was "controversial" particularly because "the situation of the sources [was] unfavorable" (p. 12). This was the result of a series of reasons which Jäckel summarized as follows:

"The operation was strictly secret. Therefore, as little as possible was written down about it. A lot was negotiated only verbally, particularly on the highest command levels. From the few relevant documents, many were probably destroyed before the end of the war. In those which survived, [we] often encounter camouflage terms, which make an understanding even more difficult. Furthermore, many of the persons directly involved were dead before they could be interrogated. Naturally, most survivors responded evasively. But even those who were ready to make statements were often not interrogated with sufficient precision, because the interrogating officials were not interested in details which historians would like to know today. Many witnesses were then executed and took their secrets with them." (p. 12)

In addition, the controversial nature of how the decision was made results from the fact "that the process, despite an undeniable determination, revealed at least initially a lack of uniformity and planning, that it was moreover marked by confusions and improvisations" (p. 12). Four organizations were involved in the extermination operations, and their relations were characterized by "conflicts of jurisdiction and rivalry" (p. 13).

Hence, no documents or reliable testimonies existed on the decision and the sequence of the presumed extermination – and they still don't exist today – thus triggering the controversy between intentionalists and functionalists as it surfaced at the Paris conference. Eberhard Kolb formulated with great clarity the two basic questions that were the main focus of this controversy:

"1) Was the 'Final Solution' the realization of an long-established plan which, as the final stage, provided for the physical extermination of the European Jews from the very beginning?"

2) Was there an explicit Hitler order – if not written, then at least verbal – to kill not only the Jews who lived in Eastern Europe, but all the Jews in the German realm of influence, and when was this order issued?" (p. 61)

²¹⁴ All subsequent page numbers in the text from there, unless stated otherwise.

Kolb then reviewed the answers supplied by Holocaust historiography up until the year of the conference:

"If I see it correctly, the majority of the studies today tend to place a big question mark on the concept of National Socialist Jewish policies having developed systematically and proceeded along one single line – from anti-Semitic slogans of agitation of the 'time of struggle' through the anti-Jewish measures of the years 1933-1939 up until the organized mass murder starting in 1941. Instead, at the center of the controversy is currently the question whether (and when) Hitler issued an explicit extermination order.

Until the 1970s, this question was answered almost unanimously in the affirmative. Of course, a written extermination order by Hitler has not been handed down, and one may well assume that such a written order never existed. Nevertheless, an explicit 'Führer order' in the form of a verbal instruction by Hitler to Himmler was seen certainly as the indispensable prerequisite for the murder operations initiated in 1941.

However, there was no full agreement on the date when this Führer order was issued: According to Raul Hilberg's opinion (1961), Hitler gave the general extermination order 'in early summer' of 1941; Helmut Krausnick (1965) dated such an order to 'March 1941 at the latest'; Uwe Dietrich Adam (1972) to a moment 'between September and November 1941'; according to Andreas Hillgruber (1972), Hitler's decision in July 1941 was made in connection with the supposedly already achieved triumph over the Soviet Union and the intended expansion to the East.

Contrary to this, Martin Broszat (1977) doubted that an explicit general extermination order by Hitler ever existed at all. According to Broszat, the physical extermination of the European Jews was not systematically planned and prepared well in advance, not initiated by one single act of decision and one single secret order by Hitler; instead, the 'program' of exterminating the Jews developed gradually in an institutional and factual sense 'from individual operations' until the spring of 1942, and attained a determining character following the setup of the extermination camps in Poland (between December 1941 and July 1942). Broszat opines that, although such an interpretation cannot be documented with absolute certainty, it is more likely than the assumption of a comprehensive secret order to exterminate the Jews in the summer of 1941. Broszat adds: 'If our interpretation assumes that the extermination of the Jews was 'improvised' in such a way, was not planned long in advance and not initiated by a single secret order, then this implies that the responsibility and initiative of the killing operations were not solely down to Hitler, Himmler or Heydrich. But this does not exonerate Hitler at all.'

Broszat's interpretive model of the genesis of the murder plan was later radicalized by Hans Mommsen (1983). Like Broszat, Mommsen is explicitly of the opinion that no 'formal order' by Hitler on the 'Final Solution' ever existed, not even in verbal form. But Mommsen moreover postulates an extraordinarily passive Hitler role in the conceptualization and execution of the murder plan: Hitler let Himmler and his henchmen have their way. 'As already before 1939,

he felt himself invested with responsibility by the Party and SS apparatus, which took literally that which for Hitler represented the 'great historical perspective'. Although Hitler was the ideological and political originator of the Final Solution, 'their implementation from a seemingly Utopian program into an actually adopted strategy was the result of self-created problems on the one hand, and the ambition of Himmler Heinrich and his satraps on the other hand'.

However, the majority of scholars still hold the opinion that the decisive initiative for the murder of the European Jews came from Hitler, and happened in the form of an extermination order issued verbally. Although Hans-Heinrich Wilhelm (1981) admits that there is no proof that the order for the general extermination of the Jews was issued already before the Russian campaign in 1941, he nevertheless rejects the theory of an 'improvised radicalization' of the persecution of the Jews, finally culminating in the systematic killing and emphasizes: without Hitler's trend-setting function and without his consent, all the partial activities leading to the program of the Final Solution would not have been possible.

In explicit contestation with Broszat's interpretation, Christopher Browning (1981) reached the conclusion that Hitler ordered the preparation of an extermination plan in the summer of 1941; the basic features of this murder plan based on this order were approved by Hitler 'in October or November 1941'.

Gerald Fleming (1982) notes that the fateful turning point in the Jewish policy of the Third Reich took place 'in the summer of 1941': At that point, Hitler ordered the extermination of the European Jews, and at the same time decreed that the murder operations had to be carried out with the strictest camouflaging and in the greatest possible secrecy.

Wolfgang Scheffler (1982) stresses emphatically that all essential decisions on the implementation of the mass extermination were taken between March and November 1941. When implementing the Holocaust, however, Hitler and Himmler depended on the given circumstances: 'As cohesive as the extermination program presented itself at the end, the approaches to implement it, as they developed between August and October-November 1941, were very diverse.' Even so, Scheffler continues, the events prove 'that little more than one month or at most three months elapsed between Hitler's decision and the implementation which rapidly became apparent'.

Finally, the more recent statements shall be pointed out. Shlomo Aronson (1984) reached the conclusion that Hitler decided to kill the European Jews 'in the late fall of 1941' due to the coincidence of several factors. Saul Friedländer also opines that the existence of a general extermination plan in the fall of 1941 can no longer be in doubt; Hitler must have approved this extermination plan 'at some time in the summer of 1941.'" (Emphases added; pp. 61-63)

When it comes to its self-imposed objective, the Stuttgart conference completely failed in its objective. Far from reconciling the controversy between intentionalists and functionalists, the discussions during conferences, from which no new information emerged, accentuated it, revealing the inconsistency of

both interpretations in all their varied nuances, as they are both without documentary support and based on mere conjecture. On one single point all participants agreed: a written extermination order never existed.

However, with regard to the existence of a verbal Hitler order, intentionalists and functionalists repeated their opposing positions. The intentionalists examined the genesis of the alleged verbal order in relation to the Führer orders from the summer of 1941 regarding the *Einsatzgruppen*, and in relation to "Operation Reinhardt" and to Auschwitz.

Only Jäckel continued to maintain the extreme theory that Hitler's intention to exterminate the Jews dates back to 1919 (p. 189).

Helmut Krausnick concerned himself specifically with "existing testimonies and circumstantial evidence as to the possible issuance of an order to shoot the Jews" (pp. 90f.). In this regard, he admits:

"With regards to the questions relating to when, where, by whom and for which circle of persons such an order was transmitted to the Einsatzgruppen, the depositions made after the war do not – or at least no longer – agree."

He added:

"More important than the question who transmitted the murder order is indubitably the question of whether and when it was issued, and to what circle of persons." (p. 91)

Some leaders of the *Einsatzkommandos* asserted that the general killing order was issued "between the end of July and the end of August" of 1941, while others said it was issued "before 22 June 1941" (p. 91), with which Krausnick agreed.

Even Alfred Streim stressed that

"While there is no doubt as to the existence of the verbal 'Führer order', until today, and notwithstanding the systematic clarification of the crimes of the Einsatzgruppen, it has not been possible to clarify conclusively who, in what time period, at which place has transmitted the order to exterminate all Jews to the leaders of the Einsatzgruppen and to the commanders of the Einsatzkommandos or Sonderkommandos." (p. 107)

The question remained unsolved because "after all this the question is still unclear who transmitted the 'Führer order' to the Einsatzgruppen" (p. 115).

In contrast to Krausnick, Streim asserted that "the related order was probably issued only several weeks after the beginning of the campaign in Russia" (p. 112). As to its character, Streim advocated the theory of an "indeterminate order," which was also adopted by other conference participants:

"After all this it is worth noting that the general order of extermination to the Einsatzgruppen was not issued as a cohesive decree at any definite place, at any definite time – as has been assumed so far; instead, several individual orders were issued which, taken together, produced in the end that which we understand, in our language today, as the 'Führer order' [...]" (p. 117)

Browning went much further, declaring that Himmler and Heydrich knew perfectly well what Hitler expected of them, so that, regarding the extermination order, "Hitler did not necessarily have to express himself in such an explicit way." A simple "nod of the head" could have sufficed (p. 186).

Czesław Madajczyk, by contrast, asserted from the audience that the decision as to the fate of the Jews of the Soviet Union was taken "probably between March and May 1941" (p. 202), while Hillgruber added "that the systematic killing of the Jews on Soviet territory to be conquered was a done deal by March 1941 at the latest" (p. 188).

Yehuda Bauer reached the conclusion that "initially a clearly worded order to exterminate the Jewish population completely did not exist" (p. 170). It was issued in the summer of 1941 (p. 166), and even had a written "version":

"Göring's letter should therefore have been unequivocally considered a version of the Führer order. [...]"

Hence, the opinion that we do not have a written Führer order must be revised in part. We do have one version of the Führer order" (p. 172)

In his report on Auschwitz, Bauer maintained "that Auschwitz and the mass murder in the Soviet Union happened simultaneously" (p. 178), and "that Auschwitz was considered as part of the plan for the Final Solution already since the summer of 1941" (p. 169), for which he was sharply criticized by Madajczyk, Rückerl and Hilberg in the subsequent discussion (pp. 174-177).

The functionalists maintain their position just as rigidly. Karl Schleunes asserted that the genesis of the decision of the presumed extermination was "chaotic," like the period of the terror during the French Revolution, or the initial phase of the Bolshevik Revolution. Hitler spoke seriously of the creation of an Aryan national community, but did not know how to obtain it.

"It was clear that a solution of the Jewish question was needed to this end, but it was not clear how the question was to be resolved. It must have been equally unclear initially that the solution would be extremely radical." (p. 80)

This solution was the "cumulative radicalization" of the conflict of authorities among various National-Socialist agencies, all of which wished to contribute to purging the German National-Socialist communities with the aim of achieving the ideal of racial purity (p. 81).

Mommsen spoke of "a self-induced automatism which, in the end, admits no solution other than total liquidation," stating that "nevertheless this process can be explained only to a small degree by Hitler's direct intervention," stating:

"I am decidedly opposed to equating classic ideological, meaning radical anti-Semitic statements by Hitler and others, which aimed at the extermination of the German Jews, with the implementation of this visionary objective in a specific policy. The first statement about the extermination of the Jews in the event of a war dates back to 1933, when the German Reich and Hitler were heaven knows how comparatively far removed from getting into such a position. Re-

ardless of what Hitler thought in this regard, it is clear that German public opinion and also the officials of the regime which did not hold a particularly radical view were already accustomed to this rhetoric to such a degree that they interpreted it essentially as a rhetorical supplement to the Jewish policy of disempowerment and emigration. Therefore, from these public declarations by Hitler, Rosenberg and others, one cannot arrive at the conclusion that anybody who wished to know should have deduced from all this automatically that a policy of final solution was imminent or unfolding." (pp. 192f.)

Mommsen said he was convinced that "after this initial thrust, which occurred in connection with the *Kommissarbefehl*, no other formal act by Hitler was required to put the 'Final Solution' in motion," and added:

"We have no material as to whether Hitler expressed himself concretely in any way internally on the systematic extermination of the Jews." (p. 193)

Broszat added during the discussion:

"Also regarding the extermination of the Jews, Hitler was not absolutely necessary as the leader, as the one who put the related activities in motion with his decision. The determination of many others was sufficient for the murderous measures. This determination was widespread above all within the sphere of the Security Police and the territorial commanders in the East. But Hitler was needed as the charismatic leader, and for the possibility of invoking him, so that the measures resulting from such determination could indeed become the effective policy of the regime. Only the possibility of invoking Hitler permitted conferring upon criminal killing measures the 'holiness' of an ideological policy backed by the charismatic Führer. But for this there was no need for an order, a nod by Hitler was sufficient for this, so to speak. From my point of view this means: Hitler was indispensable for the overall process of the extermination of the Jews, but not necessarily as the acting leader, but rather as the indispensable legitimizing authority." (p. 211)

For these scholars, it was not only illusory to speak of a specific order, but also of a systematic plan of extermination. Mommsen declared in this regard:

"We should free ourselves from the illusion that the Final Solution of the European Jewish Question or of the worldwide Jewish Question was ever systematically discussed in the highest leadership circle." (p. 67)

Broszat asserted that the historical conception of National-Socialist policies aiming from the beginning at the extermination of the Jews is unsustainable:

"That is too one-dimensional and lacks sufficient historical authenticity." (p. 179)

Even with regard to the motivation of the presumed decision, irremediable disagreements emerged at the Stuttgart conference. Broszat asserted

"that Hitler, in the spring and summer of 1941 due to pressure from several Gauleiters and the General Governor, had promised as generously as it was reckless that their territories would be made free of Jews within a short time –

promises which were at that time obviously made in connection with the preparation for, or the unfolding of, the war on Russia, but were still based on the expectation that this war would be concluded successfully by the beginning of the winter, and that unlimited possibilities, so to speak, would emerge to expell the Jews into a very distant territory, beyond the German empire of the East. When this proved a fatal error, but the deportation program was already prepared and underway in the Reich, confusions and interim solutions occurred in the fall of 1941, as repeatedly mentioned before, but as their result also the terrible consequence that no other 'way out' but further killing programs seemed possible. This led first to 'Operation Reinhard,' with the aim of eliminating primarily the Polish Jews, then, with the large-scale plant of Auschwitz-Birkenau as technical prerequisite, to the mass extermination of the German and European Jews as well." (pp. 183f.)

Browning was decisively opposed to Broszat's theory:

"This means that the final impetus for the unleashing of the Final Solution did not result from the difficulties of resettling Jews to Russia after the military successes or from the overcrowding of the ghettos. The impetus resulted instead from the euphoria of the victory in the summer of 1941. The enormous victories during the first few months of the Russian campaign enabled the prospect that soon all of Europe would be at the disposal of the National Socialists. In reality, the Final Solution was then implemented under very different conditions, that is, during military setbacks and later during imminent defeat. But the National-Socialist system could not turn back. Once placed in motion, the killing program developed its own thrust." (p. 186)

In the following years, the controversy over the "Führer order" remained unsolved. The new conjectures by Christian Gerlach, accepted by many historians, according to which Hitler is said to have announced his "fundamental decision" during the meeting with the Gauleiters on December 12, 1941, and Browning's speculations about Eichmann's statements have no greater consistency than the previous ones (see Mattogno/Kues/Graf, pp. 257-263).

5.2.2. Hilberg's Contribution

Hilberg's chosen topic for his conference paper was "Operation Reinhard" (pp. 125-136). Referring to the development of the presumed extermination process, he immediately started by saying that "[m]uch, in this regard, will always remain in the dark," since the related decisions and initiatives were taken "verbally" (p. 125). As to the presumed extermination order, Hilberg, like other conference participants, formulated mere conjectures without any documentary support:

"During that summer [1941], Hitler must have issued an unequivocal order to Himmler for the physical extermination of the Jewish people. In any case, that is what Himmler conveyed to various persons, among them Heydrich, who communicated it in turn to the head of the Gestapo, Heinrich Müller, and to

Eichmann. Among them was also Höss, the sinister Auschwitz commandant, and as a third person no doubt the SS and police leader in the Lublin District, Odilo Globocnik, who was put in charge of Operation Reinhard." (p. 126)

During the subsequent discussion, Jäckel opposed Hilberg's conjecture based on another conjecture:

"I only have one short question on the dating, Mr. Hilberg. Why do you assume that Hitler's order of which you have spoken must have been issued only after July 31? After all, we know that Himmler was at Lublin on July 20 and 21, and spoke with Globocnik on that occasion. I have always assumed that Globocnik's instruction by Himmler must have occurred on one of these two days." (p. 137)

In his paper on "Operation Reinhard," Hilberg explained that there were three death camps: Belżec, Sobibór and Treblinka, but "[f]or none of these has it been possible so far to find a site map" (p. 127). Moreover, "[w]hen planning, they improvised somewhat and saved a lot," and these camps were built "under primitive conditions" (p. 127). All three camps were without cremation furnaces (p. 129). He also admitted that the organizational phase of "Operation Reinhard" may raise various questions:

"Why three camps and not just one? Why were they built one after the other, first Belżec, then Sobibór and finally Treblinka? Why were there only three gas chambers to start with, if later they were not enough? One could be inclined to answer that the designers were not aware of the entire extent of their task, that they proceeded by groping towards their objective but did not have it in view. This is not entirely inconceivable, but it is certainly not the whole explanation, and perhaps not even the most important. In brief, we are dealing with a difficult administrative problem.

The Third Reich had no specific or central authority, nor budget item for a 'Final Solution of the Jewish Question.'" (p. 129)

But this was a simple conjecture to attempt to explain away the above-mentioned contradictions.

The "demonstrative" structure of his paper regarding the presumed extermination camps is, in summary, that which appears in his "definitive" work of 1985, but with a concession to mythical "plans of gassing installation" (p. 128), which were obviously never found, and which he openly refutes in the his opus magnum by asserting:

"Information about the number and size of gas chambers in each camp rests not on documentation but on recollection of witnesses." (1985, FN 43, p. 879; 2003, FN 44, p. 937)

In an interview published in the French daily newspaper *Le Monde* in 1994 (Weil), Hilberg repeated that the presumed destruction of the European Jews was implemented "without financing, centralization or planning" and, with regard to "Operation Reinhard" asserted:

"The real problem lies in asking how they succeeded in committing such a monstrous crime with so little human and material resources. Let us consider the killing centers: only 92 German soldiers worked at Treblinka, Sobibór and Belżec, plus a few hundred Ukrainians. 92 Germans in occupied Poland succeeded in killing almost one and a half million Jews in those three extermination centers." (Hilberg 1995, pp. XIII, XV)

But such a concept is in open contradiction with the canonical orthodox concept of Operation Reinhardt,²¹⁵ which is said to have had a central authority (Globocnik), and which was supposedly centralized and planned. Perhaps for this reason Hilberg renounced in his opus magnum the widespread view held among orthodox historians that the term "Operation Reinhardt" was inspired by the name of Reinhardt Heydrich.

Above, I reported the question of defense attorney Douglas Christie to Hilberg whether the existence of Hitler's presumed extermination order was an article of faith based on his opinion. He replied that it was not an article of faith at all, but a conclusion. The findings of the Paris conference and the Stuttgart conference show, on the contrary, that it was in fact an article of faith based on a personal opinion, or a personal opinion assumed as an article of faith.

Just another Hilberg perjury.

Hilberg appeared to have been a functionalist, even a radical functionalist, a supporter of a "telepathic" theory of the genesis of the presumed "process of destruction." The interview with Lanzmann in 1979, hence before the two aforementioned conferences, leaves no doubt in this regard. It is a fact, however, that he was a crypto-intentionalist, a proponent of a sort of metaphysics of history in which the extermination of the Jews was preordained centuries ago as "the culmination of a cyclical trend" (Hilberg 2003 [from here on], p. 5), in which the Germans were predestined for the extermination of the Jews:

"The idea of killing the Jews had its shrouded beginnings in the far-distant past. There is a hint of killing in Martin Luther's long speech against the Jews. Luther likened the Jews to the obstinate Egyptian Pharaoh of the Old Testament: 'Moses,' said Luther, 'could improve Pharaoh neither with plagues nor with miracles, neither with threats nor with prayers; he had to let him drown in the sea.' In the nineteenth century the suggestion of total destruction emerged, in more precise and definite form, in a speech which Deputy Ahlwardt made to the Reichstag. Ahlwardt said that the Jews, like Thugs, were a criminal sea that had to be 'exterminated.'" (pp. 409f.)

These "historical parallels" constituted for Hilberg "precedents of the destruction process" (p. 29). In fact, the "destructive path charted in past centuries was an interrupted path" (p. 10). The "cyclical trend" to what was preordained was carried out in three stages:

²¹⁵ On the question of the origins and significance of *Aktion Reinhardt*, see Graf/Kues/Mattogno, pp. 236-250.

"Since the fourth century after Christ there have been three anti-Jewish policies: conversion, expulsion, and annihilation. The second appeared as an alternative to the first, and the third emerged as an alternative to the second." (pp. 4f.)

The third phase, that of the presumed National-Socialist annihilation, reproduced this theological pattern in turn, since Hilberg considered "definition," "expropriation" and "concentration" as stages of the "destruction process" (pp. 51), which, in his work, becomes a sort of impersonal automatism which proceeded as a self-fulfilling prophecy:

"The destruction of the Jews was thus no accident. When in the early days of 1933 the first civil servant wrote the first definition of "non-Aryan" into a civil service ordinance, the fate of European Jewry was sealed." (p. 1118)

These meta-historical fixations are better suited to a theologian than a historian, and this fully justifies Faurisson's concomitant opinion regarding Hilberg.

And this was, in his view, the first political act of this alleged destruction process:

"All the same, in 1933 the party men seized the opportunity to launch a campaign of violence against individual Jews and to proclaim an anti-Jewish boycott. This time there were serious repercussions in foreign countries. A boycott movement was started against German exports and was supported by Jews and non-Jews alike. By March 27, 1933, Vice-Chancellor Papen was forced to write a letter to the Board of Trade for German-American Commerce, in which he pointed out that the number of 'excesses' against Americans was 'less than a dozen,' that hundreds of thousands of Jews remained unmolested, that the big Jewish publishing houses were still in business, that there was no St. Bartholomew Night, and so on." (p. 33)

In a footnote (FN 13, *ibid.*) Hilberg refers to the following sources: Documents D-635, L-198 and RC-49, in addition to the *New York Times* of March 29, 1933.

Document L-198 is a report from General Consul George S. Messersmith dated "Berlin, Germany, 14 March 1933," bearing as its subject "Molestation of American citizens domiciled or temporarily in Berlin, by persons wearing the uniform of a political party." This was a reference to ten persons, nine of whom were Jews, who had addressed themselves to the consulate for assaults or acts of harassment. The report says that Hitler had ordered the cessation of these acts against individual persons, while Goebbels was inciting people.²¹⁶ Document D-635 is a radio message from von Papen to the German-American Chamber of Commerce dated March 25 [not 27], 1933, saying, as Hilberg reports, that there were fewer than a dozen cases of physical assaults, and that they had ceased after Hitler's declaration of March 12 (IMT, Vol. 35, pp. 230-232). Also the third document, RC-49, as Hilberg informs us in the above-mentioned footnote, regards the harassment of U.S. citizens.

²¹⁶ The document has been published in *Nazi Conspiracy...*, Vol. 7, pp. 1026-1034.

The question of the boycott is completely different. In this regard, Hilberg reverses the succession of the events, presenting as a prior cause of the events that which was in reality a subsequent effect. On March 24, 1933, the British daily newspaper *Daily Express*, directed by the Jewish journalist Ralph David Blumenfeld, published a front-page article headlined "Judea Declares War on Germany" with the subtitle "Jews of all the World Unite. Boycott German Goods." A photomontage showed Hitler facing elderly Jews.

The German reaction was not long in coming. On March 29, a "Central Defense Committee against the Jewish Atrocity and Boycott Agitation" was created, presided over by Julius Streicher,²¹⁷ which called for a half-day counter-boycott of Jewish businesses on Saturday, April 1.²¹⁸ On March 31, 1933, Streicher published an article in the *Völkischer Beobachter*, in which he made explicit reference to the title from the *Daily Express*:²¹⁹

"And in order to make the awakening Germany, the Germany of Adolf Hitler, collapse into itself already in the early stages, the race fellows of the Jews living in Germany are conducting shameless boycott agitation against German products abroad. 'Don't Buy German Goods!' howls the Jewish press gang unto the peoples. And: 'Judea Declares War on Germany!'"

Hilberg does not mention either of these documents, but invokes a *New York Times* article dated March 29, 1933, p. 8, which describes a proclamation of the National-Socialist party at Munich a few days before for the boycott of Jewish goods and businesses as a measure of reprisal for the defamatory campaign against Germany, but Hilberg does not mention anything about this anti-German boycott.

5.3. Hilberg's Article in *Anatomy of the Auschwitz Death Camp*

In the context of the present study, it is also useful to examine Hilberg's short contribution to the compendium published in 1994 titled *Anatomy of the Auschwitz Death Camp*, which had evidently only been requested of him on an honorary basis (Gutman/Berenbaum pp. 81-92). The article is rather mediocre and provides nothing new in terms of information. At the time, Hilberg had still not bothered to read up on the Auschwitz Camp. Instead, he adduces the usual obsolete sources: Höss, Morgen, Entress, without mentioning a single document from the archives of the Auschwitz Museum. His only historiographical update consists in references to Jean-Claude Pressac's first book (Pressac 1989), although he cites it only for absolutely tangential reasons, without understanding its disruptive nature for the tenets of past historiog-

²¹⁹ PS-2410. IMT, Vol. 30, p. 344.

raphy, but he does not mention Pressac's second book, published in 1993, although he mentions the 1989 German edition of Czech's *Auschwitz Chronicle*. There is no other reference to expert literature.

In his discussion of the history of Auschwitz as portrayed in Höss's memoirs, Hilberg proves not overly scrupulous, as in his book.

He claims that the first gassing with Zyklon B was carried out at Auschwitz "in the early days of September 1941," and that, "once the gassing had taken place, however, Höss saw it as the answer to his Jewish problem" (Gutman/Berenbaum, pp. 84), that is, he decided to use Zyklon B for the alleged mass gassing of the Jews. Hilberg adds:

"Not long after Himmler had commissioned Höss to carry out the killing operation, Eichmann came to Auschwitz, and at the end of November Höss reciprocated by attending a conference in Eichmann's office. The talk there was about railroads and arrangements for trains." (Gutman/Berenbaum pp. 83)

But the passage from Höss's memoirs cited by Hilberg reads:

"I could not find out when a start was to be made, and Eichmann had not yet discovered a suitable kind of gas." (Höss 1959, p. 207)

Therefore, Eichmann had not yet succeeded in finding the appropriate gas, which Höss had supposedly identified two months earlier and had decided to use subsequently. Hilberg also claims that the presumed "Bunker 2" "did not become operational until the end of June" (Gutman/Berenbaum, pp. 85), but Höss's memoirs to which he refers do not mention any month.

"As of the summer of 1942, four crematoria were planned for Birkenau. By then, there was also a major revision in the planning: the crematoria were to have gas chambers." (*ibid.*, pp. 87)

At this point Hilbert refers to page 98 of Pressac's above-mentioned 1989 book, which mentions four crematoria at Birkenau, but does not say that they were to contain gas chambers.

Still referring to Pressac's 1989 book (pp. 204f.), Hilberg cites as follows the file memo written by SS *Untersturmführer* Fritz Ertl on August 21, 1942:

"At a construction conference that month about the next crematorium, the decision was to 'wait for the result of ongoing negotiations with the Reich Security Main Office [Eichmann] about the allocation of contingents,' that is to say, contingents of Jews." (Gutman/Berenbaum, p. 87)

Hilberg makes an enormous mistake here, because the "allocation of contingents" mentioned in the document was simply the allocation of construction materials, which at the time depended on the related office (*Kontingentsstelle*) of the Plenipotentiary for Construction of Reich Ministry Speer in the district of Armaments Inspection Sector VIII with headquarters in Breslau, which was subordinate to the General Plenipotentiary for Regulation of the Construction Industry, an office held by Speer and headquartered in Berlin (see Mattogno 2015, pp. 27-30).

Precisely in this 1994 collective project dedicated entirely to Auschwitz, Hilberg repeats another gross error which he already made in his 1985 "definitive" edition (and repeated in the 2003 edition), although by 1994 he could have and should have known better: With reference to the Jews, he asserts that "at the end of 1942, only 1,412 were still alive in the camp" (Gutman/Berenbaum, p. 87), a variant of the assertion examined in Chapter 3.9.2. that, at the end of 1942, "Auschwitz had obtained 5,849 registered Jewish inmates up to the same date; 4,436 had died" (see here on p. 165), so that the survivors amounted to precisely 1,412.²²⁰ I have already explained that the Korherr Report explicitly declares that the figure relating to Auschwitz and Lublin only considered Jews *not* included in the "evacuation action," and that, according to Czech's *Auschwitz Chronicle*, the total number of Jews registered at Auschwitz exceeded 58,000 (the Korherr Report speaks only of admissions). The most surprising thing is that Hilberg lists the Jewish transports to Auschwitz by country of departure up to December 31, 1942, and obtains a total of 175,000 Jews: but then, how could he seriously believe that only 1,412 of them were still alive on such a date?

Hilberg moreover asserts that "possibly 30,000 Jews were transferred to other camps for war work" in 1944 (p. 89), while the number of Jews documentarily attested to, for 1944 alone, as I have explained above, is approximately 166,000.

5.4. The 2003 Edition of *The Destruction of the European Jews*

The last edition of Hilberg's work, the "ultimately definitive" one, appeared 18 years after the "definitive" one of 1985. In these long years, orthodox Holocaust literature expanded robustly, but without being able to provide "proof" of existence of "extermination centers" for Jews; at most, alleged "traces" were adduced.

In the field of Holocaust historiography, the most-important event between 1985 and 2003 was the opening of the Soviet archives, which immediately attracted the attention of historians. The first to access it, in 1990, was Gerald Fleming, who is not exactly a prominent character, followed by many others, including Jean-Claude Pressac and also the present writer, who visited the archives several times between 1995 and 2001 together with Jürgen Graf and the late Russell Granata.

Hilberg, however, whom the mainstream viewed as the most distinguished expert in Holocaustology after the publication of the "definitive" edition of his work, eschewed these archives. In his sanctimonious arrogance, he evidently did not feel any historical curiosity to know what those files contained. He

²²⁰ The difference between 5,849 and 4,436 is 1,413, but in the Korherr Report, one inmate is listed as having been released.

waited for the U.S. Holocaust Memorial Museum in Washington (USHMM) to microfilm the documentation concerning the Auschwitz Central Construction Office, which he drew upon in the 2003 edition, as I will explain immediately.

Compared to the 1985 edition, Chapter 9 concerning the "Killing Center Operations" was enhanced in the 2003 edition with various additions, now covering pages 921-1058. The most-extensive enhancement concerns Auschwitz, reviewed by Hilberg in the light of the documents of the just-mentioned Auschwitz Central Construction Office. However, instead of taking the information from the source, meaning the microfilms at the USHMM, the structure of his "criminal-trace" argumentation relating to the "gas chambers" was simply appropriated from the two books by Jean-Claude Pressac (1989, 1993), but also from the contributions by Pressac, Robert Jan van Pelt and Franciszek Piper in the just-mentioned 1994 collective work *Anatomy of the Auschwitz Death Camp* (Gutman/Berenbaum; FN 58, p. 941; Table 9-4, p. 949). Pressac is cited repeatedly, but only as a source for the documents he reproduced (FN 59, p. 942; FN 76-80, p. 945; FN 82, p. 946; FN 88, p. 948; Table 9-4, p. 949). Hilberg paid no attention to the revolutionary character of the French researcher's arguments, which shook the foundations of Polish Auschwitz historiography as conjured up during the Warsaw and Krakow Trials, but also Hilberg's own concept. In fact, Pressac affirmed that the Birkenau crematoria had neither been conceived nor built from the start as instruments of extermination, but as sanitary installations which were gradually transformed into means of extermination starting only toward the end of 1942 (1993, pp. 53f.):

"The procedures and discussions during these two days, when the construction of the four crematoria at Birkenau was finally decided upon, which were then planned without homicidal gas chambers, can be summed up as follows: although Crematorium II served as a catalyst for the choice of Auschwitz in the liquidation of the Jews, it is not directly linked to this extermination, but is considered as an incidental supplementary means; Crematorium III was only planned as a complement to Crematorium II in order to cope with a camp occupancy of 200,000 inmates, and was 'criminalized' only for the needs of the SS bureaucracy; Crematoria IV and V, of quick-fix design, are directly connected to Bunker 1 and 2, and even if their initial arrangement is not criminal (without gas chamber), their purpose was criminal, because they were placed at the end of a process of death, in which they participate."

Without in any way explaining his departure from Pressac, Hilberg states to the contrary:

"Four massive buildings containing gas chambers and crematoria were erected in Birkenau. They were to be the answer to Himmler's admonition that more and more transports would arrive in Auschwitz." (p. 944)

Meaning that the four crematoria were planned and built as extermination tools for the expected Jewish transports.

Another aspect of Pressac's thesis in total conflict with that of Hilberg, and which Hilberg totally ignored, is the dating of Höss's alleged meeting with Himmler in Berlin, which Pressac postponed by a year "to the beginning of June 1942."²²¹

After the publication of Karin Orth's 1999 article "Rudolf Höss and the Final Solution of the Jewish Question. Three Arguments against Dating It to the Summer of 1941," no serious historian believed that this summons took place in the summer of 1941. In Hilberg's arrogance, however, he remained firmly attached to the Auschwitz commandant's anachronistic dating:

"Höss recalled that in the summer of 1941 he was summoned to Berlin by Heinrich Himmler himself. In a few spare words, Himmler told him of Hitler's decision to annihilate the Jews." (p. 940)

Since Höss explicitly stated in the documents cited by Hilberg that the claimed meeting had taken place in June 1941,²²² Hilberg's dating of the *Führerbefehl* which he inferred based on statements by Eichmann – before the end of the summer of 1941, but "two or three months after the June 22 German assault on the USSR," hence in August-September (see Subchapter 1.6.) – is not only unfounded but also contradictory.

In the same way, Hilberg clung to the witness Höss, whom he cited no less than 33 times, heedless of all the further contradictions resulting from this.

When writing about Himmler's visit to Auschwitz on July 17 and 18, 1942 as described by Höss, Hilberg recalls the order of the *Reichsführer* SS "that Jews incapable of work were to be annihilated ruthlessly" (p. 942),²²³ which further complicates the matter, because if we follow Höss, the alleged extermination order of 1941 originally concerned *all* Jews without exception ("all Jews without exception," Höss 1959, p. 146), but then (Höss does not say when or on what occasion) Himmler changed it in the sense that those fit for labor were to be made available to the armaments industry ("those capable of work were to [...] employed in the armaments industry," *ibid.*). This implies that the Jews unfit for work had to be exterminated already on the basis of the order of summer 1941: but then what is the meaning of the order of July 1942? The only possible sense would require that Himmler had revoked the initial extermination order also encompassing Jews fit for labor, but that he then reinstated it in July 1942!

As for the documentation of the Central Construction Office, it is mentioned by Hilberg for peripheral aspects of the history of Auschwitz, clearly not on the basis of any systematic research. His usage of these sources gives the impression that he had come across some more-or-less-random documents,

²²¹ Pressac 1993, p. 41; in the German edition, that date was shifted to "early 1942" (1994, p. 51) evidently because someone pointed out that otherwise claims about mass gassings of Jews in "Bunker 1" near the Birkenau Camp since early 1942 could not be explained.

²²² NO-1210; PS-3868;

²²³ "The Jews who are unfit for work are to be destroyed with the same ruthlessness." Höss 1959, p. 238.

around which he built superficial fragments of the camp's history, sometimes even distorting their meaning. For example, on pages pp. 944f. he writes:

"By February 27, 1942, however, the Jewish transports were in the offing. That day, Oberführer Kammler visited the camp and decided that the five furnaces should be installed."

He backs this up with his Footnote 76, where he refers to an order by the Auschwitz Construction Office to the Topf Company of October 22, 1941 for the supply of five triple-muffle furnaces, then claims that, "[l]acking exact word,²²⁴ the Zentralbauleitung placed an order orally for only two ovens on February 12, 1942," but that "the oral order was rescinded and the original one was reinstated" after Kammler's visit.

In reality, as I have illustrated extensively elsewhere (Mattogno/Deana, Vol. 1, pp. 228f.), the five triple-muffle furnaces were destined for the new crematorium, but this was initially planned to be built at the Auschwitz Main Camp. Initially, the Birkenau Camp was to be equipped with two "cremation halls" which each were to contain one triple-muffle furnace of a simplified design. The cost estimate of February 12, 1942 refers precisely to these plants. On February 27, when Kammler formalized the already-taken decision to move the new crematorium (the future Crematorium II) to Birkenau rather than to build the two "cremation halls" there, the order for the two triple-muffle furnaces, which had become superfluous, was consequently canceled.

Another misrepresentation of the documents appears on p. 948, where Hilberg writes:

"The status of Auschwitz as a focal point was underscored in a report by Bischoff to Kammler on January 27, 1943."

This refers to the "implementation of the special operation" at Birkenau. In this context, Hilberg notes that Bischoff referred to a *Führerbefehl* which decreed that the construction of the camp be carried out in a particularly accelerated manner, and Hilberg concludes by asserting that "[t]wo days later," Bischoff informed Kammler that Crematorium II "was now ready but for minor construction details."

Hilberg was unaware that there are three different drafts of the document he cites. The other two talk about "implementation of the special treatment" and "implementation of the special construction measures," which had nothing to do with either exterminations or "gas chambers."²²⁵

The aforementioned *Führerbefehl* did not concern merely crematoria, much less primarily, as Hilberg suggests, but also 518 barracks of various types, railway branches, water-drainage systems, roads and even a "large-scale disin-

²²⁴ Hilberg may suggest here that the Construction Office was reluctant to order all five furnaces at once due to not having received clear orders in this regard, but he forgets that he correctly observed in the same footnote that the order for those five furnaces had already been placed in October 1941.

²²⁵ See Mattogno 2016, Chapter II.6. "'Special Treatment' and the New Function of the PoW Camp," pp. 52-54.

festation facility," the *Zentralsauna*, which in the detailed cost estimate of the "POW Camp Auschwitz" of October 26-29, 1942 is listed as "Disinfestation facility 1. for special treatment" (the second facility was "for the guard troop").²²⁶

If we apply Hilberg's logic here, it follows that the *Zentralsauna*, the largest disinfection and disinfestation plant in Birkenau, being a "disinfestation facility" meant for "special treatment," had to be an extermination facility! Or put differently: If the term "special treatment," like "special operation," was a "euphemism" to indicate killings, how can it be explained that a disinfestation and disinfection system was necessary to carry it out?

Although in the 18 years that elapsed between the penultimate and the last edition of his book, no document emerged that confirmed his claims about the "category of potency" of the imaginary Zyklon types C, D, E, F. Yet still, Hilberg repeated this nonsense together with the clarification that Zyklon B was used in "gas chambers" to kill human beings (p. 955; p. 889 in 1985; see Subchapter 3.7.).

On page 957 (p. 892 in 1985), Hilberg also repeats the story of Globocnik's visit to Auschwitz in 1942, knowing full well that Czech's *Auschwitz Chronicle*, which he cited extensively in his 2003 edition, makes no mention of it. To support his claim, he cites Höss, yet misrepresents what he said in order to hide an anachronism, as shown earlier (see p. 144). As also shown earlier (p. 126), Hilberg removed all references to Höss's alleged visit to Treblinka in the 2003 edition. In the 1985 edition, Hilberg writes on p. 882 about Höss's visit to Treblinka in order to learn about the extermination method adopted there by Globocnik (see p. 125), yet ten pages later in the same 1985 edition we read that Globocnik visited Auschwitz in 1942 in order to learn "the new method" (Zyklon B) for his camp, including Treblinka!

The death tolls of the various camps changed as follows from 1985 to 2003 (p. 958; pp. 968f. in the 1985 edition):

- Bełżec dropped from 550,000 to 434,508 by virtue of the well-known telegram by Hermann Höfle of January 11, 1943 (see here on p. 116);
- Sobibór drops from 200,000 to 150,000;
- Treblinka rises from 750,000 to 800,000;
- Auschwitz remains at 1,000,000, Kulmhof at 150,000, and Lublin-Majdanek at 50,000.

For the last five camps, Hilberg gives no explanation.

The decrease in victims is therefore approximately 115,500: how does this figure affect the total death toll? In the 1985 edition, the total figure of 5,100,000 victims was divided up as follows: 800,000 (ghettos) + 1,300,000 (outdoor executions) + 3,000,000 (camps) = 5,100,000 (p. 1318). The figure of 3,000,000 includes 2,700,000 victims of the "extermination camps."

²²⁶ VHA, Fond OT31(2)/8, with reference to BW 16a; see Mattogno 2016, Chapter II.3. "'Special Treatment' and 'Disinfestation Facility,'" pp. 39-42, and Docs. 11f., pp. 131-133.

In the 2003 edition, despite the decrease of 115,500 victims, the total is still 5,100,000. How is that possible? With a sleight of hand. Hilberg decreased the victims of "death camps" by 100,000, which thus fell to 2,600,000, but at the same time he increased by 100,000 those of "outdoor executions", which rose to 1,400,000! (pp. 1320f.). It is clear that he did not want to go below 5,000,000 victims and that the resulting figure of 4,985,000 was too "reductionist". This is just another egregious indictment of the integrity of this historian.

The changes made to the chapter under discussion are entirely superficial and limited to a few additions and a few cuts; the argumentative and "demonstrative" structure remained practically unchanged. However, these changes at times lead to a jarring picture, like an old dress patched up with new pieces of cloth.

Hilberg's use of witnesses, many of them unknown and insignificant, in an attempt to prove the veracity of claims on the basis of their words, remains as excessive as in the previous edition. He cites about a hundred witnesses, seventy of whom made their statements in affidavits, declarations or during interrogations. To give an idea, I list the names of these witnesses in alphabetical order (with no guarantee of completeness; those with an asterisk are mentioned several times):

Amend	Hogman	Milch*	Schmelter*
Bachman	Höss*	Möckel	Schuler
Becher	Illgner	Morgen*	Schulhof
Becker	Jäger	Murr*	Schwarz
Blobel	Jung	Nyiszli*	Steffler
Boutbien	Kirsz	Orlik	Struss*
Broad*	Klempfner*	Paulmann*	Suchomel
Burger	Krumme	Peters	Tauboeck
Entress	Krumpe	Pohl*	Ter Meer*
Epstein	Krzepicki	Puhl	Thoms*
Falkenhahn	Küpper	Rajzmann	van den Straaten
Faust	Langer	Reder	Wagner
Fehling	Levy	Reelitz	Wiebeck
Fischer	Liebhäuser	Roeder	Wied*
Frank	Lorent	Rum	Wilhelm*
Frank-Fahle	Lörner*	Ruppert	Wisliceny
Friedman	Luthal	Salomon*	Wolf
Gerstein	Mandelbaum	Santo	
Haeni	Mangold	Scheide	
Harbaum	Mehrbach	Schluch	

To these we must add the trial testimonies by the following witnesses:

Ansel	Barthelmäss*	Dürrfeld	Erman
Auerbach	Bendel	Eichmann	Frank (Hans)

Franz	Klein	Michalsen	Stefaniuk
Fuchs	Kogon	Morgen	Struss
Göring	Koppe	Mrugowski	Wiernik*
Hilse	Kozak*	Obalek	Zaun
Kallmeyer*	Kramer	Oberhauser*	
Klein	Lasker	Pfannenstiel	

The work still teems with spurious and insignificant sources that serve to apodictically "prove" the most multifarious claims usually with insignificant anecdotes. Gisella Perl (*I Was a Doctor in Auschwitz*) is mentioned at least ten times, Ella Lingens-Reiner (*Prisoners of Fear*) six times, Olga Lengyel (*Five Chimneys*) six times. There is also a reference to *Playing for Time* by Fania Fenelon (FN 81, p. 977). In addition to these former inmates and Höss, Hilberg's most-important source for Auschwitz is Filip Müller, mentioned seventeen times. Kurt Gerstein is summoned five times as a witness, three for the statement of April 26, 1945 (PS-1553), falsely presented, as already pointed out, as an "affidavit" (FN 8, p. 1028; FN 101, p. 1042), the other as a "declaration" (FN 89, p. 1041); the other two references are to the statement of May 4, 1945 as published by Rothfels (1953).

Among Hilberg's obsolete sources we must mention Filip Friedman's propaganda work *This Was Oswiecim*, and also Jan Sehn's article-turned-book *Concentration and Extermination Camp at Oświęcim*: After the works by Pressac, van Pelt and Piper, it makes no sense anymore for orthodox scholars to quote Sehn's outdated book in support of their claims.

In the 18 years after 1985, Hilberg had the opportunity and the time for a profound reworking of the central aspects of his work, which instead remained practically unchanged both regarding its argumentative structure and the type of sources used to shore up this historiographic house of cards.

Conclusion

The chapter on the “killing centers,” as I noted in the Introduction, represents the quintessence of *The Destruction of the European Jews*, at which the entire work aims as its ultimate objective, based upon which the book justifies itself and finds its reason for being. It is not by chance that Hilberg pretended to be an expert on the gassing of Jews. However, in this fundamental area of his specialization, he himself has never made any efforts at documentary research. He has never taken the trouble to search for any possible documents relating to the “killing centers” on the spot, in Poland, and he never felt sufficient motivation to visit the essential archives, such as the Auschwitz Museum or major archives such as the Lublin-Majdanek Museum or the Stutthof Museum; nor did he inspect the places concerned: rather, he simply supplied a pale reflection of the Holocaust literature existing at one time.

The framework of his description of the camps at Chełmno, Bełżec, Sobibór and Treblinka is taken from the 1977 book by Adalbert Rückerl *NS-Ver-nichtungslager im Spiegel deutscher Strafprozesse*, which is a mere summary of the trials against former staff members of these camps staged up to this year in what was then West Germany – cited by Hilberg at least 40 times. The only noticeable change for the 2003 edition in this regard was the addition of a few references to Arad’s 1987 book *Bełżec, Sobibór, Treblinka*.²²⁷

As mentioned earlier, Hilberg’s treatment of the Auschwitz Camp is the one topic that saw major revisions for the 2003 edition. Disregarding bare testimonies, while his discussion of that camp in the 1985 edition was based essentially on Jan Sehn’s book *Concentration and Extermination Camp at Oświęcim (Auschwitz-Birkenau)*, his source base expanded slightly in the 2003 edition to also encompass works by French historian Jean-Claude Pressac and Polish historian Franciszek Piper,²²⁸ without, however, dropping Filip Friedman’s crassly propagandistic book *This Was Oswiecim*. In this chapter, Hilberg almost completely abstains from quoting indispensable sources such as Kogon *et alia*’s *Nazi Mass Murder. A Documentary History of the Use of Poison Gas*,²²⁹ Georges Wellers’s *Les chambres à gaz ont existé. Des documents, des témoignages, des chiffres*, Buszko’s *Auschwitz. Nazi Extermination Camp*, or

²²⁷ FN 98, p. 982; FN 101, p. 983; FN 17, p. 1017;

²²⁸ FN 58, p. 941; Table 9-4, p. 949; Table 9-8, p. 959.

²²⁹ He quotes the German 1983 edition once, but only as an add-on to Rückerl’s 1977 book: FN 41, p. 937.

the numerous books by Hermann Langbein. The 2003 edition also would have profited from using van Pelt's 2002 book *The Case for Auschwitz*, but that may have been released after Hilberg wrapped up the new edition. The most incredible fact is that Hilberg made no reference to the Frankfurt Auschwitz Trial, staged between December 1963 and August 1965, two summaries of which would have been easily available to him (Langbein 1965 and Naumann 1965).

Incredibly, in his chapter dedicated to "The Trials," which begins on page 1142, Hilberg mentions neither the Höss Trial (March 11-29, 1947), of which a summary in English was accessible to him as published in the series *Law Reports of Trials of War Criminals*,²³⁰ nor the trial against the former members of the Auschwitz camp garrison (November 25 to December 16, 1947), nor the Auschwitz Trial held in Frankfurt am Main!

In his discussion of the "killing centers," Hilberg relies essentially not on documentary sources, but on secondary literature of the Orthodoxy, and even that with many gaps.

As for the testimonies, the first observation that needs to be made is that he accepts or at any rate presents all testimonies confirming his preconceived notion up front as truthful, thanks above all to his habit of extrapolating from the perceived (or more-often misrepresented) context. During the Zündel Trial, he declared candidly that his method in dealing with the testimonies consisted of distinguishing the reliable and truthful parts from the unreliable and untruthful parts, and in quoting the first parts "out of context" while passing over the second parts in silence, without informing the reader of the latter's existence, and without having any objective criteria to distinguish "reliable" from "unreliable" and "truthful" from "untruthful." In this way, he creates a purely illusory concordance of testimonies consisting of individual elements extracted from various testimonies which – if seen in their entirety – are not only mutually contradictory, but which are also unreliable and untruthful in more parts than Hilberg is able to perceive or willing to admit, which invalidates their value.

Hilberg's method is obviously fraudulent, since it is contrived to make the reader believe that testimonies are truthful or convergent while sweeping all their contradictions, falsehoods and absurdities under the rug. A pair of Hilberg's imitators, Michael Shermer and Alex Grobman, have enshrined a decalogue of historiographic methods, in which Point 2 reads:

"2. Has this source made other claims that were clearly exaggerated? If an individual is known to have stretched the facts before, it obviously undermines his or her credibility." (Shermer/Grobman, pp. 248)

This principle undermines the credibility of *all* the witnesses adduced by Hilberg. This applies in particular to Gerstein and Höss, for whose testimonies Hilberg explicitly admitted the presence of elements during the Zündel Trial

²³⁰ United Nations...; he cites this source in other contexts, for example: on Zyklon B: Table 9-5, p. 953; on medical experiments in Auschwitz (Höss Trial!): FN 34, p. 1011; on Bergen-Belsen: FN 47, p. 1054; on a list of wanted German war criminals: FN 90, p. 1162.

which are untrue or not believable. And the method of extrapolation also undermines the credibility of Hilberg himself.

As correctly noted by Gie van den Berghe, Hilberg "considers events sufficiently proved if one eyewitness mentioned them." Thus, he essentially tried to replace documents – which he didn't know or ignored – by individual testimonies, which are always refuted point by point by documents, where they exist, such as, for example, with regard to the hygienic installations at the Lublin-Majdanek and Auschwitz Camps.

Another criterion used by Hilberg to consider an event sufficiently proven is literary repetition: if two or more witnesses describe the same event, it became reality in Hilberg's mind. But, of course, the repetition of a lie or an error does not transform it into truth, and therefore this cannot be a criterion of truthfulness. And in fact, several witnesses have declared, in mutual agreement with one another, the extermination of four million persons at Auschwitz to be the truth – but does this repetition make it true?

Thanks to this bogus criterion of truthfulness, Hilberg feels authorized to present any testimonial fairy tale as historical truth, such as the one according to which "the human fat escaping from the burning bodies was poured back into the flames to speed the cremations" (p. 1016).

Hilberg moreover adduces a series of insignificant, sometimes actually anonymous witnesses ("a policeman," "a railway worker") which he places, incredibly, on the same level of authority as important witnesses: they all contribute in the same way in creating his narrative tissue.

The fundamental witnesses on Auschwitz mentioned by Hilberg – apart from Höss – are Ella Lingens-Reiner, Gisella Perl and Olga Lengyel, cited a total of over twenty times all together. These witnesses are so important that Robert Jan van Pelt, in his ponderous 2002 book on Auschwitz, never even mentions any of them. The principal witness cited by Hilberg at least fifteen times, Filip Müller – referred to by Hilberg himself as "a remarkable, accurate, reliable person" – was a phantasmagorical plagiarist. Charles Sigismund Bendel, by contrast, was a common imposter, just like Miklos Nyiszli, of whose book *Auschwitz. A Doctor's Eyewitness Account* Hilberg seems to have been ignorant, although that is hard to believe.

Hilberg's credulity appears even more surprising if compared to that of Gerald Reitlinger, who on occasion exhibited at least a partially critical attitude with regard to "survivor narratives" (Reitlinger, pp. 537).

Hilberg's method regarding documents is no less aberrant. It is based on three undemonstrated up-front assumptions:

1. Hitler issued an extermination order.
2. "Killing centers" existed.
3. A "code language" was used.

Consequently, his reasoning is based on a closed circular argument, in which the presumed Hitler order and the "euphemisms" which are said to appear in

German documents “demonstrate” the reality of the “killing centers,” and the “killing centers” “demonstrate” the reality of the Hitler order and the “euphemisms”! This is particularly blatant in his manipulation of German documents containing the term “*Endlösung*,” which, due to the mere presence of this term, are presented up front as a plethora of “proofs” for the presumed National-Socialist plan to exterminate the Jews, or even as “proof” of the existence of a Hitler extermination order!

In this way he practices a systematic misrepresentation of the documents, accompanied by omissions of important documents and of important parts of documents he cites, by mistranslations and sometimes by outright lies, even going as far as committing perjury, which he did during the Zündel Trial at least six times.

This extraordinary lack of critical sense also extends to orthodox Holocaust historiography in general and has transformed itself into a sort of historical authoritarianism which permits no discussion. Hilberg presents his notions regarding the genesis of the presumed extermination of the Jews in an apodictic manner, not as conjectures among other conjectures, but as established facts, as undisputed certainties, without the slightest mention of the debates which broke out among Holocaust historians on this topic precisely at the beginning of the 1980s, and in which he had personally participated. He never mentions the conflicting interpretations of his colleagues, but by citing and misrepresenting cherry-picked documentary and testimonial sources, he wishes to accredit his own interpretation as unique and authoritative. Emboldened by the bulk of his work and his references, Hilberg poses as an authority above the contesting parties, but in those debates his colleagues did not recognize any particular authority on his part and treated his opinions like those of any other historian. His position among historians was never really the top level.

Ultimately, Hilberg’s description of the “process of destruction” of the European Jews in the “definitive” as well as in the last edition of *The Destruction of the European Jews*, and above all in his Chapter IX on the “Killing Center Operations,” is characterized by carelessness and credulity in the gathering of sources as well as speciousness and bad faith in their use. As a result, his description is without sound foundation and historically inconsistent.

Such inconsistency was quietly recognized by orthodox Holocaust historiography in the 2011 anthology *New Studies on National-Socialist Mass Killings with Poison Gas*. In a book over 400 pages long, Hilberg is mentioned only three times, and in absolutely marginal contexts to boot.²³¹

Appendix

The Opponents

Raul Hilberg, born in Austria on June 2, 1926, emigrated to the USA in 1939. He died while in Paris on August 4, 2007. He held a B.A. in political science, M.A. and Ph.D. in Public Law and Administration (1955). He was an instructor at the University of Vermont, later professor of international relations, US foreign policy, and the Holocaust.

Books (English, where available; first and current editions):

HOLOCAUST HANDBOOKS • VOLUME 12

Three sepia-toned portraits of men are displayed against a dark blue textured background. The portrait on the left shows a middle-aged man with glasses, wearing a suit and tie. The central portrait shows a young man with dark hair, also in a suit and tie. The portrait on the right shows a man in a military uniform, including a peaked cap. Below the portraits, there is a small graphic with a map of Europe and the text 'JEWISH EMIGRATION FROM GERMANY 1933-1940'. The map highlights 'Other' regions with an arrow pointing to the British Isles.

Introduction

Current historical writings dealing with matters related to the Third Reich paint a bleak picture. But such historiography has little to do with actual historical events. This applies especially to writings that deal with the Jewish ethnic group. The emigration of Jews from Germany is an example of such historical distortion.

To this day there are still accounts of the Jewish emigration that depict it as some kind of clandestine operation – as if the Jews who wished to leave Germany had to sneak over the borders in defiance of the German authorities, leaving all their possessions and wealth behind. Or as if certain avenues out of Germany were ‘inside knowledge’ not available to all Jews. In other accounts the emphasis is on Germany offering exit visas for a high price. There is no limit either to the inventive powers or to the mendacity of their authors.

The truth is that the emigration was encouraged by the German authorities, and frequently occurred under constantly rising inducements. The anti-Jewish legislation of the Third Reich is an undisputed fact in this emigration story. Likewise, the psychological pressure that Jews in Germany came to experience after 1933 is not trivialized here; it was often tragic for individuals and families. But this tragedy has already entered the public consciousness through countless publications, in radio and television programs. We needn’t recapitulate them here.

However, contrary to numerous eyewitness or autobiographical accounts, the following needs to be insisted on: Emigration was not some kind of wild flight, but rather a lawfully determined and regulated matter.

The purpose of this work is to elucidate the emigration process in law and policy, thereby correcting the traditionally received picture of Jewish emigration from Germany.

German and Jewish authorities worked closely together on this emigration. Jews interested in emigrating received detailed advice and offers of help from both sides. The accounts of Jews fleeing Germany in secret by night across some border are untenable. On the contrary, the German government was interested in getting rid of its Jews. It would have been quite counterproductive for them to deter such emigration.

1. The Jewish “Declaration of War”

After Adolf Hitler was elected Reich chancellor on January 30, 1933, and the subsequent assumption of power by the National Socialist party, the majority of Germany’s 500,000 Jews did not anticipate any significant change in their situation.

At most they expected temporary hindrances in one area or the other, but not exclusion from public life, let alone expulsion from Germany. Thus only politically or

March 24, 1933: Jewish call for boycotting Germany after Hitler's assumption of office.

Top legend: "A staged one-day propaganda show. Camera crews wait in front of the Wertheim department store in Berlin for an audience." On Saturday, April 1, 1933, eight days after the Jewish declaration of war or the call for a boycott, the Nazis staged a one-day protest against Jews for the media. Many similar photos exist, because these photos were planned well in advance and the scenes arranged.

economically motivated individuals packed their bags and resettled in a foreign country, most of them believing that sooner or later they would return to Germany.

On March 24, 1933, two months after the National Socialists took power, "*World Jewry*," as it referred to itself, declared war on Germany.¹ As World Jewry did not have its own state, it used the power at its disposal, namely

¹ There was actually a whole series of such declarations of war, c.f. Hartmut Stern: *Jüdische Kriegserklärungen an Deutschland*.

its influence on the world economy, to impose a world-wide boycott of Germany.

After this spectacular declaration, which appeared in the London *Daily Express*, it should have been obvious to World Jewry, and also to Jews living in Germany, that there would be consequences. No country in the world with any self-respect – and Germany at that time regarded itself quite favorably – can ignore such a challenge. And in fact the boycott hit Germany at its weakest point in time.

The economic situation was catastrophic. Over 6 million unemployed, countless bankrupt enterprises, a prostrate economic system posed for the new German government an almost unanswerable challenge and seemingly insoluble problems. On top of all that, the foreign boycott of its goods should have dealt Germany a death blow. That it did not, that on the contrary Germany's economy recovered with astounding rapidity, thereby setting an example for other countries, was due entirely to the genius of its leadership. This is confirmed not only by contemporary reports, but also by recent studies devoted to presenting the facts. Of these, the two chapters devoted to Germany's economic recovery in Rainer Zitelmann's *Hitler* are most instructive.²

Next page: Already on März 24, 1933, not even two months after Hitler had become elected, "World Jewry", as they called themselves. Declared war on Germany.

JUDEA DECLARES WAR ON GERMANY

Jews Of All The World Unite In Action

BOYCOTT OF GERMAN GOODS

MASS DEMONSTRATIONS IN MANY DISTRICTS

DRAMATIC ACTION

"Daily Express" Special Political Correspondent.
A L L Israel is uniting in wrath against the Nazi onslaught on the Jews in Germany.

Adolf Hitler, swept into power by an appeal to elemental patriotism, is making history of a kind he least expected. Thinking to unite only the German nation to race consciousness, he has raised the whole Jewish people to a national renaissance. The appearance of the swastika symbol of a new Germany has called forth the Lion of Judah, the old battle symbol of Jewish defiance.

Fourteen million Jews dispersed throughout the world have banded together as one man to declare war on the German persecutors of their co-religionists. Sectional differences and antagonisms have been submerged in one common aim—to stand by the 600,000 Jews of Germany who are terrorized by Hitlerist anti-Semitism, and to compel Fascist Germany to end its campaign of violence and suppression directed against its Jewish minority.

World Jewry has made up its mind not to rest contented in face of the persecution of its brethren in the Third Reich. It has decided to fight back by the only means at its disposal—by the boycott of German goods.

£12,315 • estimate to £4,000,000
This is the report of the public's share per annual contribution with a view to the War Relief Council. The War Relief Council has issued £1,000,000 of 15s. per cent. bonds at 100 per cent. to the public. The bonds are being sold at 105 per cent. to the public. 2. Jews in Germany

One of the consequences that flowed from the antagonistic attitude of so-called World Jewry was the German government's endeavor to remove its Jewish residents, to encourage them to emigrate.

For the German Jews this was a tragic development: Regardless of the fact that "World Jewry" had declared war on Germany, for hundreds of thousands of them Germany was home. Many of them had lived in Germany for generations. At first emigration was not a feasible alternative, and for a long time many could not take that decisive step.

Among the German Jews there were numerous groups and sub-groups, representing a multitude of differing political opinions. Besides purely religious organizations, there flourished very diverse associations, often with opposing viewpoints on various questions.

The four largest Jewish organizations were:

1. The Central Union of German Citizens of Jewish Faith (*Central-Verein deutscher Staatsbürger jüdischen Glaubens*, hereinafter *CV*), which was formed in 1893. Later the organization was renamed the Central Union of Jews in Germany. Membership numbered about 10,000. Its political voice was the *C.V.-Zeitung*.
2. The Zionist Union of Germany (*Zionistische Vereinigung für Deutschland*, hereinafter *ZVfD*), founded

in 1897, with up to 10,000 members. It published the *Jüdische Rundschau* (*Jewish Review*).

In 1925 this Zionist Union split, and the New Zionist Movement arose (*Neu-Zionistische Bewegung*); they also called themselves the Revisionists or State Zionists (*Staatszionisten*). The name State Zionists indicated their desire for a Jewish state. The founder and leader of the Revisionists was Vladimir Jabotinsky. His deputy in Germany was Georg Kareski.

3. The Reich Federation of Jewish Soldiers (*Reichsbund jüdischer Frontsoldaten*, hereinafter *RjF*) was founded in 1919 and had about 10,000 members. It published a newspaper, *Der Schild* (*The Shield*).
4. The Union of National German Jews (*Verband Nationaldeutscher Juden*, hereinafter *VNJ*) was founded in 1921, and had about 10,000 members. Its newspaper was the *Nationaldeutsche Jude* (*National German Jew*).

In order to represent Jewish interests more effectively an umbrella organization was formed, the Reich Deputies of German Jews (*Reichsvertretung der deutschen Juden*, *RV*). In 1939 it changed its name to the Reich Association of Jews in Germany (*Reichsvereinigung der Juden in Deutschland*). The *VNJ*, however, refused to join this umbrella organization.

In spite of these differences, two basic directions emerge: one in which Germanism was the top priority and Judaism was a religious matter; the other in which a consciousness of belonging to a separate, Jewish nation was combined with the Jewish religion. The second of these two groups comprised the Zionists, who were a minority among German Jews but in time became the most influential force.

The majority of Germany's Jews had been settled there for over a century. The Jewish Edict of 1812 eliminated all legal restrictions and gave Jews the same political rights as other Germans. Many of them thus saw themselves as Germans, not aliens. In the first few years after 1933, this attachment to Germany led not only to declarations of support for their German fatherland and the National Socialist movement, but also to open antagonism toward the Zionists, with growing fervor who pressed for emigration.

*Theodor Herzl,
founder of modern Zionism*

At first even the Zionist *Jüdische Rundschau* of April 13, 1933, declared:

"The German people must know that the historical ties of centuries cannot simply be severed."

A little later, on August 29, 1933, the same newspaper wrote:

"We believe that the German Jews must find their place and their integration in this state, and we hope that it will occur in harmony with the basic principles of the new state."

Even after the 'Nuremberg Laws,' on September 9, 1935, the *Jüdische Rundschau* wrote that it was now the task of Jews to develop their special status within the German people in a positive way.

Several quotations that document how closely Jewish citizens identified with Germany in those years follow below. This is not to suggest that the majority of Jews did not adopt an attitude of distrust or rejection of the National Socialist government. But there were other points of view as well, that are generally suppressed today.

The first article of the constitution of Union of National German Jews (VNJ) states:³

“The VNJ is an organization of Germans of Jewish ancestry who publicly declare that they feel their heritage is the German spirit and German culture, so that they can only feel and think as Germans.”

Dr. Max Naumann, the chairman of the VNJ, had published numerous essays about the Jewish question a decade earlier, in 1920 and 1924, *i.e.*, long before the rise of National Socialism. He took the following position in these writings: He differentiates between “German Jews” and “foreign Jews”, stating:

“The German Jews belong to the German people, the foreign Jews scattered to the winds are a people without a country – even the English Palestine is not their country and will never be their country.”

He defines the foreign Jews as a group marked by:

Two Memoranda of anti-Zionist, National German Jews

A book by Dr. Max Naumann,

President of the VNJ.

³ Ref. in Herrmann, p. 74.

Max Naumann (1875-1939) was a PhD lawyer, politician and publisher. From 1921 until 1935 he was the president of the German-nationalistic and anti-Zionist Union of National German Jews, which he had established (Verband nationaldeutscher Juden, VnJ). Between 1922 and 1934 Naumann published the magazine The National German Jew.

“the fanatical attachment to backwardness [...] through the madness of being a community of the chosen and a problem for others.”

He considers the Zionists to be among “foreign Jews”. Here again, he distinguishes between two groups. The “honest and upright thinking Zionists” are those who recognize their difference and are prepared to live in Germany as foreigners, if need be under legal constraints as aliens. But those who neither belong to the “German Jews” nor to the conscious Zionists, are:⁴

“the remainder that deserves to perish. It is better that a few rootless perish than that hundreds of thousands of people who know where they belong, perish – our German people must not perish.”

It is possible to claim that this was one man’s opinion, but Dr. Naumann was re-elected chairman of the Union of National German Jews year after year. That would not have been possible had the Union sought to distance itself from Dr. Naumann’s views. So it is fair to assume that there was

⁴ Ref. Herrmann, p. 30.

a group of Jews who shared this extreme view of their Jewishness.

As noted above, the Union of National German Jews refused to join the organization that comprised the other major Jewish groups. Its members felt so German that they saw no need to join a Jewish umbrella organization.

Even more radical was the attitude of a German national youth group, the Black Banner. It dissolved itself in 1934 after a number of its members left Judaism in order, as the official declaration states, to demonstrate “*complete separation from Judaism in every form.*”⁵

These national German Jews expressed a number of positive opinions about Germanism and National Socialism as well.

In 1931 the magazine *Der Nationaldeutsche Jude* posed the question: “*Can Jews Be National Socialists?*,” and the answer was a unanimous yes. In its January 1931 issue, the magazine wrote:

“Did not we Jews shed our blood on the battlefields for Germany? Was not a Jew the president of the first German Parliament in the Paulskirche?”^[6] Was not the founder of the conservative party a Jew? Whom do the parties thank for having adopted the rallying cry for a united Fatherland, its creation and its organization? The Jews! Who was the first precisely and clearly to formulate the demands that today are the main points of

⁵ Herrmann, p. 41.

⁶ This is an error. The president of the first German parliament in the Frankfurt Paulskirche was Heinrich Freiherr von Gagern. He belonged to an old aristocratic family from Rügen which goes back to the 13th century. Most probably the writer of this article mixed up Gagern with Martin Eduard von Simson, a converted Jew who in 1871 was the first president of the Reichstag; see Meinhardt.

Georg Kareski (1878-1947), director of the Jewish credit union *Iwria*, which he had founded in 1927 and which went bankrupt in 1937; between 1928 and 1930 he was president of the Jewish community in Berlin. Since 1934 he headed the revisionist State Zionist organization

the National Socialist Program? A Jew – Walter Rathenau.”

In May 1933, after Hitler assumed power, the same magazine wrote in a special edition:

“The Germany of the future is faced with completely new tasks, which can only be solved by a nation renewed at its foundation. To create this nation in the form of a national community that has never before existed in Germany’s history, is the major and, if properly undertaken, truly liberating task of the national leader.”

In 1934 *VNJ*’s Dr. Max Naumann declared:⁷

“We have placed the well-being of the German peoples and the Fatherland, to which we feel inextricably linked, above our own well-being. That is why we welcomed the January 1933 national uprising, this in spite of the hardships it brought for us, but we saw in it the only means with which to overcome the damage wrought by un-German elements during those 14 tragic years.”

An orthodox rabbi from Ansbach wrote in the same year:⁸

⁷ Ref. Herrmann, p. 22.

“I reject the teachings of Marxism from a Jewish viewpoint and profess National Socialism, naturally without its anti-Semitic components. Without this anti-Semitism National Socialism would find its most devoted adherents amongst the orthodox Jews.”

As stated earlier, these views were not that of the Jewish majority, but they were expressed in the media – an attitude, by the way, that the National Socialists did not appreciate. They did not want any support for their ideas from Jewish citizens; they wanted the Jews to disappear from Germany.

The National Socialist attitude corresponded in principle to the Zionist position. They wished to establish a nationalistic Judaism and thus opposed any inner Jewish attachment to anything German. But they approved of National Socialism because they shared its basic tenet: devotion to one’s own people and state.

In December 1935 George Kareski, the chairman of the German State Zionists, was interviewed on the Nuremberg Laws by Goebbels’s magazine *Der Angriff*. His views on how various questions arising from the legislation had been dealt with were quite positive. Kareski said that the Nuremberg Laws fulfilled old Jewish demands. For example, the separation of German and Jewish nationality, the establishment of schools for Jewish students only, nurturing and supporting a specific Jewish culture, and above all the state prohibition of mixed marriages, which in any case Jewish law did not permit.⁹

⁸ Ref. Herrmann, p. 3.

⁹ *Der Angriff*, December 23, 1935. The text is reproduced in Udo Walendy: “*Aspekte jüdischen Lebens im Dritten Reich*” Part 1, *Historische Tatsachen*, No. 61, Vlotho 1993, pp. 17f.

The Kareski interview aroused controversy in Jewish circles, but Kareski received support from orthodox Jews and even more so from Zionist groups.

3. Emigration

For the Zionists the only viable future was in their own country, the former Palestine. But even for them it was unimaginable that all Jews would leave Germany. They wanted to win over the younger Jews for emigration so that they could do the heavy work in Palestine. In order to bring this about they realized that working together with the National Socialists was the only course for their organizations. And that is what happened. Over the following years an ever-closer positive relationship with the National Socialists developed among those Jews who wished to immigrate to Palestine.

German institutions were desirous of completing the emigration as quickly as possible. As noted earlier, the Jewish groups and organizations realized the imperative of emigration only gradually.

There were three Jewish emigration agencies which had operated in Berlin (among other places) since the beginning of the century.

The *Hilfsverein für deutsche Juden* was responsible for emigration to all parts of the world except Palestine. It maintained agents in foreign countries who investigated the possibilities of immigration and settlement, *i.e.*, accommodating German Jews and establishing contact with local Jewish organizations, thereby making it easier for the immigrants to settle in.

Passport of the German Reich, issued on February 14, 1939, to the German Jew Wilhelm “Israel” Steiner. The Reich preferred to see Jews leave the country – for good.

The Palestine Office (*Palästinaamt*) concerned itself with the “*Aliyah*” – literally: ascending – meaning the ascent to Jerusalem, synonymous with immigration to Palestine. Its ‘clients’ were above all young Jews who were suitable for the hard physical labor that settlement in Palestine brought with it.

A third institution was the Main Office for Jewish Migration Welfare (*Hauptstelle für jüdische Wanderfürsorge*). Initially this agency concerned itself with Jews who were traveling in Germany. Later this organization concerned itself with caring for and resettling non-German Jews.¹⁰

The National Socialist government attempted to promote the emigration of its unwanted Jewish citizens. Two principal agreements were used by the state to regulate emigration: the “Haavara” and the “Ruble-Wohlthat.” The Haavara Agreement was in force from 1933 until 1941 and concerned emigration to Palestine. This agreement is now

¹⁰ This relief organization was founded in 1901, and in 1904 it established its migration section. In 1917 the headquarters for Jewish Travelers Aid was established; the *Palästinaamt der Zionistischen Vereinigung für Deutschland* was established during the 1920s.

regularly mentioned in the relevant literature. In 1972 the former director of the Haavara Agreement, Werner Feilchenfeld, self-published a brochure which has obviously not been read by most people who write about the Haavara; otherwise they might not write so much nonsense about it.

The Rublee-Wohlthat agreement, on the other hand, generally falls under the historical blackout.¹¹

It covered the majority of emigrating Jews, all those who did not go to Palestine, but to other European countries or overseas countries. That was about two-thirds of all migrants. Unfortunately this agreement operated for only eight months; then war broke out and regulated emigration came to a stop. We note this point here because it makes clear the intentions of the German government, which were far removed from the 'extermination of the Jews'.

Mauschel.

Von Benjamin Zeff.

Mauschel ist Antizionist. Wir kennen ihn schon lange, und es hat uns auch immer der Efel gehoben, wenn wir ihn ansahen, wenn uns das Leben in seine Nähe oder gar in Berührung mit ihm brachte. Aber zu dem Efel, den wir vor ihm empfanden, gesellte sich bisher immer Mitleid; wir suchten nach milden, historischen Erklärungen dafür, daß er ein so verkrümmter, verdrückter und schäbiger Gefelle sei. Und dann: er ist doch unser Volksgenosse — wenn auch nicht die mindeste Veranlassung vorliegt, uns etwas auf seine Genossenschaft einzubilden. Wir sagten uns, daß wir ihn ertragen müßten, ja daß es unsere hohe Aufgabe sei, ihn zu veredeln, daß wir alle an dieser Aufgabe wachsen würden, und mit einer Art von romantischer Zärtlichkeit oder Schwäche nahmen wir uns seiner an, weil er ein Lump war. Wenn Mauschel eine Gemeinheit beging, trachteten wir sie zu verzeihen. Wenn Mauschel recht niedrig war, erinnerten wir die Welt an die Großen unseres Volkes. Wenn Mauschel uns alle compromittierte, schämten wir uns oder schämten uns geheim — jedoch wir schwiegen.

Da hat Mauschel endlich etwas gethan, was Lob verdient, was uns zur Ehre gereicht, und wodurch er uns für Manches entschädigt, das wir seinerwegen erdulden mußten. Er hat sich von uns losgesagt. Mauschel, das ist ein schöner Zug!

Aber wir sprechen von Mauschel, ohne ihn noch gebührend vorgestellt zu haben. Wer ist denn dieser Mauschel? Ein Typus, meine lieben Freunde, eine Gestalt, die in den Zeiten immer wiederkehrt, der fürchterliche Begleiter des Juden, und vom Juden so unzertrennlich, daß man Beide miteinander stets verwechselt hat. Der Jude ist ein Mensch, wie andere, nicht besser, nicht schlechter, höchstens verächtelt und verbittert durch die Verfolgungen, und von einer großen Standhaftigkeit im Leiden. Mauschel hingegen ist die Verzerrung des menschlichen Charakters, etwas unsagbar Niedriges und Widerwärtiges. Wo der Jude Schmerz oder Stolz empfindet, hat Mauschel nur elende Angst oder höhnisches Grinsen im Gesicht. In den harten Zeiten richtet sich der Jude auf, Mauschel dagegen verkrümmt sich nur noch schmählicher. Werden die Zeiten besser, so ist es für den Juden eine Mahnung zur Milde, zur Duldung anderer, zum Wirken für die allgemeine Wohlfahrt; Mauschel aber wird frech und hochmüthig. Der Jude trägt in seinem vielgequälten Herzen eine unaussprechliche Sehnsucht nach der Erreichung höherer Stufen der Kultur; Mauschel betreibt hinter dem Fortschritt wie hinter der Reaktion nur seine eigenen schmutzigen Ge-

schäfte. Der Jude trägt die Armuth mit Würde und Gottvertrauen, im Reichthum öffnet sich sein Herz weit für die Mitheligen und Beladenen, und er besteuert freiwillig sein Wohlergehen durch große Gaben. Mauschel ist in der Armuth ein erbärmlicher Schnorrer, im Reichthum ein noch erbärmlicherer Progg. Der Jude liebt die Kunst und gelehrte Uebungen; die waren oft und lange sein ganzer Trost in der Abgeschlossenheit, die ihn eine feindselige Gesellschaft aufzwang. Von Mauschel werden selbst Kunst und Wissenschaft um des gemeinen Vortheils willen betrieben. So konnte man in unserer Volks zu allen Zeiten sogar Kaufleute und Handwerker von tiefer, schamhaft verschwiegener Bildung sehen — in solchen Gestalten trat der Jude auf. Einmal hieß er Baruch Spinoza, schloß Brillen und betrachtete die Welt sub specie aeterni. Und so konnte und kann man hinwieder Rabbiner, Schriftsteller, Advocaten, Ärzte sehen, die nur verheimlichte Gewinnfucher sind — in solchen Gestalten tritt Mauschel auf. Der Jude ist fähig, der Regierung seines Landes aus Ueberzeugung hart und ehrlich Widerstand zu leisten, oder sich offen als ihr Anhänger zu bekennen. Mauschel verkrümmt sich hinter den staatsfeindlichsten Oppositoren und hegt diese heimlich, wenn ihm die herrschende Autorität nicht behagt, oder er flüchtet sich unter den Volksschutz und thut Angeberdienste, wenn ihm vor dem Umsturz bange wird. Darum hat der Jude den Mauschel immer verachtet — und dieser schilt ihn wieder einen Narren. Und diese Beiden, die durch eine tiefe Feindschaft ihres Wesens allezeit geschieden waren, wurden stets miteinander verwechselt. Ist das nicht ein schauerliches Mißverständnis?

Als wäre in irgend einem dunklen Augenblick unserer Geschichte eine niedrigere Volksmasse in unsere glückliche Nation hineingerathen und wäre mit ihr vermischt worden, so nehmen sich diese unvereinbaren, unerklärlichen Gegensätze aus. Da wir nun, seit die Völker sich bekennen, immer die Schwächsten der Schwachen waren, hat man als den Vertreter unseres Volkscharakters nicht den Juden, sondern Mauschel genommen. Starke Völker werden nach ihren besten Söhnen beurtheilt, Schwache nach ihren schlechtesten. Die Deutschen sind ein Volk von Dichtern und Denkern, weil sie Goethe, Schiller, Kant hervorgebracht haben. Die Franzosen sind die Tapferen und Geistreichen, weil sie Bayard und Duguesclin, Montaigne, Voltaire und Rousseau aufstehen ließen. Wir sind ein Volk von Schachern und Sannern, weil Mauschel wuchert und Börsenreiche macht. Mauschel hat immer die Vorwände geliefert, unter denen man uns anfiel. Mauschel ist der Fluch des Juden. Instinctiv hat das der Jude immer gefühlt, und es mag oft vorgekommen sein, daß gute Juden vom Volk und vom Glauben der Väter sich entfernten, weil

First issue of the newspaper Die Welt (The World) of October 15, 1897, central organ of the Zionist movement. Since Herzl's appeal to establish a "Jewish State", emigration of the Jews was advocated with fervor by the Jews. Herzl's program has changed Judaism decisively. With this idea, the foundation of Zionism was created.

4. Haavara

4.1. Origin and Activities

Already in February 1933 Palestinian representatives of the citrus-growing company *Hanotea Ltd.* approached the German government to explore ways of realizing their mutual interests: for the Germans, the emigration of Jews; for the Jewish Palestinians, the immigration of Jews. The Jewish side attempted to get advantageous emigration conditions that would benefit Palestine. The German authorities accepted the Jewish proposals, and in May 1933 the first accords on economic policy were signed. These formed the basis of the Haavara Agreement. The word Haavara (Haavara, with emphasis on the last syllable) is Hebrew for ‘transfer,’ *i.e.*, to transport/transfer, in this case the transfer of wealth and goods. It is by this Hebrew name that the agreement became known in German files.¹²

The Haavara provided for the following arrangement: Jews who wished to migrate to Palestine could deposit their money into one or more accounts of Jewish banks in Germany. They could make such deposits even if they re-

¹² Circular 54/33 of the Reich Economic Ministry of August 28, 1933, Political Archive of Foreign Affairs (PA/AA), special W, Financial planning 16, vol 2. The text of the Haavara Agreement is reproduced in: I. Weckert, *Feuerzeichen*, pp. 219 f.

mained in Germany in the foreseeable future, *i.e.*, even if they had merely the intention of emigrating from Germany. They could then use this money for the benefit of any Jewish settlers already in Palestine, or they could invest the money in Palestine. They were also able to pay their medical insurance out of this money, up to ten years in advance. German Jews thereby received rights that German Reich citizens did not enjoy. Feilchenfeld wrote:¹³

Feilchenfeld's trend-setting paper about the Haavara agreement

“Preparations for a home in Palestine for those still in Germany were a breakthrough as regards the currency controls prohibition that applied to Germans investing overseas.”

A traveler's credit agreement, in cooperation with a travel agency in Tel Aviv, was built into the Haavara Agreement; it enabled prospective German Jews to journey to Palestine to find out what opportunities the country offered. They paid their expenses in Reichsmarks, and in Palestine received vouchers for all incurred costs. This as well was an exceptional provision: Due to strict foreign currency

¹³ Feilchenfeld, p. 48.

regulations, it was almost impossible for Germans to travel outside of Germany. The tours organized by the *KdF* (*Kraft durch Freude*) [Strength through Joy, an organization which offered affordable cruises to German workers and their families—ed.)] were settled by clearances.)

Once ready to emigrate, individuals received from their German bank, according to the exchange value, the minimum amount of foreign currency needed, 1000 Palestine pounds (the value of the Palestine pound was equal to that of the English pound sterling).

The Israeli historian Avraham Barkai has stressed that, given the prevailing foreign currency regulations, this allocation of foreign currency exclusively to emigrating Jewish citizens was a marked exception.¹⁴

Upon entering Palestine, the Jews from Germany had to show their money. A study of some years ago interpreted the 1000 pounds required for entry as payment for an entry visa.¹⁵ This is complete nonsense. The money was theirs, and they were only required to present it in order to demonstrate that they were able to support themselves and to create a new life so as not to burden the Jewish community in Palestine.

The rest of their money remained at their disposal in their Haavara account. Upon migrating they could take their complete household with them, including equipment and instruments needed for establishing themselves in their professions. All German citizens who decided to emigrate from

¹⁴ *Vom Boycott zur "Entjudung,"* p. 63.

¹⁵ Kroh, *David Kämpft*, p. 24. This work is full of inaccuracies and distortions. The entire treatment of emigration is full of false assertions; e.g., p. 28: "*The National Socialists made their expulsion pay,*" or, immigrants to Palestine had to pay the Reich flight tax and exchange currency at a fantastic rate. Both are untrue.

Germany had to pay a “Reich flight tax” (*Reichsfluchtsteuer*), something the Jews who left Germany under Haavara did not.

The Haavara accounts also paid for goods imported from Germany by Palestinian traders and merchants. In Palestine the immigrants received the equivalent in homes, land, citrus orchards, or the full amount in cash. A supplementary agreement enabled merchants from Egypt, Syria and Iraq to finance imports from Germany through Haavara.¹⁶

Additional rules and special privileges benefited the immigrant Jews from Germany in Palestine, among them that all social security and pension payments could be transferred without deductions.¹⁷

Jews living in Palestine could also make payments to friends in Germany through Haavara:¹⁸

“The sponsor paid the equivalent value in Palestinian currency at a discounted rate to the Haavara in favor of the recipient in Germany. The recipient of such support then received the equivalent in Reichsmarks through the Paltreu¹⁹ in Berlin. This system of a clearing house in private hands for payments of benefits to Germany developed in 1937 into a world-wide organization. Its task was to organize the relief payments from all over the world, and to use the accumulated foreign currency for the transfer of Jewish capital to Palestine.”

¹⁶ Feilchenfeld, pp. 54f.

¹⁷ *Ibidem*, p. 49

¹⁸ *Ibidem*, pp. 61f.

¹⁹ The “Paltreu” was a kind of sister organization of the Haavara. Its task was to enable the transfer of assets beyond the limits imposed on the Haavara. Both Haavara and Paltreu were controlled by Jews.

Another form of clearing is recounted by adviser to the Reichsbank Walther Utermöhle, former director of the center for currency control in the Reich Ministry of Economics:²⁰

“This enabled a clearing between emigrating Jews and [...] from overseas returning Germans. For example, if a German could not sell his house or business [because of the boycott in a foreign country] but found a Jew in Germany who had similar assets, then permission to exchange was given where neither side made an unfair gain.”

Besides the official regulations that applied to the Jews, there was a number of cases that were regulated through the Haavara to the advantage of the emigrants.

The Haavara was beneficial to those Jews unable to raise the one thousand pounds required in order to go to Palestine. The Haavara enabled them to obtain loans repayable years later.²¹ For these individuals the normal transfer fees were reduced by 50 percent, thereby enabling virtually

²⁰ Letter in *Deutsche Wochen-Zeitung*, December 16, 1977.

²¹ Adler-Rudel, pp. 102f.

every Jew in Germany who desired to go to Palestine to emigrate.

Insofar as the basic tenor of the Haavara Agreement reflected the German government's encouragement for Jews to emigrate, it also encouraged some Germans to actions that verged on the illegal. Rolf Vogel, the former Jewish journalist and publisher of the *Deutschlandberichte*, which aimed at promoting German-Jewish understanding, reports the following:²²

“Numerous individual actions of support were not legal, especially in cases where Jews did not wish to go to Palestine and could not be helped in any other way. It so happened that Jews sold their businesses and then lost their proceeds because they could not transfer them. To prevent this loss, government officials offered Jewish proprietors not emigration, but rather the opportunity to represent their own business overseas. By receiving high commissions and the proceeds from sales as representatives of their own firms, Jewish businessmen got back most of their lost money.

Another transfer trick, also conducted with the knowledge and good will of the foreign-currency bureaucrats, was the transfer of money through the courts: A person left at the court an envelope marked ‘My last will.’ The person then migrated, and after a few months would make a request to the local judiciary to have his envelope containing money and shares forwarded on to him from Germany.

Money could be transferred just as smoothly by an advertisement in the paper. For example, a Jew in Zurich would place an advertisement in the Völkischer Beo-

²² Vogel, *Ein Stempel hat gefehlt*, pp. 48f.

bachter: *'Representative required'. He would then have someone in Germany send envelopes filled with money or shares to the Völkischer Beobachter, which then collected and forwarded them on to Zurich.*"

In some respects the Haavara assisted in developing German exports, though this was not a primary factor, despite what one reads occasionally today.²³

Altogether one should not exaggerate the consequences of the agreement for the German economy. The consumption of goods by a community of 200,000 to 300,000 people – and the *Yishuv* (the Jewish community in Palestine) was no larger than that – which was also limited to certain goods, was not in a position to lend a country of sixty million any essential export help. Furthermore, there was no foreign currency flow to be gained by selling to Palestine; payment was in German money from the Haavara accounts. Even Feilchenfeld stressed that the export activity of the Haavara offered no significant advantage for Germany, because *"Haavara brought Germany no gains in foreign exchange."* (p. 29).

For Palestine the Haavara brought untold advantages. In the brochure published by Feilchenfeld, Dr. Ludwig Pinner, a former member of Haavara Society, is tireless in singing the praises of the agreement:²⁴

"Until the beginning of the 1930s Palestine was an agricultural country with a primitive level of development."

²³ E.g. F. Nicosia, *Hitler und der Zionismus*, p. 83 writes:

"The fear of a German decline in goods on the international market, and thus the Middle East market, influenced the German government in its decision to sign the Haavara Transfer Agreement with the Zionist representatives in summer 1933."

²⁴ Feilchenfeld, pages as indicated.

It was only the immigrants from Germany that

“altered the economic structure and the social composition of the ‘Yishuv’ and contributed significantly to its development. Under their influence and participation industrial output doubled, technology modernized, and slowly the choice and quality of manufactured goods reached a European standard.” (p. 107)

Georg Landauer (1895-1954)

“The activity of the German Jews as industrialists and investors was decisive for the development of the ‘Yishuv’ out of its pre-industrial and pre-capitalist stage.” (p. 102)

“[Their influence] on the development of Jewish Palestine was found not only in the economic and social sphere; it was also marked in the cultural, scientific and artistic spheres. The modernization of hospitals, made possible by the Transfer, made Palestine one of the most renowned medical centers.” (p. 106)

“The commitment of these people in research and teaching institutions, in business and administration, in public life and in the defense organizations was immeasurably important for the preparation of the ‘Yishuv’ for the fateful task that stood before them.” (p. 108)

The money of the ‘capitalists,’ who thanks to the Haavara could migrate to Palestine practically unhindered, also made migration to Palestine possible for workers. Dr.

Georg Landauer, the director of the German section of the Jewish Agency and a member of the board of directors of the Haavara, stated in an interview with the *Jüdische Rundschau* of February 18, 1936:

“Palestine as a developing country can absorb new immigrants looking for work proportionate to the inflowing capital and entrepreneurial spirit that creates new jobs.”

But there was the fear that wealthy Jews would go elsewhere with their capital and that only poor Jews would come to Palestine. Landauer warned:

“It is not possible to have worker immigrants without the immigration of employers.”

4.2. Opposition to the Haavara

4.2.1. ...on the Jewish side

Although the Haavara Agreement was advantageous for both the Jews and for Palestine, opposition to it was significant. The behind-the-scenes battles are described in detail by Edwin Black in his book *The Transfer Agreement*. The fact that there was an agreement between the Third Reich and the Zionists to the advantage of Israel seems to him incomprehensible and unpardonable, and he accuses the Jewish agencies involved of “*Nazi collaboration*”. Black’s attitude is all the more inexplicable because he is convinced that all Jews who remained in Germany became victims of the ‘Holocaust’.

Jewish organizations around the world complained of their own people’s violation of the boycott against Germany. The welfare of the German Jews who migrated to Pales-

tine meant little to them; they regarded the betrayal of general Jewish interests as far more important.

There were problems in Palestine as well. The Haavara's monopoly on importing German goods aroused envy among Palestinian traders, who saw their own existence threatened. This was especially the case with nascent Jewish industries in Palestine, which strove to sell their own goods and revolted

against the cheaper and better-quality products from Germany. The Haavara finally had to yield to the demands of the Jewish entrepreneurs in Palestine, and stopped importing certain goods, thus guaranteeing the protection of "*Tozeret Haaretz*" (products made in Israel). Enterprising businessmen exploited this dispensation to their own advantage. There were cases in which an enterprise obtained a factory through Haavara, then used the "*Tozeret Haaretz*" protection for its own manufactured goods. As a result the demand for imported goods and the transfer of money on the Haavara accounts declined.²⁵

On November 12, 1935 the *Jüdische Rundschau* bemoaned this lack of solidarity with the immigrant Jews from Germany:

²⁵ Feilchenfeld, p. 54.

“The transfer question is of financial importance for the emigration of Jews from Germany to Palestine, as well as for the transfer of money into the Jewish funds. Without this capital transfer it is almost impossible to emigrate in style [...] That this matter regularly comes up in public discussion in Palestine may be due partly to a lack of knowledge of the real factors, and partly due to those who wish to eliminate the competition that Haavara generates out of economic or other motives.”

4.2.2. ...on the German side

The Haavara Agreement was also not universally welcomed by Germans. It was of course quite a burden on the German foreign exchange market, and there were also political disadvantages. The German consul general in Jerusalem, Hans Döhle, emphasized in a March 22, 1937, study that through the Haavara Agreement the German government had “*subordinated all considerations that are decisive in advancing German interests in other countries*” to the “*facilitation of Jewish emigration from Germany and the settlement of immigrant Jews in Palestine.*” The strengthening of the Jewish economy “*that we made possible through facilitating the transplanting of German-Jewish industrial firms to Palestine*” necessarily worked against Germany on the world market. Döhle stressed that “*the opposition of the Palestinian Jews to Germanism is manifested at every opportunity.*”²⁶

Great Britain felt itself disadvantaged in its Palestinian mandate by the import of German goods and began to attack Germany in its press. According to Döhle’s study, the

²⁶ In: Vogel, pp. 110f.

negative imbalance of the Haavara Agreement was as follows:

1. Through export of goods with no foreign currency inflow.
2. Building up the Jewish economy builds anti-German Jewish influence in Palestine.
3. Direction of German imports to Palestine through the Jewish Agency without regard for German mercantile interests.
4. Anger among the local Arab and German businessmen, who can only trade with Germany through the Jewish Agency.
5. Anger of the British Mandatary administration, threatened by the German competition.

If one recalls that Döhle witnessed anti-German incidents and was aware how much the country owed to German immigrants, his critical assessment was not unjustified. Palestine was like the animal that bites the hand that feeds it. The hostility of the Jews toward Germany expressed itself on many different levels. For example, during a Purim procession²⁷ Germany was depicted as a poisonous-green

²⁷ Purim: The biblical book of Esther relates a historically unverifiable tale. Esther, the Jewish wife of the Persian king, discovers a plan to exterminate the Jews of Persia, to be carried out by Haman, a court official. The Persian king, Artaxerxes, is not opposed to this plan. Esther formulates a plan to save her people. On the occasion of a banquet, Esther seduces Haman and is then found by the king in a compromising situation. She informs the king that Haman has raped her. Now the king's anger turns against Haman, who is hanged. Esther succeeds in convincing the king to give the Jews free rein against their opponents.

"In all provinces of King Artaxerxes the Jews came together in the cities and attacked all those who had planned the downfall of the Jews. No one could stand against them; all peoples feared them." (Esther 9.2)

fire-breathing dragon covered with swastikas, and a placard demanded “*Tozeret Haaretz*” protection and a boycott of German goods.²⁸

In spite of it all, Adolf Hitler decided repeatedly that emigration of Jews was to be supported with all means and that a suspension of the Haavara Agreement was out of the question.

The transfer of assets through the Haavara remained possible even after the war began, through neutral countries. These connections broke down only after December 1941, following America’s entry into the war.

Winding up the Haavara in Germany was entrusted to two Jewish banks, Warburg in Hamburg and Wassermann in Berlin. At the end of the war there was still Haavara money in the accounts, which had been frozen by the German government as enemy funds; after 1945 the money was paid out in full to the owners.²⁹

The Bible reports that in just two days 75,000 people were murdered by the Jews. As already stated, history offers no foundation for this. According to one theology textbook (Preuß/Berger, *Bibelkunde*, p. 118):

“*Judaism found in the book of Esther a narrative of wish-fulfillment, of things lacking in the Jews’ actual circumstances.*”

In memory of this pogrom of revenge (Why revenge? Nothing had happened to the Jews!), the Purim festival arose and is celebrated to this day in February/March as a joyous occasion in a carnival atmosphere.

²⁸ Mildenstein in: *Der Angriff*, November 1, 1934.

²⁹ Feilchenfeld, p. 71.

5. Emigration and the SS

Besides the Reich Economic Ministry, it was paradoxically the SS and its agencies that supported and encouraged the emigration of the Jews.

The SS took it upon itself to influence German Jewish policy from the very beginning. It suggested mass emigration but warned against putting pressure on those Jews who felt German first, then Jewish. In those Jews it was necessary first to awaken a Jewish consciousness and a Jewish self-image. This was to take place through Jewish cultural³⁰ organizations. Only a Jew who had become conscious of his identity would be prepared to leave Germany and to immigrate to a future Jewish homeland.³¹

It was under such auspices that the SS and Gestapo conducted all supportive and protective measures involving Jewish institutions. As strange as it may sound, it was to the Gestapo to which many Jews turned whenever a German bureaucracy disadvantaged them or if they needed some other form of help.

For example, when during the so-called *Kristallnacht* in November 1938 the Jewish Emigration Center on Ber-

³⁰ It is surely a paradox for those who have derived their historical knowledge from the media, wherein the SS is depicted as a murderous Third Reich gang, with chief responsibility for the Jewish 'Holocaust'.

³¹ Reichsführer SS, Chef des Sicherheitsamtes: "Lagebericht Mai/Juni 1934, Die Judenfrage"; quoted in: Nicosia, p. 106.

In the SS newspaper Das Schwarze Korps (The Black Brigade) sentences like the following could be read: “The time should not be too far off when Palestine can welcome again the sons it lost more than a thousand years ago. Our wishes accompany them, with governmental sympathy.” (May 1935, p. 1)

lin’s Meinekestrasse was damaged, it was the SS that sent a team to clean up and to ensure that the office would be functioning again as soon as possible.³²

Leopold Edler von Mildenstein, who later headed the Jewish section of the SS, published a kind of propaganda tract for migration to Palestine as early as 1934. In that year Mildenstein traveled to Palestine and remained there for

³² Nicosia, p. 244.

Assembly of newspaper clippings of the NS newspaper *Der Angriff* (The Attack) on the supplement “A Nazi Travels to Palestine.”

half a year. His travelogue titled “*Ein Nazi fährt nach Palästina*” (A Nazi travels to Palestine) was serialized in Goebbels’s magazine *Der Angriff* (Sept. 26 to Oct. 9, 1934). The report is lively, vividly written, and offers an interesting picture of conditions in the British mandate and of the political currents that prevailed in Palestine in the early 1930s. It is still quite readable today. Mildenstein used the pseudonym “*Lim*” – the first three letters of his name, read from right to left as in Hebrew.

The SS and Gestapo participated in establishing and financing the re-training camps which in the meantime had been established by Zionist organizations all over Germany.

A coin minted by the Angriff newspaper to commemorate the publication of the travel report by Baron Leopold Itz Edler von Mildenstein about his journey to Palestine.

In these camps young Jews were to learn agricultural and trades to prepare them for the completely different life of Palestine. In part the SS even provided the land on which such camps could be established. Nicosia reproduces a map from August 1936 on which are marked 40 such establishments all across the Reich, from the farthest north (Flensburg and Gut Lobitten, Königsberg/East Prussia) to Gut Winkelhof in the south, near the Swiss border (see illustration).³³

Such re-training camps were established even in Austria, the former *Ostmark*, after its annexation. Adolf Eichmann, the director of the Vienna *Hauptamt für jüdische Auswanderung* (Main Office for Jewish Emigration) actively supported this program. Later, in concert with the Mosad, he vigorously supported illegal Jewish emigration. Occasionally, SS units escorted Jewish emigration groups

³³ Nicosia, *Third Reich* ..., p. 217. Only in the original English edition. In the German translation there is only a blank page. Nicosia cites as his source a document from the National Archive, USA: NA T-175/411, 2935451.

*Jewish Re-training Camps of the Hechaluz
in Germany as of August 1936*

across the border, and ensured that they crossed unhindered. Hannah Arendt was of the opinion that Eichmann’s comment before the Jerusalem Tribunal in 1960 – that he had saved hundreds of thousands of Jewish lives by such measures – was factual, even though it was met with scornful laughter in court.³⁴

³⁴ Arendt, p. 56; Kimche, pp. 17, 30. There is no evidence to support Kimche’s contention that emigrating Jews had to pay to get out. This appears to be the sort of imaginary assertion without which it is not possible for Jews to write books that deal with such topics.

6. The Rublee-Wohlthat Agreement

The Haavara Agreement specifically dealt with migration to Palestine. The second state-regulated process was the Rublee-Wohlthat agreement, which concerned itself with immigration to other countries, the goal of the majority of emigrating Jews. Just as did Palestine, other countries also required proof of the immigrant's financial self-sufficiency, which caused considerable problems for Germany. The German Reichsbank was forced to provide large amounts of

Myron Taylor gives a speech during the international conference on Jewish refugees from Nazi Germany in Evian-les-Bains, France. Next to him is James Grover McDonald.

already-scarce foreign currency for this emigration. Many countries refused to accept Jewish immigrants as well.

This topic was addressed at the international refugee conference in the summer of 1938 at the French health resort Evian-les-Bains on Lake Geneva. Representatives from 32 countries met there at the Hotel Royal from July 6–15 to discuss how German Jews could be helped. All the conference participants were united: They condemned the prevailing anti-Semitism in Germany, they were most empathetic toward the poor Jews who had been expelled from their homes, they agreed on resolutions that places must be found where the Jews could be accommodated – but every single speaker emphasized that unfortunately his country was not in a position to help by taking in a larger number of immigrants.

The only result to come out of the conference was the establishment of an “Intergovernmental Committee” based in London. Its president was a lawyer from New York, George Rublee.

From the outset Rublee tried to establish contact with the German government. This endeavor, which was supported by the German ambassador in London, Herbert von Dirksen, and the director of the political section of the Foreign Ministry, Ernst Woermann, was successfully sabotaged

George Rublee (1868-1957) was a U.S. lawyer engaged in public matters, who got increasingly involved in foreign affairs starting in 1917.

Helmuth C. H. Wohlthat (1893 – 1982) was a German political scientist and economist. Since 1934 he was the head of the Department for the Procurement of Foreign Currencies within the Reich Department of Commerce. In 1938 he transferred to the Prussian State Government. As State Secretary of the agency in charge of the “four year plan,” he was an immediate subordinate of Hermann Göring. There he was primarily in charge of foreign trade and foreign currency regulation. In this position he brokered the so-called Rublee-

Wohlthat agreement with George Rublee of the Intergovernmental Committee on Refugees in February 1939. It was meant to organize the emigration of Jews from Germany.

for months on end by the state secretary in the Foreign Ministry, Ernst von Weizsäcker, father of postwar German President Richard von Weizsäcker.

Weizsäcker let Rublee understand that he should not hope for any kind of cooperation from the German side. He repeatedly rejected any attempts from other diplomats to put Rublee in contact with German authorities. He even forbade the German embassy in London to respond in any way to Rublee's attempts to make contact, or so much as to mention them in Berlin. He inquired of the British chargé d'affaires in Berlin whether Rublee was Aryan. When Rublee wanted to travel to Berlin of his own accord,

Weizsäcker bluntly rejected his request because to his mind it was of no value.³⁵

Finally Hitler learned of Weizsäcker's unauthorized conduct and immediately summoned Reichsbank President Schacht to his office. He authorized Schacht to work out a financial plan that would enable Germany's remaining Jews to emigrate. Schacht developed a proposal, and in mid-December 1938 Hitler dispatched him to London for a discussion with Rublee and other individuals.

After the war Schacht described this so as to suggest that the plan and the trip to England had been his idea, which he had had to convince Hitler to adopt. Contemporary documents prove otherwise. After his return from London, an article written on his initiative appeared in the *Berliner Zeitung* of December 19, 1938:

³⁵ Compare with Weizsäcker's own account: in ADAP, Serie D, Bd. V.:

"27.7.1938: *The American Ambassador spoke with me today [...] on whether we might not in any way support the Evian Committee [...]. I said he need not be hopeful about it.*" (Doc. 641, p. 754).

"18.10.1938: *The British Ambassador delivered to me the attached memorandum, which the intergovernmental committee [...] is dealing with. In this memorandum – as during the past two months – it is suggested that the London-based director of the committee, the American Rublee, and his colleague Mr. Pell, come to Berlin and begin talks [...]. I advised the Ambassador – as I did last summer – that a trip by Mr. Rublee to Germany is, according to my personal view, of no value.*" (Doc. 645, p. 758.)

"7.11.1938: *The British chargé d'affaires asked me again today in matters Rublee. I explained to him, [...] 'the matter needs time. [...] I asked in what percentage was Rublee Aryan [...]'*" (Doc. 648, p. 761)

C.f. Documents 646, 647, 662. Further rejections from Weizsäcker and the AA are cited in Vogel, pp. 180–228.

“Schacht Discussion in London, the Purpose of the Trip.”

The Foreign Ministry was annoyed at this and Weizsäcker was given the task of getting an explanation from Schacht. This occurred in a telephone conversation on December 20, 1938, about which Weizsäcker wrote a memo.³⁶ It states that Weizsäcker had asked Schacht whether he had received an order from the Führer, and whether he, Schacht, had initiated the newspaper report:

“President Schacht unhesitatingly admitted that the article came from him. It concerned a command from the Führer, which he, the president, had executed within the prescribed framework in London. The Führer requests a report after return. He, Schacht, has now made an appointment to report to the Führer within the next two days, and then will also call upon the Reich minister [Ribbentrop] to give a report. He will not comment further on the matter until he has reported to the Führer.”

Schacht's later recollection of his activities at this stage of his career was obviously influenced by subsequent historical events. His version and what the documents reveal are quite different.

Saboteur Ernst von Weizsäcker

³⁶ ADAP Series D, Bd. V, pp. 768f, Doc. 655.

In any case, in 1938 the Schacht Plan was adopted by the Intergovernmental Committee as a basis for discussion. In January 1939 Rublee was invited to Berlin independently of the Foreign Ministry. There he discussed matters first with Schacht, then with Göring's ministerial director Helmut Wohlthat. Within four weeks the Rublee-Wohlthat Agreement had been reached.

Hjalmar Schacht

The basic idea of the agreement was: By establishing trust funds which would comprise 25 percent of the wealth belonging to Jews in Germany, Jewish emigration would be financed through foreign loans. Each emigrant would, in addition to receiving the requisite amount of cash for entry (*Vorzeigegeld*), receive a minimum amount of capital necessary to establish himself. About 150,000 able-bodied Jews were marked for emigration, and their next of kin were to follow later. The Intergovernmental Committee would concern itself with which countries Jews could migrate to. All Jews over 45 were to be able to remain in Germany and be protected from discrimination. Residential and work restrictions for these Jews were to be lifted.

The text of the memorandum on the Rublee-Wohlthat Agreement was an official contract. Rublee wrote it up after his return to London, and sent it to Wohlthat. Weizsäcker

hesitated to sign it,³⁷ because the Foreign Ministry had not been involved in the negotiations – something he himself had prevented.

Therefore it was Hermann Göring who presented the text to Adolf Hitler, who wholeheartedly assented to it. For his part, Rublee passed the text to the Intergovernmental Committee, made up of the representatives of 30 countries. The committee gave Rublee the task of informing Wohlthat that these countries had taken note of the agreement with interest, and that they would do everything to facilitate the emigration of Jews from Germany on its terms.

In practice this support proved less than promised, but that was not the fault of the agreement or of its German initiators.

After successfully concluding the negotiations, the 72-year-old Rublee resigned from his post as director of the Intergovernmental Committee.

In England a finance company was founded with start-up capital of one million dollars. In the United States, Jewish bankers pledged to raise enough capital to guarantee the realization of every settlement project. The new director of the Intergovernmental Committee, Sir Herbert Emerson, was convinced that the emigration of Jews had been secured and that it would be completed in three to five years' time.³⁸

In January 1939 the Reich Center for Jewish Emigration was founded in Berlin. Its work was based on the Rublee-Wohlthat agreement. It cooperated closely with the Reich Jewish Association in order to simplify the emigration process.

³⁷ "Signing of Agreement with Mr. Rublee is out of the question," ADAP Series D, Bd. 5, Doc.662.

³⁸ Vogel, pp. 252f.

The process began slowly, because most countries refused to take in Jewish immigrants. But at least the Rublee-Wohlthat agreement had removed the financial barriers. Of this period, Rublee later wrote:³⁹

“The Germans fulfilled all their obligations [...] In the months between my departure from Germany and the outbreak of war few, if any, Jewish persecutions occurred in Germany. Some left, and the rest had it easier in Germany. I received quite a number of letters from Germany wherein [...] Jews [...] thanked me for what I had done for them.”

With the outbreak of war, hopes of finding countries to which to emigrate diminished. The Royal Navy blocked the previously used sea routes, and Palestine was practically closed to immigration because the British had severely tightened the requirements for entry.

Emigration routes then went overland, for example through Greece and Turkey. On 18 and 21 June 1940 the *Jüdische Nachrichtenblatt* revealed an adventurous route: “*Via Yokohama to America.*” A map showed the new travel routes: Berlin – Warsaw – Moscow – Chita – Shanghai – Yokohama – San Francisco/Los Angeles. From there on either in an easterly direction to Chicago – New York, or south to Mexico – Panama – Santiago de Chile. The German government offered Jews with valid visas a route through occupied France to Spain and Portugal, from where they could then travel to their destination by ship.⁴⁰

That Jewish emigration continued even after the war began was principally due to, first, the international connections of the Jews, and second, to the assistance of the Ger-

³⁹ Cited in: Vogel, pp. 238f.

⁴⁰ *Jüdisches Nachrichtenblatt*, December 10, 1940.

man bureaucracies, and finally, to an organization that was later to play a completely different role, the *Mossad le Aliyah Bet*.

Betr.: Die Reichszentrale für die jüdische Auswanderung.

In Anlage übersende ich eine Abschrift des Schreibens des Herrn Generalfeldmarschalls Göring als Beauftragten für den Vierjahresplan vom 24.1.1939 an den Herrn Reichsminister des Innern, auf Grund dessen im Reichsministerium des Innern eine Reichszentrale für die jüdische Auswanderung zu bilden ist, deren Leitung mir übertragen ist.

Auf Grund des Auftrages, die Geschäftsführung der Reichszentrale zu regeln, bestimme ich folgendes:

- a) Die Reichszentrale besteht aus einem Ausschuss und einer Geschäftsstelle.
- b) Der Ausschuss besteht aus den Vertretern der an der gestellten Aufgabe beteiligten Dienststellen.
- c) Als Geschäftsstelle bestimme ich die bereits sachlich mit diesen Aufgaben befaßte Abteilung II des Geheimen Staatspolizeiamtes, zum Geschäftsführer den Leiter dieser Abteilung, SS-Standartenführer Oberregierungsrat Müller.

Ich bitte den Herrn Reichsminister des Auswärtigen, den Herrn Reichswirtschaftsminister, den Herrn Reichsminister der Finanzen und den Herrn Staatssekretär Dr. Stuckart, mir je 1 Vertreter für den Ausschuss der Reichszentrale zu benennen, damit ich alsbald die erste Sitzung des Ausschusses anberaumen kann.

Letter by Reinhard Heydrich of January 30, 1939, to the Reich Minister of Foreign Affairs regarding formation of the "Reich Center for Jewish Emigration"

7. The Mossad le Aliyah Bet

Mossad le Aliyah Bet literally means ‘Office for the Second Immigration,’ which referred to the illegal immigration to Palestine. It was out of this organization that later the Israeli secret service, Mossad, developed. Jews from Palestine founded it in Paris in 1937 in response to Britain’s Palestine policies. The British were then issuing only a limited number of immigration certificates to Palestine – fewer, in any case, than the number of Jews seeking entry.

The British classified prospective immigrants according to wealth, profession, and class; the certificates were distributed in these individual categories in numbers that reflected the desirability of immigration from each categories. Anyone who did not fit into a category considered essential by the mandatary administration would not be granted a visa.

The following immigration categories were valid from 1932 to 1945:

Category A: Persons with their own capital:

A1: Capitalists possessing £P1000 (Palestine pounds)

A2: Professionals with £P500, so long as the economic situation warranted their immigration.

A3: Craftsmen with at least £P 250.

A4: Pensioners with a minimum income of £P4 per month.⁴¹

A5: Persons with work skills scarce in Palestine, with a minimum capital of £P500.

Category B: Persons with a secure income:

B1: Orphans under 16 years of age whose keep was guaranteed by public bodies.

B2: Clergymen.

B3: Students and pupils whose keep was guaranteed until their entry into the work force.

Category C: Work certificates for workers between 18 and 35 years. The number of these certificates was audited by the Palestinian authority twice a year.

Category D: This category was reserved for wives, children and parents of Jews living in Palestine, as long as the residents could show that they were able to support their relatives.

Finally, there was the category *Jugendaliya* (Youth Aliyah) for youths between the ages of 15 and 17 years.⁴²

Jewish leaders were understandably furious at Jews being categorized on the basis of their economic value. The Palestinian Mandate entrusted to Britain on July 24, 1922, called for the British to support and to simplify Jewish immigration, while safeguarding the rights of other peoples in the country. Hence from the inception of the restrictive measures, the Zionists attempted to find ways around them,

⁴¹ This minimal sum indicates the purchasing power the British Pound Sterling had at that time.

⁴² From: *Philo-Atlas*, pp. 141–144, quoted in: Eckert, *Emigration*, p. 143.

and to send Jewish transports to Palestine illegally, in the eyes of the British.

On May 17, 1939, the British published a new White Paper, which tightened the immigration regulations anew.

In reaction to these events, in 1937 the Mossad began to establish offices in all the European countries, and sought immediate contact with agencies in Berlin, in particular with the SS and the Gestapo. Thus began a lively collaboration between the Gestapo and the Mossad.

As befitted their attitude towards Jewish emigration, the SS and the Gestapo were helpful towards the Mossad agents in many ways. In December 1938 Himmler ordered that Jewish prisoners in concentration camps who desired to emigrate should be released.⁴³ Additionally, Mossad agents were permitted to enter the camps to recruit Jews willing to go to Palestine in illegal migration ships. Nothing stood in the way of the release of such inmates. Kimche writes:

“Since he [Pino, the Mossad delegate] guaranteed the Gestapo that he would provide for their immediate emigration, Pino was in a position to get a large number of young Jews out of the concentration camps. A signed form from him sufficed to effect their release.” (p. 30)

Official seal of the Mossad

⁴³ “The Reichsführer SS and Chief of the German Police has lifted restrictions on Jews who intend to emigrate.” Circular of December 8, 1938, Bundesarchiv Koblenz (BA), R58/276, Bl. 165. A number of similar orders can be found in further volumes of documents as late as 1942.

Since direct travel to Palestine was illegal, the emigrants needed visas from other countries, for example, from immigration authorities in ports that the ships would stop at on the way to Palestine. The Gestapo became involved in this as well as in the chartering of suitable ships, even covering part of the costs. In 1939 a number of ships arrived in Palestine, bringing thousands of illegal immigrants to the country.⁴⁴

The cooperation between the Mossad and the Gestapo did not end with the outbreak of the war; indeed, it grew even stronger. Emigration papers were often made out for other countries, and the emigrants instructed not to reveal anything about their final destination. Without such help from the SS and the Gestapo and without the tacit acquiescence of the German authorities, the Mossad could not have done its work.

In the summer of 1939, an operation was planned that would have to shipped 10,000 Jews from German ports in a single convoy to Palestine. Before the ships could sail, however, war broke out and the English blocked the Channel.

⁴⁴ More details are offered in Kimche's book, though it contains some factual errors. Interesting details are also found in the essay by Ball-Kaduri, who, like Kimche, is not always accurate.

8. Irgun Proposals

Two years later, in summer 1941, the 1939 plan was revisited by Abraham Stern, one of the leaders of the Irgun, the Jewish anti-British resistance and freedom organization.⁴⁵ He offered to help the Germans in their battle against England, and suggested that Germany immediately begin to ship out 10,000 Jews in return.⁴⁶ He was of the opinion that the German ships could break through the English blockade and bring the Jews to Palestine. Once they had arrived there, the English would not be able return them.

Abraham Stern (1907-1942)

⁴⁵ The full name reads: "*Irgun Zevai Leumi*" = national military organization. Since September 1940 Abraham Stern had dissociated himself from the "Irgun" and established his own group, "Lechi" ("*Lochamei Cherut Israel*" = fighters for Israel's freedom). But in the first few months after the separation, he continued to use the former name because he saw himself as the legitimate representative of the Irgun.

⁴⁶ Katz, pp. 85f.

This was Stern's second attempt at establishing contact with the German government. Half a year earlier, in January 1941, Irgun had offered in a letter to fight for Germany against England,⁴⁷ in particular through sabotage and spying in Palestine. In return they demanded "that the [...] national aspirations of the Israeli freedom movement be recognized by the German Reich," and the establishment of a Jewish brigade:⁴⁸

"[...]military training and organization of Jewish manpower in Europe, under the leadership and command of the NMO, in military units that would play a combat role in the conquest of Palestine, should that become a front."

This letter was obviously sent at the same time that two of Stern's agents arrived to see Werner Otto von Hentig in Beirut. Hentig was an advisor in the Ministry of Foreign Affairs; at the beginning of 1941 he was on an official visit to what was then the French mandate of Lebanon. The conversation must have been similar in content to the letter, because Hentig wrote:

"In Beirut I took up residence in the 'Hotel Monopol.' [...] The most extraordinary delegation came from Palestine itself. The leader, a handsome young officer type, offered to work together with the National Socialists against their own people, especially the orthodox Zionists, if Hitler would agree to an independent Jewish Palestine." (p. 338f.)

"I could only respond to the Jewish delegation that the offer of cooperation and the conditions stated could

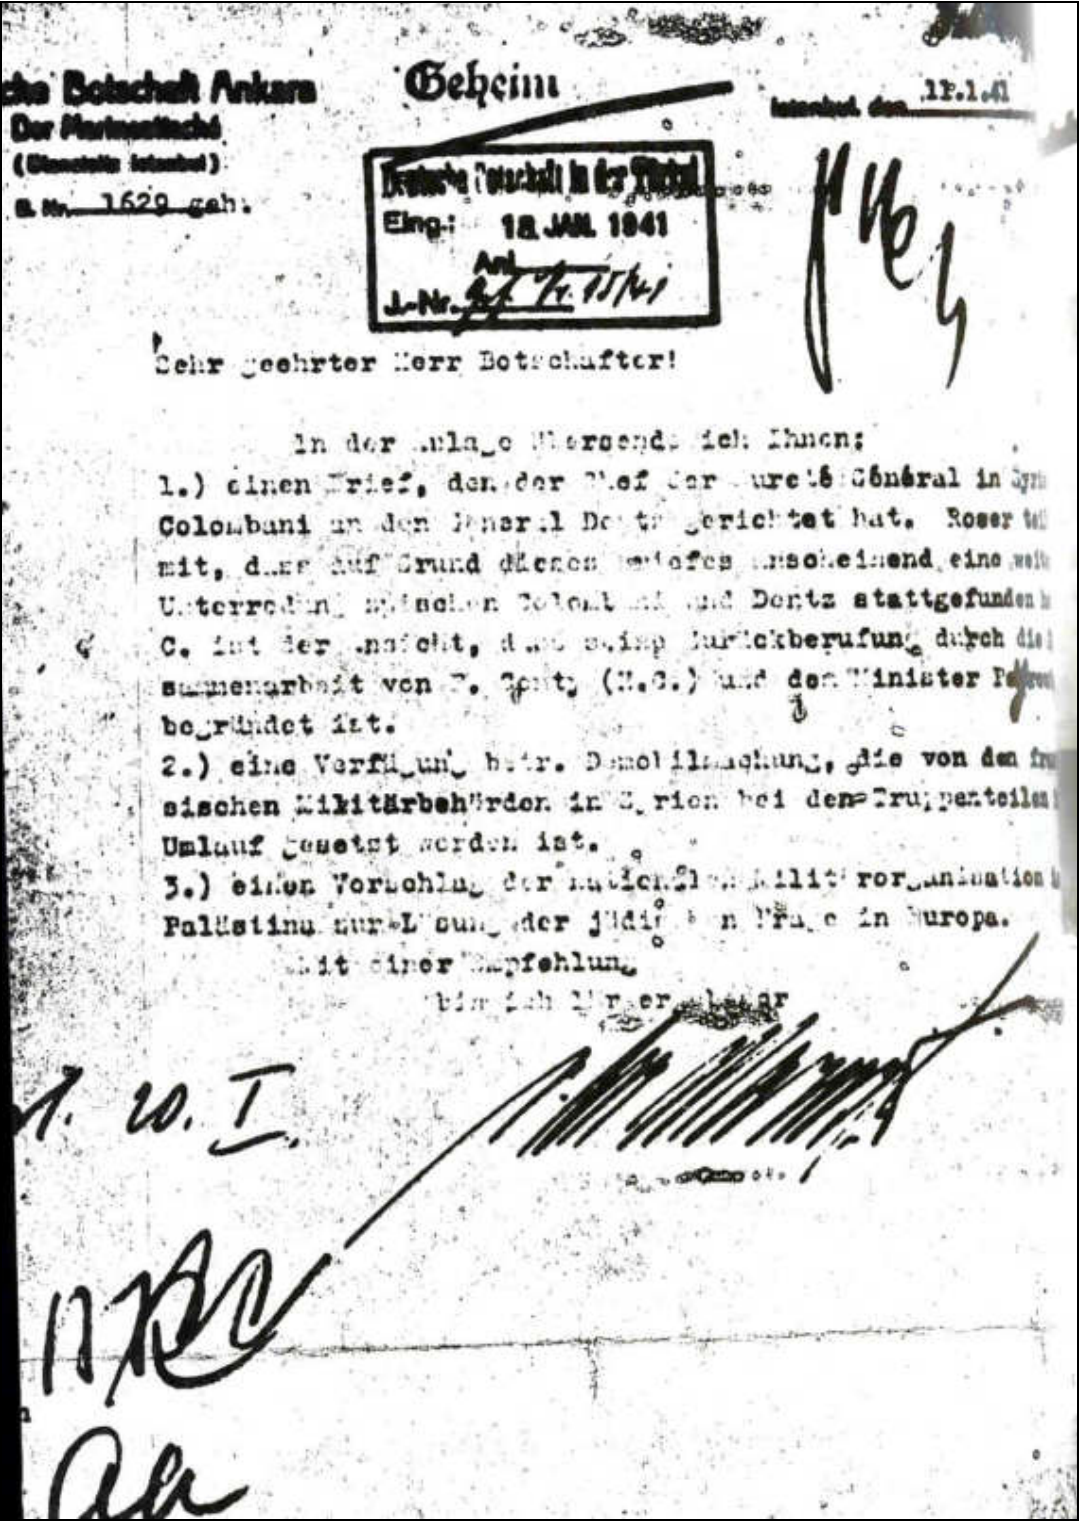

⁴⁷ According to Brenner, p. 267, it was Stern who authorized the communication.

⁴⁸ For the full text of this historic document see the Appendix.

never be accepted out of consideration for our Arab friends and our general principles.” (p. 399)

The Irgun letter, written in German, arrived safely in Germany,⁴⁹ but whether a German reaction followed cannot be ascertained from the files.

⁴⁹ A copy of this letter is found in the Politisches Archiv des Auswärtigen Amtes, Bonn (PA/AA), Nr. E 234152-234158.

First attempt at making contact by Abraham Stern of the Irgun with the German government for the purpose of cooperation, made by a letter sent to the German embassy in Turkey on January 11, 1941 – here the accompanying letter. The complete text of the proposal is reprinted in the Appendix.

9. Conclusion

The illegal immigration to Palestine continued even after the war ended, until the founding of the State of Israel in 1948, because the British kept Palestine's borders closed to Jews. In the decade from 1938 to 1948, over a hundred thousand Jews migrated to Palestine illegally.⁵⁰

The total number of Jews who left Germany (and Austria) after 1933 cannot be ascertained statistically, because there was no counting at the points of departure or at the points of arrival. Estimates vary from 100,000 and 537,000, a discrepancy that reflects the unreliability of those figures.⁵¹

In actual fact, all figures – with one exception – remain guesswork, and refer to different groups and times. There are no reliable figures that embrace Jewish emigration as a whole. Some authors construe it as confined to emigration from Germany within its pre-1938 borders. Others add Austria to their calculations. Some wish to focus exclusively on the years from 1933 to 1939, although it is clear that emigration continued after outbreak of war, and that illegal emigration to Palestine accelerated in 1938.

⁵⁰ Nicosia, p. 245.

⁵¹ Rosenstock attempts to shed some light on this confusion by focusing on the imponderables, to make clear that all figures must remain speculations.

There is only one figure that derives from an official German source that, however, is rejected by all establishment authors because it seems too high. Interestingly, this figure appears in a document that is otherwise highly regarded, thanks to its use in proving the German plan for "Jewish extermination": the "Wannsee Protocol." All information in this document is judged credible and convincing, except for its emigration statistics.

On page 4 of the Protocol the following figures are given:

"from the assumption of power until the October 31, 1941, deadline, altogether around 537,000 Jews emigrated."

"From January 30, 1933, from the old Reich, about 360,000

From March 15, 1938, from the Ostmark (Austria), about 147, 000

From March 15, 1939, from the Protectorate of Bohemia and Moravia, about 30,000."

We shall not question the authenticity of the Protocols here, nor comment on the significance of the meeting at the Wannsee villa, which has recently received a different interpretation. What is important here is to point out once again the tendency of establishment historiography arbitrarily to designate certain parts of a document as authentic, while rejecting other portions as inauthentic. As for our investigation, we stand by our statement that exact emigration figures are not available.

About a quarter to a third of the emigrants went to Palestine, a third to European countries and the rest overseas, especially to North and South America.

The Haavara, as stated at the beginning, is occasionally mentioned in specialized publications, but seldom in the

public media. The Rublee-Wohlthat agreement is practically unknown. Most Germans are certainly extensively informed about the ‘Holocaust,’ but have scarcely heard of the emigration plan that enabled the large majority of German Jews to depart unmolested. This is apparently one of the “*truths undesirable for national pedagogy*,” as Walter Hofer once formulated it.

The historian’s task will always be to swim against the stream and to help discover truths with which to bring the past into clearer focus.

Über die Nachteile, die eine solche Auswanderungsforcierung mit sich brachte, waren sich alle Stellen im klaren. Sie mußten jedoch angesichts des Fehlens anderer Lösungsmöglichkeiten vorerst in Kauf genommen werden.

Die Auswanderungsarbeiten waren in der Folgezeit nicht nur ein deutsches Problem, sondern auch ein Problem, mit dem sich die Behörden der Ziel- bzw. Einwandererländer zu befassen hatten. Die finanziellen Schwierigkeiten, wie Erhöhung der Vorzeige- und Landungsgelder seitens der verschiedenen ausländischen Regierungen, fehlende Schiffsplätze, laufend verschärfte Einwanderungsbeschränkungen oder -sperrern, erschwerten die Auswanderungsbestrebungen außerordentlich. Trotz dieser Schwierigkeiten wurden seit der Machtübernahme bis zum Stichtag 31.10.1941 insgesamt rund 537.000 Juden zur Auswanderung gebracht. Davon

vom 30.1.1933 aus dem Altreich	rd. 360.000
vom 15.3.1938 aus der Ostmark	rd. 147.000
vom 15.3.1939 aus dem Protektorat Böhmen und Mähren	rd. 30.000.

Die Finanzierung der Auswanderung erfolgte durch die Juden bzw. jüdisch-politischen Organisationen selbst. Um den Verbleib der verproletarisierten Juden zu vermeiden, wurde nach dem Grundsatz verfahren, daß die vermögenden Juden die Abwanderung der vermögenslosen Juden zu finanzieren haben; hier wurde, je nach Vermögen gestaffelt, eine entsprechende Umlage bzw. Auswandererabgabe vorgeschrieben, die zur Bestreitung der finanziellen Obliegenheiten im Zuge der Abwanderung vermögensloser Juden verwandt wurde.

Section of page 4 of the infamous Wannsee protocol with official emigration figures. Translation overleaf.

All the offices realized the drawbacks of such enforced accelerated emigration. For the time being they had, however, tolerated it on account of the lack of other possible solutions of the problem.

The work concerned with emigration was, later on, not only a German problem, but also a problem with which the authorities of the countries to which the flow of emigrants was being directed would have to deal. Financial difficulties, such as the demands by various foreign governments for increasing sums of money to be presented at the time of the landing, the lack of shipping space, increasing restriction of entry permits, or the cancelling of such, increased extraordinarily the difficulties of emigration. In spite of these difficulties, 537,000 Jews were sent out of the country between the takeover of power and the deadline of 31 October 1941. Of these

starting Jan. 30, 1933, from Germany proper	ca. 360,000
starting March 15, 1938, from Austria	ca. 147,000
starting March 15, 1939, from the Protectorate of Bohemia and Moravia	ca. 30,000

The Jews themselves, or their Jewish political organizations, financed the emigration. In order to avoid that impoverished Jews be left behind, the principle was followed that wealthy Jews have to finance the emigration of poor Jews; this was arranged by imposing a suitable tax, *i.e.*, an emigration tax, which was used for financial arrangements in connection with the emigration of poor Jews and was imposed according to income.

Appendix

Irgun's Offer to Cooperate

The main thrust of the National Military Organization (NMO) in Palestine's (Irgun Zevai Leumi) proposal for solving the Jewish question in Europe, and for actively participating on Germany's side in the war.

"Germany's leading National Socialist statesmen have in comments and speeches more than once emphasized that a New Order in Europe requires a radical solution of the Jewish question through evacuation ('Judenreines Europa').

The evacuation of the Jewish masses from Europe is a prerequisite for solving the Jewish question, which is possible only by resettling these masses in the homeland of the Jewish people, Palestine, and by establishing the Jewish State in its historic boundaries.

To solve the Jewish problem in this way and once and for all to liberate the Jewish people is the aim of the political activity and the ongoing struggle of the Israeli freedom movement, the National Military Organization in Palestine (Irgun Zevai Leumi).

The NMO, which knows full well the good will of the Reich government and its authorities toward Zionist

activity in Germany and toward Zionist emigration plans, is of the opinion that

1. a commonality of interest could exist between the interests of a new order in Europe according to the German concept, and the true national aspirations of the Jewish people as they are embodied by the NMO;

2. cooperation between the new Germany and a renewed folkish-national Jewry would be possible; and

3. the establishment of the historic Jewish state on a national and totalitarian basis, bound by treaty with the German Reich, would be in the interest of maintaining and strengthening Germany's future position as a power in the Near East.

Proceeding from these considerations, the NMO in Palestine, under the condition that the above-mentioned national aspirations of the Israeli freedom movement be recognized by the German Reich, offers to actively take part in the war on Germany's side.

This offer by the NMO, which could include activity in the military, political and information fields in Palestine and, after certain organizational preparations, outside Palestine, would be linked with the military training and organization of Jewish manpower in Europe, under the leadership and command of the NMO, in military units that would play a combat role in the conquest of Palestine, should that become a front.

The indirect participation of the Israeli freedom movement in the New Order in Europe, already in the preparatory stage, in connection with a positive-radical solution of the European Jewish problem in the sense of the above-mentioned national aspirations of the Jewish

people, would extraordinarily strengthen the moral basis of the New Order in the eyes of all humanity.^[52]

The cooperation of the Israeli Freedom Movement would be in line with the last speech given by Chancellor Mr Hitler, that he would employ any combination and coalition in order to isolate and beat England.”

⁵² This rather complicated sentence, put in clearer language, states: German Jewish politics, *i.e.*, the expulsion of Jews from Germany, is possibly immoral in the eyes of the world. It would gain moral justification if through this expulsion a Jewish state came into being. The results justify the means, or: What isn't permitted for the Germans is welcome support for Jewish nationalists in their battle, and therefore justified.

A Brief Overview of the Origins, Nature and Activity of the NMO in Palestine

The NMO arose in part out of the Jewish self-defense force in Palestine and the Revisionist movement (New Zionist Organization), with which the NMO remained in a loose union facilitated by Vladimir Jabotinsky until his death.

The pro-British attitude of the revisionist organization in Palestine made a renewal of the union impossible, and resulted in a split in the fall of that year.

The aim of the NMO is to establish the Jewish state within its historic borders.

In contrast to all other Zionist movements, the NMO rejects infiltration of the colony as the only means of achieving occupation and gradual settlement of the Fatherland, and proclaims as its motto that struggle and sacrifice are the only true means by which to conquer and liberate Palestine.

Vladimir Jabotinsky (1880-1940), was the leader of the revisionist Zionists and founder of the Irgun.

Through its militant character and its anti-British attitude, and because of the constant persecution of the British administration, the NMO was forced to conduct its political activities and the military training of its members in secret.

The NMO, whose terrorist activity had already begun in the fall of 1936, gained prominence in the summer of 1939, after the British White Paper was published, through its intensified terrorist attacks and sabotage of British property. At that time the press of virtually the entire world reported and discussed this activity, as well as the [NMO's] daily clandestine radio broadcasts. Until the outbreak of war, the NMO maintained independent political offices in Warsaw, Paris, London, Geneva, and New York.

The Warsaw office was mainly concerned with the military organization and training of the national Zionist youth. It was in close contact with the Jewish masses, which, especially in Poland, enthusiastically followed the NMO's struggle in Palestine and supported it in every way possible. Two newspapers published by the NMO appeared in Warsaw: *Die Tat* and *Jerozalima wseljona*.

The Warsaw office also maintained close contact with the pre-war Polish government and with military circles that regarded the aims of the NMO with interest and favor. Hence, in 1939, groups of NMO members traveled from Palestine to Poland, where they were quartered in barracks and their military training perfected under Polish officers.

Negotiations between the NMO and the Polish government in Warsaw aimed at actualizing and concretizing their assistance were terminated due to the outbreak of the war. Documentation of this will be easy to find in the archives of the pre-war Polish government.

In its worldview and structure the NMO is closely related to the European totalitarian movements.

The ruthless defense measures of the British administration, the Arabs, and the Jewish socialists have at no time sufficed to weaken or to paralyze the NMO's fighting ability.

Affidavit by Dr. Ernst Marcus, Manager of Paltreu

The following affidavit on the emigration policy of the German government under Hitler was written in 1946 by the German Jew and lawyer Dr. jur. Ernst Marcus, who between 1933 and 1939 was the deputy chairman of the Paltreu (*Palästina Treuhandstelle zur Beratung deutscher Juden G.m.b.H.*; Palestine Escrow Agency for Counseling German Jews, Ltd.). This agency financed the emigration of German Jews to Palestine by offsetting the costs with German exports. As such, Marcus had close contacts within the German Departments of Foreign Affairs and Commerce, to the German industry and to various Zionist organizations. In 1939 he emigrated to Palestine, but in 1951 he returned to Germany.

The following text is a translation of a document existing as a carbon copy on thin copying paper, making text typed on the reverse shine through. Page three is not a copy but an original, though, and was obviously written with a different typewriter without umlauts. Whether the text is authentic remains to be verified. Page 11 of this document was typed on twice, with a line shift. One line was typed over completely, making it illegible.

Caution is advised when Dr. Marcus comments on issues beyond his immediate realm of experiences. In some cases his views are clearly wrong, as noted in footnotes.

On Marcus see Röder/Strauss (ed.), p. 474.

Translation

The German Foreign Office
and the Palestine Question in the Years 1933-1939

by

Dr. ERNST MARCUS

(written in the year 1946)

- I. When, with the “seizure of power” on 3 January 1933, the hour struck which made the leader of National Socialism chancellor of the German Reich, the big terrible ordeal approached, and not only for German Jewry. There seemed no doubt that, according to his program, Hitler would handle the Jewish question in a global scope and make an attempt to find a solution along his lines. What role would Zionism and Palestine play in this? Which attitude would German foreign policy, directed by Hitler, take towards the Jewish National Home in Palestine? How would the question of emigration of German Jews to Palestine be treated?

When, in the fall of 1933, I re-entered the rooms of the building at Wilhelmstrasse 75 for the first time since the fall of the Weimar Republic, the transfer agreement between the Jewish agencies in Palestine and the Ministry of Commerce had been signed by Mr. E.S. Hoofia. The transfer companies Haavara and Paltreu had been established. As their representative and as a representative of those interests of the Palestine Office which led to the creation of an appropriate organization for emigration and the continuous transfer of people and capital to Palestine, I came once more into contact with the Orient Department. The first discussions on the foreign- and economic-policy aspects of our work began where Moritz Sobernheim, as “adviser for Jewish questions,”

had peacefully dwelled for more than a decade with his large library (many of his colleagues and the old allies were still in office). When I now look back on the history of the negotiations conducted by me between 1933 and 1939, I realize how valuable the knowledge of men and relationships was that I gathered in earlier years as an expert for mandate law and as a member of the “German Committee Pro Palestine” and the “German League for the League of Nations.” It was not a new beginning but a reunion with the Foreign Office.

- 2 -

I knew well its old Prussian royal and German imperial history. I had frequently met personalities from the Foreign Office during the time of the Weimar Republic. Now I had to represent interests that made it necessary to first observe which direction the Palestinian policy of the Third Reich would take. The starting points for a National Socialist policy in relation to Palestine were:

- a) Already in 1933 it became clear that Palestine represented the main receiving area for the emigration of Jews from Germany as desired by Hitler;
- b) The national renaissance of the Jews in Palestine could not be ignored by National Socialism, even if the developing community remained small and was insignificant as a potential enemy;
- c) The more the foreign policy of the German Reich transitioned to reintroduce Germany into the great game of the powers in the Middle East, the more it had to take a stance on Arab aspirations in Palestine.

However, during the first period of Hitler's rule it turned out that German foreign policy towards Palestine was extraordinarily restrained. That restraint was not abandoned until 1936. The reasons for this may have been multifari-

ous in nature. First, Hitler tried to initially give the impression that his regime would not disrupt the continuity of German foreign policy, and especially would not work against British interests. – However, continuity of German foreign policy in the Palestinian question meant compliance with the line that had not been abandoned by the Foreign Office since the first emergence of the Palestinian issue in world politics. Wilhelm II, who for romantic reasons, as is known, did not look unfavorably upon Herzl's proposals for Germany to become a protective power over a Jewish homeland to be established in Palestine,

- 3 -

was held back by von Buelow and Marschall. Maintaining the status quo in the Arab provinces of Turkey remained a fundamental principle of the Wilhelmstrasse until 1916. One need only read the German declaration of 1917 on the Jewish developmental work in Palestine, formulated with extreme caution, which was based on Zionist negotiations in Berlin and Constantinople, to realize that Jagow did not want to deviate from Marschall. After Palestine had been separated from the Turkish realm due to the peace treaties of Sèvres and Lausanne, and after it had become a British mandate, the Foreign Office behaved passively in the Palestine question. Nothing changed even when, after the entry of Germany into the League of Nations, a German member – Councilor Kastl from the Reich Union of German Industry – was appointed to the mandate commission. Kastl, who was an economist and had hardly any interest in foreign policy, intervened little in the discussions between the commission and the mandatory power. –Although Rathenau and Stresemann, as Foreign Secretaries, made statements on

the Palestine question, they did not change the cautious, benevolent attitude towards Jewish plans in Palestine. The actual work was done in the Oriental Department under the direction of Privy Councilor Pruefer, and in the Department for Jewish Affairs, which was established during the war of 1914 and staffed with Legation Councilor Professor Moritz Sobernheim and later with Professor Eugen Mittwoch.

It is a known fact that leading personalities of German foreign policy sympathized personally with the Zionist cause, and that they expressed this sympathy in the German Committee Pro Palestine. Meetings held on the occasions of the many visits by Dr. Weizmann in Germany were attended by many German diplomats. This circle included: the Secretaries of State von Schubert and von Buelow, Freiherr von Richthofen, Earl S. Bernstorff, Dr. Diekhoff, Privy Councilor Pruefer, et al.

- 4 -

- II. When Hitler became chancellor, and right after that Jewish emigration began with feverish rapidity, the Palestinian Unit in the Wilhelmstrasse was staffed by Legation Councilor Schmidt-Roethe. The German consul general in Jerusalem was Dr. Wolff, married to a Jewess.

Legation Councilor Schmidt-Roethe, earlier active in the Reich's consular service and by disposition conservative and patriotic, soon found himself facing acute problems mainly concerning trade, economics and foreign exchange, but they also had to be examined under aspects of foreign policy. These included mainly transfer projects of various kinds, partly brought to Berlin by Jewish negotiators from Palestine through the mediation of Consul General Wolff. The largest of these projects was the

so-called Hanotea transfer,^[53] based on the offer by Pardessim^[54] to Jewish emigrants from Germany, who had to deposit the requisite amount in Reichsmarks. The resulting Reichsmark accounts were to be transferred by purchasing German merchandise. While the monetary and economic issues emerging from such projects were within the jurisdiction of the Reich Department of Commerce and the Reich Office for Foreign Exchange Control, the Foreign Office was interested in the repercussions which the settlement of many German Jews had on German foreign policy, on the trade situation in Palestine and the Middle East, and on the boycott movement against German goods in the Anglo-Saxon countries. The conviction of the advisors that emigration was indispensable, and that the creation of a firm framework for this emigration was also in Germany's interest, as well as the assumption of a favorable effect on German exports to the Middle East and against the boycott, led to the endorsement of the transfer agreement between the Reich Department of Commerce and the Jewish agencies in Palestine, which had been finalized by Mr. Hofien in the fall of 1933.

- 5 -

This agreement was a decisive step on the path of promoting an organized Jewish emigration to Palestine, while taking along assets in the long run. As such, the radical group among the NSDAP was deprived of an opportunity to let Jewish emigration take on chaotic forms, as ultimately happened in late 1938. In addition, the agreement was based on the fact that among all coun-

⁵³ A company dealing in citrus trees.

⁵⁴ Jewish cooperatives.

tries, Palestine remained the preferred destination of emigration until the outbreak of war.

Schmidt-Roethe, a smart negotiator, swift in detecting problems and energetic in expressing his opinion about them, was extremely impulsive. I remember a discussion leading to a fierce dispute in early 1934, when he insisted on his opinion – based on Jewish reports from Palestine – that the transfer primarily served to promote Marxist institutions in Palestine, and that this was politically dangerous. The dispute was carried out by him with the greatest intensity and stridency, and it took a lot of calmness and steadfastness lest such outbreaks ended in a personal conflict. But Schmidt-Roethe was fair and respected the opinions of his interlocutors. A firm word, used at the right moment, brought him back to self-control. Above all, he respected the Jewish attitude toward the situation, and our attempts to handle it. His influence on the attitude of the Office in the years 1933 and 1934 is to be regarded as favorable.

The Berlin office based its position on reports which it received from the Jerusalem Consulate General. It proved to be quite valuable that Consul General Wolff was a staunch opponent of the NSDAP. He did not even bother to deny it. When I visited him in Jerusalem in early 1934 – as arranged by the Foreign Office – he was sitting in his office at his desk, turning his back to the Führer's portrait which had been foisted upon him, and as soon as the conversation turned to the regime, he expressed himself with unreserved clarity. Had Hitler's portrait

- 6 -

had ears to hear, there would have been no telling what effect the curses would have had which the Consul Gen-

eral uttered. But it was not until about the end of 1935 that Berlin decided to change its representative in Jerusalem. The cooperation of the German Consulate General was very important for the promotion of Jewish emigration to Palestine, for the transfer of capital, and for the maintenance of imports of citrus fruits from Jewish Pardess cooperatives because the Consulate had the competence to express its expert opinion on all the information underlying our plans – and a hostile representative of the Reich would have been able to do us infinite harm. But even an indifferent and bureaucratic tardiness could at times, when quick decisions were needed, delay important actions until they lost their value. All this we were spared by Wolff's sympathetic cooperation. This cooperation was at times very far-reaching. During my stay [in Palestine] in early 1934, the final form was established for the transfer of capital, which had been set up by Haavara and Paltreu as transfer companies after the aforementioned agreement of August 1933 had been reached. During that time, hardly a telegram or a report by the consul general was sent to Berlin that had not been discussed with me. Through personal helpfulness, Wolff did everything in his power in order to compensate in his field of work for the consequences of German policy with regard to the Jewish problem. During those days, I have often warned him to be more careful with his statements to strangers about the regime. He never heeded these warnings. It was therefore not surprising that he was eventually made to resign and simply retire. His fate could easily have been much worse.

Two German personalities should be mentioned here that played an important role in Palestine affairs at that time: the old consul Timotheus Wurst, Senior of Palestine-

Germans and director of the Templar Bank, and Dr. Schnei-

- 7 -

der, managing director of the German Oriental Society. Wurst belonged to the old generation of Palestine-Germans, who are mostly descendants of the peasantry of Swabia and who settled in Palestine as early as two generations ago. They had remained culturally linked to Germany without paying much attention to political developments in Germany. Wurst himself, who was already in his seventies in 1934, had never seen Germany until 1933. In 1933 he made his first trip to Germany, where he was mesmerized not by Berlin, but by his southern German homeland. He had no inclination toward or appreciation for National Socialism. He also could not find any meaning in the development that had led to Hitler, since he had neither seen Wilhelmine Germany nor the Germany of the Weimar Republic. But now the Third Reich was a fact to be reckoned with, and the quiet house on the Jaffa-Tel Aviv Road in Tel Aviv, hidden behind garden walls and trees, which was Wurst's office building, admitted a growing stream of applicants for visas and certificates, and Wurst accommodated them generously. Particularly important, however, was Wurst's position as director of the Bank of the Templar Society. Because this bank – the only German bank in Palestine – was the correspondent bank of the Reichsbank, and as such it assumed various functions within the capital transfers of the Transfer Agreement. Thus the bank's business suddenly took an unexpected upturn, not only due to administering the so-called special accounts, but also because of the important commercial and currency transactions carried out or approved by

the transfer companies Haavara and Paltreu. It was primarily to Wurst's credit that the Bank's operations with the Jewish authorities were carried out correctly and without friction. But above all, he showed impartiality and discretion, when he showed up in Berlin every year, together with Jewish and Arab representatives of the citrus-export cooperatives and farmers, in order to negotiate with the Department of Commerce issues like import quota and payment conditions for Palestinian

- 8 -

citrus fruits to Germany. The last time he called me in my office in Berlin in 1939, he began the conversation flustered and without greetings. I sensed that something was wrong. Later he came to see me and apologized. He spoke from the rooms of the representative of the NSDAP's foreign organization, and was therefore "under surveillance." His dejection was sincere. He did not feel comfortable among Nazi officials.

In 1933, Dr. Schneider was a leading member of the German Oriental Society, later serving the I.G. Farben Trust in Germany, and finally president of the German Oriental Society. Since the first days under Hitler he tried to exert influence on his Palestine politics. He was a man of a different kind. As a party member belonging to the younger generation of smart businessmen and politicians who had brought the National Socialist regime to notice, he based his expert knowledge about Palestine on just one short visit in 1933. Ever since, in an attempt to assert himself, he repeatedly surfaced when in this context matters of foreign policy or economics were negotiated in Berlin. He was pretentious and scheming, and therefore quite a dangerous opponent in the Berlin milieu, which was difficult as such. Schneider was in touch

with Jewish personalities and groups in Palestine, which were partly commercial in nature. Above all, Hanotea's transfer projects relied on him, and he represented them to the Berlin authorities. Although Schneider outwardly exhibited a friendly attitude, I have never doubted that he played a duplicitous role.

One incident from the early period of Palestine policy deserves to be mentioned for reasons of curiosity. One day – I think in February 1934 – I was called by the Foreign Office and asked by Legation Councilor Schmidt-Roethe to join an urgent meeting. Dr. Schmidt-Roethe informed me that Reich Minister Frick, who had just married, was about to embark on a cruise through the Mediterranean on a Hapag steamer, and that he intended to disembark in Palestine. The Foreign Office, which found out about this plan only recently, had vainly warned about the dangers coming with a visit to Palestine. This warning was not respected, and Frick had not changed

- 9 -

his dispositions. He – Schmidt-Roethe – therefore decided to inform me confidentially about this in view of the importance of the matter and the serious complications that would arise for the German Jews if anything were to happen to Reich Minister Frick, and he asked me to do everything in my power to prevent an action from the Jewish side against Frick. I replied that the Office's warning to Frick was certainly justified. For my part, I wanted to pass on this message to the Jewish Agency, which would certainly recognize the danger caused by Frick. I could not know, however, what they could or wanted to do about it, and in any case I would have to point out that my acceptance of the notice given to me

could in no way burden the Jewish side with responsibility should unpleasant events occur. After this promise had been given, I spoke first with Captain Foley of the British Embassy who in his capacity as passport officer already knew about Frick's intended disembarkation in Palestine. The British Embassy had informed the Foreign Office immediately, and they forwarded this to the Colonial Office. From there, the high commissioner had probably been notified regarding safety measures. For my part, I then issued a special communication to the Jewish Agency abroad. When I myself arrived in Palestine shortly afterwards, I heard that Frick had gone ashore in Palestine with a tour group of the Hapag steamship *Milwaukee*, had made the usual sightseeing tour of the Christian holy sites, and had finally dined at the King David Hotel, when incidentally Dr. Weizmann was also having lunch with his party at another table. Frick had then left the country without incident. I sighed with relief, because an incident back then could have affected the German Jews far worse than they were affected later by the vom Rath affair. Many thousands were still in Germany who by November 1938 had already emigrated.

Legation Councilor Schmidt-Roethe was replaced by Privy Councilor Pilger as advisor for Palestine, who later was ambassador in Kabul. Pilger did not have the stormy temper of his predecessor, and none of the many conversations which

- 10 -

I had with him was anything but calm and orderly. He was one of those diplomats who exhibit an attitude like a public official and avoid to comment recognizably on questions put forward to them. For example, as long as

Pilger held that position, he never took the initiative in any matter relating to Palestine. However, it must be acknowledged that he handled all matters submitted to him with great objectivity and accuracy, and that he never refused to help, if he was asked. Having been particularly interested in economic issues following his inclination, Pilger was personally familiar with the economy of the Middle East, since his father-in-law was director of Siemens Orient in Cairo and played a major role among the Germans in Egypt.

III. Privy councilor Pilger finally left this office and went as an envoy to Afghanistan, and he was succeeded by a personality whose mentality was the opposite of Pilger's: Envoy Werner Otto von Hentig. Whoever saw Pilger sit broadly and gravely, distantly and properly at his desk, talking and smiling measuredly, lost in phlegmatic calm, and who then met the new advisor – this slender, toned, lanky man with the clean-cut face, eyes flashing, his swift way to comprehend and speak, to comment briefly and passionately, to give free rein to his volcanic temperament – he knew that not merely a new advisor had made his entry into the room with the red plush furnishings and the gilded backrests of the *fin de siècle*, but a new spirit. It was this man who was to experience with us the fateful hours of 1938 and 1939, without us or him suspecting at the time what the management of this office would entail, when I went to see him for the first time.

Because – truly – Hentig had not been put in that position in order to deal with Jewish affairs. He had been active in foreign diplomatic services in the Netherlands and in South America before returning to the Wilhelmstrasse, and he had turned out to be an inconvenience. His criti-

cal attitude toward the Hitler regime was known. On the other hand, he had

- 11 -

experience and skills that could not be discarded. During the First World War, he had led the German expedition to Afghanistan as a young attaché and officer, and during the last year of the war he had been an attaché at the German Embassy in Constantinople. He knew the countries and mastered the languages of the Middle East. The German Foreign Services could boast of only a few people of this kind. Already at our first meeting it became clear that not much needed to be explained to Hentig. It turned out that, while serving under Bernstorff in Constantinople, he had dealt with the Zionist issue and had participated in the pertinent negotiations. Later he had also seen and heard Weizmann in Berlin on occasion and had been deeply impressed by him, as he related. Since he himself was a man deeply permeated by the spirit of his people and the love of his nation, he seriously understood the driving forces of Zionism as an element related to his own perception. Most important, it was also the experimental, the daring aspect that attracted him, and which made the researcher in him (which he was more than a diplomat), with his urge for the adventurous and the new, a friend of our cause.

[double-typed, illegible line ...] and encouraging. We talked openly to each other, got to know the world where every one of us was deeply embedded, and we knew we could trust each other. Already the second encounter led to a practical test. Because in the Prinz-Albrecht-Strasse, where the Gestapo had found lodgings in the vast spaces of the former Museum of Decorative Arts, a young man had appeared, smart and quick, of the type which had

liberated themselves of sentimentality – as the gentlemen themselves frequently said – in order first to rule Germany and then the entire world. This promising young man, of whom to say more there is no room here, was still unknown at that time. He even loved to remain anonymous and considered mentioning his name in addition to his official title “Herr Kommissar” as an unauthorized insult. He later grew to become the absolute master of the Jews in Vienna and Prague, a big plunderer and mass murderer, who finally, at the end of his career, disappeared without a trace. But back then the name Eichmann did not mean anything to us yet. At the time when Hentig took office, Eichmann was also about to

- 12 -

introduce himself to us, and so it happened that I, on the morning of one day when I had an appointment at the Foreign Office, was ordered by phone to show up very early, as was customary, at Gestapo headquarters and to stay there until the evening. All that happened on that remarkable day yields a wealth of substance for anecdotes. Although this kind of presence at the Gestapo headquarters evidently does not exactly improve one's life, this time even Eichmann had to endure a surprise. At 10 o'clock in the morning he had haughtily denied me permission to attend my appointment with Mr. von Hentig, for which I requested leave, and he had forced me to cancel it by phone in a rude manner following his script – but without giving a reason. In fact, he had used the incident as a welcome opportunity to make all contacts of the Reich Departments with us contingent upon his prior authorization. On the evening of the same day, however, he had become soft and polite. He knew nothing anymore about the aforementioned refusal and de-

clared that he would never do anything to interfere with my negotiations with the Reich Departments. When I visited von Hentig the next morning in order to apologize, he told me with a smile what had happened. Herr Eichmann had in turn confronted Hentig by phone, asking him how he dared to arrange a meeting with me, and had received the answer, how he dared to disturb Hentig in his official duties. The thing then went via the State Secretary of the Foreign Office, with whom Hentig immediately filed a formal complaint, to the head of the Gestapo, from whom Eichmann got a reprimand in turn. From then on, Eichmann remained distinctly polite toward me, but I knew that he would never forget my debut. No one would have dared such a clash with a member of S.D., except Hentig. For him it was nothing but a matter of course that he opposed an attack. –

IV. Incidents from the years 1937 to 1939 which ought to be mentioned, because they were either characteristic as such or had substantial results, were:

- Hitler's personal involvement in the treatment of the Palestine question,
- the “Milch conflict”
- Hentig's attitude in September 1938
- during “the days of November 1938”

- 13 -

One might have thought that Hitler would have shown a personal interest in a Jewish national home in Palestine, either deciding to fight the national renaissance of the Jews in Palestine, or trying to include them in his plans to eliminate the Jews. However, until 1937 no statement by the Führer was known that hinted in one direction or the other. It was a political fact that the top German authorities not only tolerated the emigration of Jews to Pal-

estine, but encouraged it by granting transfer opportunities and other measures. There existed also a number of statements by various government departments indicating that emigration to Palestine was preferred over emigration especially to Germany's neighboring countries, and that the German authorities did not consider the development process in Palestine as detrimental to the interests of the Third Reich. But the Führer himself had expressly mentioned Palestine only once, in a speech he delivered in 1933. Since then he had remained completely silent on this point – which was quite unusual for Hitler. In the 1933 speech, he said roughly that England was impeding the integration of the Jews, while Germany lets them emigrate, and even gives them the £1000 required for immigrating to Palestine. It was then inferred that he was in favor of the Jews immigrating to, and integrating into, Palestine. It was then evident that the German officials of all departments and top authorities dealing with the individual cases – including the young, national socialist generation – showed no hostility against the Zionist cause. My years of experience in dealing with all kinds of civil servants involved proved to me that a commitment to the Jewish nation and its goals in Palestine, combined with an upright and frank attitude when dealing with them, commanded their respect, and that they most notably also understood the Jews' desire for freedom and an independent existence as a nation, and observed the details with interest. On the other hand, there was a small minority

- 14 -

of National Socialists, consisting of outright criminals who wanted to destroy everything that could be destroyed, and of those stupid subordinate officials who

were spiteful because the matter was beyond their capacity – inclined to destroy the physical and psychological livelihoods of the Jews, however and wherever they could.

The first sign that something was going on behind the scenes could be seen right after the publication of the Peel Commission's recommendations [7 July 1937]. Suddenly the ongoing transfer negotiations with the Reich Department of Commerce stalled, and with other authorities previously nonexistent obstacles appeared as well. Initially nothing precise could be found out about the reason. From remarks it could be inferred, however, that Hitler himself had made negative statements that spread throughout the departments. Herr von Hentig clarified this by calling me over and telling me that the reasons for the Führer's new attitude were to be found in the fact that Hitler was worried about the proposed creation of a Jewish state in one part of Palestine as a result of the partition plan. He considered such a state as the second Vatican, which could become a spiritual center for a Jewish world conspiracy. He was encouraged in this view by Goebbels. Under such circumstances, the Führer wanted to cause difficulties for the formation of the Jewish state rather than supporting the national home with people and money by way of Jewish emigration from Germany. This statement showed that the situation was very serious. Even externally Hitler's worries could be noticed. When Lord Halifax had come to Berlin on a special mission, Hitler asked him at the beginning of the first conversation, and to Halifax's surprise, about the Jewish state in Palestine – a question that Halifax answered by saying: This matter is decided by the League of Nations, not by the United Kingdom. But the question

itself was symptomatic. While important issues for the relations between the powers were to be discussed, Hitler posed this question at the very beginning, and it seemed at first as if he could not be dissuaded from pursuing the matter further. Such was the situation as presented to me by Hentig. His advice was to prepare suitable material in order to prove that both the number of Jewish emigrants from Germany to Palestine as well as their financial contribution to the formation of the Jewish homeland was too small

- 15 -

to influence the development in Palestine decisively. So I worked out a memorandum that emphasized the share of Polish Jewry in the development process in all relevant details, described the financial contribution of American Jewry, and put this in relation to the small contribution of German Jewry. This memorandum was revised by a young official of the economic section of the Foreign Office, which was under the direction of Gerhart Clodius, who later became known for his economic negotiations with the Balkan countries. I had a series of meetings with this official, during which the contents of the memorandum were discussed, and finally a "Report by the Foreign Office to Hitler" emerged from the material provided to that office.

The objective of this activity was to preserve the Jewish emigration and the transfer of capital from Germany to Palestine. The described development of the second half of 1937 relates to a period during which I was tormented day and night by the knowledge of the fateful events occurring behind the scenes. Every moment could bring the news that closed the still-open gate to Palestine, and – given the lack of emigration opportunities to other coun-

tries – condemned thousands of German Jews to remain within the borders of Germany. The daily work, however, was not to show any trace of this anguished tension neither toward the emigrating audience nor to the authorities, who were not informed about the background of the existing uncertainty relating to the emigration to Palestine.

Back then, Herr von Hentig made many an effort over many months to finally bring about a definite decision by Hitler in favor of emigration to Palestine. This should have happened when the above-mentioned report was presented in the Reich Chancellery. Then the situation should have been presented to the Führer personally. It was very instructive to see how such a move had to be prepared with Hitler. When the so-called Weimar system collapsed in Germany, many capable, non-partisan officials in Germany's top authorities breathed a sigh of relief, because they believed they had been rescued from the wheels of an extremely cumbersome parliamentary legislative machine and the related parliamentary system of government.

- 16 -

They were inclined to believe that now the way was free for independent and uninhibited work and quick decisions. This illusion had since disappeared. How much this was justified was shown all too clearly by the case at hand. Because according to his habit of not reading any reports, and of not committing in writing, this report could not be presented to Hitler through office channels either. Instead one had to try to get the matter submitted by persons from the leading group of the NSDAP who at that time were on good terms with Hitler, and during a “favorable moment”, i.e. at a moment when he was in an

accessible mood. Such an exertion was not exceptional at all. There was no other way to bring a matter to a definitive solution by the head of the Reich. Just as many months of difficulties ensued with all authorities concerned regarding emigration to Palestine because for reasons of trepidation they did not dare take any responsibility without a Führer decision, so the government machinery faltered in many cases. For each official, however high his rank may have been, had to fear being suddenly not just reversed but also to fall victim to an intrigue, if someone else played off connections to the highest level against him.

This situation therefore lasted until 1938, when one day Herr von Hentig phoned and asked me to come to the office, where he told me that the Führer's decision had been positive and that nothing stood in the way of continuing emigration to Palestine. It was a very funny scene at Reich Department of Commerce, when the good news was reverentially conveyed to me a short while later about the highest decision making, for the clerks knew nothing of my activity at Wilhelmstrasse. But in fairness to these gentlemen it has to be said that they were absolutely innocent, and that they merely missed the comedy of the events surrounding their dictator.

At about the same time the Woodhead Report was released which, as is known, abandoned the Peel Commission's partition plan, and I still remember the tone of voice with which Hentig told me on the phone that the leadership of the Reich had now been relieved of their grave worries which had arisen from the seemingly imminent establishment of a Jewish state.

- 17 -

V. The fateful days of Evian were approaching. The certain prospect of war was crucial for the situation of the Jews. A brief respite could save them. A catastrophe they could not survive. We worked to save what could still be saved of German Jewry. Each organization submitted their own memorandum. Secretaries of the British and American Jewish organizations sat at the conference table as economic experts, although they had neither the expertise nor did they know the means needed to implement the projects. When the old trees of Evian cast their shadows over Lake Geneva in the evening and the lights of the casino were turned on, I was overcome by pain about this desperate situation, and I could no longer laugh. Soon the attitude of “every man for himself” would put an end to all work. The course of the Evian Conference, the pressed haste with which the Jewish organizations had to present their explanations to their memoranda in just a few minutes to the Conference President Lord Wintertur, because it is needless to say that some 30 delegations could not be heard at length, was the unwinding of a tragedy, with extermination as a certain result. The gates had closed in front of us.

Within Germany, the lack of results of Evian had the consequence that the groups of the party and the Gestapo which so far had been restrained with difficulty gradually gained the upper hand over those who preferred an orderly emigration of the Jews to the outbreak of chaos within the Jewish community. The relationship between the end of Evian and November events is unmistakable. For the November events were nothing more than an attempt by the radical wing of the party to solve the Jewish

question in their own way. Auschwitz, Treblinka, etc. were then further steps.

Of the many individual episodes from the turbulent years 1936-1939, one shall be described which was very typical for the atmosphere at the Foreign Office. Until 1936 there was, as far as foreign policy came into play, calmness in the Palestine issue, and potentially existing differences between Jews and Germans in Palestine did not come to Berlin to be resolved. In Palestine itself Consul General Wolff and Consul Wurst both contributed their share to nip the threat of conflict in the bud.

- 18 -

This state changed quickly after Dr. Döhle had been appointed Consul General in Jerusalem in 1936, replacing Dr. Wolff. Dr. Döhle came from Paris, where he had worked for a decade at the embassy as an economic attaché. He was a former democrat, and competing with party members for the position in Jerusalem, he prevailed due to support by those who wished to have a moderate individual at a post which was at the focus of so much tension. When I met Döhle for the first time, who was introduced to me by Herr von Hentig at the hotel "Kaiserhof" in Berlin so that I could inform him about the problems of his new sphere of activity, I had the pleasant impression of an objective, especially economically interested, and in any case utterly unprejudiced man. While this impression still persisted until Döhle left Berlin, another side of his personality surfaced immediately after his arrival in Jerusalem. It seemed as if he wanted show that a "new wind" was blowing in the Consulate General, maybe due to the influence of local Nazis and the foreign organization of the NSDAP, which back then, headed by

Bohle,^[55] competed with the Foreign Office before it was integrated into it. For example, this could be sensed from reports resulting from his first encounters with Jewish personalities in Palestine. They reported a rude and hostile behavior. In the press this soon showed up as well. Suddenly a wire of the *Völkische Beobachter* from Palestine, about which all Berlin offices laughed, described how – during a battle between Arab insurgents and British troops – all the cars stopped on the road from Jaffa to Jerusalem, except for the car of the German Consul General, which drove with a fluttering swastika flag on the hood through the combat zone. It was clear that the Consul General wished to perform a “heroic act.”

Then things got more serious. The radical Nazis among the Palestine Germans and their close friends within the NSDAP’s foreign organization needed an incident. The pretext seemed given when Tel Aviv dairymen ceased purchasing products from the German agricultural settlement Wilhelma, which thus far had been sold in the market of Tel Aviv. The Consul General intervened, and the Foreign Office demanded that the transfer of emigrants be interrupted until this issue was settled. When I was informed about this matter, I replied to Herr von Hentig that the transfer agencies had no influence on the dairymen of Tel Aviv, that even any influence by the Jewish Agency would be doubtful. Moreover, this was, in my opinion, an internal matter of the mandate area of Palestine.

⁵⁵ Between 1933 and 1945, Ernst Wilhelm Bohle was head of the NSDAP/AO, the NSDAP’s organization in foreign countries.

- 19 -

Some of the ethnic Germans involved were themselves citizens of that area. The matter could therefore hardly be dealt with in Berlin. Hentig, who had grasped the situation beforehand, then opted for a personal talk, for which Döhle and Wurst were ordered to come to Berlin. A joint meeting was held at the Foreign Office, which, in addition to yours truly, was also attended from the Jewish side by Dr. Siegfried Moses and by Dr. Senator, who happened to be in Berlin. An agreement was reached quickly – and the settlement of the matter was a textbook example of how good will can stamp out the spark that was about to ignite the powder keg. Because blowing up the powder was the desire of Döhle's furtive men in Palestine, where there was already a Gauleiter Herr Schwarz with his promising scion who was later seconded to Berlin for special duty. Schwarz senior, small and bent, was certainly not a Siegfried figure. When he entered, decked in his party badges, and raised his arm in greeting, everyone was surprised that the party couldn't find more imposing representatives. Schwarz preferred the poison to the sword. In the spring of 1937, Assessor Dr. Williams from the Reich Department of Commerce, accompanied by me, visited Palestine on behalf of the Department. I can attest to the fact that he worked here restlessly, literally day and night, to deal with the economic problems entrusted to him. He was denounced by this fine Party member in a special petition to the Reich Chancellery, among other things because on the Führer's birthday, when Sarona^[56] was festooned with swastika

⁵⁶ Name of the German Templar colony in Tel Aviv, Israel, which is now a neighborhood of the city.

flags, he dared visit the Jewish Agency, and he used to stay at a Tel Aviv hotel. Williams, an indefatigable and intelligent official, but not an old party comrade, subsequently lost his position in the “foreign exchange” office at the Reich Department of Commerce.

- VI. Regarding German foreign policy, the year 1937 showed all the characteristics of a transitional period from a restrained policy with evolutionary trends for the so-called policy of dynamics with revolutionary tendencies. As far as the Foreign Office was concerned, the situation had remained stable under the leadership of Neurath, and in the corridors of Wilhelmstrasse 75 and in its rooms still equipped with red plush furniture from the Kaiser era, one walked quietly and negotiated conventionally, while at the competing agency, the foreign organization in the Bendler Street, the jackboots clattered already and the “fifth column” took over. When Ribbentrop took over the Foreign Office in 1938, his staff, who had worked separately for some time, was integrated. The planned military buildup now progressed vigorously. The occupation of Austria was followed by the escalating Czech conflict. In August 1938, Germany was on the brink of war. The situation of the Jews in Germany deteriorated rapidly – especially since the Gestapo in Vienna

- 20 -

had the opportunity, unmolested by the Berlin authorities with their restraints, to take the liquidation of the Jewish group in their own hands. Since March 1938 Herr Eichmann sat in the Rothschild Palace in Vienna and implemented his “conveyor-belt system,” of which he was inordinately proud. This system was that the applicant for a passport entered the building through the entry – not happy, but in possession of his assets. When he left the

building by the back door after a laborious walk through many rooms, his fortune was gone, but he had the passport. The Foreign Office in Berlin as well as the economic authorities opposed the Gestapo's desire to extend this legal system to what had become the *Altreich*, the former Reich territory.

The line was clear which Herr von Hentig followed as a kind of special representative for Jewish affairs. All possible arguments that one could come up with in the field of foreign policy in order to prevent the creation of chaotic conditions in the Jewish question, as was the intention of both Party and Gestapo, were submitted over and over again to the executive. At short intervals, I had conferences in the office where the situation was discussed in detail.

At the end of September 1938, it seemed certain that war would break out. Herr von Hentig considered it inevitable as well. He observed with growing desperation how many German patriots recklessly steered the leadership into the disaster. He did not think there was a chance of success, if war should come. How grotesque the events were behind the scenes emerges from a fact which he told me. At the time of the Nuremberg Party Rally of 1938, the German ambassadors from the most important capitals who were present in Berlin, including the German envoy in Prague, received a prohibition from the Gestapo to personally approach the Führer.^[57] In their decisions, the senior leadership of the Reich was to be influenced by nobody. Under the prevailing circumstances, this meant that Hitler was not to be deflected from his will to war by any report by his diplomats.

⁵⁷ No doubt a grotesque and untrue rumor.

During the days of the highest tension, on September 27, 1938, I called on Herr von Hentig in order to discuss the treatment of a number of officials in the event of war, especially the possibility of emigrating to Palestine. It was about 7 o'clock in the evening. When I passed the new Reich Chancellery, which was only a few minutes' walk away from the Foreign Office, they were working feverishly in the basement. I knew that the air-raid shelters for Hitler and his staff were being completed. In the office,

- 21 -

almost no one was present anymore. When I found Hentig, he was very excited. Contrary to his usual manner, he largely ignored the questions posed to him. I said nothing and waited, because I felt what was going on in him. – When he broke the silence, he revealed to me the secret of the conspiracy against Hitler, which was supposed to strike in the event of war, to spare Germany an unfortunate war.^[58] He described how a closed circle of officers, officials and other personalities had taken the task upon themselves to eliminate the Reich leadership. They would prevail or fall. Their concern was only whether, even in case of a victorious conspiracy, which would cost a lot of blood, a sufficient number of them would still be left to form a new national leadership. I deeply sensed the passion of the emotional outbreak that had led to this revelation, and my heart was with Hentig and his friends who had the courage to take the risk.

⁵⁸ Here the truth comes to light: It was in fact not Hitler who strove for war – quite to the contrary – but rather the secret resistance, which aimed for war and promised to the western powers a putsch or even a popular insurrection in case of a war, thus stiffening their attitude toward justified German interests.

These were the same men who many years later, in July 1944, proceeded to act during an even more desperate situation. As Hentig ended, we were both silent, and shook hands – perhaps for the last time – with a glimmer of hope to experience the liberation. – About two days later it turned out that providence was with Hitler. The retreat of the western powers at the Munich conference on September 29 resulted in a huge success of his personal foreign policy. With this “bloodless” victory and the associated increase of the stature of Hitler's demonic person, any attempt to bring about a revolution in Germany by force had to be abandoned.^[59] – But no one who had not experienced the last days of September in Berlin as I did, can appreciate how moving the last few hours before and the first few hours after the Munich Conference were. There can be no doubt that at that time the Berlin population was deeply opposed to war. No enthusiasm could be sensed. Not even military parades through the streets, which used to impress the Berliners in general, could cause any visible change. The people hung their heads. During the last 24 hours before Munich, an atmosphere prevailed like after a disaster. Yet after the first message arrived about Munich, the faces lit up, and cheerfulness seized the city. Who was thinking about the Sudeten Land? Probably only a few. I must confess that I was shaken as well. On the morning of September 29, when the last Palestinian visitors left my office to go to Basel after I had given them some more instructions, at noon, when one more phone call came in

⁵⁹ Which shows once more that and why the resistance was interested in a war.

from London, in the afternoon, when I was in the west of the city, I had

- 22 -

the feeling of departing from life. Within a few hours our fate would be decided. (In the first night after the outbreak of war, rumors had it back then, personalities considered subversive, including all Jewish functionaries, were to be shot.)^[60] – When the first phone calls came from London the next morning, the sober voices of my partners sounded like greetings from a new world – the world of peace and freedom. When I passed the Reich Chancellery again on my way back, I was aware of the burden of the secret that I knew and would never betray. Hitler did not suspect that, at the moment of decision on war and peace, just a few steps outside his door was waiting his doom, was rising his nemesis. Had the war erupted in September 1938, we German Jews, the hundreds of thousands who emigrated due to the November events, would have been the likely victims. But perhaps liberation would have taken place earlier, and Europe would have been spared some of the terrible years of the war of 1939.

The Western powers' retreat changed the path. Hitler's prestige rose unmeasurably.

- VII. (The description of the November events belonging here is contained in a special contribution by Ernst Marcus) –
- VIII. The consequence of the November events was especially that chaos reigned instead of a certain order in the handling of Jewish emigration from Germany, and the insight that the Jews [waiting for] visas and certificates

⁶⁰ Obviously a false rumor, since nobody was arrested or even shot after the 1st of September 1939.

needed to be allowed a meager base to enable them to eke out a living until the emigration date. Vienna had become an example. The perfect organization of robbery with lightning speed which Eichmann had created in Vienna, the panicked flight of those who had received an unfeasibly short deadline to emigrate, even across closely guarded borders, this “success” of this Gestapo emigration policy became popular which began to move thousands to Shanghai or to small South American countries, whereas they would otherwise have waited for their visa to the USA or for their Palestine certificate. Didn’t this prove that the “strong hand,” which now took over the reins, was able to quickly and thoroughly solve the Jewish question in spite of all the difficulties, while the prudent measures of the departments couldn’t boast of such a complete success? One city after another announced proudly to be free of Jews! Homes of expelled Jews became available for Aryans. Furniture and other

- 23 -

furnishings came onto the market for cheap. Valuable real estate was sold below value. The incessant pressure by the Gestapo which increased beginning in the summer of 1938, and aimed at bringing the emigration under the management of the State Police, led to the top authorities slowly giving way. But despite all that, it took until the end of the year before a Central Office for Jewish Emigration following the Viennese example and led by the Gestapo could be established in Berlin, and even then the transfer of assets remained unaffected. After the November events and the imposition of the levy of a billion Reichsmark, in association with the lock-down and the handing over of Jewish effects, real estate, home furnishings and equipment, desperation broke out in the respon-

sible offices of the government departments that had nothing to do with any of this. The regulations had been conceived and designed by the Police Department. – All affected markets were derailed; there was nothing left of a normal formation of prices and stock market values. Buyers were no longer available despite low prices. A thin class which bought goods enriched itself. The Reich Treasury was the ultimate beneficiary. Finally the banks, industry, and all other relevant economic groups protested in the same way. This initiative led to the Reich Department of Commerce trying to eliminate the worst effects, and to create certain reliefs in negotiations with us, which enabled the continuation of the emigration to Palestine and the transfer. Proposals were renewed on how the Jewish emigration could be facilitated on the condition that the German armament enterprises, esp. the Hermann Goering Werke,^[61] would be financed with the help of Jewish bonds. It was difficult to determine who exactly was the first to come up with this idea. In any case, Schacht was working on such plans in conjunction with Max Warburg, and they were repeatedly brought up for discussion as major loan projects, like long-term mortgages to finance individual industrial projects, for instances refineries. The “Altreu”,^[62] a transfer company that had been established in 1937 by Jewish representatives, representatives of the Reich, and the Zionist Asso-

⁶¹ The *Reichswerke Herman Göring* was a steel-producing enterprise established in the course of Germany’s drive for autarky by exploiting hitherto-unprofitable iron-ore deposits near Salzgitter. Connection to rearmament arose only later.

⁶² “Allgemeine Treuhandstelle für die jüdische Auswanderung G. m. b. H.” (Altreu; General Fiduciary Agency for Jewish Emigration, Ltd.), established on May 24, 1937.

ciation for Germany, and which was to promote emigration to countries other than Palestine, dealt with projects of the described kind. –

I did not have the opportunity to formulate a general rejection in such a strident way as the subject seemed to require. During

- 24 -

unofficial meetings with officials of the Reich departments I nevertheless succeeded, by way of clarifying the difficulties and by asserting objections to certain aspects of economic nature, to impede the negotiations and to prevent them from ever reaching a conclusion.^[63]

At this time, the atmosphere became more oppressive every day. However, it could not yet be determined when the outbreak of war would put a definitive end to our efforts to save the German Jews. But it could not be denied that the end was near. It was just a matter of preventing the collapse as long as possible and not burning the bridges, as long as survivors of the disaster could still use them. When Schacht visited the City of London exactly at this time in order to negotiate with Montague Norman, the head of the Bank of England, about loans connected to the liquidation of German Jews, while at about the same time the Commissioner for Jewish Emigration of the League of Nations, the American Professor MacDonald, who was visiting Berlin, was cut off from any contact with the Jewish organizations, the background of these events was hardly discernible even from behind the scenes. For example, Schacht's visit to London could have been a covert maneuver, which in the intentions of the Germans was meant to prevent the City

⁶³ Here Marcus sabotages Jewish emigration!

from prematurely abandoning the policy of appeasement and to mitigate the impression left by the November pogrom, which was very strong in London.

For the initiated, however, no doubt was possible. The ongoing efforts at work became more and more difficult, since not a single day passed which did not highlight the terrible situation of the German Jews in a dramatic way.

Even in this dark hour, von Hentig's brave helpfulness did not fail. The Wilhelmstrasse was within the area forbidden for Jews, and when Hentig offered to apply for a pass on my behalf, which would have made it possible for me to reach the Foreign Office, I rejected his offer. It seemed to me that the investigation by the security service, which would follow after the issuance of such a pass, was too dangerous for all concerned to risk getting such a pass. Thereupon Herr von Hentig moved our meetings with his typical decisiveness to his apartment in the Händelstrasse. At that time, Ernst Eisenlohr, the Reich's last envoy in Prague, was liaison officer of the Foreign Office for Jewish Affairs, insofar as international organizations were involved. Through Hentig, an important channel to him existed. There were moreover reports on the conditions in the concentration

- 25 -

camps, which I could convey to important German personalities through this channel, and effective steps for the release of Jewish functionaries who had been in custody since November 1938. Otto Hirsch was released back then in this way. – The old Tiergarten trees in the pale evening light of winter days – the dark doorway, which I studied very carefully before I entered the house, – then the typical, slightly formal interior of a Berlin Tiergarten home, and finally the vibrant activity of the

host who, supported by his spirited wife, did not lose his courage even in the worst days, and tried to alleviate our suffering with deep empathy – he felt the morbidity of the atmosphere, the demise of his – the other – Germany and his Europe, where his life was still worth living. It probably took intimate knowledge of the milieu in order to understand the tragedy of those people who could not leave Germany because they loved it, whereas Hitler's Germany instilled hatred and contempt in them.

When I left Berlin at end of March 1939 in order to immigrate to Palestine, I did not yet know that I would not return. On the morning of the day on which my plane took off at Tempelhof, Hitler had occupied Memel. The weapons rattled.^[64] The lights of the Amsterdam airport shone cheerfully through the evening mist. But worries were widespread in the city, and a few days later we saw Zurich in invasion panic.^[65]

The Orient seemed peaceful after such a departure from Europe. Although the repercussions of Germany's "dynamic" foreign policy and of Italy's neo-imperialism had long since set the Middle East on edge, and although the actions against the Jews in Germany and the immigration kept Jewish Palestine in constant commotion, those coming from Europe could feel that an ocean lay between them and the hot spots. At that time, German foreign policy no longer had the tendency to avoid, in deference to

⁶⁴ The entirely German Memel area, which had been ceded to Lithuania after World War I against all international law, was peacefully and voluntarily given back to Germany in 1939 by Lithuania without any German pressure or initiative. Not a single shot was fired, and the Wehrmacht also never marched in to "occupy" it.

⁶⁵ At no point in time did plans exist by any power to invade Switzerland. This remark merely proves Marcus's war hysteria.

England, an open statement in favor of the Arab nationalist movements, even though an anti-British tone was usually still suppressed. The door between Germany and England had still not been slammed shut. But in addition to the activities of Italian agents, German actions could be sensed everywhere, although not initiated by the Foreign Office, but by the foreign organization of the NSDAP and other party sections. Supplies of arms and money were reaching all areas of the Middle East.

- 26 -

The German diplomats working in the Orient Department or the Orient organizations watched the new business with great apprehension. They had, after all, some experience with the Arabs from the World War of 1914, which were not the best. Dr. Grober in Baghdad and Hentig most certainly did not support an anti-British policy based on the Arabs, since the latter was generally inclined toward a western – Anglo-Saxon – orientation of German foreign policy. But their position was not strong enough to prevent foreign policy excesses by the Party in the East. In March 1939, the Foreign Office had delegated Herr von Hentig to do an inspection tour through the Middle East. He had to visit all German missions from Cairo to Ankara, a journey that led to the strangest observations by the British and British-oriented press about his person. This staunch opponent of Nazism, who was not in contact with any of its most important representatives, was called a friend and confidant of Göring, among other things. His surveillance was strikingly close. The role he had played in Central Asia during the war of 1914 had apparently not been forgotten in the Colonial Office.

In early May 1939 – immediately after he had officially arrived in Palestine and had been received by the High Commissioner – Hentig called me from the German consulate in Jaffa, and an hour later we met in the old garden of the consulate in the Jaffa-Tel Aviv Road. We left the consulate after a brief farewell to the old Consul Timotheus Wurst, who wore his spectacles on the tip of his nose as always. The types could hardly be more different than the stout, slow-moving Swabian Wurst and the stiff and tall Hentig, vibrant with energy. – Then suddenly the representative of the Party, the “Gauleiter of Palestine”, P[arty]C[omrade] Schwarz stood in front of us with medals and decorations, stretching his arm toward the sky. He had come to greet Hentig, and turned into a pillar of salt when he saw me leaving with Hentig, as he did with any other guest from Berlin. He did not notice the mocking welcome. His concern about Hentig, who said: “Oh, what a pity, I am just about to drive with Dr. Marcus to Tel Aviv”, darkened his face. That this hero – small, crooked, the archetype of a fairytale tailor – would embody the militant party members, increased the irony of the scene.

But even funnier was the face of my Tel Aviv taxi driver, who believed himself to have fallen among the Nazis and could be

- 27 -

calmed down only with difficulty.

While I showed my guest the seaside of Tel Aviv, he told me about Cairo. There appeared during his stay no less a figure than Goebbels – surprisingly and without anyone knowing the motive for his visit. Hentig, whose feelings for the Reich Minister were clear, greeted him with the words: “It is a sign of great courage that you, Mr. Reich

Minister, will visit Palestine!” Goebbels, who had no intention of doing anything like that, but merely wanted to enjoy himself in Egypt, took that statement seriously and, feeling flattered, denied such a plan. The visit ended with a mishap. After his trip the world press announced that Dr. Goebbels, while in Cairo, had shopped almost exclusively in Jewish stores. Nobody knew who had instructed Goebbels’s tourist guides!

It was my last encounter with Hentig. His interest in the growing Jewish Palestine was great. The audacity of the Jewish endeavor, the experimental element, appealed to his nature. In all this he felt oppressed by the awareness of the German people’s responsibility for what Hitler was doing to the Jews. He felt a genuine friendship for us.

He used his mission, a component of German politics, to impede the wheel that was rolling downhill toward war. But he knew that the war was coming, and he hoped that it would liberate Germany from its bloody and ignominious regime.

My intention to show Hentig the Emek⁶⁶ – a journey which he would have made incognito, of course – had to be abandoned due to Arab raids along the roads. He left Palestine without having seen our settlements.

The farewell to him was also a farewell to “the other Germany” that fought a hopeless struggle against Hitler during the war, and which had its courageous representatives in Hentig and in other individuals of the Reich’s diplomatic corps.

⁶⁶ Emek Yizra'el is a large fertile plain and inland valley south of the Lower Galilee region in today’s Israel.

Hentig is also quoted in the published diary of the executed ambassador Ulrich von Hasselt.

The End

Ernst Marcus

Foreword

By Jürgen Graf

1. The Definitive Establishment of Total Historical Truth

In reaction to the spectacular advances of revisionist historical research after the mid-1970s, an anthology entitled *Nationalsozialistische Massentötungen durch Giftgas*¹ (*National Socialist Mass Killings by Means of Toxic Gas*) appeared in Germany in 1983. (An English translation with the title *Nazi Mass Murder* followed ten years later.) Its main editors were

- Eugen Kogon (1903-1987), former Buchenwald detainee and author of the book *Der SS-Staat* (1946), which is steeped in coarse political propaganda of the early post-war period;
- Hermann Langbein (1912-1995), former communist combatant, Dachau and Auschwitz detainee and co-founder and activist of the International Auschwitz Committee, founded in 1974;
- Adalbert Rückerl (1925-1986), at the time head of the German Central Office of the State Justice Administrations for the Investigation of National Socialist Crimes (*Zentrale Stelle der Landesjustizverwaltungen zur Aufklärung nationalsozialistischer Verbrechen*).

The introduction to this collection included a paragraph which could not but arouse suspicion in the mind of a non-partisan reader:

“People who attempt to clear the national-socialist system of any guilt are trying to profit from the incredible character of the events. Some will go so far as to deny outright the mass murder of a heretofore unimaginable degree. In order to fight such tendencies effectively and limit their propagation, the whole historical truth must be definitively stated once and for all. A group of 24 specialists from 6 different countries has consecrated itself to this cause.”

Historical research, just like any other discipline, is always open for revisions and thus can never be settled in a definitive way, and attempting to impose a certain vision, taken by some to be true, in such a dogmatic and unscientific manner, is proof of an unscientific approach. Such endeavors pave the way for an imposition of this dogma by means of the penal code. Revisions may be judged to be superfluous if we are dealing with matters that are clearly established by scientific proof and no serious objections can

¹ Eugen Kogon, Hermann Langbein, Adalbert Rückerl *et al.* (eds.), *Nationalsozialistische Massentötungen durch Giftgas*, Fischer Taschenbuch Verlag, Frankfurt upon Main 1983; Engl.: *Nazi Mass Murder*, Yale University Press, New Haven 1993.

be raised. This would apply, for example, to the fact that the Battle of Waterloo took place in 1815, that Adolf Hitler became Germany's Chancellor on 30 January 1933, or that the US Air Force dropped nuclear bombs on Hiroshima and Nagasaki in August of 1945. Anyone asserting that the Battle of Waterloo did not take place in 1815 but in 1789, that Adolf Hitler was nominated Chancellor not on 30 January 1933, but on 9 November 1918, or that the atom bombs which struck Hiroshima and Nagasaki were a product of Japanese black propaganda would be generally ignored. Such theories might be mentioned as curiosities in newspapers, but no serious historian would waste his time refuting them. The mere fact that "a group of 24 specialists from 6 different countries has consecrated itself to this cause" of definitively proving "the mass murder of a heretofore unimaginable degree" would indicate that already in the early 1980s Holocaust revisionism had become so significant that the proponents of the orthodox version of history could no longer afford to ignore it.

2. A Brief Review of the History of Revisionism prior to 1983

The Frenchman Paul Rassinier may rightly be called the founder of revisionism. He was a socialist and a member of the resistance in occupied France during WW2; arrested in 1943 by the Gestapo, he was tortured, deported to Buchenwald and later taken to the Dora-Mittelbau camp. In his post-war book *Le Mensonge d'Ulysse* ("Ulysses' Lie," 1950) Rassinier attacked the blatant exaggerations by former detainees about conditions in the German camps. For several years he carried out his own studies about homicidal gassings and came to the conclusion that such gassings had never been carried out or were attributable only to a few individual madmen. Three years before his death, in 1964, he wrote²:

"Over the last 15 years, whenever I heard of someone in a European country not occupied by the Soviet Union who claimed to have witnessed gassings, I travelled there to hear his account. Every time, though, things took the same course: on the basis of my file, I asked the witness a number of detailed questions only to hear the same obvious lies over and over again; in the end, he always had to admit that he had not seen the alleged scenes himself but had merely repeated the account given to him by a trustworthy friend who had died in a camp. I covered literally thousands of miles all over Europe."

In 1976, Arthur Butz, professor of electrical engineering at Northwestern University in Evanston, Illinois, USA, published a study entitled *The Hoax of the Twentieth Century*,³ which went considerably beyond Rassi-

² Paul Rassinier, *Le drame des juifs européens*, Les Sept Couleurs, Paris 1964, p. 79.

³ Arthur Butz, *The Hoax of the Twentieth Century*, Historical Review Press, Brighton 1976; 3rd, exp. ed., Theses & Dissertations Press, Chicago 2003.

nier's various works. Butz compared the scenario drawn up by leading Holocaust historians, such as Gerald Reitlinger and Raul Hilberg, concerning the alleged eradication of the Jews with war-time reports and concluded that, on the subject of the killing methods allegedly employed and at least partly also regarding the alleged locations, the story had fundamentally changed. He also raised the question as to whether it would have been possible to hide an industrial genocide in extermination camps over any length of time. His answer was unambiguous: for any number of reasons such a cover-up would have been impossible. If the Allies had presented the Vatican or the International Committee of the Red Cross with proof of systematic mass murder, these institutions would have reacted without hesitation. They did not, however. While criticizing severely the persecution of Jews, they never spoke of gas chambers or extermination camps.⁴ Butz concluded that the stories about gas chambers and exterminations were nothing but black propaganda which was continued after the war for political reasons.

The year 1978 saw the publication, in Germany, of a book entitled *Der Auschwitz-Mythos* (The Auschwitz Myth) by Wilhelm Stäglich.⁵ Stäglich dealt primarily with the two basic pillars of the orthodox Auschwitz edifice, viz. the account written by the erstwhile Auschwitz commander Rudolf Höß while detained in a Krakow prison, and the verdict of the Frankfurt Auschwitz Trial (1963-1965). He concluded that both elements were untrustworthy from any point of view: Höß's account was so full of contradictions and absurdities as to deprive it of any legal value, while the Frankfurt trial blatantly disregarded the elementary rules applying to a court of law, such as the precedence taken by factual or documentary proof over witness testimony.

Even more decisive than the books by Butz and Stäglich were the investigations of the French professor Robert Faurisson. Faurisson was convinced that any critical appraisal of alleged gassings at Auschwitz would have to begin with the weapon of the crime. He drew up a comparison between the rooms at Auschwitz which are labelled as "gas chambers" by orthodox historiography with rooms which have actually been used for executions with hydrogen cyanide in the United States since 1924. An execution using this poison was a dangerous and complicated act. The delinquent was strapped onto a chair, and then a certain amount of cyanide was dropped by the executioner from the outside into a container filled with

⁴ On the Vatican's attitude see esp. Robert Faurisson, *Le révisionnisme de Pie XII*, Grapheos, Genoa 2002; Engl.: *Pope Pius XII's Revisionism*, Historical Review Press, Uckfield 2006.

⁵ Wilhelm Stäglich, *Der Auschwitz-Mythos*, Grabert Verlag, Tübingen 1978; Engl.: *Auschwitz: A Judge Looks at the Evidence*, 2nd ed., Institute for Historical Revisionism, Newport Beach 1990.

sulfuric acid. Fatal vapors of hydrogen cyanide were liberated in the process. The delinquent would lose consciousness within 45 seconds and died within 8 or 10 minutes. The gas chamber would then be ventilated for 15 minutes, another 30 minutes later a physician and two helpers, protected by gas masks, entered the chamber and removed the corpse.⁶ Faurisson compared this procedure with the description given by Rudolf Höß, according to which the *Sonderkommando* would enter the gas chamber – which was full of corpses – some 30 minutes after the death of the victims without any gas masks, for, as we know from Höß, the members of the *Kommando* used to smoke and eat while removing the corpses. Faurisson concludes that the *Sonderkommando* members would have died on the spot and that, furthermore, any gassings in the poorly sealed rooms at Auschwitz would have quickly caused a chemical catastrophe in the whole camp.

On 29 December 1978 and on 16 January 1979, Faurisson succeeded in publishing two articles in the French newspaper *Le Monde* expounding these arguments.⁷ Thereupon 32 French scholars published a reply in the same newspaper on 21 February 1979, declaring:

“We must not ask ourselves how such mass murder was technically possible. It was technically possible because it took place.”

In addition to Butz, Stäglich, and Faurisson, a number of high-caliber revisionist authors started speaking out toward the end of the 1970s. In Germany Udo Walendy started publishing his valuable journal *Historische Tatsachen*; in France, Faurisson received the support of revisionists like Serge Thion and Pierre Guillaume; in the US, under the leadership of Willis Carto, the *Journal of Historical Review* began to appear in 1979. The collection *Nazi Mass Murder* was obviously meant as the court historians’ rebuttal of this worrisome revision of the officially sanctioned scenario.

3. *Nazi Mass Murder: The Argumentative Structure of an Anti-Revisionist Anthology*

When reading through this collection one is struck by the almost unbelievable fact that no revisionist scholar is mentioned by name, that no revisionist work is quoted and no revisionist argument is addressed for any kind of scrutiny. This aspect by itself casts a glaring spotlight on the propagandistic and unscientific character of the book and reveals the absurdity of

⁶ A detailed description of the U.S. gas chambers can be found in: Serge Thion, *Vérité historique ou vérité politique?*, La Vieille Taupe, Paris 1980; see also: Fred Leuchter, Robert Faurisson, Germar Rudolf, *The Leuchter Reports*, Theses & Dissertations Press, Chicago, IL, 2005.

⁷ Robert Faurisson, “Le problème des chambres à gaz” ou “La rumeur d’Auschwitz,” *Le Monde*, 29 December 1978; *idem.*, “Droit de réponse,” *Le Monde*, 16 January 1979. Both articles are included in R. Faurisson, *Ecrits révisionnistes* (1974-1998), private edition, Vichy 2004, pp. 123, 133.

its arrogant claim that “the whole historical truth must be carved in stone once and for all” – anyone claiming to search for “the whole truth” must not shy away from a dispute with his opponents and their arguments.

A large part of this volume dealt with the so-called *Euthanasia* – the killing of mentally ill persons by the authorities of the Third Reich, which is not denied by the revisionists. Their past and present doubts (but not outright denial) concern merely the allegations that the killings were carried out by means of carbon monoxide gas supplied in steel bottles – there is no documentary proof for this. As the historic fact of euthanasia is not put in doubt, the question of the means used (carbon monoxide or injections?) would as such appear to be of secondary importance. Seen from the point of view of the orthodox historians, however, its great significance becomes clear in that the alleged mass killings of Jews in the “Eastern extermination camps” such as Bełżec, Sobibór, and Treblinka are depicted as a logical sequel to the Euthanasia Action.

An alert reader of this collection will soon notice that no documentary evidence exists for the alleged mass killings of Jews in gas chambers or gas vans. In an effort to get around this predicament, the authors made use of a sleight-of-hand, already used at the Nuremberg Trials, which was characterized in the following way by Carlo Mattogno⁸:

“At Nuremberg the inquisitors invented this absurd method of proof which allows reading into any document a meaning which cannot be found explicitly. This method of interpretation is based on the arbitrary and unfounded axiom that even in the most secret documents the NS authorities had employed a kind of code language, the key to which the Nuremberg inquisitors obviously claimed to have found. Thus, even the most innocent documents could be falsely interpreted in the sense of a thesis of extermination.”

In *Nazi Mass Murder* this technique was taken to a new level: on pp. 5-12 Rückerl provides us with a “decoding of the encoded notions.” Like his predecessors, he regards words like “*Auswanderung*” (emigration) or “*Eвакуierung*” (evacuation) as euphemisms for “physical extermination.” He also distorts words which begin with “*Sonder-*,” like “*Sonderbehandlung*” (special treatment), “*Sonderaktion*” (special action), “*Sondermaßnahmen*” (special measures). These designations, while sometimes being used as synonyms for “execution,”⁹ could in other cases signify housing of famous enemy personalities in princely conditions and with additional food rations.¹⁰ The topic “Special Treatment in Auschwitz” has been dealt with by

⁸ Carlo Mattogno, *La soluzione finale*, Edizioni di Ar, Padua 1991, pp. 64f.

⁹ According to a decree of the RSHA as quoted on page 17 of the discussed anthology, severe crimes committed by foreign workers were to be punished by “special treatment by the rope.” 3040-PS.

¹⁰ IMT, vol. XI, pp. 338f.

Mattogno in a separate book, published in 2003, which presents a number of Auschwitz documents containing “*Sonder-*” composites. He proves that in not even a single case did these words have a criminal connotation, yet instead often referred to hygienic, life-saving measures.¹¹

Seeing the meagerness of such “documentary evidence,” the authors of this collection felt obliged to make use of a large number of testimonies as “proof” for the mass killings by means of gas, some of which could only provoke incredulity. (In his article about the gas chamber of Mauthausen Hans Marsalek, on p. 247, quotes the verdict of a U.S. court, according to which the “gas cell” was preheated with a hot brick and the gas was introduced “bound on shreds of paper”!) Judged superficially, most of the testimonies and confessions did not appear to be contradictory and could thus be taken to be convincing at first sight. There is a significant reason for that: The editors had carefully combed through the corresponding statements and removed any obviously absurd passages. A significant example is the brief paragraph from an account by the SS officer Kurt Gerstein on the subject of alleged gassings of Jews in the Belżec camp, quoted on pp. 171f. (German edition) by the Israeli historian Yitzhak Arad, where the author leaves out a line speaking of 700 to 800 victims herded into a 25 sqm chamber (*i.e.* some three persons per square foot!). Furthermore, the author omits Gerstein’s repeated references to a diesel engine being used as the murder weapon, which would have roused the suspicion of any reader with some basic knowledge of toxicology.¹²

There is hardly any need to mention that this collection never discusses the fantastic stories published during the war and in the early post-war years, which proffered the most outrageously varying accounts of killing methods. At the time, most witnesses spoke of electric current as having been the means used at Belżec. In 1945, a certain Dr. Stefan Szende asserted that “millions” of Jews met their death in gigantic subterranean water basins through high-voltage current.¹³ According to another key witness for Belżec, the non-Jewish Pole Jan Karski, the Jews were herded and locked into cattle cars whose floor was covered with unslaked lime which burnt the flesh off the living victims.¹⁴

¹¹ Carlo Mattogno, *Special Treatment. Origin and Meaning of a Term*, Theses & Dissertations Press, Chicago, IL, 2004.

¹² Due to their high oxygen and low carbon monoxide contents, diesel exhaust gases are not at all suited for killing people; any gasoline engine would have been far more efficient. One year after the appearance of the German original edition of *Nazi Mass Murder*, U.S. revisionist Friedrich P. Berg published a well-founded paper about this (“The Diesel Gas Chambers: Myth within a Myth,” *Journal of Historical Review*, vol. 5, no. 1, Spring 1984, pp. 15-46).

¹³ Stefan Szende, *Der letzte Jude aus Polen*, Europa Verlag, Zürich 1945.

¹⁴ Jan Karski, *Story of a Secret State*, Houghton Mifflin Company, Boston 1944, pp. 339-351.

In the case of Sobibór, the most important witnesses named chlorine as having been the killing agent, or an ill-defined “black fluid” which was poured into the death chamber through holes in its ceiling. Most witnesses state that the gas chamber had a moveable floor through which the corpses fell either into a pit or into a railroad freight-car.¹⁵

Passing on to Treblinka, we encounter a long report distributed by the underground resistance movement of the Warsaw ghetto, according to which two million Jews had been killed there by means of hot steam.¹⁶ Once the Red Army had liberated the Treblinka area, a Soviet commission asserted that the Germans had suffocated three million Jews to death in that camp by herding them into sealed chambers and removing the air.¹⁷ Later on, during the Nuremberg Trial, the Polish government revived the steam version; a document presented by Poland spoke of “several hundred thousands of people” having been murdered by hot steam in the Treblinka camp.¹⁸

The year 1946/47 saw the switch-over to chambers using toxic gases. As it was most incredible that in the three camps, all run by the same authority, such diverse methods of murder had been applied, all these variants were dumped into the trashcan of history and replaced by chambers using the exhaust gases of combustion engines. This version had been proposed by the confessions of Kurt Gerstein who claimed to have witnessed a gassing operation at Belżec employing the exhaust gases from a diesel engine.

The case of Auschwitz is no less enlightening. In the period between 24 October 1941 and 7 July 1944, the Polish underground resistance published a total of 32 reports about this camp, depicting it as an extermination camp. The means used were described as having been poison gasses, an imaginary gas called “Kreuzolit,” “electric baths” as well as a “pneumatic hammer”; whereas “Zyklon B” was never mentioned. The gas chambers themselves, according to these reports, were not in the crematories but in “houses in a forest.”¹⁹

Very tactfully, the authors of *Nazi Mass Murder* treat these stories with complete silence.

The revisionists did not react with a comprehensive reply to this orthodox onslaught against critical, well-reasoned historiography. This is not really surprising, as revisionist scholarship was still in its infancy at that

time. For reasons evident, the revisionists had concentrated almost completely on Auschwitz. There were as yet no revisionist works dealing with the “*Aktion Reinhardt*” camps (Bełżec, Sobibór, Treblinka) or with the gas vans. Over the years, there have been fundamental changes, though.

4. The Evolution of Revisionist Scholarship from the Late 1980s Onward

In 1988, the Toronto court of appeals handled the appeal lodged by Ernst Zündel, a German-Canadian revisionist.²⁰ During the appeal trial, Zündel and Faurisson called for an expert opinion by Fred Leuchter, a U.S. specialist employed in the installation and maintenance of gas chambers which were still in use for executions in some U.S. states at the time. The expert opinion was to cover the rooms labeled gas chambers at Auschwitz I, Birkenau and Majdanek. In February of 1988, accompanied by a small group of assistants, Leuchter flew to Poland, visited the sites and then wrote the first ever technical expert opinion on the “crime scenes” of the “greatest mass murder” in history.²¹ His conclusions covered three issues:

- The “gas chambers” were not designed as such and could not have been used for such a purpose.
- The capacity of the crematoria would have allowed for the incineration of only a fraction of the alleged victims.
- Chemical analyses carried out (not by Leuchter himself but by a chemist called Dr. James Roth) on samples taken from the walls of the “gas chambers” showed no or only insignificant traces of cyanic residues, whereas a control sample taken from a Zyklon B delousing chamber revealed enormously high cyanide contents.

The *Leuchter Report* had its undeniable weaknesses also in the eyes of revisionist researchers,²² but its function as an ice-breaker cannot be overestimated. In the years between 1990 and 1993, the German accredited chemist Germar Rudolf analyzed the *Leuchter Report* in detail. A considerably enlarged new German edition of his report was published in 2001,²³ while the latest English edition of 2011 has been greatly expanded and re-

²⁰ Cf. Robert Lenski, *Der Holocaust vor Gericht*, 2nd ed., Uckfield 2010.

²² For example, the cremation capacity claimed by Leuchter was too low, and he claimed erroneously that the “gas chambers” had no ventilation system. Just as flawed was his hypothesis that gas chambers could not have been located in the same building as incineration ovens due to the high explosivity of hydrogen cyanide. Such a danger would have existed only at extremely high concentrations of hydrogen cyanide. See apart from F. Leuchter, R. Faurisson, Germar Rudolf, *ibid.*, also Carlo Mattogno, *Holocausto: Dilettanti allo sbaraglio*, Edizioni di Ar, Padua 1996, pp. 212ff.

²³ Germar Rudolf, *Das Rudolf Gutachten*, 2nd ed., Castle Hill Publishers, Hastings 2001.

vised.²⁴ Rudolf came to the conclusion that the mass gassings reported by the witnesses for Auschwitz could not have taken place for structural and chemical reasons:

- At the alleged time, the holes for the introduction of Zyklon B were missing; the granules could not have been introduced in the manner described by the witnesses.
- Hydrogen cyanide reacts with some of the substances contained in the brickwork. The most stable of the resulting compounds is the pigment Iron Blue or Berlin Blue, which originally provided the German name for hydrogen cyanide (“*Blausäure*,” i.e. blue acid). If mass gassings had taken place in the “gas chambers,” Iron Blue should have been found in quantities comparable to their presence in the brickwork of disinfestation chambers, but the walls of the “gas chambers” contain only non-reproducible amounts of cyanide, close to the detection limits.

The enormous upswing which revisionism experienced in the early 1990s was primarily due to Germar Rudolf and Carlo Mattogno. In 1994, Rudolf published the revisionist anthology *Grundlagen zur Zeitgeschichte*²⁵ under the pseudonym Ernst Gauss. In it, the essential aspects of the “Holocaust” topic were discussed. An enlarged English edition appeared later under the title *Dissecting the Holocaust*.²⁶ From 1996 onwards, Rudolf acted as the editor of the academically demanding *Vierteljahreshefte für freie Geschichtsforschung* (Quarterly Journal for Free Historical Research), regularly publishing his own articles there as well; he also supervised the publication of a large number of revisionist works by the publishing companies Castle Hill Publishers (England) and Theses & Dissertation Press (USA) which he had founded. In 2005, he summarized, in the form of dialogues, the most important revisionist arguments in a book entitled *Vorlesungen über den Holocaust*.²⁷ Lacking convincing counter-arguments, the Holocaust lobby had to be satisfied by a personal vendetta directed against Rudolf. In November of 2005, he was expelled from the USA, where he had been living with his American wife and daughter, and handed over to Germany where he was imprisoned until July of 2009. This persecution was too late, though, as Rudolf’s work had already been done by that time.

In contrast to the German citizen Rudolf, the Italian citizen Mattogno has so far enjoyed the benefits of living in a country which has not (yet) fettered historiography (although the Italian Holocaust lobby has been trying and keeps trying to change that; if they succeed, such a measure will come into force too late to be effective.)

In the years after 1985, Mattogno has devoted the better part of his creativity to the elucidation of the fate of the Jews during the Second World War. His impressive activity when it comes to Auschwitz, culminating in the gigantic two-volume work *Auschwitz—The Case for Sanity*,²⁸ has been complemented by research into the other alleged extermination camps. For his studies on Majdanek²⁹ and Treblinka³⁰ as well as Stutthof,³¹ labeled an “auxiliary extermination camp” by the Polish historical literature, I was able to assist him as a project initiator and co-author; the Bełżec³² and Chelmno³³ camps he has handled by himself. The final one of the “extermination camps,” Sobibór, we both covered together with the Swedish researcher Thomas Kues in a 500-page study.¹⁵ I regard my contribution to this work as the epitome of my work as a revisionist.

Today the most significant revisionist author next to Mattogno is Thomas Kues, who is presently conducting a thorough analysis of the fate of those Jews who were deported to the East by the Germans, aimed at depriving orthodox Holocaust historians of their last remaining argument: What happened to the deported Jews, if they were not gassed?

5. “New Studies” – or Old Wine in New Skins

The “democratic” system reacted to the progress of revisionism by increasing Holocaust propaganda and by intensifying repression. Muzzling laws were foisted upon one European nation after another, and subsequently many revisionists landed behind bars, some of them for many years. But there were some people in the Holocaust lobby who found that propaganda

and the terror of a police state were not enough. Something had to be done to counter the arguments of the “deniers.” Hence, on the 25th anniversary of the publication of the original German edition of *Nazi Mass Murder*, a meeting dealing with “New Studies on National Socialist Mass Killings by Poison Gas” was organized. Three years later, the lectures given there were published in an anthology (no doubt with the usual corrections and enlargements added later) bearing the same title, whose editors were Günter Morsch and Bertrand Perz.³⁴

Even a cursory examination of the book reveals the following points:

1. An over-emphasis on euthanasia

No less than six contributions (covering a total of 61 pages) are devoted to “euthanasia,” the historical truth of which has never been put in doubt by anyone. What might be discussed in this connection are the means employed and possibly the number of victims. Unqualified as I am to pronounce myself on this topic, I shall not comment on it. Therefore, my criticism below does not refer to these texts.

2. The “Aktion Reinhardt camps”: Ten pages and ten lines for 1.3 million “gassed” victims

In an article entitled “Mass killings by poison gas within the framework of ‘Aktion Reinhardt’” (“Massentötungen durch Giftgas im Rahmen der ‘Aktion Reinhardt’”), Dieter Pohl sets the number of Jews allegedly gassed at Belżec, Sobibór, and Treblinka at “roughly 95% of at least 1,366,000” persons (S. 193). This group of 1.3 million alleged victims is discussed on ten pages and ten lines (pp. 185 to 195) out of a total of 477 pages. This corresponds to one sixth of the number of pages devoted to the victims of euthanasia (allegedly 70,273³⁵ according to official sources)!

It had to be expected that Pohl would not write a single word about the revisionist studies on Treblinka and Belżec, which have been available since 2002 and 2004, respectively. What could he have replied? But the fact that he brazenly distorts the archeological findings on the Belżec site takes the cake, as it were. On p.193, he writes:

“New findings have resulted from the archeological digs on the camp sites as well as from aerial photographs of the Luftwaffe taken in 1943 and 1944. A precise topography of the camp sites, especially the locations of the mass graves and of the gas chambers, can now be established with greater accuracy. For Belżec in particular, this has led to a significant enhancement of what we know.”

³⁴ Günter Morsch, Bertrand Perz (eds.), *Neue Studien zu nationalsozialistischen Massentötungen durch Giftgas*, Metropol Verlag, Berlin 2011.

³⁵ *Ibid.*, p. 84.

Pohl's source is given here as follows: Andrzej Kola, *Bełżec. The Nazi Camp for Jews in the Light of Archeological Sources. Excavations 1997-1999*, Warsaw-Washington 2000. Robin O'Neil, "Bełżec – The 'Forgotten' Death Camp," in: *East European Jewish Affairs* 28 (1998), No. 2, pp. 49-62. It is, however, a fact that neither Kola nor O'Neil, in their soundings and digs at the Bełżec site, discovered even the slightest trace of the two gas chamber buildings mentioned by "witnesses,"³⁶ and that O'Neil admitted this quite frankly:³⁷

"We found no trace of gassing barracks, neither for the first nor for the second construction phase of the camp."

It is obvious that nobody could be gassed at Bełżec if there were no buildings housing the gas chambers!

3. A considerable rise in the alleged number of victims of gas vans compared to previous Holocaust writings

The total number of Jews killed in gas vans is given by Richard Evans as 700,000 (p. 9) and by Achim Trunk as 500,000 (p. 24). Out of these, some 250,000 are said to have met their death on the territory of the Soviet Union (*ibid.*) and 152,477 in Chelmno (p. 183). The authors don't explain what happened to the remaining ca. 100,000 to 300,000 victims. The reason for this strong increase beyond the traditional Holocaust figures is easy to comprehend: the alleged mass killings in stationary gas chambers are questioned by revisionists not only on the basis of historical but also technical arguments. On the other hand, it is obvious that people can be killed in a closed van by means of suitably introduced engine exhaust gases, and thus the tale of the gas vans cannot be refuted by technical arguments only. It is therefore in the obvious interest of the concerned circles to inflate the proportion of "gas van" victims within the total number of people allegedly gassed.

4. Playing up the alleged gassings at the Mauthausen, Sachsenhausen, Ravensbrück, Neuengamme and Stutthof camps

A total of 59 pages have been devoted to the alleged gassings in the Mauthausen, Sachsenhausen, Ravensbrück, Neuengamme and Stutthof camps, which is six times more pages than those discussing the three "Aktion Reinhardt" camps and two and a half times more than those dealing with the Auschwitz camp. At first sight this appears odd, all the more so as Raul Hilberg, in his standard treatise *The Destruction of the European Jews*, does not claim any gassings for these five camps, and because they would not be necessary at all in order to prop up the orthodox Holocaust

³⁶ See on this C. Mattogno, *op. cit.* (note 32), chapter 4.

³⁷ Robin O'Neil, "Bełżec – The forgotten Death Camp," in: *East European Jewish Affairs*, 28 (2) (1998-1999), p. 55.

narrative in view of the small number of people allegedly killed there (a total of a few thousand).

There are two reasons for the authors' persistent occupation with these rather insignificant gas chambers, though: For one thing, an admission that nobody was gassed in these camps and that, hence, all testimonies to killings by gas at those sites are false, would lead an attentive reader to the question, why witness statements concerning gas killings at Auschwitz, Treblinka, Sobibór or Bełżec should be more trustworthy than those about Ravensbrück, Sachsenhausen or Mauthausen.

A second and very important reason for this state of affairs is underlined by Mattogno: The articles were written by historians and employees working at the various memorial sites who seem to possess a perverted sense of pride that "their" camp, too, could at least boast of a small gas chamber and thus contributed its share to the Holocaust. It is not enough for them that in "their" camp tens of thousands of people died from disease, malnutrition, or exhaustion. "Without any gas chamber of their own to boast of, these narrow-gauge historians feel excluded from the pack," states Mattogno in the present work.

For lack of any documentary evidence, these dodgy historians feel obliged to accept even the most foolish witness accounts and the most absurd confessions as legal tender. Morsch himself, who is working for the Sachsenhausen memorial, is the most daring of the lot. He reveals to his stunned audience that at Sachsenhausen, aside from Jews, Soviet PoWs and sick inmates, even German soldiers were gassed (p. 271).

5. The missing refutation of the "revisionist deniers"

In spite of the initial promise to unmask the "revisionists of history" who "disregard the fundamental rules of scholarly historiography and who present history selectively" and to provide "suggestions and concepts for dealing with revisionist denials" (pp. XI f.), an examination of revisionist arguments, as announced, does not take place. In the introduction, Morsch and Perz write (p. XXIX):

"The revisionist strategies of denial were reinforced with pseudo-scientific arguments and were disseminated widely in society. [...] But our concern cannot be to address pseudo-scientific arguments in order to refute them, as this would ultimately result in honoring their representatives and the abstruse theories they defend."

While mentioning some revisionists in his chapter "Killings by means of toxic gas in the Sachsenhausen concentration camp ("Tötungen durch Giftgas im Konzentrationslager Sachsenhausen"), Morsch strictly follows this procedure otherwise and keeps completely mum about the most detailed analysis of the alleged mass murders at Sachsenhausen, provided by

a German paper authored by Mattogno in 2003.³⁸ It's as simple as that for the court historians!

The only author who at least tries to refute this or that argument put forward by the revisionists is Achim Trunk, author of the chapter "The lethal gasses" ("Die todbringenden Gase") but he fails miserably, as Mattogno demonstrates in chapter 1 of the present volume.

Thanks to his profound knowledge, acquired over more than two decades of research, Mattogno relentlessly dissects the elements of "proof" advanced by the authors of this anthology and unmask these historians for what they really are: at best incompetent and naïve amateurs, at worst blatant impostors. The total bankruptcy of orthodox historiography cannot be made any more devastating than by comparing *Neue Studien zu national-sozialistischen Massentötungen durch Giftgas* with Mattogno's reply. The Great Lie can only be maintained by brainwashing, censorship and repression – for the time being.

As stated above, this merciless judgment does not apply to the authors of the chapters on "euthanasia." It may well be that what they say about this point does correspond more or less to the facts. Neither Mattogno nor I can assess this topic. We also have to exempt from this accusation the author of the chapter "The gas chamber in the Natzweiler concentration camp" ("Die Gaskammer im Konzentrationslager Natzweiler"). For me, who translated Mattogno's book from Italian to German, the conclusion that a gassing was "probably" perpetrated in the Alsatian camp at Natzweiler was very surprising. In August of 1943, 86 Jews were sent to the Natzweiler camp from Auschwitz and were subsequently murdered. The documents do not permit any doubt in this regard. The criminal deed was initiated by an SS professor who wanted to prepare a collection of Jewish skeletons. Without providing us with any clear documentary evidence, Mattogno believes that the murders were probably carried out by means of phosgene gas. By allowing such a hypothesis, the Italian researcher risks being rebuked by other revisionist historians. The fact that he accepts this risk proves that he does spread neither black nor white propaganda but is trying to do serious science.

Both the followers and the opponents of revisionism will wonder: if Mattogno, the leading revisionist historian, suspects that the gassing action at Natzweiler did in fact take place, could it not be that gassing actions also took place at other locations? The only answer which we, as revisionists, are able to provide in this respect is: if we are presented with proof or at least with circumstantial evidence pointing to such gassings, we shall take them into serious account. Passing over counter-arguments with complete

³⁸ C. Mattogno, "KL Sachsenhausen. Stärkemeldungen und 'Vernichtungsaktionen' 1940 bis 1945," *Vierteljahreshefte für freie Geschichtsforschung*, 7(2) (2003), pp. 173-185.

silence is something the other side may practice. They have decades of experience in this field.

16 August 2011

Introduction

In 2008 an international meeting of historians took place at Oranienburg, a northern suburb of Berlin, Germany. Three years later, the papers presented there were published as a collection by Günter Morsch and Bertrand Perz (and assisted by Astrid Ley) under the title *Neue Studien zu nationalsozialistischen Massentötungen durch Giftgas* (*New Studies on the National Socialist Mass Killings by Poison Gas*). In his foreword, Thomas Krüger describes the contents and the structure of this book with the following words (p. XII):

“This anthology summarizes new findings resulting from the international scientific meeting devoted to the topic ‘Mass murder by means of poison gas.’ It describes the aims and structures of revisionist propaganda and presents suggestions and concepts for the treatment of revisionist denial.”

As early as 1983, an anthology with the title *Nationalsozialistische Massentötungen durch Giftgas. Eine Dokumentation*³⁹ had appeared, claiming to refute revisionism by way of scientific historical methods. Still, in the introduction to the book being discussed here, Morsch and Perz are forced to admit that “questions and denials did not decrease after the publication of the collection in 1983” (p. XV) and that a new effort has thus become necessary.

The new work has six parts:

1. “Mass killings by poison gas: Scientific appraisal and memory.”
2. “Technical and pharmacological aspects and the significance of remainders.”
3. “The killing institutions of *Aktion ‘T4’*.”
4. “Poison gas as a means of genocide in gas vans and extermination camps.”
5. “Murder by gas in the concentration camps located in the ‘*Altreich*’ at Mauthausen, Stutthof und Natzweiler.”
6. “The ‘gas chamber lie’ in the international revisionist propaganda.”

The significance of each contribution varies greatly. Some of them are so unimportant and have so little to do with the objectives of the Oranienburg meeting that they are hardly worth being discussed in any detail. This applies especially to the article “How unique was the murder of the Jews

³⁹ E. Kogon, H. Langbein, A. Rückerl *et al.* (eds.), *Nationalsozialistische Massentötungen durch Giftgas. Eine Dokumentation*. S. Fischer Verlag, Frankfurt upon Main 1983; Engl: *Nazi Mass Murder*, Yale University Press, New Haven 1993.

by the National Socialists?” by Richard Evans (“*Wie einzigartig war die Ermordung der Juden durch die Nationalsozialisten?*”; pp. 1-10), “Mass murder by poison gas as perceived by the survivors” by Moshe Zimmermann (“*Massenmord durch Giftgas in der Wahrnehmung der Überlebenden*”; pp. 11-20), “Technical aspects of the mass murder by poison gas as arguments in court” by Volker Bieler and Kurt Schrimm (“*Technische Aspekte des Massenmordes durch Giftgas als Argumente vor Gericht*”; pp. 50-63) as well as “Violence and death in concentration and extermination camps. Possibilities and limitations of archeology” by Claudia Theune (“*Gewalt und Tod in Konzentrations- und Vernichtungslagern. Möglichkeiten und Grenzen der Archäologie*”; pp. 64-73), although I will address Theune’s paper later.

Finally, Detlef Garbes’s contribution “The concentration camps as scenes of mass murder” (“*Die Konzentrationslager als Stätten des Massenmordes*”; pp. 316-334) has only a tenuous link with the objectives of the meeting. Notwithstanding this, I will of course examine individual arguments as presented in these contributions and where necessary.

In the following analysis of the book I shall maintain the sequence in which the individual papers appear in the book. From time to time, however, I will allow myself to assess as a group those articles which deal with the same topic. For that reason, a discussion of the articles attacking revisionism, devoid of substance as they are, appears only towards the end of this present analysis.

1. The Lethal Gases

The first article deserving attention was written by Achim Trunk and is entitled “The lethal gases” (“*Die todbringenden Gase*”; pp. 23-49). It deals with the various gases allegedly used for killing people in the National Socialist era. The first three are well-known from Holocaust literature:

Carbon monoxide which, as we are told, was allegedly applied in the euthanasia centers during the so-called “*Aktion 14f13*,” in an experimental gas vans of “*Sonderkommando Lange*,” as well as in the Majdanek concentration camp.

Engine exhaust gases, said to have been employed in the camps of “*Aktion Reinhardt*” (Bełżec, Chełmno, Sobibór, Treblinka).

Zyklon B, claimed to have been used for killing people at Auschwitz, Majdanek, Mauthausen, Stutthof and Ravensbrück (as well as, maybe, Dachau).

Aside from these three gases, Trunk introduces a fourth and ill-defined compound into the debate: a “Hydrogen cyanide preparation” (“*Blausäure-Präparat*”), also labeled “*Blausäure*” or a “chemically related substance.”

In a paragraph of seven lines, entitled “Murders by means of carbon monoxide: No objections from the deniers” (“*Kohlenmonoxidmorde: Keine Einwendungen der Leugner*”), Trunk writes (p. 30):

“No chemically-oriented arguments concerning mass murder by means of pure carbon monoxide have been brought forward by the deniers.”

Aside from the silly use of the word “denier,” this is basically correct, but, as we shall see, far more important historical arguments exist against the alleged mass killings by means of pure carbon monoxide which render “chemically-oriented arguments” superfluous.

On the subject of the toxicological effects of carbon monoxide, Trunk explains (p. 28):

“As a rule, victims of carbon monoxide poisoning can be recognized by the red color of their mucous membranes due to the fact that hemoglobin loaded with carbon monoxide (and thus the blood in general) is cherry-red.”

We agree,⁴⁰ but then why do some witnesses assert that the corpses of the victims killed by means of carbon monoxide showed a blue discoloration? Trunk explains the matter as follows (p. 32):

“If diesel engines were used, agony surely extended over a longer period of time, because diesel engines produce appreciably less carbon monoxide. Furthermore, they also produce a considerable amount of irritants. In such cases, death could have been caused under certain circumstances by a combination of carbon monoxide (internal suffocation) and oxygen deficiency (external suffocation).”

In a footnote, Trunk adds the remark that “occasional accounts” exist, according to which the corpses had a bluish color, which would point to “lack of oxygen as a cause of death” (fn. 24 on p. 32).

Before we discuss this point, we must remember the context within which the questions discussed here are placed. In his argument against revisionists who point out that diesel engines are most unsuitable for killing people, Trunk surprisingly asserts (p. 32):

⁴⁰ On the skin discoloration of the alleged gassing victims at the Bełżec, Sobibór, Treblinka and Chelmno camps see the detailed discussion by Kues in Carlo Mattogno, Jürgen Graf, Thomas Kues, *The “Extermination Camps” of “Aktion Reinhardt,”* The Barnes Review, Washington, DC, 2013, pp. 856-868.

“This argument is irrelevant, as serious research does not believe at all that diesel engines were generally used at the ‘Aktion Reinhardt’ extermination camps.”

Trunk admits that in the earlier literature there are “indications attributing a considerable weight to the share of murders by means of diesel exhaust gas.” He mentions Raul Hilberg in this connection (p. 32). In fairness he should also have mentioned the prestigious *Enzyklopädie des Holocaust*, which explicitly mentions a 250 HP diesel engine for the Bełżec camp⁴¹ and postulates a diesel engine for Treblinka as well (for Sobibór it speaks merely of a 200 HP engine but does not indicate the type). It is of course possible that earlier Holocaust historians have erred, but anyone advancing such an argument must back it up by *new sources*.⁴² Trunk writes (p. 34f.):

“The fact that gasoline engines were indeed employed in the ‘Aktion Reinhardt’ extermination camp is substantiated by reliable sources. Rudolf Reder for instance, one of the very rare survivors of the Bełżec extermination camps, speaks of a gasoline engine standing in a small room near the gas chambers.”

This is correct, but either Trunk has not read Reder’s corresponding statements or disregards them on purpose. When questioned by Judge Jan Sehn, Reder clearly stated on 29 December 1945:⁴³

“The bodies in the chamber did not show any unnatural discoloration. They looked like live persons, most had their eyes open. Only in a few cases were the corpses bloodstained. The air in the chambers, when they were opened, was pure, transparent and odorless. In particular, there was no smoke from the exhaust gas of the engine. The [exhaust] gas was evacuated from the engine directly into the open air, and not into the chambers.”

Hence, for Reder, the corpses were colored neither red nor blue, and furthermore the gasoline engine was *not* used for killing the victims. Anyone willing to go along with Trunk and considering the “older” Holocaust literature as unreliable must not shy away from the question why, of the two most important witnesses on the subject of Bełżec, one – Kurt Gerstein

⁴¹ I. Gutman, E. Jäckel, P. Longerich, J.H. Schoeps (eds.), *Enzyklopädie des Holocaust. Die Verfolgung und Ermordung der europäischen Juden*. Argon, Berlin 1993, vol. I, p. 176 (Bełżec), vol. III, p. 1428 (Treblinka), p. 1332 (Sobibór). The English edition of this encyclopedia, which appeared three years earlier, is rather badly edited: I. Gutman (ed.), *Encyclopedia of the Holocaust*, MacMillan, New York 1990.

⁴² The issue is thoroughly discussed in Mattogno, Graf, Kues, *op. cit.* (note 40), points 95-111, pp. 815-838.

⁴³ AGK, OKBZN Kraków, 111, pp. 4-4a. See my study on *Bełżec: Propaganda, Testimonies, Archeological Research, and History*, reprint, The Barnes Review, Washington, DC, 2011, p. 38.

– speaks of a diesel engine as having been the murder weapon (something which Trunk accepts in his footnote 22 on p. 31), while the other, Reder, speaks of a gasoline engine whose exhaust gases, however, were *not* used to kill any victims. As a graduate engineer and mining expert,⁴⁴ Gerstein was no doubt able to tell a diesel engine from a gasoline engine!

Trunk may well believe that Gerstein was wrong. But in this case he must also explain why Gerstein claims to have seen blue corpses of persons⁴⁵ which, according to Trunk, were victims of a gassing with gasoline engine exhaust gas and thus would have had to exhibit a cherry red skin discoloration, because he claims that a bluish discoloration could have been caused only “under certain circumstances” during gasings with diesel engines! But then perhaps the engine was both a gasoline engine for gasings and a diesel engine for the discoloration...

Trunk confirms that diesel engines operate “with a great excess of oxygen” and that, for this reason, their exhaust gases contain a higher “concentration of oxygen sufficient for [potential gassing victims] to survive.” On the other hand, he states that diesel exhaust gases act faster “under higher loads.” Referring to tests run by American engineers in the 1950s, he writes (p.33):

“Idling, or without any special load, the motors investigated produced exhaust gases with a high concentration of oxygen and very little carbon monoxide. Under higher loads, the carbon monoxide values increased without in themselves reaching directly critical values. At the same time, though, the oxygen content dropped to 3 percent.”

This decrease in the oxygen concentration down to 3% hence becomes the basis for Trunk’s thesis mentioned above, according to which the death of the victims was possibly caused by suffocation as a consequence of a lack of oxygen.

The study mentioned by Trunk (in footnote 29 on p. 33) was done by John C. Holtz and M. E. Elliot and published under the title “The Significance of Diesel-Exhaust Gas Analysis.”⁴⁶ The results summarized by Trunk were obtained by means of a modified injection pump which allowed an increase of 60% in the fuel injected, thus resulting in an incomplete fuel combustion on account of the unfavorable air-to-fuel ratio. Furthermore, the engine was loaded by means of a brake dynamometer. Page 99 of this study shows “Table 3” which contains the relevant data for “Engine B.” For a total of eight runs, the highest concentration of carbon monoxide reached 6%, whereas the lowest oxygen concentration was as low as 0.3

⁴⁴ T-1310, p. 1.

⁴⁶ In: *Transactions of the ASME*, vol. 63, February 1941, pp. 97-105.

Table 1: Concentration of Gasoline Engine Exhaust Gases, Vol. %				
Conditions	Engine	CO ₂	CO	O ₂
Idling at 1000 rpm	Hanomag	7.7	5.2	1.6
	Adler	8.5	8.5	1.1
	Benz	9.2	6.3	1.0
Full load at 1500 rpm	Hanomag	13.2	0.2	1.4
	Adler	13.3	0.2	2.3
	Benz	13.5	1.7	1.1

percent. On the other hand, gasoline combustion engines will normally produce an even higher carbon monoxide concentration and a slightly higher oxygen level; this was observed during tests carried out by the German *Reichsgesundheitsamt* (Reich health agency) and the I.G Farben company.⁴⁷ On moving from idle to full load, the percentage of carbon monoxide showed a strong decrease with a corresponding sizable increase in the carbon dioxide content, while the oxygen content increased slightly. This can be seen from Table 1 which I have simplified by merely showing the three gases which interest us here.⁴⁸

This means that even the potential victims of a gassing procedure using gasoline engine exhaust gases would have died of “external suffocation.” Hence, it is not really clear why the SS would have manipulated a diesel engine and slowed it down in a cumbersome way in order to reach concentrations of carbon monoxide which were still lower than those produced by an idling gasoline engine under conventional conditions.

Trunk explains his criticism of the assertion in the “older” literature that diesel engines were used in the Reinhardt camps by saying that, for Sobibór, the use of a gasoline engine has been postulated (p. 35). While this is true, an SS man stationed at Sobibór during the war, Erich Fuchs, stated that, during the installation of the engine, a chemist entered the chamber with a measuring device to verify the gas concentration.⁴⁹ It may be postulated that corresponding measurements would have been carried out on the diesel engine at Belzec as well (although no witness stated this explicitly⁵⁰) and that then the SS necessarily would have come to the conclusion that gasoline engines were more suitable for mass murder than diesel engines. But if that is so, it is not understandable why a diesel engine would once

⁵⁰ Although Fuchs declared he knew the chemist doing the test “from BELCEC”; see the text in Mattogno, Graf, Kues, *op. cit.* (note 40), point 48, pp. 749-753.

again have been opted for at Treblinka later on.⁵¹ Trunk mentions the fact that Holocaust historiography does assert the use of a diesel engine at Treblinka (p. 35), but he wiggles his way out by saying that the witnesses had mistaken the diesel generator used at Treblinka for the generation of electrical power with the gasoline engine employed for the mass killings.⁵² This limping explanation is followed by a no less dubious argument (p. 37):

“That these witnesses may be in error on this one aspect is quite possible; the details of the scenario of the killings as gathered from the sources can best be explained, both technically and toxicologically, by the use of a gasoline engine for the production of the deadly gases.”

The “sources” referred to by Trunk are nothing but assertions of self-styled eye-witnesses which “technically and toxicologically” explain nothing at all, not least because quite a few of them speak of the corpses having a bluish tint, which according to Trunk could “possibly” be caused only by the use of diesel exhaust gases for the killings.

Trunk’s conclusion is just as unfounded as the conjectures which form the basis of his thesis (p. 36):

“The revisionists’ assertion that it is not at all possible to kill groups of people by means of diesel exhaust gases is not correct. What is correct is that diesel engines are much less suitable for mass murder than gasoline engines – something which no serious Holocaust scholar would dispute.”

This is precisely what is asserted by serious revisionists. They ask, however, why the SS opted for diesel, even though such engines – to use Trunk’s own words – “are much less suitable for mass murder than gasoline engines.” In a study pertinently titled “Diesel Gas Chambers: Ideal for Torture – Absurd for Murder,” engineer Friedrich P. Berg comes to the conclusion:

“It would be hard to imagine a mass murder method more awkward and more inefficient. Even if some deranged minds had tried for a time to commit murder with diesel exhaust, after a few tries it would have become apparent to even the most demented fiend that something far better was needed.”

If we follow Berg, gasoline engines would have been “so much better” for mass murder – and especially gas generators, widely used by the Ger-

⁵¹ On this question see J. Graf, T. Kues, C. Mattogno, *Sobibór. Holocaust Propaganda and Reality*, The Barnes Review, Washington, DC, 2010, pp. 257f.

⁵² This objection has been thoroughly discussed several times in Mattogno, Graf, Kues, *op. cit.* (note 40). pp. 116, 750, 766, 780, 827-830, 834, 873, 883.

mans during WW2, because they could use wood or coke as fuel and yielded a gaseous engine fuel containing up to 35% of carbon monoxide.⁵³

In his discussion of Zyklon B, Trunk presents us with some well-known facts about the physical, chemical and toxicological properties of the disinfection agent, and adds (p. 40):

“The skin of victims of hydrogen cyanide often shows a pinkish discoloration, typical for carbon monoxide poisoning.”

This is absolutely true, but Trunk forgets to mention the many witnesses according to whom persons gassed with Zyklon B showed a blue discoloration.⁵⁴ He reminds us of the fact that hydrogen cyanide, in spite of being called “blue acid” in German, “is not really blue but colorless, in the liquid and gaseous state” (p. 37). He does not explain, however, why numerous witnesses speak of “blue crystals” and “blue vapors.”⁵⁵

Trunk touches only briefly on the use of Zyklon B as a killing agent. He asserts that a concentration of 10 grams per cubic meter was used in the disinfection chambers using Zyklon B (footnote 59 on p. 39). Referring to the statements made by Rudolf Höß, he writes that in the alleged homicidal gas chambers in crematoria II and III, which had a volume of 500 cubic meters each, 1,500 people had been gassed at the same time, with a corresponding “concentration of 10 up to a maximum of 20 grams of hydrogen cyanide per cubic meter” and that this, “hardly by accident, is the very concentration used for the elimination of insects” (footnote 60 on p. 39).

The modifier “hardly by accident” signifies, of course, that, in order to kill people, the SS had employed the same concentration of Zyklon B as was also needed for disinfection. If we look at the fundamental differences between human beings and insects, this idea becomes simply ludicrous. This is also underlined by Robert Jan van Pelt, considered by the orthodox side to be the leading Holocaust historian, who has contributed two papers to the work discussed here. On p. 210 he writes:

“Since Zyklon B had been developed as a disinfection agent, an evaporation time of 24 hours had been planned for the cyanide. Nits

⁵³ Friedrich P. Berg, “Diesel Gas Chambers: Ideal for Torture – Absurd for Murder,” in: Germar Rudolf (ed.), *op. cit.* (note 26), pp. 435-469. Berg’s quote is on p. 469.

⁵⁴ I quote numerous witnesses reporting about blue corpses of gassing victims in my study *Auschwitz: The First Gassing*. 2nd ed., The Barnes Review, Washington, DC, 2011, pp. 40, 61, 66, 86f.

⁵⁵ Among these witnesses is, for instance, the SS driver Richard Böck, who claimed to have seen a “blue mist” over the corpses after a “gassing” in one of the “bunkers” of Birkenau; see for this Germar Rudolf, “From the Records of the Frankfurt Auschwitz Trial, Part 4,” in: *The Revisionist* 1(4) (2003), pp. 470-472. The former Auschwitz inmate Filip Müller spoke of “bluish-violet Zyklon B crystals.” F. Müller, *Sonderbehandlung. Drei Jahre in den Krematorien und Gaskammern von Auschwitz*. Verlag Steinhausen, Munich 1979, p. 111.

[the larvae of lice] *are difficult to eliminate and must therefore be exposed to the cyanide for a long time. People, on the other hand, die quickly.*"

Trunk's assertions concerning the cyanide concentration used are also in fundamental disagreement with van Pelt's views. According to the latter, a concentration of merely 100 to 300 parts per million was used, which would amount to 0.12 to 0.36 grams per cubic meter, or 0.24 grams per cubic meter on average. The concentration proposed by Trunk (15 grams per cubic meter) is roughly 62.5 times higher than van Pelt's figure.⁵⁶

The chapters of this book dealing with the Natzweiler and Sachsenhausen camps contain a discussion of the other "hydrogen cyanide preparations" mentioned by Trunk and alleged to have been used for killing people in these two camps.

In the last section of his article, Trunk addresses the "chemical objection of the deniers." He starts by criticizing Fred Leuchter's thesis which labels hydrogen cyanide as explosive and hence cautions against its use in a crematorium (p. 45). Here Trunk preaches to the choir, since I have shown in detail as early as 1996 that Leuchter's argument is indeed not cogent.⁵⁷ Trunk goes on to say (p. 46):

"Another argument concerns the allegedly overly slow evaporation of hydrogen cyanide from the Zyklon B carrier. It is based on a wrong extrapolation of data from the product sheets."

In an effort to strengthen his thesis, Trunk refers the reader to the alleged refutation of the revisionists' chemical arguments by Josef Bailer ("Die 'Revisionisten' und die Chemie"⁵⁸). In that article Bailer polemicizes against Germar Rudolf; he asserts that the slow evaporation of Zyklon B mentioned by Rudolf (90% of the hydrogen cyanide has evaporated from the granules after two hours) was "presumably" based on the "data sheets for commercial Zyklon as available today" which would mean that Rudolf's interprets the values incorrectly.⁵⁹ Bailer mentions a patent issued on 27 December 1926 to DEGESCH (*Deutsche Gesellschaft für Schädlingsbekämpfung*, German Society for Pest Control) and referred to by Rudolf, although it does not speak about Zyklon B but only in a general way about

⁵⁶ See about this my study *Auschwitz: ..., op. cit.* (note 28), chapter 14.1.: "HCN Concentration in the Alleged Homicidal Gas Chambers," pp. 499-503.

⁵⁸ J. Bailer, "Die 'Revisionisten' und die Chemie," in: B. Bailer-Galanda, W. Benz, W. Neugebauer (eds.), *Wahrheit und Auschwitz. Zur Bekämpfung "revisionistischer" Propaganda*. Deuticke, Vienna 1995, pp. 99-118.

⁵⁹ *Ibid.*, p. 109.

hydrogen cyanide adsorbed on a porous substance such as diatomaceous earth. The patent states *i.a.*:⁶⁰

“If the can’s contents are spread out in a thin layer, the hydrogen cyanide will evaporate with 10 minutes.”

On the basis of this sentence alone, and without referring to any other documents, Bailer concludes:⁶¹

“The idea that it would take hours for the product to release the active agent is absurd.”

This alleged refutation of Rudolf’s argument is openly contradicted by van Pelt, according to whom an evaporation time of the HCN of 24 hours was expected. It mainly fails to convince, however, if we take into account the results of experiments carried out in 1942 where the evaporation rate of hydrogen cyanide was evaluated. The corresponding study⁶² is also mentioned by Trunk, but only as proof of the fact that “even at temperatures below the freezing point, considerable amounts of gaseous hydrogen cyanide are released by the carrier” (p. 46) and that “even at temperatures as low as minus 6°C something like half of the hydrogen cyanide adsorbed is released from the Erco cube” (footnote 84 on p. 46; Erco mainly consisted of gypsum). Table 2 of this article does indeed permit the conclusion that, at a temperature of -6°C, some 45% of the hydrogen cyanide has been released from the pellets; on the other hand, the last column of this very table⁶³ gives also the data for a temperature of +15°C:

After one hour:	57.0%
After two hours:	96.4%
After three hours:	100.0%

When cardboard disks were used as a carrier for hydrogen cyanide, like wise at +15°C, the results were as follows:⁶³

After one hour:	77.0%
After two hours:	96.8%
After three hours:	100.0%

These experiments are vastly more significant than the claims made in the mentioned patent. Their conclusions were confirmed by two experiments which a Polish-Soviet commission carried out in the Majdanek camp

shortly after its occupation in August 1944. Two cans of 1,500 grams each of Zyklon B were opened and then exposed at a temperature of +28°C; after that, the remainder was weighed. The contents of one of the cans weighed 450 grams, the other 470 grams, which means that over the period of two hours about 70 and 69 percent, respectively, of the hydrogen cyanide had evaporated.⁶⁴

This leads us to the inexorable conclusion: If we follow Trunk, who cites witness statements to the effect that “the [homicidal] gassing procedure was normally terminated after 20 minutes by switching on the ventilation system” (p. 41), and if we follow Jean-Claude Pressac, who states that the ventilation in the morgues of the crematoria II and III, which were equipped with an aeration and a de-aeration unit, lasted 15 to 20 minutes,⁶⁵ we may conclude that the Zyklon B granules would go on releasing their deadly load for more than another two hours, *i.e.* during the removal of the corpses from the morgues. The situation in the alleged gas chamber of crematoria IV and V would have been much worse, as these chambers were not equipped with a forced ventilation system, to say nothing of the Birkenau “Bunkers”! Since the better part of the hydrogen cyanide would be released only after the victims’ demise, the gas chambers’ operating personnel would have been in constant mortal danger. We must realize here that there was a quick, efficient, easy and safe way of releasing the Zyklon B – by means of the DEGESCH circulation system developed in 1940, which I shall discuss later and about which no witness and no orthodox Holocaust historian has ever claimed that it has ever been employed for homicidal gassings.

These SS guys truly exhibited a very strange planning behavior: In the form of the DEGESCH circulation gas chamber they had at their disposal a highly efficient system for disinfestation, but they never used it for any killings. They possessed gasoline engines and gas generators, which were quite suitable for mass murder, but are said to have used diesel engines instead. What is most astounding, though, is that in the Forensic Institutes of the German Police, where it is claimed a host of wannabe Frankensteins were working at the development of effective killing systems, nobody ever had the idea to use the gases coming from gas generators for homicidal purposes before being fed into the engine. This method imposed itself outright. This is revealed in particular by a table published by the German chemists Flury and Zernik in 1931, which gave the carbon monoxide con-

⁶⁴ See on this J. Graf, C. Mattogno, *Concentration Camp Majdanek*, 3nd. ed., The Barnes Review, Washington, DC, 2012, p. 125.

⁶⁵ J.-C. Pressac, *Die Krematorien von Auschwitz. Die Technik des Massenmordes*. Piper Verlag, Munich Zürich 1994, p. 95.

tents of various gases. Engines of an unspecified type (probably gasoline engines) produced a maximum concentration of 12%, those from wood-fired gas generators, on the other hand, contained up to 34 percent.⁶⁶ Apparently, these SS technicians of death proceeded in accordance with the motto: "Efficiency is to be avoided at all cost"!

Towards the end of his contribution, Trunk raises a further question: The "absence of a compound called 'Iron Blue' in the remaining brickwork of the Auschwitz gas chambers" (p. 46). In doing so, he presents the results of the *Leuchter Report* and the *Rudolf Report* which set out, in simplified form, the extreme differences in cyanide content of samples taken on the one hand from alleged homicidal gas chambers and on the other hand from the Zyklon B disinfestation chambers at buildings 5a and 5b at Birkenau, and Trunk raises the following objection (pp. 46f.):

"To begin with, it is not at all certain that the Iron Blue of the disinfestation chambers was caused by the effect of hydrogen cyanide vapors. For example, its origin could also be faded paint; many wall paints in those days in fact contained this pigment. A lack of discoloration would then simply mean that, while the delousing chambers were painted in this manner, the gas chambers were not. But even if we accept that the Iron Blue of the delousing chambers was caused by exposure to hydrogen cyanide, it does not necessarily follow that similar stains would have developed in the homicidal chambers."

Then Trunk lists the differences between the delousing chambers and the homicidal chambers and asserts that no Iron Blue could have developed in the latter "even if they had been exposed to hydrogen cyanide" (p. 47).

This argument fails on account of the following facts:

Rudolf utterly refuted the thesis of blue wall paint with eleven pertinent arguments in his expert report, which Trunk treats with silence, because the findings radically contradict his thesis.⁶⁷

Aside from this, Trunk's reasoning is also refuted by hard facts. In addition to the alleged gas chambers of Auschwitz, as I mentioned above, Zyklon B is asserted by Trunk to have been employed for homicidal purposes at Stutthof and Majdanek as well. He postulates 1,500 of such murders at Stutthof (fn. 5 on p. 25) but is cautious enough not to assign any figures to Majdanek. However, Tomasz Kranz, author of the article on Majdanek in the discussed anthology, mentions a maximum of 12,000 persons gassed there, either by means of Zyklon B or carbon monoxide (p.

⁶⁶ F. Flury, F. Zernik, *Schädliche Gase, Dämpfe, Nebel, Rauch- und Staubarten*. Verlag von Julius Springer, Berlin 1931.

⁶⁷ G. Rudolf, *op. cit.* (note 23), pp. 169f.; Engl. G. Rudolf, W. Lambrecht, *op. cit.* (note 24), pp. 269f.

227). Both the alleged homicidal gas chambers at Stutthof and at Majdanek show large Iron Blue stains, however, and this not only on the inside of the walls but on the outside as well. Jürgen Graf and I have pointed to this fact in our studies of these camps.⁶⁸ A strong blue discoloration is also shown on the outside of the southern wall of the Birkenau delousing chamber of BW 5b at Birkenau and – albeit to a noticeably lesser degree – on the outside of the western wall of BW 5a.

Hence, if the gas chambers at Stutthof and Majdanek were “homicidal chambers,” there are only two possibilities: Either, these chambers were all painted with Iron Blue paint patches⁶⁹ – but then, why in the world were the bricks on the outside painted patchy blue as well? – or the stains did result from homicidal gassings in spite of all of Trunk’s objections. This would mean that these stains should all the more appear in the homicidal chambers at Birkenau, which are said to have been used for considerably more gassings. If orthodox Holocaust historians maintain that a total of 13,000 people were killed by gassings at Stutthof and Majdanek (not all of them by means of hydrogen cyanide), and yet their walls show such a strong blue discoloration, then one should *a priori* expect to see such stains in the alleged gas chambers of crematoria II and III at Birkenau as well, as altogether 550,000 people were killed there by means of Zyklon B as affirmed by van Pelt.

The orthodox Holocaust historians have argued themselves into a corner, from which there is no way out. They must now choose: Either the gas chambers at Majdanek and Stutthof were “homicidal” chambers – then the blue stains should also be visible in the “homicidal” chambers at Birkenau; or it was impossible for Iron Blue to form in “homicidal” chambers – then the gas chambers at Stutthof and Majdanek were not “homicidal.”

Trunk concludes with the following argument:

“That the victims had been exposed to large amounts of hydrogen cyanide was shown [...] as early as 1945 by a toxicological analysis. It showed that e.g. the hair of the persons killed, which was destined to be used industrially, contained considerable amounts of cyanide residue.”

Let us first point out a lack of precision in Trunk’s wording. The assessment at the time was a qualitative, not a quantitative one, and it did not speak of “considerable” amounts of cyanide residues but only in general of

⁶⁸ J. Graf, C. Mattogno, *Concentration Camp Stutthof*, 2nd, revised ed., Theses & Dissertations Press, Chicago, IL, 2004, color images between pp. 110 & 111; J. Graf, C. Mattogno, *op. cit.* (note 64), pp. 341-344 (consult the online version, as the print version is b/w only); see farther below, chapters 8 & 13.

⁶⁹ Both the inside and the outside walls show patches of various hues and sizes, located only here and there, which precludes the use of paint, which would have covered the entire surface of the walls equally.

their presence. The expertise was presented on 15 May 1945 by the director of the Krakow forensic institute, Jan Z. Robel, and was accepted on 15 December of the same year by the investigating judge Jan Sehn as an element of proof for the prosecution in the trial against Rudolf Höß.⁷⁰ The conclusion of the opinion – based on three analyses – stated:⁷¹

“It has thus been ascertained that, into an aqueous solution [into which the hair had been immersed] at room temperature, the hairs have released hydrogen cyanide.”

Furthermore, it has never been shown that the hair in question, bags of which the Soviets had discovered at Auschwitz, was hair of persons killed – *i.e.* persons gassed. On 9 August 1942, SS-Brigadeführer Richard Glücks, Head of Office Group D of SS Economic and Administrative Main Office (SS-Wirtschafts- und Verwaltungshauptamt, SS-WVHA), had written a letter to the commanders of the concentration camps on the subject of “Utilization of hair cuttings.” In it he transmitted the order by SS-Obergruppenführer and WVHA-Head Oswald Pohl to collect the hair of detainees for the purpose of its industrial use.⁷²

“It is [...] ordered to conserve the hair removed from female detainees after disinfection. Hair of male detainees can only be used if longer than 20 millimeters.”

Orthodox historiography tells us that, at the time, homicidal Zyklon B gas chambers were operated only at Auschwitz, whereas the collection of hair applied to all camps. At Sachsenhausen, for example, German, Flemish, Dutch and Norwegian detainees were allowed to have hair of up to 20 mm length, while all other detainees were shorn completely.⁷³ We hardly need to mention that hair was cut from living detainees and not from the dead. After the liberation of the Natzweiler camp, the French authorities found some 27 kg of hair at that campsite.⁷⁴

It must be understood that “disinfection” actually meant “disinfestation,” because hydrogen cyanide is not a “disinfection agent,” as it cannot kill bacteria or viruses. The incorrect use of these terms is *i.a.* also found in the correspondence between the Majdanek camp administration and the firm Tesch & Stabenow concerning the supply of Zyklon B. For example,

the Majdanek camp physician addressed a memo to the camp administration on 11 September 1943 saying:⁷⁵

“It is requested to order disinfection gas in large amounts for the purpose of disinfection at the camp.”

It was standard practice to disinfest the hair clippings by means of Zyklon B before packing them and shipping them to the companies concerned.⁷⁶ After all, it was an urgent matter that lice from this hair, which were responsible for transmitting typhus in the camps, did not get transferred to the outside world and thus possibly causing epidemics there too. Therefore, any kind of analysis of a hair sample sent from any concentration camp to companies concerned would have shown traces of hydrogen cyanide. Hence, Trunk’s thesis that the analysis run at Krakow is proof of homicidal gassings at Auschwitz is completely untenable.

Let us conclude by raising a point on which Trunk is completely silent but which causes problems for other Holocaust historians: why did the alleged extermination of the Jews make use of so many vastly different methods of killings:

- pure carbon monoxide in gas cylinders
- “Gas vans” of the first generation (an ill-defined collection)
- “Gas vans” of the second generation (using diesel engines)
- Exhaust gases from diesel or gasoline engines in stationary gas chamber
- Zyklon B

The Holocaust historians claim that each of these methods had its own genesis; thus, it would be incorrect to speak of any kind of systematic “development of the technology.” This means that the execution of the alleged Hitler order or any alleged decision by Hitler was not at all centrally planned but implemented individually by local commanders and their staff in a clumsy and amateurish manner, resulting in a hodge-podge of wildly diverging and mostly inefficient killing methods!

2. The Euthanasia Centers and “*Aktion 14 f 13*”

No less than seven contributions are devoted to euthanasia centers. They vary in significance. I shall discuss them here as a group.

In her article “The destruction of life unworthy of living under National Socialism: ‘Operation T4’” (“*Vernichtung lebensunwerten Lebens’ im Nationalsozialismus: Die ‘Aktion T4’*”, pp. 77-87) Brigitte Kepplinger characterizes the body of source material with the following words (footnote 9 on p. 79):

“We must underline here the precarious nature of the sources which does not allow us to define with any degree of precision the beginnings or the detailed scenario of how the various euthanasia actions were set up. The most important primary sources no longer exist, such as the files of the Führer chancellery. The files of ‘Zentraldienststelle’ of ‘T4’ were destroyed in 1944/45 except for a small portion which was later labeled the ‘Heidelberg Documents.’ For that reason, the statements by the witnesses and the defendants during the corresponding trials thus constitute the most important source. These statements are in part imprecise, contradict one another or are contradictory in themselves to such an extent that a reconstruction of the planning process is tainted by a degree of uncertainty.”

As early as 1987, Matthias Beer, a participant of the Oranienburg meeting and author of an article concerning the “gas vans” in the present collection (cf. chapter 3), wrote:⁷⁷

“However, the historian is not entitled to use court verdicts without examining them, because justice and historiography pursue different ends. For him [the historian] primarily witness testimonies are important, because they help to fill the gaps in the sources. But due to their peculiarities testimonies can be treated on an equal footing with documents, for example, and be used profitably by historical research only if certain principles are observed. The basic requirement is not to abandon the link between witness statements and documents which have been subject to thorough sources criticism, that is to say, to always connect the probable with a certain fact. [But] even in this way we cannot respond satisfactorily to every question.”

These considerations are valid in particular when we keep in mind that, in these cases, we are dealing with Allied military courts which later were followed by political tribunals conducted mainly in Germany.⁷⁸

⁷⁷ M. Beer, “Die Entwicklung der Gaswagen beim Mord an den Juden,” in: *Vierteljahrshefte für Zeitgeschichte*, vol. 35. no. 3, 1987, p. 404; Engl.: <http://dss.ucsd.edu/~lزامosc/chelm10.htm>

The primary, though not the only aim of the prosecutors in both cases was to discredit the National Socialist ideology and the entire German nation. (Another goal of the Allied tribunal was also to divert attention from crimes committed in the name of the Allied nations.) The defendants, on the other hand, employed a strategy of emerging from the trial with the least damage possible. Seen in this light, both sides did evidently not shy away from resorting to lies in order to achieve their goals.

The Americans began moving against the directors and the personnel of the euthanasia centers at a very early stage. In April 1945 they investigated the Bernburg case (p. 137), in June 1945 the Hartheim case followed (p. 129), and in October 1945 the Hadamar case came under scrutiny (p. 149). Thus, the basic points of future charges had been formulated very early and became the foundations of all future trials. This means that for these latter procedures – which, in many cases, began years after the respective events – the observance of standard legal practice was not assured in any way. It would be naïve to use them as a means for elucidating historical facts. Hence, any historiographic approach using the verdicts of such trials as its basis would have to be called essentially unscientific.

I should stress the point that the historical reality of the euthanasia of mental patients is not in doubt. Still, I think it is legitimate to raise the following questions:

1. What items of proof exist for the assertion that the euthanasia centers were equipped with homicidal gas chambers employing carbon monoxide?
2. What items of proof permit the assertion that carbon monoxide in steel cylinders was used in the euthanasia centers?
3. What items of proof allow establishing the Ludwigshafen branch of I.G. Farben as the supplier of carbon monoxide in steel bottles to the euthanasia centers?
4. In what manner did carbon monoxide become the selected killing instrument?
5. A secondary, albeit certainly not irrelevant question concerns the crematorium furnaces allegedly installed at the euthanasia centers. Is material or documentary evidence available for their existence? If so, which firms were the manufacturers? What type of fuel was used? How did they operate and what technical characteristics did they have? Most important however: what was their capacity? This latter question is relevant in connection with the number of persons killed, said to have exceeded 100 per day at some centers over a longer period of time (p. 146).

⁷⁸ Cf. Mattogno, Graf, Kues, *op. cit.* (note 40), pp. 68-83.

What is even more relevant, though, is the alleged link between these centers and the so-called “extermination centers” of “*Aktion Reinhardt*,” which are said to have been extensions of the euthanasia centers. This aspect of orthodox Holocaust historiography will be dealt with in chapter 4 of the present book.

In her article “Mass killings by means of carbon monoxide. The ‘invention’ of a homicidal method, the ‘test gassing’ and the murder of patients at Brandenburg on the Havel” (“*Massentötung durch Kohlenmonoxid. Die ‘Erfindung’ einer Mordmethode, die ‘Probevergasung’ und der Krankentod in Brandenburg/Havel*”; p. 88-99) Astrid Ley discusses the fourth of the points just raised, *i.e.* the decision process said to have led to the choice of carbon monoxide as the instrument of murder.

Following in the footsteps of Gerald Reitlinger,⁷⁹ she also starts out from the known statement by SS judge Konrad Morgen at Nuremberg in which Morgen referred to the euthanasia centers. Then she comments on them as follows (pp. 88f.):

“Morgen’s statement is a rather early indication of the link between the ‘euthanasia’ undertaking and the Holocaust of the European Jews, even though the declaration by this questionable IMT witness may be somewhat problematic. [...] No NS files in this respect being in existence, we shall reconstruct events on the basis of trial statements made by persons involved.”

According to these “statements,” the original plan had been to kill mental patients by means of injections; later, in view of the large number of potential victims, a different killing system was opted for. Astrid Ley writes (p. 91):

“Although Ferdinand Flury, who held a professorship at the University of Würzburg and could have replied exhaustively to the special inquiry from the Führer chancellery – Ferdinand Flury and Fritz Haber had done research and development work on chemical warfare during the First World War – another institution was consulted: the Institute of Forensic Technology (KTI) in Berlin, which was part of the Imperial Police Office for Crime Investigation and had just begun developing new killing methods.”

For the latter assertion there is not even the shadow of any kind of proof. Flury, by the way – together with Franz Zernik – was the author of a highly documented standard work in this field, *Schädliche Gase, Dämpfe, Nebel, Rauch- und Staubarten*⁶⁶ (Harmful gases, vapors, mists, and types of smoke and dust). Even a very cursory look at this book informs the

Table 2: Toxicity of Poison Gases Used in WWI			
COMPOUND	TOXICITY INDEX [†]		
Phosgene	450	highly	toxic
Diphosgene	500		
Mustard gas	1,500		
Ethyl-iodo-acetate	1,500		
Chloro-picric acid	2,000		
Chloro-ethylsulfate	2,000		
Hydrogen cyanide*	1,000-4,000		
Ethyl-bromo-acetate	3,000		
Perchloro-methylmercaptan	3,000		
Chloro-acetone	3,000		
Bromo-acetone	4,000		
Bromo-xylene	6,000		
Chlorine	7,500		
Carbon monoxide	70,000	slightly	toxic

[†] according to Haber's rule; * depending on concentration

reader of the substances best suited for mass killings. In fact, the effectiveness of these substances was ranked according to their toxicity based of a rule established by Haber.

The most lethal substances are listed in Table 2; the figures given for each entry correspond to the dose (in milligrams) which provokes death within one minute.⁸⁰

This table clearly shows us that carbon monoxide – allegedly used in the euthanasia centers – is 155 times less toxic than phosgene, and 17.5 to 70 times less toxic than hydrogen cyanide. Still, Albert Widmann, a chemist working at the Institute of Forensic Technology, is reported to have recommended its use (pp. 91f.):

“Albert Widmann thus recommended carbon monoxide and not cyanide gas, used for executions in the gas chambers of various U.S. states and most probably known to him.”

In this connection, this is the second point which would cause one to raise eyebrows. How was this decision arrived at and how was it tested? Ley tells us (p. 92):

“Historical literature usually mentions a so-called test gassing carried out at the ‘euthanasia institution’ of Brandenburg on the Havel on-

⁸⁰ Michele Giua, Clara Giua-Lollini, *Dizionario di chimica generale e industriale*. UTET, Turin 1948, vol. I, entry “Aggressivi chimici di guerra,” p. 313; Attilio Izzo, *Guerra chimica e difesa antigas*. Editore Ulrico Hoepli, Milan 1935, “Principali aggressivi chimici,” Table on unnumbered page.

ly 70 km away from Berlin. [...] It is not known who the patients killed were, or where they came from. Furthermore, an exact date for this first mass murder cannot be established on the basis of the available sources.”

During one of the post-war trials it was asserted that the gassing was carried out in December 1939 or January 1940. Ley states that it “probably took place in the early days of January 1940.” At this point matters become highly convoluted, though, because the orthodox Holocaust historians – as usual basing themselves on some witness statement or other made during a trial – maintain that carbon monoxide had been in use since late November of 1939 “for killing patients of mental institutions” at “Fort VII in western Posen (Poznan) converted to an SS-camp” and explicitly “unrelated to the ‘T4’ enterprise” (pp. 93f.).

This propaganda story had originally no connection at all to an alleged testing of carbon monoxide. In 1942 it was claimed that,⁸¹

*“from the institution at **Kocborowo**, in Pomerania, as well as others, hundreds of patients were sent in lorries to Poznań, where they were poison-gassed in special chambers in Fort VII, called Entwesungs-Kammer. The children of the establishment at **Jankowice** were also poison-gassed.*

*Cripples were disposed of in this manner. A considerable number of them were poisoned at Fort VII a **Poznań**. [...]*

In this fort existed a ‘gas chamber,’ to which dozens of cripples (victims of terror) and invalids from various hospitals were carted, and there were poisoned, apparently with military gases .”

The term “*Entwesungs-Kammern*,” however, means disinfestation chambers, and that’s exactly what they were. Their use with military gases does not fit at all into the context mentioned above. This alleged event was unknown at the trial of Arthur Greiser (21 June to 9 July 1946): in the indictment and during the trial, the prosecution rested their case particularly on “Fort VII” of Posen, but without the slightest hint of these “gassings.”⁸²

This brings into focus once more all the questions mentioned above, even though Astrid Ley remains completely silent about them. This also concerns the unclear relationship between these alleged gassings and the “test gassing” at Brandenburg as mentioned above.

Astrid Ley then goes on to cite the statements made by the two most important witnesses of this (alleged) event, Viktor Brack and Werner Hey-

⁸¹ Polish Ministry of Information (ed.), *The Black Book of Poland*, G.P. Putnam’s Sons, New York 1942, pp. 72, 80.

⁸² Główna Komisja Badania Zbrodni Niemieckich w Polsce (ed.), *Proces Artura Greisera przed Najwyższym Trybunałem Narodowym* (Trial of Artur Greiser before the National Supreme Court), Warsaw 1946, pp. 34f., 57-60.

de, and discusses them as follows (pp. 96f.):

“The text passages quoted here show that the statements of the persons involved, when describing the scenario of the ‘test killings,’ contradict each other on occasion, e.g. as to the number of victims or the question as to who fed the toxic gas into the chambers. They also differ in the essential significance of the event, i.e. they at times assign to the Brandenburg murders different degrees of relevance as far as the ‘T4’ procedure is concerned. [...] Brack and Heyde basically had opposing views as to the significance of the Brandenburg experiments: while Brack considers this to have been a central point in the definition of a suitable killing method serving as a basis for Hitler’s later decision in favor of CO gas, Heyde plays down the relevance of the experiment for this decision.”

The last sentence quoted is not precise: According to footnote 30 on p. 97, Heyde not only played down the relevance of the experiment for this decision, but excluded it altogether, because, according to him, “the decision to use CO was taken before the end of November [1939].”

We are dealing here without exception with mere assertions which have no basis in documents and which contradict each other. One might say that the whole story of the genesis of the killings by means of carbon monoxide, including the Brandenburg “test gassing,” is located in the realm of holocaust mythology without any links to factual history.

For the total number of mental patients killed in the euthanasia centers, Brigitte Kepplinger refers the reader to a “*Hartheimer Statistik*” which sets it at 70,273 victims (p. 84). It consists of two sheets without header, undated, unsigned and without any official stamp imprints. The first sheet begins with this sentence:

“As of 1 September 1941 were disinfected: Persons: 70,273

This number

1. distributed over the individual institutions results in the following breakdown for the years 1940 and 1941:”

A table follows with the following data:

Institution	1940	1941	Total
A [<i>Grafeneck</i>]	9,839	–	9,839
B [<i>Brandenburg</i>]	9,772	–	9,772
Be [<i>Bernburg</i>]	–	8,601	8,601
C [<i>Hartheim</i>]	9,670	8,599	18,269
D [<i>Sonnenstein</i>]	5,943	7,777	13,720
E [<i>Hadamard</i>]	–	10,072	10,072
A-E:	35,224	35,049	70,273

The second sheet continues with the following sentence:
“2. distributed over the individual institutions for the months of 1940:”

Below this follows another table and a chart. The table contains the following data:

Institution	January	February	March	April	May	June	July
A [<i>Grafeneck</i>]	95	234	500	410	1,119	1,300	1,262
B [<i>Brandenburg</i>]	–	105	495	477	974	1,431	1,529
C [<i>Hartheim</i>]	–	–	–	–	633	982	1,449
D [<i>Sonnenstein</i>]	–	–	–	–	–	10	1,116
E [<i>Hadamard</i>]	–	–	–	–	–	–	–
Totals	95	339	995	887	2,726	3,723	5,356

Institution	August	Sept.	Oct.	Nov.	Dec.	Total	[corr.]
A [<i>Grafeneck</i>]	1,411	1,228	761	971	948	9,839	10,239
B [<i>Brandenburg</i>]	1,419	1,382	1,117	397	386	9,972	9,712
C [<i>Hartheim</i>]	1,740	1,123	1,400	1,396	947	9,670	
D [<i>Sonnenstein</i>]	1,221	1,150	801	947	698	947	5,943
E [<i>Hadamard</i>]	–	–	–	–	–	–	–
Totals	5,791	4,883	4,139	3,711	2,572	35,224	
[corrected]			4,079		2,979	35,564	

The chart’s curve gives the “number of disinfected”; a side note explains the correspondences between the letters shown in the “Institution” column of the tables (A-E) and the related institutions.⁸³

I want to draw the readers’ attention to the strange fact that the total figure given on these two sheets corresponds closely to a prediction by Viktor Brack who stated on 9 October 1939 that one might be facing some 65,000 to 70,000 cases (p. 82). Although it is not disputed that the “Aktion” was cut short on 24 August 1941, the figure of projected killings given by Viktor Brack would thus still have been reached.

⁸³ NARA II, RG-549, Exhibit 39.

Let us now return to the questions I raised in this regard. All authors dealing with the euthanasia centers assume *a priori* as a certain and indubitable fact that they were equipped with gas chambers using bottled carbon monoxide, but they offer no documentary evidence for their claim.

Concerning my point 3, Thomas Stöckle asserts in his contribution “Grafeneck. The installation of an extermination center” (“Grafeneck. Der Aufbau einer Vernichtungsanstalt”) that Viktor Brack had been entrusted with the task of “transporting the carbon monoxide gas needed for the killings from the Ludwigshafen branch of I.G. Farben to the individual killing centers. The necessary gas cylinders came from the Mannesmann factory at Buss upon Saar” (p. 105), but Stöckle does not give any source. In this connection the anthology *Nazi Mass Murder*⁸⁴ mentions two letters from I.G. Farben, dated 17 December 1943 and 18 February 1944 respectively, but already the extremely late dates of these letters raises suspicions about their authenticity. If any documents proving or suggesting the supply of carbon monoxide in steel cylinders to the euthanasia centers had ever been found, it is obvious that the orthodox Holocaust historians would have published them right away. But as far as I know, any such documents have been referred to only in passing for the last three decades.

The Ludwigshafen plant is mentioned by Mathias Beer as well, but the source given is a statement by Albert Widmann dated 28 January 1959 (p. 156).⁸⁵ The same point is dealt with by Florian Schwanninger in his article “Hartheim 1940-1944” (p. 127); he writes:

“On 19 April the purchasing department of ‘T4’ ordered 15 CO cylinders which, according to Choumoff, ‘could only have been destined for Hartheim.’ ”

Schwanninger’s source is not a document but a book by P.-S. Choumoff (footnote 70 on p. 127). As opposed to his colleagues, Tomasz Kranz maintains that the cylinders in question had the markings “Jennerwein und Brenner, Berlin” (cf. chapter 8).

Some of the seven articles contain answers to the fifth question I raised on the subject of the cremation furnaces. I shall list them under the heading of the respective euthanasia center:

Brandenburg: Astrid Ley merely says that the corpses of the patients killed were cremated “in crematoria (p. 99).”

Grafeneck:

“During the first half of January [1940], [...] two mobile crematorium furnaces are supplied to Grafeneck. [...] In the spring of 1940, when

⁸⁴ E. Kogon *et al.*, *op. cit.* (note 39), German edition, note 86a on p. 307.

⁸⁵ In his earlier paper Beer gave the date of August Becker’s statement as January 28, 1960; M. Beer, *op. cit.* (note 77), p. 405.

the killing capacity is to be raised, the gas chamber is enlarged, and a third crematorium furnace is set up in the crematorium." (p. 104)

Sonnenstein: As Boris Böhm explains in his article "The National Socialist killing facility at Pirna-Sonnenstein" ("Die nationalsozialistische Tötungsanstalt Pirna-Sonnenstein"), two crematorium furnaces were set up in this institution under the direction of master mason Erwin Lambert.⁸⁶

"The particular installation works, among other things the construction of the incineration furnaces, was carried out by a fitter of the Kori company, Berlin."

Just like the Erfurt company Topf & Söhne, Böhm continues, the Kori company had also developed special crematorium furnaces for mass incineration which came to be used both at the "T4" institutions and in concentration and extermination camps. A fire in the chimney of the killing building during the euthanasia period showed, however, that "the technology used did not always correspond to the requirements." According to an investigation by Albert Widmann, head of the chemistry department of the Institute of Forensic Technology, "the long flames were due to too many corpses having to be cremated at one time." Furthermore, Albert Widmann is said to have found that the design of the chimney – rectangular instead of round – was unsuitable: "A round chimney would not have cracked either" (p. 110).

Let me point out right away that no documentary evidence exists for the alleged supply of Kori furnaces to the euthanasia centers and that these furnaces have never been found.⁸⁷ Furthermore, Böhm's expression "special crematorium furnaces for mass incineration" is misleading, because we are dealing here with absolutely normal furnaces, each of which was designed to cremate one corpse at a time.⁸⁸ As Widmann writes about the construction process of such furnaces, it is clear that he referred to coke-fired furnaces, because the oil-fired mobile furnaces were supplied fully assembled and ready for use.

The tale of the chimney fire makes no sense at all. Seen from the point of view of heat technology, the simultaneous cremation of several corpses presents no advantage at all, neither concerning the duration of the crema-

⁸⁶ Excerpt from the statement by Erwin Lambert of 2 October 1962 (note 7, p. 110).

⁸⁷ Annegret Schüle asserts that the Kori firm "equipped the euthanasia institutes [...] with its ovens," but she gives no documentary sources. A. Schüle, *Industrie und Holocaust. Topf & Söhne – Die Ofenbauer von Auschwitz*, Wallstein Verlag, Göttingen 2010, pp. 114f.

⁸⁸ On the structure and operation of the Kori ovens see my study *I forni crematori di Auschwitz. Studio storico-tecnico con la collaborazione del dott. Ing. Franco Deana*. Effepi, Genoa 2011, vol. I, second part, chapter XI, pp. 435-448; an English edition is in preparation.

tion nor in terms of fuel needs; hence there was no motive for it. If it was done anyway, the duration would practically have doubled for two corpses, tripled for three, etc., but a chimney would not have caught fire for that reason alone.⁸⁹ Widmann's reasoning on the subject of the chimney design is likewise confused, because the draft in the duct would have been determined by its cross-sectional area, its height and the load involved,⁹⁰ and the formation of any cracks would not have been linked to the shape of this cross-sectional area. Viewed in this light, the whole tale strikes one as not very credible.

Böhm then moves on to a description of the furnaces (pp. 113f.):

"Then, two of three corpses were cremated each in both crematoria. They consisted of brickwork, strengthened by steel bands at different levels. The corpses were pushed by a stretcher to the front of the furnace, which was protected by a heavy shield of steel and closed by a trap. The shield hung down from a cable having a counterweight; over rollers the cable was led to the side, where it could be moved. The stretcher consisted of sheet metal, welded to two rods, one on each side. These rods were pushed onto two rollers set onto a support bar in front of the furnace. According to Emil Hackel,^[91] the ash was 'not preserved individually' but commingled. Behind the furnace section was a bone mill which reduced to the size of oatmeal any bones that might not have crumbled during the combustion process."

As I have already stated, the simultaneous cremation of two or even three corpses would not have brought along any improvement (except for small children). In all likelihood, we have here a model for the future Auschwitz propaganda stories.

The description of the furnace is not very precise and, in places, nearly unintelligible. The "shield," in any case, was a fire-clay closure, held by a frame of cast iron; located above the rear portion of the furnace, it could be moved by a cable and two pulleys with counterweights, but this closure ran up and down vertically like a guillotine along two guide rails set into the furnace brickwork behind the muffle door. Its purpose was to retain the corpse in the muffle while the introduction cart was being pulled out. This cart ran on two rollers, mounted on a roller frame, the horizontal bars of which were welded to the anchor frame of the muffle door, whereas the vertical bars were set into the floor.

A "bone mill" is out of place in a normal crematorium. I shall return to this point in connection with the Hartheim euthanasia center.

⁸⁹ *Ibid.*, chapter X, § 11, "Il problema dei camini fiammeggianti," pp. 430-434.

⁹⁰ *Ibid.*, first part, chapter 2, § 4, "Il camino," pp. 39-41.

⁹¹ Hackel was the stoker of the crematorium.

The whole description is apparently based on the Kori furnaces, the design and operation of which, however, escape Böhm.

Finally, Böhm looks at the ruins of the crematorium furnaces (p. 117):

“One can still see the very rusty U-shaped remains of the steel frames which supported the furnaces. In addition, the ceiling shows knocked-out holes which served to support the rollers of the furnace. The two crematoria were connected to a large square chimney, measuring about 1.40 by 1.40 meters. [...] The attic still shows stains caused by the fire of the chimney.”

This description is again rather confused and shows that the author did not know much about the design of such furnaces. The term “knocked-out holes” (*“Ausbrüche”* in German) is somewhat mysterious; apparently we have here holes in the ceiling from which some object, a hook for example, had been removed by force. We have already seen that the rollers of the Kori furnaces served only to guide the introduction cart and did not have anything to do with the ceiling. The ceiling could have served for hooks holding the pulleys for the fire-clay plate or those of the smoke-duct vane which was operated in a similar way. If the “steel frames” were roller supports, the bars were \sqcap -shaped (the vertical bars) or \sqcup -shaped (the horizontal sections set into the furnace wall).

The chimney was part of the building, but was removed in spite of this. Why should this have been done? That an ordinary smoke duct, planned and designed for an ordinary heating plant, would have measured 1.40 by 1.40 = 1.96 square meters is something totally outrageous, if we remind ourselves that the chimneys of crematoria II and III at Auschwitz reached a height of 15.46 meters and were split into three ducts, 0.80 by 1.20 meters. As these ducts were each fed by two furnaces consisting of three muffles each, a section of 0.96 m² would have sufficed for the equivalent of six Kori furnaces. At the time it was not unusual for a domestic chimney to catch fire,⁹² so that even the traces of a fire by themselves do not prove anything significant.

Hartheim: In his article mentioned above, Florian Schwanninger speaks of the cremation of corpses in this euthanasia center (pp. 120f.):

“The killing institution was equipped with its own cremation furnace which the Kori company supplied from Berlin and which was presumably installed by Berlin workers. The coke-fired furnace contained two chambers (‘muffles’), in which up to eight corpses were cremated simultaneously. Originally the crematorium was connected to the domestic chimney. Presumably caused by the permanently high load, a chimney

⁹² *Ibid.*, p. 434.

fire occurred which threatened to spread to the rest of the castle as well.”

In this case as well, the assertion that the furnace in question was supplied by the Kori company is supported merely by a statement of Lambert (footnote 16 on p. 120). Schwanninger apparently confuses the Kori furnace with the Topf double muffle furnace, because the former had only one muffle, and if it became necessary to install two muffles in one block – as in the case of the two central furnaces at the Dachau crematorium – two single furnaces were used. The idea of simply feeding the exhaust gas from a cremation furnace into a domestic chimney is ludicrous and could only be entertained by someone without any foundation in heat transfer, because the very hot gases would soon have set on fire the layers of soot always found in a domestic chimney.

A few pages on, Schwanninger tells us (p. 124):

“As the carcasses would not completely disintegrate into ash during cremation, an electric bone mill was employed. Part of the ash was shipped away in urns, each one having a capacity of some 3 kg. The remainder was filled into bags and, using a truck stationed at Hartheim, taken to the Danube, where it was dumped into the water.”

As the ash was placed partly into urns that were later sealed, partly dumped into the Danube, the electric bone mill makes no sense at all – quite apart from the fact that the Kori furnaces were very efficient and a cremation with them yielded only ash, but no larger bone fragments.

When construction work was carried out in 2001 on the eastern wing of Schloss Hartheim, “large amounts of ash and bone fragments were found” (which is not what Schwanninger claimed earlier!) as well as “urn lids with the names of victims and identification tags which detainees had held at the Mauthausen concentration camp” (pp. 129f.).

Bernburg: In her contribution “Cleared for imperial purposes. On the equipment and function of the ‘euthanasia’ institution Bernburg/Saale” (“Für Reichszwecke freigemacht. Zur Einrichtung und Funktion der ‘Euthanasie’-Anstalt Bernburg/Saale”; pp. 131-139) Ute Hoffmann writes that this euthanasia center contained “a crematorium with two stationary incineration furnaces” (pp. 135f.).

Brandenburg: In the same paper Hoffmann says merely that this center had a crematorium whose smoke was objected to by the people living in the area, whereupon cremations were moved to a site of a mansion some 4 km east of Brandenburg (p. 133).

Hadamar: In his article “Gas murder at Hadamar” (“Der Gasmord in Hadamar”; pp. 140-150), Georg Lilienthal tells us only very little about the cremation of the corpses in this euthanasia center, except that it contained

two cremation furnaces (p. 148). Whether these furnaces were also supplied by the Kori company is not made clear. The two furnaces are said to have left “visible traces” (p. 150) after having been “dismantled.” Apparently, the furnaces of all other euthanasia centers were dismantled as well, except for the two mobile furnaces at Grafeneck, of which we do not know whether they were built by the Kori or the Topf company (no other firms built such furnaces).

The stationary coke-fired Kori furnace had metal fittings which weighed a total of 1,460 kilograms,⁹³ which means that, when dismantling the 10 or 11 furnaces allegedly set up in the euthanasia centers by Kori,⁹⁴ some 14,600 to 16,060 kg of iron would have been recovered, the fate of which is unknown. (By comparison: the metal fittings of the Topf furnaces dismantled by the camp administration at Auschwitz were stored in a room of Crematorium I where they are visible even now.) And what happened to the two or three mobile furnaces? They did not leave a trace either.

In connection with Hadamar, the topic of cremation takes on a particular importance, because an extremely large number of people is said to have been killed there within a short period of time. According to Lilienthal (p. 146)

“between 5 and 9 May [1941], 88 to 90 patients were taken to Hadamar each day and murdered there. Starting in June, transports of more than 100 persons took place frequently. For example, between 21 and 24 July between 102 and 173 patients arrived daily, an average of 136 persons daily.”

The crematory was allegedly opened on 13 January 1941 (p. 144) and closed on 24 August (p. 147), so it worked for about 220 days, during which 10,000 people are said to have been murdered there (p. 147), or precisely 10,072, if we follow the above-mentioned “Hartheimer Statistik.”

During one operating day of 20 hours of operation, one Kori crematorium furnace could cremate a maximum of about 24 corpses daily,⁹⁵ or 48 for two such furnaces. If we accept the above number of victims, the Hadamar furnaces would have been running at full load for more than seven months, but as the number of victims fluctuated from day to day, on certain days a large number of uncremated corpses would have had to be dealt with. For example, during the month of June only half of the corpses could have been disposed of in this manner. The witnesses – starting with the

⁹³ *Ibid.*, pp. 437f., letter of the H. Kori company of 18 May 1943 to engineer Waller of Office CIII of the SS-WVHA.

⁹⁴ It is unclear whether the Grafeneck furnace was mobile or stationary.

⁹⁵ C. Mattogno, *op. cit.* (note 88), p. 362.

furnace attendants – have nothing to say on this. Instead, they proffer the tale of several corpses in one muffle as a solution to all of these problems!

I do not wish to assert in any way that no crematorium furnaces existed in the euthanasia centers. I merely wish to stress the fact that the information offered by the various authors is contradictory, both as far as documents are concerned and in technical respects, and thus cannot be taken as reliable historical sources.

Another topic which is not even cursorily addressed by orthodox historians concerns the death certificates of those killed. Böhm merely says that the employees at the registrar's office had indeed established such certificates, always signed them with the fictitious name of "Greif," and wrote "so-called letters of condolences"; the fact that they had always used fictitious names when writing to the families "would indicate that the killer physicians were aware of the illegal character of what was going on" (p. 114). In this respect Saul Friedländer explains elsewhere:⁹⁶

"A death certificate was an official document, and the physician, when stating the cause of death, did so in his function as a government official."

We may conclude the following: If a death certificate giving a false cause of death had to be issued, it was also necessary to establish an official confirmation to the effect that the deceased had been cremated and buried. With respect to cremation the legal dispositions in force at that time were particularly severe, as we can deduce from the legal requirements, *i.e.* the "Law on cremation" ("*Gesetz über Feuerbestattung*") dated 15 May 1934, the "Service regulations concerning cremation plants" ("*Dienstreglement für die Verbrennungsanlagen*") dated 5 November 1935, and finally the "Decree concerning the implementation of the law on cremation" ("*Verordnung zur Durchführung des Feuerbestattungsgesetzes*") dated 10 August 1938.⁹⁷ All of these dispositions were in effect long into the war, even for concentrations camps, as is documented by Himmler's decree dated 28 February 1940, entitled "Decree concerning the implementation of incinerations in the crematorium of the Sachsenhausen concentration camp" ("*Erlass über die Durchführung von Einäscherungen im Krematorium des Konzentrationslagers Sachsenhausen*").⁹⁸

Aside from all this, not even a single witness statement claims that after the cremation of the victims false cremation documents were created, even though such documents would have been as indispensable as false death

⁹⁶ S. Friedländer, *Le origini del genocidio nazista. Dall'eutanasia alla soluzione finale*. Editori Riuniti, Rome 1997, p. 142.

⁹⁸ BAK, NS 3/425.

certificates. After all, cremations were permitted only in officially licensed crematoria, which means that the furnaces of the euthanasia institutions – always assuming that they existed – would have been illegal.

Let us now turn to another question: the technical operation of the gas chambers at the euthanasia centers. It strikes me that the witnesses are unanimous when it comes to a particular detail which causes an impartial observer to raise his eyebrows. In all euthanasia institutions the gas is reported to have been removed by means of a blower (often labeled using the Anglicism “*Exhauster*”). At Brandenburg the gas supply “was stopped after half an hour; the room was ventilated by means of an exhauster and then opened” (p. 105). At Grafeneck the ventilation of the chamber was carried out “by means of a ventilator” (p. 105). At Bernburg, “a ventilation unit set into the window removed the CO-air mixture before the gas chamber was opened” (p. 136). At Hadamar “a ventilation device was installed” for the removal of the gas was. “It consisted of a pipe with a diameter of about 8 cm, set below the ceiling. It passed through the wall next to the door into the room in the west, was connected to a ventilator there and passed through the window of this room to the outside” (pp. 141f.).

Such systems cannot correspond to reality, because a gas chamber of this type would have needed *two* ventilators – one to feed fresh outside air into the chamber, and another one removing the air from the gas chamber to the outside. The disinfestation plant at Sachsenhausen (cf. chapter 10) operated in this manner.

Let me summarize: The “reconstruction” of the events in the euthanasia centers, while useful for backing up verdicts of politically motivated trials, has nothing to do with serious historiography.

It is practically an axiom for orthodox Holocaust historians that euthanasia served as a model for the alleged extermination of the Jews. They claim that, as a result of this, the personnel from the euthanasia centers were partly transferred to the “extermination camps” and that the killing method (gas chambers) was taken over by the latter. This transfer of personnel allegedly went along two avenues: into the “*Aktion Reinhardt*” camps and, via “*Aktion 14 f 13*,” into the concentration camps.

The second avenue is covered by Astrid Ley in an article titled “*Aktion 14 f 13 in the concentration camps*” (“*Die Aktion 14 f 13 in den Konzentrationslagern*”; p. 231 – 243). She asserts that this “*Aktion*” has so far been interpreted “by a portion of historical research” as “a step in the direction of creating a ‘genocidal mentality’ and has been linked to the preparation of the genocide against the European Jews” (p. 231). The designation “*Aktion 14 f 13*,” Ley assures us, was “taken from the code which was used by the Oranienburg Inspectorate of Concentration Camps (IKL) to

Table 3: Euthanasia Victims at Various Concentration Camps

Neuengamme:	240	240

designate a murder by gas. The code 14 f by itself stood for ‘death in the concentration camp,’ with 13 specifying ‘gassing’” (p. 231).

It is absolutely correct that “14 f” indicated death in a concentration camp. For example, “14 f 8-10” was used for non-natural causes of death,⁹⁹ while “14 f 14” stood for an execution, but there is not the slightest proof that “13” referred in any way to gassings. This assertion is based on a misleading fallacy of logic: because the victims of “*Aktion 14 f 13*” were gassed with carbon monoxide in the euthanasia centers, the figure “13” had to stand for “gassing”!

The only valid conclusion, however, is the following: As “*Aktion 14 f 13*” signified an extension of the euthanasia from civil institutions to concentration camps, the figure “13” stood for “death by euthanasia,” quite independent from the way euthanasia was brought about – in the same way as “14 f 14” referred to legal executions, whether carried out by shooting, hanging or in any other manner.

This *Aktion*, “probably decided on by Heinrich Himmler” (p. 231), initially concerned “physically and mentally sick detainees unsuitable for work,” as Ley tells us, and it was later extended to include all detainees unfit for work (p. 231), and finally, at least in the Mauthausen and Buchenwald camps, to all Jews (pp. 231f.). If we follow Ley, this *Aktion* began in April 1941, lasted through April 1942 (it was officially terminated only in February 1943) and is said to have caused the number of victims as given in Table 3.

According to this data, the total number of persons killed in this way amounts to some 5,900, roughly one twelfth of the “civilian” victims of the euthanasia centers.

⁹⁹ D-569.

The case of Auschwitz is especially interesting. Ley refers here to Danuta Czech's *Kalendarium*, which says that on 28 July 1942, 573 sick and unfit detainees were sent to Sonnenstein to be gassed there, but this incident is based exclusively on a statement by Rudolf Höß.¹⁰⁰ As opposed to this, the Polish underground movement at Auschwitz had sent out the following message on 2 July 1942:¹⁰¹

"The first use of gas took place in June 1941. A convoy of 1,700 'incurably sick patients' was formed and [allegedly] sent to Dresden; actually, though, [it was sent] into a building converted into a gas chamber."

Thus, the Polish underground asserts that the "first gassing" occurred at Auschwitz itself and not at Sonnenstein. Moreover, it should be noted that the two sources differ by thirteen months, as far as the date is concerned!

Hence, an extension of "*Aktion 14 f 13*" to Auschwitz is not borne out by documents.¹⁰²

Ley does not explain why this *Aktion*, also known as "*Sonderbehandlung 14 f 13*," is said to have evolved eventually into the alleged extermination of the Jews, which is also (but wrongly) labeled "*Sonderbehandlung*"¹⁰³ in the orthodox Holocaust literature. Thus, there is no connection between the euthanasia centers and the alleged extermination of Jews at Auschwitz.

Even as to the question why the SS relied on the help of the euthanasia centers when it came to implementing "*Aktion 14 f 13*" instead of solving these problems by the means available to them in the concentration camps, Ley leaves us stranded. She offers only the excuse that this question "cannot be satisfactorily answered" (pp. 242f.). Actually, the alleged "genocidal mentality" of the SS, a concept so popular among orthodox Holocaust historians (p. 231), should have prompted them to set up gas chambers on their own and right on time. In a search for an argumentative safe haven, Ley quickly moves on to the "relocation to the east of the center of gravity

of the National Socialist mass murders by poison gas,” where, “from March 1942 onwards, ‘T4’ collaborators murdered the Jews deported into the General Government within the framework of the ‘*Aktion Reinhardt*’” (p. 243). This topic will be dealt with in chapter 6.

3. The “Gas Vans”

Mathias Beer’s article “Gas vans, from euthanasia to genocide” (“Gaswagen. Von der Euthanasie zum Genozid”; pp. 153-164) is nothing but a pale rehashing of his earlier study “The development of the gas vans and the murder of the Jews” mentioned above (“Die Entwicklung der Gaswagen beim Mord an den Juden”), which I have already analyzed critically in an earlier book.¹⁰⁴ Even more than the first article, this one shows a blatant lack of critical judgment.

Beer attributes a great deal of importance to the role of the Institute of Forensic Technology (*Kriminaltechnisches Institut*, KTI) of the German police in the development of the “gas vans.” After the creation of the *Reichssicherheitshauptamt* (RSHA; Imperial Security Main Office), the KTI was integrated as group D into department V (*Reichskriminalpolizei*amt, Imperial Police Office for Crime Investigation), headed by SS-*Gruppenführer* Arthur Nebe. Section VD2 (Chemistry and Biology) was headed by the chemist Dr. Albert Widmann (p. 155).

As a starting point for his presentation, Beer chooses the already analyzed declaration by Widmann, dated 27 January 1960, in which the latter stated that he had recommended carbon monoxide for the killing of mentally sick patients. Based on Widmann’s recommendation, Beer goes on to state that the Hitler chancellery had opted for carbon monoxide (CO) as the “most suitable agent.” Passing along well-trodden paths, Beer then moves on to the phantom “test killing” at Brandenburg and mentions August Becker’s assertion, dated 4 April 1960, that the first gassing was “carried out by Dr. Widmann,” who “manipulated the gas lever and controlled the gas flow” (p. 156). In doing so, however, he omits the account given by witness Richard von Hegener in 1949, also mentioned by Astrid Ley, according to whom, at the very same “test gassing,” “the room was closed” and “the chemist concerned, Dr. Becker, let CO-gas flow into the room” (p. 95).

¹⁰⁴ *Chelmno: A German Camp in History and Propaganda*, The Barnes Review, Washington, DC, 2011, pp. 9-16.

Without furnishing any documentary source, Beer goes on to assert that two “test gassings” had taken place at Fort VII in Posen/Poznan in October of 1939 (p. 156). This is in contradiction with the depositions made by Werner Heyde during his interrogations on 12 October and 22 December 1961 to the effect that “two tests were carried out on mental patients, one using lethal injections, the other CO gas” (p. 96).

After these contradictory accounts, for which there is no solid proof, Beer turns to the alleged consequences of these “test gassings”:

“On the basis of the ‘test gassings,’ the search for efficient, or, in NS terms, more ‘mass-effective’ killing methods yielded two lines of approach. One led to the stationary gas chambers used for the ‘T4’-Aktion. [...] The other approach resulted in a first (proto)type of gas vans.”

According to Beer, the other approach was undertaken by the activities of “*Sonderkommando Lange*,” but “unfortunately, the genesis of this killing process cannot be established cohesively in view of the lack of contemporary sources as well as of suitable methods of investigation” (p. 157). Or in plain English: Historians depend on speculations, and this is exactly what Beer does as he goes along: He speculates vacuously on the structure of a “gas van” of the first type and states that such a device was a “mobile gas chamber” consisting of an “air-tight trailer, moved along by a tractor.” On the trailer were “steel cylinders with CO, [which] fed the lethal gas to the passengers.” We learn neither where the victims were located nor how the gas was piped into the cargo box, but we are told that this “mobile gas chamber” carried the designation “*Kaisers Kaffee-Geschäft*” on the outside.¹⁰⁵

“*Kaisers Kaffee Geschäft AG*” was a commercial company founded by Josef Kaiser which blended and roasted coffee and distributed it in many countries of the world with their vehicles, which on the side bore the name of the company. Witness references to “Kaisers Kaffee” vehicles may have been the result of a confusion of a special military vehicle referred to as “LC-Koffer,” which had been produced since 1940.¹⁰⁶

¹⁰⁵ The first reference to such a coffee van was made by the Polish investigating judge Władysław Bednarz during his 1946 investigations on the Chełmno camp, cf. *idem*, *Obóz straceń w Chełmnie nad Nerem*, Państwowy Instytut Wydawniczy, Warsaw 1946, p. 23; from there it entered the verdict against Albert Widmann handed down by the Stuttgart district court on 15 September 1967, cf. Christiaan F. Rüter *et al.* (eds.), *Justiz und NS-Verbrechen. Sammlung deutscher Strafurteile wegen nationalsozialistischer Tötungsverbrechen*, University Press, Amsterdam, Case 658, vol. XXVI, p. 565.

¹⁰⁶ Michael Ehrmann, *Die Geschichte des Werkes Sindelfingen der Daimler-Motoren-Gesellschaft und der Daimler-Benz AG*. Historisches Institut Universität Stuttgart, 1998, p. 201.

Toward the end of 1939, Beer tells us, a practical test was decided upon which proved positive indeed, because:

“Between January 1940 and July 1941, the ‘Sonderkommando Lange’ killed thousands of patients brought in from institutions located in the Warthegau by means of this ‘Kaiser’s Coffee Shop’ van.”

Another 1,500 patients, Beer continues, were killed in the Soldau transit camp by vans of this type (p. 157).

As usual for cases of this nature, he cites writings by other orthodox Holocaust historians as his sources, which, in turn refer to their colleagues, resulting in a vicious circle. As far as the Soldau transit camp is concerned, however, Beer did give a source in his first article, viz. a letter from Higher SS and Police Leader (*Höherer SS- und Polizeiführers*) Wilhelm Koppe to SS-Gruppenführer Jakob Sporrenberg, which says, among other things:¹⁰⁷

“The so-called Lange Sonderkommando for special tasks subordinated to me was seconded to Soldau, East Prussia, during the period of 21 May to 8 June 1940 in accordance with the agreement made with the RSHA, and in that time has evacuated 1,558 patients from the Soldau transit camp”

There is no mention here of “Kaiser’s Coffee Shop” nor of any killings, but of a transit camp. That there were also sick people passing through this camp is not surprising.¹⁰⁸ For example, between December 1943 and March 1944 no fewer than 20,850 sick or incapacitated detainees were moved from the camps at Buchenwald, Dora-Mittelbau, Neuengamme, Mauthausen, Ravensbrück, Auschwitz (!) and Flossenbürg to the concentration camp Lublin-Majdanek.¹⁰⁹

For some unknown reason, this imaginary line of technical development in the field of “test gassings” breaks off abruptly at this point. The “gas vans” of the second generation are said to have come on the drawing boards only in late fall of 1941, this time not for the purposes of euthanasia, but for the extermination of the Jews.

In this case Beer travels along well-known paths as well and starts his narrative with a visit by Himmler to Baranovici and Minsk on 14 and 15 August 1941, accompanied by SS-Obergruppenführer Erich von dem Bach-Zelewski, who held the position of *Höherer SS- und Polizeiführer Russland-Mitte*, (Higher SS and Police Leader, Central Russia), where they are said to have attended the shooting of mental patients. Shaken by the inhumanity of the killing process, Himmler allegedly realized that “shooting,

¹⁰⁷ See on this my study about Chełmno, *op. cit.* (note 104), p. 11.

¹⁰⁸ On this see Mattogno, Graf, Kues, *op. cit.* (note 40), Chapter 5, points 81-83, pp. 281-284.

¹⁰⁹ J. Graf, C. Mattogno, *op. cit.* (note 64), p. 46.

after all, was not the most humane way” and worried about the psychological effect on the firing squad, whereupon he ordered von dem Bach-Zelewski and Nebe to look for more humane killing methods.

This anecdote appeared on 23 August 1946 in the New York Jewish newspaper *Der Aufbau* as part of a statement attributed to von dem Bach-Zelewski,¹¹⁰ but its contents had been massively manipulated by the editorial staff of the newspaper, as is apparent from a comparison with the original statement of this SS officer.¹¹¹

The search for a “more humane” method is said to have been entrusted to KTI, the institute for forensic technology (p. 159):

“In the second half of September, Nebe, in his position as head of Office V of RSHA, called two meetings with KTI personnel, including Dr. Widmann, who brought along 400 kg of explosives and flexible metal tubing. The idea was to experimentally explore ‘more suitable’ killing methods at the Nowinski institution near Minsk and at the one in Mogilew. If we follow these depositions, it was probably intended also to take into consideration the fact that, on account of the distances involved, it was impossible to bring sufficient amounts of cylinders with pure CO into the operational areas of the Einsatzgruppen in the USSR.”

At this point, Beer briefly touches on alleged experiments with explosives as well as with the exhaust gases of two vehicles which were fed, by way of metal tubes, into a closed space holding several patients of an institution. The source given by Beer is an interrogation of Widmann on 11 January 1960 at Düsseldorf.¹¹² Yet nobody in his right mind should take this account seriously for the following reasons:

Widmann reports about a phone call Nebe had with his deputy Werner after the beginning of the Russian campaign. The latter then informed him, Widmann, about the subject of this phone call. According to this, Nebe said that he had received the order to kill the mental patients in his area and had selected explosives and gas for this purpose. Widmann was allegedly ordered to get hold of 250 kg of explosives and two metal tubes and to take them to Minsk. He said that he had executed this order, taking along 400 kg of explosives as a precautionary measure. He reported that the transportation of CO cylinders into Russia was impossible and that engine exhaust gas had to be used instead. He stated that it was actually Nebe who had hit

¹¹² ZStL, 202-AR-Z 152/59.

on this idea after almost dying of suffocation in his garage while the engine of his car was running.

After having reached Minsk with his two vehicles (the detonators had to be transported separately from the explosives), Widmann had met Nebe and carried out the following experiment together with him:¹¹³

“In the afternoon of that day, we drove with Nebe into a forest near Minsk. We found a clearing with 2 shelters. They must have been built by the Russians. The shelters measured about 3 by 6 meters. When we arrived, the shelters were still empty. We then set up the explosives, which were contained in boxes, and the cables. The boxes with the explosives were in the shelters themselves.”

The experiment was carried out in a single shelter. On this subject Widmann stated:¹¹⁴

“At Minsk 250 kg were used, as it had been planned by Nebe.”

Earlier, Widmann had spoken of “a killing of a maximum of 18 mental patients” and of the “use of 250 kg of explosives.”¹¹⁵ Nebe had apparently been in touch with the *Luftwaffe* to find out how much explosive material would have to be used in order to achieve the necessary effect,¹¹⁶ and he had apparently been told that the needed amount was 250 kilograms. This amount had then been used as planned.

Later, Widmann spoke of the test gassing:¹¹⁷

“Next morning, I went to the mental institution at Mogilev together with Nebe. [...] All that was needed was to select a room where this was to be done. It turned out that a laboratory was most suited; it was located in the same building. [...]

Nebe then had the window walled up in the afternoon, leaving two openings for the gas feed. Nebe wouldn't have it in a different manner. It was clear that this feed had to be left open for the hoses. [...]

The next morning the operation was carried out. [...]

When we arrived, first of all a hose which I had brought along in the car was connected. It was connected to a passenger car.

I do not remember whether it was one of the cars Schmidt and I had brought with us. Pieces of pipe had been set into the openings and allowed an easy mounting of the hoses.

Initially, there were no patients in the laboratory. They arrived shortly afterwards on [horse-drawn] farm wagons. I remember only one

¹¹³ *Ibid.*, pp. 45-47, quote is from p. 47.

¹¹⁴ *Ibid.*, p. 48.

¹¹⁵ *Ibid.*, p. 51.

¹¹⁶ *Ibid.*, p. 45.

¹¹⁷ *Ibid.*, pp. 49f.

of those wagons, but there may have been room on those wagons for 5 or at most 6 patients who were taken into the laboratory.

Once the patients were in the laboratory, Nebe ordered the engine of the car with the hose to be turned on. Nebe went into the building, where one could look into the laboratory through a window in the door.

Five minutes later, Nebe came out saying that no effect was noticed and wondered what to do now.

Nebe and I decided that the engine of the car was too weak. Thereupon, Nebe had the second hose connected to a personnel truck of the police. Then it took only a few minutes until the people fainted. Then both cars were left running for some 10 minutes."

The description of the alleged experiment with explosives is grotesque, to put it mildly. It would mean that, while the perpetrators were still in Berlin, they already knew that they were going to kill 18 mental patients with 250 kg of explosives – some 14 kg per head! Truly a reckless waste of war material.

From the results of the experiment, Nebe and Widmann concluded that, while the explosion did cause the immediate death of the victims, the method was not really practical – first of all on account of its laborious preparation and, secondly, because much work was involved in leveling the resulting craters.¹¹⁸ Was it really imperative to run an experiment in order to arrive at such an obvious conclusion?

From the description, the test gassing seems to have been a rough improvisation, starting with Nebe's bright idea (the incident in his garage) right down to Widmann's vague description. On what floor and at what distance from the cars was the laboratory located? How big was it? What type of engines did the vehicles have? What was their displacement? All these indications would have been required if one were to draw any even half-way reliable conclusions. And how could Nebe be sure that the exhaust gases would bring about death within five minutes, if a gassing with pure carbon monoxide in the euthanasia centers took two or three times as long?¹¹⁹

Thus, the whole narrative sounds absolutely foolish. Who can seriously believe that the SS would have sent one of their people to Minsk, some 1,150 km away from Berlin, with a load of 250 kg of explosives and two metal pipes in order to run experiments involving a handful of patients, which could just as well be killed at some shooting range or euthanasia center in the Reich?

¹¹⁸ *Ibid.*, p. 51.

¹¹⁹ 15 min. at Grafeneck (p. 105), 10-15 min. at Hartheim (p. 123), 10 min. at Hadamar (p. 146).

The reason for my detailed analysis of this ludicrous story is because Beer takes it at face value and draws a far-reaching conclusion (p. 160):

“The tests at Mogilev and Minsk constituted the starting point for the development of the second generation of gas vans which would now use exhaust gases instead of pure carbon monoxide.”

This decision was of course triggered by the *Einsatzgruppen*’s urgent need for mobile gas chambers... Arthur Nebe und Walter Heeß, the head of the KTI, submitted this proposal to the head of the RSHA, Reinhardt Heydrich, who in turn ordered the construction of a first prototype of the second generation gas van. Subsequently, “the vehicle, modified accordingly into an instrument of death, [...] was taken to the KTI, where chemists, protected by gas masks, took air samples with the engine running and analyzed their composition” (p. 160).

While not the slightest trace of documentary evidence exists for this account, it does show the absurdity of the alleged experiment at Mogilev. Beer continues (p. 161):

“The chemical analyses were followed by several ‘test gassing’ of Russian prisoner of war at Sachsenhausen: ‘the corpses had a pinkish appearance, as we chemists determined, which is typical of people who have died from carbon monoxide poisoning.’”

Such gassings, too, were “proven” only by witness statements and the confessions of the perpetrators; we have already seen the value of such statements. The mention of the corpses’ pinkish color in Beer’s text, by the way, is based on a statement by Theodor Friedrich Leiding dated 6 February 1959 (footnote 33 on p. 161). While it does show on the one hand that Leiding, as a chemist, obviously knew what color corpses of CO victims would show, it does not prove, on the other hand, that he had ever seen such corpses himself. It is interesting to note that in this case not one of the seven articles dealing with euthanasia in this anthology mentions such a discoloration, which should necessarily have struck the perpetrators. In particular, such a reference is lacking in the very detailed description of the corpses provided by Maximilian L. on 3 March 1947 at the Hadamar trial (p. 147).

Once Beer has presented his tale of the genesis of the second generation gas vans, he goes on to relate their alleged use, citing the rare documents available to historiography. Pierre Marais and Santiago Alvarez very thoroughly analyzed these documents, so I shall limit myself to simply referring to their studies¹²⁰ and to one additional remark:

¹²⁰ P. Marais, *Les camions à gaz en question*, Polémiques, Paris 1994. S. Alvarez, *The Gas Vans. A Critical Investigation*, The Barnes Review, Washington, DC, 2011.

Beer cites the well-known paragraph from a letter said to have been written by August Becker to Walter Rauff on 16 May 1942 and used as a document at the Nuremberg trial (p. 163):¹²¹

“On all occasions the gassing is not done in the right manner. In order to get the work done as quickly as possible, the driver gives full throttle. Through this measure the executees suffer a death through suffocation and not as intended a death by being put to sleep.”

Let me remind the reader that Achim Trunk asserts in his article mentioned above that the “gas vans” had gasoline engines but that, in stark contradiction to this, the victims allegedly suffocated under the effect of a diesel engine run at high speed.

Considering the high standard that German engine technology had already attained in the 1930s – as shown by the aforementioned German book on toxicology of vehicle engines⁴⁸ – the test gassings carried out ten years later and described by Beer and other writers appear rather childish. The only purpose of this permanent rehashing of these ridiculous stories merely is to prop up the credibility of the “gas van” legend, which is solely based on worthless testimonies and verdicts of politically motivated trials.

4. From Euthanasia to the Camps of “*Aktion Reinhardt*”

Let us now turn to the relationship between the euthanasia centers and the alleged extermination camps of “*Aktion Reinhardt*.” This topic is dealt with by Patricia Heberer in her article “From ‘*Aktion TA*’ to the mass murder of the European Jews. The transfer of the killer staff” (“Von der ‘*Aktion T4*’ zum Massenmord an den europäischen Juden.” *Der Transfer des Tötungspersonals*”; pp. 165-175). Two topics dominate here: the transfer of personnel from the euthanasia centers to the eastern camps of Belżec, Treblinka and Majdanek, and the alleged relationship between the mysterious gas chambers at these centers and those of the three camps. This second point is what mainly concerns us here.

Patricia Heberer believes that euthanasia had served “in many ways as a technical model for the ‘final solution,’” whose planners had “referred to the experience and the methods of ‘*Aktion T4*’ (p. 171). She backs up her assertions by saying (p. 171):

¹²¹ This letter was thoroughly scrutinized by P. Marais, *ibid.*, pp. 29-43. See also S. Alvarez, *ibid.*, pp. 40-55.

“The gassing method used in the camps of the ‘Aktion Reinhardt’ was a nearly perfect reflection of the model that had taken shape at the ‘euthanasia’ murder sites. As opposed to most concentration camps where the prisoners were used as cheap labor, only a few ‘able-bodied’ men or women were selected at Belżec, Sobibór and Treblinka from each transport while the others were immediately sent to their death. Here, too, the gas chambers resembled shower rooms; the deportees were told that they had to undress for washing and disinfection. [...] After the gassing, Jewish ‘Sonderkommandos’ were forced to bury or incinerate the victims, just as the ‘T4 murderers’ had dealt with the corpses of the mental patients.”

Patricia Heberer concludes that the men of “Aktion T4” had arrived in occupied Poland with a thorough knowledge of the gassing procedure and the corpse incineration process (p. 175).

This thesis is a little adventurous. We have heard that in the euthanasia centers crematoria were allegedly used for this purpose, and so one wonders about the experience the men of “Aktion T4” may have had when it came to open-air incinerations as allegedly employed in the Belżec, Sobibór and Treblinka camps. What is much more important, however, is the question of the gas chambers. Heberer’s “model” theory is not supported by the sources, as the descriptions of witnesses relating to the gas chambers for euthanasia centers are radically different from the chambers allegedly used in the “eastern extermination camps.” While carbon monoxide supplied in steel cylinders is said to have been used in the former, engine exhaust gases were purportedly employed in the latter, we are told today. This is how Patricia Heberer tries to get around this contradiction:

“At Belżec, initially pure carbon monoxide from cylinders was used for the first gassings, just like in the ‘euthanasia’ centers. Later on, the exhaust gases containing carbon monoxide^[122] from operating automobile engines became the standard killing method at Belżec and at all other ‘Aktion Reinhardt’ extermination camps.”

The assertion that carbon monoxide in steel cylinders was initially used at Belżec is based solely on a somewhat opportunistic statement made in 1962 by SS *Untersturmführer* Josef Oberhauser, who was stationed at Belżec at one time:¹²³

“While bottled gas was still used during the first experimental series and also for the first transports of the second series, the Jews of the last

¹²² Note that P. Heberer carefully avoids referring to the type of engine allegedly used!

¹²³ Interrogation protocol of J. Oberhauser, 12 December 1962. ZSL, 208 AR-Z, 252/59, p. 1685.

transports of the second experimental series were killed with the exhaust gases from a tank or truck engine operated by Hackenholt."

When, how and by whom it was then decided to use engine exhaust gases at Belżec instead of bottled carbon monoxide has not been made clear yet. I have underlined elsewhere that Holocaust historians are still busy looking for the "missing link" between the alleged gas chambers of the euthanasia centers and those of the three "*Aktion Reinhardt*" camps. Patricia Heberer now claims to have discovered this link in a well-known document (p. 168):

"On 25 October 1941, Dr. Erhard Wetzel, responsible for racial issues at the Imperial Ministry for the Occupied Eastern Territories, wrote a letter to Reichskommissar Hinrich Lohse, explaining the proposal made by Brack, i.e. to set up stationary gassing plants within the Reichskommissariat Ostland and to use 'T4' gassing technology as well as the staff from the killing centers for this purpose. In the so-called 'gas chamber letter,' Wetzel recommended using 'Brack-type means' on Jews who were no longer able to work, whereas able-bodied Jews were to be taken further east for further assignments. While Brack's proposals were never implemented at Riga as originally planned, the 'Reinhardt' strategists now came back to his offer to delegate 'T4' personnel for the gassing of Jews in the General Government. The interruption of the 'euthanasia' program in August of 1941 thus occurred at an auspicious moment when the plans of the 'final solution' were taking shape."

In one of my previous books I have already dealt with the questionable aspects of this document:

- It is the draft of a letter which never went out;
- Wetzel never recognized the authenticity of this letter;
- The criminal content of the letter was put in doubt or at least not confirmed by Eichmann and by Helmut Kallmeyer who was mentioned in the letter.¹²⁴

Furthermore, we must note that the letter suggests merely the killing of Jews no longer able to work, whereas – if we follow orthodox historiography – even the able-bodied Jews are said to have been systematically killed in the camps of "*Aktion Reinhardt*," which is explicitly mentioned by Patricia Heberer.

Wetzel's letter begins as follows:¹²⁵

¹²⁴ See on this Mattogno, Graf, Kues, *op. cit.* (note 40), Chapter 5, points 49-51, pp. 171-176..

¹²⁵ NO-365.

“Referring to my letter of 10/18/1941, you are informed that Oberdienstleiter Brack of the Chancellery of the Führer has declared himself ready to collaborate in the manufacture of the necessary shelters, as well as the gassing apparatus. At the present time the apparatus in question are not on hand in the Reich in sufficient number; they will first have to be manufactured. Since in Brack’s opinion the manufacture of the apparatus in the Reich will cause more difficulty than if manufactured on the spot, Brack deems it most expedient to send his people directly to Riga, especially his chemist Dr. Kallmeyer, who will have everything further done there.”

According to Patricia Heberer, the “gassing apparatus” were standard carbon monoxide bottles. But then why would Wetzel say that their manufacture in the Reich was so much more difficult? On the other hand, we have heard that it was allegedly almost impossible to ship CO cylinders into the occupied East; hence their local manufacture would have been just as logical.

Santiago Alvarez has proffered a number of arguments indicating that the “gassing apparatus” were mere delousing equipment, for instance the fact that they are mentioned in connection with “living shelters.”¹²⁶ This interpretation is supported by a radio message intercepted by the British on 13 November 1941:¹²⁷

“SS Main Section North Sea, HAMBURG 13.

Firm TESCH STABENOW, HAMBURG 1. Re. letter of Nov. 5. Request immediate notification when Zyklon was shipped, and when partial shipping of Tegas, Ethyleno. D and Trito can be expected, so that Dr Tesch, who [does] training at RIGA ... (corrupt groups) ... all of them ... are very needed. Dr TESCH asks to forward his mail here. Senior physician at Higher SS and Pol. Leader Riga”

The chemicals referred to in a garbled way were the disinfestation agents “T-Gas”, ethylene oxide and “Tritox,” none of which could have been used for homicide. It is thus clear that at that time the SS at Riga was being trained in the use of a number of disinfestation methods to fight disease carrying insects.

The theory that the euthanasia centers were a “model” for the “eastern extermination” camps is moreover refuted by bare facts. Between 1997 and 1999 a group of archeologists from the Nicolaus Copernicus University at Thorn, headed by Professor Andrzej Kola, carried out studies on the site of the former camp at Bełżec. They undertook soundings at a total of 2,227 locations spaced some 5 m apart, using a drill of 65 mm in diameter and 6

¹²⁶ S. Alvarez, *op. cit.* (note 120), pp. 96f.

¹²⁷ TNA, HW 16/32, German Police Decodes, No. 1 Traffic: 13.11.41, no. 10.

m in length. The length could be increased to 8 meters by a supplementary rod. The official goal of the soundings was to locate the sites of the mass graves and to find architectural remains of any buildings of the erstwhile camp. Andrzej Kola published a report on the results,¹²⁸ which also exists in an English version with the title “Bełżec. The Nazi Camp for Jews in the light of archeological sources. Excavations 1997-1999.”¹²⁹ Kola was unable to find any trace of the alleged Bełżec gas chambers, neither of those of the first phase of the camp’s history, which were allegedly located in a wooden building, nor those of the later phase, whose gas chambers are said to have been located in a concrete structure.¹³⁰

In 2000 and 2001, Kola carried out similar studies at the Sobibór camp. He published the results in a brief article whose title translates to “Archeological investigations in the area of the former extermination camp for Jews at Sobibór.”¹³¹ So far this report has not been translated into a western language. Revisionists have nevertheless analyzed it in great detail in one of their books.¹³² Neither Kola nor the other archeologists, who picked up their shovels between 2007 and 2011, accurately described by Marek Bem and Wojciech Mazurek,¹³³ were able to unearth even the slightest trace of the alleged building for the gas chambers.¹³⁴ Under these circumstances it is not surprising that Kola’s results were not discussed by the participants of the Oranienburg conference. Claudia Kühne mentions Kola merely in a footnote (footnote 9 on p. 66) without devoting a single word to its contents, in spite of the title she gave to her paper, *i.e.* “Violence and death in concentration and extermination camps. Possibilities and limits of archeology” (“Gewalt und Tod in Konzentrations- und Vernichtungslagern. Möglichkeiten und Grenzen der Archäologie”), which would well have warranted a critical discussion with this immensely important topic.

The tale about the genesis of the alleged gas chambers in the eastern camps, as proposed by orthodox Holocaust historians, is bursting with arbi-

¹³⁴ This issue is treated with more detail in Mattogno, Graf, Kues, *op. cit.* (note 40), pp. 868-939.

trary assertions and raises so many questions that it fails to convince a critical mind.¹³⁵

The second aspect of the relationship between the euthanasia centers and the camps of “*Aktion Reinhardt*” consists in the assignment of a considerable portion of the staff of these centers to the Belżec, Sobibór and Treblinka camps. Patricia Heberer writes (p. 167):

“The first assignment of German personnel to the camps of ‘Aktion Reinhardt’ comprised 153 SS members and policemen under the command of Globocnik in the Lublin district, another 205 SS-men, policemen and men from other SS units, as well as 92 persons from the ‘T4’ staff.”

Hence, some 20% of the German personnel of these three camps consisted of former “T4” staff members. We see no reason to doubt these figures – but why were these men assigned to those camps?

Orthodox historians, basing themselves on the untenable thesis that the alleged gas chambers in the three camps were modeled on those of the euthanasia centers, take the transfer of euthanasia personnel to the Lublin district as proof for the claim that they were used there for the alleged extermination of the Jews. But the problem is far more complex. The participants of the Oranienburg meeting did not even try to begin dealing with the serious contradictions which orthodox Holocaust historiography has been facing for a long time.

As I have already explained, the NS policy towards the Jews is very well documented, from the promotion of Jewish emigration up to the concept of a “territorial final solution,” which initially targeted the island of Madagascar for this purpose and later the temporarily German-occupied Soviet territories. As against this, the radical change of course towards a policy of systematic extermination is not based on a single document. At what time was this new objective of NS policy conceived? When did expressions like “evacuation” or “resettlement” become euphemisms for physical annihilation? Who decided the construction of extermination camps, and when, and for what reason did this take place?¹³⁶

Patricia Heberer and her likeminded colleagues assume axiomatically that such a crucial change did indeed occur, but they don’t make the slightest effort to prove their thesis.

Another problem avoided by these historians concerns the command levels on which the alleged extermination orders are said to have been is-

¹³⁵ J. Graf, T. Kues, C. Mattogno, *op. cit.* (note 51), foremost chapter 8.4, “The Alleged First Gas Chamber Building at Sobibór” as well as chapter 8.3.3., “Construction of the Alleged Gas Chambers: General Problems.” On Treblinka see C. Mattogno, J. Graf, *op. cit.* (note 47), chapters IV.1.-IV.7, pp. 111-137.

¹³⁶ I have discussed this issue extensively in Mattogno, Graf, Kues, *op. cit.* (note 40).

sued. According to orthodox Holocaust historiography, there were at least three chains of command (regarding the authorities involved and the killing methods allegedly arrived at):

1) Hitler → Führer chancellery → The KTI: carbon monoxide in steel cylinders (euthanasia centers, Majdanek) → gas vans (Chełmno; *Einsatzgruppen*);

2) Hitler → Himmler → Eichmann → Höß: Zyklon B (Auschwitz/Majdanek);

3) Himmler → Globocnik → Höfle → Wirth: exhaust gases of diesel and/or gasoline engines (Bełżec/Sobibór/Treblinka).

Orthodox Holocaust historians admit that the former euthanasia personnel were recruited on two occasions to temporarily take part in two undertakings which have nothing at all to do with mass killings and are thus completely unexplainable from the orthodox point of view. Patricia Heberer tells us (p. 166):

“In January of 1942, the managers of certain ‘euthanasia’ institutions urged their staff to take part in a special medical assignment on the eastern front. In this so-called ‘assignment east,’ coordinated by ‘Organisation Todt, the ‘T4’ personnel was supposedly employed for the evacuation of soldiers wounded at the eastern front.”

In an effort to extricate herself from this quandary, Heberer asserts that the euthanasia personnel were possibly sent to the eastern front in order to kill *German soldiers* who “were suffering from serious head injuries or other untreatable wounds” (p. 167), but she is unable to support her outrageous thesis with even one witness statement. If this had really been the case, one could not understand why such an undertaking was ordered only once, in January 1942, because the number of seriously injured German soldiers strongly rose after this date.

Finally, Heberer’s thesis is based on a logical error: As the staff in question had earlier been used for killings, she imputes that they could now be used only for that purpose! With the same twisted logic, Heberer *et al.* explain the fact that many of the people concerned were moved to the Adriatic coast in late 1943 in order to serve at the so-called “Risiera di San Sabba” camp near Trieste, which some Holocaust historians therefore consider to have been a small “extermination camp.” Heberer writes (p. 175)

“Erwin Lambert himself, the former master mason of ‘T4,’ built the gas chamber and the crematorium of the new camp, in which several thousand Jews and other victims were to perish.”

In September 1943 Globocnik was moved to Trieste, together with the staff of “*Aktion Reinhardt*.” At that time the Bełżec camp had already been shut down and the Sobibór as well as the Treblinka camp were about to be

closed. At Trieste Globocnik became the “Higher SS and Police Leader in the Operating Zone of the Adriatic Coastal area.” The former personnel of the three camps were regrouped as a new “Unit R” (the letter R probably referring to “Reinhardt”). The unit was directly attached to the Führer chancellery and to Globocnik and had three sections:¹³⁷

“R”/I: Trieste – Risiera di San Sabba, under the command of SS-*Hauptsturmführer* Gottlieb Hering;

“R”/II: Fiume-Susak, under the command of SS-*Hauptsturmführer* Franz Reichleitner;

“R”/III: Udine, under the command of SS-*Hauptsturmführer* Franz Stangl.

The Risiera di San Sabba camp was used as a transit camp for some of the deported Italian Jews. On this matter, the Italian historian Liliana Picciotto-Fargion has this to say:¹³⁸

“From December 1943 through March 1944 the prison of Coroneo in Trieste served as a collection center for deportees and was then replaced by the collection and transit camp of Risiera di San Sabba (police detention center).”

The author adds that, while the number of deportees per transport had amounted to an average of 500 to 600 persons in other parts of the country, it had only reached some 68 to 80 persons in the operational zone of the Adriatic coastal area with its “capital” Trieste.¹³⁹

Altogether 23 transports left the area, with a total of 1,173 Jews; most of them went to Auschwitz.¹⁴⁰ One of the deportees was Bruno Piazza, about whom Picciotto-Fargion has this to say:¹⁴¹

“Born in Trieste on 15 January 1899. [...] Arrested by the Germans at Trieste on 13 July 1944. Detained at the San Sabba camp, as well as Trieste prison. Deported from Trieste to Auschwitz on 31 July 1944. Inmate ID number 190712.”

Piazza died in 1946, but before passing away he wrote a report – published in 1946 as a book – in which he also wrote about his stay at Risiera di San Sabba.¹⁴²

“Regardless of the presence of informers which the SS had placed among us in order to spy on what we did while in our quarters, the stay at the Risiera was still better than while in deportation. At least we were

still in our own country; we hoped to see the end of the war quite soon and to be able to return home in good shape right away. Leaving here meant to give up any hope of being saved, even if we did not yet know what we would have to face. Here we weren't nourished that bad at all so that we would have starved to death. One of us, Nino Belelli functioned as a cook, and there was always enough fat in the soup dished out to us. The bread ration was sufficient, the water was clean. One night we even had wine. Then several blankets and linens were stolen from private homes on which we could rest quite comfortably in spite of the fleas. There were stools and even a table. We also had – albeit hidden away – an electric stove on which we could secretly toast some bread and fry a few potatoes. We had two faucets for washing. A few even received parcels from outside with food and newspapers. The men assigned to work unloaded heavy bags, one of us had to clean our room. I did nothing. On Sundays we were allowed to get some fresh air in the courtyard. I stayed at the Risiera only for a few days, during which time other unlucky fellows were brought in, later to end up, like me, at the Auschwitz hell where they met a cruel death."

At the time Piazza penned his account, the legend of the "extermination camps" was still in its infancy. While Piazza does write that the political detainees at Risiera were able to escape "death by suffocation and the crematorium," he adds right away: "I learned about all this, as I have already said, only later"¹⁴³ – *i.e.* after his return to Italy where the myth of the extermination camp at Risiera di San Sabba was already in the making. The inventors of this legend were led by ideological motives: in order to balance the massacres committed by the Tito terrorists in Istria and Dalmatia – in 1945 thousands of Italians had been thrown, some of them alive, into ravines in the Karst Mountains. The political left was thus in desperate need of a "Nazi extermination camp on Italian soil"!

The "evidence" adduced by orthodox Holocaust historiography for the existence of a gas chamber at the Risiera camp is more than far-fetched, the assertions as to the existence of a crematorium border on the ridiculous.¹⁴⁴

On 29 April 1976, thirty years after the events themselves, a trial took place *in absentia* against members of the SS who had been on duty at the Risiera. The verdict states, *i.a.*:¹⁴⁵

¹⁴³ *Ibid.*, p. 17.

¹⁴⁴ See my book *La Risiera di San Sabba. Un falso grossolano*. Sentinella d'Italia, Monfalcone, 1985, as well as the well-documented study by Carnier, who came to the following conclusion: "There is no material proof for the existence of a furnace at Risiera. [...] The claim according to which mass murders are said to have occurred in Risiera di San Sabba is untenable." P.A. Carnier, *op. cit.* (note 137), pp. 160f.

¹⁴⁵ Adolfo Scapelli (ed.), *San Sabba. Istruttoria e processo per il Lager della Risiera*.

“[Heinrich] Gley has provided the following detailed description: [...] ‘I knew that an incineration plant existed at the Risiera of Trieste. This plant was built by Lambert in the same way as the others of this type in the extermination camps^[146] and the euthanasia centers. At the Risiera, an existing chimney was incorporated. The rest of the installation I remember only vaguely. At the foot of the chimney, there was an open brick furnace measuring roughly 2 by 2 meters, with a large steel grid. I should say that some 8 to 12 corpses could be placed into this furnace simultaneously. The furnace and the chimney were open. There was no iron door. It was a very primitive set-up that did the job because of the high chimney.’”

For the San Sabba camp, the alleged SS crematoria “specialist” Lambert, who is said to have erected modern Kori furnaces at the euthanasia centers, is described here as having resorted to the furnace designed by Brunetti in 1873, which needed six (!) hours to incinerate a body completely.¹⁴⁷

If Lambert’s furnace really measured 2 by 2 meters, as Gley asserts, it could not accommodate more than two corpses at the same time, which meant that its maximum theoretical capacity would have been about eight corpses in 24 hours!

After this unavoidable detour through Italy, let us return to our initial question: Why was the euthanasia staff moved to the Lublin district in the first place? If we want to find a logical answer, we must remember the following ascertained facts:

1. The National Socialist policy towards the Jews did not intend their physical annihilation, but their relocation to the Eastern Territories.
2. There is not the slightest trace of a document indicating a basic change of this policy. Any “Führer order” changing the relocation into a policy of extermination has remained a mirage.
3. There is no material or documentary evidence for the existence of homicidal gas chambers at the euthanasia centers.
4. There is no material or documentary evidence for the existence of homicidal gas chambers in the camps of “*Aktion Reinhardt*.”

The only rock-solid conclusion which orthodox historiography could draw from this state of the matter is to accept that the euthanasia program was extended to include Jews destined for resettlement in the east who were physically and/or mentally severely handicapped. We cannot expect

ANED, Mondadori, Milan 1988, vol. II, p. 307. This work is also quoted by P. Heberer (note 40 on p. 175).

¹⁴⁶ The “extermination camps” in the east, where Lambert was deployed, never had any cremation furnaces.

¹⁴⁷ C. Mattogno, *op. cit.* (note 88), p. 47.

this to happen any time soon, though, because it could bring down the tale of a systematic annihilation of Jews like a house of cards.¹⁴⁸

5. The Chełmno Camp

In his article titled “Mass killings through poison gas at the Chełmno camp” (“Massentötungen durch Giftgas im Vernichtungslager Chełmno”; pp. 176-184) Peter Klein deals with the Chełmno camp (German name: Kulmhof). In line with the usual practice of orthodox Holocaust historiography, he begins his account with a letter allegedly written on 16 July 1941 by SS-*Sturmbannführer* Rolf-Heinz Höppner, Head of the Security Service’s central district of Posen, and addressed to SS-*Obersturmbannführer* Adolf Eichmann. The letter reads *i.a.*:¹⁴⁹

“All the Warthegau Jews will be assembled in a camp for 300,000 Jews which will be built in the form of barracks as close as possible to the railway line carrying coal and which contains equipment for industrial workers, tailors, cobblers and so on [...] This winter there is a danger that not all Jews can be fed any longer. We must seriously consider whether the most humane solution is not to eliminate the Jews by some substance with rapid effect insofar as they are unfit to work.”

Klein notes that the construction project mentioned was “never actually realized” but states that “the partial project, the mass killing of Jews unfit for work” had begun “a good six months later.” Between 8 December 1941 and 14 July 1944, more than 150,000 Jews are said to have been killed at Chełmno (p. 176). The “killing method sketched out in the Höppner memo – some quick-acting means” – is said to have been carbon monoxide from car exhaust gases (p. 177).

This explanation of the genesis of the camp is not supported by the letter ascribed to Höppner which suggested merely to submit the unfit Jews to some kind of euthanasia and to kill them – should starvation threaten – by “some quick-acting means.” The identification proposed by Klein in the sense that this “quick-acting means” had the same meaning as “gas vans” is utterly arbitrary, because it changes the meaning of a mere *allusion* into an *evidence* for an actual mass murder of *all* able-bodied Jews alleged to have taken place later on.

¹⁴⁸ On this see J. Graf, T. Kues, C. Mattogno, *op. cit.* (note 51), chapter 8.5, “Euthanasia and Aktion Reinhardt,” pp. 269-281.

¹⁴⁹ See on this my Chełmno study, *op. cit.* (note 104), pp. 25f., where I quote the complete content of that document.

Who is said to have given the order for such murders, at what time, and for what reason? Klein supplies us with this highly dubious reply: only two days after Höppner's letter, the head of the Warthegau, *Gauleiter* Arthur Greiser, had the opportunity to "inform Hitler personally about the security situation in the Warthegau region."

Although "*we cannot assume that Greiser submitted to Hitler detailed blueprints for the Jewish camp, or spoke about specific possibilities of mass murder, the Reich governor would have been satisfied to learn from the 'Führer' during this conversation that the latter had no objections against anti-Jewish measures which in principle included the regional murder of unfit persons.*" (p. 177)

Klein has to admit, however, that "there is no written evidence for the conclusion that during this conversation the 'Jewish question' too was on the agenda" (p. 177). This is a blatant understatement, for there are *no written documents* on the subject of this meeting. The only evidence for the meeting to have taken place is a photograph dated 18 July 1941 showing Hitler in conversation with Greiser (footnote 4 on p. 177)! It is truly breathtaking to what extent Klein loads this snapshot with interpretations.

To back up his thesis, Klein claims that the "*Sonderkommando Lange*" became active once again, shooting or murdering in gas vans nearly 4,000 Jewish people who were unfit for work in the counties of Konin, Kalisz and Yarochin (p. 177). The only support for this claim, however, are accounts by some self-styled eye-witnesses which never even mention any "*Sonderkommando Lange*."

The Jews allegedly selected to be killed were males of 14 to 60 and females of 14 to 50 years of age, hence basically fit for work, something which speaks against Klein's thesis. Anyone having read the article by Matthias Beer and who goes into Klein's account must get the impression that the Jewish victims claimed by Klein were murdered in gas vans of the first generation (the ones marked "*Kaisers Kaffee-Geschäft*"), but no witness speaks of such vans. According to an account dated 25 March 1942, "the only thing that could be established was that the Jewish community of Zagórow, Distrikt Koniń [...], was taken by trucks into the nearby woods of Kazimierz where any trace of them was lost." The account thus does not explicitly state that these Jews were killed. Another witness, the Pole Miecysław Sekiewicz, does assert that the deportees were indeed killed, but he does not mention any gas vans; instead, he describes the following rather bizarre method of murder.¹⁵⁰

¹⁵⁰ S. Krakowski, *Das Todeslager Chelmno/Kulmhof. Der Beginn der "Endlösung,"* Yad Vashem/Wallstein, Göttingen 2007, p. 24; see also: Carlo Mattogno, *op. cit.* (note 104), chapter 5, p. 49. If this story has any basis in reality, then the liquid with which the able-

“Then – the witness continues – a truck appeared on the side of the road which stopped on the path at the edge of the clearing. I noticed that there was something on the truck, like tubs for washing. The Germans then started up a small engine, which was clearly a pump, and connected it via a pipe to one of the tubs. Two Gestapo agents held the pipes and began sprinkling the Jews herded into the pit with a liquid. I think it was water, as it appeared to be, but I cannot be sure. During the pumping operation they connected the pipes to each of the other tubs. People began to cook while still alive, and this was certainly due to the boiling fresh lime.”

Klein continues (p. 177):

“Once Greiser had learned from Himmler on 18 September 1941 that the deportation of Jews from the Reich was imminent and that the first trains were heading for the Litzmannstadt ghetto, an intensive search for a site for the mass murder of the unfit Jews began.”

Here, Klein insolently distorts the contents of the document he bases himself on. In fact, Himmler’s letter to Greiser says:¹⁵¹

“The Führer wishes that the Old Reich and the Protectorate^[152] be emptied and cleared of Jews from west to east as soon as possible. For this reason I have worked hard to transport, possibly even this year, the Jews of the Old Reich and the Protectorate, primarily as a first step, into the new eastern territories obtained two years ago by the Reich, and to expel them farther east in the coming spring.

I propose to shelter for the winter about 60,000 Jews from the Old Reich and the Protectorate in Litzmannstadt ghetto, which, in my view, has the space to accommodate them.

I beg you not only to understand this decision, which will certainly create difficulties for your Gau, but to support it with all your strength in the overall interest of the Reich.

SS-Gruppenführer Heydrich, who has to carry out this Jewish emigration, will approach you in due course directly or through SS-Gruppenführer Koppe.”

Hence this letter contains not the slightest reference either to unfit Jews or their intended death. It is thus most awkward for the orthodox Holocaust historians to acknowledge that as late as 18 September 1941 Himmler still intended to transfer the Jews from the Reich first into the newly gained eastern territories and then further east yet. Who then was it that decided to

bodied Jews were sprayed was undoubtedly a disinfectant/disinfectant.

¹⁵¹ Carlo Mattogno, *op. cit.* (note 104), pp. 26f.

¹⁵² Protectorate of Bohemia and Moravia; today’s Czechia minus the Sudeten area.

start up an extermination camp at Chełmno for unfit Jews only three months later?

The alleged extermination camp is said to have been started up on 8 December 1941. This date is mentioned by all orthodox Holocaust historians, but not a single one of them props it up by means of a document.

Klein established the following untenable hypothesis in this regard (p. 179):

"[...] early into the mass murder, the 'Sonderkommando Lange' still made use of its gassing cars with bottled carbon monoxide gas. In early 1942 new gas vans from the automobile section of RSHA arrived at Kulmhof."

In order to prop up his thesis that the SS at Chełmno initially made use of "gassing cars with bottled carbon monoxide gas," Klein cites the "detailed account of a Chełmno survivor" (footnote 9 on p. 179):

"What he says about the gassings on 6 and 8 January 1942 unambiguously documents the use of an automobile in which the gas was fed from the driver's cabin into the truck body."

As I have shown in my study on Chełmno, this "detailed account" by a Jewish detainee named Szlamek is totally unreliable.¹⁵³

Concerning Klein's hypothesis, I wish to indicate that "Szlamek" describes the vehicle allegedly used at Chełmno as a genuine "gas van":¹⁵⁴

"The vehicle had a special design. It looked something like this: It was as large as a normal truck, of gray color, but at the back it was closed hermetically with two doors."

As opposed to this, the murder van allegedly used by "Sonderkommando Lange," the one marked *Kaisers Kaffee-Geschäft*, is said to have consisted of a tractor attached to a box-like trailer. Its depiction as "reconstructed" by orthodox Holocaust scholars and as published by Alvarez visually demonstrates the inconsistency of the hypothesis proposed above.¹⁵⁵

Klein himself writes that the "gas vans" shipped to Chełmno in early 1942 were vehicles of the second generation, which allegedly used exhaust gas fed into the inside. If we follow him here, there was yet another type of "gas van" occupying an intermediate position between the other two! The convoluted story of the genesis of those vans thus takes on yet another twist, quite apart from the fact that the leading specialist of "gas vans" on the orthodox historians' side, Matthias Beer, explicitly contradicts Klein's thesis (pp. 161f.):

¹⁵³ *Ibid.*, chapter 6, pp. 51-58.

¹⁵⁴ *Ibid.*, p. 53.

¹⁵⁵ S. Alvarez, *op. cit.* (note 120), Ill. 17, p. 278.

“The first gas vans of the new generation were probably shipped to the ‘Einsatzgruppen’ during the first half of November [1941], certainly not any earlier. [...] The Kulmhof extermination camp, with the ‘Sonderkommando Lange’ as the nucleus of its staff, started operations with two vehicles.”

Back to “Szlamiek.” It is correct that he stated that “gas was fed from the driver’s cabin,” but he does not mention any gas cylinders; the fact that he speaks of a “button” having to be pressed to liberate the gas¹⁵⁶ would even explicitly exclude the use of such cylinders. Moreover, “Szlamiek” speaks of a “deep and pungent smell of gas” in the cargo box, but, as Astrid Ley underlines in her article discussed above, carbon monoxide “is known to be completely odor- and flavorless” (p. 95).

The corpses of the victims allegedly killed in “gas vans” are described by “Szlamiek” in the following manner:¹⁵⁷

“It seemed that they were only put to sleep; their cheeks were pale, and they maintained their natural skin color.”

Let us stop here for a moment and recall what Achim Trunk has written about the color of the skin of victims of carbon monoxide poisoning (p. 40):

“The skin of victims of hydrogen cyanide often shows a pinkish discoloration, typical for carbon monoxide poisoning.”

Hence, for all these reasons, Klein’s assumptions are nothing but hot air.

Next Klein goes on to tell us the well-known story of how Paul Blobel came to Chełmno:

“The Gestapo’s central office in Berlin delegated SS-Standartenführer Paul Blobel to Kulmhof, where he was to try out ways to destroy corpses by burning them in the local forest camp in a manner leaving as few traces as possible. Actually, this was a problem not least for hygienic reasons – the threat of ground water pollution.”

Hence, Klein explains Blobel’s (alleged) mission by arguing that cremation of the corpses had become imperative for hygienic reasons. The latter reason was also adopted by Władysław Bednarz, the Polish judge who conducted the investigation into events at the camp in the early postwar years. However, Władysław Bednarz does not mention Blobel in his account.¹⁵⁸

In connection with Blobel’s alleged stay at Chełmno, Klein speaks of a “bone mill” and a “ball mill,” apparently in total ignorance of the question-

¹⁵⁶ Carlo Mattogno, *op. cit.* (note 104), p. 54.

¹⁵⁷ *Ibid.*, p. 55.

¹⁵⁸ *Ibid.*, pp. 83f.

able nature of the documents which mention such pieces of equipment.¹⁵⁹ He then goes on to write about Rudolf Höß's alleged visit to Chełmno (p. 180):

"During Höß's visit on 16 September 1942, the ball mill already mentioned came up on the agenda; it was rerouted to Auschwitz even before it arrived at Kulmhof."

Here, too, Klein is completely ignorant of the problems resulting from Höß's alleged visit to Chełmno. If we follow Blobel himself, the meeting of the two men took place "on a former Jewish cemetery near Lodz"!¹⁶⁰

The story of Blobel's trip to Chełmno has no historical foundation; neither does his alleged responsibility for "*Aktion 1005*" or the interpretation of Höß's trip to the "*Feldöfen Aktion Reinhardt*." This designation, by the way, prompted Bertrand Perz and Thomas Sandkühler to proffer the hypothesis that "*Aktion Reinhardt*" (which orthodox Holocaust historians consider to have been the alleged extermination of Jews in the elusive "eastern extermination camps") had been extended to Auschwitz.¹⁶¹ In this case one would have to explain why in Höfle's radio message of 11 January 1943, which refers to the "*Aktion Reinhardt*" camps with their initials, only Bełżec, Sobibór, Treblinka and Lublin (read: Majdanek) are mentioned, but not Auschwitz. In my study "*Azione Reinhard*" e "*Azione 1005*"¹⁶² as well as in my book about Chełmno¹⁶³ I have discussed the corresponding hypotheses of orthodox Holocaust historians and have demonstrated them to be unfounded, both from a historical and a technological point of view.

Klein does not tell his readers why the "first phase" of the camp "ended in April of 1943" (p. 180) and why, once Chełmno was re-opened in 1944, only 7,176 out of the more than 85,000 Jews still living in the Lodz ghetto at that moment (p. 182) are said to have been gassed (p. 183). In any case, it cannot even be shown that these 7,176 Jews were ever taken to Chełmno, let alone gassed there. The latter assumption can be excluded simply because these transports consisted almost exclusively of able-bodied Jews, which obviously contradicts Klein's assertion that the Jews *unfit for work* were murdered at Chełmno. In addition, a few months earlier, on 4 and 16 March 1944, two transports (the first one with 750 Jews and the second

¹⁵⁹ *Ibid.*, chapter 8.5.

¹⁶³ C. Mattogno, *op. cit.* (note 104), chapters 8 & 9, pp. 73-93.

one with 850 Jews on board) had left Lodz for the armament plants at Skarżysko-Kamienna located some 45 km southwest of Radom.¹⁶⁴

Klein closes his account with an assertion that is utterly absurd even from an orthodox point of view (p. 184):

“Even though Chełmno, the ‘Aktion Reinhardt’ camps in the district of Lublin, and the concentration and extermination camps at Auschwitz-Birkenau and Majdanek were located in areas with different jurisdictions, these camps were in any case interconnected as far as the optimization of the mass killings and the elimination of any traces was concerned.”

As I have stressed elsewhere, this “optimization” could apparently not prevent each one of these camps to develop their own system of killing... If we follow Gerstein’s account, which is almost sacred for some of the participants at the Oranienburg meeting, the RSHA did indeed decide to “optimize” the murder method used in the eastern camps by replacing engine exhaust with hydrogen cyanide, but this plan came to naught, because no-one even dreamed of putting it into practice there!¹⁶⁵ And what about the “elimination of any traces,” *i.e.* the cremation of the corpses? This was not even “optimized” within the camps of “*Aktion Reinhardt*,” because at Sobibór it allegedly started in October 1942, at Belżec two months later, in December of that year, and at Treblinka as late as March 1943, whereas Himmler is said to have issued a corresponding cremation order as early as July 1942!¹⁶⁶

Klein has apparently never heard or read of the archeological searches on the grounds of Chełmno. He therefore does not know that the results, as far as the mass graves and the crematorium are concerned, are in glaring contradiction to the assertions of orthodox Holocaust historiography.¹⁶⁷ Or maybe he thought it more prudent not to mention them at all.

Let us summarize: The article by Peter Klein is of a particularly low quality and does not withstand even a single moment of critical scrutiny.

Only a few of the authors of this anthology have made an attempt at refuting the revisionist arguments by counterarguments. As opposed to them, Peter Klein does not even devote a single word to my Chełmno study, the

6. The Camps of “*Aktion Reinhardt*”

Dieter Pohl’s article “Mass killings with poison gas within the framework of ‘*Aktion Reinhardt*’” (“*Massentötungen durch Giftgas im Rahmen der ‘Aktion Reinhardt’*”; pp. 185-196) is a real disappointment. The author pretends to present an overview of the state of the art of Holocaust research on the camps at Belżec, Sobibór and Treblinka, but he is a far cry from fulfilling his promise, as he limited himself to rehashing hackneyed assertions.

Early into his explanations, Dieter Pohl writes that the background of the “mass murder” has not been fully elucidated to this date (“*nicht völlig durchleuchtet*,” p. 185). After summarizing very briefly the NS policy towards the Jews in the General Government – the project of a “*Juden-reservat*” (Jewish reservation) in the District of Lublin, the plans for the removal of the Jews into the occupied Soviet territories, as well as the role of the ghettos as transit stations for this expulsion – he comes up, as if by magic, with an alleged plan for the physical elimination of the Jews (p. 186).

“At roughly the same time, in September 1941, the National Socialist leadership decided to carry out systematic mass murders also outside of the occupied Soviet territories, e.g. in the Warthegau, the Polish part of the Province of Posen, but also in Serbia. [...] It is most likely that, on 13 October 1941, SS-Chief Heinrich Himmler ordered the SS and Police Leader in the District of Lublin, Odilo Globocnik, to organize such a murder action within the GG [General Government].”

This date can be found in a number of recent articles published by orthodox Holocaust historians. Saul Friedländer and Martin Pfeiffer, for instance, wrote in a 2006 book:¹⁶⁹

¹⁶⁸ One could, of course, object against this that Mattogno’s book existed only in Italian at that time (the English edition was published in late 2011) and that it is too much to ask of a German historian to have some Italian language knowledge. On the other hand, revisionist researchers also evaluate Russian, Polish, Czech and Hungarian sources, although these languages are more difficult to learn for western Europeans than Italian. Translator’s remark.

¹⁶⁹ S. Friedländer, M. Pfeiffer, *Das Dritte Reich und die Juden: Die Jahre der Vernichtung, 1939-1945*. C.H. Beck, Munich, 2006, p. 311.

“On 13 October [1941] the Reichsführer met Globocnik and Krüger. During this meeting, the SS-Chief probably [!] ordered Globocnik to begin with the erection of the Belzec extermination camp.”

Barbara Schwindt believes that the subject of this conversation had “probably”[!] been the “erection of a regional extermination center.”¹⁷⁰ Everything is based on the sparse notes in Himmler’s service calendar, which reads:¹⁷¹

“Monday, 13 October 1941. [...] 18h – 20h meeting with SS-Ogruf. Krüger and SS-Brif. Globocnik.”

The book’s editor comments:¹⁷²

“During the meeting Himmler probably commissioned Globocnik to build the Belzec extermination camp.”

This is pure fantasy.

Regarding the hypothesized decision of a complete eradication of the Jews, orthodox Holocaust historiography has begun in recent years to move away from a “Führer order,” and instead assumes a mere “decision” by Hitler, allegedly taken on 12 December 1941. Boris Bart bases the argument on the assertion that on that day Hitler allegedly announced his fundamental decision to murder all European Jews:¹⁷³

“Hitler spoke to some 50 members of his immediate political staff who did not really need to get convinced once again. It was not an order, but the announcement of a decision.”

But even this is completely unfounded, as I have shown elsewhere in abundance.¹⁷⁴

The desperate attempts by orthodox Holocaust historians to finally nail down in a conclusive manner a date for the decision to “eradicate the Jews” only continue to complicate the issue still further.

Ever since the publication of Karin Orth’s article on Rudolf Höß and the Final Solution of the Jewish question,¹⁷⁵ it appears that no serious historian any longer believes that the alleged Führer order was transmitted to Höß by Himmler in the summer of 1941. Schwindt declares unambiguously:¹⁷⁶

¹⁷⁰ Barbara Schwindt, *Das Konzentrations- und Vernichtungslager Majdanek. Funktionswandel im Kontext der “Endlösung.”* Königshausen & Neumann, Würzburg, 2005, p. 38.

¹⁷¹ *Ibid.*, note 40 on p. 205.

¹⁷³ Boris Bart, *Genozid. Völkermord im 20. Jahrhundert: Geschichte, Theorien, Kontroversen.* C.H. Beck, Munich, 2006, p. 99.

¹⁷⁴ See in this regard Chapter 5 in Mattogno, Graf, Kues, *op. cit.* (note 40), pp. 166-377.

¹⁷⁵ “Rudolf Höß und die Endlösung der Judenfrage. Drei Argumente gegen deren Datierung auf den Sommer 1941,” in: *Werkstattgeschichte*, no. 18. November 1999.

¹⁷⁶ B. Schwindt, *op. cit.* (note 170), p. 26.

“Neither the Auschwitz commander, Höß, nor the SSPF in the District of Lublin, Globocnik, were ordered in the summer of 1941 to undertake preparations for the implementation of the ‘Final Solution’.”

This opinion is shared by Robert J. van Pelt. It follows that the first three of the alleged extermination camps – Chełmno, Bełżec and Sobibór – must have begun operations *before* Hitler’s alleged “decision,” because Höß is now said to have been informed about this decision only in July of 1942 according to the latest whims of orthodox Holocaust historians. I shall come back to this question in Chapter 7. At this point I will merely state that the excuse employed by orthodox Holocaust historians to resolve the anachronism that Chełmno, Bełżec and Sobibór were allegedly started up *before* Hitler decided to exterminate the Jews, is unusually silly. What, pray tell, does a “regional extermination center” (B. Schwindt) stand for?

Let us return to the alleged extermination decision of 13 October 1941. This date shows, into what kind of a corner the orthodox Holocaust historians have driven themselves. They feel the urge to resort to the most ridiculous attempts of an explanation in order to create the impression of reconciling things which are irreconcilable. At the point in time mentioned by Pohl – September 1941 – the NS policy of moving the Jews into the East was still continuing in full swing. This is borne out, *i.a.*, by a letter dated 18 of that month which Heinrich Himmler wrote to Arthur Greiser,¹⁷⁷ informing the Warthegau *Gauleiter* about Hitler’s wish to ship the Jews of the Old Reich and those of the Protectorate (Czechia) into the occupied eastern territories.

Three weeks later, on 10 October 1941, Reinhardt Heydrich presided over a meeting in Prague, an account of which has come down to us entitled “Notes from the meeting of 10 October 1941 about the solution to Jewish questions” (*“Notizen aus der Besprechung am 10.10.41 über die Lösung von Judenfragen”*). According to this, Heydrich confirmed there that “the Führer desires that, if at all possible, the Jews be removed from the German space by the end of the year.” This meeting considered *i.a.* the deportation of 50,000 Jews to Riga and Minsk. On this topic the account tells us that SS-*Gruppenführer* Nebe and SS-*Brigadeführer* Rasch would be able to take the Jews “into the camps for communist detainees in the operational territory.”¹⁷⁸

The option for Jews to legally emigrate from the German sphere of influence, by the way, was rescinded only on 23 October – ten days after the extermination decision had allegedly been made:¹⁷⁹

¹⁷⁷ See chapter 5.

¹⁷⁸ T-1193.

¹⁷⁹ T-394.

“The Reichsführer-SS und Chief of the German Police has ordered with immediate effect that the emigration of Jews be prevented.”

The collision between the date mentioned by Pohl and the documents I have just cited is a minor one, if we consider it in the light of the so-called Wannsee Protocol of 20 January 1942. During the Wannsee meeting Heydrich advised the officials present of a new orientation of the German policy towards the Jews:¹⁸⁰

“As a further possible solution, and with the appropriate prior authorization by the Führer, emigration has now been replaced by evacuation to the East.”

The usual trickery to accuse Heydrich of using a coded language in which “evacuation” stood in fact for “extermination” does not apply here in any way because the “protocol” speaks explicitly of the evacuation of “Jews capable of working” who are to be moved east, for road-building, via “transit ghettos.”¹⁸¹ It is silent about the fate of unfit Jews, aside from the following paragraph:¹⁸²

“The intention is not to evacuate Jews over the age of 65 but to send them to an old people’s ghetto. Theresienstadt has been earmarked for this purpose.”

Out of all Jews still present in the *Altreich* and Austria, a total of 280,000 persons, 30 percent belonged to this category, some 84,000 persons altogether.¹⁸³ Hence, if “evacuation” was a code word for “extermination,” the SS was planning to murder the able-bodied Jews and to spare the lives of the Jews who could not work!

Pohl lists the new sources concerning his topic and notes (pp. 186f.):

“The investigation into the extermination camps of the so-called ‘Aktion Reinhardt’ made considerable progress between the end of the 1970s and the mid-1990s, not least by the publication of the anthology Nazi Mass Murders.”

More recently, he continues, while “many new insights into the clearing of the ghettos and the deportations” have been gained, “less was achieved when it comes to the extermination camps themselves, *i.e.* Bełżec, Sobibór and Treblinka” (pp. 188f.). He praises the books by Thomas Blatt and Jules Schelvis about Sobibór,¹⁸⁴ which by the way have been discussed extensively by revisionist authors,¹⁸⁵ and adds regretfully:

¹⁸⁰ NG-2586-G, p. 5 (following the English translation on www.ghwk.de).

¹⁸¹ *Ibid.*, pp. 7f.

¹⁸² *Ibid.*, p. 8.

¹⁸³ *Ibid.*, pp. 7f.

¹⁸⁴ T. Blatt, *Sobibór: The Forgotten Revolt. A Survivor’s Report*. H.E.S. Issaquah, 1998; J. Schelvis, *Vernichtungslager Sobibór*. Metropol, Berlin 1998.

¹⁸⁵ J. Graf, T. Kues, C. Mattogno, *op. cit.* (note 51), pp. 40-45 as well as *passim*.

“Still, more detailed studies are still lacking, especially into Treblinka, the largest of the three camps, and Belżec.”

He complains that the investigations into the camps of “*Aktion Reinhardt*” “are limited by a lack of reliable sources” because we dispose of “hardly any contemporary documents.” For that reason, historians have to base themselves “almost exclusively on statements by the perpetrators, by the few survivors, and by Polish eye-witnesses” (p. 187).

In an effort to compensate at least in part for this lack of documents, Pohl points out new sources on the three camps. The major part, he tells us, consists of files from Soviet trials of the so-called Trawniki men, Soviet citizens who had served the Germans as helpers. There were some 200 such trials, it appears. Pohl does admit that these trials cannot be counted as legal procedures, if measured by western standards (p. 188):

“During the interrogations, the defendants were often threatened and at times – especially during such proceedings at the end of the 1940s or the early 1950s – ill-treated, which means that individual accusations or self-incriminations should be considered with the necessary caution.”

Still, says Pohl, the results of these trials can be verified to a certain degree by comparing them with the results of similar proceedings in western countries, thus determining their credibility (p. 188).

In other words, “individual accusations or self-incriminations” in connection with Soviet trials are believable as long as they agree with the “individual accusations or self-incriminations” made during proceedings in western countries. A truly peculiar kind of logic, which does not take into account that both the defendants and the witnesses of all such trials in western countries based their statements, voluntarily or not, on the propaganda claims spread by the Soviets and the Poles after 1945.¹⁸⁶ This signifies that the verdicts of all these trials are historically worthless.

Among the important new sources, Pohl refers in particular to the trials conducted in the 1980s and 1990s in the U.S. and Canada, even though here, too, “Soviet trial documents, once more, were largely used,” but at least “new witness statements were also obtained” (p. 189). Pohl disregards the obvious fact that witness statements made many decades after the events and after decades of exposure to a relentless Holocaust propaganda are without probative value.

Then Pohl goes on to the “contemporary sources,” which have not yet “been fully exploited.” This applies in particular to the documents concerning the Polish underground resistance movement and the government in exile. In this connection he mentions two articles, one by Józef Marszałek

¹⁸⁶ On this see my study on *Belżec*, *op. cit.* (note 43), chapters II & III.3.

dealing with the Polish resistance at Bełżec, Sobibór und Treblinka,¹⁸⁷ and one by Krystyna Marczevska and Władysław Ważniewski dealing specifically with the reports on Treblinka¹⁸⁸ (footnote 13, p. 189). These sources are “new” only for orthodox Holocaust historians, whereas revisionist authors have analyzed them and cited them as references in their earlier books¹⁸⁹ along with other sources which Pohl and his colleagues apparently do not know.¹⁹⁰

Further along, Pohl discusses the decryption reports by the British secret service, in particular the well-known “Höfle radio message,” as well as the “forensic digs undertaken in the 1990s on the sites of the former camps.” Nonetheless, he concludes that “we are still at some distance from an all-encompassing synthesis of all these findings; the state of the art has not fundamentally changed since the 1980s” (p. 190). Here, too, Pohl’s statement applies only to orthodox Holocaust historiography, whereas the revisionists have already prepared such an “all-encompassing synthesis,” thereby creating a ground-breaking change in the state of our knowledge as compared to the 1980s.¹⁹¹

What Pohl writes about the relationship between the euthanasia centers and the eastern camps sounds quite convincing (p. 191):

“First of all, we must answer the question whether it was originally intended to continue the euthanasia murders – after their temporary interruption – in occupied Poland. During the ‘T4’-Aktion, deaths of Jewish mental patients were often certified by an imaginary registrar’s office at Cholm in the Lublin area. There had been a mental institution at Cholm, the inmates of which were murdered by the Gestapo as early as January 1940. The death certificates, however, were actually prepared in Berlin, then sent to Lublin by courier and mailed from there. The first assignment of euthanasia personnel dates from late September or early October 1941, i.e. before the decisive meeting between the Lu-

¹⁸⁷ “Rozpoznanie obozów śmierci w Bełżcu, Sobibórze i Treblince przez wywiad Delegatury Rządu Rzeczypospolitej Polskiej na Kraju i Armii Krajowej,” in: *Zeszyty Majdanka*, vol. XIV (1992), pp. 39-59.

¹⁸⁹ Chapter II of *Treblinka...*, *op. cit.* (note 47), for instance, begins with a quote from the article by Marczevska/Ważniewski, and chapter 3 of *Sobibór...*, *op. cit.* (note 51), with a quote from the book by Marszałek.

¹⁹⁰ Among others Maria Tyszkowa’s paper “Eksterminacja Żydów w latach 1941-1943. dokumenty Biura Informacji i Propagandy KG AK w zbiorach oddziału rękopisów buw”; in: *Biuletyn Żydowskiego Instytutu Historycznego w Polsce*, No. 4 (164), 1992, pp. 47-60; cf. C. Mattogno *Bełżec nella propaganda, nelle testimonianze, nelle indagini archeologiche e nella storia*. Effepi, Genoa 2006, pp. 17f.; this source is not included in the English edition, which originally appeared in 2004 (reprint 2011; note 43).

¹⁹¹ Foremost Mattogno, Graf, Kues, *op. cit.* (note 40).

blin SS and Police Leader Odilo Globocnik and Himmler, which probably took place on 13 October 1941."

This explanation confirms what I stated earlier on the subject of the euthanasia centers: the only legitimate conclusion one may draw from the re-assignment of the euthanasia personnel to the eastern camps is that of an extension of euthanasia to include mentally ill Jews who were not to be moved on into the eastern territories by way of these camps.

The genesis of the three camps is described by Pohl only very concisely. He carefully avoids crucial questions such as the number and size of the gas chambers or the type of engine used. He tells us that in all three camps the original buildings were torn down after a while and replaced by larger ones (p. 192), without realizing in the least the nonsensical nature of such a tale. A critical reader would certainly wonder why the administration of each camp, first at Bełżec, then at Sobibór and finally at Treblinka, would have erected a gas chamber building which turned out to be too small in each case, although the alleged gas chambers were all designed by the same "SS specialists" who could easily have used their experience from one camp for the design of the following one!¹⁹²

As far as the archeological investigations on the sites of the former camps are concerned, Pohl knows only those carried out by professor Andrzej Kola at Bełżec, but draws his knowledge not directly from this source but from a brief article by Robin O'Neil (footnote 26 on p. 193),¹⁹³ which he comments as follows (p. 193):

"The exact topography of the three sites, especially the location of the mass graves and of the gas chamber building, can now be established in greater detail."

In doing so, Pohl unabashedly turns O'Neil's conclusion upside down, as the latter had actually written:¹⁹⁴

"We did not find any trace of the gassing barracks dating from the first or the second construction phase of the camp."

As I have already pointed out, Andrzej Kola did not find any traces of the alleged gas chambers either!

The immensely important archeological investigations carried out by Andrzej Kola in 2000 and 2001 on the site of the former camp at Sobibór do not belong to what Pohl calls the "new sources." The fact is that only the revisionists – often labeled "deniers" by orthodox Holocaust historians – went to the trouble of translating the accounts by this Polish archeologist

¹⁹² See about this J. Graf, T. Kues, C. Mattogno, *op. cit.* (note 51), chapter 8.3.3., pp. 254-262.

about his soundings and digs at Sobibór¹⁹⁵ into two western languages (German and English) and of analyzing them in detail.¹⁹⁶

The “famous telegram sent by Hermann Höfle, the chief of staff of ‘*Aktion Reinhardt*,’ to Adolf Eichmann” is taken by Pohl to “contribute greatly to the elucidation of the number of victims” (p. 190). We must remember, though, that this telegram speaks only of “arrivals” and presents no clues as to the fate of the persons deported into those three camps. For some unknown reason, Pohl says nothing at all about the camp at Lublin-Majdanek, even though this camp, too, is mentioned in Höfle’s radio message and hence ought to be counted as one the “*Aktion Reinhardt*” camps.

According to this radio message, a total of 434,508 Jews had been moved to “B[elżec]” which causes Pohl to conclude that some 434,000 victims can be allotted to this camp. “Up to five percent” of the victims, he concludes, died during the transport (p. 193). Five percent of 434,000 would be roughly 21,700 – a figure which would be quite compatible with the mass graves located by A. Kola on the camp site. The total volume of these mass graves amounts to some 21,300 cubic meters, if we follow Kola (actually, he considerably overestimates both the number and the size of the graves).¹⁹⁷ If a total of 434,000 corpses had actually been interred, this would correspond to 20 corpses per cubic meter – obviously a physically impossible figure. As a comparison, let us remember that the alleged 80,000 corpses of the first phase of the existence of the Sobibór camp were alleged buried in graves having a total volume of some 13,739 cubic meters, or roughly six corpses to the cubic meter – a somewhat high but not unreasonable figure.¹⁹⁸

Pohl’s article never even mentions Kurt Gerstein, who has been counted for decades as one of the major witnesses concerning the extermination of Jews at Belżec, and nothing is said about Gerstein’s alleged companion either, Wilhelm Pfannenstiel, who used to be another key witness for Belżec.

Just like Peter Klein in the case of Chełmno, Pohl completely disregards the fundamental revisionist studies on the subject of the camps of Belżec and Treblinka, even though the German editions appeared as early as 2002 and 2004 (the book on Sobibór may have come too late to be considered

¹⁹⁵ In: *Przeszłość i Pamięć*, no. 3, July-August-September 2000, pp. 89-92.

here). For the sake of completeness, I will list these studies once again here:

- Carlo Mattogno, Jürgen Graf, *Treblinka. Vernichtungslager oder Durchgangslager?* Castle Hill Publishers, Hastings 2002, 432 pages, 24 documents and 11 photos; English edition: *Treblinka: Extermination Camp or Transit Camp?*, reprint of 2nd edition, The Barnes Review, Washington, DC, 2011, 370 pp.
- Carlo Mattogno, *Belžec. Propaganda, Zeugenaussagen, archäologische Untersuchungen, historische Fakten.* Castle Hill Publishers, Hastings 2004, 156 pages, 17 documents; English edition: *Belžec in Propaganda, Testimonies, Archeological Research, and History*, reprint of 2nd ed., The Barnes Review, Washington, DC, 2011, 138 pp.; this book also exists in an Italian and a French edition.
- Jürgen Graf, Thomas Kues, Carlo Mattogno, *Sobibór. Holocaust-Propaganda und Wirklichkeit.* Castle Hill Publishers, Uckfield 2010, 526 pages, 6 Documents and 15 photos; English edition: *Sobibór. Holocaust- Propaganda and Reality*, The Barnes Review, Washington 2010, 434 pp.

Neither Pohl nor the other participants of the Oranienburg meeting even mention a single one of these books! To consciously ignore counterarguments is an infallible sign of an unscientific attitude, and these historians thus pronounce their own verdict.

7. Van Pelt's Auschwitz

The anthology under discussion here contains two articles by Robert J. van Pelt: "Auschwitz" (p. 196-218) and "For want of a nail, or reflections on how history must not be rewritten" ("Weil ein Nagel fehlte, oder Überlegungen, wie die Geschichte nicht umgeschrieben werden darf"; pp. 343-354). It seems logical to discuss both contributions together. I shall start with the second one. We are dealing here with a polemic rather than a serious paper, which is revealed by its frequent use of inflammatory words (several times van Pelt even refers to Clausewitz!). While the author apologizes for his "military metaphors," he still considers that "the fight against the denial of the Holocaust" feels "like a war" and "is conceived as a defensive battle" (p. 344).

This introduction makes the reader believe that he witnesses a fight to the finish against the revisionist "enemy," but anyone reading the article carefully gets the impression of not observing a "war," or at least a "bat-

tle,” but rather merely a desperate rear-guard skirmish. The author ends his contribution by a somewhat shameless self-adulation.

Van Pelt describes his career up to its apex when he led the “counterattack” against revisionism by accepting the position of an “expert witness” offered to him by the lawyers of Deborah Lipstadt and the publishing house Penguin Books in their court battle against British historian David Irving. Somewhat surprisingly, he also speaks of his relationship with Jean-Claude Pressac, among other things. In his preceding works – the book *Auschwitz 1270 to the Present*,¹⁹⁹ written jointly with Debórah Dwork, and the study *The Case for Auschwitz: Evidence from the Irving Trial*,²⁰⁰ van Pelt had shamelessly plagiarized the so-called “criminal traces” which Pressac had discovered (or, shall we say, rediscovered²⁰¹) by reintroducing into the discussion a number of documents already cited or published by Pressac without naming his source. An uninitiated reader had to get the impression that van Pelt had made the discoveries himself. Maybe as a sign of remorse, van Pelt dedicated his second article to Pressac (footnote 1 on p. 343). As far as I know, he never publicly acknowledged Pressac’s death, who had passed away on 23 July 2003. In icy silence the orthodox historians and the press had passed over the death of the man whom, a decade earlier, after the publication of his book *Les crématoires d’Auschwitz*,²⁰² they had celebrated as someone who had finally refuted revisionism. Ironically, the only obituaries were written by his “enemies” – by Jürgen Graf, Germar Rudolf, Robert Countess and myself.²⁰³

Van Pelt asserts that Pressac’s first book, *Auschwitz: Technique and Operation of the Gas Chambers*,²⁰⁴ had turned out to be the catalyst he had needed for “starting my own work in the archives of Auschwitz in the expectation that I would be able to provide the historical context for the material elements which Pressac had discovered, hoping that I would bring to light yet more plans and documents” (p. 353).

Things, he goes on to say on the same page, had developed “as planned” – which evidently means that his expectations and hopes were fulfilled. If we compare this rather global statement with the results of his

activity at Auschwitz, these are astonishingly disappointing. His contribution to the research on Auschwitz is in fact limited to a single “criminal trace” he found in a file memo of 29 January 1943 by SS-*Unterscharführer* Heinrich Swoboda, which he interprets in a rather bizarre manner,²⁰⁵ as well as his elaborations on an alleged “convergence of proof” and his fanciful reconstruction of a historical background.²⁰⁶

After sketching out his personal relationship with Pressac, van Pelt describes the circumstances concerning their parting of ways. He gives as a reason Pressac’s “insistence that no-one except himself would be able to provide a legitimate interpretation of the architectural evidence for the crematoria” (p. 353). It is much more probable, though, that Pressac resented the manner in which van Pelt plagiarized the contents of his studies, while van Pelt, as a Jew, was deeply worried by the idea that Pressac’s position and the revisionists’ point of view increasingly converged.

Let us now look at van Pelt’s pompously labeled “counterattack.” Once having paid due tribute to the anthology *Nazi Mass Murder*, he defines the term “fact,” insisting that the revisionists were attempting to “attack and eradicate those facts which that book had assembled” (p. 343). He summarizes the duels between the orthodox Holocaust historians and the revisionists since the 1980s and counters the revisionists’ insistence on proof for the homicidal gas chambers with “a convergence of various types of proof” (p. 350). His rather haphazard salvos against the revisionists refer *i.a.* to a paper presented in 1982 (!) by Arthur Butz²⁰⁷ saying that the “Holocaust deniers” do not intend to question “all the evidence. They rely on the so-called butterfly effect” (p. 349) which consists of attacking merely a few major points of the history of the Holocaust, hoping that, in doing so, they will bring about a collapse of the whole structure (*ibid.*). This angle of approach, van Pelt believes, has “become a dogma with a number of variants” (*ibid.*). In an effort to prove the validity of his assertion, he cites Robert Faurisson’s well-known phrase “no holes, no holocaust” and concludes that the revisionists’ motto was “for want of a hole, there was no Holocaust.” But this pronouncement by Faurisson is obviously a provocative simplification. In the conclusion to my own study of the alleged Zyklon B introduction holes in the concrete roof of the Birkenau Crematorium II, I had said “no holes, no homicidal gas chambers in Crematorium II” – with all the serious consequences this entails for Holocaust historiography.²⁰⁸

²⁰⁵ See C. Mattogno, *op. cit.* (note 28), pp. 189-199.

²⁰⁶ *Ibid.*, pp. 658-663.

²⁰⁸ “The Elusive Holes of Death,” in: G. Rudolf, C. Mattogno, *Auschwitz Lies. Legends,*

Personally, I don't feel touched by van Pelt's criticism in any way, having discussed and refuted in various studies, many of which have also appeared in English or German,²⁰⁹ all types of alleged "proof" – not only a few – for the existence of homicidal gas chambers at Auschwitz. In my most comprehensive work so far I have examined in detail all the "evidence" proffered by Pressac and van Pelt for the reality of these rooms and have come to the following conclusion:²¹⁰

- "his study of Auschwitz has no scientific and historiographic value,*
- *because it ignores works of crucial importance;*
 - *because it does not even mention essential opposing views and arguments;*
 - *because it fails to approach pivotal technical issues with technical means;*
 - *because it is highly inconsistent;*
 - *because it uses deceptive methods;*
 - *because it presents conflicting sources without due source criticism;*
 - *because it reveals a decidedly threadbare knowledge of the camp's history;*
 - *because it deforms all sources to serve the alleged 'extermination' aspects of Auschwitz;*
 - *and because even regarding the claimed 'extermination' aspects it exhibits an incomplete and superficial grasp.*

The Case for Auschwitz is neither a scholarly nor a historical work; it is only a biased journalistic assemblage of poorly understood and poorly interpreted historical sources."

Initially I had only intended to refute van Pelt's "expert opinion" mentioned above, but then I realized that I had to extend my criticism also to Pressac for the following reason:²¹¹

"Whereas Pressac was an investigator, van Pelt is first and foremost a compiler with a much weaker critical mind and much less gifted for historical and documental analyses. His reassessment of the 'criminal traces' represents a simpler way of spreading Pressac's theses and does not take into account their complexity and variety.

Hence, replying directly to van Pelt's recycled arguments makes no sense."

Lies, and Prejudices on the Holocaust. Theses & Dissertations Press, Chicago, 2005, p. 316.

²⁰⁹ See the revisionist bibliography at the end of this volume.

²¹⁰ C. Mattogno, *op. cit.* (note 28), p. 670.

²¹¹ *Ibid.*, p. 26.

Hence, Pressac was quite right in his insistence that no orthodox historian “is able to provide a legitimate interpretation of the architectural evidence for the crematoria” – least of all van Pelt!

As I have categorically refuted, item by item, van Pelt’s “evidence” for the existence of homicidal gas chambers at Auschwitz in my book mentioned above, I would not be obliged as such to deal with his contribution about the Auschwitz camp, but the new theses which he amasses in it warrant a critical assessment of his text after all.

As far as the question of the origin of the alleged order to carry out mass killings at Auschwitz is concerned, van Pelt tells us that “contradictory documents” make it “difficult to reconstruct the exact sequence of events” (p. 199). Rudolf Höß, the first Auschwitz commander, had asserted in his “autobiographical notes” that Himmler had given him the order for the extermination of the Jews in the summer of 1941,²¹² but van Pelt regards this statement as “problematic,” because “in the summer of 1941 the decision to kill the western and central European Jews had not yet been taken” (p. 199). Furthermore, van Pelt continues, the “existing extermination centers in the east” mentioned by Höß, *i.e.* the camps of “*Aktion Reinhardt*,” did not yet exist at that point in time. He concludes:

“Probably, when writing down his text, he [Höß] mixed up his dates and really meant the summer of 1942.”

This hypothesis is also untenable for two reasons. For one thing, Höß spoke clearly and unmistakably of the summer of 1941 in all of his statements: On 14 March 1946 (“June 1941”),²¹³ on 5 April 1946 (“June 1941”),²¹⁴ on 29 January 1947 (summer of 1941),²¹⁵ at Nuremberg (“summer of 1941”)²¹⁶ as well as at the Warsaw trial (summer of 1941).²¹⁷

Secondly, in the “autobiographical notes” cited by van Pelt, Höß wrote:²¹⁸

“As to the time the extermination of the Jews may have begun, I do not remember. Probably by September of 1941, but possibly as late as January of 1942.”

But how could Höß confuse the summer of 1941 with the summer of 1942, if the alleged extermination began in January of 1942 at the latest? If van Pelt’s hypothesis were correct – in fact all orthodox historians are in

agreement as to the beginning of the mass murders in early 1942 – mass exterminations would have begun before a corresponding order was ever issued!

Van Pelt examines Höß's account of the events after the issuance of the alleged extermination order, in connection with which Eichmann, according to Höß, played a major role. Van Pelt states (p. 200):

"After his arrest in 1960, Eichmann vehemently denied Höß's account, both as to their meeting at Auschwitz and to the discussion of a suitable poison and the location of the killing sites."

Van Pelt asserts that, "as in the case of the alleged meeting of Himmler and Höß in the summer of 1941," there is no evidence for the correctness of Höß's account. Referring to a study by Karin Orth²¹⁹ he concludes that "Höß's statement concerning the meetings with Himmler and Eichmann do not reflect the truth" (p. 200). In doing so, van Pelt disputes the explanation given by Höß, which had constituted one of the mainstays of orthodox Holocaust historiography on Auschwitz for many years. He does this in spite of the fact that he had boasted in 2002 that the "negationists" had not succeeded in "destroying Höß's credibility by stressing its contradictions."²²⁰

Van Pelt then embarks on a laborious attempt to reconstruct the genesis of the alleged homicidal gassings. He accepts as "an undisputed fact" that poison gas was first used at Auschwitz to kill Soviet prisoners of war, even though this assertion is essentially based on Höß's statements, which van Pelt himself had classified as being unreliable. He stresses that at the end of August 1941 several high-ranking SS officers had met at Oranienburg to discuss the most efficient killing method (p. 200). I shall come back in greater detail to this alleged meeting in chapter 9. Let me merely state here that there is not the shadow of a proof that this meeting ever took place.

Van Pelt continues (p. 201):

"It is not clear whether it was Höß himself or one of his deputies who participated in the Sachsenhausen meeting."

It is, however, a fact that the Auschwitz camp commander Karl Fritsch [recte: Fritzsche] started his own killing tests a few weeks after said meeting."

According to van Pelt, Zyklon B was used in these experiments, which was already being used in the camp as a disinfestation agent (*ibid.*).

²¹⁹ K. Orth, *op. cit.* (note 175), p. 57.

²²⁰ R. J. van Pelt, *The Case...*, *op. cit.* (note 200), p. 271. Fact is that Höß's "credibility" had already been undermined in 1997 by Karin Orth and that it had been utterly destroyed much earlier by the revisionists with the same and even farther reaching arguments.

It is, however, a fact that Höß, in his numerous and extensive statements, never refers to this alleged meeting at Oranienburg, in spite of the fact that, before his transfer to Auschwitz, he had been detention camp commander at Sachsenhausen. Van Pelt freely admits that the exact date of the experiment conducted by Frit[z]sch is not known and offers a selection of dates ranging from 15 August 1941 through early December 1941 (footnote 14 on p. 201)!

There is, however, no chronological connection between these two “events,” because we have no evidence for the first one (the Oranienburg meeting), and the second one, the alleged “first gassing at Auschwitz,” is pure invention, as I have shown in an extensive study.²²¹

At this point van Pelt’s description becomes entirely chaotic. At first he writes about a gassing of Soviet PoWs which Fritzsich is said to have conducted in the “Bunker” (basement) of Block 11 of the Auschwitz main camp during Höß’s absence. Höß had this to say about this alleged gassing in his “autobiographical notes”:²²²

“On occasion of a business trip, my deputy, Hauptsturmführer Fritzsich, had used gas on his own initiative for the extermination of these Russian PoWs. He did this by cram-packing the individual cells located in the basement with Russians and by throwing Cyklon B into the cells while wearing a gas mask, which caused an instant death.”

According to van Pelt, this “test gassing” was followed by a second one (p. 203):

“After Höß had returned to Auschwitz, Fritsch conducted a second experimental gassing in the basement of Block 11. This time it involved 600 Soviet PoWs and 250 sick detainees from the camp infirmary selected by Dr. Siegfried Schwela.”

Van Pelt cites the *Kalendarium von Auschwitz* as his source, which he praises as a “fundamental description, very useful for anyone interested in the history of Auschwitz” (footnote 1 on p. 196). This book, however, speaks of only one gassing in the basement of Block 11, said to have taken place from 3 through 5 September 1941.²²³ In the book containing Rudolf Höß’s “autobiographical notes,” edited by the Auschwitz Museum, one can read on this subject:²²⁴

²²¹ *Auschwitz. The First Gassing*, 2nd revised ed., The Barnes Review, Washington, DC, 2011.

²²² M. Broszat (ed.), *op. cit.* (note 212), p. 159.

²²³ D. Czech, *op. cit.* (note 100), pp. 117-120.

²²⁴ J. Bezwinska, D. Czech (eds.), *Auschwitz in den Augen der SS. Rudolf Höß, Pery Broad, Johann Paul Kremer*, Staatliches Museum Auschwitz-Birkenau, Oświęcim 1997, note 107 on p. 64.

“Previous investigations have shown that the first experimental killing with gas took place in the basement of Block 11. A second gassing of detainees in this basement has not been proven.”

As van Pelt does not cite any new source to prove his “second experimental gassing,” a favorable view would be that he has not read the available sources correctly, or, more severely, invented the whole story himself. The latter assumption is probably correct, because van Pelt does not shy away from inventing “historical facts,” like he does when pretending to know exactly how the alleged gassing at Block 11 proceeded (p. 203):

“The main access [to the Bunker] consisted of a door opening up into a long corridor which was cut into three sections by gates with cross-bars. Once the victims had been herded behind the gates of the first and third sections, an SS man with a gas mask had no problem to throw the cyanide-laden cubes of calcium sulfate [= gypsum pellets soaked with hydrogen cyanide] into the second section and then close and seal the door. The cross bars were no obstacle for the evaporating cyanide.”

A page further on he comes back to the “special separation of the corridor of Block 11 into three sections” which allegedly permitted the SS men to empty their Zyklon B containers unimpeded into the central section (p. 204).

These assertions are nothing but hot air. For one thing, van Pelt refers to the present state of the Bunker.²²⁵ While there is evidence for two gates in the basement of Block 11 in the form of a drawing dated 26 June 1944, there is no proof that they existed already in 1941. Secondly, no witness asserting to have been involved in the removal of the corpses from the Bunker confirms van Pelt’s description. According to Zenon Rozanski, the corpses of the victims were located directly behind the steel door leading into the Bunker, which can only mean that the central section must have been full of corpses as well.²²⁶

“Wacek turns the knob while taking a step back and yanks the door open.

The door opens and at the same time I feel that the stubbles of hair on my head stand on end.

One meter in front of me there are people standing!”

Other witnesses say, on the other hand, that the corpses were in the cells. Wojciech Barcz:²²⁷

²²⁶ *Ibid.*, pp. 49f.

²²⁷ *Ibid.*, p. 53.

"We had to move the corpses out of the Bunker cells. That way, we were able to see that they had simply gassed in those cells a large number of Russian inmates together with the patients we had taken there.

The sight we faced when the doors were opened was something like opening a tightly packed suitcase. The corpses fell towards us."

Bogdan Gliński:²²⁸

"In the cells there were piles of corpses, and a stifling odor irritating the eyes reigned in the basement."

Konrad Szweda:²²⁹

"In a cell [meant] for one, detainees were piled 30, 40, finally 50! One standing on top of the other."

The preceding paragraph of Höß's "autobiographical notes" flatly contradicts van Pelt's assertions:²³⁰

"The gassing was carried out in the stockade cells of Block 11. I myself witnessed the killing, protected by a gas mask. Death in the crowded cells took place immediately after throwing in [the product]. There was only a brief, almost choking scream, and everything was over."

Hence, the victims were locked into the cells, the doors of which would at least have slowed down the penetration of the cyanide vapors into the corridor. If Höß's account is to be believed, he could at best have observed the progress of death through a peep-hole in the cell door,²³¹ but in that case van Pelt's tale of the three sections collapses completely. Hence, his description is pure invention and contradicts the witness statements.

The utter unreliability of Höß's "autobiographical notes" results also from the following, rather revealing fact: Höß wrote that the next gassing carried out "shortly afterwards" took place in Crematorium I, which confirms that only a single gassing occurred in Block 11, namely the very one he claims to have witnessed while wearing a gas mask. This is what Höß himself had to say about the alleged gassing:²³⁰

"While [I was] on a business trip, my deputy, Schutzhaftlagerführer Fritzsche, had used gas for killings. In fact, it was the hydrogen cyanide preparation Cyklon B which was in daily use at the camp for disinfections and hence was in stock. After my return he informed me about this, and then this gas was again used for the following transport."

This is followed(!) by the paragraph quoted above. One can only conclude that Höß witnessed a gassing which took place in his absence!

²²⁸ *Ibid.*, p. 46.

²²⁹ *Ibid.*, p. 63.

²³⁰ M. Broszat (ed.), *op. cit.* (note 212), p. 126.

²³¹ C. Mattogno, *op. cit.* (note 221), p. 153.

But this is not the end of the absurdities. In accordance with orthodox Holocaust historiography, van Pelt asserts that the gassing had caused the death of “600 Soviet PoWs and 250 sick inmates” (p. 203) while Höß speaks exclusively of “Russian Politruks and political commissars.”²³²

Another discrepancy: whereas Höß, as we have just seen, stated that the victims died immediately, Michał Kula – whose statements of 11 June 1945 were used by the Polish judge Jan Sehn as a basis for his “reconstruction” of the “first gassing”²³³ – asserts that the victims were still alive at 4 p.m. the day *after* the introduction of the Zyklon B.²³⁴

Van Pelt next deals with the alleged gassings in the morgue of Crematorium I at the Auschwitz main camp, where, he says, “an existing ventilation system” which “had been installed by the Gestapo-henchmen” allowed “the uncomplicated removal of the hydrogen cyanide” (p. 204).

The Auschwitz *Kalendarium* states that the first gassing in Crematorium I took place on 16 September 1941,²³⁵ but at that time the ventilation system requested on 7 June of that year by SS-*Untersturmführer* Maximilian Grabner, head of the political department of Auschwitz (one of the “Gestapo-henchmen” in van Pelt’s terminology) did not yet exist. It was only on 25 September – nine days after the alleged first gassing in this crematorium – that the detainee workshop began with the necessary job which took at least until 13 October to finish.²³⁶

Van Pelt writes that “introduction holes” for the Zyklon B granules had been chiseled through the roof (p. 204) but keeps quiet about the source for this assertion, and he does not write anything about the size and shape of these openings either. He continues (p. 204):

“In early 1942, this gas chamber was also used for the first group of Jews. They had been working for ‘Organisation Schmelt’ named after its head, SS-Oberführer Albrecht Schmelt, who coordinated the employment of 50,000 Jews as forced laborers in Upper Silesia. In early 1942, Schmelt decided that the ‘unfit’ among them were to be killed, and he talked Höß into carrying out the dirty work at Auschwitz.”

Once again this story is pure fiction made up by van Pelt. In the *Kalendarium von Auschwitz*, the name Schmelt appears for the first time under the date of 28 August 1942.²³⁷ Starting on 28 August 1942, Jewish trans-

²³² M. Broszat (ed.), *op. cit.* (note 212), p. 125.

²³³ Except for the date, as this gassing is said to have taken place on 14 & 15 August 1941 according to Kula.

²³⁴ C. Mattogno, *op. cit.* (note 221), pp. 83f.

²³⁵ D. Czech, *op. cit.* (note 100), p. 122.

²³⁶ C. Mattogno, *Auschwitz: Crematorium I and the Alleged Homicidal Gassing*. Theses & Dissertations Press, Chicago 2005, pp. 209ff.

ports headed from France to Auschwitz stopped at Cosel, where a portion of the able-bodied Jews were selected for the “*Organisation Schmelt*” as replacements for deceased or sick detainees.

In a section of his “autobiographical notes,” dated 16 November 1946 and not published by Martin Broszat, Höß wrote several pages about the “*Organisation Schmelt*.” The following is an excerpt:²³⁸

“Schmelt, as far as I can remember, employed more than 50,000 Jews. I do not know how many Poles and Czechs. The extermination order from RF-SS of the summer of 1941 forced ‘Organisation Schmelt’ to close down the work camps and workshops where Jews were employed and to transfer the Jews to Auschwitz. But continuous serious objections by the Wehrmacht and the armament commandos, both with RSHA and with the RF-SS, caused the dissolution to be repeatedly postponed. It was only in 1943 that an unmistakable RF-SS order was issued to close down the workshops, to move the Jews and their jobs to Auschwitz, and to transfer the major work camps to factories essential for victory, under the administration of the Au[schwitz]. or K. Gro[ss].-Rosen camps, respectively.”

This happened in the spring of 1943. Hence, “*Organisation Schmelt*” cannot have ordered any gassings of physically unfit Jews in early 1942, but then perhaps van Pelt knows these things better than Höß!

Van Pelt next describes this alleged gassing, calling upon “SS-Unterscharführer Pery Broad,” a self-declared witness of this alleged event (p. 205). Here, too, van Pelt makes a big mistake, because SS-Rottenführer (not Unterscharführer!) P. Broad was transferred to Auschwitz only on 8 April 1942 and consequently could never have “witnessed” events which took place or are said to have taken place several months earlier – unless he had, like Höß, the rare gift of being present at events which occurred in his absence...

Van Pelt describes the “procedure” as described by Broad in the following words (p. 205):

“For the first time, deception was used in the killing of the ‘Schmelt-Jews’ [...]. The so-called ‘delousing’ in the Birkenau gas chambers was made more credible by the fake shower heads installed here and by the calm behavior of the SS and the Sonderkommando.”

The only thing wrong with this is that no fake shower heads existed in the alleged gas chamber of Crematorium I, and that the only shower heads

²³⁸ Höss Trial, vol. 21. pp. 180f. The Korherr Report of 27 March 1943, modified on 28 April of that year, mentions 50,570 Jews working for the “*Organisation Schmelt*”; NO-5194, p. 13.

which can be shown ever to have existed at Birkenau were the real ones in Crematorium III!²³⁹

Van Pelt tells us that Höß was proud of his killing system which was more efficient than the one used at Treblinka (p. 205). Unfortunately van Pelt “forgets” to draw the reader’s attention to the fact that Höß, in a declaration under oath made on 5 April 1946, asserted to have visited the Treblinka camp *before* the adoption of Zyklon B for the murders at Auschwitz,²⁴⁰ and that he had specified on 14 March 1946 that his stay at Treblinka had taken place in the spring of 1942.²⁴¹ The problem with this story is, though, that Treblinka began operating only on 23 July 1942²⁴² and thus was not yet in existence when Höß claims to have paid it a courtesy visit! In an effort to eliminate this gaping discrepancy, van Pelt arbitrarily moved Höß’s trip to July 1942 in an earlier book,²⁴³ but that gets him from the frying pan into the fire, because then the adoption of Zyklon B at Auschwitz would have been decided upon only *after* that date.

Van Pelt posits the “evolution of the Auschwitz concentration camp from a concentration camp with unusually many deaths, which also operated a gas chamber as one of its killing instruments, into an extermination camp in which nearly all of the victims were murdered in gas chambers.” He splits that evolution into two discrete steps, the first one being said to have lasted from January to August 1942, and the second one from September 1942 through May 1943 (p. 205). He attempts to retrace the genesis of “Bunker I,”²⁴⁴ in spite of the fact that there is no documentary evidence for the existence of such a building and that there is no logical reason as to why such a structure should have been set up. For what purpose and on whose orders would such a killing site have been built? Van Pelt does not supply us with a clear answer; he merely writes (p. 207):

“The Bunker began operating on 20 March 1942 when a small group of ‘Schmelt-Jews’ was killed as an experiment.”

This assertion is obviously linked to the completely untenable thesis that Jews who were not fit enough to work for “*Organisation Schmelt*” were shipped to Auschwitz for extermination. In an earlier book van Pelt had written:²⁴⁵

²³⁹ C. Mattoigno, *op. cit.* (note 28), pp. 148-157.

²⁴⁰ PS-3868.

²⁴¹ NO-1210.

²⁴² I. Gutman *et al.*, *op. cit.* (note 41), p. 1430.

²⁴³ D. Dwork, R. J. van Pelt, *op. cit.* (note 199), p. 321.

²⁴⁴ In contravention to the common nomenclature, van Pelt writes “Bunker I.”

²⁴⁵ D. Dwork, R. J. van Pelt, *op. cit.* (note 199), p. 301.

“Auschwitz already had become the destination for one particular group of Jews residing on Reich territory: those considered unfit for work in the so-called Schmelt program.”

Let us first of all note that, in the documentation of the Auschwitz Central Construction Office with its tens of thousands of pages, not even the slightest reference to the Auschwitz “Bunkers” has ever been found. Van Pelt freely concedes this point (p. 207):

“There no longer exists any written evidence on the way in which this farmhouse was turned into a gas chamber.”

As I have stated in a study devoted to the Birkenau “Bunkers,” it can be shown that the two Polish farmhouses, called “Bunker 1” and “Bunker 2” by orthodox Holocaust historians, were not within the domain of the Auschwitz Central Construction Office and were never used by it.²⁴⁶

The date of the first alleged gassing in “Bunker 1” was taken by van Pelt from the Auschwitz *Kalendarium*. I do not have to emphasize that no documentary evidence exists for this. In addition there is not even a witness statement which would allow us to affix the date of 20 March 1942 to the beginning of the alleged gassings in this building. Incidentally, the first edition of the *Kalendarium* stated just as arbitrarily that “Bunker 1” went into operation in January 1942.²⁴⁷

For good measure, van Pelt distorts the contents of his source. Danuta Czech, in fact, speaks only of “transports of Polish Jews from Upper Silesia organized by the Gestapo” which were allegedly gassed “without having undergone a selection.”²⁴⁸ This means that the author of the *Kalendarium* never referred to “the unfit Jews of *Organisation Schmelt*,” because these had already been selected as such and would not have required a further selection.

Rudolf Höß tells us:²⁴⁹

“Now in the spring of 1942 the first Jewish transports from Upper Silesia began to arrive, which all had to be annihilated. They were led to the farmhouse – Bunker 1 – from the ramp across the fields of what later became construction sector II.”

Broszat, in this respect, speaks of Jews from Beuthen (Bytom) in a footnote, which means that those Jewish transports came from the ghettos in Upper Silesia and not from *Organisation Schmelt*.²⁵⁰

²⁴⁶ Carlo Mattogno, *The Bunkers of Auschwitz. Black Propaganda versus History*, Theses and Dissertations Press, Chicago 2004.

²⁴⁷ D. Czech, “Kalendarium der Ereignisse im Konzentrationslager Auschwitz-Birkenau,” in: *Hefte von Auschwitz*, no. 3. Wydawnictwo Państwowego Muzeum w Oświęcimiu, 1960, p. 49.

²⁴⁸ D. Czech, *op. cit.* (note 100), pp. 186f.

²⁴⁹ M. Broszat (ed.), *op. cit.* (note 212), p. 127.

Van Pelt must necessarily take recourse to such falsifications because his own thesis concerning the beginning of the alleged mass gassings at Auschwitz cannot be reconciled with that of Czech. While the latter embraces fully the statements by Rudolf Höß (although they are bursting with contradictions) and has the *systematic* annihilation of the Jews begin in March 1942, van Pelt, as we shall see, is convinced that it began in mid-July of that year.

Still, van Pelt's statements, too, are loaded with contradictions. If "Bunker 1" did not serve for the systematic killing of Jews, but only for the liquidation of the unfit Jews from "*Organisation Schmelt*," it would have been no problem for the SS to make use of the "gas chamber" in Crematorium I, which, after all, is said to have been in operation for several months. The alleged reason why the SS is said to have moved the gassings from Block 11 into Crematorium I is given by van Pelt on p. 204:

"The location of the crematorium just outside of the camp perimeter allowed the victims to be taken there quietly, without imposing a camp closure."^[251]

Thus, for van Pelt, all requirements for gassing the unfit Jews of "*Organisation Schmelt*" in Crematorium I were fulfilled – but then why convert and use Bunker 1?

The second reason given by van Pelt for the start-up of "Bunker 1" is related to the negotiations between the Slovak government and the Reich on the subject of the deportation of Slovakian Jews (p. 206):

"The Slovak government was worried that the SS would accept only young and strong Jews [who, according to van Pelt, were sent to Auschwitz to replace the PoWs working in the armament factories there], leaving behind children, old people and the sick, which would then have to be taken care of by the Slovakian state. The government therefore tried to talk the SS into accepting all Jews, offering a sum of money for each Jew deported to Auschwitz."

Then, on p. 208, van Pelt sums up his thesis:

"The sequence of steps in this process – the selection on arrival and the creation of a 'Sonderkommando' – turned an initially 'sporadic' process (the killing of the Schmelt-Jews from Upper Silesia), into something that might be called 'normal practice' of annihilating the Jews at Auschwitz. But this practice had yet not become official. The Bunkers continued to be a special solution for a problem which had arisen from

²⁵⁰ *Ibid.*, p. 187.

²⁵¹ Van Pelt confuses two terms: "*Blocksperre*" (block closure, which meant that the inmates were not allowed to leave their buildings) and "*Lagersperre*" (camp closure, which refers to an isolation of the camp from the outside world, usually due to hygienic measures like quarantine).

the concurrence of two facts: first of all the unwillingness of the Slovak government to take care of children and the elderly among the Jewish population, and secondly the greed of the SS for money and manpower.”

When discussing the (alleged) consequences of these negotiations, van Pelt mentions the Auschwitz visit by SS-Brigadeführer Hans Kammler, Head of Office Group C of SS-WVHA, on 27 February 1942. At that time Kammler ordered the new crematorium, which originally was meant to be set up at Auschwitz I, to be moved to Birkenau instead. Van Pelt comments on this order as follows (p. 206):

“A layout plan of Birkenau prepared soon after this meeting indicates that the crematorium was initially planned to be set up directly next door to the farmhouse which the SS, a month later, would convert into a gas chamber. This gas chamber was referred to as ‘little red house’ or ‘Bunker 1.’ As the crematorium and the Bunker were to be located so close to each other, one may suspect that Kammler not only opted for the construction of a crematorium at Birkenau modeled on the one at Auschwitz, but also ordered the farmhouse to be turned into a killing station at the same time. What is crucial in this case is the fact that the SS notified the Slovak government of its readiness to accept even unfit Slovakian Jews only after Kammler’s return to Berlin. If Höß is right in saying that Eichmann visited Auschwitz in late 1941 or early 1942 and in saying that both men searched the Birkenau area for a location suitable for setting up a killing station, it would not be far-fetched to assume that Kammler simply approved the decision arrived at by Eichmann and Höß earlier on, viz. to consider the farmhouse as a suitable location for a gas chamber. On the basis of the available evidence, no unambiguous pronouncement can be made.”

In order to lend some credence to his outrageous speculations, van Pelt systematically distorts the facts and the contents of the documents. Let us begin with the negotiations between the German and the Slovak governments.

On 16 February 1942 Martin Luther, head of the domestic department in Germany’s Ministry of Foreign Affairs, sent a telex to the German embassy at Pressburg (Bratislava) stating that the Reich, as part of the “measures related to the final solution of the Jewish question in Europe,” was willing to immediately “deport 20,000 young and healthy Slovakian Jews” to the east where there was a demand for manpower.²⁵² On 13 March 1942 a schedule for the first transport of that kind was drawn up. It com-

²⁵² T-1078.

prised of 10 trains each to Auschwitz and Lublin with a load of 1,000 deportees each.²⁵³

Referring to this telex, Luther prepared a memo, dated “21 August 1942,” for his Ministry, stating *i.a.*:²⁵⁴

“The number [...] of Jews deported to the east is insufficient to cover the local demand for manpower. Therefore, the Reichsführer-SS asked the RSHA to approach the Foreign Ministry with the request of asking the Slovak government to furnish 20,000 young and healthy Jews from Slovakia for deportation to the east. The Pressburg embassy reported to [department] D III 1002 that the Slovak government had responded very positively and that the preparations could begin.”

On 20 March Luther transmitted to the German Embassy in Bratislava a communication by the Chief of the Security Police and Security Service, Reinhardt Heydrich, about two days prior to the deportation of Jews from Slovakia:

“In the course of this operation it is planned to charge Slovakia with the payment to the Reich of an amount of RM 500.-- for each Jew taken over.”

The reasoning was as follows:

“The mentioned contribution of RM 500.-- per capita is used to cover the costs which will arise from the lodging, provisioning, clothing and training of these Jews in the near future. It ought to be considered that, according to experience, the productivity of these as yet untrained Jews is very low as such and that the training will have an effect only after some time.”

Since the Jewish wealth in Slovakia amounted to 3 billion Slovak Crowns, the document continues, “it can be assumed, as has already been confirmed, that Slovakia will not only not object to this regulation, but that it will assume responsibility for paying this sum.”²⁵⁵

On April 25, SS-*Hauptsturmführer* Dieter Wisliceny sent a draft of a verbal note with the following content to the German Embassy in Bratislava:²⁵⁶

“The Jews taken over from Slovakia to the territory of the Reich are taken to labor camps for business use, while their families are housed in appropriate residential areas. According to experience, however, the productivity of the Jewish workers is initially very low, and there is a need for a thorough re-education and training to prepare them to work

²⁵³ C. Mattogno, *Special Treatment in Auschwitz*, op. cit. (note 103), pp. 29f.

²⁵⁴ NG-2586-J, pp. 5f.

²⁵⁵ T/1080.

²⁵⁶ T/1084.

in a regulated production. In addition, the housing of family members unfit for labor often requires a considerable expenditure of resources. For this reason it is necessary that the Slovak state pay a resettlement contribution to the German Reich of RM 500 for every Jew. This contribution is calculated on the basis of experience gained so far. The German Embassy requests to be notified whether the Slovak government is willing to make available this respective contribution and awaits proposals about the form in which this contribution will be made available to the German Reich and the period of time within which the payment may be made.”

Finally, on 29 April the German embassy at Pressburg sent a verbal note to the Slovak government, which stated:²⁵⁷

“The Jews transported or to be transported into the Reich area from Slovakia will be used for work in the General Government and in the occupied eastern territories after preparation and retraining.

Housing, food, clothing and retraining of the Jews including their dependents will require expenses which cannot be recovered from their initially low productivity, as retraining [will] become effective only after some time and as only a part of the Jews transported or to be transported are fit for work.”

To cover these expenses, the Reich government requested the Slovak government for reimbursement of 500 RM per person.

From these irrefutable documentary facts we may conclude unambiguously:

1. From its very beginning the German plan for the deportation of the Slovak Jews provided also for the deportation of physically *unfit* Jews, for, as Luther stated in his memo, “only part of the Jews transported or to be transported are fit for work.”
2. The payment of 500 RM for each Jew deported was not a spontaneous offer by the Slovak government but a request by the German government explained by the argument that only a portion of the Jews would be fit for work and that retraining and housing etc. of those fit would initially not be compensated by their low productivity.
3. This request to the Slovak government, which van Pelt considers to be the reason for the erection of “Bunker 1,” was made on 28 April, *i.e.* more than a month after the claimed start-up of this “murder station.”

Let us now look at this matter from Kammler’s point of view. The Birkenau map mentioned by van Pelt, which shows the location of the new crematorium in the north-eastern corner of the camp, was not drawn up

²⁵⁷ *Riešenie židovskej otázky na Slovensku (1939-1945)*. Edícia Judaica Slovaca. Bratislava 1994, documenty, 2. Časť, p. 105.

“prepared soon after this meeting” (*i.e.* the meeting between Kammler and the camp command on 27 February 1942) but seven weeks earlier. We are dealing here with the “Situation map of the PoW camp Auschwitz-Upper Silesia, Plan No. 885,” drawn on 5 January 1942 by SS-WVHA,²⁵⁸ hence a long time *before* the negotiations between the Slovak and the German government ever began. When Kammler visited Auschwitz on 27 February, he merely gave his blessings to a decision which obviously had been taken before, *i.e.*, he approved a proposal submitted in early January. Hence, the relationship between Kammler’s trip to Auschwitz and the idea to erect the new crematorium near “Bunker 1,” as construed by van Pelt, is pure imagination.

The fact that van Pelt’s assumptions are devoid of any logical cohesion can also be shown in the following manner: As the Birkenau camp was rapidly being enlarged, complete with two Zyklon B disinfestation chambers in building 5a and 5b on the drawing board, the SS – if a project of mass killings by gas had been planned – would surely have built a separate gas chamber along the lines of the disinfestation chambers in buildings 5a and 5b or installed one within the new crematorium (as, supposedly, had already been the case at Auschwitz I), rather than converting an existing, yet poorly suited farmhouse into a gas chamber and setting up the crematorium next door.

In fact, the above-mentioned plan shows the outline of a crematorium which refers unequivocally to the design by architect Werkmann of November 1941, correctly reporting its size (55.50 m × 12 m).²⁵⁹ The respective cost estimate for a ventilation system (*Kostenanschlag über Be- und Entlüftungs-Anlagen*), written by the Topf company on 4 November 1941, for the ventilation of the “B”-Raum (= *belüfteter Raum*: ventilated room), that is, the future Morgue 1 (*Leichenkeller 1*), provided two blowers (one intake, one exhaust fan), each with an hourly capacity of 4,800 m³ of air against a total pressure of 40 mm of water column and driven by a three-phase motor of 2 hp,²⁶⁰ which was later indeed delivered and installed.²⁶¹ Therefore, from the perspective of the orthodox Holocaust version, an option had existed ever since late 1941 to create a “gas chamber” inside the

²⁵⁸ RGVA, 502-2-95, p. 7. C. Mattoigno, *op. cit.* (note 28), pp. 625-627.

²⁵⁹ These are two drawings, which were already published by Pressac* and in better quality also by van Pelt,** The outline on the map differs from the blueprints by the chimney tract being located at the top instead of the bottom and by being 10 m wide instead of 7 m.

* J.-C. Pressac, *op. cit.* (note 202), documents 1-11, unnumbered pages.

** D. Dwork, R. J. van Pelt, *op. cit.* (note 199), document 14f., unnumbered pages.

²⁶⁰ J.A. Topf & Söhne, *Kostenanschlag über Be- und Entlüftungs-Anlagen*. 4 November 1941. RGVA, 502-1-327, pp. 151-153.

²⁶¹ Invoice no. 171 by the Topf firm of 22 February 1943. RGVA, 502-1-327, p. 25.

planned new crematorium, and Michael T. Allen interprets the Werkmann drawings mentioned above precisely in this sense.²⁶²

Thus, we see that van Pelt's thesis is nothing but a collection of unfounded speculations!

Van Pelt then adds a brief description of "Bunker 1," basing himself on an "eye-witness account provided by Shlomo Dragon in 1945." According to van Pelt, the building consisted of "two rooms with a floor area of 50 square meters, which allowed the killing of between 250 and 500 people, depending on size and age" (p. 207). This data, unfortunately, disagrees with van Pelt's source, because Dragon attributes a total floor area of 80 square meters to the two rooms, asserting that 2,000 victims could have been herded into them (the equivalent of 25 persons per square meter!).²⁶³ Van Pelt writes that this gas chamber "did not possess a mechanical ventilation," but he does not explain why the SS would have foreseen such a device in the disinfestation chambers but not for the homicidal gas chambers. He states that the Bunker went into operation on 20 March 1942 with a group of "Schmelt-Jews" and goes on to say (p. 207):

"The following set of victims did not consist of Slovakian Jews, but of 1,000 sick inmates who were gassed on 4 May. [A total of] 5,200 Jews from the surrounding area were killed here over that month."

His – unnamed – source for these assertions is the Auschwitz *Kalendarium*. However, as I have shown elsewhere,²⁶⁴ there is no documentary evidence for the alleged gassing of 1,000 sick detainees, and on the subject of the "5,200 Jews from the surrounding area" nothing shows that they were ever deported to Auschwitz in the first place.²⁶⁵

And if the sick inmates were indeed the "following set of victims" after the alleged trial gassing of 20 March, we may conclude that the "Bunker" stood idle for 44 days. But if that facility was indeed rarely used, why, then, did the SS decide to build a second gassing bunker? Van Pelt answers this question in the following manner (p. 207):

"As the gas chamber which had originally been set up for the Slovakian Jews was already in full operation even before the first transport

²⁶² Michael T. Allen, "The Devil in the Details: The Gas Chambers of Birkenau, October 1941," in: *Holocaust and Genocide Studies*, vol. 16, fall 2002, pp. 189-216. See my critique "Le camere a gas di Birkenau nell'ottobre 1941: Le fantasie storico-tecniche di un 'tecnologo'," in: *Auschwitz: nuove controversie e nuove fantasie storiche. I Quaderni di Auschwitz*, vol. 4, Effepi, Genoa 2004.

²⁶³ In the above-mentioned study on the "Bunkers" I quote Dragon's statement, *op. cit.* (note 246), pp. 71-74.

²⁶⁴ *Auschwitz: assistenza sanitaria...*, *op. cit.* (note 103), pp. 111f.

²⁶⁵ C. Mattogno, *op. cit.* (note 28), "Number of Deported Jews," pp. 523-527.

of 'unfit' Jews began arriving, the SS decided on the conversion of a second farmhouse into a killing station."

Van Pelt's thesis concerning the genesis of the gas chambers and the extermination of the Jews bursts with absurdities and is devoid of any logic. If we assume that the order Höß claims to have received from Himmler in June 1941 is not a historical fact, the whole story of the alleged extermination of Jews at Auschwitz simply floats in mid-air. Van Pelt asserts that the Auschwitz gas chambers were developed in "1941 to kill Soviet PoWs" (p. 213), but who could have ordered the camp commander to use them later on to kill Jews, if there was no corresponding order from Himmler yet?

Can anyone in his right mind seriously believe that an *SS-Oberführer*²⁶⁶ could have "persuaded" Höß (to use van Pelt's own expression on p. 204) to carry out limited exterminations at Auschwitz? This idea is all the more outrageous, as the "*Organisation Schmelt*" was under Himmler's command, making him the only person to decide over the fate of the unfit Jews. Van Pelt's other fantastic story, the one of the unfit Slovakian Jews whose alleged killing was the starting point for the systematic extermination of Jews, fails from the very start because no such order was given. Who, in the world, at what point in time and for what reason is alleged to have given such an order?

The traditional story of Auschwitz, illogical and contradictory as it is, becomes even more confusing when we listen to van Pelt. He makes no attempt at explaining the second phase of the evolution of Auschwitz into an "annihilation camp" where "almost all victims were murdered in gas chambers" (p. 205). In connection with Himmler's trip to Auschwitz on 17 and 18 July 1942, van Pelt does not shy away from making historical facts out of Höß's fictional account about this visit, beginning with the presence of the *Reichsführer-SS* at the gassing of a "freshly arrived transport of Jews"²⁶⁷ (p. 208). Van Pelt quotes the following statement by Höß (p. 209):²⁶⁸

"Eichmann's program continues with increasing vigor each month. See to it that you move ahead with the enlargement of Auschwitz. The Gypsies are to be annihilated. Just as remorselessly you will kill the unfit Jews."

This complicates matters even further. According to Höß, Himmler had informed him of Hitler's order of a complete eradication of the Jews in the summer of 1941:²⁶⁹

²⁶⁶ This rank was between that of a Colonel and of a Brigadier General.

²⁶⁷ These inventions are refuted by the extant documents, starting with Himmler's journey. See about this my study *Special Treatment in Auschwitz*, *op. cit.* (note 103) pp. 17-29.

²⁶⁸ M. Broszat (ed.), *op. cit.* (note 212), p. 184.

²⁶⁹ *Ibid.*, p. 157.

“All Jews within our reach are to be annihilated now during the war.”

When he went to Auschwitz in July of 1942, Himmler is said to have softened the earlier order and to have decreed only the killing of the Jews *unfit for work*:²⁷⁰

“When the RF-SS changed his original order, according to which all Jews without exception were to be destroyed, by ordering that the able-bodied ones were to be used for work in the armament industries, Auschwitz became a camp for Jews, a collection camp for Jews of a dimension heretofore unknown.”

If we follow van Pelt’s representation, however, the annihilation of the Jews had begun – more or less by accident – in January 1942, had become standard practice by March 1942, only to be accelerated in June by the completion of the second “gassing bunker” – without Himmler ever having given a corresponding order!

As van Pelt has access to no source except for the declarations by Höß, but is reluctant to make full use of them in view of their numerous absurdities, he gets caught in an inextricable web of contradictions.

If there was no “Führer order” in the summer of 1941, the alleged order issued by Himmler has no basis in reality, being, as it is said, the consequence of that very “Führer order.” In an effort to bring at least a minimum of order into this utter chaos, Barbara Schwindt, author of a book about Majdanek, invents the explanation that this “Führer order,” while not having led to the alleged mass extermination, had merely caused an “acceleration of the final solution.”²⁷¹ But if that is so, when was the extermination order issued? Many orthodox Holocaust historians believe that it was issued on 12 December 1941 (cf. chapter 6),²⁷² but then, why is it that the Auschwitz camp authorities let a full seven months pass before implementing it? And on whose orders did the numerous alleged killings occur which happened before July 1942?

In an earlier work, van Pelt wrote that the second phase of the history of Auschwitz, characterized by systematic exterminations, started in September 1942:²⁷³

²⁷⁰ *Ibid.*, p. 114.

²⁷¹ B. Schwindt, *op. cit.* (note 170), p. 122.

²⁷² According to the “new” orthodox Holocaust historiography, Hitler announced the extermination decision on this day in a meeting with the Gauleiters; see C. Gerlach, “The Wannsee Conference, the Fate of German Jews and Hitler’s Decision in Principle to Exterminate All European Jews,” in: *The Journal of Modern History*, vol. 70, no. 4, December 1998, p. 810.

²⁷³ D. Dwork, R. J. van Pelt, *op. cit.* (note 199), p. 322.

“The final transformation of Auschwitz into a killing site for Jews was confirmed on 26 September 1942, when Höss received explicit instructions from Berlin about the property of gassed victims.”

But the go-ahead order for this transformation is said to have been given earlier, when Himmler visited Auschwitz on 17 and 18 July 1942 and is said to have explained, according to Rudolf Höß, “the new role of Auschwitz as the destination for the Jews of Europe.”²⁷⁴

Van Pelt based his earlier thesis – that the “final transformation” of Auschwitz into an annihilation camp for Jews was decided on 26 September 1942 – on an order issued on that day by SS-*Brigadeführer* August Frank, head of *Amtsgruppe* A of SS-WVHA concerning the utilization of possessions in connection with the settlement and resettlement of Jews.” The addressees of this order were the commanders of the SS administration of Lublin and the camp command of Auschwitz.²⁷⁵

That these possessions stemmed from “gassed Jews” is therefore nothing but yet another untenable assertion by van Pelt, which moreover contradicts the fact that these instructions also concerned the camp at Lublin-Majdanek where the alleged extermination of Jews in gas chambers is said to have begun only in October 1942 (cf. Chapter 8).

Moving on to the order Höß claims to have received from Himmler concerning the extermination of the Gypsies, we see that, while van Pelt does quote the corresponding sentence, he does not say that, according to Höß, Himmler never ordered the killing of *all* Gypsies. Here is what Höß stated about this:²⁷⁶

“The RF-SS insisted on preserving the two major Gypsy tribes by all means – the designation of the tribes is no longer in current use. [...] Those people moved to Auschwitz were to be held in a family camp for the duration of the war.”

Höß adds:

“Then there was the RF-SS visit in July 1942. I took him on a detailed tour of the Gypsy camp.”

Himmler paid particular attention to the diseases and epidemics raging in the camp.²⁷⁷

“He looked at everything in detail as it really was – and gave us the order to destroy them after selecting the able-bodied, as in the case of the Jews.”

²⁷⁴ *Ibid.*, p. 320.

²⁷⁵ NO-724.

²⁷⁶ M. Broszat (ed.), *op. cit.* (note 212), p. 108.

²⁷⁷ *Ibid.*, p. 109.

The only thing wrong with this account is that the Gypsy camp (sector BII of Birkenau) did not yet exist in July 1942. There is evidence to show that it was set up only in February 1943.²⁷⁸ Here we have further proof for the “reliability” of Höß’s “autobiographical notes” and of the hypotheses based upon them.

Let us return to the “Bunkers.” “Bunker 1,” said to have been set up for the annihilation of the unfit Slovakian Jews, allegedly went into operation on 20 March 1942 – but the first transport from Slovakia which also carried Jews of this category reached Auschwitz only on 4 July, or three months later! In the meantime – starting in May – the mass extermination of the Jews from the Upper Silesian ghettos is alleged to have begun. According to Danuta Czech, a total of 10,700 of them were gassed in “Bunker 2” in May and June 1942. But who ordered this mass murder, at what time, and for what reason? Moreover, as “Bunker 1” was needed for killing the Jews from the ghettos of Upper Silesia, if we are to believe van Pelt, the SS erected “Bunker 2” for the gassing of unfit Slovakian Jews – even though the Slovakian Jews began arriving at Auschwitz only after all Upper Silesian Jews are said to have been annihilated, as Danuta Czech tells us! If we follow van Pelt, this “Bunker 2” had “a total floor area of 65 square meters, allowing some 320 to 600 persons to be killed here, depending on age and size” (p. 207), but according to Dragon it measured 100 square meters and could take in 2,500 persons (which means that, again, 25 persons would be compressed into one square meter!).²⁷⁹ As he did earlier with “Bunker 1,” van Pelt improves his source once again without telling his readers!

Let us consider now the Birkenau crematoria. They are said to have undergone some architectural modifications which, for van Pelt, reflected the Himmler order discussed above, because, as he puts it, the “Auschwitz architects went to work” straight away after Himmler’s departure (p. 209). I will not go into the details of van Pelt’s theses, having already done so elsewhere on 200 pages.²⁸⁰ Instead, I will examine here the new theses proffered by van Pelt in his 2011 contribution. There he stresses in particular the significance of the (alleged) wire-mesh columns for the introduction of Zyklon B into the gas chambers (p. 210):

“These wire-mesh columns allowed not only the easy introduction of the cyanide-bearing cubes of calcium sulfate, but also their quick removal. The cubes continued to give up their hydrogen cyanide even after the poisoning process had ended after 20 minutes and no one was alive any more. The removal of these Erko cubes was essential for the

²⁷⁸ D. Czech, *op. cit.* (note 100), p. 423.

²⁷⁹ C. Mattogno, *op. cit.* (note 246), p. 78.

²⁸⁰ C. Mattogno, *op. cit.* (note 28), pp. 441-667.

smooth and continuous operation of the killing station. Zyklon B having been developed as a disinfection agent, the duration of the evaporation had been fixed at 24 hours. Nits are difficult to get rid of and must be exposed to the cyanide for a long time. People, on the other hand, die quickly. With fresh transports arriving day by day, the SS insisted on the gas chambers being accessible right away after the death of all victims. The architects must have concluded that the removal of the still active Erco cubes would facilitate the cleaning-up operations."

I wish to draw the reader's attention to the fact that these explanations squarely contradict the arguments brought in by Achim Trunk in his polemic against Germar Rudolf (cf. chapter 1)! Only one page further on, when he speaks of crematoria 4 and 5, van Pelt makes a sudden about-face to refute his own arguments in one swoop (p. 211):

"Modeled on the gas chambers in the Bunkers, the appropriate gas chambers of crematoria 4 and 5 were simple spaces, above ground, without the rather complicated equipment for removing the toxic gas, such as the gas columns in the gas chambers of crematoria 2 and 3, and, at least initially, without a mechanical ventilation system."

Hence, on the one hand the wire-mesh columns were "essential for the smooth and continuous operation of the killing station" in crematoria II and III, whereas on the other hand they were completely superfluous, because, in the "appropriate gas chambers" of crematoria IV and V, one could very well manage without them. Regrettably, van Pelt "forgets" to explain to his readers how these Erco cubes were removed from the gas chambers of these crematoria. Here the Zyklon B is said to have been poured directly on the heads of the victims through holes in the walls, with the effect that the hydrogen cyanide would have gone on evaporating during the removal of the corpses. The carrier granules could only have been collected after the corpses had been removed from the chambers. As "the architects" must have concluded this to be the case, their decision not to install a mechanical ventilation system in the gas chambers of these two crematoria²⁸¹ to compensate at least partly for the absence of a wire-mesh column would have constituted a shot in the foot of the worst order.

When discussing the deportation of Hungarian Jews to Auschwitz in the summer of 1944, van Pelt states on p. 214:

"In the months of May and June, nearly 7,000 Jews from Hungary arrived every day. The crematoria could not cope with the demand, and so there were once again piles of corpses."

Van Pelt does not even waste one word on the cremation trenches described by the Holocaust historians!

²⁸¹ In the crematories IV & V ventilation devices had been planned but were never installed.

On the subject of the number of persons gassed, van Pelt has this to say (p. 216):

"I should think that it is probable that over 300,000 persons were murdered in crematorium 2 and another 200,000 in crematorium 3, while the gas chambers of crematorium 4 and those of Bunker V brought about the death of at least 100,000 people."

In one of his earlier books, van Pelt had spoken of 500,000 people murdered in Crematorium II.²⁸² He provides no explanation for the reduction of this number by 200,000 victims.

Towards the end of his article, van Pelt brings out of the junk closet the tale of the Auschwitz "gas van" and, so to speak, provides it with an official blessing (p. 215):

"In September 1944, when the systematic gassings with Zyklon B were slowly ending in the camp, the Polish detainee Stanisław Kłodziński smuggled a message to Teresa Lasocka [out of the camp] saying that the SS at Auschwitz had begun using a Saurer gas van with the registration number POL71462. This truck was used for killing people who had been condemned to death by the Gestapo at Kattowitz and whom, so far, the SS had executed in the yard of Block 11 or in the morgue and/or gas chamber of crematorium I. It appears that the gas van was also used in the smaller satellite camps as a 'rolling Kommando of death.' According to Stanisław Kłodziński, exhaust gases were used as the killing means in this case. Until recently no evidence from the archives was known which would have confirmed the use of a gas van at Auschwitz. Recently, however, a researcher found evidence for the existence of a Saurer gas van with the license number POL 71462. It is neither known with certainty when this mobile gas chamber stopped operating nor how many people were killed in it."

In this case van Pelt's source is a well-known holocaust website (footnote 49 on p. 216), although this claim was first made in the Polish literature as early as 1946.²⁸³

The document mentioning the "gas van" is the "Activity and Situation Report of Einsatzgruppe B for the period of 16 through 28 February 1942," dated 1st March 1942 which states, *i.a.*:²⁸⁴

"The gas vans received at Smolensk on 23.2.42 were distributed as follows:

EK 8 : Lkw Saurer Pol 71462

²⁸² R. J. van Pelt, *The Case...*, *op. cit.* (note 200), pp. 68, 458, 469.

²⁸³ F. Friedman, T. Hołuj, W. Barcikowski, *Oświęcim*. Spółdzielnia wydawnicza "książka", Warsaw/Bromberg 1946, pp. 81f. The license plate number is given as "Pol. 71-462."

²⁸⁴ *Der Bundesbeauftragte für die Unterlagen des Sicherheitsdienstes der ehemaligen DDR* (BStU) ZUV 9, vol. 31, p. 159.

EK 9: Lkw Saurer Pol 71457.

Both vehicles arrived at Smolensk in need of repair and were distributed to the Einsatzkommandos after reparation.

The two smaller gas vans will be dispatched to SK 7a and 7b after completion of their use with EK 8."

This document proves in no way that the "*Einsatzgruppen*" employed "gas vans" for homicidal purposes. In fact, all Saurer trucks had diesel engines, the exhaust gases of which were totally unsuitable for murder,²⁸⁵ a fact now even acknowledged by orthodox historians, as we have seen earlier. Although Achim Trunk goes so far as to assert that such mobile gas chambers had killed 250,000 persons in Russia alone (p. 24), the piles of documents²⁸⁶ which have come down to us contain only a single one speaking of "gas vans" – the one being discussed here – and the text does not prove in any manner that this car was used for homicidal purposes. Hence, the usual explanation of the SS having destroyed all incriminating documents does not apply in this case.

Matthias Beer, who is considered the expert historian on "gas vans," for some strange reason does not mention the document cited by van Pelt in connection with the use of these vehicles at Smolensk. He writes that in the "language of the period," the "mobile gas chambers" were known by such designations as "*Sonderwagen*" (special cars), "*Spezialwagen*" (dto.), "*Sonderfahrzeuge*" (special vehicles) and "*S-Wagen*" (S-cars), which allegedly confirms the thesis of a "coded language" used by the SS (p. 154). But then why was the specific designation "*Gaswagen*" used in this unique document?

The word "*Gaswagen*," in the sense of "mobile homicidal gas chamber" was coined only after the Second World War by the victorious powers. Earlier, a "*Gaswagen*" had simply been an abbreviation for "*Holzgaswagen*" (a vehicle using gas from the gasification of wood). Such a vehicle was also distributed to the Auschwitz motor pool (*Fahrbereitschaft*). In a report dated July 1942, reference is made to "1453 km using wood gas."²⁸⁷ The report speaks *i.a.* of a "tractor, wood gas."²⁸⁸ In a document of 22 September 1942, the vehicles of the Auschwitz Central Construction Office are classified according to the type of fuel used: *Benzin* (gasoline), *diesel*,

²⁸⁵ S. Alvarez, *op. cit.* (note 120), p. 24.

²⁸⁶ The "*Ereignismeldungen UdSSR*" (Event Reports USSR) alone encompass more than 2,900 typewritten pages. H. Krausnik, H.H. Wilhelm, *Die Truppe des Weltanschauungskrieges. Die Einsatzgruppen der Sicherheitspolizei und des SD 1938-1942*. Deutsche Verlags-Anstalt, Stuttgart 1981, p. 333.

²⁸⁷ "Tätigkeitsbericht der Fahrbereitschaft der Zentral-Bauleitung der Waffen-SS und Polizei Auschwitz für den Monat Juli 1942," RGVA, 502-1-181, p. 275.

²⁸⁸ *Ibid.*, p. 278.

Treibgas (fuel gas) and *Holzgas* (wood gas). There is only one vehicle in this latter category which, in all likelihood, is the “*Gaswagen*” mentioned by van Pelt.²⁸⁹ In October of 1942 a distance of 662,²⁹⁰ in November 470²⁹¹ and in December another 470²⁹² kilometers were covered using “wood gas.”

In fact, the shortage of fuel had led the German secretary for armament Albert Speer to appeal to vehicle owners on 22 October 1942 to convert their vehicles to operate “with producer gas” on their own initiative.²⁹³

On 6 September 1944, the head of the Central Construction Office, SS-*Obersturmführer* Werner Jothann, informed the regional counselor of the Bielitz economic authority that the Breslau authorities had supplied him with a generator vehicle.²⁹⁴

“The vehicle in question is a generator[-powered] vehicle. In view of the present difficult supply situation in the domain of liquid fuels, it is irresponsible for generator vehicles to be standing idle for lack of tires in favor of gasoline and diesel vehicles.”

Under these circumstances, the assumption that the alleged “vehicle for homicidal purposes” was, in fact, this very vehicle is absolutely warranted. The assertion that it was a “mobile gas chamber” was made solely by Kłodziński. In the internet source cited by van Pelt the text of this message can be found, but it shows merely that Kłodziński’s source²⁹⁵ was someone who had seen a vehicle with the license number POL 71462. During the trial of the camp staff, Kłodziński declared *i.a.* that in January 1944, “another 7,000 [Polish] officers had been gassed,”²⁹⁶ something which speaks volumes about the reliability of this witness.

Incidentally, two further witnesses, Bronisław Falborski and Szymon Srebrnik,²⁹⁷ had identified a perfectly harmless vehicle – a furniture truck stationed in the yard of the Ostrowski factory – as being a “*Gaswagen*.”

²⁸⁹ “Aufstellung der im Dienste der Zentralbauleitung der Waffen-SS und Polizei in Auschwitz stehenden Transportfahrzeuge und Baumaschinen,” RGVA, 502-1-181, p. 80.

²⁹⁰ “Tätigkeitsbericht der Fahrbereitschaft vom 1. bis 31. Oktober 1942,” RGVA, 502-1-181, p. 246.

²⁹¹ “Tätigkeitsbericht der Fahrbereitschaft vom 1. bis 30. November 1942,” RGVA, 502-1-181, 235.

²⁹² “Tätigkeitsbericht der Fahrbereitschaft der Zentral-Bauleitung der Waffen-SS und Polizei Auschwitz O/S für den Monat Dezember 1942,” RGVA, 502-1-181, p. 227.

²⁹³ Werner Kroll, *Der Gasgenerator*, Verlag G. Kliemt. Nossen i. Sa. 1943, pp. 14f.

²⁹⁴ RGVA, 502-1-190, p. 416.

²⁹⁵ Kłodziński was deported to Auschwitz on 12 August 1941 and stayed there until 19 January 1945. He was initially employed as a nurse and later as a physician in Block 20 of the inmate hospital. Since the “gas van” is said to have been stationed near the camp, he would inevitably have seen and thus mentioned it.

²⁹⁶ AGK, NTN, 162, p. 136.

²⁹⁷ S. Alvarez, *op. cit.* (note 120), pp. 147 & 155.

As the structure of a generator vehicle differed greatly from an ordinary truck, especially on account of the pipes feeding the gas from the generator to the engine's cylinders, it was easy to mistake it – innocently or on purpose – for a homicidal “*Gaswagen*.” Such gas generators were in use in Italy as early as 1934, by the way.²⁹⁸

As far as the alleged use of a “*Gaswagen*” at Auschwitz is concerned, let me finish by saying that it would have spoken volumes about the local SS men's intelligence, had they added such a vehicle to the many killing methods allegedly already practiced in that “extermination camp” (gas chambers, phenol injections, shots in the back of the neck etc.).

8. The Gas Chambers of the Majdanek Camp

Tomasz Kranz, the director of the Majdanek memorial site and author of the chapter “Mass killings with poison gas at the Majdanek concentration camp” of the book discussed here (“*Massentötungen durch Giftgas im Konzentrationslager Majdanek*”; pp. 219-227), is very familiar with the German edition of the book about that camp written by Jürgen Graf and myself.²⁹⁹ In a Polish article of 2005, which was translated into German two years later, he summarizes our book as follows:³⁰⁰

“In connection with the computation of the number of victims for Majdanek, we must mention a revisionist book in which the questions of the deportations and the mortality, along with other topics, take up considerable space. The authors deny^[301] the gassings and the mass shootings of detainees but do admit that the mortality in the camp was significant on account of the living conditions and typhoid epidemics. Based on an analysis of the available death books, they estimate that a total of 42,200 detainees lost their lives at Majdanek.”

In his contribution to the anthology discussed here, Kranz no longer even mentions this book. He probably was discouraged from doing so by the German editors.

Kranz begins by saying that Odilo Globocnik, head of the SS and police in the district of Lublin, had regarded the Lublin concentration camp as “his own” and had included it into “*Aktion Reinhardt*,” which he had orga-

²⁹⁸ Serafino de Capitani, *Gli autoveicoli a carburanti nazionali solidi, liquidi, gassosi*. Editore Ulrico Hoepli, Milan, 1940.

²⁹⁹ *KL Majdanek*, *op. cit.* (note 29).

³⁰⁰ T. Kranz, *Zur Erfassung der Häftlingssterblichkeit im Konzentrationslager Lublin*. Państwowe Muzeum na Majdanku, Lublin, 2007, p. 54.

³⁰¹ The original Polish says “*negujq*,” which can mean deny or negate.

nized (p. 219). As far as the “use of poison gas for homicidal purposes” is concerned, Kranz continues, the Majdanek camp was a special case (p. 219f.).

“Not only were two different gases used here as killing agents in gas chambers – the disinfestation agent Zyklon B (HCN) and carbon monoxide (CO) – but a gas van was used as well. It would appear that the installation of the gassing facilities in this camp was due to the SSPF [SS and Police Leader, i.e. Globocnik] in Lublin.”

Kranz believes that two “anecdotes” [sic!] indirectly point this out: the report by Kurt Gerstein and the deposition of the head of the camp’s technical department, Friedrich W. Ruppert (p. 220). Unfortunately, these two “sources” are not only “indirect” but have no historical value either...

The odd thing about the alleged mass murders at Majdanek is that two entirely different killing agents were supposedly used in parallel, Zyklon B and carbon monoxide in steel bottles. As we have seen earlier, the SS is said to have abandoned the latter agent – allegedly used in the euthanasia centers – in favor of other, more practical methods. But then why was it re-introduced at Majdanek? Kranz answer this question in the following way (pp. 222f.):

“Carbon monoxide began to be used in September or October 1942. The experience gathered by the camp personnel during the murder program ‘T4’ probably played a major role in the decision to use this toxic gas at the Majdanek concentration camp. A large part of this [T4] personnel was moved to Lublin in connection with ‘Aktion Reinhardt.’ The main figure in this context was Christian Wirth, who initially was in command of the Belżec extermination camp and became inspector of the ‘Aktion Reinhardt’ Sonderkommando in August 1942, residing at Lublin.”

But this explanation does not remove any problem; it merely creates new ones. In his article which I have already discussed above, Dieter Pohl argues that the alleged order to kill the Jews was given to Globocnik by Hitler on 13 October 1941, and that Globocnik then had the Belżec camp set up. If this was so, one does not quite understand why Globocnik and Wirth, after Belżec was in operation, waited for another six or seven months before they began building gas chambers at Majdanek, a camp that, after all, was part of “Aktion Reinhardt.” It is even more difficult to understand why the system of using carbon monoxide from steel bottles was thrown out at Belżec after a few trials, whereas it was re-introduced at Majdanek as late as September or October 1942. As we shall see, the Zyklon B gas chamber would be installed even later than that.

In this connection, another question arises which Kranz does not even mention in passing. Orthodox Holocaust historians maintain that at Bełżec, Sobibór and Treblinka any and all Jews were murdered, even the ones who would have been able to work, while at Majdanek this fate allegedly awaited only the “unfit” ones. Why this difference in treatment, if all four camps were part of “Aktion Reinhardt”?

The purported genesis and design of the gas chambers are dealt with by Kranz as follows (p. 220):

“Little is known about the installation of the gas chambers at the Majdanek concentration camp, because there are practically no documents describing their construction or their start-up. The only thing known with certainty is that these gas chambers were built along the lines of the appropriately modified design of a disinfestation plant using the system of disinfestation with hydrogen cyanide (HCN is the active ingredient of Zyklon B).”

These assertions are absolutely untenable. As I have explained in the study of Majdanek mentioned above, the disinfestation gas chambers of the Majdanek camp were designed exclusively for hygienic reasons and were genuine Zyklon B delousing chambers.

Before going briefly into the genesis of these sanitary installations, I wish to outline the meanderings of orthodox Holocaust historiography on the subject of the homicidal gas chambers of Majdanek.

Between 4 and 23 August 1944, a Polish-Soviet commission investigated the camp, which had been liberated a short time earlier, and wrote a technical and chemical report about the alleged killing installations. The report stated that there had been six homicidal gas chambers at Majdanek. Later on Polish historians added a seventh such chamber. The following table summarizes the characteristics of these chambers:

Table 4: Alleged Homicidal Gas Chambers at the Majdanek Camp			
ROOM	LOCATION AND DESIGNATION	SIZE [M]	AREA[M ²]
I	Barrack 41, room in the south-west	4.50 × 3.80	17.1
II	Barrack 41, room in the north-west	4.50 × 3.80	17.1
III	Barrack 41, delousing chamber in the east	9.27 × 3.80	35.2
IV	Barrack 41, gas chamber, next to shower		107.7
V	Barrack 28, drying unit	11.75 × 6	70.5
VI	Barrack 28, drying unit	11.75 × 6	70.5
VII	New crematorium, room between morgue and autopsy room	6.10 × 5.62	34.9

Chambers I, II, III and IV are claimed to have been conceived and built as homicidal gas chambers whereas chambers V and VI, according to the

Polish-Soviet commission, could also be used for disinfestation but were solely used for the disinfestation of the clothes of murdered detainees.

Decades later, orthodox Holocaust historiography cast several of these chambers overboard. The first one to go was the gas chamber in the new crematorium (no. VII), although it would have been most logical to set up such a killing site directly next door to the cremation furnaces – in the same way as orthodox Holocaust historians claim this to have been the case at the crematoria of Auschwitz I and Birkenau. Polish Majdanek literature clung to chambers V and VI of barrack no. 28 (drying unit) into the early 1990s, but then abandoned them. The latest gas chamber given up by orthodox historiography was chamber IV, which was located in barrack no. 41 (bath and disinfection) next to the shower room. As late as 1997, a sign could be seen there saying:

“Experimental gas chamber for killing detainees by means of Zyklon B. It was dumped through openings in the ceiling”

It is likely that this gas chamber was discarded because of the already mentioned study written by J. Graf and myself, which appeared for the first time in German in 1998.²⁹ In 2000, we enjoyed the support of two orthodox Holocaust historians, Michael Shermer and Alex Grobman, who declared that this room was used “for the disinfestation of clothing and blanket, but not for mass killings.”³⁰² It is slightly ironic to note that this chamber is the only one labelled “gas chamber” in a document.³⁰³

Thus, we are left solely with the chambers I to III, which were located in a concrete building behind barrack no. 41. Kranz deals exclusively with these.³⁰⁴ In a book published in 2005,¹⁷⁰ orthodox Holocaust author Barbara Schwindt also considers only these rooms as homicidal chambers.

Let us now examine the genesis of these chambers.

The drawing prepared by the Majdanek Central Construction Office on 31 March 1942 and labelled “Prov.[isional] delousing installation PoW camp Lublin” shows eight small disinfestation chambers lined up in the center of a room labeled “Delousing” and measuring 13.5 m × 4 m. These chambers separate the “clean” side next to the shower room from the “unclean” one toward to the outside. The delousing installation was housed in a building measuring 40.76 m × 9.56 m.

³⁰³ WAPL, Zentralbauleitung, 145, p. 14, cost estimate by the Michael Ochnik company of 18. Nov. 1942. Reproduced in J. Graf, C. Mattogno, *op cit.* (note. 64), p. 323.

³⁰⁴ The *Enzyklopädie des Holocaust* mentions seven gas chambers (I. Gutman *et al.*, *op. cit.* (note 41), vol. II, p. 918).

During delousing, the detainees followed the following sequence of stations: Entrance/registration → undressing room/shearing → showers → dressing room → exit.

The clothes laundry sequence was: clothes reception → delousing (unclean → clean) → clothes hand-out.

There were 40 showers, with the hot water coming from the boiler room.³⁰⁵

This layout followed an older plan of 23 March 1942 for a delousing facility which was originally meant to be built outside the camp.³⁰⁶ From the outside, it can be seen that it was realized, with a few modifications, in barrack 42, building BW XII, inside of which the boiler plant and a chamber made of concrete can still be recognized. Both rooms are considerably larger than originally planned. Today barrack 42 is designated as “Bath and disinfection II.”

A report by the Lublin Central Construction Office tells us that by 1 July 1942 BW XII had been 40% completed. The document says *i.a.*:³⁰⁷

“Building XII Delousing and Bath – meanwhile a second horse stable barrack, with shower facility, has been added”

This second installation was barrack 41, today called “Bath and disinfection,” which was erected to the east of barrack 42.

On 19 June 1942, SS-*Sturmbannführer* Lenzer, head of the Office of Central Construction Inspection of SS-WVHA,³⁰⁸ forwarded to the Construction Inspection of the Waffen-SS and Police General Government a request dated 27 May of that year concerning the erection of a disinfection plant for the Lublin garment works:³⁰⁹

“In the aforementioned letter Office BII submitted a request for the construction of a disinfection facility as per the system of disinfection with hydrogen cyanide.”

A week later, on 27 June 1942, the head of the Construction Inspection of the Waffen-SS and Police General Government advised the Lublin Central Construction Office that the “advance project with cost estimate” for the Lublin garment works would have to be addressed to him as “addendum to the preliminary draft for the construction of the fur and garment workshop by 10 July 1942.”³¹⁰

³¹⁰ *Ibid.*, p. 4.

On 10 July, the head of the Central Construction Office of the Construction Inspection of the Waffen-SS and Police General Government forwarded the complete documentation concerning the disinfestation plant: motivations, explanatory note, construction notification, cost estimate, local map as well as the drawing of the disinfestation barrack. In his letter of transmittal he stated:³¹¹

“Enclosed as per the order of 27 June 1942, please find the supplement to the construction proposal for a disinfestation facility as Building XII in the Fur and Garment Works of Lublin, to the amount of RM 70,000, with the request for review and provision of the financial and material means. The Polish contractors’ prices were used as basis for the cost estimate.”

Of the documents enclosed with this letter, the explanatory report and the cost estimate are the only ones to have survived; both were drawn up by Chief of the Central Construction Office on 10 July 1942. The first, reproduced in its entirety below, explained the purpose of this facility:³¹²

“Explanatory Report for the Construction of a Disinfestation Facility for the Fur and Garment Works of Lublin.

For purposes of disinfesting the arriving items of fur and clothing, a disinfestation facility as per the diagram provided by the SS Economic-Administrative Main Office is to be built on the grounds of the Fur and Garment Works of Lublin. As the enclosed diagram shows, the disinfestation chamber is to be constructed solidly with a ceiling of reinforced concrete. A so-called pole-support roof must be built above this delousing chamber. This pole-support roof is to be 60.0 x 18.0 m in size to allow the disinfested materials to be spread out and stored. The furnace as well as the remaining equipment is provided by Office BII. Everything else results from the drawing.”

The “Cost Estimate for the Construction of a Disinfestation Barrack for the Fur and Garment Works of Lublin” comprises 27 sections and cites a total cost of 140,000 Złoty. Section 18 reads:³¹³

“4 air-tight iron [sic] doors, delivered by the contractor and installed with the fitter’s aid, including all work involved in caulking and plasterwork.”

The original project, of which a subsequent diagram has been preserved—namely, the August 1942 diagram “Prisoner-of-war Camp Lublin. Disinfestation Facility. Building XII^A,” by the Central Construction Office—shows a rectangular block 10.76 × 8.64 × 2.45 m in size, containing

³¹¹ *Ibid.*, p. 2.

³¹² *Ibid.*, p. 5.

³¹³ *Ibid.*, pp. 7f.

two disinfestation chambers 10 m long, 3.75 m wide and 2 m high. Each chamber has two doors 0.95 m wide and 1.8 m high, located opposite each other in such a way that each of the shorter sides of the chambers included a pair of doors 3 m apart. Above the block with the two disinfestation chambers is a similarly rectangular pole-support roof of 18×60 m, which is divided down the middle into two halves of equal size, corresponding to the “contaminated” and the “clean” sections. Between the two doors of the disinfestation chamber on the smaller side of the “clean” sector, a coke-fuelled furnace is installed whose structure resembles the previously described Kori air heaters. The furnace is set 0.66 m onto the ground; its lower part includes a trap door and a stoking door. Four steps lead down to it. Its upper part includes the smoke stack. The furnace is connected to the two disinfestation chambers via two round openings of 35 cm diameter each. The latter are located sideways to the left and right of the wall dividing the two sectors, 33 cm away from this wall and 1.72 m above the floor.³¹⁴ Since the disinfestation facility was operated with hydrogen cyanide, this furnace served to heat the air and to accelerate the circulation of the air-gas mixture.

The actual construction of the facility adhered to this plan, with the exception of the heating system:³¹⁵ the central furnace described above was replaced by two air heaters manufactured by the Theodor Klein Maschinen- und Apparatebau company, headquartered in Knollstrasse 26 in Ludwigshafen. The Central Construction Office had ordered them on 11 September 1942.³¹⁶ One of them was installed in front of the outside wall of the westward-facing delousing chamber described in the Soviet expert report as “Chamber III.”

The Klein hot-air device was a coke-fueled air heater. It consisted of a stoking system underneath a heating chamber, within which a recuperator was installed. This recuperator was composed of a number of ridged vertical heating pipes connected to the stoking chamber below and to the air exhaust above. A ventilator was installed in the heating chamber, and underneath the ventilator, beside the heating system, was a chamber out of which the pressurized-air pipe extended. In front of the ventilator was the opening of the ventilation pipe, which was equipped with a flap to regulate the air flow. Both pipes – pressurized-air and ventilation – were 31 cm in

³¹⁴ See *Concentration Camp Majdanek*, *op. cit.* (note 64), document 31, p. 322.

³¹⁵ The dimensions of the various rooms were also modified slightly: the Commission speaks of 9.70×3.70 m, whereas the Polish reports give the measurements as 9.27×3.80 m.

³¹⁶ J. Marszałek, “Budowa obozu koncentracyjnego na Majdanku w latach 1942-1944.” In: *Zeszyty Majdanek*, IV, 1969, p. 53, note 117.

diameter and were connected via two round openings in the wall to the chamber where the air heater was installed.

The system worked as follows: the smoke from the stoking chamber flowed through the recuperator pipes, giving off some of its heat in the process, and then escaped through the chimney. If the ventilator was operating, the air flowing through the ventilation pipe came into contact with the hot recuperator pipes, warmed up, and was pumped by the ventilator through the pressurized-air pipe into the room. In this way a constant circulation of hot air was ensured. The air heater could produce 80,000 Kcal per hour; the air temperature could reach as much as 120° and could be regulated with the air flap as well as with suitably timed additions of fresh outside air into the circulation system.³¹⁷

If the air temperature was kept low, this air heater could serve the same function as the DEGESCH circulation system for delousing with the hydrogen cyanide product Zyklon B. A similar unit was set up in BW 20L of the Auschwitz detention camp in the autumn of 1942.³¹⁸

On 22 October 1942, the Chief of the Lublin Central Construction Office sent the SS-Economist of the Higher SS and Police Leader in the General Government a progress report about the camp's various construction projects. The work in progress for the building project PoW Camp Lublin included the construction of

"2 delousing barracks with baths, erected partly on wooden post supports and partly on solid foundations."

Under the heading of "construction project Lublin fur and garment workshops" the report mentions the "erection of a disinfestation plant,"³¹⁹ *i.e.* the unit with the two disinfestation chambers in BW XII^A next to barrack 41.

There is not even the slightest hint that the technical project of a delousing plant was later modified in any way for criminal reasons, as Kranz asserts.

Kranz then goes on to describe these "modifications" of what he calls the "Bunker." To make matters clearer, I have added to his explanations, in square brackets, the Polish-Soviet designations used in our book on Majdanek mentioned above: the two original gas chambers were designated as III and IIIa in that publication; chamber IIIa was split into two rooms: Room I is the one with the pipe, the other one became room II.

Kranz writes:

³¹⁷ Instytut Techniki Ciepłej. *Ekspertyza dotycząca konstrukcji i przeznaczenia pieców zainstalowanych przy komorach gazowych w Obozie na Majdanku w Lublinie*, Łódź 1968. APMM.

³¹⁸ RGVA, 502-1-332, p. 46.

³¹⁹ WAPL, Zentralbauleitung, 8, p. 22.

“According to the drawings, two chambers [= III & IIIa] were originally projected. The chamber in the eastern portion (towards the camp), however, was then divided into two smaller ones [= I & II], one of which was then arranged for the use of Zyklon B and carbon monoxide, while the other one [=II] apparently remained idle. The first one [= I], however, was equipped with a metal pipe which ran along the walls at floor level. The pipe had perforations through which the gas was fed into the chamber. The ceiling also had an opening, used for dumping in Zyklon B. It ended in a shaft mounted on the roof. The chamber was illuminated by two electric lights protected by double iron grids. The larger gas chamber [= III], next to the two smaller ones, on the other hand, was equipped solely for the use of carbon monoxide. The metal pipe ran along only one wall. At both ends it had openings allowing the gas to be fed in, protected by cast iron grids set into the wall. In the opposite wall, there were two openings through which hot air could be blown in from a furnace set outside the chamber. The chamber was illuminated by an electric light, arranged in a way similar to the lamp in the small gas chamber. A small room abutted both gas chambers, the so-called cabin of the SS personnel, where two cylinders with carbon monoxide were located. The SS men were able to observe the gassings through a small window in the wall, protected by bars. The light switches were next to it. All gas chambers were equipped with steel doors which could be closed hermetically from the outside; they carried the name of the supplier – ‘Auert Berlin.’”

Towards the end of his text Kranz admits (p. 222):

“As there are no documents concerning the erection of the gas chambers, many essential details cannot be retraced.”

This means that there is no documentary evidence for the assertion that the disinfection plant was modified for criminal purposes, and the origin of the alleged gas chambers for mass homicide remains unexplained.

Kranz asserts that the carbon monoxide gas chambers went into operation in September or October 1942, the ones using Zyklon B in the spring of 1943 (p. 222). He adds that the gas chambers “were in use for one year” and that the “annihilation of human beings by means of poison gas” was stopped in early September 1943 (p. 226). He goes on to say (*ibid.*):

“Furthermore, the carbon monoxide cylinders were dismantled in September. On 21 September, 23 Jewish detainees from the Sonderkommando which had been forced to operate the gas chambers were shot. Later on, garments were disinfested by means of Zyklon B in the larger gas chamber (the one without a shaft for dumping in the Zyklon B), as was the case in the dressing room of the men’s bath.”

The dates are completely arbitrary, since there is no document confirming any of them. The arbitrariness of the whole reconstruction can be seen from the fact that the chronological sequence of the events as claimed by Kranz is not only not documented in any way, but not even supported by any witness accounts. It is based solely and entirely on my own analysis of the material findings which, needless to say, Kranz never even mentions. In the book I wrote together with J. Graf we mentioned that on the surface of the plaster above the pipe attached to the eastern wall of chamber III there was a clearly visible blue stripe, as if the pipe had been the catalyst for the formation of blue iron cyanides. As against this, no such blue pigments can be seen in chamber I. A few such spots do exist in chamber II, but only on the eastern wall, between the door and the central partition and in the lower portion of the partition itself at places which correspond to their location above the pipe in the adjoining room. This would lead one to assume that hydrogen cyanide was used in chamber III *after* the installation of the pipe, but not at all in chamber IIIa. The blue spots in that chamber are, in fact, too small and can be found only at a few locations **opposite those** of chamber II, which means that their presence can be explained most easily by diffusion of hydrogen cyanide through that wall. This diffusion phenomenon has also caused the appearance of blue cyanide pigment stains on the southern and northern outside walls. Chamber IIIa was split into chamber I and II *before* the disinfestation plant went into operation. This can be shown by the fact that it was never equipped with the air preheater originally projected.

Hence the SS – although it had two real cyanide gas chambers at its disposal which it could easily have been converted into homicidal gas chambers by opening up holes in the ceiling for the Zyklon B – is said to have set up from the very beginning a plant for killing people by means of bottled carbon monoxide. Why would the SS have done that? If gassings with hydrogen cyanide ran as smoothly at Auschwitz as we have always been told, there would have been no reason for using carbon monoxide at Majdanek!

If the gassing of people had actually been planned, it would have made no technical sense at all to split chamber IIIa into two rooms measuring 4.50 m × 3.80 m each with the result that only one chamber with a floor area of 17.1 square meters would have been available. On the one hand, this would have made chamber II completely redundant and superfluous. Kranz says nothing about that at all. A partition would also have made the natural ventilation of chamber I much more difficult. Without this absurd partition in chamber IIIa, one could easily have ventilated the entire chamber by opening the two opposing doors for cross-ventilation.

The tale of the alleged gassings by means of Zyklon B is even more absurd. Kranz freely admits that the Zyklon B supplied to Majdanek was used for disinfestation – as it was in all other camps. He says (p. 222) that the date on which it was “used for the first time to kill detainees” could not be ascertained. As evidence for such killings, Kranz quotes a brief extract of a statement made on 8 September 1947 by the former SS-*Oberscharführer* Erich Mußfeldt,³²⁰ who had earlier served at Auschwitz and was later appointed head of the Majdanek crematorium. A more detailed passage from that statement is given below:³²¹

“As I have stated previously, I was sent from Majdanek to Auschwitz on 19 February 1943 in order to learn there how to burn corpses in ditches in the open air. On this occasion, I was accompanied to Auschwitz by SDG^[322] SS-Oberscharführer Entress [Enders] who had to familiarize himself with disinfestation units and with the system of killing people by means of gas in homicidal gas chambers.”

After their arrival at Auschwitz, Mußfeldt continues, the two SS NCOs were taken to “Bunker 5” (according to orthodox Holocaust historiography, this building was called that way only from 1944 onwards!), without, however, having been able to witness a gassing for lack of a transport. They were satisfied with a tour of the installation, the Zyklon B introduction holes in particular, but Mußfeldt does not say anything about their design or their location. After his return to Lublin, Mußfeldt is said to have been put in charge of the incineration of corpses in the forest of Krempec, whereas “Entress was employed in the gas chamber of Majdanek.”

Hence, the Zyklon B gas chamber at Majdanek must have gone into operation in February 1943 – but which gas chamber was it? Kranz does not provide us with a clear answer – apparently because he realizes the absurdity of it all – but hints that it was chamber I. In fact, today “a hole in the ceiling” allegedly used “for the introduction of Zyklon B” can be seen there (p. 221).

This means in plain English that the SS personnel at Majdanek had at their disposal a genuine cyanide gas chamber measuring a full (9.27 m × 3.80 m =) 35.2 square meters. This room was equipped with an air-heater which could greatly accelerate the vaporization of hydrogen cyanide, allowed the air-gas mixture to be recycled, and facilitated the ventilation of the room. But for killing people, they instead are said to have used the

³²⁰ This spelling appears in a document about his promotion to this rank; see J. Graf, C. Mattogno, *op. cit.* (note 64), document 26 on p. 317. He signed with Muhsfeldt, though (as such in the Polish interrogation protocols), as he seems to have written all ß as hs.

³²¹ AGK, NTN, 144, pp. 91f.

³²² Sanitätsdienstgrad, paramedical service rank.

small chamber I with its 17.1 square meters, yet – in spite of its hole in the ceiling – not for Zyklon B, no, they employed carbon monoxide instead!

Kranz furthermore “forgets” to tell his readers that a hole in the ceiling existed not only in chamber I but also in chamber II. The opening in chamber I measures 26 cm × 26 cm,³²³ the one in chamber II 29 cm × 33 cm.³²⁴ Both openings, especially the one in chamber II which did not even have a wooden frame, show very crude workmanship. In neither case were the reinforcing steel bars of the ceiling removed, which clearly shows that the holes were opened up in great haste for the benefit of the Polish-Soviet commission. As a matter of fact, Konstantin Simonow, special correspondent for the Soviet army newspaper *Red Star*, who visited the camp immediately after its liberation, does not even mention them, although he certainly would have noticed them, had they existed at that time.³²⁵

On the alleged gassings with carbon monoxide, Kranz has this to say (p. 233):

“There are [...] no documents referring to the supply of carbon monoxide. After the dissolution of the camp, on the other hand, the Polish-Soviet investigation commission ascertained traces of this gas in five cylinders found in the area [of the camp]. If we follow the Russian text of the report by the commission, the cylinders were dark red and bore the numbers 10, 17, 44, 52 and 60. They bore the inscription ‘Kohlenmonoxid. Bei 150 Atmosphären abgefüllt. 8. 7. 42, Žeberwajn und Brenen. Berlin B. 9. [recte: W 9] Getestet bei 225 Atmosphären. Leergewicht 75,8 kg. Volumen 40,6 Liter’ (Carbon monoxide, filled at 150 atmospheres. 8 July 42, Žeberwajn & Brenen, ... Tested at 225 atmospheres. Empty weight 75.8 kg, volume 40.6 liters). These markings indicate that the cylinders stemmed from the stores of ‘Aktion T4.’”

In a footnote, Kranz adds that the address was to be read as “Jennerwein und Brenner”; the names used here were allegedly pseudonyms for Victor Brack and Werner Blankenburg (footnote 15 on p. 223).

Quite apart from the fact that the sources used to prop up these arguments are not documents but books by orthodox Holocaust historians, this tale is simply silly: Why for heaven’s sake would Victor Brack and Werner Blankenburg have engraved their (alleged) pseudonyms on the steel bottles right next to the technical data – a task that was up to the manufacturer of the cylinders? To show that these bottles were destined for the euthanasia centers? Would the local personnel not have understood anyway what the bottles were for? If euthanasia, at least within Germany, is known to have

³²³ J. Graf, C. Mattogno, *op. cit.* (note 64), photo XI, p. 340.

³²⁴ *Ibid.*, photo XII.

³²⁵ *Ibid.*, pp. 142f.

been stopped on 24 August 1941, how can anyone seriously assert that a bottle filled on 8 July 1942 stemmed from “the stores of ‘Aktion T4’”?

That this is pure nonsense can also be seen from the fact that the markings on steel bottles were punched in when the bottles were produced and tested. Any aliases of later owners could never have been on them.

Incidentally, J. Graf and I were the first to have dealt with the five steel bottles left behind by the Germans in the area of Majdanek and with the Polish-Soviet commission report.³²⁶ This report had never been mentioned in the Polish literature on Majdanek before the publication of our book, obviously because Polish historians were unfamiliar with it. In this context Kranz consciously hides certain not altogether unimportant facts:

For one thing, the five steel bottles which allegedly contained carbon monoxide have meanwhile disappeared from the camp; nobody seems to know where they are now. It is truly most unusual for a prosecutor to allow the “murder weapon” to disappear – unless he wants to avoid any later scrutiny. For this reason, the report by the Polish-Soviet commission must be handled with extreme caution!

Secondly, the two steel bottles which today are shown in the “cabin” of the “Bunker” do not contain carbon monoxide at all, but carbon dioxide. They bear in fact the following inscription:³²⁷

“Dr. Pater Victoria Kohlensäurefabrik Nussdorf Nr. 6196 Füll. 10 kg [...] und Fluid Warszawa Kohlensäure [...] Fluid Warszawa Lukowski. Pleschen 10,1 kg CO₂ gepr.”

(Dr Pater Victoria carbonic acid factory Nussdorf no. 6196, fill. 10 kg [...] and Fluid Warszawa carbonic acid [...] Fluid Warszawa Lukowski. Pleschen 10.1 kg CO₂ test.)

This means that the five alleged carbon monoxide cylinders have disappeared and were replaced by two totally innocuous cylinders of carbon dioxide! It would be nice if Herr Kranz could give us an explanation for this wondrous incident.

On the question of gassings, there are a few – but very vague – witness statements about homicidal gassings with Zyklon B, but there is nothing at all in the copious literature on Majdanek where gassings with carbon dioxide are mentioned.³²⁸

³²⁶ *Ibid.*, pp. 121, 126, 143f.

³²⁷ *Ibid.*, pp. 143. Personal inspection by the author of these lines as well as written confirmation by the then director of the Majdanek Museum Archives to me on 30 January 1998. The inscriptions are only partly legible.

³²⁸ A witness quoted by Kranz describes the corpses’ hue as “bluish” (p. 225), but as we have seen in chapter 1, people poisoned with hydrogen cyanide or carbon monoxide turn pinkish to cherry-red. According to another source, “the hypostasis has a cherry red discoloration in cases of CO poisoning, bright red in cases of cyanide poisoning.” Marco

When K. Simonow investigated the “Bunker,” he did not find any steel cylinders in the “cabin” – he found a few cans of Zyklon B. The former inmates who accompanied him explained that the gassings were implemented by dumping the contents of these cans into the pipes,³²⁹ which would have been an entirely senseless procedure, technically speaking.

During the trial of some members of the camp staff at Lublin in December 1944 a single witness, Tadeusz Budzyn, spoke of killings in the chambers that were equipped with pipes:³³⁰

“Presiding judge: Were any murders committed by suffocation?”

Witness: Let me begin by stating that, when there was [as yet] no Zyklon B, there existed a first gas chamber where gassings could be implemented by means of combustion gases. This chamber is arranged in such a way that, on the one hand, it had pipes connected to a diesel engine feeding the gas into the chamber. In the last phase, the Germans at Majdanek hit on the idea to design cars which were gas chambers at the same time. These cars were built in such a manner that, when the driver started out, the gas was fed from the exhaust pipe into the interior of the car, and when the driver had reached his destination, the detainees were already dead.”

There is no reference to carbon monoxide bottles here either, but to the exhaust gas of a diesel engine, as in the camps of “Aktion Reinhardt,” at least according to the “old” version of orthodox Holocaust historiography.

It is unbelievable to note that Kranz makes use of the tale of gas vans! On p. 219 he apodictically asserts that “a gas van had also been in operation” at Majdanek. But on p. 225 he has to admit dejectedly that there is only “circumstantial evidence” for this assertion. He does not condescend to tell his readers what kind of “evidence” he refers to.

Incidentally, Barbara Schwindt believes that the tale of the gas vans was based on a “propagation of errors” caused by an insufficient knowledge of the history of the camp.³³¹

In the conclusion of his article, Kranz presents a numerical assessment of the alleged gassings at Majdanek (p. 227):

“The sources do not allow us to determine exactly how many of the almost 80,000 victims of this camp were murdered in the gas chambers. We only have the statement by Ruppert,^[332] who estimated the number of people gassed during the last quarter of 1942 to have been some 500 –

Strano, *Manuale di criminologia clinica*, SEE, Florence 2003, p. 238.

³²⁹ J. Graf, C. Mattogno, *op. cit.* (note 64), p. 178.

³³¹ B. Schwindt, *op. cit.* (note 170), p. 13.

³³² Friedrich W. Ruppert, head of the technical department at the Lublin camp.

600 detainees per week and the number of Warsaw Jews murdered in the spring of 1943 to have been 4,000 to 5,000 persons."

This would bring the total number of people allegedly gassed to a maximum of 12,200 persons.

SS-Obersturmführer Friedrich Wilhelm Ruppert was transferred from the Dachau concentration camp to the Lublin-Majdanek camp on 18 September 1942, where he supervised the fitters, electricians, carpenters and painters. Hence he must have had an accurate knowledge of the alleged homicidal gas chambers, if they existed, because his office would have been in charge of the alleged adaptation of the disinfestation chambers described above to instruments of mass murder. But he actually knew practically nothing. References to gassings are fleeting and insubstantial in his testimony.³³³

"For the weeks and the months of October to December 1942, I estimate the number of prisoners who died from this disease [typhus] at 100-120 cases per day and the number of those who perished in the gas chamber at 500-600 every week."

This means that the maximum number of those who died from typhus ($120 \times 7 = 840$) was higher than that of those allegedly gassed (600)!

The second reference to gassing concerns the so-called "Operation Warsaw," which took place in the months of May, June and July 1943. Inmates fit for labor were registered, while

"the older, the weak and the sick inmates were not admitted into the camp; they had to stay in the bath barrack in the evening hours and were then taken to the gas chamber."

Ruppert added:

"I estimate the number of prisoners who arrived at the Lublin camp as a result of Operation Warsaw at 15,000 and the number of prisoners who perished in the gas chamber at 4,000-5,000."

An observation concerning the Jews from the Warsaw ghetto is due here. On 31 March 1943, the Ostindustrie company sent the following letter to the Lublin Central Construction Office:³³⁴

"On the basis of the order issued by Reichsführer-SS, the factories located in the Warsaw ghetto which have an importance from the point of view of the armament industry must be moved out as quickly as possible for security reasons and with the aim of increasing the Jewish labor deployment. Relocation will be to Poniatowa, Trawniki and Lublin

³³³ Affidavit by F.W. Ruppert of 6 August 1945, document NO-1903. The German text is reproduced in: T. Kranz, "Affidavit Friedricha W. Rupperta z 6 sierpnia 1945 r. na temat obozu koncentracyjnego na Majdanku", in: *Zeszyty Majdanka*, vol. XXIII, 2005, pp. 97-115, German text: pp. 101-107, subsequently quoted: pp. 104f.

³³⁴ APMM, ZBL, 268, p. 1.

into available buildings. These building still require certain additions and changes which must be undertaken soonest."

This letter does not mention any unfit Jews, because they were not part of the persons to be moved: the Jews assigned to the three camps were all skilled workers. After all, Himmler aimed at "increasing the Jewish labor deployment."

According to the Polish historian Zofia Leszczyńska, these Jews numbered 16,000,³³⁵ but this is only an estimate which is not supported by documents.³³⁶ Ruppert mentioned 15,000 deportees. But even if we accept these numbers, can anyone seriously believe that some 4,000 to 5,000 – 27 to 33 % – of them had all of a sudden become unfit and had to be "gassed"?

Ruppert also described "the" gas chamber:³³⁷

"The gas chamber was a solid brick building of about 6 x 6 meters and about 2 meters high, with two doors, one of which was opened during ventilation."³³⁸ Outside the building was a small annex where the gas container was held."

Apart from the clearly erroneous dimensions, this describes the installation of the above-mentioned disinfestation building BW XIIa adjacent to Barrack 41, and the "gas container" could be a circumscription of a steel cylinder with carbon monoxide. This confirms that Ruppert had no knowledge of the alleged homicidal gassings: Neither does he mention anything about the fact that the gas chambers were designed and built as Zyklon B delousing chambers, nor that they were allegedly adapted to homicidal gas chambers, nor that there were two of them; he does not explain how the killings happened and does not even mention the type of gas allegedly used. In practice, he had no direct personal knowledge of homicidal gassings, and his testimony in this regard is a simple repetition of propaganda themes.

But back to Kranz. Viewed from the point of view of orthodox Holocaust historiography, it is not very surprising that Kranz makes use of a mere assertion, substantiated by no supporting document, while ignoring

³³⁵ Z. Leszczyńska, "Transporty więźniów do obozu na Majdanka," in: *Zeszyty Majdanka*, IV, 1969, p. 194.

³³⁶ In 1991 Z. Leszczyńska still wrote about 11 transports of Jews from Warsaw, although she gave numbers only for five of them (a total of 7,411 inmates; in: T. Mencil (ed.), *Majdanek 1941-1944*. Wydawnictwo Lubelskie, Lublin 1991, pp. 447f.). Hence the total number of Jews transferred to Lublin Jews is unknown. It is thus also unknown, how many of them eventually ended up at Majdanek.

³³⁷ T. Kranz, *op. cit.* (note 333), p. 105.

³³⁸ This does not make sense, because an effective ventilation would have required opening both doors.

the so-called “Höfle radio message.” Achim Trunk, on the other hand, does mention this message, commenting it as follows (footnote 6 on p. 25):

“What remains unclear is the fraction of the 78,000 victims at Majdanek that was killed by means of carbon monoxide gas. We may assume that the 25,000 persons who were murdered at Majdanek as part of ‘Aktion Reinhardt’ were killed in this manner: this figure would then constitute a minimum.”

Kranz’s silence on this point is all the more surprising in view of the fact that he includes in the (allegedly) 78,000 Majdanek victims also the 24,733 Jews mentioned in the Höfle message.³³⁹ However, the thesis that these Jews died or were even murdered at Majdanek is untenable.³⁴⁰ This may be the reason why Kranz, in this case, does not want to take any more risks.

On balance, I must say that Kranz’s assertions are based on highly dubious sources. His argumentation is not coherent. He is far from refuting the conclusions of our book *Concentration Camp Majdanek* but rather confirms them inadvertently. On the one hand, Kranz accepts the book’s genesis of the disinfection plants at Majdanek, on the other hand he is careful to avoid mentioning the arguments presented in our book against the historical reality of the “gassings.” Our book on Majdanek is, in fact, never mentioned even once in the book discussed here.

9. The Gas Chamber of the Mauthausen Camp

The fifth part of the book under scrutiny here is dedicated to the alleged gas chambers said to have existed in some concentration camps on the territory of the German Reich proper as it existed at the time: Mauthausen, Sachsenhausen, Ravensbrück, Neuengamme, Stutthof and Natzweiler.

The series begins with a contribution by Bertrand Perz and Florian Freund and is entitled “Killings by means of poison gas at the Mauthausen concentration camp” (“Tötungen durch Giftgas im Konzentrationslager Mauthausen”; pp. 244-259). The two authors can hardly contain their pride at being able to show that their camp, Mauthausen – apart from Auschwitz – was not only the camp where “Zyklon B was systematically used for

³³⁹ T. Kranz, *op. cit.* (note 300), p. 61. For some inscrutable reason Kranz also includes in this number the 14,348 Jews (14,217 men and 131 women) who had died at Majdanek as of 31 December 1942 according to the Korherr Report (NO-5194, p. 12), although they belonged to a different category of inmates than the 24,733 inmates mentioned above, who had been deported within the framework of the “evacuation action” and who had not been registered in the camp.

³⁴⁰ See J. Graf, T. Kues, C. Mattogno, *op. cit.* (note 51), pp. 321-326.

homicidal purposes for the first time,” but that in this camp “more detainees [were killed] by poison gas than in the other concentration camps on the Reich territory” (p. 244). These murders by Zyklon B are reported to have taken place in a gas chamber as well as in a gas van, and furthermore in another gas chamber in Hartheim castle located not far from Mauthausen.

Bertrand Perz and Florian Freund state that fortunately “the body of source material for these killings [...] is relatively good in spite of the destruction of many documents by the SS” (p. 244). This is, however, nothing but hot air, because these sources stem solely from post-war trials. The reliability of the “knowledge” gained from these trials can be judged by what no lesser author than the Jewish Holocaust historian Olga Wormser-Migot wrote on these matters in her 1968 book where she contested (or, to use the argot of the anthology, “denied”) the existence of a homicidal gas chamber at Mauthausen and relegated it to the “realm of myths.”³⁴¹ (Olga Wormser-Migot also regards the gas chamber of Ravensbrück as a myth, see chapter 11.)

Perz and Freund supply some rather useful information on the use of Zyklon B for the purpose of disinfestation at Mauthausen (p. 246):

“A special role with respect to the use of Zyklon B at Mauthausen was played by the Linz cleaning and disinfestation company owned by SA-Obersturmführer Anton Slupetzky, which as a well-established company carried out disinfestations with Zyklon B in the barracks of Mauthausen and Gusen. [...]

No later than the second half of 1941, a Zyklon B delousing chamber for textiles was built at Mauthausen along the lines of the one erected at the Sachsenhausen concentration camp by the Degesch company.”

This delousing chamber, erected in Barrack 25, was a DEGESCH circulation chamber, designed by the Boos company and delivered by the Heerdt-Lingler company.³⁴² The training of Mauthausen SS staff as disinfectors occurred simultaneously (pp. 246f.). While all of this is properly documented, things change drastically when the homicidal gas chamber comes in, and the two authors have to admit (p. 248):

“Nothing is known about the events leading up to the erection of a Zyklon B gas chamber at Mauthausen.”

Perz and Freund construe a link between the erection of the alleged homicidal gas chamber and the arrival of 4,000 Soviet PoWs at Mau-

³⁴¹ Olga Wormser-Migot, *Le système concentrationnaire nazi*, Presses universitaires de France, Paris 1968, p. 541.

³⁴² Already on 26 June 1940 Heerdt-Lingler had been in contact with the Boos company regarding a “*Entlausungsanstalt K.L. Mauthausen*” (delousing installation for the Mauthausen camp). NI-13781.

thausen and Gusen on 20 and 24 October 1941. Then they discuss a mysterious secret meeting said to have taken place at Sachsenhausen in late August of 1941.

We must pause here for an explanation. The story of this “secret meeting” is presented by several authors of the anthology under discussion. The first one to mention it is Robert Jan van Pelt (p. 200) who says:

“It is highly likely that this first use of poison gas [i.e. the alleged first gassing at Auschwitz] was linked to the search for a suitable mass killing method of Soviet ‘political commissars’ conducted by the IKL [concentration camp inspectorate] during the summer of 1941. A meeting was held at Oranienburg in late August of 1941 at which the commander of SS-Totenkopfdivision, SS-Obergruppenführer Theodor Eicke, the inspector of the concentration camps, SS-Gruppenführer Richard Glücks, and other leading members of the SS participated; Eicke informed the participants about Hitler’s order to liquidate the ‘commissars.’ The participants then discussed the possibilities of implementing these massacres efficiently and in a manner which would not be overly hard on the SS henchmen. After the meeting, the Sachsenhausen SS staff devised an installation for shooting people in the back of the neck, which Eicke demonstrated to the commanders of all concentration camps at Sachsenhausen in September 1941 using several Soviet PoWs.”

The source for these assertions – a book – is given by footnote 12 on page 201:

“Reinhard Otto, Wehrmacht, Gestapo und sowjetische Kriegsgefangene im deutschen Reichsgebiet 1941/42, Munich 1998, pp. 263ff. Cf. the contribution by Günter Morsch in the present volume.”

A closer look at the date supplied by Reinhard Otto, however, shows that he speaks of “early August” rather than “late August.” Furthermore he never mentions the participation of the Institute of Forensic Technology in this matter, as opposed to Morsch (p. 262). Since Otto’s book is referred to as a source by all contributors who speak of the “secret meeting,” it is worthwhile quoting the corresponding paragraph in full:³⁴³

“In early August 1941 a secret meeting was held at the Sachsenhausen concentration camp attended by the commander of SS-Totenkopfdivision, SS-Obergruppenführer Theodor Eicke, the inspector of the concentration camps, SS-Gruppenführer Richard Glücks, and the head of his intelligence department, SS-Sturmbannführer Arthur Liebehenschel, as well as staff members. Eicke informed the participants that the

³⁴³ Reinhard Otto, *Wehrmacht, Gestapo und sowjetische Kriegsgefangene im dunklen Reichsgebiet 1941/1942*, Munich 1998, p. 263.

Führer had ordered the liquidation of certain groups of Soviet PoWs and the erection at Sachsenhausen of an installation for shooting [them] in the back of the neck. Prior to the systematic liquidation of major PoW transports on 31 August 1941 – it concerned 448 Red Army personnel from Stalag 315 at Hammerstein – the camp commander, SS-Oberführer Loritz, ordered two ‘test runs’ involving small groups of prisoners. Apparently, even the first one turned out to be so ‘satisfactory’ that all concentration camp commanders were ordered to Sachsenhausen ‘to see how the Politruks and the Russian commissars could be liquidated.’”

Otto’s source is not a document, though. He merely refers to literary works on the subject of Sachsenhausen and the Soviet PoWs. The last sentence, however, indicates that the original source was the confession by Franz Ziereis, the Mauthausen commander, who had been fatally wounded by two shots in the stomach at his capture.³⁴⁴

“Ziereis goes on to say: I know details of other camps. In 1941, all commanders were ordered to come to Sachsenhausen in order to see the fastest way of liquidating the politruks and the Russian commissars.”

Immediately after that, Ziereis goes into the details:

“In a separate barrack, the politruks and the commissars were assembled at one end and then led through a dark corridor to the execution cell while a radio was drowning out all sounds. At the other end of the cell there was a lath with a slit, behind which was a support, moveable [for a gun]. Using this slit, the execution was carried out by a shot in the back of the neck.”

Günter Morsch reconstructs the history of the “secret meeting” in the following manner:

“In August and September 1941, members of these SS institutions [the Institute of Forensic Technology, as well as the Sachsenhausen camp Kommandantur] had met in the large conference room with the commanders of other concentration camps for a discussion of suitable methods for murdering Soviet PoWs. Chaired by Theodor Eicke, the roughly 20 SS-leaders spoke about various killing methods: Murder by hanging, by fatal injections, by shooting squad or by an automatic method for shooting them in the back of the neck.”

No source is given for these assertions!

In his article “The Concentration Camp as Sites of Mass Murder” Detlef Garbe accepts this tale at face value (“*Die Konzentrationslager als Stätten des Massenmordes*,” here p. 329):

³⁴⁴ GARF, 7021-115-24, p. 48.

“In early August 1941 and in the presence of SS-Gruppenführer Richard Glücks and SS-Sturmabführer Arthur Liebehenschel as the representative of the IKL, the commander of SS-Totenkopfdivision, SS-Obergruppenführer Theodor Eicke, informed the commander of the Sachsenhausen concentration camp, Hans Loritz, and his immediate staff about the ‘Führer order’ to liquidate, after selection in the PoW camps, the ‘partisans of the communist party of the SU,’ ‘Soviet-Russian intelligentsia,’ all Jews and all former ‘Polit-commissars’ of the Red Army. Eicke went on to say that an installation for shooting [them] in the back of the neck was to be set up at Sachsenhausen.”

Again, Garbe quotes the book by Reinhard Otto as his source (footnote 47 on p. 329). It is interesting to note that, without any fuss, the Jews were smuggled in with the alleged intended victims!

It is worthwhile taking a closer look at the blatant manipulations of this topic perpetrated by these orthodox Holocaust historians. The original source – Ziereis’s untrustworthy “confession” – vanishes behind a flood of quotations which one author copies from another without mentioning Ziereis in any way. The date given by the latter – 1941 – is so vague that this select group of historians is obliged to invent a more precise date: early or late August 1941. While Ziereis speaks only of one meeting, the historians turn it into two, the first one allegedly having taken place in early August, the second one late that month (or one in August and one in September). It is easy to see the reason for this fraudulent procedure: Ziereis, in fact, knew nothing of an “order from Hitler for the liquidation of the commissars” and says that, when the commanders arrived at Sachsenhausen, the device for shooting the victims in the back of the neck had been in operation for two weeks³⁴⁴ and could thus be shown to the guests. But since this installation could never have been set up before a corresponding order to kill Soviet commissars had been issued, a second meeting was needed. Another one of Morsch’s inventions is his assertions that the SS leaders had discussed “various killing methods.” The reason for bringing in the Institute for Forensic Investigations into these alleged murders is that, for the younger generation of orthodox Holocaust historians, this Institute has become, as it were, a *deus ex machina* who crops up everywhere and has an explanation for everything.

Perz and Freund also bring up the story of the meeting at Sachsenhausen, but at least name the direct source, Ziereis (p. 248):

“Commander Ziereis – as he stated in May 1945 – had earlier [before the arrival of the Soviet PoWs] been summoned to Sachsenhausen, together with other camp commanders, to be shown ‘how politruks and

Russian commissars could be liquidated' by means of the automatic shooting device."

On 15 October 1941, Richard Glücks, "who had participated in the secret meeting held in late August 1941 at the Sachsenhausen concentration camp" (p. 249), visited the Mauthausen camp. Perz and Freund surmise that on this occasion he discussed with the camp commander a method for killing the Russian PoWs whose arrival was imminent. Their source – who would have expected it? – is the article by Morsch as well as the book by Otto (footnote 25 on p. 249). What is really incredible about this incestuous and inextricable tangle of references is that Morsch, while discussing the "secret meeting" without naming his source, does not even mention Otto's book.

The indictment of the Soviet Sachsenhausen trial (to which I return in chapter 10) reads:³⁴⁵

"The extermination of Soviet PoWs was implemented in 1941 under the direction of General of the Waffen-SS Eicke, specifically appointed by Himmler, who came to the Sachsenhausen camp in August 1941 and held a secret meeting with the camp's senior staff, during which he gave instructions about the methods and the system of the extermination of Soviet PoWs."

The defendant Gustav Sorge, former *Rapportführer* of the camp, claimed that it had been a local affair without the involvement of Glücks, Liebehenschel and the commanders of other concentration camps:³⁴⁶

"Prosecutor: What do you know about the meeting of August 1941 where the extermination of Russian PoWs was discussed?"

Sorge: General of the Waffen-SS Eicke, then commander of the Death Head division, arrived at the camp in August 1941 and had a meeting with the individual camp leaders."

Perz and Freund continue (p. 249):

"Before the end of autumn of 1941 and in line with other concentration camps, an execution site equipped with an installation for shooting people in the back of the neck and a gallows was set up, and work on a gas chamber was begun."

Later on this installation is mentioned no more. It should be said in passing that the existence of a neck-shooting device is also mentioned for Buchenwald,³⁴⁷ but for some strange reason no such device is claimed for Auschwitz. Even though these historians claim that Rudolf Höß was also

³⁴⁵ Fritz Sigl (ed.), *Todeslager Sachsenhausen. Eine Dokumentation vom Sachsenhausen-Prozeß*. SWA-Verlag, Berlin 1948, p. 29.

³⁴⁶ *Ibid.*, p. 99.

³⁴⁷ Eugen Kogon even furnishes a sketch of this alleged device: *Der SS-Staat. Das System der deutschen Konzentrationslager*, Verlag Karl Alber, Munich 1946, p. 344.

present at this phantom meeting, the latter does not devote even a single word to such a contraption in his copious notes.

A little further along, Perz and Freund return to Ziereis, who is said to have asserted “when he was interrogated in May 1945” that the Mauthausen gas chamber was due to a decision by Glücks (p. 249). The quotation is as follows:³⁴⁸

“Basically, the gassing installation at Mauthausen was built on the orders of SS-Obergruppenführer Glücks, because the latter thought that it was more humane to gas detainees rather than to shoot them.”

At this point Perz and Freund proffer a hypothesis which, a little further along, they designate as being not entirely defensible (p. 249):

“A possible indication for an order to build a gas chamber could be a note, dated 8 October 1941, in the activity report of the administrative head of the Mauthausen concentration camp which mentions an order received from Reichsführer-SS (RFSS) concerning the erection of a ‘special building in the detention camp KLM.’ The camp drawings from this period designate as ‘special building’ the area of the crematorium where the execution site and the gas chamber would eventually be set up. On the other hand, the designation could also refer to the installation of a brothel for the detainees which is referred to as ‘inmate special building’ in the same drawings.”

Immediately after this the authors refute their own initial thesis on the subject of the relationship between the erection of the gas chamber and the arrival of Soviet PoWs when they write that the latter “were intended for employment as workers, and not for execution” (p. 249). Seen in this light, the tale of the secret meeting at Sachsenhausen loses any significance for the argumentative structure of the article.

After dealing with more such useless speculations, the authors approach the core of the question (p. 251):

“On the subject of the construction of the gas chamber at Mauthausen and the process of killing with poison gas, we have a number of statements made by SS personnel involved [in these matters] and by former detainees which stem in particular from the trial at the Hagen [Germany] district court against Fassel and Roth.

[... The alleged gas chamber was] a windowless room some 3.80 m in length and 3.50 m wide, partly tiled, having two air-tight doors, a heating device, operational shower heads and a ventilation device, the closure of which could be operated from the outside. From a small adjacent room called ‘gas cell,’ which contained a sealable gas feed device and a blower, the gas was fed in through a pipe sporting a slit

³⁴⁸ PS-3870. IMT, vol. XXXIII, p. 282.

about one meter long pointing toward the wall in such a way as to be invisible."

Document 1 shows a floor plan of the basement of the infirmary said to have housed the alleged gas chamber (the room labelled no. 5). Photographs 1 to 7 show its state in December 1990. When the gas chamber is said to have been built, the Boos company, which specialized in the construction of hydrogen cyanide disinfestation plants, is claimed to probably have been involved as well (p. 252).

Then, Perz and Freund go on to quote a long passage from the verdict of the Hagen court which spoke of the gassing technology. The important parts are quoted here (pp. 252f.):

"[Prior to of a gassing], Roth ordered a detainee from the crematorium squad, usually witness Kanduth, to heat a brick in the furnace of the crematorium. Then Roth transferred the brick into the gas cell by means of a shovel [sic!] and placed it into the gas feed device; the latter consisted of a box with a removable lid which could be made airtight by means of wing nuts and a seal. By increasing the temperature, the brick was to serve later to hasten the release of gas from the paper shreds to which it was bound. [...] Depending on the size of the group of detainees to be gassed, one or two cans [of Zyklon B] were opened in the gas cell, and the gas contained in paper shreds or felt pads was poured into the gas feed device, which had been pre-heated by the brick placed there earlier. When the lid had been bolted down, a ventilator, also located in the gas cell, was switched on, feeding the gas into the gas chamber through a feeding pipe."

According to the verdict of the Hagen court, the gassing phase lasted about 5 minutes. Some 15 minutes after feeding in the gas, "defendant Roth, by looking through the peep-hole of a door, made sure that no victim in the gas chamber was moving any longer." He then switched on

"the ventilator located in the space between the dressing room and the tool room, which removed the gas from the gas chamber to the outside by way of a chimney. This ventilation process took about two to three hours. Then Roth opened the two doors of the gas chamber, cautiously introducing a specially prepared strip of paper to test whether the room was free of gas, and then ordered the detainees under his command to move the corpses to the refrigerated space of the crematorium."

Before the corpses were incinerated,

"female victims had their long hair shorn off, and gold teeth were removed by the SS camp physicians from the corpses marked with a colored cross." (pp. 253f.)

Perz and Freund inform their readers that “the ventilator is now held at the Terezin memorial site, the original gas chamber doors and the feeding device have disappeared for the time being.” They add that the gas chamber had been “reconstructed during the transformation of Mauthausen into a memorial site in 1948/49 by the addition of non-original doors and the rebuilding of the walls of the adjacent gas cell. These changes are “not precisely documented,” as the aim had not been a “scientific documentation” but a “dignified memorial” (p. 259).

Whatever the case may be, up to December 1990, when I visited the camp, there was not the slightest indication in the sense that there had been a reconstruction. Quite to the contrary, the gas chamber was implicitly presented to be “in its original state.” A few years earlier, Pierre Serge Choumoff, a historian specialized in the history of this camp, had published the photograph of one of these reconstructed doors with the following caption:³⁴⁹

“One of the two armored doors of the gas chamber. One can see the hermetic seal (which has nothing to do with a shower room) and the peep-hole.”

Actually, the doors of the alleged gas chamber are ordinary steel doors like those for an air-raid shelter.³⁵⁰ Nonetheless, Perz and Freund blithely attack those revisionists who, in the 1980s, referred to the alleged gas chamber as a “fake” and a “reconstruction by the Allies”! (p. 259)

Before we go into a closer examination of the whole installation, let us look at how the gassings are said to have been carried out by the two authors (p. 254):

“After the completion of the gas chamber, a ‘test gassing’ involving rats is said to have been carried out in March 1942”

No comment.

“Then, for a further ‘test,’ 15 probably seriously ill detainees were smothered in this gas chamber. Slupetzki is said to have been present, according to some witness statements.”

To use the term employed by the two authors, this “probable” gassing rests entirely on witness statements, with the names of the witnesses not even mentioned. We are thus dealing here with a mere assertion, which cannot be examined objectively. Perz and Freund then continue (*ibid.*):

“After these ‘tests,’ 231 Soviet PoWs were murdered in the gas chamber during the night of 9/10 May 1942; they had been moved to

³⁴⁹ P.S. Choumoff, *Les assassinats par gaz à Mauthausen et Gusen Camps de concentration nazis en territoire autrichien*. Amicale de Déportés de Mauthausen, Paris 1987, p. 63.

³⁵⁰ Among others, these steel doors were manufactured and promoted by the company Firma Fr. Richardt, Eisenbau, Hameln/Westfalen; see *Gasschutz und Luftschutz*, vol. 14., No. 1, January 1944, p. 2.

Mauthausen shortly before that in order to be executed on the orders of Sipo [security police] and the SD."

Perz and Freund use as a source the verdict by the Hagen court (footnote 39 on p. 254). They could just as well and more appropriately have used the Nuremberg document PS-495. The latter is an excerpt from the death book of PoWs at Mauthausen which lists the names of these 231 persons together with the date, the hour and the reason of their execution (an order given by Heydrich on 30 April 1942). Nothing indicates that these PoWs were gassed. In fact, the details of the document exclude this explicitly. The first 21 delinquents were executed at 23:35 hours on 9 May, the remaining 210 on 10 May at 0:15 hours.

If we keep in mind that the first group of 21 prisoners all died at the same hour and that this is also true for the second group of 210 prisoners, one could believe that we are dealing here with two mass killings in the alleged gas chamber.

On the other hand, Perz and Freund say that the gas chamber had a maximum capacity of 100 people (p. 252), an exceedingly high number for a room having a floor area of just $[3.50 \text{ m} \times 3.80 \text{ m} =] 13.3$ square meters, because it would have involved 7.5 persons per square meter (all adults). Furthermore, we have been told that a gassing took 15 minutes, followed by a ventilation phase of three hours. This means first of all that 210 persons could not have been gassed at one time, and also that a second gassing could not have been conducted for at least 40 minutes after the gassing of the first 21 victims.

In this case the promoters of orthodox history cannot even hide behind the argument that the entries in the death book were falsified, because we are dealing here with an execution explicitly carried out upon the orders of a superior, which means that, technically speaking, the operation was legal. If a homicidal gas chamber had existed, it would even have been legal to use it because, if we follow Ziereis, it had been set up on the orders of Glücks. Hence, from the point of view of orthodox historiography there was no reason at all for any "camouflage."

Also the further gassing of 261 Czech detainees on 24 October 1942, which is claimed by the verdict of the Hagen court, may be considered as "legally proven" due to this court verdict, but this does not mean that it must be regarded as a historical fact.

"In spite of all the secrecy surrounding the killings by poison gas," Perz and Freund tell us that soon rumors were spreading even outside of the camp (p. 255):

"Thus, the exile journal Der Aufbau published an article on 12 June 1942 with the title 'American official confirms Mauthausen crimes'

which spoke about the murder of Dutch and Czech Jews by means of 'gas experiments.'"

Unfortunately the two authors forget to inform their readers about the fact that *Der Aufbau*, in its edition of 5 December 1941, had already published two letters to the editor on the subject of "The Mauthausen Secret." The first one, signed by a "Carl von Hester," spoke of Dutch Jews who "died from poison gas," the other one, signed "R. Pisk (New York City)" asserted that the Dutch Jews had been "subjected to experiments with poison gas."³⁵¹

In its edition of 12 June 1942, cited by Perz and Freund, *Der Aufbau* wrote that a high American official had "confirmed the events concerning poison gas at the Mauthausen concentration camp, which *Der Aufbau* had brought to the attention of a shocked world," *i.e.* the fact that "hundreds of Dutch Jews rounded up in Holland had been killed in these gas experiments at Mauthausen."³⁵²

This would mean that in June 1942 *Der Aufbau* confirmed the gassing experiments which allegedly took place in that camp in *November 1941*, *i.e.* at a time when there was as yet no gas chamber at Mauthausen according to orthodox historiography. If Perz and Freund use this propagandistic assertion as proof for the existence of a gas chamber at Mauthausen, in spite of the fact that according to their own account such a gas chamber did not yet exist at Mauthausen at the time, then this demonstrates merely what kind of "scientific ethics" these two gentlemen subscribe to.

Thomas Kues, who has investigated the pertinent sources, stresses that the first propaganda reports about a gas chamber at Mauthausen began to circulate precisely in November 1941.³⁵³

Perz and Freund claim that, in the spring of 1945, "the gas chamber was first used also for murders of sick detainees" (p. 255). Prior to that date, Soviet PoWs were allegedly predominantly murdered there (p. 254). Altogether 1,400 sick persons are said to have been gassed there (p. 256). In this case, the source used by the two authors is the article by Choumoff on Mauthausen in the German edition of the anthology *Nazi Mass Murder*.

On the subject of the technical characteristics of the gas chamber, Perz and Freund say that it was "a simplified form of the cyanide disinfestation chamber with circulation equipment" designed by Degesch. They go on to say:

³⁵¹ *Der Aufbau*, 5 December 1941, p. 6.

³⁵² *Ibid.*, 12 June 1942, p. 5.

³⁵³ T. Kues, "More on Mauthausen and the Genesis of the Mass Gassings Allegation," in: *Smith's Report*, No. 177, December 2010, pp. 4-8.

“This technology could be used by the SS only with the assistance of qualified companies like Slupetzky and Boos and by replacing the technically complicated Degesch design by simpler means. A metal box, probably manufactured in the camp, with a screwed-down lid and two pipe connections was used for the gas feed; instead of a heating element, a pre-heated brick would have to do for the acceleration of the gas release, the integrated gas circulation system with its four-way switch for changing the gas flows was replaced by two ventilators, one for the air feed, the other for air removal.”

Finally, the steel doors used by Degesch for their delousing chambers are said to have been replaced by gas-tight wooden doors (p. 253).

At this point, we must stop briefly for a description of the design and operation of the Degesch disinfestation chamber with circulation. In it the Zyklon B can was opened from the outside with a four-way switch, equipped with a can opener. This device could be adjusted to two positions: “ventilation” – with the air entering the gas chamber from the outside by way of this valve – and “circulation,” with the air circulating within the chamber. When the can was opened, the contents dropped into the “Zyklon catchment basket” placed in front of the heater and struck by the circulating current of warm air, driven via the circulation pipe by a fan designed for 72 air exchanges per hour and located on the other side of the chamber. Through the pressure pipe, the air re-entered the circulation device and struck the Zyklon B granules anew. After the disinfestation was complete, the gases were removed from the chamber through the ventilation pipe by the fan. Normal operating temperature was 35 to 40°C. An average disinfestation would require 70 to 75 minutes.³⁵⁴ In the Degesch disinfestation chambers with recirculation operating at Buchenwald, the duration of one fumigation varied between one and twelve hours, with an average of three and a half hours.³⁵⁵ Document 2 shows a typical Degesch circulation plant for delousing by Zyklon B hydrogen cyanide.

Let us now return to the alleged homicidal gas chambers of Mauthausen. The technology described in the verdict of the Hagen trial would have been primitive, dangerous and inefficient. Emptying a can of Zyklon B onto a hot brick would immediately have released clouds of cyanide vapors, like water hitting a hot surface.³⁵⁶ These vapors would have spread

³⁵⁴ G. Peters, E. Wüstinger, “Entlausung mit Zyklon Blausäure in Kreislauf-Begasungskammern. Sach-Entlausung in Blausäure-Kammern,” *Zeitschrift für hygienische Zoologie und Schädlingsbekämpfung*, No. 10/11 (1940), pp. 193-196; *Degesch-Kreislauf-Anlage für Entlausung mit Zyklon Blausäure*. APMM, VI, 9a, vol. 2, pp. 1-4.

³⁵⁵ Letter by Weimar Central Construction Office to the Auschwitz Central Construction Office dated 4 July 1944. RGVA, 502-1-333, p. 17.

³⁵⁶ One has to keep in mind that the boiling point of hydrogen cyanide (25,7°C) is much

throughout the basement of the infirmary where the alleged gas chamber was located, and removal of the vapors would have been impossible for lack of ventilation. Moreover, this procedure would have been dangerous as well on account of a possible explosion. The explosive limits of HCN in air lie between 5.4% (= 60 g/m³) und 46.6% (= 520 g/m³).³⁵⁷ If the brick had been hot enough, a conflagration in the metal box could not have been prevented.

We are told that the gas chamber was not designed for mass killings, but for the execution of a limited number of persons at a time, and so it is difficult to understand why the hot brick was needed at all, because the room itself could have been heated, so that the radiator there could have been used for accelerating the release of the hydrogen cyanide vapors.

A fundamental question addressed neither by Perz and Freund nor by any other orthodox Holocaust historian is the following: Why was an operational shower system needed for this gas chamber, or an operational radiator? There is another absurd aspect of the official version: For standard clothes disinfestations Richard Glücks approved a regular Degesch circulation system, but for the homicidal chamber which, as Ziereis tells us, he himself had ordered, he could apparently not provide the necessary funding, forcing the camp authorities to piece together a dangerous makeshift replacement.

A published photo of this device,³⁵⁸ if it is that device to begin with, can actually be interpreted in a completely different way. It shows a metal box open at the top, with a lid leaning on its right rear corner. The box sports four visible bolts with wing nuts (one on each side, two at the front; two more are probably at the back) used to firmly (hermetically) seal it with the lid. A person is holding two cans over it – probably of Zyklon B – each of which has a large hole in its bottom. At the bottom left side the box is connected via a pipe to a circular device which is undoubtedly a fan. The pipe can be closed with a hand wheel valve (pointing to the rear). At the top right side of the box another pipe enters, which also sports a hand wheel valve (pointing upward). No mechanism is clearly visible to open a Zyklon B can located in the sealed box – unless the feature running vertically through the center of the box is such a mechanism. Or such a mechanism may simply not be visible on that photo, if it was located at the back of the box on this photo. It is also possible that the Zyklon B can was opened outside the box and merely its contents poured into the box – a risky albeit

lower than that of water (100°C).

³⁵⁷ Berufgenossenschaft der chemischen Industrie (ed.), *Cyanwasserstoff. Blausäure. Merkblatt M 002 12/89*. Jedermann-Verlag, Heidelberg, p. 6.

³⁵⁸ Bundesministerium für Inneres (ed.), *KZ-Gedenkstätte Mauthausen. Forschung, Dokumentation, Information*, Vienna 2008, p. 44. See Document 9.

possible procedure requiring the operator to wear a gas mask and the room where this happens to be equipped with some sort of ventilation. But since the box had to be opened after completion of the procedure anyway in order to remove the Zyklon B can and/or loose granules, working with a gas mask in an area that can be ventilated would have been necessary anyway.

The similarities between the gas chambers at Sachsenhausen and Mauthausen are so evident that they cannot be accidental. In both cases, an existing room was possibly converted into a disinfestation chamber which could also serve as a shower room. The Mauthausen chamber was certainly using a modified Degesch circulation system, similar to the one used at Sachsenhausen. This procedure was linked to the fact that the ceiling of the room was below the surface of the surrounding area. The structure of the system can be inferred from the sources available for the Sachsenhausen device (see Documents 4f.). The container for holding and opening the Zyklon B cans (the above-mentioned metal box [Doc. 5, no. 1]) was located in an adjoining room (called “gas cell” today). Inside the disinfestation chamber, attached to the opening device, stood a circulation blower [no. 7], while the bent tube to the right of the device went back through the wall into the disinfestation chamber at a short distance and thus constituted the suction pipe [10-12]. The ventilation fan was mounted in the opposite corner, under the ceiling, where the opening for it can still be seen [9]. The opening could be closed by means of a round lid and was connected to a chimney above the ceiling, through which the hydrogen cyanide vapors could be removed without endangering anyone (the Sachsenhausen device will be described in more detail in the next chapter, p. 178).

As if the “evidence” for the presence of a homicidal gas chamber at Mauthausen was not dubious enough, the story of the homicidal gassings at the Gusen camp, a sub-camp of Mauthausen, is even more absurd. Perz and Freund tell us (p. 256):

“In this phase [spring 1945], sick inmates were also killed at Gusen by means of Zyklon B. As had been the case before, in 1942 this poison gas was used in a barrack; some 600 persons of various nationalities lost their lives in the process.”

The source for this assertion (footnote 45 on p. 256) is a witness statement of 1968! It also crops up in Choumoff’s work, who dealt with these alleged gassings in 1987 and also makes use exclusively of witness statements.³⁵⁹ Perz and Freund add that “executions in the gas chamber continued to be carried out” (p. 256), *i.e.* in the Zyklon B disinfestation chamber mentioned by them on p. 248. According to Choumoff, incidentally, it had

³⁵⁹ P.S. Choumoff, *op. cit.* (note 349), pp. 31-36.

a volume of some 100 cubic meters,³⁶⁰ more than three times the size of the homicidal chamber at Mauthausen, something which would have rendered the latter completely superfluous!

On the subject of the Gusen delousing chamber, there are detailed operating instructions. We can see that the room had doors (two, no doubt, one for the “clean” side and another for the “unclean” side), that it had windows and a ventilator connected to a gas removal opening. The document, drawn up by SS-Hauptsturmführer Eduard Krebsbach, the Mauthausen camp physician, begins with the following words:

“The work near and inside the hydrogen cyanide disinfestation chamber is life-threatening if the following instructions are not respected to the letter.”

The service instructions specified *i.a.* that a gas test was performed, after at least one and a half hours of ventilation, from the outside through an open window and by someone wearing a gas mask.³⁶¹ This gas test was a legal requirement and was standard practice also in the case of disinfesting dwellings. It gave rise, no doubt, to the passage of the Hagen verdict quoted above, which said that, in the case of the homicidal gas chamber at Mauthausen, defendant Roth had “cautiously introduc[ed] a specially prepared strip of paper to test whether the room was free of gas.” Such gas indicator strips were part of the standard gas testing kit.³⁶²

Towards the end of their article, Perz and Freund discuss the alleged gas van of Mauthausen and Gusen, cautioning that the details of its use are “not clear” (p. 257). They continue (*ibid.*):

“Apparently the Mauthausen camp physician, Eduard Krebsbach, had heard about this new killing method soon after the tests of a gas van at Sachsenhausen, because in early August he asked Berlin for such a gas van.”

In order to be allotted the vehicle, the head of Department II D of RSHA, SS-Obersturmbannführer Walter Rauff, is said to have approached the omnipotent Institute for Forensic Investigations (*ibid.*).

Rauff’s letter has undergone a critical analysis by the French researcher Pierre Marais and by Santiago Alvarez. Both of them came to the conclusion that the document is a fabrication prepared during the run-up to the Nuremberg trials and intended to lend credence to the assertions by Hans

³⁶⁰ *Ibid.*, p. 31.

³⁶¹ “Dienstsanweisung für die Bedienung der Blausäure-Entwesungskammer im K.L.M. Unterkunft Gusen,” ÖDMM, Archiv, M 9a/1.

³⁶² See the chapter “Auschwitz: ‘Gas Testers’ and Gas Residue Test Kits,” in my article “The ‘Gas Testers’ of Auschwitz,” *The Revisionist*, 7 2(2) (2004), pp. 150-154, where I describe the common standards for delousing measures and where I reproduce the original text of the service instructions mentioned (pp. 63-67).

Maršálek and especially to those of Franz Ziereis on the subject of the Mauthausen gas vans.³⁶³

As a matter of fact, the letter – published earlier by Choumoff³⁶⁴ – exhibits a number of points which give rise to doubts about its authenticity. Let me stress that, in addition to the analyses carried out by Marais and Alvarez, the letter, based on its letterhead (“II D Rf/Hb”), would have come from Walter Rauff (“Rf”)³⁶⁵ who held the rank of an *SS-Obersturmführer* and the position of head of group II D 3 (Technical matters) of RSHA. Subsection II D 3a (Security police vehicles) was headed by *SS-Hauptsturmführer* Friedrich Pradel. Nonetheless, at the bottom of the document we have Rauff’s signature, preceded by “i.A.” (*im Auftrag*, by order). Contrary to normal practice, the typed name of the author of the letter is missing, as are his name and rank. Item 2 of that letter lists the name of a second addressee, “II D 3 a – Major Pradel,” but Pradel was not a “Major” in any way; his SS-rank of *Hauptsturmführer* corresponded to that of a captain.

The first addressee, the Institute of Forensic Technology in Berlin, is mentioned under item 1, below the word “*Schreiben*” (letter). An analysis of the contents reveals the following peculiarities:

a) “*Attached I return the file of the garrison physician concentration camp Mauthausen.*”

Returning such “files” (apparently referring to a documentation) was not standard practice.

b) “*The special vehicles manufactured by us are currently all in use according to the order of the head of the Security Police and the SD.*”

This is apparently intended to create the impression that there was an order from Heydrich for the use of these vans, although no such order exists.

c) “*More vehicles are on order, whose delivery, however, depends on the availability of the chassis by the Plenipotentiary of motor vehicles. It is not yet known when the allocation will be made by the GBK, and it has to be reckoned that after the allocation an additional time for conversion of ca. 8 to 14 days will be needed for the individual vehicles*”

As Matthias Beer tells us in his article discussed above, the Gaubschat company at Berlin-Neukölln “had received the order to equip six chassis of gasoline powered 3.5 ton vehicles of two different brands (Diamond and Opel-Blitz with an airtight cargo box, p. 160). A letter from Section II D 3 of RSHA, addressed to this company, spoke of “10 Saurer chassis already

³⁶³ S. Alvarez, *op. cit.* (note 120), pp. 297f.

³⁶⁴ P.S. Choumoff, *op. cit.* (note 349), p. 40.

³⁶⁵ “Hb”, acc. to Marais, was the initial of Rauff’s secretary.

supplied.”³⁶⁶ All this favors the interpretation that the story about the “availability of the chassis” is based on the correspondence between RSHA and the Gaubschat company.

d) *“After this point in time I would be prepared to place such a special vehicle at the disposal of the concentration camp Mauthausen for a certain period of time. At a given time I will apprise you, as soon as the vehicle can be deployed.”*

Since I assume that the concentration camp Mauthausen cannot wait for an undetermined amount of time for the allocation, I ask to initiate from there the acquisition of steel bottles with carbon oxide or other auxiliary agents for the implementation.”

The use of the senseless term “implementation” without its object, *i.e.* without stating who or what was to be implemented, can only stem from an error in translation. It seems that the letter was drawn up in English and that on translation into German the English word “execution” was rendered as “*Durchführung*” = implementation rather than as “*Hinrichtung*” or “*Exekution*” in the sense of capital punishment. Choumoff, for instances, translated it as “*exécution*,”³⁶⁷ which can mean both in French as well: implementation or capital punishment. The proposal to supply Mauthausen with “steel bottles with carbon oxide or other auxiliary agents” (what agents?) is nothing but yet another attempt to produce a document using this infamous term which otherwise does not appear in any document.

Perz and Freund, in turn, have to admit that the content of this letter is highly dubious even in the light of orthodox Holocaust historiography (p. 258):

“Why the camp physician at Mauthausen would have requested a gas van around the turn of the year 1941/42, at a time when sick or unfit detainees were shipped to Hartheim to be killed and a gas chamber was under construction with the active participation of Krebsbach himself, cannot be explained unambiguously on the basis of the existing sources.”

Referring to the statement of a witness, the two authors come up with the hypothesis that the gas van was “intended for killing detainees who suffered from an epidemic” which one did not want to ship to Hartheim because of the preventive measures in connection with epidemics (*ibid.*). But why use a gas van if a Zyklon B gas chamber was available in the camp?

There is no documentary evidence for any actual use of a gas van at Mauthausen. Perz and Freund admit that it is not clear “if and when the Mauthausen camp physician received the requested gas van” (p. 257) and

³⁶⁶ S. Alvarez, *op. cit.* (note 120), pp. 323-325, where the original document is reproduced.

³⁶⁷ P.S. Choumoff, *op. cit.* (note 349), p. 41.

that “nothing is known about what became of a gas van” at Mauthausen (p. 258)

The only basis for assuming the presence of such a vehicle in this camp consists in the statements made by former SS personnel and detainees who differ, however, about the way the vehicle is said to have operated. According to the U.S. detainee Jack H. Taylor, there was a “gas van with Zyklon B utilization” [sic] in which, “some 3,300 detainees are said to have been killed between March and October of 1943” (p. 257). This contrasts with the interrogation of SS-*Hauptsturmführer* Adolf Zutter, camp commander Ziereis’s deputy, during a 1967 trial at Cologne:³⁶⁸

Prosecutor: Were you responsible for the trucks called ‘gas mobiles’ in the same way as for the car pool as a whole?

Zutter: ‘Gas mobile’? This is the first time that I hear such a word. We had two motor vehicles for transporting people. They were called ‘Minas’ and were used both for transporting soldiers and for detainees.

Prosecutor: Do you want to tell the court that you knew nothing of the existence of two vehicles converted to gas chambers? And that you did not know they were being used for gassing prisoners?

Zutter: That is impossible. There were two vehicles for disinfection, used by the laundry department. I was not responsible for any ‘gas cars.’

Prosecutor: And you never heard anyone talking about them?

Zutter: It is here that I have heard for the first time any mention of ‘gas mobiles.’

We hardly need to tell our readers that Zutter is never even alluded to by Perz and Freund!

In the alleged confession by Franz Ziereis, he is reported to have said on this subject:³⁶⁹

“Furthermore, a car of a special type shuttled between Mauthausen and Gusen, in which detainees were gassed during the ride. The idea for the design of this car originally came from the pharmacist SS-Untersturmführer Dr. Wasicki. I have never put gas into that car, I have only driven it, but I knew that detainees were being gassed.”

The story which Maršálek ascribes to Ziereis was, at that time, still in an embryonic state, because the former detainees had not yet reached agreement on how this mobile gas chamber operated, but the story was, as it were, officially consecrated in this manner.

³⁶⁸ Vincenzo & Luigi Pappaletta, *La parola agli aguzzini*. Mursia, Milan 1979, p. 161.

Since I do not have access to the court files, I had to retranslate this from the Italian.

³⁶⁹ PS-3870. IMT, vol. XXXIII, pp. 281f.

In any case, it is totally absurd to imagine that the camp commander himself would have driven the shuttle van between Mauthausen and Gusen.

At this point I would like to show the incredible negligence exhibited by orthodox Holocaust historians when it comes to witness statements. Axiomatically and without any kind of critical analysis they assume them to be correct, carefully leaving out any passages which might expose them as unreliable. Here I am talking about Franz Ziereis's alleged deposition made during his interrogation (Perz and Freund on pp. 248f.). The two authors pass in silence over the fact that this document was qualified as "worthless" by the Cologne court,³⁷⁰ simply because it is *not* a "deposition" made up during an "interrogation." Perz and Freund also keep silent about the fact that one of the two versions of this "confession" – the one presented at Nuremberg and accepted as document PS-3870 – is nothing but a sworn statement by the former Mauthausen detainee Hans Maršálek who asserted:³⁷¹

"On 22 May 1945, the Commander of the Concentration Camp Mauthausen, Franz Ziereis, was shot by American soldiers while escaping and was taken to the branch camp of Gusen. Franz Ziereis was interrogated by me in the presence of the Commander of the 11th Armored Division (American Armored Division) Seibel; the former prisoner and physician Dr. Koszeinski; and in the presence of another Polish citizen, name unknown, for a period of six to eight hours. The interrogation was carried out in the night from 22 May to 23 May 1945. Franz Ziereis was seriously wounded – his body had been penetrated by three bullets – and he knew that he would die shortly and told me the following:"

The alleged statement by Ziereis is written throughout in the first person singular, which is to create the impression that Maršálek limited himself to writing down the words of the former Mauthausen commander.

The second version is a document entitled *Protokol (sic) des Kommandanten Ziereis Franz aus Mauthausen*, and is dated "Gusen, 24 May 1945." The circumstances of its origin are summarized in a final note, written in Polish:³⁷²

"The above declarations were written during the night of 23/24 May 1945 and were closed at 6 a.m. in the presence of the head physician of the Gusen hospital, Dr. Anton Goscinski, as well as the director of the hospital Kosmal Roman."

For one thing, the date does not agree with the one given by Maršálek, and secondly, neither he nor Seibel is mentioned. The text is longer than

³⁷⁰ V. & L. Pappalettera, *op. cit.* (note 368), p. 140.

³⁷¹ PS-3870. IMT, vol. XXXIII, p. 280.

³⁷² GARF, 7021-115-24, pp. 43-50; the quote is on p. 50.

the one presented by Maršálek. In addition to the alleged statements by Ziereis, it also contains comments by the Polish originators as well as certain passages missing in the other version (e.g. a letter dated 24 May 1945 written by Ziereis to his wife³⁷³) and various rather fanciful stories about other concentration camps, beginning with the mysterious meeting of camp commanders at Sachsenhausen where they were shown the “installation” for neck-shooting people. Both documents burst with obvious absurdities. For example, one or one and a half million people are claimed to have been murdered at Hartheim Castle³⁷⁴ – a figure which appears twice, for good measure.³⁴⁸ Elsewhere there is even talk of a figure as high as four million³⁷⁵ – while literally ten million victims are ascribed to the area of Warsaw, Kaunas (Kowno) and Libau.³⁷⁶ According to his “confessions,” Ziereis claims to have *personally* shot 4,000 detainees!³⁷⁷

The document prepared by the two Poles also contains the story adopted by Perz and Freund about the gassings at Gusen:³⁷⁸

“Slupetzky is famous for having gassed at Gusen I on 13 March 1942 some 170 Russian PoWs in Block 16 under orders from SS-Hauptstf. [sic] Krebsbach together with the former head of the protective custody camp Hauptstuf. Karl Chmielewski with the gas Zyklon B.”

I will not go into the claimed extermination orders Ziereis is alleged to have received from his superiors, but one of the stories is worth recording here. On 31 May 1943 Himmler honored Mauthausen with his visit. True to his reputation as an innate sadist, he ordered the detainees working in the quarry to carry rocks weighing more than 50 kg up the steep hill. Three months later (i.e. in August 1943) 1,000 Czech Jews arrived:³⁷⁹

“At the time, mortality was less than 3%. For the superiors in Berlin this was too low. They therefore summoned Ziereis asking him why the mortality in his camp was so low.”

Just like the whole remainder of Ziereis’s “confession,” such horror stories, while showing the hatred and revengefulness of the former detainees who wanted to crush their former oppressors, are not confirmed in any manner by contemporary documents. As early as 28 December 1942, Oswald Pohl had, in fact, informed the commanders of all concentration camps including Mauthausen of an order by Himmler according to which

³⁷³ *Ibid.*, pp. 47f.

³⁷⁴ In a concluding comment Maršálek writes that ghe considers this number to be exaggerated. I explain the reason for this remark further below.

³⁷⁵ GARF, 7021-115-24, p. 48.

³⁷⁶ *Ibid.*, p. 49.

³⁷⁷ PS-3870. IMG, vol. XXXIII, p. 281.

³⁷⁸ GARF, 7021-115-24, p. 47.

³⁷⁹ *Ibid.*, p. 49.

mortality in the camps was to be *lowered* by all means, and Glücks himself repeated this order on 20 January 1943.³⁸⁰ Thus, it is clear that Ziereis's "confession" was essentially written by the detainees who "interrogated" the dying commander. Besides many other oddities, this is shown by the fact that the document lists no less than 33 camps (Mauthausen and 32 satellite camps) with their precise camp strength.³⁸¹ A man dying from three shots in the abdomen would certainly not have been capable of such mathematical showmanship. When Maršálek wrote that he considered the death toll figures for Hartheim mentioned by Ziereis to be too high, he merely wanted to underline the "critical attitude" with which he regarded the "voluntary" statement in question.

It must be said that the U.S.-Americans were no less eager to spread mere propaganda. In the official report by the Prosecutor of the Third Army about Mauthausen and its subcamps, date 17 June 1945, one reads:³⁸²

"The total count of victims is impossible to estimate, but with HARTHEIM Castle (a building used for mysterious disposal of people), (See Exhibit 213,) almost 2,000,000 are counted from the German Records themselves."

10. The Gas Chamber of the Sachsenhausen Camp

The article on this topic, written by Hajo Funke and bearing the title "The 'gas chamber lie' in the revisionist propaganda in Germany and Austria" (*"Die 'Gaskammerlüge' in der revisionistischen Propaganda in Deutschland und Österreich"*; pp. 382-393), is so pitiful that it is not really worthwhile discussing it in detail. The author writes on pp. 390f.:

"As early as 2003, the revisionist journal Vierteljahreshefte für freie Geschichtsforschung – which often denies the Holocaust outright – published an article by Carlo Mattogno about the Sachsenhausen concentration camp: 'Sachsenhausen. Occupancy reports and 'exterminations' 1940 through 1945.' The introduction clearly presents the revisionist purpose; it says i.a. that the 'case of Sachsenhausen is highly revealing as to the methods used by the Allies, in this case specifically by the Soviet black propaganda in the immediate post-war period.' It is claimed, writes Mattogno, that 'in this camp, numerous detainees were killed by poison gas, and that, furthermore, the Germans had murdered

³⁸⁰ See on this my study *Auschwitz: assistenza sanitaria...*, *op. cit.* (note 103), chapter I, "Le condizioni di vita dei detenuti," pp. 15-23.

³⁸¹ PS-3870. IMT, vol. XXXIII, pp. 283f.

³⁸² PS-2176. IMT, vol. XXIX, p. 314.

thousands of Soviet PoWs in a shooting installation.' The author asserts that such claims are without any historical substance and uses revisionist literature in doing so."

I will begin with a correction: first of all, the introduction was not written by me but by the editor of the journal. Secondly, the introduction does not merely "present[s] the revisionist purpose," in fact it begins with these words:³⁸³

"The Sachsenhausen concentration camp, located in the Berlin vicinity and often referred to as Oranienburg [a nearby town] hardly plays a role in the 'Holocaust' discussion. If Carlo Mattogno deals with this camp in the following article, the reasons are twofold: On the one hand, the documents retrieved by him and by Jürgen Graf in the State Archive of the Russian Federation in Moscow permit a very precise determination of the camp strength and the mortality in this camp during the war years. The publication of these data is an act of positive historiography which does not want to merely refute historical lies and myths but rather wants to determine as clearly as possible what really happened. On the other hand, the case of Sachsenhausen is highly revealing..."

We can see that Funke's arguments do not burst with excessive precision.

If one of the authors of the anthology under scrutiny here could be expected to present a scientific refutation of my article on Sachsenhausen, then it would be Günter Morsch, the author of the paper "Killings by poison gas in the Sachsenhausen concentration camp" (*"Tötungen durch Giftgas im Konzentrationslager Sachsenhausen"*; pp. 260-276). The sad fact is, though, that Morsch, while ending his article with a grandiloquent paragraph about "revisionist strategies of denial," is too much of a prude to mention even the title of my article!

Morsch's main topic is the recent research into the alleged gas chamber at Sachsenhausen. From the mid-1990s onwards, orthodox Holocaust historiography seized upon newly discovered sources which, according to Morsch, supply us with a "considerably more precise vision of the use of poison gas for homicidal purposes in the Sachsenhausen concentration camp," even though "important questions, unfortunately, still remain unresolved" (p. 260). We shall discuss these "important questions" as we go along.

Despite these advances of orthodox historiography, its way of "demonstrating" the alleged homicidal gassings still follows essentially the script of Soviet postwar propaganda. In this regard, clarification is needed. Any

³⁸³ C. Mattogno, *op. cit.* (note 38), p. 173.

historiographical assessment of the declarations about the gas chamber and the “gas van” as made by the camp commander and other members of the garrison cannot be considered outside the procedural framework in which they were made. The Sachsenhausen trial, which was staged in Berlin from 23 October to 1 November 1947, was a typical Stalinist show trial. All the defendants were accused – and sentenced guilty – of the most diverse and atrocious crimes. Going way over the top with their zeal to prosecute, the prosecution indicted 16 defendants, including the last camp commander Anton Kaindl, and charged them with all kinds of crimes, even at the cost of incurring blatant contradictions. The indictment stated, for example, that, “in order to conceal the number of people killed in Sachsenhausen, in early 1945 the ashes that had been gathered from the cremation of these bodies in the crematory furnaces were destroyed at the order of Kaindl” (p. S53).³⁸⁴ Yet “the inspection of the camp area near the crematorium revealed two pits with a total content of about 27 cubic meters; they contained human bones and ashes, which, according to the statements by former crematorium workers – Sakowski and Zander – were remainders from the cremation of prisoners killed at the camp” (p. S21, cf. p. S133).

According to a statement by Heinrich Fresemann, former branch manager of a brick manufacturer, 8-9 tons of ashes are said to have been “sunk at the Hohenzollerndamm” (p. S92). The witness probably didn’t know – or he fooled the prosecutor interrogating him – that the Hohenzollerndamm was not a reservoir dam, as the German name suggests, but the name of a main traffic road in Berlin. If we take that figure of 8-9 tons seriously anyway, and assuming an ash density of half a ton per cubic meter,³⁸⁵ in total there would have been some $[27+(16-18)\approx]$ 44 cubic meters of ash. This translates to approximately 22 tons of ash corresponding to some 7,300 corpses,³⁸⁶ a figure more consistent with the actual deaths (less than 20,000) than with those put forward by Soviet propaganda (about 100,000).

In addition, inmates unfit for labor were allegedly killed on a regular basis, possibly sent to other “extermination camps” for this purpose, but on the other hand the SS is said to have exploited the detainees for labor regardless of their age, and among these were also “Jewish children between 6 and 12 years old” (p. S44), although it is unclear what kind of work they

³⁸⁴ All subsequent page numbers in this chapter initialed with S refer to Fritz Sigl, *op. cit.* (note 345).

³⁸⁵ Douglas J. Davies, Lewis H. Mates (eds.), *Encyclopedia of Cremation*, Ashgate, London 2005, p. 134.

³⁸⁶ Assuming an average weight of 3 kg of ashes from the cremation of an emaciated corpse, with an ash density of 0.5 g/cm³. C. Mattogno, *I forni crematori di Auschwitz. Studio storico-tecnico con la collaborazione del dott. ing. Franco Deana*. Effepi, Genoa, 2012, vol. I, p. 30.

could have performed. This is all the more incomprehensible because at the same time it was claimed that “the Sachsenhausen camp was a place of mass extermination of the Jews” (p. S40).

The trial setup (and its preliminary investigation) left no escape for the defendants, because the Soviets presupposed that the “fascists”, ever since their assumption of power, had carefully worked out “a plan for the mass extermination of political opponents of Nazism”; they then are said to have set up the entire network of concentration camps “for the mass destruction of men,” and “the mass extermination was implemented mainly through the system of concentration camps of the SS.” In this context, Sachsenhausen was allegedly merely one among many camps “in which the plan of the Hitlerite government for the extermination of men was carried out” (pp. S17f.). The defendants’ lawyers were five Soviet attorneys who were at least as hostile and prejudiced against them as the Public Prosecutor. The lawyer S.K. Kasnatschejew for instance, who defended Kaindl and another defendant, stated in his speech (p. S142):

“This trial has revealed the monstrous mechanism of organized crimes and has called back into the memory of the people recently experienced pages in the history of the Hitler regime, of that regime which has contrived and encouraged atrocities never before seen in the history of mankind, such as those perpetrated in the Sachsenhausen camp.”

Needless to say that the verdict could not be appealed (p. S215). The defendants conformed fully to the charges, completely embracing the Soviet theory of Sachsenhausen as a “death camp” and, consequently, the myth of the gas chamber, which had a semblance of logic only in this context. This legal framework necessarily entailed a systematic distortion of facts and documents, as is evident from Kaindl’s statements (pp. S65f.):

“Prosecutor: What orders are you familiar with regarding the treatment of prisoners of war?”

Kaindl: Three days before the aggression [sic] against the Soviet Union, a Führer order was issued to the division and regiment commanders according to which all the commissars had to be isolated and delivered to the SD for extermination.

Prosecutor: What types of extermination happened in your camp?

Kaindl: In Sachsenhausen mass killings were carried out by shootings and hangings until the autumn of 1943. For the shooting of Russian prisoners, a special room had been disguised as a medical room. It was equipped with a device for measuring the body height, a table to test the visual acuity and also SS men dressed as doctors in white coats. While apparently measuring the height, the detainee was liquidated with a blow to the neck from behind through an opening in the meas-

urement stick. In the adjoining room, from which the shot was fired, a gramophone played music to drown out the shots.

Prosecutor: So while you were the camp commander, did you devise an elaborate extermination technique?

Kaindl: Yessir! In addition to the medical room there was also an execution site, a portable gallows and a mechanized gallows, where 3 or 4 prisoners could be hung together.

Prosecutor: You made some changes to this extermination technique, didn't you?

Kaindl: In mid-March 1943 I introduced the gas chambers as a mass extermination site.

Prosecutor: On your initiative?

Kaindl: In part, yes. Since the existing facilities were no longer adequate for the envisioned extermination, I organized a meeting, also attended by the chief medical officer Baumkötter, and he told me that the poisoning of persons with hydrogen cyanide in special rooms would result in their instant death. So I considered the construction of gas chambers for mass extermination to be appropriate and also more humane.

Prosecutor: Who was responsible for the mass killings?

Kaindl: The camp commander personally.

Prosecutor: So you?

Kaindl: Yessir!"

These claims about "gas chambers" (in the plural!) must be seen against the background of Soviet propaganda, which led to Kaindl's following, no less brazen "confessions" (p. S67):

"Prosecutor: How many prisoners were exterminated in Sachsenhausen during your activity as camp commander, hence during two years and eight months?

Kaindl: (bows his head for a moment's reflection, then turns to the interpreter, his voice clear and firm): All things considered, under my responsibility about 42,000 were exterminated, including about 18,000 directly in the camp itself.

Prosecutor: And how many died of starvation during your time?

Kaindl: During this time, according to my assessment, about 8,000 prisoners died of starvation."

Apart from the fact that all these figures are contradicted by documents, as we will see later, if 42,000 prisoners had indeed been exterminated under Kaindl's command, *i.e.* from August 1942 until April 1945, it follows that even more would have been murdered prior to August 1942 – at least 58,000 in order to reach the total death toll of 100,000 as claimed. Yet the

Soviets did not bother at all to determine whom such an alleged extermination would have to be attributed to.

The assumption of such an enormity, which was of value only in the aberrant logic of the show trial, was a historical fraud crafted for the following purpose (pp. S67f.):

“Prosecutor: Defendant Kaindl, did you receive the order to blow up the camp in order to erase the traces of the crimes committed?”

Kaindl: Yessir. On 1 February 1945, I had a conversation with the head of the Gestapo, Müller. On that occasion he conveyed to me the order to destroy the camp by artillery fire and air attack or by gassing. The execution of this order, however, which came from Himmler, was technically impossible.

Prosecutor: Would you have followed the order if it had been technically possible?

Kaindl: Of course. But it was not possible. In case of artillery fire or air attack the surrounding population would have noticed this. In the case of gassing, this would not only have endangered the civilians, but also my SS staff.

Prosecutor: What did you do then?

Kaindl: I spoke with Höhn and others, and then gave the order to exterminate all sick inmates, those unable to work and above all the political prisoners who were to be exterminated.

Prosecutor: Were they [exterminated]?

Kaindl: It was begun. On the night of February 2, the first inmates were shot, about 150. Until the end of March it was possible to exterminate around 5,000.

Prosecutor: Who directed this mass extermination?

Kaindl: The defendant Höhn on my orders.”

It should be noted that the idea of gassing the entire camp (with what gas?) was not just technically impossible, but the idea as such was utterly insane and would not even have occurred to a fool.

This contrived and phony logic of extermination was pushed to the ridiculous by the Soviets: if all concentration camps were death camps, and if Himmler had explicitly ordered the extermination of all Sachsenhausen prisoners, all transports that departed from this camp to any others camp would also have been slated for extermination, “zur Vernichtung,” as was explicitly and repeatedly stated (pp. S54f., S58, S86 *et passim*). And not only Auschwitz and Majdanek (often accompanied by “Lublin,” as if it were another camp) counted as “extermination camps,” but also Mauthausen, Dachau, Bergen-Belsen and Nordhausen! The interrogation of the

former SS-Untersturmführer Ludwig Rehn, who was in charge of the inmates' labor deployment, is emblematic in this regard (p. S90):

“Prosecutor: How many [inmates] were transferred by you in the first period?”

Rehn: 6,000 to Auschwitz, including those interned in September 1944.

Prosecutor: How many to Majdanek?

Rehn: 3,000!

Prosecutor: To Dachau?

Rehn: 2,000!

Prosecutor: To Bergen-Belsen?

Rehn: 2,500!

Prosecutor: And during the second period?

Rehn: 5,000 people to Bergen-Belsen.

Prosecutor: And how many were transferred from the Heinkel auxiliary camp to Nordhausen?

Rehn: Around 7,000!

Prosecutor: So during the two periods together around 26,000 people were transferred to other camps for extermination?

Rehn: Approximately 26,000, yessir!”

Although Rehn knew that these had been perfectly normal transfers or evacuation transports, he fully accepted the Soviet propaganda and was therefore found guilty of sending 26,000 prisoners to their extermination! (The sum actually resulted in 25,500.)

Two Jewish transports were mentioned in particular: one comprising 1,094 individuals went to Dachau on 14 November 1944, the other with 300 people was sent to Auschwitz on 30 August 1944 (p. S42). The first was regularly registered at Dachau: the 1,094 Jews were given the serial numbers 126919-128012.³⁸⁷ The transport to Auschwitz is not mentioned in Czech's *Kalendarium*.

Rehn also made other statements which were just as foolish (p. S89):

“Prosecutor: Where did the prisoners go who were unable to work, exhausted?”

Rehn: To other extermination camps.

Prosecutor: Are you convinced that the prisoners in the other camps were actually exterminated?

Rehn: Based on my activities at Majdanek and Lublin [sic] I certainly assume this.

³⁸⁷ Het Nederlandsche Roode Kruis, *Auschwitz, Deel VI: De afvoertransporten uit Auschwitz en omgeving naar het noorden en het Westen en de grote evacuatietransporten*. 's-Gravenhage, 1953, p. 54

Prosecutor: So according to your experience at Majdanek and Lublin you confirmed to the court that all the prisoners who were transported from Sachsenhausen to other camps were transferred only in order to be exterminated?

Rehn: Absolutely. [...]

Judge: Why were people, who were unable to work, transported from the Sachsenhausen camp to other camps for extermination?

Rehn: Because the capacity of the crematorium at Sachsenhausen was insufficient for their envisioned extermination."

The last response was also in flagrant contrast to the "findings" of the Soviet "experts" about the cremation capacity of the camp's six cremation furnaces (two mobile oil-fired and four stationary coke-fired furnaces, all built by Hans Kori): 864 corpses per day,³⁸⁸ which – if true (which it wasn't) – would have meant that 30 days would have sufficed to cremate the bodies of the 26,000 prisoners transferred to other camps for their alleged extermination.

"Prosecutor: At that time, how many detainees were still in the camp?

Kaindl: 40,000-45,000. On April 18, I received orders to load them on barges and bring them along the channel of the river Spree into the Baltic Sea or the North Sea and to scuttle them there in the open sea. But even that was impossible, because procuring barges for so many prisoners would have been time-consuming, and the Red Army was advancing rapidly.

Prosecutor: What happened then?

Kaindl: I made the detainees march first toward Wittstock, then to Lübeck in order to load them onto ships and to scuttle them as ordered." (p. S68)

The defendant August Höhn, who had been the second camp commander, was coaxed into making this absurd "confession" (p. S73):

"Höhn: I have heard personally from the camp commander of Neuengamme, Pauli, that two large ships with camp inmates were sunk at sea.

Prosecutor: So there was already a method of exterminating prisoners by sinking inmates into the sea?

Höhn: Yessir, there was.

Prosecutor: And this criminal plan was not carried out with Sachsenhausen detainees because it was beyond the control of the camp authorities?

³⁸⁸ C. Mattogno, *op. cit.* (note 386), vol. I, p. 384

Höhn: Yessir. That the remaining 45,000 prisoners of our camp were not drowned was not due to the fact that the camp authorities did not want it, but because it was prevented by the rapid advance of the Red Army."

With utmost hypocrisy, the Soviets attributed to the Germans crimes which had actually been committed by the Allies. It is known that on 3 May 1945 the Royal Air Force sank the luxury ocean liner *Cap Arcona* and the freighter *Thielbek*, carrying altogether about 8,000 inmates mostly from the Neuengamme camp, only 200 of which survived the attack.³⁸⁹

Due to this farce the Soviets could present themselves in the guise of "saviors." The trial verdict in fact sanctioned this (p. S203):

"With the rapid advance of the Soviet troops some 45,000 prisoners of various nationalities were rescued in the Sachsenhausen camp who had been sentenced to death by Himmler's order."

In the context of this trial, Kaindl's "confession" about the alleged gas chambers (which he mentioned in the plural!) demonstrates its utter inconsistency: their construction in March 1943 is said to have been part of an alleged extermination practice which did not exist at all, in order to carry out a "mass" murder, although its surface area, a little more than 8 square meters, makes such an assumption simply ridiculous, as is the claimed use of Zyklon "A" instead of Zyklon B, which was confirmed during the trial (pp. S24f., S203).

Earlier, on 16 July 1946, Kaindl had made an affidavit while in Nuremberg which had an altogether different thrust and is far more consistent with reality. It does not contain any of the enormities he "confessed" later while in Soviet custody and also fails to mention any extermination order of detainees:³⁹⁰

"In the last phase of the war, at the beginning of February 1945, I also verbally suggested to MUELLER that the German prisoners should be enlisted in the Wehrmacht, while the foreign prisoners should be assigned to the labor service. This unfortunately was refused.

On 4 April 1945 I suggested to HIMMLER in Rheinsberg that at the enemy's approach the Sachsenhausen concentration camp should be handed over to the International Red Cross. This suggestion was also turned down.

On 18 April 1945 I received the verbal order from the Chief of Office Group D (Economic Administrative Main Office) Gluecks to requisition

³⁸⁹ Pit Pietersen, *Kriegsverbrechen der alliierten Siegermächte*. Books on Demand GmbH, Norderstedt 2006, p. 559

³⁹⁰ From the website *Holocaust Texts*, <http://madness-visible.blogspot.it/2011/05/anton-kaindl-commandant-of.html>. Last accessed on 16 April 2014.

the ships, lying in the West Harbor of Berlin, to take them to the Lohmits Lake via the Hohenzollern Canal and to ship the Sachsenhausen prisoners through the canals to the North Sea and the Baltic Sea. I refused to carry out this order and suggested once more that the camp should be handed over to the International Red Cross; Gluecke [sic] was furious about my refusal and threatened to report me to HIMMLER. I did not carry out the requisition of the ships, thus this mad scheme was not carried out.

In conclusion I wish to state that three members of the staff of the camp headquarters Sachsenhausen were shot in Sachsenhausen on 22 December 1944 in the presence of the assembled troop, after having been sentenced by an SS and Police Court for the theft of prisoner's property and Reich property."

At the Sachsenhausen trial the prosecutors declared with satisfaction that the Soviet Union had abolished the death penalty on 18 October 1947 (p. S62), but Kaindl and the other defendants had been interrogated the year before during the preliminary investigations (e.g. Sakowski on 21 Dec. 1946, Sorge on 19 Dec.; pp. S174, S148). It is therefore very likely that they made their aberrant "confessions," which they then "confirmed" during the trial, under the threat of a death sentence.

I will now analyze Morsch's paper.

Morsch stresses that the department "Sanitation and Camp Hygiene" of the Concentration Camp Inspectorate was housed on the edge of the camp, an institution which controlled all disinfestation plants as well as the disinfestation school of the Waffen-SS where SS personnel were instructed in the use of these plants. Morsch then goes on to say (pp. 216f.):

"It must, therefore, be assumed that the Sachsenhausen concentration camp also served as a kind of model and guide for the use of poison gas throughout the camp system as a whole. This function can also be shown by the objective figures of the Zyklon B suppliers. Thus, the majority of orders for Zyklon B, which the pertinent SS officer in the hygiene institute of the SS supreme headquarters, Kurt Gerstein, placed with the Degesch company, were supplied to Oranienburg. The metal cans with the red and yellow labels and a warning skull were then forwarded to all other camps. On their business trips, the agents of that company most frequently called on and visited this camp in the vicinity of the Reich capital. The only other camp to rival with it was Auschwitz, incidentally."

In his footnote 4, Morsch mentions a book by Saul Friedländer about Kurt Gerstein,³⁹¹ which mentions 12 invoices for Zyklon B shipments to

³⁹¹ Saul Friedländer, *Kurt Gerstein oder die Zwiespältigkeit des Guten*, Beck, Munich,

Table 5: Zyklon B Shipments to Auschwitz and Oranienburg				
CAMP	SHIPMENT DATE	INVOICE DATE	NUMBER OF CANS	WEIGHT [KG]
Auschwitz	14 Feb 1944	14 Feb 1944	390	195
	8 Mar 1944	13 Mar 1944	420	210
	20 Mar 1944	30 Apr 1944	390	195
	11 Apr 944	30 Apr 1944	390	195
	27 Apr 1944	30 Apr 1944	390	195
	31 May 1944	31 May 1944	390	195
	Total:		2,370	1,185
Oranienburg	16 Feb 1944	16 Feb 1944	390	195
	8 Mar 1944	13 Mar 1944	420	210
	20 Mar 1944	30 Apr 1944	390	195

	12 May 1944	18 May 1944	390	195
	26 May 1944	31 May 1944	390	195
	Total:		2,370	1,185

Auschwitz and Oranienburg and which were addressed by Degesch to Gerstein. The pesticide was supplied in 500 gram cans. Table 5 provides details on the total volume of these shipments.³⁹²

Nothing speaks against the assumption that the Zyklon B supplied to Oranienburg was destined for the Sachsenhausen camp which was also called Oranienburg. The fact that shipments to Auschwitz went directly to that camp clearly support this assumption because if Oranienburg had really been a hub for the distribution of Zyklon B to the other concentration camps, Auschwitz would likewise have received its shipments from Oranienburg.

There is no doubt that Sachsenhausen did indeed serve “as a kind of model and guide for the use of poison gas,” but the gas was used for disinfestations. This is borne out by the simple fact that the department “Sanitation and Camp Hygiene” was located at the edge of the camp and also housed the disinfestation school of the Waffen-SS. Morsch, however, assumes that the poison gas was used for homicidal purposes. In the section “The first homicides by means of poison gas in the Sachsenhausen concentration camp” (“*Die ersten Menschentötungen durch Giftgas im Konzentrationslager Sachsenhausen*”) he tells us the following well-known story:

“In the fall of 1941, probably in early October, the concentration camp near the Reich capital would once again play the role as an experimental station and forerunner. The process for killing people with

2007, pp. 158ff.
³⁹² PS-1553, pp. 15-26. Note the identical shipments to both camps!

carbon monoxide in a truck converted into a gas van, ordered by Arthur Nebe, the head of the criminal investigation department of the police, and elaborated by the Institute of Forensic Technology (KTI) headed by Dr. Albert Widmann, was tested on some 30 Soviet PoWs in the presence of high-ranking technicians of the KTI.” (p. 262, my emphasis)

Mathias Beer maintains that the test gassing occurred on 3 November 1941.³⁹³ The “proof” for this experiment rests solely on post-war witness statements, unsupported by any documentary or forensic evidence, and thus constitutes nothing but assertions totally devoid of any historical value.

The gas vans entered the Holocaust myth only after the Sachsenhausen trial had been celebrated by the Soviets in 1947. Hence the use of two “gas vans” was claimed during this trial for a point in time when the first models are said to have only been tested (pp. S30f.):

“According to the statements of the former camp inmate Lothar Blank, questioned as a witness, it is established that in the fall of 1941, as a result of overloading the local shooting ranges, the extermination of Soviet prisoners of war was carried out in special gas vans. He declared:

‘I learned from Franz Schimalla that the Soviet prisoners of war were also exterminated in two gas vans and that their bodies were cremated in the same crematorium. I myself saw that the gas van described to me by Franz Schimalla made two trips from the barracks in the ‘Industriehof,’ where the Russian PoWs were, to the crematorium.’”

The defendant Paul Sakowski, the “executioner,” declared in this regard (pp. S121f.):

“Prosecutor: I am interested in mobile gas chambers. What do you know about them?”

Sakowski: The Gasautos?^[394] I learned of these Gasautos in October 1941, during the action against the Russians. They were tall, closed vehicles; in each there were about 50 Russian prisoners of war, completely undressed, but still alive. They came to us at the crematorium and then the tube was connected to the cargo space and the exhaust gas was piped inside. When we opened the doors after about 20 minutes, the corpses fell towards us.”

Morsch then tells us that these gas vans were “not used systematically and permanently for the assassination of the more than 13,000 Soviet PoWs” (p. 263). This means that the Sachsenhausen camp authorities gen-

³⁹³ M. Beer, *op. cit.* (note 77), p. 417.

³⁹⁴ The defendant was still unfamiliar with the term “Gaswagen”, as it was introduced only later during the course of the trial.

erously allowed others to use their “inventions” without themselves making any proper use of them. Morsch ignores just as generously all the absurdities and contradictions of this trial.

There is first of all the number of Soviet prisoners of war allegedly killed. The Soviet indictment and verdict put the number at 18,000 (pp. S30, S202), but the former *Blockführer* Klittner Martin spoke of 12,000 deaths, of which about one-third had died of hunger in the months of September, October and November 1941 (pp. S108f.).

Sakowski stated that the detainee Franz Schimalla

“kept statistics about the fuel consumption of the furnaces and came to the conclusion that the total number of cremated prisoners of war must amount to 20,000-25,000.” (p. S121)

If assuming the figure of 18,000 killings within three months (90 days), this would amount to 200 prisoners killed per day. Since the neck shooting device is said to have allowed the killing of a prisoner in 1½ minutes (p. S131), and because on the first day of operation, on 3 September 1941, 465 prisoners were killed and then 250 per day, as Sakowski stated (p. S121), there would have been no practical need for a “gas-van,” if we follow the logic of the case, because the neck shooting device was by no means “overloaded.” In fact, it would have worked at merely $([250 \div 465] \times 100 =)$ 54% of its potential maximum capacity according to Sakowski (250 per day), or at $([200 \div 465] \times 100 =)$ 43%, if filling a need to kill 200 prisoners per day.

On the subject of the legend concerning the 13,000 allegedly murdered Soviet PoWs (or 12,000 or 18,000 or 20-25,000), it is worth repeating what I have written in my article on Sachsenhausen already mentioned.

The *Enyklopädie des Holocaust* says in this connection:³⁹⁵

“Probably in early August 1941, the camp command had a mass shooting installation set up, camouflaged as a [medical] examination room, in which during the following months 13,000 to 18,000 Soviet PoWs were murdered who had not even been registered in the camp.”

At first sight, these assertions seem to be corroborated at least in part by a hand-written entry in the change reports of 1941, which says:

“On 23 October 1941 2,436 Russ. PoWs removed fr. camp strength, i.e. liquidated in the crematorium.”

The clause “i.e. liquidated in the crematorium” however, does not agree with the facts and was undoubtedly added later, probably by the three former detainees who summarized the strength reports after the liberation of the camp. In fact, there is an original document which provides us with details on the numerical changes of Soviet PoWs for the period between 18

³⁹⁵ I. Gutman *et al.* (eds.), *op. cit.* (note 41), vol. III, p. 1270.

October 1941 (the arrival of the first transport of such prisoners) and 30 December 1941.³⁹⁶ Under the date of 23 October, when 2,436 Soviet PoWs were housed in the camp, there is a typewritten entry “v. 23. 10. 41 *nicht mehr in der Lagerstärke*” (no longer in camp strength from 23 October 1941). As this document keeps on recording the numerical changes of Soviet PoWs housed in the camp – from 2,423 on 24 October to 1,360 on 30 December – it is obvious that the 2,436 PoWs were not murdered but rather moved elsewhere. They belong, in fact, to the 2,814 detainees who are listed in the change report of October in the category “transfer.” From 24 October onwards, the Soviet PoWs were counted separately.

700 prisoners were admitted to the camp on 18 October 1941, 1,796 more the next day, and 12 during the following few days, so that a total of 2,508 prisoners were interned during that time. Only 1,360 of them were still alive on 30 December 1941, so that the mortality was 1,148 in 73 days, or on average about 16 per day (with peaks of 51 deaths and lows of 2 deaths in one day). Mortality, however, was in general very high: about 45.8% of the total number of inmates during those 70+ days. It is possible that some of these prisoners were executed as Soviet political commissars, but the story reported by *Enzyklopädie des Holocaust* is still wrong on two counts. First of all, it is not true that Soviet PoWs were interned but not registered at Sachsenhausen, and secondly it is not true that, after August 1941, 13,000 to 18,000 of them were murdered.

Morsch then discusses the “stationary gas chamber in the so-called ‘Station Z’” and pretends to reconstruct its “origins and erection.” He begins his demonstration by inventing the following:

“In May of 1942, the camp command began operating the new and factory-like extermination facility with a major mass murder operation.”

The victims involved in this “operation” supposedly were 250 Jews, but no source for this assertion is provided for the interested reader!

Morsch then goes on to the “confession” of the camp commander of Sachsenhausen, Anton Kaindl, which I have analyzed in my article mentioned above. Kaindl’s statement to the effect that he himself had decided to build a gas chamber for mass killings of detainees is commented by Morsch as follows (p. 265):

“While Kaindl’s assertion is not totally implausible, it appears dubious for good reasons, not least because the Soviet Secret Police conducted the interrogations by applying mental and physical violence, which means that its value as a source is very uncertain. Moreover, the chief camp physician at the time, Dr. Heinz Baumkötter, when brought

³⁹⁶ This document is reproduced in my article, *op. cit.* (note 38), p. 179.

face-to-face with his former commander, denied having discussed this project with him. Lastly, an order from IKL concerning the use of gas chambers in the camps is neither known so far nor is it even highly probable on account of the unsystematic or – in the case of Buchenwald and Flossenbürg – even largely absent use of poison gas.”

Morsch’s overly tortuous phrasing cannot hide the fact that he fully confirms the essence of my criticism of Anton Kaindl’s confession! In this respect, he raises the following question (p. 266):

“If [...] the commander had merely wanted a gas chamber for mass killings also in ‘his’ concentration camp, why did he not make use of the crystalline Zyklon B available at Sachsenhausen in large quantities, whose effect was well-known by the SS camp staff?”

My summary of the deliveries of Zyklon B to Oranienburg as shown in the above table underline the validity of this argument. In doing so, however, Morsch completely demolishes the entire line of argument of the article on Sachsenhausen contained in the anthology *Nazi Mass Murder*, because it rests almost entirely on Kaindl’s confession!

When seen in this light, it becomes most obvious that the alleged gas chamber at Sachsenhausen must have had an entirely different function from that ascribed to it by Morsch and his cronies. I will return to this point below.

Now, when is this gas chamber supposed to have been built? Morsch says (p. 266):

“According to coinciding statements by Kaindl and those of other contemporary witnesses, the gas chamber began operating in the autumn of 1943 at the latest. Since Paul Sakowski was relieved of his function in the crematorium in September 1943 but is known to have been present at the first ‘test gassing,’ the gas chamber was probably built during the summer of 1943.”

This date is pure imagination. If we follow the Soviet “experts” who drew up a report about the camp after its liberation, “Station Z,” the building which housed the crematorium and the alleged gas chamber as well as an installation for neck-shooting people, had been completed in March 1943, because their computations of the corpses allegedly incinerated in the stationary furnaces of the crematorium begin with that month:³⁹⁷

“In the stationary crematorium, 432,000 corpses were incinerated between March 1943 and April 1945.”

This figure is simply ludicrous,³⁹⁸ and it becomes evident why the Soviets forced Kaindl to “confess” the following:

³⁹⁷ GARF 7021-104-2, pp. 5f.

³⁹⁸ According to the Soviet “experts,” 492,480 more corpses had been cremated in the mo-

“In mid-March 1943 I introduced the gas chambers [plural!] as a mass extermination site.”

The Soviets had decided that the “gas chamber(s)” had operated from the moment of the completion of “Station Z” onwards; this also provides us with an explanation for the “coinciding statements by Kaindl and those of other contemporary witnesses” which Morsch refers to.

Just as untenable are the following propositions which are supposed to support Morsch’s dates (p. 266):

“A few months earlier, in early June, Dr. Kurt Gerstein and Dr. Gerhard Peters had met in Berlin. During that meeting which is mentioned both in the famous Gerstein memorandum and by Peters in his various [post-war] trials, the department head of the Waffen-SS hygienic institute who was in charge of these matters asked the Degesch manager for the supply of liquid hydrogen cyanide, as he regarded the use of Zyklon B to be overly cruel [for homicidal purposes] on account of the irritant contained in Zyklon B as a warning agent. [...] Could it be that the Sachsenhausen concentration camp was once more turned into a field of experiments for a new technology of mass killings with poison gas, in this case a liquid cyanide preparation?”

Morsch’s date of the meeting (early June 1943) is not borne out in any manner by the source he cites in footnote 12 on p. 266. This source is the verdict reached by a court on 27 May 1955 in the trial against Gerhard Peters, mentioned in volume 13 of the series *Justiz und NS-Verbrechen* on p. 113. The text of the verdict refers to a meeting of a commission which took place in early 1943 at the Degesch headquarters. It has this to say about the discussion between Peters und Gerstein:³⁹⁹

“The defendant [Peters] often went to Berlin at that time and on the occasion of one of his visits he was told by Prof. Mrugowski that Gerstein wanted to see him. He therefore called on Gerstein at the latter’s office in Berlin.”

Then the verdict summarizes Gerstein’s request:

“Gerstein allegedly then told him [Peters] that he had the most secret order to obtain hydrogen cyanide for killing people and therefore needed the defendant’s advice on these matters. [...] Gerstein then informed him that this was not the point, but that Himmler’s request concerned the use of hydrogen cyanide for executions. He was to supervise the procedure and to obtain the substance. He himself, though, took the use of Zyklon B for this purpose to be overly cruel in view of the unnec-

bile crematories of Sachsenhausen, so that the total number of cremated corpses in that camp would have amounted to 924,480! *Ibid.*

³⁹⁹ C. F. Rüter, D. W. de Mildt (eds.), *op. cit.* (note 105), vol. XIII, p. 113.

essary pain caused by the irritant added and regarded liquid hydrogen cyanide to be more useful."

According to the court, Peters then "advised Gerstein of the dangers presented by the use of liquid hydrogen cyanide, e.g. in connection with its transportation" and refused his request (*ibid.*).

During his interrogation on 27 October 1947, Peters had already referred to his meeting with Gerstein without, however, giving the year the meeting took place:

"As I could see no way to provide pure liquid hydrogen cyanide, there was only the possibility to produce Zyklon B without an irritant. Gerstein requested the supply of such Zyklon without the involvement of Tesch & Stabenow or Heli."

Under a pretext, Peters allegedly managed to have Zyklon B manufactured without an irritant. He then allegedly convinced Gerstein to order a large amount of the material to avoid suspicion – the very quantity which is mentioned in the invoices for Auschwitz and Oranienburg sent to Gerstein.⁴⁰⁰

The credibility of this story is zero. The irritant added to Zyklon B is the methyl ester of bromo-acetic acid, an agent for chemical warfare which is described thus in an Italian reference book:⁴⁰¹

"An important chemical warfare agent which acts both as a tear gas and as a poison gas. Its primary effect, however, resides in its lachrymatory effect."

In the manufacture of Zyklon B, this agent was added routinely.⁴⁰² On the other hand, it was legally required only in the case of the gassing of buildings which were part of a block of houses.⁴⁰³

A test on animals, conducted in 1943, proves the fact that this irritant would not have caused excessive pain to the victims of a hypothetical homicidal gassing:

"Practical work with standard Zyklon B and with Zyklon B lacking this irritant shows no differences in the gassing process. In cases of a leaking gas mask as well as during ventilation the characteristic odor of hydrogen cyanide was also present, yet basically never the piercing lachrymatory effect of bromo-acetic acid methyl ester. Animals showed

⁴⁰³ "Verordnung zur Ausführung der Verordnung über die Schädlingbekämpfung mit hochgiftigen Stoffen. Vom 25. März 1931," *Reichsgesetzblatt*, 1931, no. 12, part I, § 10, p. 84.

no change in their behavior when exposed to Zyklon B with or without the warning agent. It has been observed on the basis of the behavior of cats and dog that [the animals] did not notice the [presence or absence] of the warning agent."

The reason for the absence of such an effect was due to the high boiling point of the irritant: 144°C as opposed to 25.7°C for hydrogen cyanide,⁴⁰⁴ which means in practice that HCN evaporates and dissipates much faster than the tear gas, hence killing the victims before any noticeable lachrymatory effect can be produced.

The verdict concerning Peters mentions explicitly that Degesch has always also supplied commercial Zyklon B *without* the irritant for the gassing of delicate substances (food, tobacco, etc.), which could be learned from the information on the labels of the cans. It stated furthermore that the amount of irritant was *reduced* during the war on account of its scarcity, that Tesch & Stabenow also furnished the hygienic section of the German military barracks at Berlin-Lichterfelde with Zyklon B containing *no* irritant, and that the Zyklon B supplied by Degesch to Oranienburg, "where no killings with Zyklon B occurred" did *not contain* the irritant either.⁴⁰⁵

Let me stress finally that the supplies of Zyklon B which I have summarized in the table above and which are borne out by the invoices sent to Gerstein, carried the mention "Zyklon B hydrogen cyanide without irritant" also in the case of the Auschwitz camp.⁴⁰⁶ This should take care of Morsch's hallucination according to which "the Sachsenhausen concentration camp was once more turned into a field of experiments for a new technology of mass killings with poison gas, in this case a liquid cyanide preparation."

Gerstein's own account of the matter reads as follows:⁴⁰⁷

"The director of Degesch [Peters], who had made out this invoice, told me that he had supplied hydrogen cyanide in vials for the killing of people."

Once again we have no indication of a date. Thus, the date given by Morsch for the meeting is pure invention, which evidently was meant to provide at least some credence for his assertion that the alleged gas chamber at Sachsenhausen was built in the summer of 1943.

Quite apart from the fact that the accounts of Peters and Gerstein do not allow any conclusion to be made with respect to the date of their meeting,

⁴⁰⁴ R. Queisner, "Erfahrungen mit Filtereinsätzen und Gasmasken für hochgiftige Gase zur Schädlingsbekämpfung," in: *Zeitschrift für hygienische Zoologie und Schädlingsbekämpfung*, 1943, pp. 190f.

they contradict each other squarely and are utterly absurd as far as Gerstein is concerned. Limiting myself to the topic of hydrogen cyanide, I will quote only one sentence from Gerstein's "report" (*ibid.*):

"The method for killing children [at Auschwitz and Mauthausen] consisted in placing under their noses a cotton pad soaked with hydrogen cyanide."

It is easy to see why Morsch refrains from quoting the Gerstein report or from at least mentioning it in a footnote!

Morsch's hypothesis that the Sachsenhausen camp may have been "turned into a field of experiments for a new technology of mass killings with poison gas, in this case a liquid cyanide preparation" is in contradiction with Himmler's order to simply use liquid hydrogen cyanide. By speaking of a "liquid cyanide preparation" Morsch wants to eliminate an additional contradiction which results from the alleged use of a mysterious "Zyklon A" in the Sachsenhausen gas chamber. I will deal with this question below.

Realizing that his speculations are untenable not least due to their mutual contradictions, Morsch writes (p. 266):

"The chronological coincidence between the construction of the Sachsenhausen gas chamber and the often-cited meeting of Gerstein and Peters is certainly not sufficient to substantiate such a hypothesis. What is surprising, though, is that a new and largely unknown technical method for killing people was used at Sachsenhausen, for which, so far, no precedents are known."

Before quoting more text, allow me to stress that this paragraph stems from a section entitled "The technical procedure" ("Das technische Verfahren") which shows that Morsch's claim to demonstrate "genesis and construction" of the alleged gas chamber was somewhat reckless. His "findings" in this respect can be summarized in a single sentence: "The gas chamber was *probably* built during the summer of 1943."

This is what Morsch has to say about the technical details of the alleged gas chamber (p. 267):

"The aim of the numerous technical innovations was the replacement of the crystalline Zyklon B by a liquid cyanide preparation which the sources, however, refer to alternatively as liquid hydrogen cyanide, liquid Zyklon B or Zyklon A."

Morsch does not cite any sources for the first two designations, quite apart from the fact that it makes no sense to speak of "liquid Zyklon B" because Zyklon B, in chemical terms, is a porous carrier soaked with liquid hydrogen cyanide. The witness statements known to me in this respect⁴⁰⁸

⁴⁰⁸ E. Kogon *et al.* (eds.), *op. cit.* (note 39), pp. 255f.

speak only of “Blausäure” *i.e.* hydrogen cyanide (Kaindl) or of “a capsule” with “liquefied poison gas” (witness Höhn⁴⁰⁹), which would make “Zyklon A” the only designation to be substantiated, albeit in a rather unconvincing manner:

According to Morsch, the Soviets, on 31 May 1945, discovered a strongbox in the underground morgue of the camp containing seven small flasks sealed with paraffin wax and holding a light-colored fluid. On 14 June of that year a chemical analysis is said to have been made showing that the fluid was “a preparation of hydrogen cyanide (HCN) containing 25 g HCN in 100 g of fluid.” In the analysis the preparation was designated as “Zyklon A” said to contain a mixture of 90% “cyano-carbon ether” and 10% “chloro-carbon ether” (p. 267). Morsch then describes the technical procedure used in the gassings:

“Previously, liquid hydrogen cyanide had been used mainly by placing the strong poison in an unprotected manner in the room to be gassed and letting it evaporate or by spraying it. As this way of operation was not applicable to the planned homicides, a specifically invented or adapted device had to be developed. As substantiated by drawings, photographs, and descriptions it consisted of a ventilator in pressure and one in suction, an electric heater, a bottle-like container which could be closed and into which the glass flasks with the hydrogen cyanide preparation were placed; they could be shattered from the outside by means of a prick. There was also a system of tubes through which the pre-heated gas could be pressure-fed into the gas chamber. This device was attached to the outside of the wall which separated the gas chamber from the adjacent room, right next to the door leading into the gas chamber.”

Such a way of operation, however, was possible only with liquid hydrogen cyanide but not with Zyklon A, as described by Achim Trunk in his chapter entitled “Mass murder with other preparations of hydrogen cyanide” of his paper “The deadly gases,” which I have discussed elsewhere. Trunk writes (pp. 43f.):

“The Sachsenhausen concentration camp, the model for the whole camp system, also had a gas chamber of its own in which prisoners were murdered with hydrogen cyanide or a similar poison: the total number of victims is as yet unknown. The murders by poison gas, however, were not committed with Zyklon B; the sources mention the use of a liquid poison, not a solid substance. The deadly fluid was, in fact, discovered after the liberation of the camp; it was contained in small flasks held in a strongbox. The military laboratory of the Red Army subjected

⁴⁰⁹ Declaration by August Höhn according to the verdict against him of 15 October 1960.

them to a chemical analysis. It was found that the poison was probably the liquid preparation Zyklon A. [...] Zyklon A is composed of 90 % cyanoformic acid methyl ester, toxic when inhaled, and 10% chloroformic acid methyl ester, an irritant. The mixture has a boiling point of 96°C; for use at room temperature it was sprayed under pressure and thus finely distributed."

Achim Trunk points out that the use of Zyklon A for homicidal purposes was basically possible (which is quite correct) and continues (p. 44):

"[...] in case the Zyklon A hypothesis [sic!] is correct, [we also have] a simple explanation for the installation of operational showers in the Sachsenhausen gas chamber (not fake showers as in other gas chambers): water will in fact quickly destroy the components of Zyklon A; running the showers could quite possibly quicken the removal of the poison from the gas chamber after the deed was done – and at the same time take care of any body secretions left behind by the victims."

If we follow Morsch, however, the showers had an entirely different function (p. 268):

"The showers were not only used for camouflage, they accelerated the action of the hydrogen cyanide gas."

We see that the showers were good for many applications except for taking showers...

Let us return to Zyklon A. Once Trunk has expressed his doubts on the subject of the "Zyklon A hypothesis" in the manner shown, he explains in detail the reasons for his reticence (p. 44):

"The source of Zyklon A, however, is uncertain. At the time, it did not constitute a normal commercial product, as Zyklon B or Calcid would have been. Its place in disinfestation had been taken over completely by its successor, Zyklon B, both because of the ban imposed by the Versailles treaty and for economic reasons. Furthermore, the way it was used has yet to be ascertained with respect to the boiling point of this preparation, which was considerably higher than that of hydrogen cyanide. One of the technical particularities of the Sachsenhausen gas chamber – apparently derived from the more modern disinfestation chambers for goods – was the possibility to allow a stream of preheated air to strike the poison before it entered the murder chamber. It has yet to be determined to which degree the indications given by the sources about the way the murders were performed are compatible with these technical and toxicological conditions."

These explanations show Trunk's uneasiness. He does not want to go so far as to say that gassing with Zyklon A would not have been possible using that device. Zyklon A, in fact, requires a device which would resemble

a sprayer for plants operating under 5 to 10 atmospheres pressure. Although technically speaking it was more toxic than hydrogen cyanide, this preparation required a higher dosage on account of its high molecular weight – 2 g per cubic meter.⁴¹⁰

For that reason, Trunk posits the “hypothesis” of liquid hydrogen cyanide usage (p. 45):

“The majority of the indications provided by the sources are more easily compatible with the hypothesis that the deadly poison was liquid hydrogen cyanide.”

This hypothesis, however, contradicts the Soviet account, which causes Trunk to question its validity. The analysis stated that almost 30% of the fluid was cyanide; the conclusion of the Soviet experts is based

“primarily on this value – Zyklon A was, after all, a substance containing hydrogen cyanide and had a cyanide content of nearly 30%. The expertise does not provide any other data which could help to determine the nature of the fluid.” (p. 45)

Among other things, the expertise said neither anything about the specific gravity of the fluid nor about its boiling point (p. 45, footnote 81). But if the result of the chemical analysis is questionable, there is no longer any reason to accept at face value the story about the flasks said to have contained a fluid with 30% of hydrogen cyanide. This is a very significant point, because the Soviets spoke of the investigated “Zyklon A” having contained up to 30% of hydrogen cyanide [*sinil’noj kisloty*]; the weight of the contents of one bottle is given as 150 grams.⁴¹¹ Now, if the fluid was not Zyklon A, what was it? And why would pure hydrogen cyanide be mixed with 70% of something else? One thing is certain: the flasks did not contain pure hydrogen cyanide – which causes Trunk’s hypothesis to crumble. He obviously realizes this and is thus forced to make the following logical somersault (p. 45):

“In any case, regardless of whether the substance employed at Sachsenhausen was pure hydrogen cyanide, Zyklon A or yet another preparation – one thing is certain: once the National Socialist homicide machine had poisoned people with pure carbon monoxide, with engine exhaust gases and with Zyklon B, it devised, at Natzweiler and Sachsenhausen, a fourth and then a fifth method for killing masses of people by means of toxic gases.”

These assertions are in total disagreement with the chronology used by orthodox Holocaust historiography. This timetable states that, at the time the Sachsenhausen gas chamber was being erected (summer of 1943), mass

⁴¹⁰ G. Peters, *op. cit.* (note 402), p. 57.

⁴¹¹ Soviet report on the Sachsenhausen camp, 10-22 June 1945. GARF, 7021-104-3, p. 4.

killings with engine exhaust gases in the camps of the “*Aktion Reinhardt*” were coming to an end (Treblinka, Sobibór) or had already been terminated (Belżec), whereas the murders with Zyklon B at Auschwitz were moving along at full speed. What would have prompted the SS at this point in time to devise a “new” method “for killing masses of people by means of toxic gases”?

On this point, Morsch agrees with Trunk. He, too, asserts that, at Sachsenhausen, the SS wanted to devise a “new, more perfect killing technology” (p. 269) which would possibly have involved the use of liquid hydrogen cyanide.

In addition to my own serious arguments already laid out against this thesis, the thesis is contradicted also by Gerstein’s and Peters’s statements on the contents of their conversation as cited above. If we follow these witnesses, the search for a new killing agent could have had no reason other than the one given by Gerstein: the use of Zyklon B for killing people was too cruel, because the irritant it contained would have caused unnecessary pain to the victims (which is untrue). For that reason, Gerstein took liquid hydrogen cyanide to be more suitable. Based on these two testimonies, false as they are, there could simply not have been any other reason for the search for a new killing agent. However, as Peters did not supply the SS with liquid hydrogen cyanide, the hypothesis propounded by Messrs. Trunk and Morsch collapses like a house of cards. After the invention of this “new, more perfect killing technology,” the gassings in the second and third Reinhardt camps, Treblinka and Sobibór, were stopped, whereas murders with Zyklon B would go on unaltered and unimpeded at Auschwitz – what in the world was the use of a “new, more perfect killing technology”?

Apparently without realizing what he is doing, Morsch takes up here one of the most absurd aspects of the tale of homicidal gassings with Zyklon B, and his hypothesis provides an indirect confirmation of its erroneous character. It is well-known that the “newest and most perfect technology” in the field of disinfestations was the Degesch circulation system. It could have been applied to human beings without any essential modifications. Such an operation would have entailed all the advantages which Morsch ascribes to the “new method” developed at Sachsenhausen. As Morsch himself explains, the Degesch system was first used at Sachsenhausen. On 25 October 1940 technicians from the “Sanitation and Camp Hygiene” of the Inspectorate of Concentration Camps and from Degesch introduced this method at Sachsenhausen. On the same day the head of the department *Haushalt und Bauten* (budgeting and buildings) ordered all

concentration camps to use this method in the future. Morsch comments this order as follows (p. 262):

“This decree assigned a model character to the delousing station of Sachsenhausen, introduced Zyklon B as the poison gas preferred by the SS, and [imposed] the technical process of the circulation chambers officially on all camps.”

This means that, in spite of the fact that from late October 1940 onwards the SS disposed of the most highly developed delousing system of the time employing hydrogen cyanide (which could theoretically also be used for killing people), the SS opted for the use of liquid hydrogen cyanide or “Zyklon” A three years later, regardless of the fact that Zyklon B had been especially developed to reduce the risks and drawbacks associated with the use of these two products! But there is more: at the same time the SS began using a device for feeding the poison gas into the chamber, which, as Morsch tells us, resembled the circulation chambers (p. 268). Why in the world did they not simply use the Degesch system right away for their homicidal projects?⁴¹²

When it comes to the gassings and the number of victims, Morsch limits himself to the terse statement that “the sources concerning the murder actions carried out in the gas chamber are rather sparse.” At least, he says, the fact that people were murdered in the gas chamber is borne out by “many witness statements, both by former SS personnel and by erstwhile detainees” (p. 269). The fact remains, however, that there is not even the shadow of documentary evidence for homicidal gassings at Sachsenhausen, but merely witness statements. Morsch himself concedes that “the Soviet Secret Police conducted the interrogations by applying mental and physical violence” and that the value of the confessions is therefore “very uncertain” (p. 269). Surely, the erstwhile detainees did not have to suffer violence in order to toe the Soviet propaganda line – on the contrary. Not one of them would contradict the crazy assertions dished out by the Soviet “experts.” These statements are nothing but very general declarations for whose accuracy we have no objective proof. To become convinced of this state of things, we only have to read Morsch’s summary of the statements provided by these eye-witnesses. Once Morsch has claimed that “in the course of a number of investigations and criminal proceedings in the old Federal Republic” of Germany several gassing actions have been “ascertained beyond any doubt,” he goes on to say (p. 270):

⁴¹² A thorough discussion of this issue can be found in my study on the Auschwitz gas chambers, *op. cit.* (note 28), chapter 6.2., “Why Not Use Degesch Gas Chambers for Homicides?,” pp. 185-188.

“In the summer and early fall of 1943, the camp commander ran at least three ‘test gassings’ in the gas chamber that had just been completed. The victims were small groups of Soviet PoWs, between two and five persons each.”

Then, according to Morsch, in the summer of 1944, after the 20th of July (the attempt on Hitler’s life) “eight to ten civilian workers” were gassed, and, “in early 1945, probably in February,” “a group of female forced laborers from eastern Europe” was taken “directly into the gas chamber.” Morsch says that, at an unknown point in time, twelve persons suffering from syphilis as well as three Wehrmacht soldiers were gassed as well! Finally, “several major murder actions” are said to have taken place from December 1944 onwards “in connection with the evacuation of the camp.” According to Morsch, as before, the victims included “hundreds of Jews,” aside from “sick persons or people unable to walk and other specially selected groupings.” Altogether, Morsch tells us, “several thousand detainees” ended up as victims of “the mass murders ordered directly by Himmler, by Kaltenbrunner, the head of the RSHA, by Heinrich Müller (“Gestapo-Müller”), head of the Gestapo, and by the Inspector of the Concentration Camps, Glücks” (p. 271).

These alleged massacres are categorically refuted by a contemporary document about changes in the camp strength which I have mentioned in my article cited above. It is summarized in the table below:

Table 6: Changes of Detainee Numbers at Sachsenhausen Camp

<i>Year</i>	<i>Entries</i>	<i>Departures</i>	<i>Releases</i>	<i>Transfers</i>	<i>†</i>	<i>Executed</i>	<i>Escapes</i>	<i>Missing</i>	<i>Unspecified departures</i>
1940	18,555	18,402	2,064	11,425	3,788	–	–	–	1,125
1941	8,662	8,531	1,153	6,191	1,187	–	–	–	–
1942	16,590	10,747	1,663	4,701	4,175	208	–	–	–
1943	20,011	8,334	1,064	3,387	3,563	320	–	–	–
1944	50,565	31,100	2,349	25,129	2,366	136	96	1,024	–
1945	17,813	22,721	278	17,251	4,821	11	295	65	–
Σ	132,196	99,835	8,571	68,084	19,900	675	391	1,089	1,125

On 1 January 1940 the camp held 12,187 detainees. Between January 1940 and April 1945 (132,196 – 12,187 =) 120,009 detainees were admitted. Over the same period, 8,571 detainees were released, 68,084 were transferred elsewhere, 19,900 died, 675 were executed, 391 escaped, 1,089 were probably removed from the camp by the local police authorities, and 1,125 were transferred to unspecified destinations. These numbers concern only male detainees, but we must underline that the camp was set up on 12

July 1936 as a camp for male inmates only. The presence of female detainees has only been shown for the time after 15 March 1945.⁴¹³

During the Nuremberg trial, the Soviet prosecutor Smirnov declared during the session of 19 February 1946:⁴¹⁴

"I shall now present to the Tribunal evidence of the fact that besides the stationary crematoria, there existed also movable crematoria. The Tribunal already knows about the movable gas chambers. These were 'murder vans.' There were also created transportable crematoria. An SS member, Paul Waldmann, testifies to their existence. He was one of the participants in the crime perpetrated by the German fascists when 840,000 Russian prisoners of war in Sachsenhausen were annihilated at one time."

This figure is yet another striking proof for the "reliability" of the famous Soviet "expertises."

Continuing with Morsch's summary of the gassings, we learn that "many sick, burdensome and Jewish victims were smothered in the gas chamber just before the end of the war" and that, in 1968, the former SS man Paul Breckenfelder was found guilty by a court of the communist East-German "Democratic Republic" of "having participated in the gassing of some 400 old and sick detainees in February/March 1945" (p. 271).

When reading Morsch's listing of alleged gassings, one is struck by the fact that he does not indicate a precise date for any of these events and that he never provides us with an accurate number of victims either. Still, in the end he goes as far as to say that

"Mass killings by means of poison gas in a stationary gas chamber at the Sachsenhausen concentration camp can be substantiated beyond doubt."

Apparently Mr. Morsch has his own special ideas about the meaning of the term "beyond doubt." Hence Achim Trunk, when referring to Morsch's article about the Sachsenhausen gas chamber, is perfectly right when speaking about the "difficulty of ascribing a precise number of victims to the gas murder carried out there" (p. 25, footnote 7).

Morsch believes that the gas chamber was used "for homicides rather in exceptional cases, sporadically and selectively." The victims were for the most part persons "who were shipped to Sachsenhausen specifically to be killed, often by superior authorities of the SS state, be they Soviet PoWs, women, civilians or so-called looters." But even for these doomed persons the gassing was "rather an exception"; normally they were shot (p. 272).

⁴¹³ Gudrun Schwarz, *Die nationalsozialistischen Lager*. Campus Verlag, Frankfurt/New York 1990, p. 189.

⁴¹⁴ IMT, vol. VII, p. 586.

When trying to answer the question why the gassings occurred only sporadically, Morsch goes back to his untenable thesis set out above that gassing techniques were being perfected at Sachsenhausen (p. 273).

“The chemical technology [...] was probably conceived rather more as an improvement of the existing ways of killing people with poison gas: faster, better camouflaged, and easier and less complicated for the SS operators. At Sachsenhausen the gas chamber of the future, as it were, was being tested.”

As I have stated before, this thesis makes no sense at all. The “gas chamber of the future” was the one based on the Degesch circulation model which was indeed tested at Sachsenhausen but was never used for homicidal purposes according to the opinion of orthodox Holocaust historians.

In a final paragraph, Morsch takes on the “revisionist denial strategies” (p. 274):

“Over the last few years, leading revisionists, in their journals such as the ‘Vierteljahreshefte für freie Geschichtsforschung’ and elsewhere, above all on the world-wide web, have tried to refute the existence of a gas chamber in the concentration camp. In doing so, the authors use pseudoscientific arguments, by analyzing the contents of Russian archives as well as those of the Memorial site over an extended period of time and then going into an extended and detailed discussion of the value of these sources. Often these attempts at denial are in no way simple, clumsy and transparent, but consist of chains of apparently objective arguments and denial strategies which even historians not conversant with these matters cannot easily refute. In my opinion, these revisionist attempts at denial must therefore be taken most seriously, particularly so as they find a large audience by means of the Internet and have even made a foray into the British Irving trial.” (Emph. added)

Morsch then criticizes various revisionist arguments but without ever even mentioning, let alone discussing, my above-mentioned article on Sachsenhausen. Instead, he merely informs his readers that “Station Z” was blown up in two major steps in 1952 and 1955 by the East German paramilitary “*Volkspolizei*” (people’s police). But why would they have done that, if they contained “traces of the extermination plants” which the SS had unsuccessfully tried to hide (p. 276)? According to Morsch, the SS had “considered a possible re-activation of the gas chamber in the case of a possible re-occupation of the camp, otherwise they would probably have destroyed the equipment” (p. 275) – a truly unusually ridiculous argument! Would it not be much more logical to assume that this “equipment” had nothing to do with a *homicidal* gas chamber and that the German com-

munists therefore, after the war, thought it better to do away with this exonerating evidence?

I will conclude this chapter by examining the value of the Soviet “technical expertise” concerning the Sachsenhausen camp. Let us first consider the cremation furnaces. The Soviet “experts” claimed that the four coke-fired Kori furnaces could have incinerated 575 corpses in 24 hours, a figure five times higher than the maximum theoretical capacity.⁴¹⁵ The total number of persons cremated is given as 924,480 – a truly grotesque figure.

In my above-mentioned article on Sachsenhausen I have already discussed the equally outrageous figure of 840,000 murdered Soviet PoWs. According to Messrs. Trunk and Morsch, the flasks with the mysterious fluid were found in a strongbox, but the Soviet report says that they had been discovered “in a recess of the morgue.” As we have seen, even Achim Trunk has his doubts about the character of the analysis of this fluid (if it ever existed). It is an unsupported assumption that the flasks contained 30% hydrogen cyanide and were used for the alleged homicidal gas chamber. When the Soviet “specialists” inspected the alleged homicidal gas chamber, it was empty. The technical equipment was found “in the rechargeable battery building of the industry yard” (p. 275).

“Station Z,” as I have already pointed out, does no longer exist. But this is not due to the SS (which would have had good reasons for the demolition, *if* the place had really been an extermination site) but due to the “People’s Police” of the obediently communist, anti-fascist “German Democratic Republic.” Thus, for better or for worse, we must rely on the Soviet “expertises.”

The conclusion is now very easy: the tale of the Sachsenhausen gas chamber is nothing but Soviet propaganda. Historiography is unable to determine today at what time, for what reason and on whose orders the alleged chamber was erected, what kind of poison was used there, how many victims any gassing actions caused, if any, or when such actions were carried out, if at all. So much for what Morsch and his friends have “substantiated beyond doubt.”

It is highly likely that the small room in question was a gas chamber indeed, but one for the destruction of insects and not people.

Between 10 and 22 June 1945 a commission of Soviet experts, consisting of Colonel Vlochin and the engineers Teljaner and Grigorev, inspected the Sachsenhausen crematorium and the alleged adjacent execution sites (gas chamber and shooting installation). The group then wrote a report

⁴¹⁵ See C. Mattogno, *op. cit.* (note 88), vol. I, second part, chapter IX, 3.2, “La perizia sovietica sui forni crematori Kori del KL Sachsenhausen,” pp. 382-384 as well as IX.4, “Discussione sulle perizie tecniche sovietiche sui forni crematori Kori,” pp. 385-389.

with several additional drawings. On the subject of the alleged homicidal gas chamber, the report states:⁴¹⁶

“Gas chamber.^[417] This is a rectangular room, 2.75 by 3 m, with two entry doors: one from the garage [no. 1], the other from the undressing room [no. 4]. At a level of 1.5 m above the floor the northwestern wall had a window 75 by 100 cm with an armored glass pane and a metal grid.

At a level of 2.20 m above the floor, the northeastern wall had a ventilator for the aeration of the room as well as a window with an armored glass pane and a metal grid. All four walls are tiled up to a level of one and a half meter. On the wall and the ceiling there is a water pipe with six shower heads. The floor is made of concrete. The floor has a drainage channel.

Closer inspection of the gas chamber wall adjacent to the garage [no. 1] revealed traces of an opening which was closed later on and which had held the device for the evaporation of the hydrogen cyanide, examined during the technical investigation. This device consisted of a hermetical[ly closed] chamber, an electrical mechanism for heating the air, a blower for feeding hot air, and a connecting tube. The feed of the hydrogen cyanide vapors into the gas chamber was accomplished in the following manner: a flask of Zyklon ‘A’ containing 30% hydrogen cyanide was placed in the chamber. The contents of the flask weighed 150 grams.

Note: Seven flasks with hydrogen cyanide – the preparation Zyklon ‘A’ – were found within the confines of the crematorium in a recess in the morgue, next to the shooting installation. At the same spot, a large number of broken Zyklon ‘A’ flasks was also found.

The flask would be broken by a pressure screw, and by heating the air with the mechanical mechanism the vapors of hydrogen cyanide were blown into the gas chamber through a wire-mesh... [illegible word].”

It can be said with certainty that the installation described and drawn by the Soviet experts was a modified version of the Degesch circulation system, adapted to this room. This is clearly borne out by a comparison of the Soviet drawing (document 4) and the diagram of the operating manner of the mechanism (document 5), on the one hand, with a drawing showing the Degesch device (document 2), on the other.

As the ventilator could not be mounted above the ceiling, the Degesch standard design was modified in such a way that two ventilators were in-

⁴¹⁶ Soviet report on the Sachsenhausen camp, 10-22 June 1945. GARF, 7021-104-3, pp. 2-4.

⁴¹⁷ Appears as no. 2 on the drawing of the crematory; see document 3.

stalled for the ventilation of the room. The first one, effecting the circulation (cf. no. 7 in document 5) was mounted on the floor and opened into an open distribution tube (no. 8), the second one, for ventilation, was set on the ceiling and connected to a chimney (no. 9). The Zyklon B can was placed into the – gastight – opening mechanism (no. 1) which had an opening lever (no. 2) and a hermetically sealing lid (no. 3). The Zyklon B granules dropped into a wire-mesh basket (no. 4) below. Underneath the latter was an electric heater (no. 5) for the vaporization of the hydrogen cyanide. The ventilator on the floor (no. 7) fed the gas mixture into the room through the distribution tube (no. 6). In the opposite corner was the opening of the circulation tube which was connected to the device for opening the Zyklon B cans (no. 1). On each passage, the gas mixture was heated so that the hydrogen cyanide would evaporate more quickly. This system assured the circulation of the gas mixture, which was the underlying principle of the Degesch circulation system. When the disinfestation had ended, the lid was opened, the Zyklon B can was removed, the connection between the vertical suction tube and the mechanism was closed, and both ventilators were switched on. The circulating ventilator blew in fresh air from the outside while the ventilation fan (no. 9) removed the air from the room.

A contemporary photograph of the gassing device confirms that it was designed to hold a can of Zyklon B.⁴¹⁸ The alleged bottles of Zyklon A actually had a capacity of merely 150 grams, or not more than fits into an ordinary small beverage glass, but the seat of the device has a much larger diameter. Moreover, since the alleged Zyklon A bottles were made of glass, recovery of the glass fragments after the bottle's rupture would have been at least inconvenient.

Even though this disinfestation chamber – just as any other such chamber in any other concentration camp – could theoretically have been used for homicidal purposes, its very size – 2.75 m × 3 m = 8.25 square meters – renders Kaindl's "confession" absurd that it had been built "as a mass killing station."⁴¹⁹

As I have explained elsewhere (chapter 9) this gas chamber operated in the same way as the one at Mauthausen. The design of both chambers was very similar as well. Both had two doors, one for the "unclean" side through which the garments to be disinfested were carried into the room, and another for the "clean" side used for removing the garments after treatment.

⁴¹⁸ See Document 10, taken from *Filmblatt*, vol. 11, winter 2006, p. 22.

⁴¹⁹ E. Kogon *et al.* (eds.), *op. cit.* (note 39), p. 322.

The Sachsenhausen gas chamber had a genuine water pipe with six genuine shower heads. A gutter in the floor ensured the draining of the water. The walls were tiled up to a level of a meter and a half.

At Mauthausen, the gas chamber located in the vicinity of the crematorium⁴²⁰ has two gas-tight doors (photographs 1 – 3), a genuine water pipe with 15 genuine shower heads (photograph 5); its walls are tiled with fine tiles up to a level of one meter and a half. It is relatively small, having a floor area of $3.59 \text{ m} \times 3.87 \text{ m} = 13.89$ square meters and a height of 2.42 meters.⁴²¹ It is equipped with a heating radiator consisting of five horizontal tubes (photograph 6). A round metal lid in the ceiling closed off the opening which had held the ventilation fan (photograph 7). Both rooms served undoubtedly alternately as shower rooms and disinfestation chambers for the crematorium personnel who were constantly handling corpses.

Just like most revisionist studies, my article on the Sachsenhausen concentration camp, which raised serious arguments against the existence of homicidal gas chambers at Sachsenhausen³⁸³ was received with icy silence by Messrs. Morsch, Perz and Freund, as well as by the other participants of the Oranienburg meeting. The gentlemen, once again, failed to counter the revisionists and their “denial strategies” with concrete arguments.

11. The Gas Chamber of the Ravensbrück Camp

At the beginning of his article “The gas chamber in the Ravensbrück concentration camp, early 1945” (“Die Gaskammer im Konzentrationslager Ravensbrück Anfang 1945”; pp. 277-287), Bernard Strebel writes that the history of the investigations into the gas chamber at Ravensbrück was “closely linked with its denial” (p. 277). Strebel himself admits that the first “denier” (the correct term would of course be contestor or person to contest) of this gas chamber was, ironically, not a revisionist but the French historian Olga Wormser-Migot, a woman of Jewish descent (*ibid.*).

The strangest aspect of this alleged gas chamber is that it is said to have gone into operation only “in the final phase of the camp history” (*ibid.*) or more precisely in February 1945 (p. 282). In view of this odd timing, the question as to who ordered the killing station to be built, why, and for what reason is of utmost importance.

⁴²⁰ Just like the Topf double muffle furnace, it is located in the basement of the camp hospital. See document 5.

⁴²¹ Measured by me *in loco*.

In the second half of 1944, Bernard Strebel says, 52,000 detainees were moved to Ravensbrück who ran the risk of “being [considered] superfluous from the start” (p. 278). He goes on to say (p. 280):

“It is no longer possible to say without ambiguity who initiated the installation of a gas chamber. Commandant Suhren and the Head of the Protective Custody Camp, SS-Obersturmführer Johann Schwarzhuber, independently declared that in early 1945 the camp command had received an order from their superior authorities to kill all sick inmates as well as those unable to walk.”

This order is said to have come from Himmler, Richard Glücks and August Heißmeyer, the Higher SS and Police Leader in military district VIII (Berlin; pp. 280f.). On 15 August 1946 Schwarzhuber made the following deposition:⁴²²

“9. GASSING.^[423] End of February 1945 I was summoned, together with Dr. TROMMER, to the camp commander Sturmbannführer SUHREN. SUHREN informed us that he had received an order from Reichsführer HIMMLER to the effect that all women who were ill or unable to march were to be killed. Before he told us this, he asked us, how many sick women there are in the camp. I told the camp commander that I was glad to have gotten away from Auschwitz and that I didn't want to do this a second time. He then told me that the deputy camp commander SAUER was charged with carrying out this order. During the subsequent days selections were carried out in various blocks by Dr. TROMMER, on which occasion he selected more than 2,300 women. First they started to shoot these women. These shootings were performed by Hauptscharführer MOLL. He had 8 inmates assisting him. This method didn't seem to be fast enough for the camp commander. He said in my presence, 'this is not fast enough; we have to use other methods.' Subsequently Sturmbannführer SAUER ordered the installation of a gas chamber in a barrack next to the crematorium. I was present during one gassing. Always 150 women were forced into the gas chamber at a time. Hauptscharführer MOLL ordered the women to undress and told them that they were about to be deloused. Then they were led into the gas room and the door was closed. A male inmate wearing a gas mask climbed onto the roof and from the top threw a gas can into the room through an opening, which he closed again immediately. I heard moaning and wailing in the room. After two to three minutes it

⁴²² Deposition by J. Schwarzhuber of 15 August 1946. TNA, WO 235-309, pp. 4f. of the statement.

⁴²³ The German term used twice by Schwarzhuber in his deposition – “Gasen” – is unheard of. It should be “Vergasung.” Translator's note.

became quiet in the room. I cannot say whether the women were dead or stunned. I was not present when the room was emptied. I was merely told (by MOLL) that the corpses were brought into the crematorium instantly. Sturmbannführer SAUER, Dr. TROMMER and Hauptscharführer MOLL were in charge of the entire implementation of this operation, and they were always present during the gassing. The whole work was done by inmates who had been commandeered from the male camp.”

A while earlier, on 30 December 1945, commander Suhren said the following on the same subject:⁴²⁴

“Gas Chamber:

I was occupied with the dissolution of various subcamps in March 1945, and for this reason I was absent from my main camp Ravensbrueck. When I returned, this was roughly in mid-March, I found a so-called Sturmbannführer Sauer to be camp commander. Sauer was the former commander of the Riga camp. I took over the command again – but Sauer stayed in the camp and negotiated with the Higher SS and Police Leader in Berlin, defense district III, named Heismeyer.

I was informed by Sauer that he had received the order from Heismeyer to build a gas chamber. As far as I know, the gas chamber already began to operate at this point in time for some three weeks, that is [it was] in operation until early April. The inmates destined for the gas chamber were selected by the camp physicians. The head physician was Dr. Trommer, and I found out through him that some 1,500 women were gassed, namely those suffering incurably from tuberculosis and consumption [which is the same thing]. I cannot tell with certainty which physicians were involved in the selection of those destined for the gas chamber, but I consider it almost certain that Dr. Winkelmann was involved in it. Other camp physicians were probably involved in it as well. The names of the physicians I can remember are:

Dr. Trommer, Dr. Treite, Dr. Winkelmann, Dr. Lukas, Dr. Rosenthal, Dr. Oberhauser, Dr. Schietlauski, Dr. Trommer’s predecessor.”

These “confessions” are squarely opposed by two substantiated facts:

First of all, in late 1944 the Bergen-Belsen camp was turned into a collection camp for sick detainees from other camps,⁴²⁵ which means that there could not have been an order from Himmler to kill all unfit detainees. Secondly, as Strebel himself explains,

⁴²⁴ Statement by Fritz Suhren of 30 December 1945. TNA, WO 235-310. p. 1. Strebel quotes a part of it on p. 282.

⁴²⁵ R. Phillips (ed.), *Trial of Josef Kramer and Forty-Four Others (The Belsen Trial)*. William Hodge and Company, London/Edinburgh/Glasgow, 1949, pp. XXIX, 515.

“there were ever more concrete negotiations of high-ranking SS officers with representatives of the Swedish Red Cross and the World Jewish Congress. In this way, Himmler hoped to negotiate a separate peace with the Western Allies behind Hitler’s back and against his explicit will. Among other things, the negotiations resulted in the liberation of 7,800 female detainees from Ravensbrück before the end of the war – in particular through the ‘Aktion Bernadotte.’” (p. 279)

This was a gesture of good will by Himmler who tried to score bonus points with the Allies. It is therefore simply nonsensical to ascribe to him a simultaneous order to have all unfit detainees killed.

Seen from the viewpoint of orthodox Holocaust historians, such theories are particularly foolish, because these same historians have been asserting that in October 1944 Himmler ordered “the gassing at Auschwitz to be stopped and the gas chambers and furnaces in the crematoria to be dismantled” (van Pelt, p. 215). Before abandoning the Auschwitz camp, all detainees were moved to other camps, Ravensbrück included, except for 7,000 sick inmates who were unable to march and whom the SS left at Auschwitz I, Birkenau and Monowitz where they would soon be found by the Soviets.⁴²⁶ This means that the physically unfit of an alleged extermination camp were spared – at the risk of allowing them to tell the Russians about all the unbelievable things that had happened in that camp – whereas the unfit detainees of an “ordinary” camp like Ravensbrück would have been gassed a few weeks later! All this reveals the lack of plausibility of Strebel’s argument that the SS had “truly attempted [...] not to let any inmates fall alive into the hands of the Allies” and had therefore planned to annihilate them (p. 286). The whole argumentation thus assumes an utterly fictitious character.

It is easy to retrace the way in which the legend of the Ravensbrück gas chamber took shape. Over the last few months of 1944, the conditions prevailing in all the remaining camps had taken a catastrophic turn for the worse – not only because the epidemics raging there had gone completely out of control, but also on account of the ever worsening hygienic and sanitary situation and the lack of food, provoked by the collapse of the German infrastructure which had been completely destroyed by Allied bombing. These consequences of the war led to the death of thousands of inmates. The mortality in the camps was to reach its peak only *after* the end of the claimed program of mass extermination.

⁴²⁶ A. Strzelecki, *Endphase des KL Auschwitz*. Verlag Staatliches Museum in Oświęcim-Brzezinka, 1995, p. 256. Of these ca. 7,000 inmates, 536 died; their corpses were subjected to an autopsy by the Soviets. GARF, 7021-108-21.

A number of terse statistical data demonstrates this:⁴²⁷

- At Buchenwald, no fewer than 12,595 out of the total of 32,878 deaths registered in the statistics of the infirmary occurred in the first three and a half months of 1945 (as compared to 20,283 deaths in the preceding six years!)
- At Dachau, 15,385 detainees, more than half of the total of 27,839 deaths registered there, died between the beginning of January and the end of April of 1945 (as compared to 12,455 detainees who died in the earlier four years!)
- At Mauthausen, a total of 86,026 deaths have been registered, 36,043 of which belong to the period of January through May 1945.
- At Sachsenhausen, a total of 19,900 deaths were registered in the years of 1940 through 1945; a quarter of them – 4,821 – occurred in the first four months of 1945.

When British and American troops reached these camps, they considered the horrifying scenes they saw in the camps as a confirmation of the intensive propaganda they had been subjected to over the years. They believed that the National Socialists had exterminated entire groups of people, Jews in particular, and ascribed the extreme mortality to an intentional policy of killing the inmates, which, in their opinion, had also been accomplished by means of gas chambers. During the Nuremberg trial, the British chief prosecutor, Sir Hartley Shawcross, went so far as to declare:⁴²⁸

“Two-thirds of the Jews in Europe exterminated, more than 6 million of them on the killers’ own figures. Murder conducted like some mass production industry in the gas chambers and the ovens of Auschwitz, Dachau, Treblinka, Buchenwald, Mauthausen, Maidanek, and Oranienburg.”

This charge is echoed in a quotation taken from the works of the British-Jewish Holocaust historian Gerald Reitlinger:⁴²⁹

“In this way, over time, every single one of the concentration camps was given its own gas chamber, of one type or another, even though its use did not always turn out to be feasible.”

It goes without saying that “witness statements” were available for every camp, including Buchenwald⁴³⁰ and Groß-Rosen.⁴³¹ It would be quite in-

⁴²⁷ Cf. C. Mattogno, *Negare la storia? Olocausto: la falsa convergenza di prove*. Effedieffe Edizioni, Milan, 2006, pp. 74f.; Engl.: “Denying Evidence,” in: G. Rudolf, C. Mattogno, *op. cit.* (note 208), p. 242.

⁴²⁸ IMT, Vol. XIX, p. 434.

⁴²⁹ G. Reitlinger, *op. cit.* (note 79), p. 166.

⁴³⁰ Reverend Georges Hénocque has described this camp’s “gas chamber” in detail. A reproduction of his eyewitness statement can be found in R. Faurisson, *Mémoire en défense contre ceux qui m’accusent de falsifier l’histoire*. La Vieille Taupe, Paris 1980, pp.

teresting to find out why the historical legend of the gas chambers took hold for some camps, but not for others, as was the case for Buchenwald and Groß-Rosen.

While the legend of the gas chambers was being promoted, the Allies knew no bounds in increasing the numbers of victims. Thus, Ravensbrück was assigned 92,000 deaths whereas the “true” figure – according to Strebel – amounted to 28,000 (p. 287), for Dachau Allied propaganda touted a figure of 238,000 victims (B. Distel on p. 340), although available documents prove that the actual figure was 27,839.⁴³² Soviet exaggerations of the number of victims in the camps they had occupied, such as Majdanek and Auschwitz, though, were even more blatant.

The existence of gas chambers immediately became a dogma which the SS defendants could not question without risking to get entangled in a hopeless situation. Hence they – and their lawyers – almost invariably opted for an opportunistic defense strategy. The circumstances in which the witness statements of former detainees took shape have been described most succinctly by Olga Wormser-Migot for the case of Ravensbrück:⁴³³

“It is striking that assertions as to the existence of gas chambers began to be made at Ravensbrück in February 1945, hence after the arrival of inmates evacuated from Auschwitz, when the prisoners at Ravensbrück learned about the [alleged] existence of gas chambers at Auschwitz.”

A transport of 4,782 detainees from Auschwitz did indeed arrive at Ravensbrück on 29 January 1945.⁴³⁴ Members of the Auschwitz camp staff had also been moved to Ravensbrück, among them Schwarzhuber himself and SS-Hauptscharführer Otto Moll, who is said to have been the head of the Auschwitz “murder squad” (p. 284). Under these circumstances the local detainees became convinced that there *had* to be a gas chamber at the Ravensbrück camp as well!

If we follow the French author Germaine Tillion, who was herself interned at Ravensbrück, Suhren, when questioned about the existence of a

191f.

⁴³¹ In one of the most important Polish books about this camp, *Gross Rosen. Obóz koncentracyjny na Śląsku*, Wydawnictwo Bellona, Warsaw 1990, the author Mieczysław Mołdawa dedicates several pages to the room “for killing people with gas.” The former inmate of Groß-Rosen Isaak Egon Ochshorn stated about it: “Between October 1941 and August 1942, 500 to 600 Russian PoWs were killed with poison or gas every day. I myself was present, because I had to write down the respective numbers.” NO-1934, p. 3.

⁴³² G. Neuhäusler, *Wie war das im KZ Dachau?* Karmel Heilig Blut Dachau, Munich, 1961, p. 27.

⁴³³ Quoted according to G. Tillion, *Ravensbrück*, Éditions du Seuil, Paris, 1973, p. 240.

⁴³⁴ Het Nederlandsche Roode Kruis, *Auschwitz*. Deel VI. ‘s-Gravenhage, 1953, p. 107.

gas chamber, had initially denied it, but later on he accepted it with the proviso that it had not been under his command.⁴³⁵ Strebel notes (p. 281):

“Not one of the defendants of the Ravensbrück trials has denied the existence of a gas chamber. Schwarzhuber and Suhren merely claimed that they were not yet present at Ravensbrück, or stationed elsewhere, at the time of installation and start-up (late January/early February). Both of them named SS-Sturmbannführer Albert Sauer, the erstwhile commander of the concentration camp at Riga-Kaiserwald, as the one who had been put in charge of the installation of a gas chamber.”

In view of the defense strategy adopted by nearly all defendants at such trials, such protective statements are quite understandable.

Strebel describes the alleged gas chamber as

“a wooden barrack in the immediate vicinity of the crematorium which, until then, had been used for the storage of materials. We may be certain that this gas chamber operated from 8 February until 30 March 1945 (Good Friday).” (p. 282)

We will soon show the degree of “certainty” of this assertion. First, it behooves us to examine the testimonies. On 30 August 1946 Schwarzhuber declared:⁴³⁶

“Between 150 and 200 inmates were shot by MOLL. After these executions VON ZUREN was told that this is too slow, that the rest had to be gassed now. Sturmbannführer SAUER was told about that, who in turn told me about it. Between 2300 and 2400 persons were gassed at RAVENBRUECK [sic]. The gas chamber measured some 9 by 4.5 meters and could take in 150 people. The gas chamber was about 5 meters away from the crematorium. The prisoners had to undress in a small shed some 3 meters from the gas chamber and were then led into the gas room through a small chamber.”

As we have already seen, the “gassing” (*Gasen*) was carried out as follows:

“A male inmate wearing a gas mask climbed onto the roof and from the top threw a gas can into the room through an opening, which he closed again immediately.”

Strebel states that it is rather unlikely that this task was entrusted to an inmate (note 24 on p. 282). This is his only criticism of Schwarzhuber’s and Suhren’s testimonies. The least one can say is that his critical sense is extremely weak.

⁴³⁵ G. Tillion, *op. cit.* (note 433), p. 175.

⁴³⁶ Statement by J. Schwarzhuber of 30 August 1946. TNA, WO 235-310 (only one page). Strebel quotes from it on p. 283, omitting the initial part.

If the “gas chamber” measured $9\text{ m} \times 4.5\text{ m} = 40.5\text{ m}^2$, it could have accommodated more than 150 inmates, or about 4 per square meter. Given that the “gas chamber” had allegedly been built because killing by shooting into the neck was too slow, it does not make much sense that it was used only at more or less half its potential maximum capacity (8 inmates per square meter would have been a reasonable maximum packing density).

On the other hand, the number of alleged victims provided by the two witnesses is not only contradictory (2,300-2,400 versus 1,500), but also at odds with their assumptions.

The “gas chamber” is said to have been in operation for 3 weeks (21 days), during which it could have “processed” at least ($21 \times 150 =$) 3,150 inmates. Conversely, if there were 2,400 or 1,500 gassing victims, they could have been killed within 16 or 10 days, respectively. Hence, the whole story seems to be utterly inconsistent.

The witnesses talk about the “gas chamber” as if it were a common facility known to everybody, like for instance a storage hut, and all the technical problems involved are therefore totally ignored by both witnesses. The description of this room is rather superficial. It is not even specified what kind of “gas” this installation used. Schwarzhuber merely hints at it when he speaks of a “gas can” – presumably of Zyklon B. The inmate carrying out the gassing had to “climb” onto the roof of the chamber, and there the contents of the “gas can” were thrown – obviously on the heads of the victims – through an “opening” that could be closed (it is not specified how). How was the “gas chamber” ventilated? Schwarzhuber mentions only one door. The structure of the extermination facility defies our imagination: the “gas chamber” was “in a barrack” (*in einer Baracke*) 5 meters away from the crematorium, but the prisoners had to undress “in a small shed” (*in einem kleinen Schuppen*) which was 3 meters away from the “gas chamber,” and the gas chamber was accessed by walking “through a small room” (*durch ein kleines Zimmer*): So there were at least two buildings: “*Baracke*” and “*Schuppen*.” How do you reconcile this description with the official version, according to which the “gas chamber” was in a barrack? And what kind of barrack was it? There were indeed many standard models of barracks, for example the “*Pferdestallbaracke Typ 260/9*” (horse stable barrack) measuring $40.76\text{ m} \times 9.56\text{ m}$; the “*RAD-Baracke*” (barracks of the Reich Labor Service), $69.70\text{ m} \times 8.14\text{ m}$; the barrack “*RAD IV/3*” ($19.95\text{ m} \times 8.14\text{ m}$); and the “*Schweizer-Baracke*” (Swiss barrack, $28\text{ m} \times 6\text{ m}$). None of them fits Schwarzhuber’s description, though (“9 by 4.5 meters”).

Since the buildings in question no longer exist (if they ever did), the evidence for the existence of a homicidal gas chamber is reduced to mere testimonies and a few transport lists.

Before we examine them, it is worthwhile taking a closer look at the alleged strange procedure of the “extermination scenario” supposedly implemented at Ravensbrück. Strebelt says that “no precedence of any racist criteria used in the selection” has been determined (p. 286 – as if the SS guards had mutated overnight into staunch anti-racists) and that the male and female detainees selected in the camp for being killed were taken to the so-called “youth protective camp” at Uckermark, a mile away from Ravensbrück. There they were allegedly subjected to another selection, sent back to Ravensbrück and gassed there (p. 280). Not really the most efficient procedure, in my opinion.

Among the female guards allegedly involved in this operation was commander of the Uckermark camp, Ruth Neudeck. Tillion provides us with a longer excerpt of one of her statements:⁴³⁷

“Every day some 50 to 60 women were put onto the list by me, who, it was said, were to be moved to the Mittweida camp. This camp never existed; it was an invention by Schwarzhuber to avoid telling the inmates that they were to be gassed. The selected women were taken by us into an empty barrack which we called the gym. Around 6pm, still on the same day, a truck arrived which took the detainees to the gas chamber at Ravensbrück in 2 runs.”

3,000 women were gassed according to Ruth Neudeck (*ibid.*). In other words, the truck had to make 100 round trips to take the intended victims to Uckermark and back to Ravensbrück, covering some 600 kilometers in the process. Apparently there was a surplus of fuel at the Ravensbrück camp in the spring of 1945...

The insanity of this procedure becomes even more apparent if we imagine that something like that would have taken place at Auschwitz. In that case the intended, pre-selected victims from the Birkenau camp would have been moved to the Auschwitz main camp in order to be “selected” there once again and then taken back to Birkenau to be gassed!⁴³⁸

What Ruth Neudeck had to say about the gas chamber of Ravensbrück is much more important, though:⁴³⁹

“After I had been at Uckermark for 3 or 4 days, Rapp told me that the women we had selected were taken to be gassed in the Ravensbrück

⁴³⁷ G. Tillion, *op. cit.* (note 422), p. 260.

⁴³⁸ The difference is that the distance between Birkenau and Auschwitz I is a little longer than that between Ravensbrück and Uckermark.

⁴³⁹ *Ibid.*, p. 261.

crematorium. The car always stopped at 50 meters from the crematorium. Rapp and his friend then took 2 women at a time from the car and led them into the crematorium. I and the other female guards stayed near the car until the last detainees had been taken into the crematorium.”

This statement clearly says that the gas chamber was not at all in a barrack next to the crematorium but in the crematorium itself! We see once again that the myth of the Ravensbrück gas chamber had its roots in the Auschwitz myth. Since the Auschwitz gas chambers are said to have been located in the crematoria, this also had to apply to Ravensbrück.

In a later interrogation Ruth Neudeck “improved” her first confession. In a short excerpt from this interrogation quoted by Tillion in her book it is said three times that the alleged gas chamber was located in a “barn.”⁴³⁹

According to Suhren, the total number of persons gassed amounted to 1,500.⁴⁴⁰ According to Schwarzhuber there were 2,300 to 2,400 victims (p. 283). The former detainee secretaries who had worked in the office of the labor command claimed 3,660 (p. 285). Yet if we follow Strebel, then we get 5,000-6,000 (p. 286). Needless to say that there is no trace of any evidence for these alleged gassings.

Such eye-witness accounts – illogical even from the point of view of orthodox historiography – are not supported even by a single document. The key witnesses are not even in agreement as to whether the gas chamber was located in the crematorium or in a nearby building. Seen in this light, the weight of such accounts is zero.

Aside from witness accounts, orthodox historians present us with further proof for the existence of the Ravensbrück gas chamber in the form of some transport lists which have the name of a “Recovery camp Mittwerda” in Silesia as their place of destination. As we have seen, this “recovery camp” was labelled in Ruth Neudeck’s confession as an invention by Schwarzhuber. As in other such cases, the SS is painted as incredibly stupid, because if Schwarzhuber had wanted to allay suspicion among the detainees to be moved, he would obviously have spoken of a real camp, such as Bergen-Belsen, which was a true collection camp for sick detainees.

Strebel writes (p. 285):

“The secretaries in the youth camp soon suspected that these indications were fakes. In the ‘labor command’ group as well, the detainees working there became suspicious of the Mittwerda transports, as these were handled in a manner very different from the usual procedure. Only one of these ‘Mittwerda-lists’ – the one dated 6 April – could be hidden by the detainees. It contained the names and the ID numbers of 496 fe-

⁴⁴⁰ *Ibid.*, p. 175.

male prisoners who, in all likelihood, were murdered on 30 March in the last gassings; it is signed by Commandant Suhren."

Tillion, too, mentions this document and adds that there had also been "other vanished lists with the spelling Mittweida."⁴⁴¹ "Mittweida," however, which differs from "Mittwerda" by only one letter, was a satellite camp of Ravensbrück,⁴⁴² which means that it could hardly have been an accidental error. Tillion, in fact, writes:⁴⁴³

"The female detainees who had to keep the Mittwerda lists up to date had never any doubt about the identity of the gas chamber and Mittweida, recording, as they did, the names and the ID numbers of the inmates at the very moment they saw them being moved away."

This was the case for any kind of detainee transports. The need to identify "Mittwerda" with the alleged gas chamber was an indispensable part of the gas chamber story. If such a killing site did exist, it had to have its victims, and in view of the documents the detainees clearly concluded that they were being taken to an imaginary camp – Mittwerda in this case.

The orthodox Ravensbrück historians did not hesitate to consider such a fable, born out of the propaganda of the immediate post-war period, as a "historical fact." They were guided not by scientific but by "moral" principles. After all, each memorial site was in need of a gas chamber as a permanent reminder of "Nazi barbarity"! Furthermore, there were personal motivations. Without any gas chamber to boast of, these narrow-minded historians feel excluded: their camp would no longer have anything to do with the Holocaust, and thus the historian of a second-rate camp automatically becomes a second-rate historian. This is why it is so important for these people to pride themselves on a gas chamber "of their own." Quite apart from the fact that the only things tourists, when visiting the camp, are really interested in are the gruesome gas chambers. Without a gas chamber, there is no public attention, and without attention there is no funding, and without any funding there is no job and no justification for Holocaust dogmatists.

Still, all this should not distract us from the fact that the story of the Ravensbrück gas chamber has always been absurd. Even Strebel recognizes that "during the last few months of the war, more detainees fell victim to the catastrophic conditions [...] than were murdered in the makeshift gas chamber" (p. 286).

If we keep in mind that the Ravensbrück gas chamber is said to have been erected at a time when the mortality in all camps, including Ravens-

⁴⁴¹ *Ibid.*, p. 170.

⁴⁴² G. Schwarz, *op. cit.* (note 413), p. 162.

⁴⁴³ G. Tillion, *op. cit.* (note 433), p. 170.

brück, reached astronomical heights and struck, first of all, the weakest of the inmates, one wonders why anyone would have gone to the trouble of setting up such an installation at that point in time in the first place.

Due to its content and its early date (5 May 1945), the statement by Dr. Percival Karl Treite, one of the physicians at Ravensbrück, helps to understand the genesis of the legend of the “gas chambers” of this camp. He actually told the tale of the Ravensbrück camp’s final months quite differently than the version which prevailed later on:⁴⁴⁴

“In early 1945 the camp’s overcrowding got extraordinarily severe, and since the camp’s evacuation had to be anticipated, all inmates unable to walk were to be eliminated. Being the camp physician, I was to medic out these inmates. But since the allotted time did not suffice, I refused to carry out this selection, because I knew its meaning. – This selection was then carried out in a very superficial way by the garrison physician Dr. Richard Trommer, Ravensbrück (Hauptsturmführer). Some 5,000 female inmates were separated to the ‘Uckermark’ camp. As far as I know, SS-Obersturmbannführer Höß, former camp commander of Auschwitz, and SS-Sturmbannführer Sauer, former commander of the Riga camp, were in charge of eliminating these inmates. Initially 50 inmates were finished off every day in front of the crematorium by shooting them into the neck, after I had refused to kill these inmates by injections. As a camp physician I had to be present during the first shooting (ca. 50 inmates), which was necessary because a shot did not always kill the inmate at once.

Because I refused any further such work, it had to be taken over by SS-Obersturmführer Dr. Lucas, who after one day also refused to continue doing this task and who had by then also deserted from the SS.

It needs to be emphasized that these were not merely old and ailing persons, but that also young women fit for labor were shot due to the superficial examination. The shootings were subsequently carried out without the presence of a physician under the direction of the head of the protective custody camp [Schutzhaftlagerführer], SS-Obersturmführer Schwarzhuber.

The women who were still alive in the ‘Uckermark’ camp were put on half food rations and had to stand 5-6 hours in the open every day; these measure evidently were also meant to let perish a major part of these inmates. At times as many as 50 persons died every day in this camp.

Neither the camp physicians nor the national socialist nurses were permitted to serve this ‘Uckermark’ camp in sanitary terms.

⁴⁴⁴ Statement by P.K. Treite of 5 May 1945. TNA, WO 235-309, pp. 2f.

Of the ca. 1,500 sick inmates of the Ravensbrück camp, several hundred long-term patients were transferred to the 'Uckermark' camp. Since the daily shootings lasted too long, a gas chamber was built, in which the inmates could be killed faster and in larger numbers; a camp physician was never consulted for this.

I refused to carry out the order by garrison physician Dr. Trommer to issue death certificates giving [false] natural causes of death. Subsequently he personally issued such fabricated death certificates for all inmates who had died or had been killed there.

After this operation had been finished, the gas chamber was completely eradicated."

On 14 August 1946 Dr. Treite returned to the issue at hand in another interrogation:⁴⁴⁵

"As far as I have heard,^[446] the mass executions by shooting were stopped in January/February 1945, and the executions were [then] carried out by gassings. I received the order from Dr. TROMMER to examine inmates regarding their ability to work. I knew what that meant and replied that this would take a very long time. I then was to conduct an expedited examination, but as this was impossible, I refused to do it. Later I heard that the Schutzhaftlagerführer SCHWARZHUBER had instructed the female guards to do the selections themselves. All inmates unfit for labor from all blocks were separated and later transported to the youth camp, ~~where they were executed~~^[447]."

It is interesting to note that Dr. Treite, after reading the protocol of this interrogation, evidently made changes to it which indicate that he had a change of mind and that his knowledge of executions was based merely on hearsay. This impression is confirmed by statements Dr. Treite made during an interrogation on 3 October 1946.⁴⁴⁸

"In 1944 a transport of inmates unable to work was transferred to the Bergen-Belsen camp. As I heard from my superior, this camp was designated only for sick inmates unfit for labor. I was present during the evacuation of the inmates; it happened in closed freight cars, their floors lined with straw and which had a bucket inside. Medicine was handed out, and I saw also that food had been given to the inmates. I can no longer say how many inmates were in each car.

⁴⁴⁵ Statement by P.K. Treite of 14 August 1946. TNA, WO 235-309, p. 2.

⁴⁴⁶ This handwritten phrase was added at the margin.

⁴⁴⁷ This phrase is struck out in the original.

⁴⁴⁸ Statement by P.K. Treite of 3 October 1946. TNA, WO 235-309, p. 4.

13. In 1945 I heard from inmates that a gas chamber is said to have been built at RAVENSBRUECK. I have never seen it myself and I have never been present during such executions."

It is thus clear that Dr. Treite knew only from hearsay about the alleged "gas chamber" and did not even know where it was located, since he apparently attributed it to the youth protective camp. And how can the extermination in the "gas chamber" of prisoners unfit for labor be reconciled with the transport of other prisoners to the Bergen-Belsen camp, who were just as unfit for labor? The absurd claim that Rudolf Höß, the former Auschwitz commander, was responsible for the alleged extermination clearly indicates that Olga Wormser-Migot's interpretation is well justified.

In conclusion, the more believable story of events evolving during the months of March and April 1945 was told by Suhren in his affidavit of 22 July 1946 concerning the evacuations from the subcamps and the main camp Ravensbrück. Under point II he mentioned the evacuation order (*Verlagerungsbefehl*):⁴⁴⁹

"End of February 1945 I received the order from the Higher SS and Police Leader, defense district III, SS-Obergruppenführer Heissmeyer, who has been authorized for this since early February according to a decree by the Reichsführer-SS in cases of emergencies, to first transfer the subcamps Kallies, Stargard, Koenigsberg, Pinow, Eberswalde and Grüneberg to Ravensbrueck."

He gave guidelines for the transfer, including this one:

"The old and sick inmates and those unable to walk as well as food and clothing supplies and items owned by the SS which are to be removed will be picked up by trucks from the main camp."

Suhren personally participated in the evacuation of the subcamps Kallies and Stargard:

"The evacuation of Kallies and Stargard took 2 to 3 days. After my return I was informed that, during my absence from Ravensbrueck, the SS Economic and Administrative Main Office, Office Group D, had appointed the former camp commander of Riga, SS-Sturmbannführer Sauer, as commander of Ravensbrueck."

Sauer arranged for the evacuation of the Koenigsberg camp: within a few days 550 men were taken by train to Ravensbrück; 250 men had fled.

In point IV Suhren describes the evacuation of the Ravensbrück camp:

"Roughly toward the end of March, after the [inmates of the] subcamps had been transferred back to the main camp Ravensbrueck, I received the special order [Sonderauftrag] from SS-Obergruppenführer

⁴⁴⁹ Unsigned(!) affidavit by F. Suhren of 22 July 1946. TNA, WO 235-310, pp. 1-6.

Heissmeyer as well as from SS-Gruppenführer Glücks to evacuate the inmates of the main camp.

The order stated that all inmates had to be set in motion immediately toward the Mecklenburg Gau, that barns and pit-dwellings had to serve as accommodations and that food had to be provisioned by farmers. Including the persons transferred from the subcamps to Ravensbrueck, the total to be transferred was:

24,500 female and 3,100 male inmates, plus some 800 guards."

Of these 27,600 inmates, 5,000 were evacuated to Neustadt-Glewe, Malchow and Rechlin. In late April the evacuation of the remaining 22,600 inmates began, which took place as follows:

<i>"A. Handover to the Intern. Red Cross</i>	<i>7,000 persons</i>
<i>B. Releases from custody [Haftentlassungen]</i>	<i>2,500 persons</i>
<i>C. Non-transferrable sick/old and unable to walk</i>	<i>3,500 persons</i>
<i>[Nichverlagerungsfähige Kranke/Alte und Nicht-Gehfähige]</i>	
<i>D. Designated for the trek</i>	<i>9,600 persons."</i>

Suhren then explains:

"The handover of the inmates to the International Red Cross occurred after March 1945. According to the order by the Reichsführer-SS, all [inmates of] the western and Scandinavian peoples, all Poles and Hungarian Jewesses were to be placed at the disposal of the I.R.C. Based on this order, some 18 to 20,000 persons of the entire camp should have been handed over. But since the I.R.C. could not provide a sufficient fleet of vehicles, only 7,000 persons from the main camp were handed over. [...]

Some 3,500 male and female inmates who were sick and unable to walk, plus those who were old, did not qualify for the foot march and remained in the Ravensbrueck main camp."

As logic demands, Himmler's order therefore concerned the general evacuation, not the extermination of inmates who were sick, unfit for labor or unable to walk. These were actually left behind in the main camp as had happened before at Auschwitz-Birkenau. In this context, all the other characters implicated in this Holocaust tale – Glücks, Heißmeyer, Sauer – appear in a much more believable light.

In view of the policy to hand over the inmates to the International Red Cross, the extermination of some of them would have been a form of schizophrenia, but this seems so only because it is filtered through the respective schizophrenia of orthodox Holocaustology.

Before proceeding, it is appropriate to look into this a little deeper, which will fully confirm the conclusions I have drawn above.

In her doctoral dissertation, Silke Schäfer deals specifically with the “gas chamber” at Ravensbrück. I omit her discussion of the “evidence” which I have already discussed earlier and will instead focus on a few new elements. She traces the alleged gassings to a general policy allegedly implemented in October 1944, of all things:⁴⁵⁰

“When the daily ‘normal’ mortality and the executions did not ‘yield’ enough murdered persons in the eyes of the camp’s leadership, the construction of a provisional gas chamber was commenced in late 1944 or in February 1945. Camp commander Suhren is said to have received the order from Himmler in October 1944 that, ‘with a retroactive effect of 6 months, 2,000 persons had to die each month’.”

This phrase, taken from the statement of the former inmate Anni Rudroff of 11 March 1948, is given as such in a note by Strebel, who comments: “Dating and content of this order are doubtful” (note 17, p. 281).

Schäfer then expounds an utterly far-fetched theory of a double “gas chamber”:⁴⁵¹

“Starting in early 1945, the second, technically improved gas chamber was also erected by male inmates using rocks. Due to inclement weather and lack of supplies, but also due to the way the inmates worked, who had figured out what they were expected to build, the completion was repeatedly delayed. The gas chamber was finished shortly before the evacuation, but it was not used, and it was destroyed prior to the liberation.”

Having even less of a critical mind than Strebel, the dissertation’s author refers to a number of testimonies which show the fairytale-like character of the “gas chamber.” The former inmate Irma Trksakova, for instance, provided the following hearsay description based on the lore of an inmate who allegedly “was able to escape” (presumably from the “gas chamber”):⁴⁵²

“It was a rather small room, whose cracks were plugged with blankets. The SS men threw gas bombs [Gasbomben] into the chamber; some women were only stunned; they were then cremated in this condition.”

Similar statements were made by Michalina Woźniakówna in 1946, who described the alleged gas chamber as follows:⁴⁵³

⁴⁵⁰ Silke Schäfer, *Zum Selbstverständnis von Frauen im Konzentrationslager. Das Lager Ravensbrück*. Dissertation, Technische Universität Berlin, 6 Feb. 2002, p. 199.

⁴⁵¹ *Ibid.*, p. 200.

⁴⁵² *Ibid.*, p. 201.

⁴⁵³ M. Woźniakówna, *Obóz koncentracyjny dla kobiet Ravensbrück*, Nakładem Związek B. Wiezniow Politycznych, Poznań 1946, pp. 96f.

“It was a small room into which the women meant to die were locked up and into which gas was released. The room designed for ‘gassings’ was not very gas tight, and the women were mostly stunned, but not dead. But no one cared, nor did they check. The partially poisoned women were taken half alive from the gas chamber to the crematorium.”

And the legendary “gas vans” aren’t missing either:⁴⁵⁴

“There are also some statements of survivors who speak of killing with carbon monoxide. This is probably due to the fact that car engines were run to drown out the people’s screams. Another method of gassing also repeatedly referred to by surviving female inmates is the conversion of ambulance vehicles to a mobile gas chamber. In this regard, however, it is doubtful whether these mobile gassing installations were ever used at Ravensbrück. Information on this method presumably came to Ravensbrück during the evacuation of the eastern concentration camps. It is conspicuous that the defendants in the Ravensbrück trials at Hamburg report in detail about the stationary gas chamber, but do not mention a mobile gassing device.”

Hence the “gas vans” were even more imaginary than the “gas chambers.”

George Clutton, Second Secretary of the Embassy of Great Britain in Stockholm, wrote a report on 20 June 1945 which summarized the statements of former Ravensbrück inmates who had been evacuated to Sweden:⁴⁵⁵

“There seem to have been two gas chambers at Ravensbruck. [One] was situated next to the crematorium outside the boundary of the camp and was a small brick building with the appearance of a washroom with showers. It took one hundred victims at a time. The existence of the second gas chamber was widely believed, but no one had ever seen it. It was said to have been brought to Ravensbruck at the end of 1944 by S.S. Obersturmführer [sic] Brauning from Auschwitz where he had been in charge of gassing methods. It consisted of what appeared to be two covered railway wagons attached together and connected with two railway tankers containing the gas. The women put into the trucks were unaware of the fate in store for them and were generally under the impression that they were to be removed to another camp. The doors of the wagons were shut and the gas pumped in at either end from the tankers. Death was stated to have taken two hours. The victims to be taken to the gas chambers were given old clothes, stripped of everything except

⁴⁵⁴ S. Schäfer, *op. cit.* (note 450), p. 202.

⁴⁵⁵ TNA, FO-371-50982, pp. 20f.

chemise and frock and taken away in lorries. Camp numbers were at the beginning written on the back or chest of those stripped for post mortem examination but latterly this was given up. The bodies of those gassed were later brought back to the morgues, piled in lots of three and counted. Any victim not yet dead was usually finished off by an S.S. man with a club or else taken still living to the crematorium. The refugees estimated that over 5,000 persons were gassed in Ravensbruck. The last gassing at Ravensbruck took place 30th March and on April 2nd, the chamber was demolished, the prisoners employed on the work never being seen again."

It is needless to say that Schäfer fails to raise the imperative question whether the story of the stationary "gas chamber(s)" at Ravensbrück, just like the tale about the Ravensbrück gas vans, has its origin also in "information," that is to say propaganda, spread by inmates transferred from Auschwitz to Ravensbrück – as is Olga Wormser-Migot's well-founded theory.

12. The Gassings at the Neuengamme Camp

It is hardly worthwhile to look at Reimer Möllers's article "The two murder actions with Zyklon B at the Neuengamme concentration camp in 1942," ("Die beiden 'Zyklon B'-Mordaktionen im Konzentrationslager Neuengamme 1942"; pp. 288-293). The text merely testifies to the fact that the orthodox Neuengamme historians have the insane feeling that they should add a gas chamber to "their" camp as well. Reimer Möllers begins his paper as follows (p. 288):

"In October 1942 accredited tradesmen were given the order to carry out certain structural modifications on the stockade of the Neuengamme concentration camp. They replaced the wooden shutters on the window with steel plates and attached steel bars with bolts on the entrance door of the stockade. In the building itself they installed an electric cable which was connected to a heating coil and a ventilator. Six tubes, each one having a length of half a meter and a diameter of 80 mm, were sunk into the roof, and a catchment plate was attached at the lower opening."

The source for this assertion is a witness statement dating back to 1967 (footnote 1 on p. 288). We will now move on to the brief description of the two (!) gassings said to have led to the death of a total of 197 Soviet soldiers (p. 290):

“The two SS men poured the ‘Zyklon B’ crystals into the tubes. At the outlet of the tubes, the crystals fell upon the metal plates which were warmed by the heating coil. The heat accelerated the liberation of the hydrogen cyanide gas which was quickly fed into the room by the fan.”

The source is different from the first but is also a witness statement dating back to 1967 (footnote 5 on p. 290). According to another witness, “the bunker door was opened 5 or 6 minutes after the introduction [of the Zyklon B]” (footnote 6 p. 290). According to Reimer Möller, the first gassing took place “probably in October 1942” (p. 289). Möller hardly tells us anything about the second and final gassing (p. 292):

“A second gassing took place four weeks after the first. This time, the victims were 251 Soviet PoWs, among them considerably more wounded than in the first group.”

In this case no source at all is given, not even a witness statement.

The “gas chamber” is said to have had a floor area of 35 square meters (p. 290), which means that for the first gassing six persons were squeezed onto one square meter, and seven in the second case. As usual in those cases, the henchmen lured their victims into the gas chamber by an evil deception (“The Soviets had towels in their hands, the SS seem to have told them that they were going to take a shower,” p. 290), but such an attempt at deception would have been particularly ridiculous and unsuccessful in this case, because this room had neither real nor fake showerheads. How on earth could the SS men hope to deceive the delinquents in such a case?

One does not quite understand why the SS should have gone to the trouble of setting up a gas chamber for two gassings, wasting manpower and materials, even less so as a delousing chamber already existed at Neuengamme according to Möllers (p. 288), which probably operated along the lines of the Degesch circulation system. The camp administration could have made use of the experience gathered there, but is said to have decided to proceed in an absolutely amateurish way when they allegedly built this homicidal gas chamber. A space of 35 square meters with an overkill of six Zyklon B feed openings would have caused all alarm bells to sound with the victims, inducing desperate reactions. The device for accelerating the vaporization of the cyanide was complicated, useless and easy to sabotage by the victims. Even when viewed from the point of view of orthodox Holocaust historiography, it makes no sense at all. If gassings could be carried out continuously in the large gas chambers of Auschwitz without such a device, as is claimed, why was it necessary on a much smaller scale for minor gassings? Achim Trunk correctly says in connection with the alleged gas chambers at Auschwitz that “the body heat released by a large group of people herded into a [small] space will quickly heat it” (footnote 85 on p.

46) – why then would metal plates heated by a heating coil have been needed at Neuengamme?

Möller's "evidence" for the two gassings he postulates is so meager that, in order to beef up his article a little more, he feels compelled to add a section on "Sources and Literature" (pp. 292f.). These sources, however, consist entirely of witness statements and confessions made at post-war show trials. Among other things, he mentions Fritz Bringmann's article on Neuengamme in the anthology *Nazi Mass Murder*. This text of a little more than four pages consists almost entirely of an excerpt from the interrogation of SS-Unterscharführer Willi Bahr during a British show trial in Hamburg, dated 22 April 1946. Defendant Bahr made the following deposition, *i.a.*:⁴⁵⁶

"A tube was installed on the roof and an artificial hot-air ventilation unit with an electric coil."

Bahr went on to say that he had brought five cans of Zyklon B for a gassing of 180 to 200 persons and that the camp physician had instructed him to pour half a can into each tube.⁴⁵⁷ The most important point of this confession, which Möller is careful to not even mention, is that "in this bunker the individual cells were very small" and that the cells had doors.⁴⁵⁸

If there really had been six tubes in the roof of this stockade, it would logically have consisted of six cells, each one measuring $(35 \div 6 =) 5.8$ square meters. In such a case, though, Möller's device for heating the air and for ventilation would only have served one cell, but not the others, and it would have made no sense at all to build such a device individually for a 6 sqm cell. This illustrates the credibility of the tale about a homicidal gas chamber at the Neuengamme camp.

13. The Gas Chamber at the Stutthof Camp

The Polish historian Józef Orski writes in his article "The annihilation of detainees of the Stutthof camp by the poison gas Zyklon B" ("Die Vernichtung von Häftlingen des Konzentrationslagers Stutthof durch das Giftgas Zyklon B"; pp. 294-303) about the alleged homicidal gas chamber at Stutthof. As early as 1999, Jürgen Graf and I had published a book about this camp in German,⁶⁸ in which Orski's arguments had already been comprehensively refuted. His arguments are, in fact, nothing but a mere rehash

⁴⁵⁶ E. Kogon *et al.* (eds.), *op. cit.* (note 39), p. 267.

⁴⁵⁷ *Ibid.*, p. 268.

⁴⁵⁸ *Ibid.*, pp. 269f.

of the arguments which the Polish Stutthof historians have been proffering for decades.

Orski, who could have been expected to make an attempt at refuting the “deniers,” passes over our study in complete silence, just like most of the other authors of this anthology who act as if revisionist research did not exist.

At the beginning of his text, Orski writes that the camp administration, faced with the peak of an epidemic, had decided to build a disinfestation chamber inside the camp near the crematorium. Earlier, he says, the garments to be treated were taken to a delousing station in the city of Danzig (p. 294). Orski writes explicitly that the Stutthof gas chamber had at least initially been used as a “disinfestation chamber for detainee garments,” (p. 295) but then he brings up a totally incredible story about how a delousing chamber allegedly became a homicidal gas chamber: the paramedic of the infirmary, *SS-Untersturmführer* Otto Karl Knott, was sent to Oranienburg “on a special course for disinfectors lasting several weeks” during which, however, the participants were also informed that “mass killings of people in eastern camps were being carried out by means of the gas” (*ibid.*). I do not have to stress that the source for this statement is not a document but – in the usual manner – a witness statement made during a show trial.

After the course, Orski continues, Knott was sent to Lublin where he stayed until 20 August 1943. During that time “he underwent practical instruction in how gas chambers could be used for killing people” (p. 296). Undoubtedly, the mythical Zyklon B homicidal gas chambers at Majdanek were used for demonstrations of the procedure.

It is needless to say that all this is mere speculation on the part of the author. It may well be that Knott was sent back to Stutthof after his stay at Majdanek and was assigned there to the staff of Department V (camp physician) and that the delousing chamber was under the direct authority of the latter (p. 296), but in line with the invented background of Knott’s reassignment, Orski evidently takes this reassignment to be a proof for the assertion that the delousing chamber at Stutthof was henceforth used to kill people. He goes on to say (*ibid.*):

“The mass murder of prisoners in the gas chamber began in June 1944 under the code name of ‘special treatment.’”

This too is completely unfounded, because the orthodox Stutthof historians have never presented a document which mentions a special treatment of detainees.

Orski then goes into the details of the alleged murders by poison gas. The starting point is said to have been the gassing of 100 Polish partisans on 22 June 1944 (p. 297), but on p. 301 he postulates a total of 70 gassings

for the whole month, and he thus contradicts his own previous assertion. On 26 July 1944, 12 Poles are said to have been murdered in the gas chamber. Orski does not claim any other gassings for July, but for some mysterious reason, the 12 Poles killed during that month grow into 400 persons! I shall return later to the alleged murder by gas of 77 wounded Soviet PoWs – the only one for which there is an apparent documentary reference.

Orski believes that most of the victims of the gassings at Stutthof were “detainees of Jewish origin” and continues (p. 299):

“The murder of Jewish inmates at Stutthof was carried out pursuant to the orders of the Head of Office Group D (concentration camps) of SS-WVHA. In this way, the camp was integrated into the ‘Final solution of the Jewish question.’ The immediate cause was the arrival of 49,000 Jews, 38,000 of whom remained at Stutthof. Initially only those Jewish inmates who were unfit for work were murdered [...]. At Stutthof, the decrees for the implementation of the ‘final solution’ caused far fewer victims than in other concentration camps.”

Here, Orski becomes very sloppy with his use of terms, because the term “final solution” does not appear in any of the documents concerning the transfer of Jews to Stutthof. Even a cursory glance at the list of Jewish transports which reached Stutthof in the second half of 1944 shows the absurdity of Orski’s thesis – and thus, in a more general way, the absurdity of Polish Stutthof historiography, in that it classifies this camp as some kind of “auxiliary extermination camp” besides Auschwitz:

Table 7: Deportations of Inmates from Auschwitz to Stutthof in 1944 ⁴⁵⁹			
DATE	NUMBER	DATE	NUMBER
29 June	2,502	3 September	2,405
20 July	2,500	10 September	668
14 August	2,800	10 September	1,082
16 August	2,800	27 September	4,501
28 August	2,800	28 October	1,500
31 August	8	Total:	23,566

All these detainees were duly registered as camp inmates. The thesis concerning the “Auschwitz auxiliary extermination camp” fails, if only because on 25 July 1944 a total of 1,423 Jews were shipped from Stutthof to Auschwitz, followed by another 575 on 10 September 1944.⁴⁶⁰ Thus, Orski and his cronies assert that Auschwitz sent unfit Jews to Stutthof to be

⁴⁵⁹ C. Mattogno, J. Graf, *op. cit.* (note 68), p. 28.

⁴⁶⁰ *Ibid.*, p. 109.

gassed, while Stutthof in turn packed off its own unfit Jews to Auschwitz to be gassed there?

Orski sets the total number of Jews allegedly murdered in the Stutthof gas chamber at 1,150 (p. 301) but mentions only one specific gassing of Jews in which “in the summer of 1944” (not even the month seems to be known) between 70 and 200 Dutch Jews were killed. These people, he claims of course, were not “registered in the camp book” (p. 300), which precludes any possibility of an objective verification. The source for this assertion is a “witness account,” as usual.

In an effort to provide his claims with at least the semblance of credibility, Orski imbeds them into a fictional historical context: According to this, in late July or early August 1944 camp commander Hoppe is said to have travelled to Oranienburg where he was told what was to be done with the deportees. A few weeks later, so Orski tells us (pp. 299f.),

“a first meeting took place at Oranienburg during which Richard Glücks, the head of IKL, decreed to begin with the annihilation of the unfit Jews (mostly women who constituted the majority) and to use Zyklon B for this purpose. The gassings in the gas chamber were probably stopped in late October or early November 1944, after a corresponding order from Oranienburg had been received.”

Do I have to make a special point by underlining that Orski is unable to give a source for these freely invented stories? From the viewpoint of orthodox Holocaust historiography, these claims are nothing but an unnecessary complication, as they have already enough problems to explain the genesis of the alleged order concerning the extermination of the Jews. Initially, Himmler is said to have transmitted to the Auschwitz commander Höß an order from Hitler decreeing the total annihilation of the Jews, but later this order is said to have been modified by Himmler himself in the sense that only unfit Jews were to be killed. For unknown reasons this second order was not applied to the camps of “*Aktion Reinhardt*,” as opposed to those at Chelmno and Majdanek. Later on even this order was softened by Glücks who prohibited even the killing of unfit persons – except for mental patients which would be selected by medical commissions within the framework of “*Aktion 14f13*.”⁴⁶¹ Finally, Himmler is said to have ordered the gassing actions to be stopped. There is not even the shadow of any documentary evidence for any of this!

As I have already mentioned, there is a document which seems to confirm one of the alleged gassings at Stutthof, at least at first sight. Orski writes (pp. 297f.):

⁴⁶¹ Letter by Glücks of 27 April 1943. PS-1933.

“Another gassing which created a strong resonance in the camp concerned the murder of 77 Russian detainees in the gas chamber; they were PoWs who had been moved to Stutthof by the Security Police (Sipo) at Riga. The camp documentation on this event is complete. A detailed account of these gassings has been given by Aldo Coradello, former vice-consul of the Kingdom of Italy at Danzig and a key witness in the trial of 1946. [...] During the session of 21 May 1946, sixty pages of Aldo Coradello’s written eye-witness report, translated into German, were read.”

On the subject of the documentation of this case, Orski writes (p. 298):

“The transfer of the Soviet prisoners by the Sipo at Riga on 15 August 1944 is documented by an entry in the camp register. Out of this group, 77 wounded were given the same date of death, 22 August 1944. It was the first time that the dates were already entered into the camp register. As neither the letter ‘E’ nor the numbers of the death certificates appear in the death book of the registrar’s office (the file for 1944 has not survived), it is warranted to assume that these men who were unfit because of their injuries died in the gas chamber.”

This is a question which I have dealt with at length in our book on Stutthof.⁴⁶² If these Soviet PoWs were killed, the reason cannot have been the one given by Orski (the fact that they were unfit for work), because at Stutthof a policy of annihilation of unfit detainees can be shown not to have been practiced. Even Orski himself has reported elsewhere that a “cripple company” existed at Stutthof consisting of men who “were so emaciated as to be unfit for any kind of work.”⁴⁶³

It would even be improper to argue that the National Socialists had systematically killed disabled Soviet PoWs, for at Majdanek a “Soviet-Russian infirmary for disabled soldiers” existed.⁴⁶⁴ The first transport of 299 disabled PoWs arrived at the Lublin camp on 21 May 1943; on 22 August the infirmary housed 1,742 inmates, and 2,573 on 14 December.⁴⁶⁵ The disabled were registered in a special register which listed *i.a.* “details of the kind of wound (injury by combat agent, body part, weapon) or disease.” The last entry, number 2,886, is dated 29 February 1944.⁴⁶⁶

In case the 77 Soviet invalids were indeed murdered at Stutthof, it must be due to a local initiative, and the only plausible motive was euthanasia. The fact that the letter ‘E’ is missing in column “deceased” of the arrival registry below the stamped-in date of death excludes a regular execution

⁴⁶² C. Mattogno, J. Graf, *op. cit.* (note 68), pp. 88-96.

⁴⁶³ *Ibid.*, p. 93.

⁴⁶⁴ *Ibid.*, p. 92.

⁴⁶⁵ T. Kranz, *op. cit.* (note 300), p. 16.

⁴⁶⁶ GARF, 7021-107-6, pp. 1-294.

(i.e. an execution ordered by a special SS court) whereas a missing number for the death certificate as such is not significant. In an analysis I carried out on the names of 1,850 Jewish detainees who were registered between 19 July and 15 August 1944, I showed that 273 of them died and that for 37 of these deaths no number of the death certificate had been given.⁴⁶⁷

The camp registry and the personal registration cards for these Soviet PoWs thus merely indicate that all of them died on 22 August 1944. The strange circumstances of the discovery of this document, however, cast doubts on the assumption that the men were actually murdered. It is also strange that the entries in the registry of detainees containing these inmates' death dates were discovered only in 1987 (by the Polish historian Maria Elżbieta Jezierska), although the documents in the Stutthof museum had, at that time, been available to the public for decades! We must remember that these entries for the 77 Soviet soldiers with their identical dates of arrival (15 August 1944) and of death (22 August 1944) cover eight successive pages and are most apparent.⁴⁶⁸ Hence, something seems to be fishy about this case.

Orski's hypothesis that these invalids were gassed is based solely on the statements by Aldo Coradello, which, however, are unreliable.⁴⁶⁹ Coradello declared that he had merely seen the prisoners when they were still alive, whereas he only knew from hearsay that they had been gassed. Moreover, he explicitly noted: "On 26 August [1944] I was once again interned at Stutthof" and said that he saw the Soviet invalids on the same day,⁴⁷⁰ but how could this be if they had been killed four days earlier?

On the subject of the gas chamber at Stutthof, I refer the reader to the above-mentioned study written by Jürgen Graf and myself.⁴⁷¹ It should be kept in mind that there is no documentary evidence for its use as a homicidal gas chamber.

Orski himself supplies us with an involuntary indication on the origin of the fable about homicidal gassings at Stutthof. He quotes the statement by a witness, the Polish engineer Wacław Lewandowski, who had jokingly asked SS-Unterscharführer J. Paul what would happen if he ever forgot to get a person out of the chamber before starting a disinfestation (p. 295):

⁴⁶⁷ C. Mattogno, J. Graf, *KL Stutthof. Il campo di concentramento di Stutthof e la sua funzione nella politica ebraica nazionalsocialista*. Effepi, Genoa, 2002, pp. 98f. This paragraph is missing in the 2003/2004 English editions, as it was added to the later Italian edition. (A new, scheduled English edition will include it, though.)

⁴⁶⁸ AMS, I-IIIE-12, pp. 304-311. Each page contains 10 registrations.

⁴⁶⁹ C. Mattogno, J. Graf, *op. cit.* (note 68), pp. 67-73.

⁴⁷⁰ Witness statement by A. Coradello in: Hermann Kuhn (ed.), *Stutthof. Ein Konzentrationslager vor den Toren Danzigs*. Edition Temmen, Danzig 1990, pp. 126f.

⁴⁷¹ C. Mattogno, J. Graf, *op. cit.* (note 68), pp. 62-69.

“[Paul was] very surprised at this question. We, the prisoners, had heard about the gas chambers at Auschwitz etc. from friends. Actually, here, garments were disinfected from time to time, but later on [...], people began to say that in the chamber detainees were being killed by gas.”

Just as in the case of Ravensbrück, the propagandistic rumors spread by detainees arriving from Auschwitz were at the origin of the legend of homicidal gassings at Stutthof as well!

14. The Gas Chamber at the Natzweiler Camp

Florian Schmaltz, author of the article “The gas chamber at the Natzweiler concentration camp” (“Die Gaskammer im Konzentrationslager Natzweiler”; pp. 304-315), believes that this gas chamber was “an exception” in that “scientific-medical research into the use of chemical weapons for military use were being carried out there” (p. 304). With that statement Schmaltz moves away from the traditional meaning attributed to the function of this chamber. He writes (p. 314):

“As opposed to what has been assumed in the literature for a long time, the gas chamber at Natzweiler was not originally set up to gas the victims which the SS physician August Hirt had caused to be murdered in August of 1943 for his collection of skeletons.”

Schmaltz believes instead that the gas chamber was needed “solely for experiments with the gaseous pulmonary agent phosgene” which Otto Bickenbach, the head of the biological section of the medical department at the Reichsuniversität Straßburg had undertaken (p. 314). According to a witness, these experiments involved “exposing between 90 and 150 inmates to phosgene, 50 to 60 of whom died painfully by suffocation” (p. 310).

Schmaltz notes that the gas chamber at Natzweiler was the only gas chamber in a German camp to have been equipped with “measuring devices” which “permitted to measure the concentration of phosgene in order to determine the dosage of this life-threatening poison gas” (p. 314). According to Schmaltz, this chamber was built between the autumn 1942 and April 1943 (p. 309).

One of the most prominent proponents of the thesis that the Natzweiler gas chamber was built on account of establishing a collection of skeletons is Jean-Claude Pressac, who has written a well-documented book about

this question. It is worthwhile to consider and examine his arguments. He starts out by giving very interesting details:⁴⁷²

“The gas chamber at Struthof, which was located outside the camp in a building designated by the SS work management as ‘building 10,’ was originally a cold storage room; this explains why it was lined with white tiles. Blocks of ice were used to keep the temperature low for the conservation of easily rotting food. The room – in line with all cold storage rooms – was relatively air-tight and was therefore used as a gas chamber in which SS recruits acquainted themselves with the use of gas-masks and where teargas was used for training purposes (in the French army, benzyl bromide is normally used for this purpose). Because this basic training was carried out in view of a possible chemical warfare, [camp commander] Kramer immediately thought of this training chamber when he was approached by SS-Professor Hirt of the anatomical institute of Reichsuniversität Strasburg who wanted him to gas a group of Jewish detainees from Auschwitz; he thought about the modifications which would have to be implemented before he would be able to use the cyanide salts which Hirt had provided. The modifications were finished between 3 and 12 August [of 1943].”

Before we look at the document itself where the modifications are described, we must take note of a letter written by Kramer to the SS institution “Ahnenerbe” on 12 April 1943 in which he writes that “The G-cell here has been finished and has a volume of 20 cubic meters.” The designation “G-cell” undoubtedly refers to a “gas cell.”⁴⁷³

Although the first document concerning the skeleton collection dates from 9 February 1942,⁴⁷⁴ and the issue was raised again in early November,⁴⁷⁵ it remained dormant for several more months. On 21 June 1943 SS-*Standartenführer* Wolfram Sievers wrote a letter to Adolf Eichmann, saying that SS-*Hauptsturmführer* Dr. Bruno Beger had stopped his work at Auschwitz because of the risk of an epidemic and that he had selected 115 detainees – 79 Jews, 2 Poles, 4 Asians and 30 Jewesses – which were now in quarantine. Sievers stressed that, for the further treatment of the persons selected, they had to be transferred to Natzweiler immediately on account of the risk of the epidemic at Auschwitz. In order to prevent the typhus epidemic raging at Auschwitz from being transmitted to Natzweiler, Sievers demanded that the Natzweiler command ship immediately clean and deloused clothing for 80 men and 30 women to Auschwitz. At the same time

⁴⁷² J.-C. Pressac, *op. cit.* (note 74), p. 6.

⁴⁷³ *Ibid.*, p. 10. This document is also mentioned by Schmaltz (p. 309).

⁴⁷⁴ *Ibid.*, p. 18, NO-085.

⁴⁷⁵ *Ibid.*, pp. 20f., CXXXIII-52 (Centre de Documentation Juive Contemporaine) and NO-089.

it would be necessary to provide temporary housing for 30 women at Natzweiler.⁴⁷⁶

Since this letter is dated 21 June 1943, there cannot have been any need for a homicidal gas chamber at Natzweiler before this date. This means that the gas chamber mentioned by Kramer in his letter of 12 April 1943 was necessarily related to the experiments with phosgene. There is yet another document which refutes Pressac's thesis. It is a letter written by Hirt to "Ahnenerbe" on 14 July 1943 saying:⁴⁷⁷

"Having read the contents of the letter, I impart that, according to information from the camp commander, a difficulty has arisen in that the material for gassing is not available. I ask you to prompt the authorities concerned to provide the corresponding substances, because otherwise the matter cannot be implemented."

This letter confirms that the gas chamber as such already existed and only the "material for gassing" was missing. It is therefore incorrect to say that the gas chamber was modified between 3 and 12 August 1943. Pressac (or his translator/editor) was apparently aware of this contradiction, because the expressions used in the document – "material for gassing" and "the corresponding substances" – are translated as "gassing equipment" and "the necessary equipment", respectively,⁴⁷⁷ in order to create the impression that it was not the *toxic substance* which was missing but the *equipment* of the gas chamber.

This signifies that the entries which Pressac found in the "Construction report for the new construction of concentration camp Natzweiler, Alsace" cannot have referred to the modification of a cold storage room or a training gas chamber into a homicidal chamber. The entry for 3 August 1943 reads:⁴⁷⁸

*"– Mason / 10 working hours / work in gas room
– Roofer / 5 hours / gas chamber / lengthen exhaust tube 1 tube clamp
– Painter / 60 working hours incl. physical plant / work in gas room
– Mason / 40 hours /work in the gas room."*

The roster concerns the period between 20 May and 28 August 1943. The mentioned entries for 3 August are apparently the only ones related to the gas chamber, which means that Schmaltz is correct when he writes:

"The construction reports for the new construction of the Natzweiler concentration camp contain entries for 3 August 1943 which substantiate masonry, roofing and painting work in the 'gas room.' These modifi-

⁴⁷⁶ *Ibid.*, p. 22, NO-087.

⁴⁷⁷ *Ibid.*, p. 11.

⁴⁷⁸ *Ibid.*, p. 69. Pressac reproduced it in his book *Auschwitz: ..., op. cit.* (note 204), pp. 448f.

cations were closely related to the impending murder of a group of Jewish detainees for Hirt's skeleton collection."

Hence, we are dealing here with the modification of an existing gas chamber. It is, after all, a natural thing that a room which is converted into a gas chamber cannot have been one before the conversion. If the entry of 3 August suddenly speaks of a "gas chamber" it must have existed before and must have been serviceable.

This brings us to the central point of the question. The conversion of the chamber, in fact, is said to have involved the laying of a pipe "which ended in a hole in the floor of the gas chamber" and was "equipped with a closeable faucet and a funnel," to "feed liquids into the gas chamber" (p. 310). This is a very vague description and nearly unintelligible.

The former Natzweiler detainee Georg Weydert has described the conversion in detail:⁴⁷⁹

"He [SS-Mann Schondelmaier] ordered me to fashion a funnel from sheet metal which was mounted on the outer wall of the gas chamber, very close to the opening towards the chamber. At the narrow end of the funnel was a pipe which went into the chamber and ended in a hole that had been broken into the concrete floor. In this hole was a porcelain vessel of 1 or 2 liters capacity. In the pipe just below the funnel, there was a faucet. The objective of this device was to allow a liquid, unknown to me, to be poured into the funnel when the faucet was closed and then, at a certain moment, to cause the liquid to flow into the porcelain vessel in the gas chamber. Another liquid had been filled into the porcelain vessel beforehand. The chemical reaction of the two liquids was intended to produce a toxic gas, destined to cause the prisoners locked up in the chamber to suffocate."

The former SS-Hauptsturmführer Josef Kramer, commander of the camp, made the following deposition during an interrogation by a French military court on 26 July 1945:⁴⁸⁰

"In August 1943 I received the order from the Oranienburg camp, or more precisely from the SS high command in Berlin that contacted me via the commander of the Oranienburg camp, to receive some 80 detainees from Auschwitz. The accompanying letter specified that I was to get in touch immediately with Prof. Hirt. The latter explained to me that a transport of detainees from Auschwitz to Struthof was planned. These people, he added, were to be suffocated by gas in the Struthof gas

⁴⁷⁹ Jean-Pierre Faye, "Natzweiler: Eine Skelettesammlung wird angelegt," in: E. Kogon *et al.* (eds.), *op. cit.* (note 39), p. 273.

⁴⁸⁰ J.-C. Pressac, *op. cit.* (note 74), pp. 72f.: from the French translation of Kramer's statement. I do not have access to the original German wording of Kramer's statement.

chamber and the corpses were to be taken to the anatomical institute for his attention. After this conversation he handed me a flask having a volume of about one quarter of a liter, which contained salts. In my opinion they were cyanide salts. The professor indicated the approximate dosage I was to use to kill the detainees from Auschwitz myself.

So, in early August 1943 I received the 80 detainees to be put down by means of gas which had been put at my disposal by Hirt. One night, around 9 o'clock, I began to take them to the gas chamber by truck, some 15 women initially. I told them that they would have to enter a disinfection chamber, hiding from them the fact that they were to be killed. With the help of a few SS men, I ordered them to undress completely, and when they were completely naked, I pushed them into the gas chamber.

As I closed the door, they started screaming.

After I had closed the door, I poured a certain amount of salt into the funnel which was on the right, directly above the peep-hole. At the same time, I added a certain amount of water which, just like the salts, fell into a pit which was located inside the gas chamber below the peep-hole.

Then I closed the opening of the funnel by means of a faucet which was connected to the end of this funnel and continued into a pipe. Through this metal pipe, the salts and the water reached the pit inside the chamber which I just mentioned.

I lit up the inside of the chamber by means of a switch located next to the funnel and observed through the peep-hole what was going on in the chamber. I saw that the women continued breathing for about half a minute and then collapsed. As I opened the door after having switched on the ventilator below the aeration duct, I saw that these women were lifeless and had released excrements before dying.

The next morning, I ordered two male SS nurses to load these corpses on a truck and to take them to the anatomical institute, in line with what Professor Hirt had told me.

A few days later, I took a certain number of women to the gas chamber in the same way as before, who were killed there in the same manner; another few days later, I had some 50 men taken there in two or three trips who were once again liquidated by means of the salts put at my disposal by Professor Hirt.

In answer to a question: I don't know what Hirt did with the corpses of these murdered detainees, I think they came from southeast Europe, but I don't know from which country.

The representative of the French military court: We showed the witness the album containing photographs of the gas chamber.

The witness: I recognize on these photographs the Struthof gas chamber which was built in mid-1943 for the purpose of killing the inmates destined for Professor Hirt.

In answer to a question: The gas chamber was modified by inmates according to my order. Some time earlier, it had been erected as a cold room.

In answer to a question: As far as I know, nobody was killed in this manner aside from the 80 detainees shipped from Auschwitz

In answer to a question: As far as I know, no vial was ever thrown into the gas chamber to kill inmates. I do not know the purpose of the iron pipe that was mounted in the entry door of the gas chamber."

For a better understanding of this deposition, I should like to stress that the device described by Kramer serving for the introduction of the salts and the water is said to have been identical to the one of which Pressac published a photograph.⁴⁸¹ It consists of a vertical faucet having at its upper end a funnel. The device is said to have been on an outside wall of the gas chamber building. At the lower end, a 90-degree elbow had to be attached which led into the gas chamber through a specific hole in the wall, where another 90 degree elbow led downwards along the wall, ending in a pit, 60 cm × 60 cm, which had been opened up in the floor of the chamber. This is shown in a drawing by Pressac (cf. document 7).

According to Pressac, the device is held in the Besançon citadel, but there is no evidence to show that it actually came from the Natzweiler gas chamber. Pressac writes that, after the liberation of the camp, the device was removed for a toxicological analysis,⁴⁸² but in the contemporaneous drawing of the gas chamber the funnel and its pipe are not included. One has trouble believing that the French military authorities dismantled the funnel and the pipe before having a drawing of the room prepared! In fact, the "French specialists" who "inspected and described the chamber in detail" after the war mentioned neither the funnel nor the pipe.⁴⁸³

Moreover, the construction reports for the period of 20 May through 28 August 1943, mentioned above, yield no information concerning the installation of a funnel or a tube (the indispensable ventilator, which was apparently installed earlier in connection with the phosgene experiments, is not mentioned either). Furthermore, two photographs published by Robert

⁴⁸¹ *Ibid.*, p. 66. See also J.-C. Pressac, *op. cit.* (note 478), p. 15. See document 6. The French text published by Pressac is incomplete; certain passages are missing, although they are included in the English translation added by Pressac himself. The latter corresponds to the French version published by Faurisson, so that we are dealing with two French versions, one abridged, the other complete.

⁴⁸² J.-C. Pressac, *op. cit.* (note 74), p. 12.

⁴⁸³ Jean-Pierre Faye, *op. cit.* (note 479), p. 274.

Faurisson show that the hole broken through the wall for the passage of the pipe was fashioned in a very coarse manner on both sides of the wall. On the inside, no fewer than five small bricks were damaged for piercing a hole a couple of centimeters in diameter.⁴⁸⁴ This could indicate that the device was invented only after the liberation of the camp. It is also possible that the funnel was indeed manufactured in the camp but that it served an entirely different purpose than we are told. Pressac himself notes, in his commentary on the witness Weydert, that the latter could not have known that the funnel was to serve a criminal purpose.⁴⁸⁵

The killing process described by Kramer sounds ponderous and inefficient. The women could have blocked the lower end of the pipe with one hand, thus preventing the water from reaching the pit and making a gassing impossible. Men could even have bent the pipe itself. A smooth operation was possible only if the victims cooperated.

Then there is the riddle of the cyanide salts. What did Kramer mean? He may have been talking about potassium cyanide (KCN) or sodium cyanide (NaCN). On contact with stronger acids, such as sulfuric acid (H₂SO₄), these salts release gaseous hydrogen cyanide according to the reaction:

Concentrated sulfuric acid is diluted with a double amount of water, and the necessary amount of sodium cyanide is added. The first cyanide disinfestations operated according to this so-called “vat process.”⁴⁸⁶ The same method used to be applied in the U.S. execution gas chambers.

On the subject of Kramer’s deposition, Pressac notes categorically:⁴⁸⁷

“The manner how he [Kramer], in his confession made on 26 July 1945 in front of Major Jadin, claims to have gassed a certain number of people, cannot be considered credible. He would have gassed himself.”

The gassing described by Kramer, Pressac argues, would have involved a “chemically impossible” reaction. He continues:⁴⁸⁷

“On account of the absurdity of this modus operandi and his [Kramer’s] ignorance concerning the substances used, legitimate doubts about this gassing procedure and even concerning the gas chamber itself have been raised.”

⁴⁸⁴ Serge Thion, *Vérité historique ou vérité politique. Le dossier de l’affaire Faurisson. La question des chambres à gaz*. La Vieille Taupe, Paris 1980, p. 313.

⁴⁸⁵ J.-C. Pressac, *op. cit.* (note 74), p. 29.

⁴⁸⁶ Otto Lenz, Ludwig Gassner, *Schädlingsbekämpfung mit hochgiftigen Stoffen. Heft 1: Blausäure*. Verlagsbuchhandlung von Richard Schoetz, Berlin, 1934, p. 9; G. Peters, *op. cit.* (note 402), pp. 45-47.

⁴⁸⁷ J.-C. Pressac, *op. cit.* (note 74), p. 5.

Since Kramer claims that the liquid was not sulfuric acid but plain water, no considerable amount of hydrogen cyanide could have been released. If some acid had been used, it would have been completely irresponsible to mix the two substances outside the chamber, because the release of HCN would have begun right then and there.

The above-mentioned deposition by Kramer is far from being his only one. On 26 July 1945, at Celle, he handed over a typewritten declaration which, however, does not bear his signature. It says *i.a.*:⁴⁸⁸

"I declare the following to the French lieutenant Paul Heiker: in July 1943, executing an order received from Berlin, I caused 30 women and 50 men (Jews from the east), who were between 20 and 55 years of age, to be treated with gas in the camp at Nutzweiler[sic], Alsace. The corpses were taken to the hospital in Strasburg. I declare that there was a gas chamber in the Nutzweiler [sic] camp."

In his first declaration made during the Belsen trial, Kramer spoke at length about his activities at Natzweiler, but he did not mention any gasings.⁴⁸⁹ On the other hand, in his second statement he declared the following:⁴⁹⁰

"On the subject of the orders I received to gas a certain number of women and to send [their corpses] to the University of Strasburg, as I have declared under oath to Major Jadin of the French army, I will provide the following details: the orders I received were put down in writing and signed by Gruppenführer Glücks by order of Reichsführer Himmler. As far as I can remember, they specified that a special transport would arrive from Auschwitz, that the persons making up this transport were to be killed, and that their corpses were to be shipped to Professor Hirt at Strasburg. It also said that I was to get in touch with Professor Hirt in connection with the killing method. I did this, and Hirt gave me a container with crystal gas as well as instructions for its use. At Struthof no regular gas chamber existed, but he advised me how I could use it in a normal room. I know nothing more about the professors who were connected to Hirt, but I do know that in one of the departments there was a professor Bickerbach."

During the proceedings, Kramer committed a strange *lapsus linguae* by confusing the names Hirt and Höß. He added some more details:⁴⁹¹

"Was there a gas chamber before you arrived? – No."

⁴⁸⁸ R. Faurisson, "Sur la prétendue 'chambre à gaz' homicide du Struthof, les trois confessions successives et contradictoires de Josef Kramer", in *Ecrits révisionnistes* (1974-1998), private edition 1999, vol. I, pp. 247-255.

⁴⁸⁹ R. Phillips (ed.), *op. cit.* (note 425), pp. 725-729.

⁴⁹⁰ *Ibid.*, p. 738.

⁴⁹¹ *Ibid.*, p. 174.

Did you consciously order 80 female detainees to be gassed? – Yes, on the orders of Reichsführer Himmler [...].

Did you personally feed in the gas and did you then observe through the peep-hole what you had done? – No.

Did you not state that the women went on breathing for another half minute? – One could hear that. There was no need to look.”

Kramer's last declaration dates from 6 December 1945:⁴⁹²

“In mid-May of 1943 I received from Berlin the written order to kill the persons that had been sent to us from Auschwitz and to send their remains to the anatomical institute at the Strasburg hospital. As to the killing method, according to the written order I had to get in touch with Hirt, professor of anatomy. I called on the professor and informed him about the orders I had received.

Hirt advised me to kill the people with gas. I answered that there was as yet no gas chamber in the camp. Thereupon Hirt gave me a glass bottle closed with wax. Inside there was a substance consisting of small white particles, similar to soda. Hirt said to me, if I poured water on it, I would get a toxic gas. He also instructed me in detail about the dosage. I told him that I was being assisted by the civil engineer Untersturmführer Heider who had been delegated by Oranienburg to help me. So I had the gas chamber built by detainees.

After some time, the first transport arrived, consisting of 26 women aged between 20 and 50. They stayed in the camp for eight days. They were not ill-treated and were fed better than the other detainees. I had received no special instructions concerning these persons. After having waited for eight days, in mid-August of 1943, I had these women taken to the gas chamber at eight o'clock at night. They had to undress in the adjacent room. I then poured a handful of the substance into the hole in the floor. I had the women enter the gas chamber and closed the door. The women started crying and screaming. From the outside, I poured water into the funnel provided [for this purpose]. The water flowed through a pipe that could be closed by a faucet into the hole where the granules were. Half a minute later, the cries in the chamber stopped.

I declare that I did not observe their death through the peep-hole. I only listened. As nothing could be heard and nothing moved, I switched on the ventilator. During that time, I was outside and I neither sensed nor felt the gas. After a quarter of an hour, I opened the door. It seemed that death had occurred normally. Only three or four had not been able to retain their excrements. It was around 9:30.

⁴⁹² J.-C. Pressac, *op. cit.* (note 74), pp. 35f. The French text of this quote is on pp. 258f. of Faurisson's article, *op. cit.* (note 488).

The next morning, around 5:30, I had the corpses taken to Strasburg by means of a truck covered by a tarpaulin. This system was chosen so that nobody would know what had happened. I had, in fact, been sworn to absolute secrecy. I affirm that I did not shoot any of these detainees. Four SS men were present at the gassing, but I can remember only one of them by name, Lagerführer Zeus [Wolfgang Seuss]. Stabscharführer Jung did not participate. I deny that I gave a speech [on that occasion].

Hirt was not present. He came to Struthof two or three times for a personal visit, unrelated to any executions. Some time later, another transport from Auschwitz arrived at Struthof, consisting only of men. Eight days later they were killed in the same manner. [Another] two or three weeks later, a transport of 30 men arrived who stayed in the camp for 10 days and were killed likewise with gas. I deny that the SS men drank after the execution. The same SS men were always present at the executions.

The professor had told me the name of the gas, but I forgot it. But I could recognize the granules if they were shown to me. [...] The 86 corpses that were taken to the Strasburg hospital were all Jewish. I could verify this by means of a list of names. They all came from south-eastern Europe.”

The following “correction” was added later on a separate sheet:⁴⁹³

“There was a single transport, consisting of 26 women and 60 men. They were all Jewish. Within ten days, they were all killed in the manner described.”

The contradictions between these declarations are obvious. Robert Faurisson has presented them in an excellent article, the English title of which is “The three successive confessions and contradictions of Josef Kramer about the alleged homicidal ‘gas chamber’ at Struthof.” In this article, he quotes and analyzes the three declarations made by Josef Kramer to the French military court.⁴⁹⁴ I will summarize only the most obvious of them:

- At times the gas chamber existed already when Kramer received the order from Berlin, at times it did not.
- At times, Kramer observed the killing process through the peep-hole, at times he was content with only “listening.”
- The number of women murdered in the first gassing was both 15 and 26, and the “correction” added later devastates Kramer’s chronology completely. It furthermore contradicts his statement of 26 July 1945 where he said that the 80 detainees arrived in a single transport.

⁴⁹³ R. Faurisson, *op. cit.* (note 488), p. 257.

⁴⁹⁴ *Ibid.*, pp. 247-259.

- Kramer asserts to have poured the “salts” into a pit inside the gas chamber (“I then poured a handful of the substance into the hole in the floor”) and then says that from “the outside, I poured water into the funnel provided.” On the other hand, he claims to have poured both the “salts” and the water into the funnel on the outside (“After I had closed the door, I poured a certain amount of salt into the funnel which was on the right, directly above the peep-hole. At the same time, I added a certain amount of water which, just like the salts, fell into a pit which was located inside the gas chamber below the peep-hole.”)
- Kramer declared that, after the death of the people inside, he had opened the door to the gas chamber while switching on the ventilator. That would have been a logical thing to do, but if Kramer had entered the gas chamber without a gas mask, he would have met his death. Then, elsewhere, he said that he had switched on the ventilator and opened the door fifteen minutes later. This, however, would have been illogical on two counts, for no air could have been removed from the gas chamber without a fresh-air feed, and in this case Kramer would have been poisoned as well. The fact that he did not wear a gas mask can be seen from his own statement that he “did not breathe” the whole time.

At this point I must call the reader’s attention to the fact that the “glass bottle” with the “substance consisting of small white particles” logically had to contain potassium or sodium cyanide, but in this case, no poison gas would have been released on addition of water (instead of sulfuric acid)!

The chronology of the alleged gassings is vague, even contradictory. According to Schmaltz, the first one took place on 11 August 1943 and involved 15 Jewish women (p. 312). It was followed by three more gassings, “probably” on 13, 17 and 19 August (p. 313), but if we follow the only witness, Josef Kramer, the dates were as follows:

Declaration of 26 July 1945

- In early August of 1943 (no precise date is indicated) 15 women were gassed.
- A few days later, an unknown number of women were murdered in the gas chamber.
- A few days after that, some 50 or 55 men were gassed in two or three turns.

As the total number of persons gassed was 86, the number of women gassed on the second occasion must have been between 16 and 21.

Declaration of 6 December 1945

- 26 women were gassed in mid-August of 1943.

- A second transport, consisting of men, arrived some time after that and was gassed 8 days after its arrival.
- Two to three weeks later, 30 men arrived who were killed 10 days later in the gas chamber.

It is difficult to understand why Pressac, who discards Kramer's statement of 26 July 1945 on account of an "obvious physical impossibility," would judge the statement made on 6 December of the same year to be credible. He explains:⁴⁹⁵

"Kramer proceeded as he related on 6 December 1945 in his second statement. There was, in fact, no other way in which the operation could have been carried out. The water poured into the funnel flowed upon a substance which had earlier been placed into the basin, and provoked the liberation of the 'hydrogen cyanide gas.'"

The reason why Pressac speaks of "hydrogen cyanide gas" [*Gas Blausäure*] is that the SS-Mann Volkmar, who was on duty at Natzweiler, noted in his diary the entry "Gas Blausäure Prof. Hirt." Pressac presents photocopies of four pages of this diary, the entries on which have mostly been crossed out by ink or by pencil. No. 43 clearly has "Gas Blausäure," followed by two illegible words. No. 42 clearly shows the words "Prof. Hirt," but this obviously refers to a different entry. Moreover, these entries are undated. Thus they do not prove the gassings allegedly carried out by Kramer.

In the crematorium at the Natzweiler camp, there was a small chamber with two doors, which was incorrectly labelled "disinfection" by the French when they drew the plan of the crematorium in 1945. It was, no doubt, a Zyklon B disinfestation chamber.⁴⁹⁶ The sequence of operations there was the same as in the Birkenau buildings 5a and 5b. Coming from the undressing room, the detainees entered a vestibule ("unclean" side), placed their garments there, entered the shower room next to the delousing chamber ("clean" side), scrubbed themselves, took back the disinfested garments, entered the dressing room and got dressed there. In the meantime, the garments were taken to the gas chamber by the "unclean" side, and after disinfestation they were removed from it from the "clean" side. The plan indicates that the chamber had two chimneys, one for the fresh-air feed from the outside, the other for the removal of the gas. The entry "Gas Blausäure" thus could easily have referred to this installation.

In an effort to provide a chemical explanation for the gassing mode he believes to be credible, Pressac refers to Georges Wellers. Schmaltz also refers to Wellers when writing that

⁴⁹⁵ Pressac, *op. cit.* (note 74), p. 6.

⁴⁹⁶ *Ibid.*, p. 53.

“chemically speaking, two possibilities might be considered. Either the substance used at Natzweiler was potassium or sodium cyanide (KCN or NaCN) which reacts with water (H₂O) to yield hydrogen cyanide (HCN), or it was the calcium salt of hydrogen cyanide which is used in agriculture as a disinfection agent under the name of ‘Cyanogas.’” (p. 313)

Wellers’ assertion that KCN or NaCN reacts with water to release hydrogen cyanide is incorrect. These salts are soluble in water but dissociate only to a very limited degree, *i.e.* the solutions smell of hydrogen cyanide but the vapor pressure is too low to affect human beings.

Pressac⁴⁹⁷ thinks that the flask with the salts

“could have been an inert combination of potassium cyanide, carefully mixed with a crystallized acid such as citric, oxalic, or tartaric acid, two substances which react only in an aqueous environment, or else the flask contained calcium cyanide which dissolves in water liberating hydrogen cyanide.”

If a dry and solid strong organic acid such as oxalic, citric or tartaric acid is mixed with an absolutely dry cyanide (such as KCN), nothing much will happen initially, except possibly a slow decomposition. A reaction will start only after an addition of water or under the influence of humidity in the air, *i.e.* the cyanide will be decomposed slowly and hydrogen cyanide will be released. In that case the victims could not have died after “about half a minute.”

Of these substances, only “Cyanogas” was normally used as a disinfection agent. It was the trade name of a product used by the Germans in the 1930s and 1940s. It was based on calcium cyanide which generates HCN gas when in contact with water according to the following reaction:⁴⁹⁸

Calcium cyanide was produced in the form of 20 gram disks which were pulverized into particles 0.001 to 0.01 mm in size by means of a special device, whereupon they yielded hydrogen cyanide under the influence of the humidity of the air.⁴⁹⁹ The alleged device at Natzweiler would have been unsuitable for this product, though.

The other substances would surely have yielded hydrogen cyanide gas, but it is highly improbable that the vapors would have developed fast enough to be fatal within half a minute.

⁴⁹⁷ *Ibid.*, p. 7.

⁴⁹⁸ G. Peters, *op. cit.* (note 402), p. 66.

⁴⁹⁹ *Ibid.*, pp. 67-70.

On the other hand, the pit in the floor of the gas chamber shows no outlet duct. It would have had to contain a porcelain vessel which Kramer, however, never mentions. How would the liquid substance which formed during the reaction have been disposed of? Would it really have been so difficult to connect the pit to the drain in the middle of the room, which was protected by a drain cover?

The question as to the substance used for the gassings is an essential one for a reason I shall explain below. Even if we assume that the killing system described by Kramer in his statement of 6 December 1945 was operational, it does not necessarily mean that the statements of the Natzweiler commander are credible, let alone true. For one thing, as I have already pointed out, he would have killed himself in this case as well on opening the door. In addition, this declaration is in contrast to the dates accepted by orthodox Holocaust historiography. In fact, Schmaltz writes that the 86 delinquents arrived at Natzweiler as a single group, on 2 August 1943 (p. 312), and not in several transports spaced out over several days.

Last but not least, the beginning of Kramer's declaration contradicts the contents of Hirt's letter of 14 July 1943, which says that "according to information from the camp commander [Kramer], a difficulty has arisen in that the material for gassing is not available." As I have pointed out earlier, there was a gas chamber at Natzweiler at that time, but according to Kramer the "material for gassing" was missing.

Yet according to Kramer's post-war declaration, the gas chamber did *not* yet exist a month later – in mid-August – so that Hirt "advised" Kramer to use toxic gas, and he even gave him the material!

Pressac has published two weekly reports concerning the camp strength, the first one covering the period of 7 through 14 August, the second one the period of 15 through 21 August. On 7 August, the column "Jews" has 90 persons, 30 of whom were registered as "deceased," with another 57 deceased Jews for the following period, which means that between 7 and 21 August 87 Jews died.⁵⁰⁰ It would be extremely difficult to attribute these sudden deaths to a cause other than intentional killing, all the more so as this explanation agrees with the other documents cited.

As we have seen, the letter from *SS-Standartenführer* Sievers to Eichmann dated 21 June 1943 states that *SS-Hauptsturmführer* Dr. Bruno Beger had to stop his work on 15 June on account of the danger of an epidemic, after having selected 115 detainees – 79 Jews, two Poles, four Asians and 30 Jewish women at that time housed in quarantine.

The letter goes on to say that, for the further treatment of these persons, their immediate transfer to Natzweiler was imperative without any delay

⁵⁰⁰ J.-C. Pressac, *op. cit.* (note 74), p. 70.

on account of the threat of an epidemic at Auschwitz. In order to prevent the typhus epidemic raging at Auschwitz from contaminating Natzweiler as well, clean and deloused garments for 80 men and 30 women would have to be shipped to Auschwitz immediately. At the same time, temporary housing for 30 women had to be arranged at Natzweiler.⁴⁷⁶

On 5 September 1944 Sievers wrote to Brandt in connection with the collection of Jewish skeletons:⁵⁰¹

“In accordance with the proposal of 9 February 1942 and approval dated 23 February 1942 ref. 23.2.42 AR/493/37, the corresponding and so far missing selection of skeletons has been assembled by SS-Sturmbannführer professor Hirt.”

Now why did Kramer make such diverging statements? Pressac tried to answer this question as follows:⁵⁰²

“Early into his detention, Kramer felt that he was still bound to his superiors such as SS-Obergruppenführer Oswald Pohl by his oath of obedience and thought that it was his duty not to betray anything he might know. This would also explain why he gave to Major Jadin a false description of the gassing procedure during the Struthof trial. He did this on purpose because he believed that the gassing technique and the substances used in this connection actually were ‘secrets’ of the medical ‘science’ of the Third Reich. But later, having seen how his former superiors behaved in front of the Allied tribunals – some of them even committed suicide – he felt that he had been relieved from his oath, ‘put his cards on the table’ and gave quite honest replies. This is how the ‘second versions’ originated.” [It would be correct to say: “This is how the second version originated,” *i.e.* the statement of 6 December 1945.]

To me this explanation seems a little laborious, because Kramer’s declaration of 6 December 1945 is just as unreliable as the one given on 26 July of that year. It would seem that Kramer did not know anything about the gassing of these people and yielded to the pressure of the prosecution who was out to show that a special gas chamber had been built for the purpose of killing these Jews. It is inconceivable that such a primitive technique would indeed be considered a “secret.” Moreover, even after “repenting,” Kramer did not divulge the name of the substance used for the gassings. What is even less convincing, however, is the fact that the camp commander himself claims to have carried out the gassings!

As there was a gas chamber at the Natzweiler camp, with “measuring devices” which “permitted to measure the concentration of phosgene” (p. 314) and as the first experiments took place in June 1943 – according to

⁵⁰¹ *Ibid.*, p. 24.

⁵⁰² *Ibid.*, p. 8.

Schmaltz (p. 310) – the detainees selected for the skeleton collection could have been gassed there without any major problem. But then, why was it necessary to install a funnel and a pipe for the introduction of an unknown substance? As mentioned earlier, phosgene has a toxicity index of 450, in contrast to 1,000-4,000 for hydrogen cyanide. This means that it was considered to be roughly two to nine times more toxic than the latter, and the SS were certainly well familiar with this.

Faurisson mentions an “expertise by professor René Fabre, which said that he had not found any trace of cyanide, neither in the corpses [found at the anatomical institute at Strasburg] nor in the samples of the brickwork taken from the gas chamber or in their plasterwork.”⁵⁰³ Pressac confirms this at least partly.⁵⁰⁴

“At Struthof, the results were negative, something that was rather embarrassing.”

Referring to the letter of 14 July 1943 mentioned above, Schmaltz writes (p. 312):

“At the end of July 1943 ‘the corresponding substances’ were handed over by the secretary of SS-Ahnenerbe, SS-Obersturmbannführer Wolf-Dietrich Wolff, to Hirt personally in Strasburg.”

In a footnote he adds that this letter is dated 30 July 1943, but quotes only the words “*die entsprechenden Stoffe*” (the corresponding substances).

My conclusion, therefore, is that the 86 Jews were indeed murdered at Natzweiler, most probably by means of gas, but in an existing gas chamber that had been built for experiments with phosgene gas.

Still, much remains mysterious. For one thing, one does not know when the 90 Jews who were interned at Natzweiler on 7 August 1943 had arrived there. It is unlikely that, of all the camp strength reports, the only two to have survived would be the ones mentioned by Pressac!

The Auschwitz *Kalendarium* mentions Professor Hirt for the last time under the date of 15 June 1943 in connection with the contents of the letter which Sievers wrote him on 21 June. No further documents exist on the subject of the transfer of the 86 or 87 Jews to Natzweiler (it is not clear why only 86 or 87 Jews out of those selected were sent to Natzweiler). This means that one can only surmise that they came from Auschwitz. This is corroborated at first sight by the fact that one of the corpses found towards the end of the Second World War at the anatomical institute of Strasburg university bore the number 107969 on its lower left arm. At Auschwitz, this number had been assigned to the detainee Menachem Taf-

⁵⁰³ R. Faurisson, *op. cit.* (note 488), p. 253.

⁵⁰⁴ J.-C. Pressac, *op. cit.* (note 74), p. 12.

fel.⁵⁰⁵ But if the photograph of this number is compared with an undoubtedly genuine Auschwitz tattoo,⁵⁰⁶ one can see that it was inscribed in ink or indelible pencil rather than as a tattoo.

On the subject of the work carried out in the gas chamber according to the construction reports, it is probable that their purpose was to modify the chamber from one for non-fatal phosgene tests to one in which the victims could be killed. The only specific job mentioned concerns the lengthening of the chimney duct and its fixation by means of a clamp.

Towards the end of his article, Schmaltz writes that, while the gas chamber at Natzweiler was linked “to criminal scientific purposes,” it had not served the same purpose as the “gas chambers in the extermination camps at Kulmhof, Bełżec, Sobibór, Treblinka, Majdanek or Auschwitz-Birkenau, in which thousands of inmates were murdered” (p. 315).

If taken seriously, the history of the gassings at Natzweiler – by means of those unknown compounds (letters of 14 and 30 July 1943) or the alleged use of this mysterious substance (claimed by Kramer) as well as the gas chamber’s claimed primitive equipment – shows merely that the Natzweiler SS guards knew nothing about mass murders by gas in other camps. From the viewpoint of orthodox Holocaust historiography, this is all the more astonishing as the victims came from Auschwitz, the purported model of all “extermination camps.” The correspondence preceding the Natzweiler killings contains no indications concerning the Auschwitz gassing procedure which, logically, should have been applied also at Natzweiler – if orthodox Holocaust historiography were really based on facts. The letters do not speak of Zyklon B; they don’t mention the assignment of an Auschwitz “specialist” to Natzweiler; or the dispatch of a Natzweiler guard to Auschwitz so that he may familiarize himself with the alleged gas chambers there (such as SS-*Oberscharführer* Anton Enders was allegedly sent from Majdanek to Auschwitz to learn there how to gas human beings). This is all the more remarkable as the Natzweiler gas chamber could easily have been used with Zyklon B, possessing, as it did, a small window below the chimney, which merely would have had to be furnished with a hermetic shutter to obtain a perfect orifice for feeding Zyklon B granules.

Without the need of breaking any holes into the walls, the room could also have been turned into a gas chamber of the type allegedly used in the euthanasia centers. It would have sufficed to hook up a pipe to the slightly enlarged peep-hole and connect the pipe to a cylinder of carbon monoxide. Another possible way would have been to connect it to the exhaust pipe of a gasoline engine, such as was allegedly the case in some of the “Aktion

⁵⁰⁵ *Ibid.*, pp. 16 & 77 (photos 5 & 6).

⁵⁰⁶ See document 8.

Reinhardt” camps, or to set up a gas generator using wood as a fuel. In any case, it would have been possible to bring in one of those gas vans which were ubiquitous, if we are to believe the authors of this collective volume.

So why didn’t the SS guards use any of those techniques, well-tested as they allegedly were by gigantic mass killings?

It is possible that the murders were committed by means of phosgene. The fact that experiments with this chemical warfare agent were secret could also explain the cautious formulations found in the two letters. The contradictions and absurdities in Kramer’s declarations indicate that he was not present during the killings. If he did say so later on, he must have acted under pressure.

15. The Mysterious Gas Chamber at Dachau

The last part of the anthology discussed here exhibits a specifically anti-revisionist tendency and claims to refute the revisionists. This results already from the title “The ‘gas chamber lie’ in the international revisionist propaganda” (“Die ‘Gaskammer-Lüge’ in der internationalen revisionistischen Propaganda”) which is meant to discredit revisionist research as mere “propaganda.”

The first contribution of this part of the series comes from Barbara Distel and is entitled “The gas chamber in ‘Baracke X’ of the Dachau concentration camp and the ‘Dachau lie’,” (“Die Gaskammer in der ‘Baracke X’ des Konzentrationslagers Dachau und die ‘Dachau-Lüge’”; pp. 337-342). It begins as follows (p. 337):

“In the spring of 1942, the construction of a new crematory in line with the plans of the SS was started at Dachau – designated as ‘Baracke X’ by the SS, because the capacity of the crematorium erected in 1940 was no longer sufficient in view of the high mortality in the camp, caused in particular by the execution of thousands of Soviet PoWs. The new crematorium was equipped with a gas chamber.”

Distel continues (p. 338):

“The question of whether people were actually murdered by poison gas in the gas chamber installed in this crematorium has not yet been answered with certainty; the sources in this respect are poor, and this has not changed in the 25 years which have passed since the first scientific inventory on ‘Nazi Mass Murders.’”

For this reason, Distel tells us, the “date of the termination and/or the start-up of the gas chamber is still unclear” (footnote 8 on p. 338), in spite of the fact that, at Dachau, “in the early 1960s an intensive search for relia-

ble sources was carried out in the area of the former camp as part of the creation of a memorial” (footnote 6 on p. 338).

The author tells us that, in the opinion of some orthodox historians, the alleged gas chamber was built in connection with the execution of Soviet PoWs, but adds (p. 339):

“The question as to why the gas chamber, presumably erected in the spring of 1943, was not used for executions according to what we know today must remain unresolved just like the question whether the gas chamber was possibly used for individual killing actions.”

While evidence is said to exist to the effect that “during the construction of Baracke X” the infamous Dr. Siegmund Rascher considered using “the gas chamber for the testing of deadly combat gases,” this has “not been ascertained unambiguously to the present day,” although it “could not be excluded” either (p. 339). This is really beating about the bush in the true sense of the word.

Distel refers to the well-known statement of the former detainee Franz Bláha dated 3 May 1945 (PS-3249), in which he claimed personally to have seen gassed victims, but she then admits that “evidence for the killing of people in the Dachau gas chamber does not exist in this case either.” Just as unresolved, in her opinion, is the question why the alleged gas chamber “was not used during the last months of the war for the murder of the sick and the weak, as was the case in other camps which possessed such killing installations.”

In what way Distel’s article is aimed at the revisionists is made clear only on p. 341. She writes that, in the early 1960s, the *Deutsche Soldaten-Zeitung* und *National-Zeitung* “again and again reported extensively about the alleged ‘gas chamber lie’ at Dachau.” Over and over again new witnesses had appeared “who claimed that, after the liberation of the concentration camp, they had been forced by the American military authorities to set up a gas chamber in the existing crematorium of the camp.” She also states that, according to these claims, the furnaces of the crematorium had been faked after the war and that the furnaces in the crematorium and the gas chamber had been blended into the expression ‘gas ovens.’

Distel then writes about Martin Broszat’s much-cited letter to the editor of the German weekly *Die Zeit*, published on 19 August 1960 under the title “No gassing at Dachau” (“Keine Vergasung in Dachau”) and adds that “the revisionists” (it would have been better to say “some revisionists”) had distorted its contents and had claimed falsely that Martin Broszat had contested in a general way the existence of gas chambers on the territory of the *Altreich*, i.e. Germany in the borders of 1937 (which, in fact, he did not do).

All this is well known. What is less well known is that Martin Broszat wrote his letter in reply to a front page article in *Die Zeit* by Robert Strobel, in which he “implicitly painted as a fact the assertion that mass killings by poison gas had been carried out in the Dachau gas chamber and moreover created the impression that the victims had been Jewish” (p. 314). In this article, Robert Strobel had attacked the former Wehrmacht general Martin Unrein, a “proto-denier” who had labeled the gas chamber as an ordinary shower room. The meaningless notion of “gas ovens” was introduced into the discussion by Robert Strobel himself:⁵⁰⁷

“For him [General Unrein], it was not Hitler’s victims who were burned in the Dachau gas ovens but the corpses of the German SS-soldiers who had died at Dachau.”

The article mentioned by Distel actually appeared only on 7 January 1966 (since 1963 the title of the newspaper has simply been *Deutsche Nationalzeitung*). It was written by H. Berger and was entitled “Rumors about Dachau.” It said that the SS guards, interned at Dachau, had been forced by the Americans to build “new and larger gas ovens” – which, of course, is incorrect.

Distel indicates that, in 1945, the local U.S. military authorities had erected a sign in front of the crematorium which spoke of 238,000 victims having been incinerated in this building (p. 340). Paul Rassinier, who published a photograph of this sign, wrote:⁵⁰⁸

“In a lecture presented on 3 January 1946 and published in Stuttgart by Franz M. Hellbach under the title ‘The road to freedom,’ Pastor Niemöller asserted that ‘238,756 people were burnt’ at Dachau, more than had ever been interned there.”

Although this claim was actually not made by Pastor Niemöller, the poster outside of the crematorium did indeed say:⁵⁰⁹

“In the years between 1933 and 1945, 238,756 people were burnt here.”

Let me remind my readers that the correct figure is 27,839 (cf. chapter 11).

At this point, it is interesting to read what is asserted in the first official American report about Dachau – prepared in May of 1945 by Colonel William W. Quinn of the 7th Army – in the section entitled “Executions”:⁵¹⁰

⁵⁰⁷ R. Strobel, “Weg mit ihm!” in *Die Zeit*, no. 33, 12 August 1960; see www.zeit.de/1960/33/weg-mit-ihm.

⁵⁰⁸ P. Rassinier, *La menzogna di Ulisse*, Le Rune, Milan 1961, p. 334.

⁵⁰⁹ M. Niemöller, *Der Weg ins Freie*. Stuttgart 1946, p. 19.

⁵¹⁰ Brochure with the title “Dachau.” GARF, 7021-115.17, p. 33; cf. www.scribd.com/doc/36088795/Dachau.

“GAS CHAMBERS: The internees who were brought to Camp Dachau for the sole purpose of being executed were in most cases Jews and Russians. They were brought into the compound, lined up near the gas chambers, and were screened in a similar manner as internees who came to Dachau for imprisonment. Then they were marched to a room and told to undress. Everyone was given a towel and a piece of soap, as though they were about to take a shower. During this whole screening process, no hint was ever given that they were to be executed, for the routine was similar upon the arrival of all internees at the camp.

Then they entered the gas chamber. Over the entrance, in large black letters, was written ‘Brause Bad’ (showers). There were about 15 shower faucets suspended from the ceiling from which gas was then released. There was one large chamber, capacity of which was 200, and five smaller gas chambers, capacity of each being 50. It took approximately 10 minutes for the execution. From the gas chamber, the door led to the Krematory[sic] to which the bodies were removed by internees who were selected for the job. The dead bodies were then placed in 5 furnaces, two to three bodies at a time.”

Numerous other statements by witnesses on the subject of the alleged gas chamber have been collected by Robert Faurisson.⁵¹¹

In the same way as in all other camps, the story of the Dachau gas chambers was a reaction to the harrowing scenes the Americans and the British saw and recorded on film on their arrival. Distel writes (p. 337):

“In front of the [crematorium] building, as well as in the so-called morgue, there were piles of naked corpses that it had been impossible to throw into the mass grave near-by. That is where the dead had been taken in the last weeks before the liberation, as there was no longer any fuel for the incineration of the corpses in the cremation furnaces.”

It was clear to the U.S. propaganda staff that these poor people must have been murdered in a gas chamber. This version was all the easier to sell as there existed – in front of the crematorium – four genuine Zyklon B circulation disinfestation chambers (plus an empty one, without any equipment, which was probably used for the storage of the Zyklon B cans). As we have seen, these chambers would be presented as homicidal gas chambers in the official American report on Dachau prepared in May of 1945.

During the Dachau trial (15 November through 13 December 1945) it was explicitly recorded:⁵¹²

⁵¹¹ F.A. Leuchter *et al.*, *op cit.* (note 21), pp. 149-158.

⁵¹² *Law Reports of Trials of War Criminals*. Published for the United Nations War Crimes Commission by His Majesty's Stationery Office. London 1949, vol. 11, p. 5;

“A typhus epidemic was raging at the camp from December, 1944, until the liberation of the camp by American troops in April, 1945. Approximately 15,000 prisoners died of typhus during this period.”

Hence, Distel’s “refutation” of the revisionists rests on very shaky ground and is most confused. On the one hand, she hints – without explaining for what reason – that the room in question had actually been a homicidal gas chamber, on the other hand she admits four times (pp. 338, 338f., 340, 341) that there is no evidence showing that killings were actually carried out in these chambers. Does this not entitle a person to accuse those who present the alleged gassings at Dachau as established historical facts of “fraud” and “cheating”?

The unreliability of witness statements is clearly shown by the statements of the former Dachau detainee Eugen Seibold, who declared the following on 10 November 1945:⁵¹³

“Gaskammer. I have never seen a person gassed in the gas chamber. Initially, the gas chamber was arranged differently from the way it looks today. Rows [of showers] running parallel to the floor, as in a shower room; it is assumed that they sprayed gas. It was only later, roughly a year ago, that the ceiling with the fake shower heads was put in. The reason was that the gas used arrived in the form of granules. It was thought that the entry of the steam heated by the furnaces took place above the false ceiling where the granules were dissolved by the steam, upon which they left through the shower heads and killed the people.”

The false ceiling with the fake shower heads, however, could not have been installed a year earlier – *i.e.* in late 1944. In fact, Fred Leuchter has stressed that the alleged gas chamber, according to a document presented by the U.S. prosecutors at Nuremberg, had a height of “10 feet,” a little over three meters, whereas its present height is about 2.15 meters. The document in question states that the gas “was fed into the chamber through perforated pipes attached to the ceiling, which ended in brass fittings.”⁵¹⁴

If this Nuremberg document does indeed describe the state of the room at the time, it is clear that the false ceiling with the fake shower heads was put in only after the end of the war. The historian Hellmut Diwald, mentioned by Distel towards the end of her article, was therefore absolutely right when he talked about “Attrappen” (mockups) which were fabricated by the Americans. It would be nice if Mrs. Distel would explain why they did this.

⁵¹⁴ “Atrocities and other conditions in concentration camps in Germany.” Report to the U.S. Congress of 15 May 1945; L-159; IMT, vol. XXXVII, p. 621.

Photographs 8 – 12 show the state of the crematorium in December of 1990. The arcade in front of the crematorium contains four Degesch circulation disinfestation chambers (photograph 8). The entrance to the alleged gas chamber shows the famous inscription “*Brausebad*” (shower room, photograph 9). As can also be seen from the inside (photograph 10), the steel door is the standard air-raid shelter door, just as the door of the alleged gas chamber at Mauthausen, with the minor difference that the door at Dachau did not have a peep-hole. Photograph 11 shows the false ceiling with the fake shower heads. From the time this building had been accessible after the former camp’s conversion to a museum up to the 1990s, a sign was standing in that room announcing in five languages “Gas chamber – camouflaged as a shower room – was never in operation” (photograph 12).

On a more detailed critical analysis of the alleged gas chamber of Dachau see the most recent edition of *The Leuchter Reports: Critical Edition* as well as Thomas Dalton’s paper “Reexamining the ‘Gas Chamber’ of Dachau”.⁵¹⁵

16. Holocaust-Propaganda against Revisionism

On the subject of Robert Jan van Pelt’s article “For want of a nail, or considerations on how history must not be rewritten” (“Weil ein Nagel fehlte oder Überlegungen, wie Geschichte nicht umgeschrieben werden darf”; pp. 343-354) I have already laid down my reservations in chapter 7. The subsequent contribution by Brigitte Bailer-Galanda, “Holocaust denial in Austria. On the history of right-wing extremism in Austria” (“Holocaust-Leugnung in Österreich. Zur Geschichte des Rechtsextremismus in Österreich”) discusses briefly the main representatives of revisionism in Austria (Franz Scheidl, Gerd Honsik, Walter Lüftl, Wolfgang Fröhlich), limiting herself by and large to the latest repressive measures taken against them by the authorities and without in the least trying to sum up their arguments, let alone attempting to refute them.

The article “Negationism as a pseudoscientific cloak for anti-Semitism” (“Negationismus als pseudowissenschaftliche Tarnung des Antisemitismus”; pp. 366-381) by a certain Jean-Yves Camus was apparently planned as a comprehensive refutation of “negationism,” but its very title announces that the reader will encounter nothing but a political polemic. As a matter of fact, this contribution turns out to be nothing but a rehashed version

⁵¹⁵ Thomas Dalton, “Reexamining the ‘Gas Chamber’ of Dachau,” *Inconvenient History*, 3(4) (2011), <http://www.inconvenienthistory.com/3/4/3162>.

of the traditional anti-revisionist propaganda along the lines of the late French-Jewish historian Pierre Vidal-Naquet.

If one listens to Camus, negationism “takes recourse to conspiracy theories,” which makes it “inherently anti-Semitic.” I do not have to stress that the mandatory reference to the “Protocols of the Elders of Zion” also figures here; after all, Deborah Lipstadt herself had construed a fictional relationship between this pamphlet and revisionism, a mirage later on perfected by Valentina Pisanty in Italy.⁵¹⁶

The alleged “conspiracy theory” seems to have become the true obsession of poor Mister Camus, as he always returns to this topic (pp. 367-370). The main characteristic of this propaganda is a most interesting psychological phenomenon: People like Camus assign to revisionism the very methods they themselves are employing and the blind dogmatism which shapes their own patterns of reasoning. Camus deplores the fact that the revisionists are acting in a universe “largely removed from reality and based on a quasi-theological conviction.” Ever since the 1980s, he says, they have appeared “as a genuine sect, with their own dogmas, high priests and faithful believers” (p. 373). Actually, it is just the other way around: the “quasi-theological” dogmatism of which Camus accuses the revisionists found its most poignant expression in the famous declaration by 34 leading French intellectuals of 1979:⁵¹⁷

“One must not ask how such a mass murder was technically possible. It was technically possible because it took place. This is the mandatory starting point of any historical approach to this question. We must underline this simple truth: there is no debate about the existence of the gas chambers and there must not be one.”

Several authors, especially the Italian writer Gianantonio Valli,⁵¹⁸ have underlined that the present belief in the Holocaust is, in effect, a secular religion or “superstition.” This belief has its own

- Crucifixion (the Jewish people as a collective Messiah),
- Lamb of God (the victims slaughtered by the Nazis),
- Priests (the Holocaust historians),
- Cathedrals and Churches (Holocaust Museums and Memorials),
- Holy Days (the “Day of Remembrance,” 27 January),
- Saints (like Elie Wiesel and Yisrael Meir Lau)

⁵¹⁶ See my study *Teoria e prassi del anti-“Negazionismo.”* Da Pierre Vidal-Naquet a Valentina Pisanty, Effepi, Genoa 2011.

⁵¹⁷ P. Vidal-Naquet *et al.*, “La politique hitlérienne d’extermination: une déclaration d’historiens,” in: *Le Monde*, 21 February 1979, p. 23.

⁵¹⁸ See Gianantonio Valli, *Holocaustica Religio. Fondamenti di un paradigma.* Effepi, Genoa 2007.

- Prophets (the eye-witnesses whose statements of what they saw cannot be questioned),
- Pilgrimages (to the former German concentration camps)
- Inquisition (the media that enforces Holocaust orthodoxy),
- Excommunication (anathema will be pronounced against revisionist heretics)
- Prosecutorial Arm (secular laws and law-courts that punish revisionist utterances),
- Zealots (like French existential writer Albert Camus, and Abe Foxman), and
- The Faithful (the unquestioning believers of Holocaust propaganda).

Another standard feature of this crude propaganda is the assertion that all revisionists are poorly-camouflaged anti-Semites or Nazis whose only objective is the “rehabilitation of Nazism” (p. 373). This fictional notion goes back to Vidal-Naquet, and its only aim is to discredit revisionism. Near the end of his text, Camus blames the revisionists for harboring an “extreme, almost obscene hatred” (p. 381) – the very quality which he himself exhibits towards his opponents.

With respect to revisionist websites, Camus notes with obvious displeasure (p. 376) that in the USA, “the legal situation is complicated [sic] by the freedom of opinion guaranteed by the First Amendment.” In line with all dogmatists of his ilk, Mr. Camus feels that the principle of freedom of opinion is just an unnecessary complication of the matter.

Even orthodox Holocaust propaganda is projected onto revisionism. According to Camus, the latter puts on a “pseudo-academic cloak” and acts behind a “pseudo-scientific façade” (p. 367); its representatives are “pseudo-scientists” (p. 373) – boomerang arguments which backfire onto their originators.

Perhaps the most descriptive example of the fraudulent methods used by Camus is his assertion on page 367:

“Trying to maintain respectability and to hide their true intentions, many negationists call themselves ‘revisionists.’ As opposed to this, the ‘genuine revisionists’ do not doubt the Nazi genocide as such, but only the number of victims claimed.”

Among the “genuine revisionists,” Camus counts people like Ernst Nolte, who were labeled as such during the west-German “Historians’ Dispute” of 1986/87. Camus knows perfectly well that, at that time, *genuine* revisionists had existed for at least a decade. If anyone is trying to “hide their true intentions,” it was the historians of the Federal Republic of Germany. It is well-known that silly expressions like “negationists” or “Holo-

caust deniers” were coined later – not to distinguish the genuine revisionists from the others, but to discredit them.

Camus presents a brief account of the history of revisionism, claiming – like another Holocaust propagandist, Deborah Lipstadt,⁵¹⁹ before him – that the founder of “negationism” was the French writer Maurice Bardèche (p. 368). It is an established fact, however, that Bardèche, an avowed fascist, while severely criticizing the Nuremberg Trial, explicitly recognized the veracity of the extermination of the Jews.⁵²⁰ It is also well known that the first revisionist was in fact Paul Rassinier, a socialist and member of the French *Résistance* interned at the Buchenwald camp during the war, but he does not fit very well into the dogma that revisionism has “anti-Semitic” and “Nazi” origins. In such a situation it is easier to nominate the fascist Bardèche to the post of Ancestor of Revisionism.

At least Camus calls some revisionist authors by their names, but cheats here and there in doing so. Following in the footsteps of Deborah Lipstadt, he does not shy away from listing the alleged “eight theses of negationist doctrine” as formulated by a practically unknown American author, Austin App. He devotes more than half a page to this nonsense, while consecrating barely a few lines to Germar Rudolf, one of the key figures of revisionism: On p. 367, the reader learns that Rudolf is a chemist, and on p. 373 that he lived in the U.S. until 2005 and was then deported. Not a word about the fact that, at that time, he was deported to Germany where he was sentenced to further 30 months in prison on 15 March 2007 on account of renewed infringements of the Holocaust dogma.⁵²¹

Camus consecrates three lines to the Swiss revisionist Jürgen Graf (p. 375). I myself am mentioned on the same page, together with Claudio Moffa, as representatives of Italian revisionism. Here, too, Camus plays with a stacked deck: Claudio Moffa, professor at the University of Teramo, is not a revisionist researcher, not even a self-confessed revisionist. He is merely a “heretic,” courageous enough to classify the Holocaust as a historical topic like so many others, which can be debated and critically questioned.

Cheating reaches its peak when David Irving is called “without doubt the most famous revisionist in Europe” (p. 375). It is well-known that all serious revisionists regard David Irving merely as a pseudo-revisionist. This is particularly true after David Irving’s pronouncement regarding the

⁵¹⁹ Deborah Lipstadt, *Denying the Holocaust*, Free Press, New York 1994, p. 49.

⁵²⁰ Maurice Bardèche, *Nuremberg et la Terre Promise*, Les sept couleurs, Paris 1948, p. 187.

⁵²¹ Already in 1995 Rudolf had been sentenced to 14 months’ imprisonment for his chemical research in Auschwitz, but he had to serve this time only after his deportation from the U.S. in 2005. On 5 July 2009 Germar Rudolf was released from prison.

alleged “eastern extermination camps.”⁵²² Moreover, Irving has never even published a single article dealing with the persecution of the Jews, let alone written a book about this matter. But because of his rather overt sympathy for National Socialism and of the libel suit he filed – and lost – against Deborah Lipstadt in 2000, Irving is a convenient bogeyman for propagandists like Camus, against whom they can vent their wrath.

The pseudo-scientific and clumsily propagandistic nature of Camus’s article becomes also apparent in that he makes no attempt whatsoever at presenting a critical analysis of revisionism. He does mention the occasional revisionist title, but never wastes even a single word on the arguments presented in these texts. Without giving any evidence, he declares that revisionism is “pseudo-scientific” in a way used to pronounce an anathema. In other words, it is he, Jean-Yves Camus, who claims to be the guardian of absolute truth, thus assuming the right to prohibit any discussion *a priori* and deciding *ex cathedra* that anyone who does not believe whole-heartedly in the dogmas of the Holocaust religion is automatically wrong. He uses this dogmatic approach as an excuse to not even read the most important revisionist works, let alone to analyze them – after all, the high priests of the Holocaust creed, Pierre Vidal-Naquet in particular, have set down the truth, once and for all. Since the latter and most reverend of the lot published his Papal Bull against revisionism as early as 1987,⁵²³ his followers refuse to say anything about the revisionist texts which have appeared later, in spite of the enormous surge which scientific revisionism has experienced after the mid-1990s.

This can easily be documented. In his first footnote on p. 366, Camus presents a “general bibliography on negationism” prepared by John A. Drobnicki. It lists 37 revisionist books, articles and journals from the following periods:

1950-1959:	1
1960-1969:	1
1970-1979:	16
1980-1989:	15
1990-1999:	2

In addition, there is the undated “Letter to the Pope” by Léon Degrelle (written in 1979), as well as the U.S. newspaper “*The Spotlight*” (1975 – 2002). Among the authors mentioned, one finds totally or relatively unknown names such as Alfred Eris, Benjamin H. Freedman, Joseph Halow und Malcolm Ross as well as some second-order revisionists of the

⁵²² J. Graf, “David Irving and the *Aktion Reinhardt* Camps,” in: *Inconvenient History*, vol. I, 2009, pp. 149-175.

⁵²³ Pierre Vidal-Naquet, *Les assassins de la mémoire*, La Découverte, Paris 1987.

1970s.⁵²⁴ Aside from three titles in French, only English language literature is considered (even the writings of the four German authors mentioned are listed in their English translation). Drobnicki's article appeared in 1998, but Camus mentions an internet version (footnote 1 on p. 366) which ends on 16 August 2006 and does not mention in any way the most important revisionist works which have appeared since the 1990s. Does anyone need more evidence for the propagandistic and unscientific mentality of the anti-revisionists?

Let us review briefly the lies used by Holocaust propagandists in their fight against revisionism. According to Camus, this revisionist view

- is by nature anti-Semitic and attempts to rehabilitate National Socialism;
- is nothing but camouflaged anti-Semitism;
- is a false and consequently pseudo-scientific doctrine.

This means that revisionism is heresy and thus does not have the right to exist. It goes without saying that Camus and his cronies have never presented any proof for their assertions in this respect! They have never tried to critically analyze and refute the most important revisionist texts. As opposed to this, revisionist authors have on several occasion discussed in detail the most important books published by their antagonists.⁵²⁵

It is quite obvious that Camus and his ilk want to hide their inability to face revisionists – at least the most important of them – at eye-level. The more helpless they feel in this regard, the more they resort to invectives and the louder they call for the police in an effort to silence their accursed opponents. They are careful to avoid any debate and hence cannot even refer to certain anti-revisionist internet bloggers who are at least trying to refute what the revisionists have to say. The fact is that the arguments of

these bloggers are so poorly put together that not even the participants of the Oranienburg meeting take them seriously, even though these participants are quite willing to use internet sources. In a huge two-volume tome we recently finished off those bloggers – who are more accurately called Holoplagiarizers – by teaching them a harsh lesson in historical methods which encompasses the entire Holocaust historiography.⁵²⁶

Hajo Funke's article "The gas chamber lie in the revisionist propaganda in Germany and Austria" ("Die 'Gaskammer-Lüge' in der revisionistischen Propaganda in Deutschland und Österreich"; pp. 329-393) contains a remark on one of my articles which I have already addressed in chapter 10. The contents of Funke's paper as such are of such deplorable quality that I shall refrain from answering it.

Therkel Stræde's contribution "Lone wolves against the Holocaust. The gas chamber denial in Denmark" ("Einzelkämpfer gegen den Holocaust. Gaskammer-Leugnung in Dänemark"; pp. 394-402) is in no way better, although it does mention a few persons who are more or less inclined towards revisionism but who are totally unknown outside of Denmark. When reading the article, though, it becomes apparent that the Danes are vastly more tolerant towards their own dissidents than the French, the Germans and the Austrians are towards theirs, and that in Denmark freedom of opinion exists even for avowed National Socialists.

Just as devoid of any significance is the article written by Thomas Skelton-Robinson, "New tendencies of Holocaust denial in North America" ("Neue Tendenzen der Holocaust-Leugnung in Nordamerika"; pp. 403-411). In line with Camus, Skelton-Robinson makes no bones about his contempt for free speech as guaranteed by the First Amendment of the U.S. constitution (p. 404). He dismisses the revisionists' defense of this general principle as a kind of abuse (p. 405):

"The wide-spread inclination to defend the unrestricted right of free speech has been periodically appropriated and used by the agitators of Holocaust denial."

In order to deny the revisionists their right to free speech, Skelton-Robinson employs the usual slogans of orthodox Holocaust propaganda (p. 412):

"The denial of the Holocaust is, in its essence, nothing but yet another variant of anti-Semitism."

It follows, quite naturally, that the true objective of the revisionists is the "rehabilitation of the Third Reich and National Socialism" (p. 411). As I have already pointed out, this is nothing but a threadbare excuse to avoid

⁵²⁶ I refer to the 1500+ pages of Mattogno, Graf, Kues, *op. cit.* (note 40), long PDF version online, see www.holocausthandbooks.com/dl/28-tecoar-long.pdf.

a discussion of the revisionist arguments, against which the orthodox Holocaust ideologues seem to be powerless.

Nobody will argue against Skelton-Robinson's assertion that the revisionist movement, numerically speaking, is "minute" – but why is it necessary to organize an international meeting and to publish the proceedings in a heavy anthology in order to fight it? Why are laws needed to suppress it? Why do orthodox historians have to make use of the most blatant distortions and to project onto the revisionists the most sinister motives?

The last chapter of this anthology is an article by Matthias Heyl with the title "Denial of National Socialist crimes as an educational problem for memorial sites" ("Leugnung der nationalsozialistischen Verbrechen als gedenkstättenpädagogisches Problem"; pp. 415-424) which is not any more significant than the preceding chapters. One can only marvel at the way these "scientists" are beating about the bush and fire away with empty slogans without ever even touching on the really important issues. Who are the most important representatives of revisionism today? What do they have to say? Are their arguments well-founded or not? If they are unfounded, how can they be refuted? All these questions are disarmingly simple, but these splendid scientists do not have the guts to ask them. When seen in this light, the claim "to develop strategies against denial" (p. 415f.) is nothing but hot air.

Even if Matthias Heyl's article consists mainly of meaningless cant, it does entail an important piece of information: On 22 August 2002 a man was sentenced to six months in prison for having "denied," *i.e.* contested, the existence of the gas chamber at Ravensbrück (p. 418). As we have seen, there is not a single document lending credence to the existence of this alleged gas chamber. There are no photographs or material remains. For this reason, the French historian Olga Wormser-Migot, a writer of Jewish descent, declared this gas chamber to be a myth as early as 1968. But, hold it – there are the "witnesses," those prophets of the Holocaust religion, who do not describe but invent the erstwhile "reality." For the followers of the Holocaust religion, any heretic who is insolent enough to cast a critical light on the assertions of these saintly "witnesses" must indeed be put behind bars!

17. Conclusion

The anthology *Neue Studien zu nationalsozialistischen Massentötungen durch Giftgas* claims to refute revisionism. In doing so, it repeats the orthodox Holocaust dogmas about the Holocaust as handed down by their

predecessors and at once attempts to reinforce these dogmas by claiming to refute revisionism. Both aspects are present in some of the articles, whereas towards its end the book specifically aims at confronting revisionism.

Let us first consider the second aspect, *i.e.* the evidence that the authors of the book present to support the officially sanctioned version of history. In spite of the fact that in a number of cases they were able to use sources which were made available only recently, they have not succeeded in presenting a scientifically sound demonstration of their theses. Instead of such a demonstration, they offer the credo of a new and dogmatic historiography which no longer has to be proved because, according to the unfathomable mysteries of this creed, everything has already been shown to be true. Questions which are absolutely fundamental remain unanswered, for example the manner in which the alleged gas chambers using engine exhaust gases or Zyklon B evolved from the alleged carbon monoxide chambers in the euthanasia centers, or the genesis and the evolution of the “gas vans” of the first and the second generation. Instead, the authors arbitrarily link fictitious events created by the congress participants, which are based exclusively on contradictory witness statements that have been cleaned of their most blatant absurdities.

Another fundamental problem which the participants of the Oranienburg meeting have not even touched upon is the mythical “Führer order” to eradicate the Jews. The existence of such an order is tacitly – or shall we say, dogmatically – assumed. The gas chambers, whose existence remains to be demonstrated, are said to have been used in order to carry out an industrialized genocide, but nobody can say who ordered it at what time and for what reason.

Just as unexplored is a third question of equal importance: the choice of the various killing methods allegedly employed when implementing such a policy. In the euthanasia centers, carbon monoxide in steel cylinders is claimed to have been used; in some of the “*Aktion Reinhardt*” camps it was exhaust gas from gasoline and/or diesel engines; in Auschwitz and a few other camps it was Zyklon B, as against gas vans in Chełmno, in Serbia and behind the Russian front; and a hodge-podge of means is claimed for Majdanek. In spite of all the frantic efforts of the authors of the anthology to come up with a virtual relationship between all these widely diverging killing methods, recurring to the German Institute of Forensic Investigation as a kind of *deus ex machina*, or by conjuring up a fictitious meeting of concentration camp commanders at Sachsenhausen, the critical reader ends up having the impression that the implementation of the alleged genocide had been left to the discretion of the local SS staff who, though acting

without overall coordination, were still linked by means of three different chains of command, which were all independent of one another.

These orthodox historians attempt to demonstrate a horrifying mass murder carried out in chemical slaughterhouses in spite of the total lack of documentary proof and, for many camps, even the lack of any circumstantial evidence. This clearly demonstrates both their credulity and ideological blindness as well as their resounding disregard for elementary scientific principles. Exemplary in this regard is the way in which they rely exclusively on witness statements which they have selected and cleaned of the most nonsensical passages.

Even those chapters which at least merit discussion are superficially and hastily written; sources are often not indicated, with many cross-references among the authors, leading to a sterile vicious circle.

I have summarized the situation regarding the source material for the existence of the alleged homicidal gas chambers and “gas van” in Table 8.

Table 8: Locations Where Poison Gases Were Allegedly Used for Homicides, Types of Gas Used and Number of Victims

LOCATION	TYPE OF CHAMBER	POISON [†]	VICTIMS	DOCUMENTS	MATERIAL TRACES*
USSR	≥ 30 “Gas vans”	Engine exhaust	250,000 (p. 24)	None	None
Chełmno	2 or 3 “Gas vans”	Engine exhaust	152,477 (p. 183)	None	None
Other sites [‡]	≥ 1 “Gas van”	Engine exhaust	97,500	None	None
Bełżec	3, later 6 gas chambers	Engine exhaust	435,000 (p. 24)	None	None
Sobibór	3, later 6 gas chambers	Engine exhaust	150,000-250,000 (p. 24)	None	None
Treblinka	3, later 6 or 10 gas chambers	Engine exhaust	800,000-1,100,000 (p. 24)	None	None
Euthanasia centers	6 centers	CO	70,273 (p. 84)	None	None
Lublin-Majdanek	3 gas chambers	CO & HCN	12,200 (p. 227)	None	Present
Mauthausen	Gas chamber(s)	HCN	3,500 (p. 25)	None	Present
Sachsenhausen	1 gas chamber	Zyklon A (?)	Thousands (pp. 271f.)	None	None
Ravensbrück	1 gas chamber	HCN	5-6,000 (p. 25)	None	None
Neuengamme	1 (6?) gas chamber(s)	HCN	448 (pp. 289, 292)	None	None
Stutthof	1 gas chamber	HCN	1,150 (p. 25)	None	Present
Dachau	1 gas chamber	(HCN)	0	None	Present

[†] Exhaust gases from gasoline or diesel engines; CO: from steel cylinders; HCN: from Zyklon B.

[‡] Serbia (Semlin), Majdanek, Auschwitz, Mauthausen; Number of victims is the difference between the two figures directly above.

* Buildings, rooms, equipment or parts thereof, with no opinion on their genuine character or their use.

If we are to believe Achim Trunk, the mythical gas vans caused no fewer than 500,000 victims altogether, 250,000 in the Soviet Union, 152,477 at Chełmno, and consequently 97,500 at all the other sites where they were reportedly used. However, not a single such vehicle has ever been found or photographed. I have already expressed myself clearly on the subject of the sparse documents relating to this matter.

Between 1,385,000 and 1,785,000 persons are reported to have perished in the alleged gas chambers of “*Aktion Reinhardt*,” without any documentary or material evidence for such a claim. These are the fragile foundation of the Holocaust religion! The same is true for the alleged gas chambers at Ravensbrück and Neuengamme.

Table 9: Evidence for Auschwitz: Crematory I and Bunkers

BUILDING	NUMBER OF GAS CHAMBERS	DOCUMENTS	“CRIMINAL TRACES”
Block 11	(“First gassing”)	None	None
Crematory I	1	None	None
“Bunker 1”	2	None	None
“Bunker 2”	4	None	None

At Majdanek and Stutthof, buildings which obviously were delousing chambers are presented as homicidal gas chambers, even though any evidence to support such assertions is lacking. The same goes for the corresponding localities at Mauthausen and Sachsenhausen.

In the case of Auschwitz, the situation is rather complex and somewhat different. I will therefore discuss it separately below. Here, too, there is a complete absence of documentary evidence for the existence of homicidal gas chambers, but at least we have more than a dozen alleged “criminal traces” (an expression coined by J.-C. Pressac), although if investigated in their context, they have no probative value either.

Again, in the case of Auschwitz the orthodox Holocaust historians are unable to tell us who ordered the construction of these gas chambers, at what point in time and under what circumstances. Table 9 summarizes the data regarding the alleged murders with Zyklon B at the Auschwitz main camp and the two “Bunkers” of Birkenau.

For the Birkenau crematoria II to V there are alleged “criminal traces,” but their number reflects in no way the alleged duration of the operation or the number of victims who allegedly perished in the gas chambers installed there. (We must remember that van Pelt affirms that at least 550,000 persons were gassed in the crematoria II and III alone, p. 216). Each one of the 15 so-called “criminal traces” can be explained in a completely innocuous way. All of them concern only the period of planning and erection of these crematoria. Not a single one of these “traces” dates from the time these facilities were in operation (whatever operation this might have been). Moreover, van Pelt’s contribution is of an even poorer quality than the others and has little more to offer than unproven apodictic assertions and fanciful hypotheses.

Still, the last part of the anthology is its absolute nadir. It is pompously titled “The “gas chamber lie” in international revisionist propaganda” (“Die ‘Gaskammer-Lüge’ in der internationalen revisionistischen Propaganda”), and its objective is to refute revisionism. Yet the authors have not a single argument to offer. One cannot but feel that it was written to fulfill an unpleasant duty – after all, one of the stated aims of the Oranienburg meeting was the refutation of revisionism, even though not a single one of the participants was in a position to do so even in a rudimentary way. The

editors may have felt the need to publish these latter contributions in an attempt to make the book more voluminous and thus give it a more impressive appearance. The same goes for those articles which are so devoid of significance or that are unrelated to the meeting's topic that I have felt no urge to discuss them.

When compared to the preceding work, *Nazi Mass Murder*, the present volume offers hardly any new ideas. Although many of the "at least 60 pertinent articles and monographs [...] published since 1983" have been considered (p. XVII), the quality has in no way been improved, because the sources are mentioned haphazardly in footnotes and merely serve to hide the lack of watertight documentary or material evidence.

On balance, the results of the Oranienburg meeting are devastating for orthodox Holocaust historiography. The meeting has not succeeded in presenting a documented and coherent analysis of the genesis of the alleged industrial homicidal gas chambers and has failed spectacularly in its attempt to refute revisionism. This kind of pseudo-scientific historiography can only survive thanks to propaganda and government repression.

* * *

In conclusion I wish to point out the most important revisionist studies that have been published over the last two decades and which deal with various aspects of the "National Socialist mass killings by poison gas." The better part of these studies is available in two or more languages. To the extent that they exist in German or English, I shall merely refer to them and omit any other language editions.

If the participants of the Oranienburg meeting had sincerely wished to fulfill their duty as historians, they would have had to take these studies into account and refute them, but, except for one or two instances, they have not even mentioned them.

Some of My Other Works on the Holocaust

- *La Risiera di San Sabba: un falso grossolano*. Sentinella d’Italia, 1985.
- *Wellers e i “gasati” di Auschwitz*. La Sfinge, Parma, 1987.
- *Come si falsifica la storia: Saul Friedländer e il “rapporto” Gerstein*. La Sfinge, Parma 1988.
- *Auschwitz: Fine di una leggenda*. Edizioni di Ar, Padua, 1994; Engl. as part of G. Rudolf (ed.), *Auschwitz: Plain Facts. A Response to Jean-Claude Pressac*, Theses & Dissertations Press, Chicago 2005; reprint,

- The Barnes Review, Washington, DC, 2010; German: Herbert Verbeke (ed.), *Auschwitz: Nackte Fakten. Eine Antwort an Jean-Claude Pressac*. Vrij Historisch Onderzoek, Berchem 1996.
- *Olocausto: Dilettanti allo sbaraglio*. Pierre Vidal-Naquet, Georges Weller, Deborah Lipstadt, Till Bastian, Florent Brayard et alii contro il revisionismo storico. Edizioni di Ar, Padua, 1996.
 - *L’“irritante questione” delle camere a gas ovvero da Cappuccetto Rosso ad Auschwitz. Risposta a Valentina Pisanty*. Graphos, Genoa, 1998
 - *Olocausto: dilettanti a convegno*. Effepi Edizioni, Genoa, 2002.
 - *Olocausto: dilettanti nel web*. Effepi, Genoa, 2005.
 - *Ritorno dalla luna di miele ad Auschwitz. Risposte ai veri dilettanti e ai finti specialisti dell’anti-“negazionismo.”* Effepi, Genoa, 2006.
 - *Un nuovo libro olocaustico su Belzec e la sua fonte. Considerazioni storico-critiche*. Effepi, Genoa, 2007.
 - *Raul Hilberg e i “centri di sterminio” nazionalsocialisti. Fonti e metodologia*. Effepi, Genoa, 2011.

Altogether these works comprise more than 10,000 pages, and one cannot endlessly pretend that they don’t exist. This is all the more true, since a synthesizing and objective compilation of the revisionist position has been available since 2009: Thomas Dalton, *Debating the Holocaust. A New Look at Both Sides* (Theses & Dissertations Press, New York, 2009). How many international conferences of historians are still required before these ladies and gentlemen finally condescend to address the revisionist arguments on a scholarly level?
